Tahiti Steamship Company, Ltd. (244,613).—Private Company. Registered December 24th. Capital £1,000 in £1 shares. Objects: To carry on the business of shipowners, carriers by sea, shipping and forwarding agents, etc. The directors are: F. Oldfield, W. G. Mahoney, J. A. T. Mackenzie. Registered office: 86, Strand, W.C.2.

Carter & Bone, Ltd. (244,594).—Private Company. Registered December 24th. Capital £1,000 in £1 shares. Objects: To carry on the business of coal and coke merchants formerly carried on by R. G. W. Carter at Drayton, Norfolk, and that of carters, carriers, haulage and transport contractors, etc. The permanent directors are: R. G. W. Carter, G. B. Bone.

Admiral Tug and Lighterage Company, Ltd. (244,617).—Private Company. Registered December 27th. Capital £3,000 in 2,800 ordinary shares of £1 each and 4,000 founders shares of 1/-. Objects: To carry on the business of shipowners and brokers, managers of shipping property, freight contractors, carriers by land and sea, barge owners, lightermen, forwarding agents, storekeepers, warehousemen, dock proprietors and stevedores, etc. The directors are: L. G. Claridge (permanent director and chairman), Bertha Claridge, E. L. Claridge. Secretary: E. L. Claridge. Registered office: 1, Ironmonger Lane, E.C.2.

Rapid Road Transport Company, Limited. (244,640).—Private Company. Registered December 27th. Capital £1,500 in 1,400 ordinary shares of £1 each and 2,000 founders shares of 1/- each. Objects: To carry on the business of haulage, cartage, general transport and removal contractors, motor car agents, motor coach and garage proprietors, etc. The directors are: L. G. Claridge (permanent chairman), Bertha Claridge, E. L. Claridge. Secretary: E. L. Claridge. Registered office: 1, Ironmonger Lane, E.C.2.

Victoria Coaches, Ltd. (244,647).—Private Company. Registered December 27th. Capital £5,000 in £1 shares. Objects: To acquire the undertakings of A. R. March and A. C. Redbourn, automobile engineers and char-a-banc proprietors, carrying on business at the Victoria Garage, 2, Victoria Road, Ramsgate, and to carry on the same and the business of coach builders, runners of omnibuses, taxi-cab and char-a-banc services, etc. The directors are: A. C. Redbourn (managing director), A. R. March (both permanent, subject to each holding 100 shares). Secretary: E. H. Ovenden. Registered office: 2, Victoria Road, Ramsgate.

Harry C. France (Carriers), Ltd. (244,656).—Private Company. Registered December 28th. Capital £2,000 in £1 shares. Objects: To carry on the business of carriers and haulage contractors formerly carried on by H. C. France at 29, Findon Street, Sheffield, and that of proprietors of motor omnibuses, tractors and carriages, etc. The first directors (to number not less than 3 nor more than 5) are: H. C. France, H. Ford, May France. Secretary: H. Ford. Registered office: 29, Findon Street, Sheffield.

Andrews (Southampton), Limited. (244,684).—Private Company. Registered December 30th. Capital £4,000 in £1 shares. Objects: To acquire the business of motor engineers, baggage contractors and general carriers carried on by Lottie Andrews and J. A. Andrews as Andrews Bros., Southampton, and to carry on the same and the business of electrical, wireless and mechanical, marine and general engineers, etc. The permanent directors are: Mrs. Lottie Andrews (governing director), J. A. Andrews (managing director). Registered office: No. 7 Berth, Channel Road, The Docks, Southampton.

A. Pannell, Ltd. (244,721).—Private Company. Registered January 1st. Capital £6,000 in £1 shares. Objects: To acquire the business of carman and contractor now carried on by A. I. Pannell at Glasshouse Street and elsewhere in London. The directors are: A. I. Pannell (permanent governing director and chairman), A. C. Pannell, H. T. Pannell.

Fylde Live Stock Transport, Ltd. (244,792).—Private Company. Registered January 2nd. Capital £1,500 in £1 shares. Objects: To acquire the business of a motor transport contractor carried on by E. Rainford at Blackpool. The first directors (to number not less than 3 nor more than 5) are: W. Armstead, J. Cocker, T. Masheter, J. Pickering, E. Rainford.

Croydon Coaches, Ltd. (244,785).—Private Company. Registered January 2nd. Capital £500 in £1 shares. Objects: To carry on the business of motor coach and carriage owners, hauliers, transport contractors, etc. The first directors are: J. C. Kenward, A. E. E. Dawson, Mrs. D. Duckering (all permanent). Registered office: 51, Sydenham Road North, Croydon.

Mortgages, Charges and Satisfactions.

E. W. Younger & Co., Ltd.—Mortgage on 8, 10 and 12 Spicer Lane, Quayside, Newcastle-upon-Tyne, dated November 21st, 1929, to secure all moneys due or to become due from the company to the Midland Bank, Ltd.

H.B. Buses, Ltd.—Charge on properties in Totnes, dated November 26th, 1929, to secure all moneys due or to become due from the company to Lloyds Bank, Ltd., not exceeding £5,000.

Cornfield Garage, Ltd.—Land Registration charge on 19 Cornfield Road, Eastbourne, dated November 30th, 1929, to secure £3,507 16s. 3d. Holders: Eastbourne Mutual Building Society.

Springer & Company, Ltd.—Debenture dated December 2nd, 1929, to secure £630, charged on the company's property, present and future, including uncalled capital. Holder: L. Myers, Spitalfields Market, E.

Henry Allen, Ltd.—Particulars filed of £1,500 debentures authorised December 5th, 1929, charged on the company's property, present and future, including uncalled capital, the whole amount being now issued.

J. G. Fryer, Ltd.—Debenture charged on the company's undertaking and property, present and future, including uncalled capital, dated December 6th, 1929, to secure all moneys due or to become due from the company to Barclays Bank, Ltd.

South Western Transport Company, Ltd.—Particulars filed of £300 debentures authorised December 9th, 1929, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

W. Bleasdale & Co., Ltd.—Two mortgages on S. S. "Attercliffe" and "Beecliffe" both dated December 10th, 1929, to secure all moneys due or to become due from the company to the National Provincial Bank, Ltd., respectively.

Southern Roadways, Ltd. — Second debenture dated December 10th, 1929, to secure £18,000, charged on land at Poole and the company's undertaking and property, present and future, including uncalled capital (subject to existing debentures for £17,000). Holders: Branch Nominees, Ltd.

Accrington Motor Services, Ltd.—Debenture charged on the company's undertaking and property, present and future, including uncalled capital and as collateral security thereto, a mortgage on Hillock Vale Motor Garage, Burnley Road, Huncoat, Accrington, both dated December 14th, 1929, to secure £1,000. Holders: J. Singleton, "Tremellyn," 35 Kings Road, Ansdell, Lytham-Saint-Annes, Lancs.

Malden Haulage Company, Ltd. — Debenture dated December 17th, 1929, to secure £250, charged on the company's property and assets, present and future, at 90 Elm Road, New Malden, including its undertaking and uncalled capital. Holder: S. H. Longman, 18 Fassett Square, Dalston, E.8.

Chalkley's Garages, Ltd.—Particulars filed of £1,125 debentures authorised December 18th, 1929, charged on the company's undertaking and property, present and future, including uncalled capital, the amount of the present issue being £925.

Watford Co-operative Mutual Omnibus & Transport Co., Ltd. — Mortgage debenture dated December 19th, 1929, to secure £1,000 charged on the company's undertaking and property, present and future, including uncalled capital. Holder: B. Holt, Primrose Cottage, Radlett Road, Watford, Herts.

John Uttley & Sons (Blackpool), Ltd.—Satisfaction in full on October 14th, 1929, of mortgage dated February 3rd and registered February 20th, 1926, securing £7,500.

South Notts. Bus Company, Ltd.—Satisfaction in full on November 18th, of debenture dated March 4th, and registered March 9th, 1929.

Vokins & Company, Ltd.—Satisfaction to the extent of £3,000 on December 2nd, 1929, of debentures authorised May 28th and registered June 15th, 1926, securing £16,000 (part of an issue of £20,000).

British Industries Fair Advance Catalogues.—A special advance overseas edition of the catalogues of the 1930 British Industries Fair, to be opened in London and Birmingham on 17th February, was published seven weeks before the opening of the Fair and has been issued to 10,000 business men in Europe, North America, South Africa and the eastern coast of South America, including all those buyers who have notified the Department of Overseas Trade of their intention to attend the Fair. By this publishing feat, which has only been made possible owing to the keenness of British manufacturers to participate in the Fair, trade buyers in cities as far apart as Istanbul, Capetown and Vancouver will be able to receive copies of the Fair catalogues before commencing their voyage to England. The catalogues, apart from containing descriptive entries of the exhibits of some 1,800 British manufacturers, embody a complete classification of the exhibits by trades, and indexes in nine languages, enabling foreign buyers who are ignorant of the English language easily to trace the goods in which they are particularly interested.

The Co-ordination of Passenger Transport.

AFTER we had gone to press with the last issue of this journal a very interesting paper was read before the members of the Institute of Transport by Mr. Ashton Davies, General Superintendent (Passenger Commercial), London, Midland and Scottish Railway, on the progress which had taken place during the past twelve months in co-ordinating rail and road transport as far as the passenger side was concerned, this being the period following the acquisition of full road transport powers by the railway companies. For the last three or four years co-ordination has been much in the minds and on the lips of transport men, both as a means of providing the greatest facilities for the travelling public without unnecessary waste of capital, and at the same time to assist the railway companies to improve their financial position from the parlous state of affairs which followed the end of the Great War. The first step, however, towards co-ordination was taken when the Institute of Transport was formed, now just on eleven years ago. The coming together of leading men in every branch of transport was a great step forward towards ending the antagonism of competitive forms of transport, and as year by year has gone by we have seen a steady movement towards a better understanding of the difficulties and the problems of each section of the industry. This has laid the basis upon which it has become possible to negotiate working arrangements on a friendly footing between the various parties concerned. At the same time, the process would have been a very much slower one had the railway companies not secured legislative powers to carry on road transport services of a very wide character. It is good, therefore, to have a review of what has taken place since that event, and the paper by Mr. Ashton Davies is to be welcomed on this account. In outlining the position he has dealt with the Road Traffic Bill, now coming before the House of Commons after passing through the House of Lords, and in connection with this he makes a suggestion which is worthy of very special consideration. A great deal of doubt is being felt in transport circles as to the Area Commissioners, who will be responsible for the licensing of public service road vehicles in each of the twelve appointed areas. The suggestion made by Mr. Davies is that these Area Commissions should be established on a similar basis to the Railway Rates Tribunal, which consists of an impartial Chairman and of two other members, one a representative of the industry, and the other a representative of the users, and in this way a judicial body has been formed which has secured the confidence of both sides. As at present outlined in the Bill these Area Commissions are to consist of a Chairman, appointed by the Minister of Transport, and two commissioners drawn from panels nominated by local authorities. We trust that this suggestion will be urged very strongly in Committee and in this way one of the objections to the Bill will be overcome. In dealing with the widespread arrangements which have already been made by the railway companies and passenger road transport organisations, the lecturer referred to the joint committees, consisting of an equal number of representatives of the railway company and the passenger vehicle company, which are being set up. While each side of this committee will have its own system of transport to keep to the forefront, yet the committee as a whole will be dealing with the question from a broader point of view and its duties will be to provide that form of transport which is most needed to provide travelling facilities for the public. Although the lecturer dealt only with the subject of co-ordination of passenger transport, yet the principle underlying the whole subject is the same and it is only possible to deal in a practical form with the results as already shown. When it comes to the wider field of co-ordination—that between railway, road, sea, and air methods of transport—the details may become more involved and the organisation required may be of a more complex character, but the experience already secured will tend to make any further development easier.

Comment on Current Topics.

Tramcar, Railless Vehicle and Motor Bus.

An interesting paper dealing with the advantages and limitations of the three types of public service vehicles—the tramcar, the trolley bus, and the motor bus—was given by Mr. R. H. Wilkinson before the members of the Institute of Transport on Monday, February 10th last. Perhaps the most difficult thing in the world is to be impartial on any subject, and, at any rate in the case of transport, everyone has his own preference and usually favours the kind of transport in which he is engaged. Even those who, for obvious reasons, are not limited in their scope to a single section of the industry, yet have their own strong convictions and advocate some particular form of transport as the best for a specific purpose. For ourselves we are whole-heartedly in favour of the motor bus as against the tramcar. It is safe to assert that no tramway engineer, faced with the problem of what form of traction he should introduce to a particular municipality, would entertain for a moment the idea of laying down tram lines and instituting a tram service on the ground that it was the best form of transport for the use of the public of which he was the servant. The difficulty arises when the same individual has to decide, as an expert, whether the tramway system which has done such good work in the past should be scrapped and a large amount of capital lost, in favour of instituting a motor bus service in its place. Reports from all parts of the country show that this is being done to an increasing extent and that many well-known municipal authorities, under the able guidance of their engineers, are considering the question and weighing up the pros and cons of the matter. It is not surprising, however, that many of them have compromised on the matter and have adopted the trolley vehicle as a system which contains to some extent both the advantages of the tramcar and of the motor bus. The trolley bus is a very popular method of transport, much favoured by those who have been condemned to use the tramcars for many years and that it has distinct advantages no one will deny. At the same time it is tied to the "fishing rod" apparatus, beyond the limits of which it cannot go, and we believe that it is only a half-way stage towards the use of the motor omnibus. To-day the public require two qualities in the vehicles which they wish to use, the first being mobility and the second speed, and the tramcar fails on both these points. A passenger carrying vehicle requires the same quality which is shown in the "door to door" slogan of the goods carrying road vehicle and, other things being equal, the motor bus will always be more popular than the tramcar because it takes the traveller nearer to his ultimate destination. When we consider the question of speed other points come in. If the tramcar has its own special track, where it can travel at a high speed without being deterred by other vehicles, it is probably the fastest form of traffic on the streets of our large towns and cities, but where, as is usually the case, the tram is held back like other traffic at cross roads or by congestion or by a breakdown of some kind, not necessarily to the tramcar itself, then its speed is reduced and owing to its immobility it suffers seriously in comparison with the motor bus. The writer of the paper, some extracts from which appear on another page in this issue, has had long experience of the use of the trolley vehicle, dating back to June 1911, and as is natural with a municipal official he has other matters to take into account besides those which we have mentioned. For instance, he makes a point in his paper, and quite a good one, that the trolley bus uses electricity—a home-produced fuel—to the great advantage of the municipality producing this form of power, as opposed to an imported fuel which we may not be able to obtain in a time of emergency. This is quite a strong argument, because the price of electricity to the householder depends to a large extent upon the total amount used and out of this total a very considerable proportion goes to the account of the Tramway Department. In a paper read before the Institute of Transport Congress held in Liverpool in 1928, Mr. Brodie, the well-known Liverpool engineer, set forth his views on traffic development in that important area and incidentally mentioned that tramcars should be made capable of travelling at 35 miles an hour. This practically means that they become railways on the public highways and if any such speed were to be practicable it could only be on wide thoroughfares where the tramlines could be isolated by small hedges on either side and the track entirely given up to the trams. This would be a retrograde step, reducing the advantages of the wide thoroughfare to the extent of the separated portion. Other difficulties of the tramcar which may be mentioned are the fact that they only stop at certain appointed places and the traveller may be carried a considerable way past his destination, or have to alight some considerable distance before he wishes to do so. Other traffic is held up while passengers step off the tram and walk across to the pavement, while it is often very difficult for motor traffic to pass trams unless the road is straight and clear for a considerable distance. The tramlines, too, are the most dangerous portion of the road for the motorist, particularly where they have not been kept in thorough repair and have become raised above the roadway. Taking the arguments for and against the tram and looking at the subject all round, everything points to the time when the tramway will be eliminated from our towns and cities as a means of transport and we believe that ultimately the trolley bus will follow suit, because of its inherent disadvantages as compared with the mobile and speedy motor bus.

War Department Subsidy Scheme.

In this issue we publish a notice issued by the War Department drawing further attention to the Subsidy Scheme for motor vehicles which has been in operation for a good many years. The object of the present notice is to draw attention to the fact that the rigid six-wheeled vehicle has now displaced the ordinary four-wheeled subsidy model and the former has been adopted as the standard military equipment on account of its proved superiority in use. It was also necessary to restate the names of the makes of vehicles which are eligible for the subsidy due to recent additions of both makes and types. It will be noticed that six well-known motor manufacturers are included in the scheme. The War Office invites applications from owners of these types of vehicles to fill vacancies which have occurred, and the scheme is one which should be very carefully considered by all motor vehicle owners who have types of vehicles eligible for the subsidy. It will be noticed that further information and forms of agreement can be obtained either in London, Glasgow, Manchester or Bristol.

Using the River Thames.

We have followed with considerable interest the discussion which was started in the columns of "*The Times*" some little time back in favour of using the River Thames once again as a great water highway. Those of us who are old enough to remember the splendid boats which, for a brief period, did such excellent service as passenger carrying vessels on the Thames, have always regretted their passing and the consequent relegation of the river to the exceedingly important but humdrum business of

Digitized by Google

carrying goods by barges and small vessels in the upper reaches of the river and by the ships which make so picturesque a feature of the Pool of London as seen from London Bridge. The protagonist of using the Thames as a highway is Sir Samuel Instone, who for some years past has been prepared to place a fleet of boats on the Thames if the London County Council would provide the landing stages necessary for the efficient and successful running of a passenger service. In order to test the possibilities of such a service, a motor boat considered suitable for use as a "Water-bus" has recently taken a trial trip on the river. This type of boat would carry thirty or forty passengers each and it is suggested that about one hundred and twenty of these vessels should be used to maintain a five minutes service between Barnes and Woolwich. The trial trip was certainly successful, but whereas one vessel travelling at high speed would not affect the other traffic of the river the position would be a very different one if a hundred and twenty of these motor boats were careering up and down the Thames at fast speeds. While we look with favour upon every proposal to improve the traffic facilities of London, it is essential that we should keep a level head in considering any suggested plans, in order that a recurrence of previous adventures in this direction, with the resulting loss of large sums of money, may be avoided.

British Industries Fair, Birmingham.

The heavy section of the British Industries Fair, held in Birmingham each year concurrently with the London fair, is one which attracts buyers of machinery of all kinds as well as the many industries for which Birmingham and the Midlands are famous. The Fair, which opens on Monday, February 17th, and continues until February 28th, will be visited by buyers not only from this country but from all parts of the world, and for this reason we have taken a stand (Engineering Section, Stand No. 16 E-5) and our publications will be exhibited and members of our staff will be in attendance to give information to our readers, advertisers or any enquirers.

Personal Notes.

Freedom of the City of London Conferred on Colonel J. S. Matthew, C.M.G., D.S.O.—Following his admission to the Freedom and Livery of the Worshipful Company of Wheelwrights, Colonel J. S. Matthew, C.M.G., D.S.O., has been admitted to the Freedom of the City of London. Colonel Matthew is one of the senior officials of the Dunlop Rubber Company, and is well-known in the motor car, commercial vehicle, and aero industries.

Mr. Hubert J. Webber Appointed Transport Manager and Engineer to Cerebos, Ltd.—Mr. Hubert J. Webber, who for the past 7 years has been Chief Rolling Stock Engineer (Automobile & Tramcar Sections) of the Yorkshire (West Riding) Electric Tramways Co., Limited, and the West Riding Automobile Co., Limited, Wakefield, has been appointed Transport Manager and Engineer to Messrs. Cerebos, Limited, the well-known salt firm. Mr. Webber, who holds the diploma of Member of the Institute of Automobile Engineers, was associated with the Bristol Tramways and Carriage Co., Limited, for over 20 years, and held the position of Maintenance Engineer, Automobile Section, prior to his appointment with the Yorkshire (West Riding) Company.

MR. HUBERT J. WEBBER.

Oldham Corporation Tramways.—Mr. J. F. Richards, the newly appointed General Manager and Engineer of the Oldham Corporation Tramways, has had a wide experience in tramway work. He commenced his career with the Metropolitan Electric Tramway Co., Ltd., afterwards becoming Assistant Manager of the West Ham Corporation Tramways and then Technical Assistant to the General Manager of the Belfast City Tramways. This appointment he relinquished to become Rolling Stock Superintendent at Oldham.

City of Oxford Motor Services.—Mr. R. F. Dixon has been appointed Manager of the City of Oxford Motor Services in succession to Mr. A. A. Tyler, who has just retired after completing twenty-five years' service. Mr. Dixon, who is 48 years of age, comes from Mansfield, Notts., but is a native of Croydon.

Wakefield and District Chamber of Trade.—Mr. G. E. Gilbey, of Gilbey & Sons, household removal and warehousing contractors, of Denby Dale Road, Wakefield, has been elected President of the Wakefield and District Chamber of Trade for another year. Mr. Gilbey is a Vice-Chairman of the North Eastern Division of the Commercial Motor Users' Association.

Honour for Mr. Frank J. C. Pollitzer.—We offer our congratulations to Mr. Frank J. C. Pollitzer, the senior partner in the firm of Beck & Pollitzer, Queen Victoria Street, London, a well-known member of the Corporation of the City of London, who has been appointed a Justice of the Peace for the County of London. Mr. Pollitzer, in addition to his other duties, has been appointed Chairman of the Streets Committee of the Corporation of London for a second period.

MR. FRANK J. C. POLLITZER, J.P., C.C.

Sir H. Hartley Appointed a Vice-President and Director of Scientific Research, London, Midland & Scottish Railway.—The Board of the London, Midland and Scottish Railway has appointed Sir Harold Hartley, C.B.E., F.R.S., to be a Vice-President in succession to the late Mr. R. W. Reid, C.B.E., and also Director of Scientific Research. Sir Harold has been a Fellow and tutor of Balliol College, Oxford, since 1901, and is Bedford Lecturer on Physical Chemistry. A member of the Fuel Research Board, he has served on several Government Committees dealing with the application of scientific research to various practical and industrial problems, and with the necessary organisation. It is understood that, following the appointment of Sir Harold, an advisory council of eminent scientists is to be set up under his chairmanship. Sir Harold's activities will embrace the chemical, metallurgical, and physical sides of the organisation. He will exercise functions similar to that of general manager of several departments, including those of civil, marine, mechanical, signal and telegraph engineering, and carriage and wagon construction.

Ministry of Transport Appointment.—Lord Ponsonby, Parliamentary Secretary to the Ministry of Transport, has appointed Mr. Aubrey Clark to be his Private Secretary.

Digitized by Google

G.W.R. Appointment. — Mr. H. W. Payne has been selected by the directors of the Great Western Railway Co. for the position of district goods manager in charge of the Newport, South Wales, district with headquarters in the new offices, which have recently been built at Newport Station. Mr. Payne entered the Company's service at Bristol goods station on December 21st, 1896. After passing through the various departments he became staff clerk, and was closely associated with the inception and development of the new conditions of service from the first arbitration award to the year 1916. From Bristol goods station he was transferred to the Bristol district goods manager's office, and in 1918 was removed to the chief goods manager's office at Paddington. There, as chief staff clerk, he gained experience in the handling of staff and labour matters from the headquarters point of view, and later took charge of the working department in the same office. In this capacity he was associated with the control of the supply and distribution of wagon stock, the arranging of goods train transits, the handling and conveyance of special loads, demurrage questions, and propaganda work connected with the development of the user of 20-ton wagons. In February, 1927, he was appointed chief clerk to the chief goods manager, in which capacity he has been responsible for the development of the extended use of road transport following upon the granting of road powers to the railways, and is at present engaged on a revision of goods transhipping arrangements.

MR. H. W. PAYNE.

MR. G. COLE DEACON.

Railway Companies' Association. — Mr. G. Cole Deacon, assistant Solicitor of the London, Midland and Scottish Railway Company, has been appointed Secretary of the Railway Companies' Association in succession to Mr. A. B. Cane. Mr. Deacon will continue to act as secretary of the Rates and Charges Committee.

L.M. & S. Railway. Appointment of Assistant Chief Goods Manager. — Mr. E. H. Davies has been appointed Assistant Chief Goods Manager, London, Midland and Scottish Railway. Mr. Davies has held the position of Goods Operating Manager, Euston, since January, 1928, prior to which he was Goods Manager, Northern Division. He entered the service of the L.N.W.R. as an apprentice at Park Lane Station, Liverpool, and, after experience in all departments at stations, was transferred to the District Manager's Office. He was later promoted to be Agent, and in January, 1914, became Assistant District Goods Manager, Birmingham. In March, 1915, he was loaned to the Ministry of Munitions as Railway Transport Officer for the Midlands, being transferred in December, 1915, to the Ministry Headquarters in London, as Assistant Director of the Railway Transport Department. Upon the establishment of the Coal Control he was transferred there, and for services rendered was awarded the O.B.E. On his return to railway service, Mr. Davies became District Goods Manager in the Northampton district, and was transferred to Euston in September, 1919, to take charge of the newly created Road Transport Department. He was promoted to Manchester in 1923, as Station Working and Road Transport Assistant for the reconstituted L. & N.W.R. consisting of the L. & N.W., L. & Y., and a number of smaller railways. He became Chief of the L.M.S. Road Transport Department in January, 1923, and remained in that position until receiving the appointment of Goods Manager, Northern Division, in May, 1927.

G.W.R. District Goods Manager, Cardiff.—Mr. H. E. Cracknell, of the Great Western Railway Company, who has been appointed District Goods Manager at Cardiff, entered the Company's service in 1891 in the Horse Department. Three years later he was transferred to the staff of the Chief Goods Manager, where he remained until 1914. In 1915 he was appointed Chief Clerk to the Bristol District Goods Manager, and in May, 1922, following the amalgamations and absorptions under the Railways Act, 1921, he became Assistant District Goods Manager of the newly constituted Cardiff Valleys District, in which position he performed much useful work in connection with grouping arrangements. In 1926, he was appointed Assistant District Goods Manager in the Cardiff District, and in August, 1929, was made District Goods Manager of Newport, and temporarily exercised a dual district control.

MR. H. E. CRACKNELL.

Mr. J. Allingham Taylor Returns to Ireland. — Mr. J. A. Taylor, who has recently been appointed Regional Sales Manager for the Irish Free State by the Dunlop Rubber Company (Ireland), Ltd., has had a long and varied experience with other Dunlop Companies. His first appointment was in India, where he spent 4½ years as Manager for the whole of India, Burmah, Ceylon and Singapore. Returning to England, he was appointed Manager of the Dunlop Rubber Company's Newcastle Depot, and remained in the North of England for five years. From there, he returned to Ireland and was resident there all through the difficult period covered by the years 1915 to 1920. While in Ireland, he had charge of the arrangements for the building of a new depot in Dublin. Again, Mr. Taylor proceeded to India, as Acting General Manager and opened and organised various new depots. Having accomplished this, he returned to England, and was appointed District Manager for the Midlands area—this position was held by Mr. Taylor up to two years ago, when he went to Fort Dunlop to occupy a responsible position. It is certain that he returns to Ireland to renew very many warm friendships.

Death of Mr. H. Allaway.—Everyone connected with shipping will have learned with deep regret of the death of Mr. Henry Allaway, the Assistant General Manager (Shipping) of the London & North Eastern Railway Company, which took place on January 11th last. Mr. Allaway, in addition to being manager for shipping of the railway company's services, filled the position of Continental Traffic Manager of the steamship services between Grimsby and Hull and the Continent in which the railway company are interested. He was also General Manager of the Hull & Netherlands Steamship Company.

Air Transport for Goods.

Existing Facilities and Procedure.

By J. W. Parker, A.M.Inst.T.

THE general conception of air transport concentrates upon its future possibilities to such an extent as to overlook the useful service which this new arm is actually rendering to industry *now*. It has been left to the newer trades such as radio, artificial silk, light machinery and novelties to realise its present day value as a means of increasing trade and developing fresh activities. It may be argued that apart from the Metropolis there is little scope yet in this country, but such an attitude overlooks two factors. Firstly, there is the recently concluded arrangement between Imperial Airways and the four grouped railways whereby traffic will be accepted for international transit by joint rail and air service at some hundred different towns and cities in Great Britain. Secondly, all the main railways safeguarded their position last year by securing air carrying powers between this country and the Continent as far east as Warsaw. The growth, too, of what is rather inappropriately named the "aerial taxi" is already having some effect upon freight developments. It would thus seem advisable for anyone in the carrying trade to be conversant with the methods, costs and facilities now available.

Air freight conveyance appears to be following closely on the lines of existing means of transport. As on the railways, the user has the choice of delivered or "station" rates and facilities. The familiar "C. & D." rate of rail carriage has its aerial equivalent in D/D, or "domicile to domicile," as distinct from the "station to station" equivalent known as the A/A (aerodrome to aerodrome). In London, goods can be handed to the Airways central station or any agency from which they are collected by airway's motor and hauled direct to the Croydon airport. Provincial consignments can be despatched by passenger train to the appropriate main line terminus, each of which is visited several times daily by the Airway's road fleet. If a consignment of unusual importance be despatched in this way, it is advisable to wire an advice to Imperial Airways informing them of the particulars.

As might be expected, a limit is placed on the size and weight of packages. On the direct service, where transhipment to other lines is not needed, the maximum size is 3 ft. 6 in. by 2 ft. 6 in. by 2 ft. 3 in., and in all other instances 3 ft. by 2 ft. by 1 ft. 6 in. If anything bigger is required to go by air special arrangements have to be made beforehand. In the ordinary way 150 lbs. is the weight limit, but if notice in advance is given the company will accept up to 3 cwt. The policy of Imperial Airways is to encourage small and easily handled packages, and to this end the tariff is arranged on a weight basis and not at a package rate. Senders utilising the joint passenger train and air service should, of course, bear in mind that the railway passenger train rates are generally on a separate package basis. An appreciable saving can be made in packing as the risk of damage is slight whilst any risk of pilferage, so prevalent in ocean carriage, is absolutely eliminated. It may also be borne in mind that there are no port charges or dock dues to be paid for aerial conveyance. As to packing, an instance in point concerns motor cycles which need not be packed in crates, it being sufficient to have the outstanding points covered so as to avoid scratching. It is characteristic of freight air transport to find the insurance rate lower than in any other means of conveyance. In fact, in some instances it is as much as 50 per cent. below the ordinary terms. This is a tribute to the inherent safety no less than to the celerity of the new organisation.

On the London-Paris route the D/D rate is 2/- for 2 lbs. or 1 Kg. in one direction and 9 francs in the other. At 44 lbs., or 20 Kg., the corresponding charge is 14/- or 72 francs, whilst 112 lbs., or 50 Kg., would amount to 28/-. Insurance is raised at the rate of 2/- per cent. with a minimum of 1/- to Paris, or 10 per cent. and a minimum of 1.90 francs in the reverse direction. On the London-Brussels line the A/A rate rises from 1/6d. for 2 lbs. to 25/6d. for 1 cwt., the corresponding charges in the homeward direction being 10 and 163 Belgian francs. Insurance in this case is either 2/- per cent. or 10 per cent. according to the direction. On the Cologne route, the depot to depot charge is 6d. a lb., subject to a minimum of 2/- outward or 1.10 marks per kilo inwards, the insurance amounting to 2/9d. per cent. from England, and 4 per cent. to this country. Where collection and delivery charges are raised separately they are at the rate of 9d. for 2 lbs. or 3/- for 44 lbs. In Germany and Austria, up to 10 kilos costs R.M. 0.50 and 200 kilos is rated at R.M. 2.00. Brussels charges 20 per cent. of the freight rate whilst the Swiss table begins at one Swiss franc for 5 kilos and goes up to 7 francs for weights in excess of 100 kilos. Flat rates are in force for freight to the chief European cities, ranging from 9d. a lb. to Hamburg to 1/9d. at Barcelona and 2/5d. at Constantinople, or 2/7d. to Moscow.

Where regular lots of more than 10 cwts. are passing, deferred rates at a lower level can always be obtained, and these figures show a considerable saving when compared with the booked quotations.

A feature which is likely to appeal to some branches of industry is the chartering arrangement under which aircraft can be hired at short notice on a mileage basis from the time of leaving Croydon to the time the machine returns there. 200 lbs. capacity is charged at the rate of 1/9d. a mile, 600 lbs. at 2/-, 1,000 lbs. at 3/-, 2,500 at 5/-, or 4,000 lbs. at 10/-. It will be noticed that to use a plane for 4,000 lbs. is very much cheaper relatively than for a smaller weight, this, of course, being due to the fact that a full load for an average aeroplane is in the neighbourhood of two tons of freight. The present advantage of chartering arises from the possibility of using aircraft for internal transport to any point in possession of an aerodrome or landing ground. One may expect the tendency in chartering to indicate which internal routes will justify a regular service first, and on these grounds alone any extension of hiring will be followed with interest.

In forwarding freight, it is advisable to use the form of consignment note issued by the Airways Company, particularly the five-fold document which includes the necessary customs' declarations, as by so doing the possibility of packages being delayed owing to insufficient information is avoided. It will be readily understood that as the saving of time is nearly always the chief reason for utilising the air service, any detention robs the transit of its main advantage. Filling in of the consignment note calls for no special comment as the particulars required are of the usual routine character save that arrangements can be made for C.O.D. in the ordinary manner. The declaration of value on the consignment note is taken by the carrying company as an instruction to effect insurance at their published rates, a fact which relieves the sender from any further responsibility or anxiety under this head. A point of some interest is the provision on the note for the senders' disposal instructions in the event of a package being refused by consignees. This appears to be another concession to the need for prompt working and one which

Digitized by Google

might with advantage be adopted by the older means of transport. Since through rates have not been developed to all places on the Continent, the consignment note contains provisions for re-booking charges from the point of transhipment to destination. Of the five-fold form previously mentioned, the original goes to the aerodrome at destination, the first copy is for the consignee, the two buff copies are for customs' clearance and entry bills for the authorities at each end of the transit, whilst the last form is the senders' office copy. The various notes are printed in three languages on distinctively coloured paper, so that there is no danger of confusion or misapplication of their respective functions. Customs' clearance is commonly effected by the Airways Company. For outward freight 6d. a consignment is charged for making out the consignment note and statistical form, and presenting to the customs' officer. In the case of inwards goods, passing of entry, including opening the first parcel, costs 1/-, subsequent parcels paying either 6d. or 1/-according as they are under or over 10 kgs. in weight. Dutiable goods are opened for examination at the rate of 1/- each if under 10 kgs., or 1/6d. each for packages over that weight, whilst for completing form 105, 6d. per consignment is the correct amount.

There is no rule as to the payment of carriage charges, the instruction "paid" or "forward" being honoured as required by the consignor. Under the conditions of carriage, however, the Imperial Airways reserve their right to demand pre-payment of the necessary freight and cartage. It is most important to know the company does not accept the liability of common carriers for any goods committed to its care nor does it carry at company's risk. On the contrary, the carriage conditions plainly state all articles are conveyed only at owners' risk. In view of the very favourable insurance rates and the facilities with which cover can be obtained, this drawback is more apparent than real. In this country, at any rate, the carrying concern maintains its full rights as to lien on goods, and it claims not only a particular but a general lien in satisfaction of any disputed amounts. Whilst any kind of goods may be refused, certain articles will definitely be rejected, amongst them being explosives, corrosives, arms, ammunition and any other commodity likely to catch fire or endanger aircraft. The practical impossibility of coping with an outbreak of fire on board a moving plane is, of course, an all sufficient reason for this proviso. Other goods not carried include prohibited imports or anything which is officially prohibited above a country flown over. Articles likely to cause annoyance to passengers or which are unsuitable for air conveyance will likewise not be carried. When livestock is conveyed it has to pay 50 per cent. more than the ordinary merchandise rates, the chief exceptions being day old chicks and fish. For light and bulky lots, the company has the option of charging cubic capacity rates, but this will not be exercised without first informing the sender. In the same way, Imperial Airways has the right to charge freight amounts upon either the declared or insured value instead of the weight.

Unless other arrangements have been agreed between the parties concerned, the consignee is notified of the arrival of goods either by telephone or by letter. As to claims, the well-known interval of three days is stipulated for aerial carriage in those instances where loss or damage is not apparent immediately upon delivery. It is provided that all claims be either endorsed on the consignment note or delivered in writing to the firm or its agents.

The duty of supplying all necessary documents in support of the consignment note and any legal liability attaching thereto fall not on the Airways Company but on the sender, who must indemnify the carrier against all consequences of omission or inaccuracy. Imperial Airways refuse to be responsible either for examining or certifying as to the correctness or completeness of the documents.

The steady decrease in operating costs and equally steady expansion of facilities and routes are combining to narrow the margin between traffic which is securely held to the older means of transport and that which in the near future will become the preserve of air conveyance.

Personal Notes.

(*Continued from page 272.*)

A.J.S. Special Representative.—Mr. W. Leslie Cross, who is well-known in transport circles through his association with Messrs. Harris & Hasell, Ltd., of Bristol, has joined the staff of A. J. Stevens & Co. (1914), Ltd., of Wolverhampton, as Special Representative, and will be visiting his old friends in the interests of "A.J.S." passenger and commercial vehicles. In this connection it is interesting to hear that the "Commodore" chassis, which was recently introduced by Messrs. A. J. Stevens & Co., has met with an excellent reception. Numerous orders are in hand, and even at this early stage the firm have received several repeats.

MR. W. LESLIE CROSS.

Mr. F. R. Kay joins the Vulcan Motor & Engineering Co.—Mr. F. R. Kay has been appointed Home Sales Manager to the Vulcan Motor and Engineering Co. (1906), Ltd., of Crossens, Southport. Mr. Kay has a particularly wide connection and association with the motor dealers of Great Britain, having been in close touch with them as Sales Manager to the Rover Company for the past 33 years. The policy he intends adopting in the marketing of the Vulcan Company's products will be one specially suited to traders, and he looks forward to securing their support.

MR. F. R. KAY.

F.W. & R.A. New Members. — The following firms have been elected to membership of the Furniture Warehousemen and Removers' Association:—Messrs. John Neil and Sons, Ltd., 26 Allen Road, London, N.16; J. G. Bond, Ltd., 27-30 High Street, Chelmsford; Henry Skelton, 96 Maple Road, Surbiton; Thomas Harry & Co., 21 Upper Clapton Road, London, E.5; and W. H. Norris & Son, Ltd., 306 Green Street, London, E.13.

Kingston By-Pass Road. A Cross-Road Warning.—Motorists are strongly advised by the Automobile Association to drive carefully over the Tolworth crossing, on the Kingston By-pass road. Special warning signs have recently been erected by the County Surveyor, and road users are particularly requested, in the interests of public safety, strictly to observe the warning conveyed by these signs.

The Advantages and Limitations of the Tramcar, Railless Vehicle, and Motor Bus.

AT a meeting of the Institute of Transport, held in London on February 10th last, **MR. R. H. WILKINSON**, the Tramways Manager to the Bradford Corporation, read a paper entitled "The Advantages and Limitations of the Tramcar, Railless Vehicle, and Motor Bus."

He said that high-speed, comfortable transport is essential to meet public requirements and, no doubt, in the future still higher speeds will be demanded for long distance transport. He believed that on heavy trafficked routes the tram possessed the advantage in regard to average speed, and being electrically driven and having no gears to change, had a greater rate of acceleration than the petrol bus, and that was probably the chief reason for its higher speed. That feature, however, ceased to be an advantage when compared with the trolley vehicle.

The chief thing, to his mind, in favour of the tram to-day was tradition, although it might be that in a few big cities a large capacity tramcar would be the most economical vehicle to operate.

The disadvantages of the tramcar were:—Its high initial cost for permanent way or track; passengers must board and leave the car in the middle of the road; one car breaking down or being obstructed held up the service. Another was that of noise. It also required overhead equipment.

The public preferred the bus. The extra speed of the bus was largely due to its flexibility, but had it to undertake the ordinary tramway duties in densely populated areas it would not be so efficient and economical as the tramcar.

The motor bus was a great public boon. Being self-contained and mobile it had provided a means of transport all over the country. This form of transport was in its proper sphere on long journeys, but for the handling of heavy traffic and making frequent stops it could not compare with either the tramcar or trolley vehicle.

The disadvantages of the motor bus were:—Slow acceleration; jerks due to gear changing; depends on petrol supplies from abroad; noisy engines and gears; emits noxious fumes; short life and high depreciation; higher operating costs; too many complicated parts; fire risk. The advantages of the motor bus over other vehicles were:—High speeds on open roads; greater mobility; when broken down does not interfere with remainder of service; good for testing a route for traffic, there being no fixed equipment; being self-contained, requires no outside equipment; loads at curb edge.

The trolley vehicle had nearly all the advantages of the tram and others in addition, such as:—Ability to pass round an obstruction; higher average speed and increased receipts; the most silent vehicle in public service; low "all-in" costs. It had not the speed of the motor bus on the open road; was held up should the supply of electricity be cut off the overhead—an unusual occurrence. It could not overtake another trolley vehicle, and required overhead equipment like the tramcar. It was, however, a totally British product and derived its power from home produced fuel.

Experience with the trolley vehicle at Bradford proved that it had a useful life of approximately 10 years, but in the case of the motor omnibus it was the practice in Bradford to write these off over a period of 4 years, as it was anticipated that after that period they would not be economical to operate. Any international complications could easily check and, perhaps, prevent the import of oil fuel, with dire results to motor transport. Beyond the tax which the Government derived from petrol the bulk of its cost went abroad, whereas all money spent on trolley vehicles remained in the country. It paid higher rates than the bus, thus reducing local rates.

General improvements and more efficient pneumatic tyres had given the trolley vehicle an assured place in the transport world, and had made it the most serious rival of the tramcar for all kinds of town traffic.

Comparing operating costs of tramcars, trolley vehicles and motor buses, Mr. Wilkinson gave figures which, he said, showed that the trolley vehicle was the most economical for dealing with all services up to 18 minutes frequency, after which the motor bus became the most economical.

In conclusion, he pointed out that in the trolley vehicle, tramway authorities, particularly those whose rails meet but are unable to inter-run owing to differences of track gauge, had a traffic instrument in their hands capable of giving the most efficient and economical service between towns and on which they could have protective fares.

It was interesting to try and visualise how many (if any) electric tramway systems would be in operation to-day if motor buses and trolley vehicles had been in their present state of efficiency about 30 years ago. Had these two types of vehicles been dealing with all the traffic, it was difficult to imagine anyone proposing a system of laying steel girder rails in the road and running cars thereon as a better means of transport, not to mention the heavy financial burden that would be added to the operators' costs for road construction and maintenance.

Institute of Transport.

Metropolitan Graduate and Student Society Re-union.

THE Seventh Annual Re-union of the Metropolitan Graduate and Student Society of the Institute of Transport was held at the Florence Restaurant, Rupert Street, W, on Thursday, 16th January, 1930.

About one hundred members and their friends, including many ladies, sat down to dinner; among those present were Sir Josiah Stamp (President of the Institute), Mr. Roger T. Smith (Past President), Mr. and Mrs. F. G. Bristow, Messrs. H. T. Chapman, A. W. Arthurton, P. H. Price, W. V. Wood, C. J. Spencer, C. E. Sherrington, H. R. Campfield (Members of Council), Sir Ernest Moir and several other prominent members of the Institute. Invitations were accepted by Sir Sefton Brancker and other members who were unavoidably prevented from being present.

The Chair was taken by Mr. A. W. Coombs (Chairman of the Society), and the Toast of the Society was proposed by Sir Josiah Stamp in a delightfully humorous and witty speech admirably suited to the occasion. Mr. A. F. Belcher (Vice Chairman) submitted the Toast of the Visitors, which was replied to by Mr. F. G. Bristow.

An excellent concert was provided, and a very successful evening was brought to a close by the singing of "Auld Lang Syne."

Road Vehicles—Great Britain.

A RETURN has been issued by the Ministry of Transport giving particulars of the gross receipts from the taxation of Road Vehicles, for the period from 1st December, 1928, to 30th November, 1929, and of the number of motor vehicles registered for the first time during the month of November, 1929. Copies (price 2/6) can be obtained from H.M. Stationery Office, Adastral House, Kingsway, W.C.2. The gross amount received in payment for licences issued during the twelve months ended 30th November, 1929, was £26,301,965, compared with £25,521,052 in the corresponding period of the previous year. The gross amount is subject to deductions in respect of rebates, refunds, statutory deductions, including costs of collection and administration and the proportion due to the Exchequer, under the Finance Act, 1926, from the net receipts of the taxation of motor cycles and vehicles taxed on horse-power. Particulars are given of the total number of licences issued and surrendered during the twelve months to the 30th November, 1929, and of the approximate number of licences current on that date. The total number of motor vehicles, excluding tramcars and trade licences, was approximately 1,863,000, compared with 1,758,000 in the corresponding period of the previous year. The total number of mechanically propelled road vehicles registered for the first time in November, 1929, was 19,058, compared with 18,843 in November, 1928.

Federation of Chambers of Commerce of the British Empire.—His Royal Highness, the Prince of Wales, has graciously consented to attend the inaugural session of the Twelfth Triennial Congress of the Federation of Chambers of Commerce of the British Empire at the Guildhall, London, on Monday, May 26th, and open the proceedings with a short address of welcome to the Empire delegates.

Motor Coach Licences. — Manchester Corporation Watch Committee has sanctioned the following applications by motor coach proprietors for permission to run omnibus services from the city:—Central Motor Tours, Manchester; F. A. and H. Dean, Newton Heath; York Motors, Chorlton-cum-Hardy; J. H. Hodge, Chorlton-upon-Medlock; R. T. Leach and Son, Harpurhey; George F. Wilson, Newton Heath.

Liverpool Short Cart and Motor Owners' Association.

DISSATISFACTION with the appalling lack of uniformity in the rates of motor hire was expressed at the 21st Annual General Meeting of members of the Liverpool and District Short Cart and Motor Owners' Association, held at the Carlton Restaurant, Eberle Street, Liverpool, on 29th January.

Mr. C. Harvey presided, and amongst those present were:—Messrs. H. Prescott, John Mason, William Parr, W. Harding, J. D. Rotheram, A. J. Roberts, J. R. Leese, Harold Jones, J. J. McKnight, H. Carruthers and F. S. Jones (acting Secretary).

Arising from the minutes Mr. H. Prescott said that although the Short Cart and Motor Owners' Association was only a small and young association he thought there should be a closer attachment with the National Road Transport Employers' Federation. This did a great amount of work, and dealt with many questions of interest and concern to members of that Association. The Federation was interested in all forms of local and national transport, and it was desirable that Liverpool contractors should know what was being done up and down the country.

Mr. McKnight explained that the Association was affiliated to the National Road Transport Employers' Federation, but on the ground of expense no one from the Association attended its meetings during the past year.

Mr. J. J. McKnight submitted the accounts for the year ended 31st December, 1929, and on the proposition of Mr. W. Parr, seconded by Mr. H. Carruthers, they were unanimously adopted.

The Chairman, after thanking the Committee and the officials of the Association for their services during the past year, remarked that trade had not been as good as it might have been, neither was the membership of the Association as strong as all would like to see it, but this was the effect of bad trade. By plodding on as they had been doing, he was sure that in due course many new members would be enrolled. No matter whether a man was a horse owner or a motor owner engaged in local work, he should be a member of the Association, and all of them should be adequately remunerated for the work they had to do. If the Association got the support it should get, there would be no finer organisation in the city.

Concerning rates, there was no justification for anyone to be employed at remuneration that was not economic. In the horse owners section, the Association had a stabilised rate for horses and teams that were hired to any contractor or public body. In the motor section entirely different conditions prevailed. What happened when one made application to participate in a contract? The first question asked was "How much do you require"? The motor owner was entitled just as much as the horse owner to an adequate return for his work and on the capital he had invested on his rolling stock. For local haulage there should be a recognised price, and this should be observed throughout the city in the same way as was the rate for the hire of horses. The Association could never function as it ought to do until it was able to enrol motor owners in greater numbers. The solution of the difficulty was organisation. If motor owners would combine in the Association he was confident some good would result. He was happy to be able to report that since the last meeting four new members had enrolled in the motor section.

Mr. H. Carruthers took the chair pending the re-election of the Chairman, Mr. Harvey, whose name he again submitted to the meeting. Mr. Harvey was unanimously re-elected.

Mr. H. Carruthers was re-elected Vice-Chairman. The Committee were re-elected en bloc.

The Chairman expressed the appreciation of the Committee to Mr. McKnight for his able control of the finances of the Association since he had been in office. He moved his re-election as Hon. Treasurer. Mr. H. Carruthers seconded, and Mr. H. Prescott in support, remarked that no one had done more to build the Association than Mr. McKnight. Responding, Mr. McKnight said he was proud to belong to the Liverpool Short Cart and Motor Owners' Association because it was a fighting Association.

Mr. W. F. Ewbank was re-elected Secretary and Mr. J. T. Lunt and Mr. Gilbert Jones were re-elected auditors.

The Chairman voiced the thanks of the Meeting to Mr. F. S. Jones, the Secretary's Assistant, for the efficient manner in which he dealt with the business of the Association during the past year.

Liverpool Cart and Motor Owners' Association.

THE Annual Meeting of the Liverpool Cart and Motor Owners' Association was held at the Common Hall, Hackins Hey, on 22nd January. The President, Councillor W. T. Roberts, presided, and reviewing the work of the Association during the past year, mentioned that the Association was represented at the recent conference of employers and employees representatives called by the Lord Mayor of Liverpool, Mr. Lawrence Holt, to consider the question of casual labour in the port of Liverpool, when resolutions were adopted giving full support to the Lord Mayor in collecting all the facts concerning the effects of casual employment in the city and port, and requesting him to call a further meeting when they are ready for presentation to the conference. Mr. Roberts next dealt with the Road Traffic Bill. With the general provisions of this Bill the Committee were not in disagreement, but there was one clause which could not be allowed to pass unchallenged. He referred to Clause 18 which proposed to restrict the working hours of motor men to not more than five hours at a stretch and not more than ten hours in any consecutive 24 hours. It would be obvious to members of the Association that a limitation of that character would seriously interfere with the operation of motor vehicles in both local and up country work. The views of the Liverpool Cart and Motor Owners' Association, along with those of other interested bodies, had been put before the National Road Transport Employers Federation, and the Federation had had an interview with the Minister of Transport. It had not been possible to get the clause deleted, but negotiations were in progress with the object of getting less irksome conditions.

As there were no vacancies for the Committee the retiring seven members were unanimously re-elected:—Messrs. R. W. G. Barnett, W. J. Cornes, W. J. Harper, R. S. Harrison, Charles Hinns, Frank Jones, and T. H. Pearson.

The following trustees were also re-elected:—Messrs. W. T. Roberts, W. Edwards, and J. C. Harper.

The meeting concluded with a vote of thanks to Mr. W. T. Roberts for his services as President during the past 12 months.

Manchester Transport Owners' Association.

REPRESENTATIVES of the Commercial Motor Users' Association (Manchester Area) and the Manchester Transport (Owners') Association, Ltd., joint organisation, put up strenuous opposition at the Manchester Town's Meeting to seven clauses in the Manchester Corporation (General Powers) Bill as follows:—(36) Power to run omnibuses beyond the city, and to carry passengers, luggage, goods and parcels; (40) to substitute omnibuses or trolley vehicles on any route in place of tramcars; (48) to prohibit any person to sell or offer for sale any article or thing from any vehicle in the street without a permit from the Corporation; (70) to stop all traffic at every tramway stopping place when a tramcar is standing; (71) to compel insurance for all Hackney Carriage Proprietors; (72) to appoint stations and places for the starting of omnibuses, and also points for setting down passengers; (73) to apply the provisions relating to steam locomotives as to consuming their own smoke to any heavy motor car.

The opposition, however, was unavailing, although the clause dealing with the insurance of vehicles was passed by a majority of only ten votes. Some concession was obtained in the case of clause 48. The Town Clerk agreed to confer with Mr. Howard Robinson, A.M.Inst.T., Secretary of the C.M.U.A., and Manchester Transport (Owners') Association to redraft the clause concerning the sale of goods from vehicles without interfering with the sale of coal, milk, fruit, vegetables, fish, etc., to householders.

The majority of the proposals mentioned are already being dealt with in the Road Traffic Bill, now before the House of Lords, and it is the view of the Joint Organisation that no legislation should be promoted in Manchester which is different from that operating all over the country. The Manchester Committee of Road Users, of which Mr. Robinson is Secretary, is considering what steps to take before the date of the petition.

Good progress is being made with the scheme of co-ordination, which is being formulated by the Motor Coach Section of the Manchester Transport (Owners') Association, Ltd., and district committees are engaged in completing the details.

British Industries Fair.

Castle Bromwich, Birmingham. 17th to 28th February, 1930.

The following are brief particulars of such exhibits at the British Industries Fair, Birmingham, which are of interest to the transport industry:—

Accles & Pollock, Ltd., Oldbury, Birmingham. As the manufacturers of every type and quality of weldless steel tubes, the examples shown on their stand will fully demonstrate their claim that practically every manufacturing industry can use tubular construction to advantage.

Aero Hire, Ltd., Clarence Chambers, 39, Corporation Street, Birmingham. The business of this firm is that of air taxi work, short flights and giving tuition in flying. They will have a display of aero photographs of works, etc.

W. & T. Avery, Ltd., Soho Foundry, Birmingham. This famous firm of weighing machine manufacturers, which now celebrates the two-hundredth anniversary of its existence, have in addition to a display of weighing machines, a petrol pump manufactured by them of a type well known on roadsides all over the world.

W. Blackwell Oil Company, Victoria Oil Works, Aston, Birmingham. There will be a range of "Nulsec" motor oils to suit every type of motor. An important claim for "Nulsec" oils is that they are non-absorbent. Various process oils for industrial purposes will also be shown, amongst which will be a cutting oil of special interest. An entirely new product will also be exhibited for the first time. It is a lubricant for gears and back axles, manufactured in two grades—light and heavy, the light grade being an oil and the heavy a semi-solid; it is to be known as "Grey-gear." The claim is that it shows a saving of 25 per cent. over other gear oils.

John Booth & Sons, Hulton Steelworks, Bolton. The exhibit will include fire-proof doors and shutters suitable for garages, welded tanks for petrol storage, supplied in any capacity from 300 gallons to 15,000 gallons.

Bristol Authority, Port of, Queen Square, Bristol. The exhibit will consist of a large scale model of the Port of Bristol showing the equipment for handling goods passing through the docks and will include the entrance channel, graving dock, ships, cranes, railways, transit sheds, warehouses, granaries and other items. There will also be a daylight cinema showing the handling of traffic at the port.

British Road Tar Association, 17, Grosvenor Gardens, London, S.W.1. The theme of the display will be to present a comprehensive survey of the use of tar for road-making, and will include samples of road tar complying with the British Standards Specifications.

Brookes (Oldbury), Ltd., Oldbury, nr. Birmingham. The exhibit will include geared guillotine shears for cutting up to 6 ft. by 1/8 in. mild steel sheet. An "Arno" open-fronted geared power press and a "Player" pneumatic cold planishing hammer.

Canadian Pacific Railway Co., 62-65, Charing Cross, London, S.W.1. The stand will be devoted to advertising the Company's many world-wide services.

Cellon, Ltd., Cellon Works, Upper Ham Road, Kingston-on-Thames. The exhibit will consist of "Cerric" cellulose lacquers and "Cellon" aeroplane dopes. These materials are well known and much used in the aeroplane and motor manufacturing industry.

Chloride Electrical Storage Co., Ltd., Clifton Junction, Manchester. Storage batteries for a variety of purposes will be exhibited by this firm, whose works are the largest battery manufactory in the British Empire. There will be batteries for practically every purpose.

Clear-Hooters, Ltd., 79-81, Lombard Street, Birmingham. The display will consist of electric horns, a special feature being the "Clarion."

County Chemical Co., Ltd., "Chemico" Works, Birmingham. The exhibit will include "Chemico" science and industry specialities which will appeal to manufacturers of every description. These specialities, however, appeal more particularly to motor manufacturers and users.

Coventry Chain Co., Ltd., Spon End Works, Coventry. There will be roller and inverted tooth chains for power transmission, stud, balance and block chains, complete with chain drives, and there will be an elevator for hoisting or lowering goods.

Crossley Brothers, Ltd., Openshaw, Manchester. There will be exhibited a Crossley Diesel engine of 220 b.h.p. at 350 r.p.m. A three cylinder vertical Diesel engine of 82 b.h.p. These engines are suitable for belt or rope drive.

Dennis Bros., Ltd., Guildford. The exhibit will be confined to lawn mowers.

Evertite Locknuts, Ltd., Fieldgate, Walsall, South Staffs. The "Evertite" locknut will be exhibited, which is a one-piece nut simple in operation which can be used repeatedly without injury either to its own or the bolt thread.

"Fastnut," Newnham Road, Wood Green, London, N.22. The firm's patent locknuts will be exhibited, also patent spanners and wrenches.

Fescol, Ltd., 101, Grosvenor Road, Westminster, London, S.W.1. Samples of the "Fescol" system of depositing metals will be shown which should be of great interest to the motor transport industry.

General Electric Co., Ltd., Magnet House, Kingsway, London, W.C.2. Various electric furnaces, oil heaters and melting pots which will be shown in operation.

Hollings & Guest, Ltd., Thimble Mill Lane, Birmingham. Working exhibits of various hydraulic presses, hand and power operated.

India Rubber, Gutta Percha & Telegraph Works Co., Ltd., 106, Cannon Street, London, E.C.4. The exhibit will consist of a range of rubber and ebonite manufactures.

R. A. Lister & Co., Ltd., Dursley. A representative exhibit including Lister auto trucks, light plants, pumps and a range of their well-known petrol engines.

Low Loaders, Ltd., Leysfield Road, Goldhawk Road, Shepherd's Bush, W.12. The exhibit will consist of a B-1 new type low loading truck fitted with stillage gear and elevating platform, price £190 plus £30 extra for the stillage gear. Also a 25-cwt. truck, price £110.

M.C.L. and Repetition, Ltd., Pool Lane, Langley, Birmingham. Automatic screw machine products, bright bolts, nuts, screws, studs, washers, terminals and repetition work of every description for the electrical and engineering trades.

W. & C. Pantin, Ltd., 147, Upper Thames Street, London, E.C.4. An interesting exhibit of gravity roller conveyors and an inclined drag type elevator for raising packages.

Parker, Winder & Achurch, Ltd., Broad Street, Birmingham. The exhibit will consist mainly of the "Parwinac" oil burner for industrial purposes.

Ransomes, Sims & Jefferies, Ltd., Orwell Works, Ipswich. Mainly motor lawn mowers.

"Rose" Multi-Service Pumps, Ltd., 203, North Street, Leeds. Oil installation pumps for garages and service stations.

Severn & Canal Carrying Co., Ltd., 16, Bridge Street, Broad Street, Birmingham. The exhibit will take the form of a service and enquiry bureau. The stand will be largely furnished with photographs showing various types of craft used by the Company, of warehouses and the like.

H. C. Slingsby, 89, Kingsway, London, W.C.2. The exhibit will include a comprehensive range of the firm's well-known warehouse trucks and general equipment.

Spiral Tube & Components Co., 12, Pembroke Street, King's Cross, London, N.1. There will be a display of radiators for use in conjunction with various types of internal combustion engines.

Sternol, Ltd., Royal London House, Finsbury Square, London, E.C.2. A full range of Sternol lubricating oils and greases, including straight and soluble cutting oils, turbine and transformer oils, machinery and steam cylinder oils.

Tangyes, Ltd., Cornwall Works, Birmingham. The firm will exhibit various heavy oil and fuel oil engines and pumps in motion. There will also be a range of the firm's well known lifting tackle.

Herbert Terry & Sons, Ltd., Redditch, England. This well-known firm of spring and presswork specialists will exhibit a comprehensive range of their products.

Upper Cylinder Oils, Ltd., 27, New Street, Worcester. The two items to be exhibited are the firm's two specialities, "Miracle" oil and "Mirol." "Miracle" oil is for mixing with the petrol for injection into the combustion chamber, the roof and sides of which it lubricates because it does not carbonise under the intense heat. "Mirol" is a lubricating oil for very light machinery.

C. C. Wakefield & Co., Ltd., Wakefield House, 30 & 32, Cheapside, London, E.C.2. High class lubricants and cutting oils together with lubricating appliances.

City and Suburban Carriers, Ltd.

Annual Staff Dinner.

THE Annual Staff Dinner of the City and Suburban Carriers, Ltd., the well-known London and Suburban Carriers of Stepney Green, London, E., was held at the London Tavern, Fenchurch Street, E.C., on January 25th last.

One can best describe this yearly gathering, when the Directors of the Company entertain their employees, as a large New Year's party when Father gathers round him his many children. **Mr. Llewellyn Barter**, the Managing Director of the Company, who was in the Chair, is indeed a father to his people, and small wonder that the employees responded with such good will to the calls made upon them during last year that the Company broke all previous records.

Mr. F. Gerner (Herd & Gerner, Ltd.), proposing the toast of "The Company," said he remembered the City and Suburban Carriers when in infancy; to-day it was a very strong concern. "Carriers come and go but the City and Suburban Carriers have came to stay." (Applause.) He believed that the secret of business success was to satisfy one's customers, and that was the object of the Directors and staff of the Company. Occasionally his own firm had a bouquet thrust upon it, but to the City and Suburban Carriers bouquets were presented fairly frequently. He rejoiced that the Company had so prospered, and they looked forward to its continued success.

Mr. J. V. Hatch (Director), responding, said that the City and Suburban Carriers started in a small way, not so many years ago, with the object of providing a much needed express delivery parcel service in London at competitive rates, and he was pleased to say that the Company was able to register another record for the past twelve months. (Applause.) That the nourishment they had given their child had suited it was proved, yet, like all growing children, it suffered from what he might term "growing pains"; for instance, many of their customers wanted their goods collected at about the same time in the evening, and all wanted their goods delivered by nine o'clock in the morning. (Laughter.) By a little dovetailing and overlapping, coupled with other little devices, he believed they succeeded in satisfying their customers. The Company suffered from one growing pain, not peculiar to itself but which applied to all growing companies, and that was the difficulty of providing adequate accommodation. Just over two years ago the Company acquired land and built what they considered to be an ideal distributing depot; they had hardly finished building, however, when it was found necessary to buy new property, pull down the new buildings and proceed to provide much larger ones. He thought they had now formulated plans to enable the business to extend sufficiently that in the near future they would be able to handle double the volume of traffic they were dealing with at the present time. (Cheers.)

Mr. J. Partridge, one of the Company's outdoor representatives, proposed the health of the visitors. He said there was a proverb "Brevity is the soul of wit," but it did not apply to an outdoor representative. (Laughter.) Their visitors were the friends of the Company, and he thought they were to be congratulated upon having such carriers as the City and Suburban Carriers to do their work; he really did not think they could be bettered. (Laughter.)

Mr. Richards, responding on behalf of the guests, spoke in eulogistic terms of the ability of Mr. Partridge, and concluded this part of his speech by saying, "If that does not get him a rise it ought to." (Loud laughter.)

He was glad to hear Mr. Gerner say that the City and Suburban Carriers had come to stay, and he hoped that the Company would be in existence for many years to come. Mr. Hatch had referred to little difficulties the Company had to face, and mentioned delay caused to their vans when their driver had to wait for a signature for a parcel whilst the lady of the shop served one of her best customers. Mr. Hatch might like to give his men a little tip. The following happened to one of his customers:—A delivery driver rushed into his shop with a parcel and shouted: "Sign quickly, Sir, the old bus is on fire"; the customer signed the sheet and the driver rushed out and jumped on to his footboard; the customer followed and found that the fire was only the old Ford boiling, and off she went like the Flying Scotsman. (Loud laughter.)

Mr. Alderwick and Mr. Watts also replied on behalf of the visitors, the latter remarking that the clients of the City and Suburban Carriers appreciated the way in which the Company gave immediate attention to every suggestion put before them.

Mr. Llewellyn Barter, who was enthusiastically received, proposed the health of the staff. It was, he said, the toast that it always gave him the greatest pleasure to propose. His staff was one of the best. The drivers were out in all weather and seldom did they lose time. People said to him occasionally, "One of your drivers cut me off in so-and-so." (A voice: "We were out to win." Laughter.) He hoped, however, that the Company's drivers would always be courteous on the road, and, of course, they must never close in a car belonging to one of the Company's customers. (Laughter.) The Office Staff had done excellent work, whilst the bank staff consisted of willing men. The Company's engineers had a difficult task which they accomplished in an admirable way, and the Company's outdoor representatives inspired confidence wherever they went. (Applause.)

During the past year the Company had handled just over three million parcels (loud applause), and they had in service approximately 150 motor vehicles. With a view to increasing the speed with which the Company could deliver parcels they were installing conveyors which would also have the effect of lessening the heavy work. He counted upon the loyal support of the staff during the coming year, and their aim must be to reach the four million parcels mark.

Mr. H. V. Redburn, responding, said how gratified the employees were at the kind way in which Mr. Barter had expressed his appreciation of their efforts. He then proceeded to refer to the great support the staff received from the Board of Directors. In this connection, Mr. Redburn mentioned that during the Christmas rush Mr. Llewellyn Barter and Mr. J. V. Hatch personally assisted the night staff in the handling work.

Mr. J. Lamboll proposed the health of the Chairman. He said that Mr. Barter was a born organiser and was held in the greatest respect and esteem by the staff.

Mr. Barter, responding, said that he had some really good helpers. Mr. J. V. Hatch was one of his great supporters and Mr. Frank Taylor was another, and with regard to the latter gentleman, his heart was in the right place even if he was a strict disciplinarian. (Laughter.) On the mechanical side he had Mr. Hedges, and other able assistants were Mr. Redburn and Mr. Cracknell. Without such support the Company could not prosper as it had.

Census of Mechanically Propelled Road Vehicles—Great Britain. — A return has been issued by the Ministry of Transport giving particulars of the number of mechanically propelled road vehicles for which licences were current at any time during the quarter ended 30th September, 1929. Copies (price 1s.) can be obtained from H.M. Stationery Office, Adastral House, Kingsway, W.C.2. The total number of vehicles recorded was 2,196,714 compared with 2,052,539, during the corresponding period of 1928. The return includes details of the numbers of vehicles of different classes licensed in each Registration Area, and an analysis of the principal classes according to the various taxation scales.

Tramways Return.—A return has been issued by the Ministry of Transport giving particulars of the accounts and statistical returns of the Tramway Undertakings in Great Britain for the year ended 31st December, 1928, for companies, and 31st March, 1929, for local authorities, and is now on sale at His Majesty's Stationery Office, price 10/6. In addition to summaries of the year's results, the return contains full particulars regarding the capital, income and expenditure, volume of traffic and operating results of each undertaking. The return also gives particulars of the working of Trackless Trolley Undertakings in Great Britain. The number of passenger journeys during the year was 99,065,544.

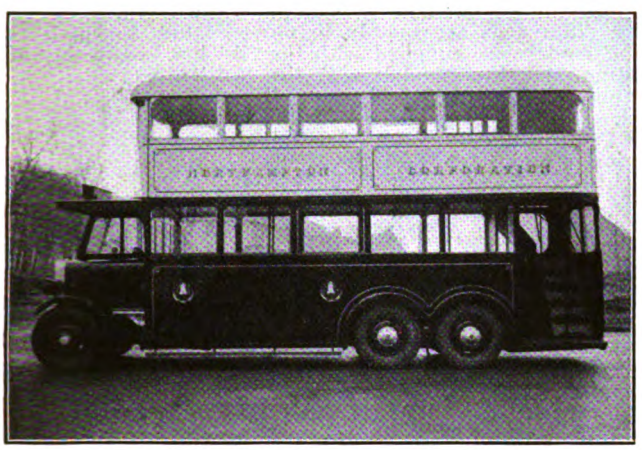
Interesting Guy Chassis.

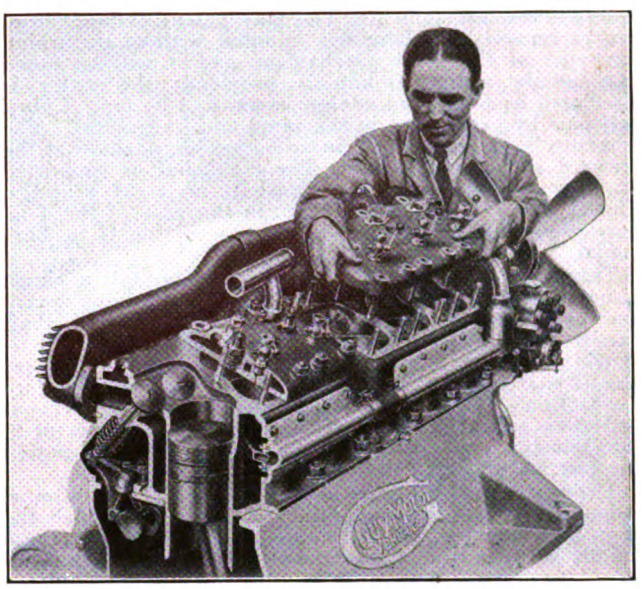
GUY MOTORS, LTD., of Fallings Park, Wolverhampton, are, as our readers are well aware, manufacturers of very comprehensive ranges of passenger and goods vehicles. During a recent tour of the Guy works we saw practically the whole of both ranges in the various construction stages, but for the purpose of this article we propose confining our descriptions to the six-wheel and the 48-seater double-deck bus chassis, which appear to us, without depreciating the utility and value of other passenger models, to be the most interesting.

THE SIX-WHEEL PASSENGER CHASSIS.

The advantages provided by the six-wheel design, such as the halving of the rear axle weight, the elimination of wheel spin, the practical elimination of skid, increase of adhesion, reduction of shock transmitted to the chassis frame, are points which we believe our readers now thoroughly understand. The six-wheeled vehicle is, in fact, entering into favour so rapidly that it may ere long be regarded as the normal type.



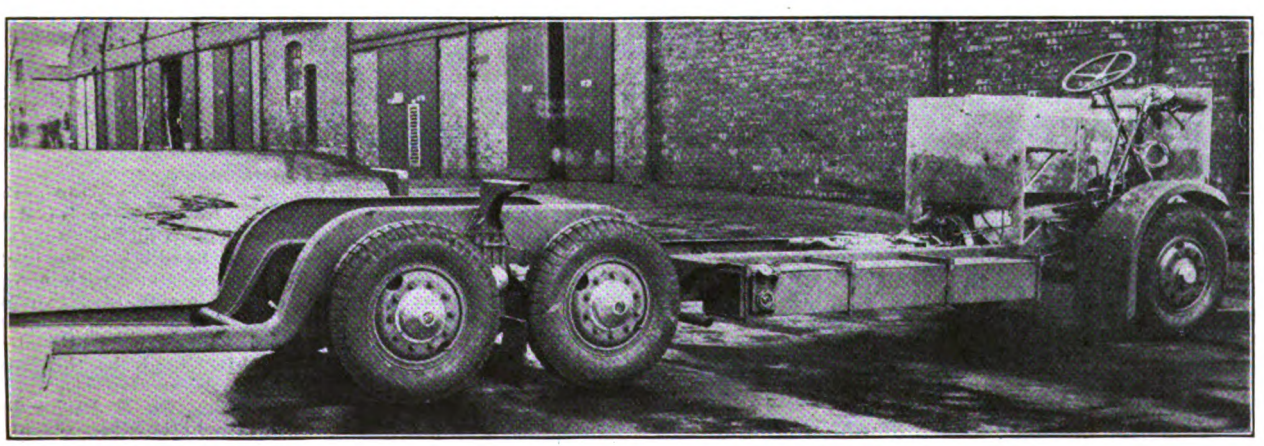
THE GUY DOUBLE-DECKED 66-72-SEATER BUS.



THE GUY 6-CYLINDER ENGINE.

Guy Motors are, we believe, the pioneer builders of rigid six-wheel bus chassis for single and double-deck bodies. There is, it must be understood, a great deal of difference between the rigid six-wheeler as developed for army transport over rough country, and the rigid six-wheeler as developed for passenger and goods transport over ordinary roads. The former may be described as the acrobat amongst motor vehicles, whilst the latter is designed to provide smoothness of running primarily, and it has the additional advantages as mentioned above, as compared with the four wheel type of vehicle. In short, the bogey carriage of the passenger rigid six-wheeler is a plain straightforward piece of engineering work, free from the elaborate mechanism necessary to permit the contortions to which the army type of vehicle is subjected.

The Guy bogey carriage consists of a pair of underslung worm axles, complete with differentials, connected by a universally jointed driving shaft. Centrally, between the two axles, there is a tubular cross member bracketed to the side frame members. At each end of the cross member there is an independent spring swivel bracket mounted on a floating bronze bearing. Half elliptic springs are, at their centres, anchored above and below each spring swivel, and the spring extremities are bushed and connected with the axle brackets. There are no torque members, the torque being taken through the springs. Should the bogey carriage require over-hauling, by unfastening the eight cross tube bracket bolts and after disconnecting one universal joint, the brake rods and jacking up the frame, the entire bogey carriage can be wheeled away from the chassis. All wheels are mounted on taper roller bearings. Both foot and hand brakes operate on the four bogey wheels in 18 in. diameter brake drums. The foot brake is vacuum servo motor assisted. The axles are offset to the nearside for low loading and are fully floating, the weight of the vehicle and load being carried on the axle housings, therefore the whole of the transmission can be removed without jacking up the vehicle.



THE GUY RIGID SIX-WHEELED BUS CHASSIS.

The Engine. The power unit is a first-class piece of engineering work and has proved to be decidedly successful in service. It is of the modified overhead type or, to

Digitized by Google

be more accurate, it may be said to be a compromise between the overtype and the side type providing, by the Guy patented valve design and detachable cylinder head, the advantages of both types. Such is the claim made by the makers which we, in our turn, believe is justified.

The engine has six cylinders, 4 in. bore and 5½ in. stroke, R.A.C. rating being 38.4 h.p. Alternatively, an engine of 4½ in. bore and 5½ in. stroke may be fitted, the R.A.C. rating being 43.4 h.p. The principal features of the engine are: The cylinder head and valve arrangement, which can be best understood by reference to the accompanying illustrations. It will be seen that the camshaft valve and rockers are placed alongside the cylinders with the water jacket between, therefore, they are not subject to high temperatures which has been one of the causes of overhead valve trouble in the past. The valve stems are automatically lubricated, and the valve operating gear is enclosed by quickly removable aluminium covers with thumb screw attachment. The Guy patent cylinder head can be removed in about five minutes, without disturbing any part of the valve mechanism, and it will be noted that ample water cooling is provided; the water is circulated by pump and cooling is assisted by fan. Lubrication is by gear pump in the sump and by troughs. The magneto is placed high up in an accessible position at the forward end of the engine. The crankshaft is supported on seven bearings and the camshaft on eight bearings. The engine develops 50/90 b.h.p. in the case of the 4 in. bore model and 58/105 h.p. in the case of the 4½ in. bore model.

Transmission. Power is transmitted through a single disc fabric lined clutch provided with multiplying levers and clutch stops, and a short universal jointed shaft carries the power to the four-speed gear box, which is provided with right hand control. A feature of the gear box is that additional central bearings are provided (see illustration) to the main and layshafts which prevent deflection and give much quieter running. Adjustment to the selector mechanism can be made without opening the box and draining the oil.

The engine and the gear box are carried on a subframe, independent of the main frame, the design of which the firm has patented. It is mounted universally at three points between the main frame members, and thus all stresses resulting from main frame distortion are insulated from the engine and gear box. The rear end of the subframe is carried on brackets supported by a cross member of the frame, thus independent movement is provided. Another advantage of this construction is that, in the event of an accident to the main frame, the three subframe suspension points may be unfastened and the subframe with the engine, clutch and gear box, universal joints complete with the propeller shaft, can be supported by jacks and the main frame lifted over these units thus effecting a considerable saving in time. Transmission to the front bogey axle is through a two-piece tubular propeller shaft with Hardy Spicer flexible couplings.

Steering. The steering is by cam and roller, and the steering column can be adjusted to any suitable angle. The steering rods are of strong tubular section and they form oil reservoirs, with wick fed to the patent ball joints. Provision is made for replenishing the oil at intervals, but this is only necessary after many thousands of miles running.

With regard to the front axle: This is provided with renewable bushes at the bottom of the swivel pins and roller bearings at the top. The load on the swivel pin is taken through a thrust bearing, and lubrication is taken from an oil reservoir above the swivel pin. The hubs are mounted on adjustable taper roller bearings.

Frame. The frame is well braced with strong tubular cross members. In addition there is a brake cross shaft consisting of 2¼ in. high tension tubing mounted on spherical bearings. This shaft supports the brake transmission rods.

The chassis is automatically lubricated throughout, all points requiring lubrication being connected with accessible oiling galleries provided with high pressure oil granulators.

The wheels are shod with 36 in. by 6 in., 34 in. by 7 in., or 36 in. by 8 in. pneumatic tyres according to the size of the body.

The chassis is supplied in five different models though the differences are mainly in minor detail, for instance two models are supplied with the 38.4 h.p. engine R.A.C. rating, and three models with the 43.4 h.p. engine R.A.C. rating; the two former have 16 ft. 7 in. and 19 ft. 1½ in. wheelbases respectively, whilst the latter have 16 ft. 7 in., 18 ft. 6 in., and 19 ft. 1½ in. wheelbases respectively. The prices are (1) for the 38.4 h.p. model, 16 ft. 7 in. wheelbase, £1,190; (2) with 19 ft. 1½ in. wheelbase, £1,295; (3) the 43.4 h.p. model, with 16 ft. 7 in. wheelbase, £1,495; (4) with 18 ft. 6 in. wheelbase also £1,495, and with a 19 ft. 1½ in. wheelbase, £1,525.

THE 48/51-SEATER CHASSIS.

This chassis is similar in all respects to the model above described with the exception that it has a single rear axle instead of a four-wheel bogey. The rear axle is off-set to the nearside and is under-worm driven. The chassis is built for 48/51-seater bodies. The gross carrying capacity, including the body, is 5 tons 5 cwt.

GENERAL.

We were much impressed during our visit with the activity of the Guy works and the large number of complete vehicles ready for dispatch or about to be dispatched to their destinations. Amongst these were noticeable six 20-seater chassis for the Scottish General Transport Company, 31-seater "Conquest" vehicles for the Western Welsh Omnibus Company, 31-seaters and 20-seaters for the National Omnibus Company, 35-seaters for the Great Yarmouth Corporation and several other corporations and private operating firms, and it should be observed that these are passenger type vehicles only. With regard to goods vehicles the works appeared to be equally busy, but this must be the subject for a separate article.

In Parliament.

Mersey Docks and Harbour Board Schemes. Asked the gross amount of the schemes for the relief of unemployment submitted by the Mersey Docks and Harbour Board up to the 20th January last, and the total amount approved to date? **Mr. Thomas** (Lord Privy Seal) said that three schemes, total value of over £2,250,000, had been submitted and that two, value nearly £2,000,000, had been approved. The other scheme had been approved in principle, subject to an examination of detail, which was nearly complete.

Slow Moving Traffic. Mr. Day asked the Home Secretary how many prosecutions had taken place in the Metropolitan police district for the 12 months ended to the last convenient date, with reference to the bye-law which had been in force since 12th March, 1914, with regard to slow moving traffic keeping near the kerb. **Mr. Clynes** said that there were no prosecutions under the bye-law referred to. Two persons were reported and dealt with by caution.

Subsidised Motor Vehicles. Mr. Ayles asked the Secretary of State for War the number of privately-owned motor vehicles subsidised by the War Office, the purpose of such subsidies and the total amount of money so spent? Replying, **Mr. Shaw** said that the scheme provided for subsidising 1,000 vehicles at £40 a year each, and a sum of £40,000 was included in the Army Estimates for the subsidies; the actual number of vehicles enrolled was, at the moment, 989. The vehicles were available to be purchased by the Department in emergency, and the object of the scheme was to save the heavy expenditure which would otherwise be necessary in providing, storing and maintaining a reserve of such vehicles as War Department property.

Motor Vehicle Headlights. Sir P. Richardson asked the Minister of Transport whether he had considered the danger to users of vehicles and to pedestrians arising from the increasing number of dazzling headlights on motor cars; and whether he was taking any steps with a view to minimising the danger? **The Minister of Transport** said that the question of the further regulation of motor vehicle headlights was under consideration in the light of the recommendation on the subject made by the Royal Commission on Transport in their First Report.

Vibration Caused by Heavy Traffic. Sir P. Richardson asked the Minister of Transport whether his attention had been drawn to the excessive vibration caused by heavy motor vehicles and the serious damage occasioned to properties adjoining roads, and, if so, what steps he proposed to take to minimise damage and consequent loss to householders? **Mr. Herbert Morrison** said that complaints had been made to him from time to time on the subject. He thought there was reason to hope that the vibration caused by heavy traffic would diminish owing to the improvements which were continuously being made, both in road surfaces and in the design and construction of heavy vehicles. Encouragement was given to the equipment of the heavier types of vehicles with pneumatic tyres by a substantial rebate in taxation.

Motor Coach Organization in North America.

By a Canadian Correspondent.

DEVELOPING from a small organisation operating two or three jitneys on the streets of Vancouver, B.C., an open touring car between New Westminster and Vancouver cities, and another car between Vancouver and the International boundary line with an occasional trip to the seaside in the summer time, the B.C. Motor Transportation, Limited, is to-day the largest organisation of its kind in the Canadian Pacific Coastal territory.

TERMINAL DEPOT OF PACIFIC STAGES AND HEAD OFFICE BUILDING OF B.C. MOTOR TRANSPORTATION, LTD., VANCOUVER, B.C.

The B.C. Motor Transportation, Limited, has an elaborately constructed terminal depot in the city of Vancouver and has branches throughout the lower mainland of British Columbia. It operates the Pacific Stages throughout this territory and also has interstate certificates and operates an international service between Vancouver, B.C., and Seattle, Washington, in conjunction with an American organisation. The firm also operates the Grey Line Sightseeing Tours in Vancouver City and controls the Vancouver Transfer Company, the Vancouver Yellow Cabs, operates a Limousine Service and a branch of the Hertz Driv-Ur-Self.

As already stated, its first inter-state service was given by an open touring car way back in the days when the jitneys threatened to put street cars and other organisations of transportation out of business. I. W. Neil, general superintendent of operations for the B.C. Motor Transportation, Ltd., was the pioneer driver in those early days.

To-day, one million passenger miles per year are covered by the firm and 35,000 passengers are carried each month in its stages, six different regular routes being served by the company.

Inter-state service between Vancouver and New Westminster over the Pacific Highway, across the border to Seattle, Washington, is one of the big paying features of the firm's activities. At Seattle connections are made with motor coaches which connect with all points in California, Oregon and Washington, and through tickets can be secured at any of the company's depots or agencies throughout British Columbia for a coach trip to the most easterly state or even across the American border to Mexico by the Pacific Coast route.

Careful attention to the maintaining of a high standard of equipment and courteous service at all times are declared to be the creed on which the success of the B.C. Motor Transportation, Limited, has been founded. The summing up of the general points is to be found in the remarks of a prominent official of the company recently, when he stated: "It is not merely enough to provide transportation, a firm operating in a business such as ours must present an opportunity to the general public to travel between two points in the minimum of time, with the maximum of comfort and to derive the maximum enjoyment from the journey."

Accidents are little known in the records of the Pacific Stages. Like all other motor transportation firms there is a few of these accidents to mar its record but, nevertheless, the firm stands highest of all stages operating companies on the Pacific Coast in this connection and holds the confidence of the travelling public. All drivers are compelled to pass rigid tests before they are permitted to take over the wheel of a motor stage, and even then supervision of their driving is carried on for a considerable time before they are permitted to take out a coach on a regular run.

Standardisation of vehicles is coming into force on the Pacific stage system. At present 22 parlour coach type stages are operated, each being equipped with individual cushion seated chairs and the accommodation of the coaches ranges from 18 to 30 passengers. The interior trim of the coaches is carried out in Spanish leather and mahogany woodwork. Attractive curtains on the windows, shaded to blend with the general scheme of colour, give a touch of luxury to the appearance of the interior of the vehicles.

The successful development of the firm is attributed to one big factor practised by the firm, that of thorough mechanical inspection of the vehicles by the officials of the firm. Every night, when the coaches come into the garage, the engine, body and interior of the coach is thoroughly inspected. In addition to this nightly inspection, a regular chart is drawn up which shows exactly what equipment on the coaches must be replaced, repaired

LEFT: INTERIOR OF TERMINAL OF PACIFIC STAGES, VANCOUVER, B.C. RIGHT: LOADING PLATFORM AND BUS DRIVEWAY AT B.C. MOTOR TRANSPORTATION, LTD., TERMINAL.

Digitized by Google

or overhauled when a certain mileage has been reached.

A record is carefully noted in a book of any repair work done, no matter how small, together with the mileage done by the vehicle up to the time of the repair. A record is thus provided for checking up the additional mileage required for making the next regular inspection. It is pointed out by Mr. Neil, however, that no matter how carefully planned this system may be, it is not going to be successful unless the most thorough and rigid inspection is made nightly of all parts of the coach for the purpose of seeing that there is no necessity to carry out any repairs sooner than shown on the chart. In the course of this inspection, should it be found necessary to repair, change or substitute any portion of the equipment of the coach, or any part of the engine, the vehicle is at once held out of service until this work is performed.

A twenty-four hour service is operated at the B.C. Motor Transportation Garage, and employees of the firm take charge of all work connected with the vehicles of the firm. Frequently the coaches get scrapes or the interior may be torn by baggage, but this is immediately repaired and if necessary a section of the coach repainted on its return to the garage. By this means it has been the experience of the firm that the necessity for regular repainting their vehicles does not arise so frequently as in the case of firms who allow all paint repairs to be done when the coach is getting a new paint job. The policy of the B.C. Motor Transportation, Limited, is that their coaches' exterior must at all time be perfect, and no scratch, no matter how small, is allowed to remain on the vehicles.

It has been found essential, in the opinion of the firm, to equip motor stages on long distance operations with a sleeve valve motor for the purpose of eliminating the noise which is liable to get on the nerves of passengers. Six-cylinder engines are also used in all coaches for a similar purpose, while air brake control is provided on all vehicles operated by the firm.

A service was at once started to the flying field at Vancouver when its airport opened some months ago, and it is now possible to buy through tickets at the Vancouver depot of the company, not only for air journeys from Vancouver airport, but also for journeys by air from any of the ports in the United States with which it is possible to make motor coach connection.

A very handsome modern motor coach depot was erected in Vancouver when the B.C. Motor Transportation, Limited, first officially organised under that name, and a second depot on a less elaborate scale was built at New Westminster. The exterior of the depot at Vancouver is finished in stone and is of a particularly impressive character. There are long mahogany benches in the waiting room which harmonise with the colour scheme of the woodwork in the rest of the building. To one side of the room is a baggage office. At the other side, between two doors leading to the street, is the information bureau, while just across the room from this and between the two doors leading to the coach loading platform, is the ticket office. Rest rooms are situated on the mezzanine floor, while a lunch counter, candy, magazine and tobacco stands are located on the ground floor of the building with entrance from both the interior of the depot and from the street. These are operated by private individuals who secure the concessions from the firm. The actual loading of the coaches is done from a low platform running parallel with a long driveway which occupies approximately one-third of the ground floor of the depot, and into which the coaches drive for the purpose of both loading and unloading passengers.

The company has agents and waiting rooms at all points along its route in addition to these depots. In Seattle the inter-state buses operate into the depot of the Pacific Northwest Tractor Company. The latter company operates two motor coaches daily between Seattle and Vancouver, while the Pacific States operate two motor coaches on the same run. The American-owned coaches use the depot of the Pacific Stages on their arrival at Vancouver. Tickets on one line are also good on the other line, which thus gives to all intents and purposes a service of four round trips daily between Vancouver and Seattle by the two companies.

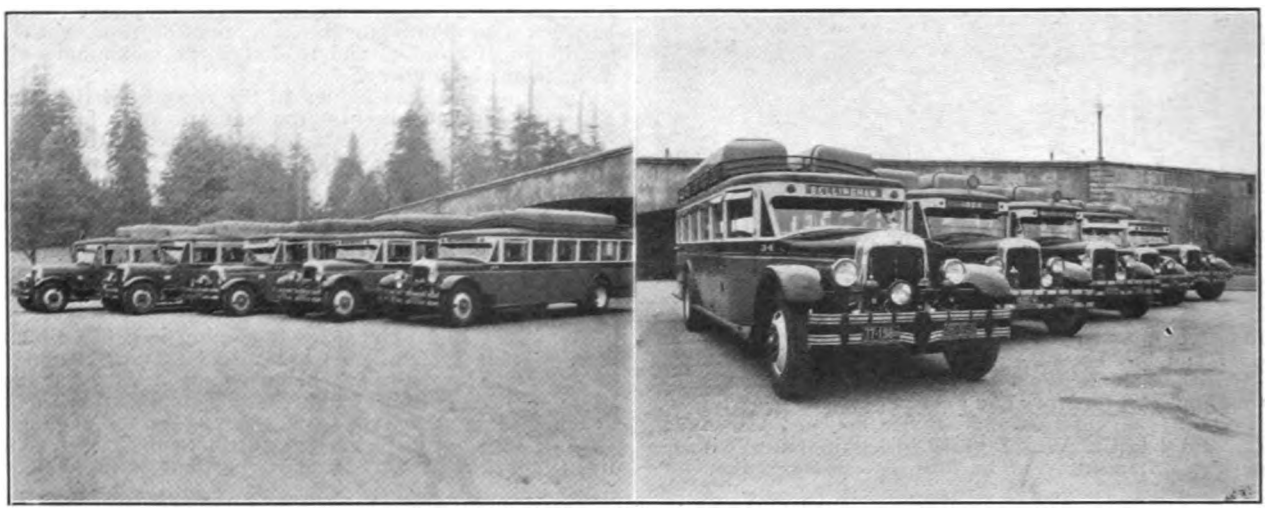
The zone system for tickets has been established on all local routes of the Pacific Stages. The routes being alphabetical and the stops numerical. Further efficiency in the ticket system is secured by a ticket machine which issues the tickets stamped with the route letter and stop number.

The motto stressed to a very considerable degree in the training of the operators and in fact all employees of the B.C. Motor Transportation Limited is "Service with a Smile." The men have established a reputation for their courtesy and are well spoken of by all patrons of the line. The Pacific Stage operators wear a neat khaki uniform of similar material and in fact, with the exception of different badges, of practically the same cut as that of the regulation uniforms supplied to officers in the army. The cap worn is the regulation officer's field cap with suitable badges for the local firm.

Large country communities, which were little more than struggling hamlets, owe their growth and success to the elasticity of the stage service which started regular communications between these small towns with the outside world. It has been the policy of the firm at all times to make a fair offer for all the vehicles which are operating in opposition to it over the routes it now serves. There has never been any attempt on the part of the company, according to the claims of its officials, to freeze out the small man, and fair offers for the, in many cases dilapidated jitney lines operating before the company commenced service with its modern motor stages, were always made.

A considerable proportion of the time, especially in the winter months, is occupied by charter business. Special parties and clubs, societies and organisations are regular patrons of the firm and charter anything from one to twenty coaches at regular periods.

Pacific Stages are often rebuilt and painted in the orthodox grey shade with suitable diamonds and lines, to operate as the Grey Line sightseeing coaches, another line operated by the B.C. Motor Transportation, Ltd. Various other makes are also used for this service. Some of these coaches have been fitted with folding roofs,



LEFT: A FEW OF THE PACIFIC STAGES COACHES. RIGHT: SOME OF THE COACHES OPERATED ON SEATTLE, PORT HANEY, WHITE ROCK, IOCO, AND BELLINGHAM ROUTES. NOTE WASHINGTON STATE AND BRITISH COLUMBIA LICENCE PLATES ON EACH COACH.

Digitized by Google

which are specially adapted for permitting an unobstructed view of the mountain tops seen on sightseeing trips around the city of Vancouver. The windows are higher than in the usual stages and the seats in some of the vehicles are slightly raised one above the other. Twelve coaches are operated in this sightseeing service. All points of interest around the city of Vancouver are touched by these coaches, and a service is maintained all the year round.

An additional sightseeing trip is also run by the Grey Line coaches, between the city of Vancouver and the Grouse Mountain Chalet. This service is in the form of a sightseeing trip, but is also a regular stage route. This trip occupies exactly one hour and brings passengers from the seaside to the snows of the mountain top. During the winter period, when snow on the mountain in the past has prevented coaches completing the climb, the passengers have been transferred to sleighs on which the last stage of the route has been completed.

Authentic and exact information is given out on sightseeing trips, as a strict ruling on the part of the firm objects to any vaudeville play of any description being staged. The men who are employed on these tours are men who are thoroughly acquainted with Vancouver, and who not only know the various points of interest, but are also familiar with the traditions, folk lore, legends or history of the various places or buildings which they are talking about. As a result of this policy on the part of the officials of the firm, the sightseeing trips on the Grey Line tours are not only extremely interesting but actually educational.

The city of Vancouver has 26 Yellow Taxi stands in various parts of the city from which 43 vehicles operate for the B.C. Motor Transportation, Ltd. Each of these stands is connected with a private line with a switchboard at the main depot of the company.

A very elaborate system of checking up the position of all cabs in connection with these stands, and also a system of checking up the meters of the cabs themselves, has been worked out and is in active practice in the company's system. There is a dispatcher in the main depot of the company. Each taxi cab when it goes out of the garage to a particular stand is given a number corresponding to a number on a little plug in the board in the dispatcher's office. When this cab leaves the stand on a run it checks out by telephone or by automatic signal. A pink tab, giving the time the car checked out is then pinned on the square bearing the number corresponding to the number of the cab on the dispatcher's board. When the cab checks in again on its return to the stand this slip is again passed through a time clock and punched. When the cab arrives on the stand a time slip is also punched of a different colour, so that an exact check can be made of how long the cabs remain idle on the stands and also of how long they are on a run. By means of this board it is also possible to tell exactly how many cabs are standing on the various stands and how many are remaining in the garage, as well as those in active operation.

The company has reduced its fares during the recent weeks to a scale of a system at present in force in Cleveland. These reductions apply to rates over $1.00 and are designed to give less expensive service to all outlying points. The meters call for a fare of 25 cents on the taxi being flagged, and ten cents for every following third of a mile. Since the reduction in fees over $1.00 there has been a very favourable response from the public.

Old cars on the cab service have been substituted by the company by the highest type of modern taxi cab during the past year, and the old cars have since been disposed of. This gives a particularly attractive fleet of fully modern taxi cabs now in active service in Vancouver and surrounding district under the flag of the Yellow Cab system. The men operating cabs pass through the same schooling in courtesy as the Pacific Stage and Grey Line operators, and they are all dressed in neat dark grey uniforms.

Commercial men and tourists who are not able to secure their own car in time of need are accommodated with a luxurious type of Drive-Ur-Self system comprising of nine cars in the city of Vancouver.

For the accommodation of those persons who wish to use a car bearing all the appearance of a private vehicle and driven by a uniformed chauffeur, a Limousine service is provided by the company. This fleet of cars are composed of Packards, Studebakers and Buicks.

An exclusive concession from all railroads and steamships lines and from the leading hotels has been granted to the B.C. Motor Transportation, Ltd., under the name of The Vancouver Transfer Co., Ltd. The Yellow Cabs also enjoy this concession. The Vancouver Transfer specialises in all baggage and other shipments coming in by rail, or ship, which require instant delivery. The prompt and almost instantaneous service which has been invariably given by this firm in the past has been responsible for its securing many additional concessions and contracts without any exertion whatsoever on its part, as its reputation has been so high that new hotels starting in business have of their own accord come to the company for the completion of an agreement between the two organisations.

At the present time the B.C. Motor Transportation, Ltd., is completing the first unit of the largest single floor garage on the North American continent. This building will be of ultra-modern design, and only two posts will be erected on the entire floor area, thus leaving a maximum amount of room for manipulating the largest of the stages in operation. Special accommodation for tyre shops and paint shops, battery shops and all other departments necessary in the maintenance of an efficient and highly organised service will be provided.

In addition to agents who are not on the regular payrolls, the firm at present employs well over 250 persons and operates over 160 vehicles.

Mr. Neil, general superintendent of operations, is, as already stated, himself a practical man who has pioneered the way for the present gigantic system of the company. Mr. Frank Barnes, general managing director of the firm, has taken no less active part in the development of motor transportation in Vancouver. He has been personally connected with the game for the past 20 years and has built it up from the early days of the old-fashioned jitney to its present elaborate and ultra-modern stage.

Subsidies for Motor Vehicles.

War Office Scheme.

THE War Office is inviting applications to fill vacancies in its scheme for subsidising motor vehicles. Vehicles eligible for the subsidy are rigid-framed six-wheeled ones built to the War Department chassis specification. They are equipped with pneumatic tyres and are of the following makes and types:—Albion (S.K.31) 4 tons; Crossley (I.G.L.3); Guy (B.A.X.) 3-5 tons; Karrier (W.O.6), (R.M.6) 3 tons and (F.M.6) 5 tons; Leyland (Terrier) 4 tons; and Thornycroft (A.3) 3 tons and (A.5) 3½ tons.

A vehicle of each type has been submitted to exhaustive tests as to stability and performance, under War Department scrutiny, to ensure reliability under all conditions of service. Owing to their capacity for cross-country work, the vehicles are particularly suitable for loading on almost any condition of ground, thus saving double handling of the load. Detailed particulars of the vehicles may be obtained from the makers. Practically any type of goods-carrying body is acceptable; but where special trade requirements necessitate an abnormal body, the chassis can be enrolled without the body.

The subsidy agreement gives the War Department a right to purchase the vehicle if it is required during a national emergency. There is no obligation to hire to the Department at any time.

The subsidy offered is £120, payable half-yearly in advance by six instalments, the first being paid on enrolment. A vehicle being acquired by hire purchase can be enrolled under the scheme; in this case the agreement provides for the subsidy paid to the legal owner being credited to the hire-purchaser as received.

Further information will be supplied on personal or written application to the Chief Inspector of Subsidised Transport, Hyde Park Barracks, London, S.W.7, or to one of the Area Inspectors of Subsidised Transport, whose addresses are:—For Scotland and Northern Ireland: 50 Wellington Street, Glasgow (Tel. Central 1325). For Midlands and Northern England: 52 Corporation Street, Manchester (Tel. Central 8444). For West of England and Wales: 84 Park Street, Bristol (Tel. Bristol 7728).

Coach Makers at Dinner.

THE members of the Worshipful Company of Coach Makers and Coach Harness Makers of London, met together at a Livery Dinner held at Grocers' Hall on Tuesday, February 4th last under the presidency of the Master, Sir Edward Manville, J.P., M.I.E.E., who was supported by Mr. W. Lawton Goodman, Senior Warden; Mr. Sydney Norris, Renter Warden; and Mr. A. F. Farish, Junior Warden. A large company of distinguished guests was present including: The Duke of Atholl, Lord Ampthill, Lord Aberconway, Lord Faringdon, Lord Blanesburgh and Lord Wargrave. Amongst other well-known guests at the head table were Sir Ralph Wedgwood, Sir Herbert Walker, and Mr. J. Milne, Sir George Beharrell, Sir Harold Bowden and Sir Sefton Brancker. The guests of the evening were the Lord Mayor of London, Alderman Sir Wm. Waterlow, K.B.E., and the Sheriffs Alderman W. Phene Neal, and Mr. F. Bowater.

SIR EDWARD MANVILLE, J.P., M.I.E.E.

It was a matter of disappointment that the Master was unable to take his customary part in the speaking part of the proceedings owing to loss of voice, and the regrets of the members and visitors was expressed by the Junior Warden.

The civic toast was proposed by Mr. Lawton Goodman, Senior Warden, who referred to the famous coach, the product of their industry, which was a feature of the Lord Mayor's Show, and he predicted the time when it would be necessary for the Lord Mayor to visit not only the continent, but the various parts of the Empire, when an aerial coach would be required. In view of this possibility the Worshipful Company numbered amongst its members some of the most distinguished constructors of aerial coaches.

The Lord Mayor, in responding, said he had been making enquiries as to the possibility of travelling by aeroplane to Paris and then direct to Edinburgh, and said that if it could be arranged he would make use of it.

The toast of the Houses of Parliament was proposed by Mr. Sydney Norris, and to this Lord Amulree and Mr. P. T. Hannon, M.P., replied.

The toast of the Worshipful Company was proposed by Lord Ampthill, who said there was no Englishman who was not proud of the great City Companies. British craftsmanship was the best in the world, and traditions, customs and regulations on which that craftsmanship had been built up were mainly due to the old City guilds.

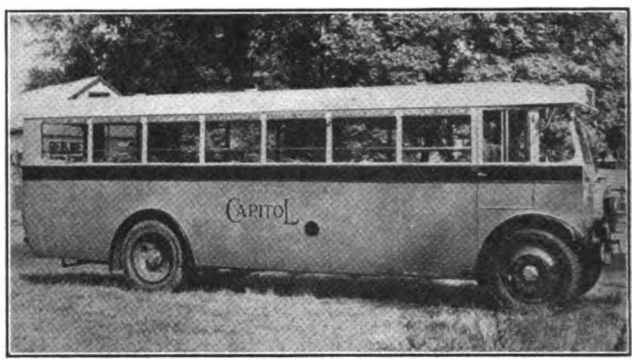
Professor E. W. White, C.B.E., M.B.E., the Past Master of the Company, responded on behalf of Sir Edward Manville, and said their's was a very ancient Company going back to Tudor times. The old charter was lost in the Great Fire, and the present charter dated from 1677. When he was Master in 1908 it was decided, in view of the decline of the coach trade, to admit members of the motor trade, and he considered that as a result of this development the Company would soon be one of the most important in the City of London. The Company was doing all it could to encourage the design of motor bodies, and was giving grants for the promotion of the industry.

Mr. A. F. Farish proposed the toast of the guests, and Air Vice-Marshal Sir Sefton Brancker replied.

Albion Passenger Vehicle Orders.—The Albion Motor Car Co., Ltd., Scotstoun, Glasgow, announce the following repeat orders for passenger vehicles:—A number of 32-seaters for the Grimsby Corporation, ten 4-cylinder 32-seaters for the Leicester District Green Bus Co., Ltd.

Passenger Vehicle Notes.

Tilling-Stevens Buses.—The photograph shows one of a number of 30-seater buses supplied by Tilling-Stevens Motors, Ltd., 5 Iddesleigh House, Caxton Street, Westminster, London, S.W.1, to the Capitol Road Transport, of South Street, Romford. This omnibus the makers state, represents the latest in design affording the maximum comfort for passengers, and is a representative type



TYPE OF TILLING-STEVENS 30-SEATER BUSES FOR THE CAPITOL ROAD TRANSPORT OF ROMFORD.

of the firm's "Express." The chassis is type B.10.A.2. with 16 ft. wheelbase, forward steering and low load line frame, and fully complies with the requirements of the Ministry of Transport. The body was constructed by Metcalfes (London), Ltd., of Romford.

The New Type Guy Trolley Bus.—The picture shows a new type six-wheeled double-deck trolley bus supplied by Guy Motors, Ltd., Fallings Park, Wolverhampton, to the Wolverhampton Corporation. It is one of nine which are now being put into service in Wolverhampton. The chassis is similar generally to those the firm are supplying to the Hull Corporation and the South Lancashire

A POINT FOR THE WAREHOUSING AND REMOVAL INDUSTRY.

To the Editor of THE WORLD'S CARRIERS.

SIR,—A Member of the Furniture Warehousemen and Removers' Association in South Wales consulted me a few days ago in connection with a case of linen that had been destroyed owing to, as the customer alleged, having been stored in a damp place.

It appears that this particular case containing linen, towels, etc., had been stored on top of a box containing blankets, and the latter was found in perfect order, whilst the former had been reduced to a dry pulp, and the interior of the case affected by dry rot.

There is no doubt that the position in which this particular box was found removed any idea that the Depository was damp, because had this been so, the bottom case containing blankets would have been affected, and the blankets riddled by the moth grub, but there was not a sign of the moth grub or damp.

The property having been stored for a period of twenty years, and no examination having been made of the contents during that period, it was a matter for very serious investigation.

I had the whole of the materials analysed, and it was found that the primary cause of the disintegration of the linen was due to the fact that when the articles were washed twenty years ago considerable use was made of soda and alkali for washing purposes, and this chemical compound was not thoroughly washed out of the materials before packing for storage.

It is quite possible that in addition to the chemicals used, the linen was not thoroughly aired and dried before storage. Further, had the materials been properly rinsed, rough dried and then packed no damage would have resulted.

It is unwise to starch or even iron such fabrics before storage, or even to remain packed in a house unused, because anything in the nature of starch left behind is bound to be detrimental to the fabric and render the linen useless.

For years I have been advising customers that cotton fabrics should be washed free of starch before storage, as the fabric is bound to become disintegrated if starched and ironed and left for a long period.

I feel sure this case is one that will be noted with interest by the Members of the Removals and Warehousing Industry, and I hope that steps will be taken by them to pass on the necessary advice to customers who intend storing their furniture.

Yours faithfully,
R. J. ARMSTRONG,
Manager,
REMOVALS & WAREHOUSING DEPT.
ARMY & NAVY CO-OPERATIVE SOCIETY, LTD.

THE WORLD'S CARRIERS YEAR BOOK AND DIARY, 1930.

To the Editor of THE WORLD'S CARRIERS.

SIR,—I am returning the 1930 Year Book & Diary which you kindly sent. You will see that it arrived badly burnt. The Carriers van took fire a mile from my house.

As I always use your diary, may I venture to ask for a replacement?

With best wishes for 1930.

Yours faithfully,
E. S. SHRAPNELL-SMITH.

Hound House,
Shere, Surrey.
3rd January, 1930.

TRANSPORT CO-ORDINATION.—"A Study of Present-Day Transport Problems." By K. G. Fenelon, M.A., Ph.D. (P. S. King & Son, Ltd., Orchard House, Westminster, S.W.1. Price, 6/- net). The author is Lecturer on Economics in the University of Edinburgh and this work is a survey of the possibilities of the co-ordination of the various forms of transport. This important subject the author explores thoroughly. He deals with the economic characteristics of the various types of transport and their respective economic spheres, passing on to discuss the competition between road and rail. Coming to the economic basis of co-ordination the author takes the following points amongst others:—Co-ordination in the past; practical difficulties; types of co-ordination; voluntary co-operation; co-ordination through railway ownership or control; statutory co-ordination, etc. "Is Road Competition Fair Competition"? The author states clearly both sides of this question, and it will be for the reader to find the answer. The author points out that there are now signs that road and rail transport are finding their natural economic equilibrium, and he sets out facts from which he deduces that it should now be more easy to attain some form of co-ordination between the two forms of transport. A number of statistical tables are given and the work is well indexed. A study of this book will certainly increase one's ability to understand the many important questions relating to transport, the discussion of which is now going on and which will, no doubt, be the basis of legislation in the immediate future.

BILBROUGH'S RAILWAY MILEAGE TABLES (GREAT BRITAIN).—Revised edition. Compiled and arranged by Granville F. Bilbrough, Assoc.Inst.T. (Birmingham Chamber of Commerce (Incorporated), 95 New Street, Birmingham. Price, £3 3s. net). This work has been compiled and issued for the use of traders who employ rail facilities in the transmission of their traffic and is designed to enable them to ascertain the actual mileage between any two points in Great Britain and should prove invaluable in assisting them to estimate the carriage charge upon any traffic. January 1st, 1928, witnessed a complete revolution in the methods of charging upon the railway systems of the country. New schedules of standard charges came into operation—based upon an entirely new classification. Additionally, the principle of "continuous" mileage was adopted for the first time and, even more important, there were profound modifications in the chargeable distances, which radically affect the bases upon which the new rates are computed. This new volume, which has been prepared to meet the new conditions, is most comprehensive, and covers some 15,000 stations, junctions and private sidings. It incorporates the whole of the railway systems of Great Britain and it contains a mass of essential information for the use and guidance of traders. The volume can be confidently recommended and will provide an essential part of the equipment of every traffic clerk.

"PEEPSHOW OF THE PORT OF LONDON."—By A. G. Linney. Sampson Low, Marston & Co., Ltd., London. 7/6 net. Mr. Linney, who is the Editor of the very interesting P.L.A. Monthly, published by the Port of London Authority, knows the River Thames and the Port from one end to the other and he writes about it in a way which makes it clear that he has made it a life study and with evident affection. It is not easy to realise that the jurisdiction of the Port of London Authority extends from Tilbury, almost at the mouth of the river, up to Teddington, a distance of 70 miles, and that within this range vessels from the magnificent 20,000 ton ocean liners to the smallest boats ply for hire and carry on their business on its surface. Mr. Linney, in this work, which is aptly entitled "The Peepshow of the Port of London," describes all this and takes the reader with him into nooks and crannies, Wharves, stairs, inns and buildings which are unknown even by name to the average inhabitant of this great City. Just as it is in London Streets, so on the river side, the old buildings, formerly well known and often influential, are gradually passing away, and it is a good thing that such a record has been made which will remind us of what the Port of London has been as well as what it is to-day. All those who are interested in the trade of the Port will find this volune a most fascinating one, not from an historical point of view, for it does not deal with the history of the Port, but as giving a bird's eye view of the river and of the buildings on both sides, and of the creeks and ferries and curious buildings which line either bank. The illustrations are exceedingly good and practically all of them are taken from the author's own photographs, adding in this way very greatly to its interest.

Newcastle's Transport Problem.

IN accordance with a recent promise to Newcastle-on-Tyne City Council, to clearly define its policy, the Corporation Transport and Electricity Committee, on January 31st, issued a comprehensive report regarding the transport undertaking. In this the Chairman, Alderman Richard Mayne, briefly reviews the situation, and the General Manager, Mr. T. P. Easton, gives a lengthy explanatory statement of the operations of the undertaking since its inception.

The Committee, says Ald. Mayne, have no thought of recommending to the Council the general abolition of the existing system of tramways. On the other hand, the Committee do not propose to recommend any extension of the existing tramway track.

They propose, with the consent of the Council, to adopt other forms of transport, when and where desirable, to meet the growing need of the City's inhabitants. It will be a part of the Committee's policy, in every case where the tramway becomes worn out, to give careful consideration to the question whether the route can be more efficiently served by a form of transport other than trams —due weight being given to two prime factors, namely, the convenience of and the cost to the travelling public. They are convinced that on most routes trams are still the best and most economical form of transport. The policy of the Committee may be described as evolutionary, and not revolutionary.

With regard, in particular, to the existing and projected omnibus services of the Corporation:—As new residential districts are being opened out, largely by the Housing Committee's enterprise, it is proposed that omnibuses should be provided, on which residents are carried at fares similar to tram fares; but where the route traverses or competes with a tram route passengers must pay ½d. above the tram fare. This is the policy which the Committee have already adopted, and which they propose to continue.

Mr. T. P. Easton (General Manager) points out that during the 17 years up to the end of the Great War the system made steady progress and was gradually being established in a very strong financial position. Entering into the post-war period with a reserve and renewals fund of £155,251, there seemed to be reasonable prospects of the undertaking maintaining its satisfactory position, but many adverse circumstances developed which affected, in a drastic manner, the fortunes of the system. Increased wages was the chief factor responsible for an enormous rise in the cost of working.

Mr. Easton gives details of how working expenses rose, saying that in three years £197,000 was withdrawn from the Reserve and Renewals Fund. The pre-war cost of permanent way renewals averaged £10,000 per mile of double track, but post-war renewals have averaged £22,000; while for three years it was only possible to make the usual contribution of £14,000 to the relief of the rates by withdrawing the amounts from the Reserve and Renewals Fund. Newcastle was the only system to retain pre-war fares throughout the war. "A conservative estimate of the loss in tram receipts brought about by bus competition is £25,000 per annum," says Mr. Easton.

In concluding, Mr. Easton strikes a hopeful note on the tramways undertaking, saying, "Traffic receipts are showing a steady rise, and a pleasing feature of this is the improvement in workmen's traffic—a sure promise of an increase in the number of passengers all round."

Should the general improvement which has taken place in the past few weeks be maintained, there is every reason to anticipate the surplus on the present year's working—after paying working expenses, interest and redemption and other charges—will result in the sum of £30,000 being available for the Reserve and Renewals Fund, which, at the close of the last financial year, showed a deficit of £10,191.

Orpington By-pass.—On the 22nd January last the new bridge constructed for the Kent County Council and carrying the main London-Dover line of the Southern Railway over the Orpington By-pass at St. Mary Cray, Kent, was opened for traffic. The Orpington By-pass forms the last item in Kent of the programme of important road works initiated in the Autumn of 1923; the greater part of the road has been open to the public since the 26th June, 1927, but short lengths adjacent to the new bridge have been closed to through traffic owing to the bridge works. The Orpington By-pass is 6½ miles in length.

News from all Parts.

Body Building Competition.—In our September, 1929, issue we announced that a competition was being organised by Venesta, Limited, the manufacturers of Plymax, the metal-faced plywood for a working drawing of a delivery van which could be used by a confectioner, a grocer, a butcher or a fishmonger. The competition required that Plymax was to be specified for all panels and doors of the vans and for all other parts deemed suitable by competitors. It was the belief of Messrs. Venesta, Limited, Vintry House, Queen Street Place, London, E.C.4, that the next step forward in the design of retailers' delivery vans was the development of their interior equipment somewhat along the lines of that fitted in the modern wardrobe, and it was their desire to accelerate that development that prompted them to offer prizes in the competition. The competition was open to two classes. (a) Any person, without age limit. (b) Any person who was a student of any technical school of Motor Body and Carriage Building in the United Kingdom, or who was apprenticed to a firm of Motor Body builders, and was under 21 years of age. First and second prizes were offered to each class of competitors, as follows:—Class A—First, £50. Second, £20. Class B—First, £30. Second, £10. The judging has now been completed and we print below the names and addresses of the successful competitors. Class A. 1st Prize, Mr. H. Watters, 35 Larches Lane, Wolverhampton. 2nd Prize, Mr. A. W. Lyons, The Gables, Abbots Bromley, Stafford. Class B. 1st Prize, Mr. C. G. Dennis, jnr., 14 Kelfield Gardens, North Kensington, W.10. 2nd Prize, Mr. H. A. Sparling, 51 Daventry Street, Marylebone, N.W.1.

Commercial Motor Users' Association. North Eastern Division.—The Annual Meeting of the Commercial Motor Users' Association, North Eastern Division, was held at Leeds on February 6th. The Annual Report stated that the number of members in the Division is approximately 900, and on the financial side the year's working was considered satisfactory. 105 cases of legal defence and representation have been dealt with by the Divisional Committee. Members are requested to pay particular attention to the lighting of their vehicles, particularly back number plates, and to see that their vehicles are in such condition and so loaded that there is no excessive noise when the vehicles are on the road. Other matters dealt with in the Report are: Traffic Noises, Royal Commission on Transport, Road Traffic Bill, Bradford Corporation and Heavy Motor Traffic and Automatic Traffic Signals. Mr. J. France was elected Chairman and Mr. G. E. Gilbey and Mr. J. Wallis Vice-Chairmen. Mr. Ernest Harrison is the Divisional Secretary, and the offices are at 20 Bond Street, Dewsbury.

Commercial Motor Users' Association. North Western Division, Preston Area. — The Annual Report for the year, 1929, of the North Western Division, Preston Area, of the C.M.U.A. deals only with the more important work which has specially engaged the attention of the Committee. With regard to the Road Traffic Bill the Report states that there is much in it that will be of undoubted benefit to all users of the highway, including commercial motor users. On the other hand several of the clauses are such that the Association will need to use every effort to secure satisfactory amendments in order that the Bill may not be unduly prejudicial to the interests of road motor transport. The number of Police Court cases defended on behalf of members during the year was 26. The following are the officials of the Preston Area, North Western Division, of the C.M.U.A.:—Committee: Messrs. Richard Houghton, J.P. (Chairman), Messrs. G. & R. Dewhurst, Ltd., Preston; C. le M. Gosselin, M.Inst.T., Messrs. H. Viney & Co., Ltd., Preston; P. G. Harper, Messrs. P. & W. Harper, Chorley; R. H. Harrison, Morecambe; Major H. E. Hickmott, Ribble Motor Services, Ltd., Preston; C. B. Nixon, Messrs. Leyland Motors, Ltd., Leyland; J. H. Shaw, Messrs. Shaws' Depository, Ltd., Blackpool; J. W. Taylor, Messrs. Page & Taylor, Ltd., Preston; Councillor J. Leavesley, Blackpool; J. Wharton, Kendal; J. Watkinson, Preston; J. Hill, Messrs. Hills Motors, Blackpool; F. J. Lewis, Messrs. H. Viney & Co., Ltd., Preston; J. H. Battersby, Morecambe; E. Green, Chorley. Secretary: Mr. Walter Atkinson, F.C.A., 25a Winckley Sq., Preston.

An Offer to Traders.—Andrew Page & Son, Ltd., Motor Accessories Factors, 99, Albion Street, Leeds, in order to introduce their Solder Seal Radiator Repairer and Cleaner to traders who have not yet tried it out, are giving free to purchasers of three dozen tins of this material during the months of February and March a handsome pen with 9 ct. gold nib and a propelling pencil set.

Coal and Oil Bunkering Stations Throughout the World.—Wm. Cory & Son, Ltd., whose head offices are at Fenchurch Street, London, have published a large wall map showing, in colours, the names of coal and oil bunkering stations all over the world. Oil ports are shown clearly in red and coal ports in blue, while ports where coal and oil are both available are printed in green. The principal shipping routes are given as well, with the distances in nautical miles.

S.M.T. Magazine.—The Scottish Motor Traction Co., well known for its prominent position as a transport undertaking in Scotland, has sent us a copy of the S.M.T. Magazine, which they publish and which is described as a monthly journal for all who travel by road or rail. The magazine is well produced, with a large number of articles by well-known contributors, commencing with a contribution by Viscount Cecil of Chelwood. It is also copiously illustrated and incidentally contains a considerable number of pages of advertisements. This magazine is more than a house organ and is one which would be read with interest by the general public. It is sold at the price of 6d. monthly.

Slippery Roads.—The National Horse Association have issued the second of their Slippery Road Committee's Reports. This contains an account of the Committee's activities during the last two years in which Members have toured the Country inspecting and approving road surfaces and visiting County and Local Surveyors. It is of interest to learn that the County Surveyors' Society have nominated representatives to the Committee. It appears that a certain amount of improvement has been effected in many counties. The Report indicates that some of the causes of slipperiness are probably due to surface dressing materials containing unsuitable bituminous matter, unsuitable fluxing oil, or to the use of too small sized grit for blinding. Reference is also made to the use of asphalt, tarmacadam or bituminous macadam, concrete and to grouted roads. The Committee recommend that the camber in roads should not exceed 1 in 40.

Patents in 1929. Still Higher Figures.—Although the year 1928 showed the highest figures in Patents applied for at H.M. Patent Office in any one year, viz., 38,593, Messrs. Rayner & Co., the well-known London Patent Agents, inform us that the total for 1929 is 39,927. This total is especially satisfactory remembering the severe financial depression in the latter part of last year. The extraordinary activity, however, shown by the Patent Office figures for 1929 clearly points to the onward trend of progress and enterprise in the World of Inventions, the corresponding total for 1913, the last pre-war year being only 30,102.

The Handy Reference Atlas.—We have received from John Bartholomew & Son, Ltd., Edinburgh, their Handy Reference Atlas of the World. This useful volume gives over 100 maps, mostly spread over the two pages, so that although the book is of handy size the maps themselves cover a space of 7½ in. by 10 in. It is a very useful atlas where space is valuable and it is desired to keep it on one's reference bookshelves for immediate use. There is a general index, giving a list of over thirty-five thousand place names, so that it may be stated with confidence that it is very unlikely any place would be required which is not included in the gazetteer. The price of this work is 12/6d. net in full cloth, while more expensive bindings may be had.

* * * *

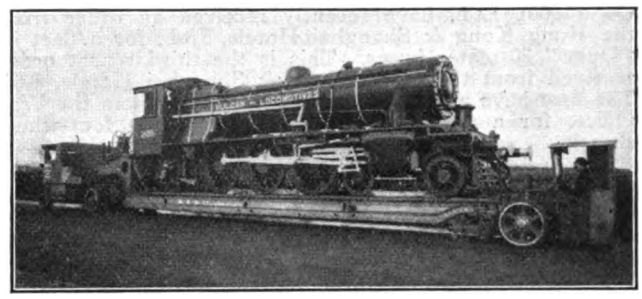
MERSEYSIDE.

Coming of Age Year.—This is the coming of age year of the Liverpool and District Short Cart and Motor Owners' Association, and after the annual meeting, held on 29th January last and reported elsewhere in this issue, a hot-pot supper was held in the Carlton Rooms, Eberle Street, Liverpool. The Association has behind it a fine record of achievement and fills an important niche in the transport organisation of the city. Mr. W. F. Ewbank has been secretary for many years and he is represented at the monthly meetings by his assistant, Mr. F. S. Jones.

Casual Labour Conference.—Mr. Allen Walter represented the Liverpool Cart and Motor Owners' Association at the Conference convened by the Lord Mayor of Liverpool to consider the question of casual labour in the port of Liverpool, with the idea of finding ways and means to secure its modification or, preferably, elimination.

Liverpool C.M.U.A.—The twelfth annual general meeting of the Liverpool Area Committee of the Commercial Motor Users' Association was held at Liverpool on 13th February. The Committee, in their report, state that the scheme for the supply of water to steam wagons continues to operate successfully, but unfortunately a great deal of damage is being done to the service boxes. Members were asked to bring to the notice of the Committee any cases of suspected damage. The Committee had devoted a great deal of time to the consideration of the Road Traffic Bill, and relied upon the National Council to do all in their power to press for such amendments as are considered necessary. A large number of cases of legal defence had been dealt with in the year. The membership in the Liverpool area had been well maintained, but there must be hundreds of commercial motor users in the area who are not attached to any motor organisation.

Road Hauled Locomotives.—M.R.S., Ltd., of Liverpool, obtained the contract for the transfer of 14 locomotives, each weighing 60 tons, from Newton-le-Willows to Gladstone Dock, Liverpool, whence they were shipped for India. The interesting feature of this contract was the fact of this being the first time heavy locomotives have been dispatched from the works complete. Hitherto sections have been forwarded by railway to the point of shipment, and there assembled, before being put aboard the steamer.



TRANSPORTING LOCOMOTIVES BY ROAD. CONTRACTORS: M.R.S., LTD., OF LIVERPOOL.

* * * *

The Scottish Motor Show. — At an Extraordinary General Meeting of The Scottish Motor Trade Association, Ltd., held on 29th January, it was unanimously agreed that this year's Scottish Motor Exhibition be held in the Kelvin Hall, Glasgow, in November, 1930. The Exhibition is under the patronage of The Society of Motor Manufacturers & Traders, Ltd., London, and besides the Private Car and Accessory Sections, it will include a Commercial Motor Vehicle Section comprising omnibuses, Chars-a-banc, etc. The Secretary of the Scottish Motor Trade Association, Ltd., is Mr. David A. Fairley, C.A., 3 Palmerston Place, Edinburgh.

Crossley Activities. — Crossley Motors, Ltd., Gorton, Manchester, have recently received an order from the Canadian Government for sixteen six-wheeler chassis with 20/60 h.p. four-cylinder engines.

Garage Practice and Servicing. — A special course of lectures, demonstrations and practical work in garage practice and Servicing for garage mechanics and garage owners, was commenced at the Polytechnic, 307-311 Regent Street, London, W.1, on January 15th last. The Course is being conducted by Mr. A. H. Reynolds, of Messrs. Harvey Frost & Co., Ltd., the well-known garage equipment and tool specialists, of Great Portland Street, London, W., on Wednesday and Friday evenings. The full course will occupy 14 weeks and will consist of lectures and demonstrations on Wednesdays, 7.30 to 9 p.m., and practice in the engineering workshop on Fridays, 7 to 9.30 p.m. An alternative evening may be arranged for workshop practice to suit the convenience of applicants. The head of the mechanical engineering department of the Polytechnic is Mr. R. F. Thompson, B.Sc. Hons. (Eng), M.I.Mar.E., A.M.I.Mech.E.

Pratts High Test Petrol.—We are asked by the proprietors of Pratts High Test petrol to correct an impression which appears to exist that this new petrol is sold at a higher price than ordinary motor spirits. Such is not the case. The new petrol is no dearer than ordinary petrols.

Digitized by Google

Newbury District Bus Proprietors and Carriers' Association.—The Annual Meeting of the Newbury District Bus Proprietors and Carriers' Association was held on the 21st January last. Mr. W. Chalk, the Chairman of the Association, presided. There was a good attendance, and the Secretary gave a brief outline of the year's work. Officers were elected for the ensuing year. The Annual Dinner will take place on 19th February at "The Hatchet" Hotel." Mr. Councillor C. W. Burns will be the guest of the evening. It has been decided to hold a Grand Whist Drive, at the Oddfellows Hall, on 21st February.

Rushton Tractor Company (1929), Limited. — Some weeks ago an announcement was made in interested circles of the voluntary liquidation of Rushton Tractors, Ltd. It is now, however, made clear that this was in pursuance of the policy of the Company which has at its aim, the production of an all-British Tractor for commercial and industrial purposes. On the same date as the liquidation of the old Company, the new Company, trading under the name Rushton Tractor Co. (1929), Ltd., was formed, and is now established in a vast factory at Walthamstow, where production is proceeding. It is satisfactory to learn that already the output, although substantial, is insufficient to meet with the demand both in the industrial and agricultural sphere.

Vulcan Activities.—The Vulcan Motor and Engineering Co. (1906), Ltd., have recently received an order from the Hong Kong & Shanghai Hotels, Ltd., for a fleet of "Duke" 20-seater buses. This is the third repeat order received from the Hong Kong & Shanghai Hotels, Ltd. The firm have also received a repeat order from the War Office, for a fleet of vans on their 30-cwt. four-wheel chassis.

* * * *

MANCHESTER.

Coachowner's Enterprise.—Fingland's Hire Cars, Ltd., motor coach owners and agents of Wilmslow Road, Manchester, have taken over the motor coach booking office and information bureau at 9a St. Peter's Square, Manchester, formerly occupied by Fleet Motors. This firm, of which Mr. C. Fingland is managing director, intends during the coming motor coach season to institute, possibly in co-operation with other vehicle owners, daily services to London and the South Coast, Glasgow and the Clyde Coast, the North Wales coastal resorts, Tyneside, etc.

Threat to Rochdale Coach Owners.—Efforts are being made by the Amalgamated Horse and Motor Owners' Association, of Manchester, to secure the deletion from the Rochdale Corporation Bill of a clause which would give the Corporation power to reserve motor buses for special purposes. Mr. J. S. Howarth, Secretary of the Amalgamated Horse and Motor Owners' Association is endeavouring to secure the withdrawal, or modification of the clause.

Horse and Motor Owners' Association. — The annual meetings of the Amalgamated Horse and Motor Owners' Association and the C.M.U.A. (East Lancs.) will be held on 1st March at the Boars Head Hotel, Radcliffe. The Quarterly Conference will be held at 3.30 p.m., and will be followed by the Annual Meetings of the two Associations named.

* * * *

Commer Cars, Ltd.—Commer Cars, Ltd., of Luton, inform us that two of their representatives have recently changed their addresses. The address of Mr. P. J. Sands, the firm's Scottish representative, is now 25 Highburgh Road, Dowanhill, Glasgow, W.2, whilst that of Mr. C. B. Egan, the "Commer" representative in the South Western Counties, is now 16 Regent Street, Clifton, Bristol. Telephone: Bristol 3505.

The National "Safety First" Association.—The January issue of the journal of the National "Safety First" Association, of 119 Victoria Street, London, S.W.1, gives particulars of the National Safety Week, which the Association is organising in all the principal centres from the 19th to 24th May. This event will coincide with the Annual Congress of the Association, which will be held in Liverpool on May 21st. In this issue, Sir William Arbuthnot Lane contributes a specially signed article dealing with Health and the Nation. There is a criticism of the safety provisions in the Road Traffic Bill now before Parliament. Particulars of the street accidents during July and August, 1929, and their causes are contained in a special article by Lt.-Col. J. A. A. Pickard. The Annual General Meeting of the Association will be held in London on Thursday, April 24th.

British Industries Fair.—For the convenience of motorists visiting the Birmingham Section of the British Industries Fair (17th-28th February), the Automobile Association has prepared a special map showing the distances to Castle Bromwich from the principal cities and towns in England and Wales, and from Glasgow and Edinburgh. Copies may be obtained, free, from any A.A. Office.

* * * *

YORKSHIRE.

The Parliamentary Bills of Leeds and Sheffield.—The proposal of the Leeds City Council in regard to motor bus services, which were to have been incorporated in a Parliamentary Bill, were defeated at a public meeting and were unreservedly ruled out when voted upon at a poll of the ratepayers. The city proposed to run omnibuses outside the confines of the city, make agreements with other companies or corporations and to arrange through services. Similar proceedings have been in progress at Sheffield, the principal proposal of interest to transport users being the provision of a transport centre in the heart of the city and powers to sell petrol and oil and provide refreshments. This clause was defeated by 23,000 votes to 9,000. These instances show the trend of public opinion in regard to municipal versus private ownership of passenger transport undertakings.

Enterprise brings Business.—An instance of how attractive and suitable vehicles affect receipts is given in regard to the introduction of A.E.C. double-deck buses on one of the town routes in Halifax, where the revenue has been increased from 17d. to 29d. per mile. This is a circular route in the centre of the town, serving districts which are near to the town centre and also near to the tramway routes. The double-deck vehicles are capable of carrying heavy loads at rush hours.

* * * *

NORTH EAST COAST.

An All-British Truck.—Interesting demonstrations have been made in Newcastle area lately with the Morris-Commercial truck, which exceedes 45 m.p.h. on the road, and climbs up steep hills easily.

A Question of Charge.—The position of bus proprietors with regard to the use of and payment for omnibus stands, provided by municipal authorities, is defined in a communication from the Ministry of Transport to Blyth Town Council, which states:—"Statutory authority is required to enable a licensing authority to construct barriers for the purpose of an omnibus stand and to make a charge for the use of the stand. Failing statutory authority for the imposition of a charge, the Minister would not consider that a corporation's licensing powers could properly be used so as to require any proprietor to pay for the use of an omnibus stand."

Appointment. — West Hartlepool Town Council, on January 24th, appointed Mr. H. E. Blackiston, Deputy Borough Electrical Engineer at Bermondsey, to be Borough Electrical Engineer of West Hartlepool. It is understood that Mr. Blackiston will be appointed Transport Manager also.

* * * *

SCOTLAND.

Bus Companies Dances.—The Grosvenor Restaurant, Glasgow, was chosen for the Third Annual Dance of the Scottish General Omnibus Coy. Among those present were Mr. W. H. Cox (director); Mr. S. J. Scott Adamson (secretary); Mr. J. W. Wintour (manager) and Mr. Anderson (chief engineer). Bailie W. J. Thomson, the Chairman of the firm was unavoidably absent. Carnival novelties helped to make the evening a merry and successful event. The South of Scotland Bus Coy. also held their Annual Social at Dumfries, and Mr. R. Percival, the Managing Director, and others of the Executive, were present, besides representatives of the Dunlop Rubber Coy., the Red Line Petrol Coy., and the Vacuum Oil Coy.

Big Order for Albions.—An order for a fleet of thirty 4-ton vehicles from the Anglo-Persian Oil Coy. has been secured by the Albion Motor Car Coy., Ltd., of Scotstoun, Glasgow. This follows an order recently received from the same company for a number of 2½ and 3-ton vehicles for use in the oil fields of Persia.

Stirling Firm's Social.—Messrs. W. Alexander & Sons, Ltd., bus proprietors, held a very successful dance in Stirling. Altogether about 500 were present. Mr. W. Alexander, sen., and Mr. Tom Alexander looked after the comfort of their guests.

Digitized by Google

Activities of the Motor Trade Association.—Certain statements have appeared recently in the general press to the effect that the activities of the M.T.A. have been, or are to be, taken over by the Society of Motor Manufacturers and Traders, Ltd. These statements are without foundation. The S.M.M. & T. is an international body and represents impartially the interests of its members whether British manufacturers or concessionaires for foreign manufacturers.

Institution of Automobile Engineers. Officers for Session 1930-31.—Sir Herbert Austin, K.B.E., has been elected President of the Institution of Automobile Engineers for the Session 1930-31, whilst Mr. C. R. F. Engelbach and Mr. W. J. Tennant have been elected as Vice-Presidents.

Calendars for 1930.—We thank the following firms for useful calendars for the year 1930:—Braziers, Ltd., The Depositories, Stanstead Road, Forest Hill, London, S.E.23; W. H. Willcox & Co., Ltd., 38 Southwark Street, London, S.E.1; "Sentinel" Waggon Works, Ltd., Shrewsbury; Guy Motors, Ltd., Fallings Park, Wolverhampton.

A Useful "Garner."—We illustrate a dual-purpose cattle carrier and general transport van mounted on a forward drive low load line Garner chassis, which is very successful in service. The back forms an easy ramp and the gates are instantly removable; permanent roof, curtains side and rear.

A DUAL-PURPOSE VAN ON A FORWARD DRIVE LOW LOAD LINE GARNER CHASSIS.

Shire Horse Society.—The Council of the Shire Horse Society met at 12 Hanover Square, London, W.1, on February 4th, to determine the final arrangements for the Society's fifty-first Show to be held at the Royal Agricultural Hall, London, on Tuesday, February 25th, and the two following days. A representative entry had been secured comprising 117 stallions, 91 mares and fillies, 44 geldings, and 79 produce, so that a comprehensive exhibition of shires of all ages and both sexes is assured. This entry also ensures the provision of additional cash prizes in all three sections. Many notable names in the shire horse world are to be found among the list of exhibitors. The programme will be as follows:—Tuesday, February 25th—9.30 a.m. Show opens. 10 a.m. Judging of Stallion and Gelding Classes. Wednesday, February 26th—9.30 a.m. Show opens. 10 a.m. Judging of Mares and Produce Groups. 3 p.m. Awards of Championships followed by a Parade of all exhibits (if practicable). 4.15 p.m. Annual General Meeting of Members. Thursday, February 27th—9 a.m. Parade of animals entered for the Auction Sale. 10 a.m. Auction Sale. 2 p.m. Judging of classes for Commercial Horses.

A New Long Distance Passenger Service.—We are interested to learn that Thomson's Tours, Ltd., of Princes Street, Edinburgh, will shortly be putting on the roads a number of Daimler C.F.6. double deck buses, accommodating forty passengers, to carry on a regular service between Edinburgh and London. The usual seating capacity of this type of machine is being reduced so as to afford extra comfort to passengers on this long distance route and also to provide ample accommodation for luggage. We are informed that the journey will be completed in the day, vehicles leaving Edinburgh in the morning arriving in London the same night, and vehicles leaving in the evening arriving the following morning, while the same time-table will be in operation from London to Edinburgh.

New Showrooms.—Messrs. F. G. Smith (Motors), Ltd., 169, Shaftesbury Avenue, W.C.2, inform us that on account of the very considerable increase in the volume of Dennis Commercial Vehicle business they have opened showrooms at 169, Shaftesbury Avenue, W.C.2, to handle the Dennis business in London, under the management of Mr. R. S. Hill. The firm's existing Commercial Vehicle Depot at Goodmayes will in future be entirely devoted to the Sale and Service of Morris-Commercial Vehicles, under the management of Mr. S. R. Bonallack.

Guy and Star Vehicles in South Africa.—Guy Motors (S.A.), Ltd., have opened a new depot at 59, Mooi Street, Johannesburg, where they are in a position to give complete service on Guy and Star Vehicles.

* * * *

HULL.

A Proposal Resisted.—Owners of motor buses running to places just outside the city of Hull are strongly opposing a proposal put forward by the Hull Watch and Licensing Committee that the minimum fare for all vehicles holding Hull licences shall be sixpence per passenger. If the Watch Committee persist in their attitude a big fight will no doubt develop.

Level Crossings at Hull. Abolition Scheme Landslide.—The scheme for the abolition of the level crossings at Hull has been wiped out by a veritable landslide of votes. Hull has never before rejected a proposal put forward by the City Council in such an emphatic manner. The town's meeting, at which the vote was taken, was strongly against the scheme and when the poll was taken, only 2,854 votes were given in its favour and 32,319 against. A remarkable thing is everyone in the city is agreed that the abolition of the crossings is very, very desirable. But votes were not given for the scheme because everyone felt the financial proposals were absurdly generous to the London and North Eastern Railway Company, and correspondingly unjust to the ratepayers. Of a total estimated cost of nearly 1¼ million pounds, £600,000 was to be provided by State grants. The railway company, on whose estate the money was to be spent, were to contribute £100,000, whilst the ratepayers were to provide the whole of the remainder, which could not be less than £550,000.

* * * *

MIDLANDS.

Street Closed.—A good deal of inconvenience has been caused by the closing of Paradise Street, Birmingham, for sewer construction. Gyratory traffic is now necessary involving Edmund Street, Congreve Street and Great Charles Street.

Roads and Bridges.—The General Purposes Committee of the Birmingham City Council has approved schemes for the improvement of roads and bridges sanctioned by the Council last October. The expenditure involves £465,722 on road works and £14,000 on bridges.

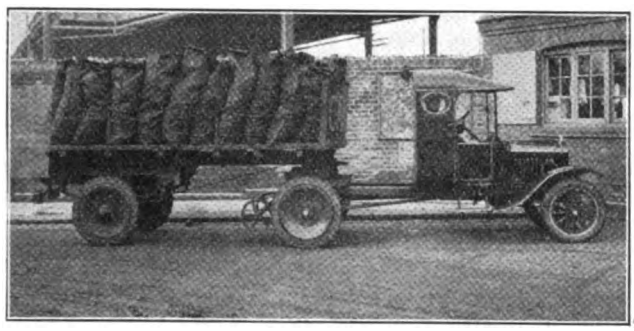
Birmingham's Trams. — A new type of double-deck tramcar has been tried out on the Bristol Road route. Aluminium and aluminium alloys have been largely used in its construction for purposes of weight reduction. The tests, both in the matter of load and speed, are highly satisfactory and the new tram is claimed to be the first definite step in the introduction of a lightweight vehicle.

* * * *

King's Cross Motor Coach Station.—A further development in the direction of long distance motor coach services is the scheme to build a super motor coach station at King's Cross. E. H. Stodart & Co., the architects for the scheme, inform us that they have been engaged on the plans for the past twelve months, in consultation with several experts in transport, the idea being to erect two or more terminal coach stations on the inner boundaries of London adjoining the large railway termini, particularly at King's Cross and Victoria. The King's Cross site has a ground area of over 30,000 ft. super, and it is proposed to erect a building of about six storeys, the main coach station being on the ground floor, with waiting room, refreshment rooms, restaurant, and every possible convenience for passengers, including booking offices or kiosks for various coaching companies, the idea being that the station will be open to all coach owners. Immediately adjoining this site is an existing subway, at the corner of Belgrave Street and Euston Road, connecting the Main Line and the Metropolitan Railway Stations opposite, which it is considered should prove a great asset to the station as well as a convenience to passengers.

Digitized by Google

Trailer with Drop Wheels.—The article describing the Trailmobile, which we published a month or two back, has brought us an interesting photograph from Q. M. Camroux & Co., 121, Holland Park Avenue, London, who point out that they have been using a similar system for the transport of coal, whereby the small wheels drop down so that the empty trailer can be moved about by hand labour. They inform us that they have been using this system of transport for between four and five years.

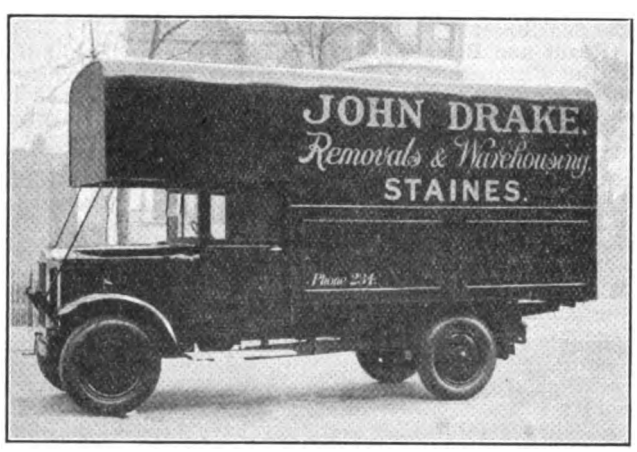


Q. M. CAMROUX & CO.'S TRAILER REFERRED TO IN TEXT.

F.W. & R.A. New Members.—The following firms have been elected to membership of the Furniture Warehousemen & Removers' Association:—Messrs. Foster, Biggs & Sons, 50, Portland Road, South Norwood, London, S.E.25, and The Victoria Transport Co., Merton House, Farnham, Surrey.

B.A.I.F.R. New Members.—The following firms have been elected to membership of the British Association of International Furniture Removers:—Pedro Fluiters Garcia, Alcala 10, Madrid, and the Lincoln Warehouse Corporation, 1189/1201 Third Avenue, New York, U.S.A.

A "Bean" Removal Van.—We have received from John Drake, Removal Contractor, Wyatt Road, Staines, a photograph of a new "Bean" 30-cwt. van which he is using for removal work. He informs us also that he has another 30-cwt. six-wheeler on order, just being delivered, and proposes to use it in replacement of heavier vehicles, as he considers that he can give his customers quicker and better service with the lighter vehicles. Mr. Drake has extensive warehouses at Kingston Road and Wyatt Road, Staines, and the business is carried on under his personal supervision, with the aid of his two sons and a loyal staff of workmen, some of whom have been in his employ for upwards of thirty years.



JOHN DRAKE'S NEW 30-CWT. "BEAN."

Motorists and Private Bill Legislation.—An unusually large number of Private Bills has been introduced in the present Session of Parliament by local authorities and private concerns, many containing provisions of serious importance to motor owners. Acting in conjunction with the Motor Legislation Committee every Bill has been carefully scrutinised by the Automobile Association. In some cases, negotiations with the promotors in the hope of securing the necessary amendments are in progress, but where this is not possible arrangements are being made for strong opposition, before the Parliamentary Committee dealing with these Bills, to various proposals which are against the interests of motorists.

SOUTH WALES.

Contract Haulage Preferred.—The Bedwas and Machen Urban District Council, which has formerly carried out scavenging work by both direct labour and contract haulage systems, has now decided to drop the direct labour system and add the districts so done to those on which the contract haulage system is worked.

Caerphilly and Merthyr Purchases.—Caerphilly Urban District Council is to buy four new bus bodies from Messrs Davidson, Trafford Park, Manchester. Merthyr Corporation Bus Dept. is buying four new Bristol buses and will shortly require further buses.

Value of Conference Exhibitions of Vehicles.—Arising out of report of members and officials attending the recent Roads and Public Works Exhibition in London, the Merthyr Corporation has arranged for several low loading refuse collection vehicles to be demonstrated under working conditions at Merthyr, with a view to purchase. Other South Wales authorities made similar arrangements as result of exhibits at this Exhibition.

Record Licensing Applications.—In January, the local authorities of the South Wales area received a record number of applications for licences for both local and long-distance bus services.

* * * *

NORTHERN IRELAND.

Motor Trade in Belfast.—Mr. Victor S. Ferguson, M.I.M.T., has been elected chairman of the Belfast division of the Motor Trade Association, and Mr. Charles Hurst, chairman of the Motor Agents' Association, Ltd.

Fares and Rates Tribunal.—The Governor of Northern Ireland, his Grace the Duke of Abercorn, has appointed as the fares and rates tribunal for public service vehicles Sir Lynden Macassey, K.C., Mr. D. L. C. Clarke, O.B.E. (Assistant Secretary of the Ulster Ministry of Home Affairs), and Mr. Adrian Robinson, B.L., a former inspector under the old Irish Local Government Board. Sir Lynden, who is giving his services without fee or reward, will be chairman. The first sitting will be at Holywood, where an application will come up from the Belfast and Co. Down Railway to increase their bus fares between Belfast and Holywood. It is a coincidence that Holywood is Sir Lynden Macassey's native place.

Return of Mechanically Propelled Vehicles.—The latest return shows that there are in Northern Ireland 34,902 mechanically propelled road vehicles. Of these, 11,771 are in Belfast. According to the return of cars taxed on horse power—17,603 altogether—12 h.p. is the greatest single division, with 5,423 vehicles. Only one of the other classes, 13 h.p., with 2,002, rises above the 2,000 mark.

Road Accidents in Northern Ireland.—Another interesting Government return is of the road accidents in Northern Ireland during 1929. According to this, accidents numbered 1,417, involving the death of 126 persons and the injury of 1,473 others. The return states that 616 of these accidents were caused by the fault of pedestrians, 43 of whom were killed. Omnibuses show a big decrease in their accident figures as compared with previous years, and the principal vehicles involved were:—Motor cars, 671; motor cycles, 219; motor lorries, 227; push bicycles, 264; buses, 119; horse vans, 104.

* * * *

IRISH FREE STATE.

Owners and Returns for Government Purposes.—In the Dublin District Court, the necessity for bus owners in the Irish Free State to compile statistics in relation to the use of their vehicles, and supply such returns for Government purposes, was shown when three Dublin bus owners were prosecuted for having failed to furnish returns in accordance with an order made by the Ministry for Industry and Commerce under the Statistics Act. Fines were inflicted.

Bus Speeding and Damage to Roads.—In the District Court at Carrick-on-Suir, District Justice McCabe fined the driver of an omnibus 20s. for driving a vehicle at 30 miles an hour. The District Justice said that on a main road a bus driven at 30 miles an hour by a good driver was not a danger, but his reason for fining the defendant and other bus drivers was because of the damage they did to the roads, for which the ratepayers had to pay.

Motor Vehicles in Dublin.—In Dublin City, in 1929, the number of motor vehicles registered was 8,716, as compared with 7,845 in 1928. There was an increase of 149 in the number of commercial vehicles compared with the previous year, the figures being 1,991 in 1929, and 1,842 in 1928. The number of buses and chars-a-banc registered in Dublin last year was 463, as against 253 in 1928.

British Association of Shipping and Forwarding Agents.

Annual General Meeting.

THE Annual General Meeting of the British Association of Shipping and Forwarding Agents was held at the Chamber of Commerce, Leeds, on the 17th January last.

MR. A. W. HEARD (Jones, Heard & Co., Ltd., Newport, Mon.), the Chairman of the Association, presided, and was supported by the three Vice-Chairmen, **Mr. M. E. Duffett** (J. D. Hewett & Co., Ltd., London), **Mr. W. H. Elder** (W. H. Elder (Shipping), Ltd., Hull), and **Mr. Norman N. Bird** (Herbert Watson & Co., Ltd., Manchester).

There was an excellent attendance of members, those present including:—

Mr. W. Mendus (Burgess & Co., Ltd., Swansea); Mr. J. B. Bower (F. Bower & Co., Liverpool); Mr. H. Almond (G. W. Sheldon & Co., Ltd., Liverpool); Mr. E. Sutton (W. W. Jones, Dooly & Co., Ltd., London); Mr. H. Smith (John Sutcliffe & Son, Grimsby); Mr. F. Longrigg (Herbert Smart & Co., Ltd., London); Mr. F. L. Bryant (Van Oppen & Co., Ltd., London); Mr. H. Gilbert (G. W. Sheldon & Co., Ltd., London); Mr. W. O'Brien (G. W. Sheldon & Co., Ltd., Liverpool); Mr. W. Westwood (Van Oppen & Co., Ltd., Hull); Mr. J. H. Allen (Stockwell & Co., Ltd., Manchester); Mr. G. E. Gilbey (Gilbey & Sons, Wakefield); Mr. F. J. Gerson (Rosenberg, Loewe & Co., Succrs., Ltd., London); Mr. G. W. Robertson (Robertson, Buckley & Co., Ltd., Liverpool); Mr. A. Faulkner (Crowe and Co. (Ldn.), Ltd., Manchester); Mr. H. W. Raybould (Maurice Cooke & Co., Birmingham) and Mr. F. H. S. Rouse (Hon. Treasurer) (American Express Co., Inc., London).

Apologies for inability to attend were announced from Mr. A. MacCulloch (MacCulloch, McLellan & Pollok, Glasgow); Mr. T. Heyman (Morison, Pollexfen & Blair, Ltd., Birmingham); Mr. C. E. Sanderson (Sanderson's Express, Ltd., Nottingham); Mr. W. H. James (James and Hodder, Bristol); Mr. K. F. Harker (Harker, Shield and Co., Ltd., Hull); Messrs. T. R. W. Mason, Ltd. (Swansea) and Messrs. H. Smith & Son (Southampton).

The Chairman said how pleased he was to see such a large gathering. He saw friends from Hull, Manchester, Liverpool, London, Swansea and South Wales, and he extended to all a very hearty welcome.

The Minutes of the last Annual General Meeting, held at Manchester on January 22nd, 1929, were read and adopted.

THE CHAIRMAN REVIEWS THE WORK OF THE YEAR.

The Chairman, in moving the adoption of the Report and Accounts, referred to the question of co-operation between members which was a subject raised at the last Annual General Meeting when it was recommended that such co-operation should be encouraged. He said he felt that members were beginning to realise that they should support each other and for more than one reason. Firstly, the fact that a Forwarding Agent was a member of the British Association of Shipping and Forwarding Agents was evidence of the sound status of that member, and other members knew that they were safe in dealing with a fellow member at a port even if they had not met personally. Secondly, if they supported each other there would apply that spirit of good fellowship and mutual assistance born by being members of the same organisation, and such co-operation would be to the good of all.

The work of the Association had developed during the past year and the annual report which had been circulated to members showed that the Council had their hands fairly full.

The question of railway and steamship competition with shipping and forwarding agents was still rather acute. Members of the Council had taken advantage of opportunities to discuss the position with the railway companies and he was pleased to report that on the whole their relationship with the railway companies was good. Matters were still under consideration and members could rest assured that the Association would not let the question rest until they were satisfied that the rights of shipping and forwarding agents were fully protected and their interests properly looked after.

An important matter with which the Council had dealt during the year was that regarding the affiliation of the London Shipping and Forwarding Agents' Conference with the British Association of Shipping and Forwarding Agents. That question would be referred to later.

The British Association of Shipping and Forwarding Agents had become affiliated to the International Federation of Forwarding Organisations, and had been represented at the meetings of the International Federation, and he felt that a great deal of good would accrue to the British Association of Shipping and Forwarding Agents through their affiliation as there was great need for full co-operation with their friends on the Continent. If the Association brought its full weight to bear in the deliberations of the International Federation it could only be productive of good.

Another important matter which had been considered by the Council was the question of adopting the practice of keeping a register of firms of doubtful integrity. Members were sometimes let down by firms whom it was thought were composed of people of repute. Arrangements had now been made to keep a register containing the names of firms of doubtful integrity, and members would be entitled to draw upon the information so collected, such information, of course, being given in confidence.

During the year there had been considerable changes in the Secretaryship. Mr. R. E. Peers had resigned in order to take up a new appointment and Mr. A. G. L. Ives, who was appointed in his place, had also resigned to engage in new activities. The Association had now entered into an arrangement whereby Mr. B. G. Arthur, M.B.E., a member of the London Chamber of Commerce Staff, had become the Secretary, and Miss Watson was present that day representing Mr. Arthur.

During the year the Association had adopted an official die, or emblem, to the design of a notable artist, and he hoped that members would, whenever possible, use it on their stationery. Blocks could be ordered through the Secretary at a very small cost.

The Association was advancing. They could not expect to go ahead like a house on fire, but if the proposed affiliation of the London Shipping and Forwarding Agents' Conference with the British Association of Shipping and Forwarding Agents was agreed to, the membership of the National body would be considerably augmented and it would represent a large proportion of the best houses in the country. Prospects were, indeed, quite good.

The Association had received invaluable assistance from their official organ, *The World's Carriers and Carrying Trades' Review*, and Mr. E. W. Willis, the Editor of that paper, deserved the hearty thanks of the members. No doubt members had read carefully the reports of the activities of the Association which had appeared regularly in the *World's Carriers* during the past year.

He hoped that each member of the Association would use his influence amongst reputable firms of shipping and forwarding agents to procure new members. There were many firms in all parts of the country who should join the Association and who would find that they had advanced their own interests by so doing. Membership was more or less in the nature of an insurance. The members were out to protect the interests and welfare of each other. The shipping and forwarding agents had difficulties to face, some of which were mentioned in the annual report, and unless they worked and pulled together, and made up their minds to stand together, the outlook was not quite so bright as one could wish. To enhance the power and to raise the status generally of shipping and forwarding agents, the Association must aim at increasing its membership, and he urged members to use their influence amongst their friends to that end.

The Hon. Treasurer of the Association presented the accounts for the year ended 31st December last. He explained various items in the Balance Sheet, and said he thought all would agree that the finances of the Association were excellent, and he believed they could look forward to being in a still more favourable position at the end of the current year.

A resolution that the report and accounts for the year, 1929, be adopted was carried unanimously.

ELECTION OF CHAIRMAN.

Mr. M. E. Duffett (J. D. Hewett & Co., Ltd., London), Vice-Chairman of the Association, said that at a Council meeting of the Association, held that morning, their Chair-

Digitized by Google

man announced his decision not to offer himself for re-election for the ensuing year owing to the calls made upon his time by his own business. The Council, however, came unanimously to the conclusion that no man was better fitted for the important post of Chairman of the National body than was Mr. Heard. (Applause.) Unless members wished to nominate any other gentleman for the position it would give him great pleasure to propose that Mr. A. W. Heard be re-elected as Chairman for the ensuing year. (Loud applause.)

As no further nominations were forthcoming the proposition was seconded, put to the meeting, and carried with enthusiasm.

Mr. A. W. Heard, who was received with applause, said he felt that the members were conferring upon him a great honour in asking him to be the Chairman of the Association for the third year. When he suggested to the Council that it was time they elected another Chairman he was turned down, might he say with ignominy, and almost told to mind his own business. (Laughter.) Yet he did find a lot to do in his own business and felt he was not really giving sufficient time and attention to the affairs of the Association. To make an Association such as the British Association of Shipping and Forwarding Agents go ahead one needed to concentrate upon it and give it a lot of personal attention, much more, perhaps, than might appear on the face of it, and it seemed to him that, living as he did in South Wales, perhaps he was too far from the scene of action. However, the Council thought otherwise and, perhaps, under a certain amount of pressure he felt he had no option but to fall in with their wishes. He was extremely obliged to the members for the honour conferred upon him, but was still of opinion that it would be a good thing if, before the next annual meeting, they could find a gentleman to occupy the chair who could devote a little more time to the work of the Association and lived nearer to the centre of activity.

Election of Vice-Chairmen. Mr. A. W. Heard said that perhaps he could return the compliment paid him by proposing the re-election of Mr. M. E. Duffett, Mr. W. H. Elder and Mr. Norman N. Bird as Vice-Chairmen of the Association for the ensuing year. These gentlemen had proved stalwart henchmen and their advice and assistance had been available always and he had received great help from them in all circumstances. (Applause.) If members re-elected their Vice-Chairmen they would be leaving their interests in safe hands, and they would keep a wary eye upon him and would see that he did his duty so far as he was able to do so. (Laughter.)

The proposition was seconded and carried unanimously.

Mr. M. E. Duffett, speaking for Mr. Elder and Mr. Bird as well as on his own behalf, said they would be only too pleased to give Mr. Heard all the assistance they could during the year, and he thanked the members for re-electing them Vice-Chairmen.

Election of Hon. Secretary and Treasurer. Mr. H. Gilbert proposed the re-election of Mr. F. H. S. Rouse as Hon. Secretary and Treasurer, with authority to sign cheques. This proposition was seconded and carried unanimously. Mr. Rouse thanked the members, and said he would do his best to give satisfaction.

Election of Council. The Chairman said that at the present time there were ten members of the Council. Under the Memorandum and Articles of Association they had power to elect twenty-one members and the Council must not consist of less than six. When electing the original Council their object had been to obtain representation from all over the country. It was now felt that a further five or six gentlemen could with advantage be added to the Council. The London Shipping and Forwarding Agents' Conference had a large membership and it was only fair that the London Conference should have adequate representation on the Council, i.e., their representation should be proportional to the membership as compared with other associations affiliated to the National body. There were some good men in London whose presence on the Council of the National body would be all to the good. The Council had considered the matter very carefully and recommended that the ten gentlemen at present on the Council should be re-elected, and that Mr. J. B. Ballantyne (J. B. Ballantyne & Co., London), Mr. E. W. Turvey (Nunzi & Co., Ltd., London), Mr. J. B. Taylor (Immediate Transportation Co., Ltd., London) and Mr. John B. Bower (F. Bower & Co., Liverpool) should be elected to the Council, which thereby would be materially strengthened. He invited other nominations before any resolution was proposed.

Mr. W. H. Elder said that the Humber area already had two representatives on the Council, Mr. K. F. Harker (Harker, Shield & Co., Ltd., Hull) and himself, but Mr. Harker was not always able to attend meetings in London. He did not ask for an undue representation for Hull, but in view of the important matters affecting the Humber area, now under consideration by the Association, he hoped the members would consider the appointment of another representative for Hull so that he could have the benefit of the experience and assistance of another gentleman from Hull when Mr. Harker was unable to be present at the Council meetings. He thought that his suggestion, if adopted, would strengthen the Council. He proposed the election of Mr. H. Harrison (Oughtred & Harrison, Ltd.). Mr. Harrison was very keen regarding the negotiations now being conducted by the Association touching matters affecting the Humber ports and he had had considerable experience of the forwarding business in Hull.

The Chairman then formally proposed that the following gentlemen should form the Council for the ensuing year: Messrs. T. Heyman (Morison, Pollexfen & Blair, Ltd., Birmingham); G. W. Robertson (Robertson, Buckley and Co., Ltd., Liverpool); J. O. Wood (T. F. Wood & Co., Ltd., York); W. H. James (James & Hodder, Bristol); F. J. Gerson (Rosenberg, Loewe & Co., Succrs., Ltd., London); C. E. Sanderson (Sanderson's Express, Ltd., Nottingham); A. Faulkner (Crowe & Co. (London), Ltd., Manchester); W. O'Brien (G. W. Sheldon & Co., Ltd., Liverpool); A. MacCulloch (MacCulloch, McLellan & Pollok, Glasgow); K. F. Harker (Harker, Shield & Co., Ltd., Hull); J. B. Ballantyne (J. B. Ballantyne & Co., London); E. W. Turvey (Nunzi and Co., Ltd., London); J. B. Taylor (Immediate Transportation Co., Ltd., London); John B. Bower (F. Bower and Co., Liverpool) and H. Harrison (Oughtred & Harrison, Ltd., Hull).

This resolution was seconded and carried.

Mr. B. G. Arthur, M.B.E., of the London Chamber of Commerce, was elected Secretary of the Association and Messrs. W. B. Keen & Co., C.A., of London, were re-elected auditors for the ensuing year.

PROPOSED AFFILIATION OF THE LONDON SHIPPING AND FORWARDING AGENTS' CONFERENCE WITH THE BRITISH ASSOCIATION OF SHIPPING AND FORWARDING AGENTS.

The Chairman said that for some time past negotiations had been taking place between the London Shipping and Forwarding Agents' Conference and the British Association of Shipping and Forwarding Agents with regard to the affiliation of the London Conference with the National body. The proposed terms of such affiliation had received the approval of the Council, and it was for the members to decide whether they would agree to those terms. The proposed affiliation would strengthen the finances and increase the status and usefulness of the British Association of Shipping and Forwarding Agents.

The Hon. Treasurer of the Association explained to the meeting what effect the affiliation of the London Shipping and Forwarding Agents Conference with the British Association of Shipping and Forwarding Agents would have upon the two bodies and how it was proposed that the Secretarial expenses in London should be provided. He pointed out that many members of the London Conference are already members of the National body. He said that the proposals before the meeting had been considered by the London Conference and approved with certain reservations as to the method of electing firms to membership of the National body; he emphasised to what an important extent the membership of the British Association of Shipping and Forwarding Agents would be increased by the affiliation to it of the London Conference.

The Chairman then proposed the adoption of three resolutions to make the affiliation of the London Shipping and Forwarding Agents' Conference to the British Association of Shipping and Forwarding Agents an accomplished fact.

The first two dealt (*inter alia*) with the financial questions involved and the third dealt with the method of electing firms to the National body, and disposed satisfactorily of the points regarding which the London Conference had made reservations when approving of the terms of affiliation. Apropos of the third resolution the Chairman said that District Associations should collect their membership in their own areas and they would then automatically become affiliated to the British Association of Shipping and Forwarding Agents.

Mr. F. J. Gerson seconded the adoption of the three resolutions and in the course of his remarks said that, in effect, the third resolution merely set down in black and white the policy of the British Association of Shipping and Forwarding Agents, viz., that they could not accept for membership a firm on that firm's direct application when it came from an area where there was in existence an affiliated Association without first consulting

Digitized by Google

the Executive of the local Association. It would be impossible to carry on if the Council of the British Association of Shipping and Forwarding Agents were in a position to accept as members firms from all over the country when such firms might be unsatisfactory from the point of view of their colleagues in the port or district in question.

The three resolutions were then put to the meeting and were carried unanimously.

Annual Meeting, 1931. A resolution that the next Annual General Meeting of the British Association of Shipping and Forwarding Agents should be held in London in 1931, was put to the meeting and carried unanimously.

Mr. W. O'Brien informed the meeting that the New York Conference had asked the Association whether they could draw up a schedule upon which could be based charges for through Bills of Lading to different parts and that he and Mr. F. H. S. Rouse had drawn up such a schedule.

The Chairman said that this matter had arisen in connection with a certain North Atlantic conference with which they had tried to get into line more or less in regard to the question of through Bills of Lading. The suggestion had been made that if the British Association of Shipping and Forwarding Agents would agree upon a definite scale of charges it might facilitate the negotiations. At the present time some forwarding agents had their own ideas upon the subject, and in many cases were prone to handicap and kill business by overloading small matters with excessive charges; this was detrimental to themselves, to the Association and to the status of forwarding agents generally, and he thought that the scale that had been drawn up was reasonable. It was, however, for the members to consider the question and to say whether they were prepared to go ahead and to tell the North Atlantic Conference that forwarding agents would be prepared to adopt the proposed schedule. The schedule in question applied to east-bound cargo.

Mr. F. J. Gerson said he was of opinion that a confidential circular should be sent out to members giving the particulars contained in the schedule and that they be asked to say whether they agreed to the scale proposed.

Mr. H. Gilbert was of opinion that the Council of the Association should consider the schedule before it was broadcast.

It was decided that the Council should consider the matter before any definite suggestions were put before the members and that they should get into touch with existing forwarding agents associations in this country and ask for their views on the matter.

A hearty vote of thanks to the Chairman for presiding concluded the business.

London Shipping and Forwarding Agents' Conference.

Annual General Meeting.

THE Annual General Meeting of the London Shipping and Forwarding Agents' Conference was held at the London Chamber of Commerce on 14th January last.

The President of the Conference, **MR. M. E. DUFFETT** (J. D. Hewett & Co., Ltd.), presided.

The Minutes of the last Annual General Meeting, held on 10th January, 1929, were adopted.

ELECTION OF PRESIDENT.

Mr. J. B. Taylor (Immediate Transportation Co., Ltd.) proposed the re-election of Mr. M. E. Duffett as President of the Conference for the ensuing year. He spoke in eulogistic terms of the excellent services rendered to the Conference by Mr. Duffett.

The resolution was carried wtih enthusiasm.

The President said it was very kind of the members to re-elect him to the Presidential chair, yet he did not know whether their action was justified. (Cries of "Yes.") If the members felt that he could continue to serve them he would be happy to carry on for another year. (Applause.)

Election of Council.—The President mentioned that fifteen gentlemen were at present serving on the Council of the Conference. The question of the composition of the Council had been before the Council and it had been decided that at the annual general meeting the members should be invited to say how many gentlemen should constitute the Council.

A member said he thought it would be a good idea if a certain number of the Council retired each year and were eligible for re-election only if the Conference failed to find within its membership a sufficient number of gentlemen to form an adequate Council. He felt that there should be a more or less continuous influx of new minds. If his proposal was adopted he wished to place his own name in the category for retirement. Some gentlemen had served on the Council year after year, and as one of those he would like to take a rest and see some others do their bit.

Another member expressed the opinion that the present Council seemed rather unwieldy. The Council sometimes came to a decision perhaps after a quarter of an hour's discussion, and then one member would start the whole argument over again, and probably after three hour's discussion the Council would arrive at the same decision as they had done during the first quarter of an hour.

It was then moved that the Council should consist of eleven members elected from the general membership of the Conference, together with the Chairmen of the four Sections of the Conference. This proposition was put to the meeting and carried unanimously.

A proposition was moved that three members of the Council should retire annually in rotation, and should not be eligible for re-election at the end of their term of office unless the Conference found that it was unable satisfactorily to fill their places.

A number of gentlemen were nominated to serve on the Council for the ensuing year, and on a ballot being taken it was found that Mr. P. Buswell (Sutherland International Despatch, Ltd.) and Mr. W. Woollett (Woollett, Airey & Co., Ltd.) had tied for a seat. Both gentlemen offered to retire in favour of the other, but as the Chairmen of the four Sections of the Conference had not at the time been elected for the ensuing year, they also being entitled to sit upon the Council, the question whether Mr. Buswell or Mr. Woollett would act was left in abeyance.

The following gentlemen were definitely elected to the Council:—Messrs. J. B. Ballantyne (J. B. Ballantyne & Co.), H. K. Coppendale (Morison, Pollexfen & Blair, Ltd.), H. A. Crowe (Crowe & Co. (London), Ltd.), H. Gilbert (G. W. Sheldon & Co., Ltd.), F. J. Gerson (Rosenberg, Loewe & Co., Succrs., Ltd.), C. McEwan (Thos. Cook & Son, Ltd.), W. Narracott (Van Oppen & Co., Ltd.), G. Perry (British Commercial Transport Co., Ltd.), E. W. Turvey (Nunzi & Co.), and Mr. F. H. S. Rouse (The American Express Co., Inc.).

Accounts.—Mr. E. A. Aves, the Hon. Treasurer, presented the accounts for the year 1929. He referred to various items of expenditure, particularly emphasising the amount expended by the Conference in countering the activities of so-called shipping and forwarding agents who were likely to bring the trade into disrepute, and in this connection the President pointed out that such action had been taken in accordance with the instructions of the Council and their action had been entirely successful.

The accounts were adopted.

ANNUAL REPORT.

The President presented the Annual Report of the Executive Council for the year 1929.

The report dealt firstly with the special activities of the four Sections of the Conference which are concerned with the interests of members engaged in particular geographical sections of the trade.

Air Section.—In the month of May last it was found desirable to take steps to establish a special Section amongst members interested in air traffic to take up in closer detail questions relating to air transport. An Air Section was subsequently inaugurated. Questions considered by the Air Section included negotiations with Imperial Airways on the question of rates and conditions of clearance and delivery on the London/Paris route. The Section is strongly of opinion that the present volume of traffic sent by air by Forwarding Agents is very small in comparison with the volume that could be sent were the rates more favourable. Further negotiations are now in progress with Imperial Airways. A notably gratifying feature of the negotiations was the manifest desire of the Management of Imperial Airways, Ltd., to recognise the London Conference, through its Air Section, as a medium for negotiations on matters of joint interest to the Company and Forwarding Agents generally, and also to utilise

Digitized by Google

the services of the Conference for the distribution of information as new facilities came to be established from time to time.

American Section.—At an early meeting in the year it was decided that sectional meetings of firms interested in the American trade should be held every three weeks instead of every fortnight. Many matters of importance have been dealt with, including the licensing of Customs Brokers in U.S.A., relationship with Steamship Lines, minimum freights—U.K. to New York, etc.

French Section.—This section of the Conference has done good work. It has conducted negotiations with the Wholesale Textile Association and discussed difficulties reported to have been experienced by members in connection with the working of Customs Form C105. Export Rates (British Railways) is another matter which has received careful attention.

German Section.—A delegation from this Section visited the Verein Deutscher Spediteure in Berlin on February 11th, 1929, and on the two subsequent days interviewed the Verein Hamburger Spediteure in Hamburg, and the Verein Bremer Spediteure in Bremen. At each place they were received by small sub-committees which had been selected as representing members of the respective German Associations particularly interested in forwarding traffic to England. It was gratifying to find an atmosphere of vital and constructive interest and that there appeared to be a cordial appreciation of certain important points, including the need for a greater realisation of the fact that the interests of Forwarding Agents in both countries are not opposite but fundamentally identical.

Other matters of interest which have been dealt with by the Section are:—Through Bill of Lading; Continental Quotations involving the Phrase "Per Ton"; Over-Entry Certificates; P.L.A. Rates.

Council.—The general working of the Conference is under the control of the Executive Council, which considers from time to time matters of common interest to members, and the various trade sections are under obligation to refer to this Council any matters arising within their own province which may have manifest bearing on the general policy of the Conference.

Matters dealt with by the General Council during the year include the question of affiliation with other bodies. It has always been the policy of the Conference to promote friendly relations with other organisations at home and abroad with whom it has some bond of business contact or who are pursuing aims similar to its own. The General Council has also conducted negotiations with Imperial Airways, and considered such matters as a Customs Bond, Pilferage at the Port of London, Fraudulent Trading, Export Rates, etc.

Pension Scheme.—With regard to a suggested Pension Scheme of Insurance for the staff of members of the Conference, the general idea is that a scheme such as is in force with Lloyds and others for the payment of a pension at the age of 60 or 65 (or, alternatively, at death or disablement before this), on payment of a premium on a contributory basis, is one which should commend itself to the members of the Conference. The Council are giving the matter their careful consideration and will presently be placing before members some considered suggestions in regard thereto which it is hoped will meet with a ready response in the interests of the members and their various staffs. The Council would welcome any suggestions in regard to this.

Mr. E. D. Brigg was re-elected Hon. Auditor and thanked for his services.

Mr. Aves was re-elected Hon. Treasurer and thanked for his services.

AFFILIATION OF THE LONDON SHIPPING AND FORWARDING AGENTS' CONFERENCE WITH THE BRITISH ASSOCIATION OF SHIPPING AND FORWARDING AGENTS.

The members were informed that the question of the affiliation of the London Shipping and Forwarding Agents' Conference with the British Association of Shipping and Forwarding Agents had been before the Council. At present those members of the London Conference who were also members of the National body paid two subscriptions, and it had been suggested that the London Conference should become affiliated with the National body and that one subscription should cover membership of both organisations. It was proposed that members of the London Conference should pay a subscription of four guineas which would be divided equally between the two organisations. That would mean a reduction in the income of the London Conference, and it would be necessary therefore to make some arrangement regarding secretarial expenses. It was suggested that the existing arrangement under which the two Associations each paid half the cost of the secretarial expenses in London should be so amended that the London Conference paid twenty-five per cent. and the British Association of Shipping and Forwarding Agents would contribute 75 per cent.

The President pointed out that at present members of the London Conference who were members also of the British Association of Shipping and Forwarding Agents were paying three guineas to each Association. If the proposals were adopted the payment of an annual subscription of four guineas would in future cover membership of both Associations. The Council's recommendation to the members was that the subscription to the London Shipping and Forwarding Agents' Conference should be increased to four guineas to cover membership of both Associations; the British Association of Shipping and Forwarding Agents not to accept members from any port or district where there was an affiliated Association except through that affiliated Association.

A member submitted that the Council of the London Shipping and Forwarding Agents' Conference should be able to nominate a sufficient number of members of the London Shipping and Forwarding Agents to adequately represent the Conference at the deliberations of the British Association of Shipping and Forwarding Agents, such representation being consistent with the financial contribution to be made by the London Conference to the funds of the National body.

A member pointed out that the London Conference was largely instrumental in the formation of the British Association of Shipping and Forwarding Agents and they hoped it was going to be more national in its aims and objects than any of the existing conferences. They must all support the British Association of Shipping and Forwarding Agents as far as they possibly could.

A resolution was then put to the meeting that the London Shipping and Forwarding Agents' Conference should become affiliated with the British Association of Shipping and Forwarding Agents; that the subscription of members of the London Shipping and Forwarding Agents' Conference should be Four Guineas per annum to cover membership of the London Conference as well as of the British Association of Shipping and Forwarding Agents; that it be understood in future that the British Association of Shipping and Forwarding Agents would accept for membership no firms from London except through the London Shipping and Forwarding Agents' Conference; that the representatives of the London Shipping and Forwarding Agents' Conference present at the forthcoming annual meeting of the British Association of Shipping and Forwarding Agents be instructed to ask for proportional representation on the Council of the British Association of Shipping and Forwarding Agents, such representation to be based on membership; the resolution in favour of affiliation with the National body to be contingent upon the question of proportional representation of the London Conference upon the Council of the National body being satisfactorily dealt with.

This resolution was carried unanimously.

A cordial vote of thanks to the President for presiding was carried with acclamation.

The Royal Belgian Lloyd Amalgamation Scheme.—The Belgian Cabinet has given its consent to the fusion of the Royal Belgian Lloyd with the Belgian-Congo Maritime Company.

New Mexico Steamship Service. — A Mexico City message says that an agreement has been signed by the Government and the Panama Mail Line for a new fortnightly service between the west coast of Mexico (as far south as Salina Cruz) and the ports of California (U.S.A.). The new service will regularly serve the Mexican ports of San José del Cabo, La Paz, Maleje, Isla-del-Carmen, Santa Rosalía, Guaymas, Yavaros, Topolobampo, Altata, Santa Teresa, Mazatlán, San Blas, Puerto Vallarta, Chemela, Manzanillo, Acapuloc, Tecanapa, Minizo, Puerto Encondido, Puerto Angel and Salina Cruz.

Portugal. Duty on Gasoline and Tyres. — A Lisbon message says that the Government notifies an increase ir the import duty on gasoline from a minimum of 0.023 to 0.045 escudo (gold) per kilogram, and on tyres and tubes from a minimum of 0.20 to 0.50 escudo (gold) per kilogram. These increases are in place of the touring tax and municipal tax on motor vehicles, which have been abolished.

Ceylon Increases Import Duties.—A Colombo message says that increases in the duties on cotton piece-goods, machinery, matches, paper, spirits, tobacco, wines and malt liquors imported into Ceylon were introduced on January 23rd. The revised duties, of which the above are the principal, are expected to yield an additional two million rupees a year.

Liverpool Shipping and Forwarding Agents' Association.

Annual Dinner.

ANIMOSITIES and rivalries between one port and another are out-of-date and must cease if the county of Lancashire and the North of England is to hold together in the bond of prosperity and well being, said the Lord Mayor of Liverpool (Councillor Lawrence D. Holt, J.P.) himself a shipowner, at the Annual Dinner of the Liverpool Shipping and Forwarding Agents' Association, held at the Midland Adelphi Hotel, Liverpool, on 18th January last.

The guests included the Lord Mayor of Liverpool (Councillor L. D. Holt, J.P.); Sir Edwin F. Stockton, J.P.; Mr. T. J. D. Large, O.B.E. (Collector of Customs); Mr. F. J. Marquis, M.A., B.Sc., J.P.; Mr. F. Brocklehurst; Mr. N. M. Simpson, C.B.E. (Postmaster); Mr. A. W. Heard (Chairman, British Association of Shipping and Forwarding Agents); Mr. M. E. Duffett (President, London Shipping and Forwarding Agents' Conference); Mr. H. P. Lumb (Chairman, Manchester Shipping and Forwarding Agents' Conference); Mr. S. T. Burgoyne; Mr. F. R. Hauxwell; Mr. C. J. W. Mundy; Mr. David Jones, J.P.; Mr. G. C. Horton; Mr. J. Mitchell-Jones; Mr J. Jude, C.C.; Major Eckes, T.D.; Mr. E. Eckes; Mr. R. G. Baird; Consul for France; Consul for Spain; Commander Roden, R.N.R. and Col. Clayton, D.S.O., T.D.

Mr. David Jones, J.P. (Elder Dempster & Co., Ltd.), who presided, referred to the industrial activities in the south country. He said that a good many industries were springing up around London. It was convenient to have the factories there and the water transport to the factories, it being generally recognised as cheaper than any mode of transport. He was glad all the ports showed improvement—not one port improving at the expense of another—because it was largely a question of what they could do nationally. What the country needed was more exports.

Sir Edwin F. Stockton, J.P., proposed "The Trade and Commerce of Liverpool." He did not suppose, he said, that the trade and commerce of Liverpool was so great at the present time as they would like, but that was no reason why they should cry "wolf" and it was no reason why everybody should not work harder than ever to bring that restoration of trade which was so badly needed. He believed every part of the country had suffered a great deal by decrying their own goods and their own business efficiency, and even their own trades.

"Most people take you at your valuation. We have got rather a bad habit of looking upon ourselves as much inferior really to what we are. Lift up your city right to the top and keep it there—together with Manchester. (Laughter.) Let the country see that you in the north are not ashamed of your cities and can, in the long run, restore your lost trade."

Industrial depression could not be cured by the wave of a magic wand. It was a question of time. He had been told that the Manchester Ship Canal was not a very popular institution in Liverpool, but he sincerely believed that the men who showed great determination and vision in organising that great canal, had in their minds the idea of bringing Liverpool and Manchester closer together so that they might be better friends, and by the co-ordination of the two ports, do something to improve the business of the North of England.

Prosperity to Liverpool shipping meant that Lancashire was making plenty of goods. It was true that Lancashire trade was going through one of the most difficult periods it had ever known. It meant that they must put their house in order; bring themselves to a better state of efficiency; and wipe out a great deal of inflation which he thought was being accomplished.

The time had come when Lancashire would have to tackle the problem of unemployment by going on double shifts. Until they did that his candid opinion was that the trade of Lancashire could not compete successfully in foreign trade. No organisation, combination of employers or trade of any sort, could go on constantly and continuously losing money without the trade "going out." The prospects did show some definite signs of revival, and Lancashire was beginning to realise that she had to grapple with her problems and she was re-organising herself, and that was the first step for bringing about a complete restoration.

The heavy industries were paramount in the north and always would be, and the northern ports together held a much bigger percentage of the country's trade. He believed the figures for last year showed that the northern ports held a much bigger percentage of the trade of the country than the southern ports. There was no serious competition between the north and the south.

Liverpool shipping and forwarding agents served clients both at home and abroad. He need hardly advise them to try and keep all the trade they could for the port of Liverpool and prevent it going elsewhere. Every effort would be made by the railway companies to co-operate in every way they could to increase and help the trade of that great city.

The Lord Mayor of Liverpool, replying, spoke of the relationship of the two Lancashire cities between which, he said, there was a close community of interests. At times we were apt to look upon life with the eyes of the past and to think it necessary to keep up for appearance sake rivalries and animosities which were now wholly out of date. There was a time when rivalry was permissible. That time was past; rivalries and animosities even of the most friendly character, must cease if the county of Lancashire and the North of England was to hold together in the bond of prosperity and well being. Their efforts must be directed to a larger field by a common intelligence and in a common effort in goodwill amongst themselves. Liverpool had pre-eminence in maritime transport, in which the shipping and forwarding agents played a very essential part.

Mr. Tennyson J. D. Large, O.B.E. (Collector of Customs), introduced the toast "The Shipping and Forwarding Agents' Association (Inc.)." He said it was essential if the shipping of a port was to be conducted successfully that the various parts of the port machinery should work smoothly and sweetly. The Association and the Customs department were cogs in the industrial and national machine and were really dependent one on the other. Their relations had always been most friendly. One of the main objects of the Shipping and Forwarding Agents' Association was to promote the trade and commerce of the port of Liverpool. He shuddered to think of the state of chaos that would arise in the trade of Liverpool if the shipping and forwarding agents were to notify importers and exporters that in future they would have to look after their own Customs business. Such a contemplation made him realise how indebted the business community was to shipping agents for the highly expert service they rendered their clients. From time to time matters of general interest to shippers throughout the port arose, and it was at those moments that the Customs officials appreciated the very great importance of being able to approach an Association such as the one under whose auspices they had foregathered. It was infinitely preferable from the Customs point of view to approach an association rather than a big number of individual traders.

Mr. G. C. Horton, chairman of the Council of the Liverpool Shipping and Forwarding Agents' Association, who acknowledged the toast, said occasionally the members of the Council were asked: What are the objects of the Association? Why have an Association? What does it accomplish? The object of the Association was collective bargaining. As agents they considered they were in a stronger position by expressing their views collectively than if they merely spoke as individuals. The Association at all times sought to maintain friendly relations with the officials of the port, the steamship companies and traders. Liverpool offered facilities for all the traffic the world could send, and it was his belief that if they could promote more co-operation between the manufacturers, rail carriers, steamship companies and shipping and forwarding agents, Liverpool would get a greater share of trade than she already had. At the moment there was an agitation for Empire trade. Empire trade was very useful, but we were wanting something more than Empire trade: we were wanting world trade.

Mr. W. R. Lloyd, vice-chairman of the Council proposed "The Guests." Mr. F. J. Marquis, M.A., B.Sc., J.P., chairman of the Liverpool Organisation, replied. He said he believed the time was just opportune for some rapprochement commercially between Liverpool and Manchester so that they could jointly tell the world of the commercial and industrial possibilities of this part of Lancashire.

The final toast, that of "The Chairman," was proposed by Mr. J. Mitchell-Jones and replied to by Mr. David Jones, who spoke of the encyclopædic knowledge of members of the Council. He always considered the shipping agent, like the shipbroker, always worthy of his hire.

News from the Ports.

Port of London Authority. — Additional shipping to the extent of 2,090,984 net reg. tons used the Port of London during 1929, the traffic being greater than in any previous year. The total was 57,540,136 net reg. tons, compared with 55,449,152 net reg. tons for 1928, the previous record year. London's increase of 2,090,984 net reg. tons represents 9.6 per cent. of the total 1929 increase for the whole of the ports of the United Kingdom. So far as London is concerned, a large proportion of the increased tonnage of shipping is in respect of the Dominions and Colonies.

P.L.A. Election of Members. — The next triennial election of Members of the Port of London Authority takes place in March, 1931, and the register of voters is now in course of preparation. Of the 28 Members constituting the Port of London Authority, 16 are elected by users of the Port whose voting power depends entirely upon the amount paid to the Port of London Authority is respect of Port Rates on Goods, River Tonnage Dues, Dock Dues, Dock and Warehouse Charges, etc. Individual Shipowners and Merchants can ensure for themselves representation in the administration of their Port by using as far as possible the docks and warehouses and general facilities provided by the Port of London Authority.

* * * *

Liverpool Shipping and Forwarding Agents' Association.—Believing this to be an opportune time to launch a campaign to augment the membership of the Association, the Council of the Liverpool Shipping and Forwarding Agents' Association has in hand a scheme which already shows promise of good results. The present membership is about 100, and whilst that figure includes nearly all the leading agents in the port, it is felt that there are others who should be participating in the benefits of the Association. Members of the Association have been invited to put their shoulder to the wheel in a missionary effort, by exercising personal influence on desirable agents who are outside the Association. Mr. A. G. Taylor, of Sutherland International Despatch, Ltd., 17 Brunswick Street, Liverpool, has joined the Council of the Association.

Obituary.—At the last meeting of the Council of the Liverpool Shipping and Forwarding Agents' Association, sympathetic reference was made to the passing of Mr. T. H. Jackson, a partner in the firm of G. H. Fletcher and Co., old members of the Association. Mr. S. L. Jude, Secretary, attended the funeral on behalf of members.

* * * *

Southampton Docks.—The record amount of shipping traffic dealt with at the Docks last year affords undeniable evidence of the Port's continued prosperity. In such circumstances it gives particular satisfaction to note that good progress is being made with the great scheme of dock extension being carried out at Southampton by the Southern Railway Coy. Work is proceeding on the construction of 3,800 feet of deep water quays, representing the first part of the entire scheme, and it is expected that 1,000 feet of quay will be ready to accommodate shipping in the spring of next year. During this year reclamation work will be commenced on the mudlands lying between the new quay wall and the existing foreshore whilst the erection of a new shed, which will face the first 1,000 feet of quay, will be undertaken together with the preparation of other dockside equipment such as cranes and rail connections.

* * * *

Risks of Shippers.—Mr. T. H. Jones, speaking at the Manchester Athenæum Textile Society on 14th January, spoke of the risks run by Manchester shippers in the manner of insurance of their goods sent abroad. The merchant who sent his goods out and gave credit to a customer abroad and did not look after the insurance himself was not really insured and was taking an unwarranted risk which might involve him in serious loss. In one country the majority of the policies issued only covered total loss, and partial loss might fall back on the supplier whose only remedy was in litigation which had to take place in a foreign country. Mr. Henry Keat, of the Thames and Mersey Marine Insurance Company said that loss by theft was not covered in the marine insurance policy, and in order to protect himself against such loss the merchant had to enter into a special arrangement with his underwriter.

* * * *

Coal Exporters.—For the fifth consecutive year the Humber Coal Exporters Association have appointed Mr. Sydney Little their Chairman. The coal trade, said Mr. J. W. Barraclough, who proposed Mr. Little's re-election, was never in a greater state of perplexity, and it was essential they should preserve a continuity of the policy which had been followed under Mr. Little's able guidance.

Crane Facilities at Goole.—The Aire and Calder Navigation Company, the owners of the Goole docks, have informed the Goole Chamber of Commerce that they are in communication with the London, Midland & Scottish Railway Company respecting the Chamber's request for additional crane facilities to deal with 20 ton coal wagons. The matter is receiving attention.

* * * *

Glasgow Harbour Traffic.—At the last meeting of the Clyde Navigation Trust it was reported that the trade at Glasgow Harbour is showing signs of improvement. Reviewing the trade during the past year the Chairman, Mr. James Craig, said the de-rating scheme of the Government enabled them to give relief in dues to the extent of £81,000 per annum as from October 1st last.

Port Glasgow Launch.—The new steamer, "Bio Bio," built by Messrs. Hamilton & Co., Port Glasgow, for Valparaiso owners, has been launched. She is 350 feet in length and about 4,500 tons gross. The passenger accommodation is of a luxurious nature. Accommodation has been provided for trading merchants, and space on deck provided for these traders to erect stalls from which they buy and sell at the various ports at which the vessel calls on her coasting voyages.

* * * *

Newcastle's Progressive Quay.—The progressive policy of increasing Newcastle's quay accommodation and cargo-handling facilities is gaining its due reward. During the past nine months 1,170 vessels came to the Corporation's quay berths as against 1,129 in the corresponding period of 1928. What is more, a larger type of vessel is now trading to the quay; and the ocean-going type is gradually being attracted.

Congratulations have been extended from far and wide to Sir William J. Noble, Bt., of Messrs. Cairns, Noble and Co., Ltd., Chairman of the Tyne Improvement Commission, on his elevation to the Peerage. He has decided to take the title of Baron Kirkley of Kirkley Hall. Felicitated by his fellow-commissioners, the new peer said that he felt the honour conferred on him to be a call to greater work and responsibility. After 32 years on the Commission, he would, perforce, be compelled to devote less time to its interests than heretofore.

* * * *

Tribute to Mr. Daniel Radcliffe.—At the Cardiff Exchange on January 29th a striking tribute was paid to Mr. Daniel Radcliffe, J.P., the well-known Cardiff shipowner. Mr. Radcliffe was presented with an illuminated address and an autograph album to commemorate his seventieth birthday and his long association with shipping and the development of Cardiff as a port.

New President of Swansea Chamber of Commerce.—Mr. Fred A Rees has been elected 1930 year President of the Swansea Chamber of Commerce. He is a principal of Messrs. Stockwood, Rees & Coy., Ltd., steamship brokers and coal exporters. He is a fellow of the Institute of Shipbrokers, a member of the executive of the Shipping Federation, a member of the National Maritime Board and of the Coal Shipment Advisory Committee.

* * * *

Port of Dublin.—The total registered tonnage of vessels entering the port of Dublin during 1929, was 2,340,000, which showed an increase of 48,500 tons on the figure for 1928.

Country of Origin of Goods and Products Imported into the Irish Free State. — The Council of the Cork Chamber of Commerce has received intimation from the Revenue Commissioners, Dublin, that importers, agents, and other persons concerned are now required to show on the official forms of entry the country of origin, or production, of imports of such commodities as wheat, wheaten flour, maize, butter, bacon, commercial motor vehicles, touring motor cars, outer covers for motor car tyres, cement for building, and wines.

REUTERS TRADE SERVICE.—By special arrangement with Reuters Trade Service we are publishing news items from all parts of the world dealing with transport matters.

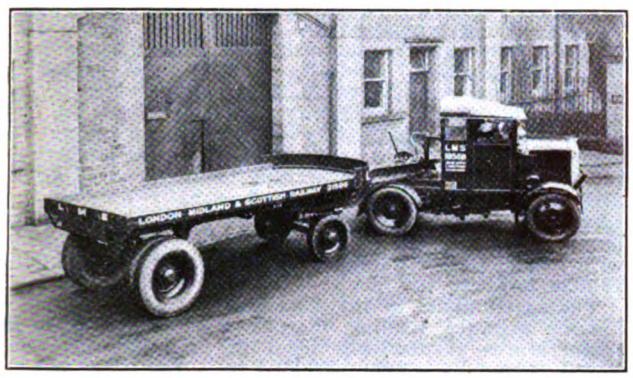
Railway Notes and News.

Selling Rail Transport. Press Advertising the Best Medium.—The Incorporated Society of British Advertisers met recently at the Hotel Cecil, London, when Mr. C. G. G. Dandridge, Advertising Manager of the L.N.E.R., read a paper entitled "Selling Transport." Mr. Dandridge stressed the importance of advertising rail transport, and said that the most important medium of L.N.E.R. advertising and that which represented the greatest expenditure was press advertising.

Karrier Outfits for L.M.S. Railway.—We illustrate one of the many six-ton Karrier "TT" type of Tractor Trailer



A SIX-TON KARRIER "TT" TYPE TRACTOR TRAILER OUTFIT FOR THE L.M. & S. RAILWAY.

outfits which are being delivered by Karrier Motors, Ltd., of Huddersfield, to the order of the L.M.S. Railway Company. This type of vehicle is designed primarily for the rapid transport of heavy loads at low cost. The tractor proper, which incorporates an engine of 31-47 h.p., has an eight-speed gearbox and is mounted on 36 in. by 6 in. pneumatics (twin rear), may serve any number of trailers, used individually of course, so that waiting time during loading and unloading is eliminated. A further feature is that the whole vehicle can be turned in a twenty foot roadway without reversing. Apart from mechanical brakes on the tractor, the rear wheels of the trailer—shod with 36 in. by 7 in. twin pneumatics—are braked by air pressure. The hoist gear on tractor is also operated by air pressure, and the design is such as to allow either a portion or the whole of the weight on the trailer forward axle to be transferred to the tractor chassis itself.

Cold Storage, Rail-Road Units.—An improved pattern of insulated container for meat traffic between Liverpool and all parts of the L.N.E.R. system was inspected recently by representatives of the meat trade at Liverpool, under the guidance of Mr. G. Leedam, L.N.E.R. District Goods Manager. These new containers are constructed on the lines of the L.N.E.R. refrigerator vans, with slab cork insulation between inner and outer sheeting boards. A door is fitted at either side and in one end. The containers, which are of three tons capacity, are carried on specially constructed flat wagons which allow of easy access to all doors.

Transport at the Fair.—An ambitious railway exhibit, under the auspices of the Railway Clearing House, is promised in the London section of the British Industries Fair, which is to be held at Olympia from February 17th to 28th. This will be part of the General and Sales Services Section on the ground floor in the broad connecting link between the Main and Small halls. Other transport exhibitors in the section include the Cunard Steamship Company, Ltd., the White Star Line and Lep Transport and Depository, Ltd. The "heavy" industries, as usual, will have a simultaneous display in the enlarged buildings at Castle Bromwich, Birmingham.

British Industries Fair, February 17th-28th.—Season Tickets available for a minimum period of seven days, but commencing any day of the week, are to be issued by the L.M. & S. Railway Company in connection with the British Industries Fair both at London and Birmingham.

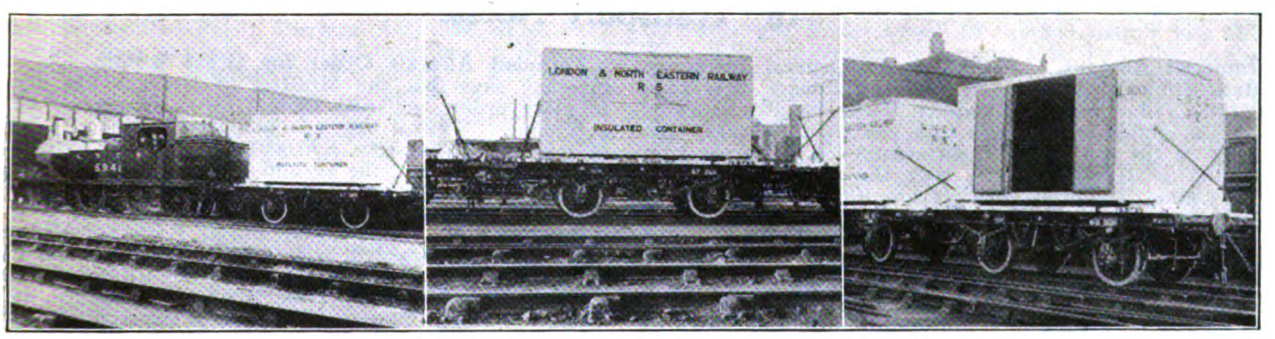
Additional G.W.R. Schemes. Company to Spend £200,000.—The Directors of the Great Western Railway have approved the expenditure of £200,000 on works in connection with the Government's schemes to relieve unemployment. These works will be carried out at St. Austell, Hockley, Swansea, Small Heath, Paddington-Southall. These works are in addition to the £5,000,000 schemes previously authorised, all of which have now been commenced with the exception of the enlargement of Cardiff General Station, re-building of Bristol Temple Meads Passenger Station and the deviation of the Main Line between Westbury and Frome.

The Railway Barometer.—The Railway Traffic Receipts of the four Group Railway Companies for the first 4 weeks of 1930 compared with the same period in 1929 are as under:—

	1930	1929
Passengers, Parcels, etc. ...	£4,788,000	£4,733,000
Merchandise, etc.	£4,762,000	£4,745,000
Coal, Coke, etc.	£2,915,000	£2,946,000
	£12,465,000	£12,424,000

A good feature in the first period of the Year 1930 is the Increase in the Passengers, Parcels, etc., and Merchandise, etc., traffics. *Railway Newsletter*, February issue.

More Southern Progress. Big Plans for 1930.—The Directors of the Southern Railway, continuing the policy of improvement and development, have authorised the expenditure of about £4,300,000 on various new works for 1930, involving the construction of new locomotives and rolling stock, new steamships, new stations, station improvements, extension of electrification, etc. This expenditure, which will provide a large amount of work for British firms, follows closely upon the Southern Railway's large programme of new works for 1929, culminating on



L. & N.E.R. INSULATED CONTAINERS FOR MEAT TRAFFIC.

January 5th last with the opening of the new Wimbledon and Sutton Railway.

L.M.S. 1930 Wagon Building Programme.—During 1930, twelve thousand freight wagons are to be built by the L.M.S. Railway at a cost of £1,500,000.

L.N.E.R Dinner and Dance.—The annual dinner and dance of the L.N.E.R. Advertising Department was held at the Royal Station Hotel, York, on January 25th. Mr. C. Dandridge presided over a large gathering. The occasion proved most enjoyable.

Permanent Way Institution.—The annual convention of the Permanent Way Institution for 1930 will be held at Cardiff in July. The 1930 president is Mr. R. Carpmael, chief engineer of the G.W.R. Company, and the vice-president for Wales is Mr. M. C. Hornson, G.W.R. divisional engineer, Newport.

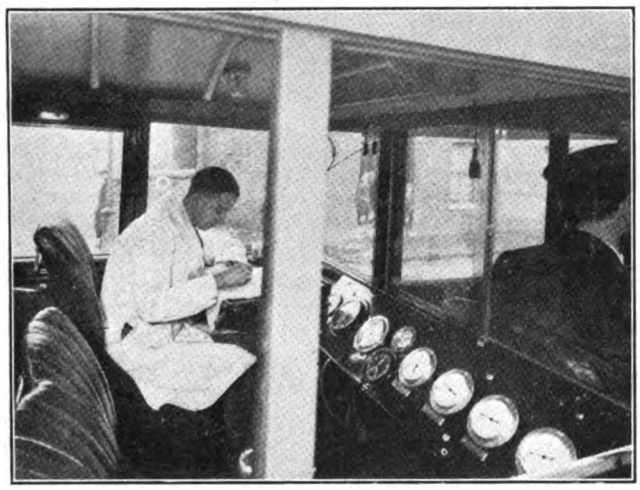
Field Tests for Lubricating Oils and Motor Spirits.

WE recently inspected a most interesting and we believe novel vehicle consisting of a chassis specially fitted with the necessary instruments for ascertaining the behaviour of lubricating oils under actual working conditions. The data obtained from these observations are supplementary to the ordinary laboratory tests.

The firm responsible for this field laboratory investigation is Shell-Mex, Ltd., Shell Corner, Kingsway, London, W.C.2. The explanation of this new enterprise is that while the ordinary laboratory tests and research are satisfactory up to a point, they provide no data as to the actual behaviour of lubricants and spirits under actual working conditions. We are informed that already much



THE OBSERVATION CABIN ON THE SHELL CO.'S TEST LORRY.

valuable information has been collected by employing this field or travelling laboratory.

The average user of motor vehicles is not aware of how little he knows concerning either the fuels or lubricants he uses. Correct lubrication is, without doubt, the most important factor governing the economic operation of vehicles. A perfect chassis could not operate without lubrication of some kind. Assuming a perfect chassis (there is, of course, no such thing) its degree in approach to perfection in operation would be entirely governed by the quality and suitability of lubricants and fuels used.

We would like to impress upon our readers that the difference between inferior quality and suitable quality in these essential attributes to good performance is no trifling matter, but, in fact, one which does make all the difference between successful and unsuccessful operation. It is the appreciation of this point which has decided Shell-Mex to carry out the research with which we now deal.

Though this departure is new we understand it is typical of what the larger oil companies are now doing in the way of research work and of the care that is devoted to test and development of oils for motor vehicles to-day. Furthermore, with regard to the Shell field experimental work: the firm owns a fleet of upwards of 2,000 vehicles of all makes on which the behaviour of oils is recorded.

The vehicle used as a travelling laboratory is a Leyland "Tiger" being typical of the fast bus and long distance coach chassis now commonly in use. The driver occupies the usual position beside the engine, and behind the driver's cab a separate compartment is provided occupying the full width of the chassis and enclosed by glass on all sides, which is used as the observation cabin. This cabin is provided with a separate dash board to carry the instruments, a table for writing, and there is seating accommodation for three, though usually only one observer is carried. Behind this observation cabin there is an ordinary platform body which is usually loaded with lubricants for garages on the standardised route the vehicle follows.

The instruments in the observation cabin are:—

Four distance reading thermometers, which take the temperatures respectively from the radiator, oil sump, gear-box and back axle, the lead from the latter measuring no less than 20 ft. A speedometer with a special trip dial. An engine revolution counter. A clock with an additional time of trip face. An aneroid barometer, giving the height above sea level as well as atmospheric pressure. A Wimperis accelerometer and gradient meter, which is used for arriving at many factors of performance. An ordinary household thermometer hung outside the cabin and easily visible from the observer's seat, the scale being mounted in a magnifying glass. A direct indicator, by pointer and scale, of the throttle position, operated from the accelerator pedal.

There are three petrol tanks each carrying a different grade of fuel, and there is an arrangement of pipes and taps whereby the observer can switch the engine from one grade of fuel to another. Samples of oil from the various lubricating centres are taken at intervals and are sent to the central laboratory for examination.

The vehicle travels over a selected route and averages about 150 miles per day. A daily log sheet is kept on which observations are entered every half hour and every ten miles, so that it forms a time and mileage chart.

Air Transport Notes.

Imperial Airways. Reductions in General Insurance Rates.—Imperial Airways, Limited, announce that considerable reductions in Insurance Rates for all classes of air-borne goods traffic came into effect on February 1st. Owing to the maintained satisfactory record in the safe handling of freight by air, with the resultant freedom from claims, Imperial Airways are now able to publish new rates quoted by Lloyds Underwriters showing in some cases very large reductions. The Company feel justified in anticipating that the reduction will enable a still larger volume of traffic to be despatched by air. A list giving the new Rates and any further information will be readily supplied on application either by letter or telephone to any of the Company's Offices.

Flying in 1930.—We reprint the following extracts from the January issue of "Imperial Airways Gazette." Important as have been the developments in aviation during 1929, the present year promises to eclipse, or at any rate, to equal them. During 1930 thousands of miles are to be added to Empire Airways, by the opening of a large sector of the Cairo-Cape service. Experimental Empire flights are planned for the two giant airships, including trans-Atlantic flights to Canada, and direct flights to Egypt, India, South Africa and Australia. There seems no reason to doubt that 1930 will see a great increase in the popularity of flying on the cross-channel services. New luxury air liners, carrying 40 passengers each, will be put on service, and practically every city in Europe will be within a day's air journey from London. Touring the Continent wholly by air—already popular among many whose time is limited, but whose desire to see as much as possible of this world in which we live is strong—will certainly experience a "boom" year.

Estonian Aircraft Order for Great Britain.—A Reval message says that the Minister of Defence has decided to place orders in Great Britain for a number of chaser aeroplanes. The Minister is prepared to spend 1,250,000 crowns (approximately £70,000) and the first batch is to be delivered during the second half of this year.

The Usborne Memorial Prize.—The Royal Aeronautical Society, 7 Albemarle Street, Piccadilly, London, W.1, announce that the Usborne Memorial Prize for the year, 1929, has been awarded to Mr. F. G. Evans for his paper entitled "The Cross-Section of the Semi-Rigid Airship." The Usborne Memorial Prize is offered annually, at the discretion of the Council, for the best paper by a student on lighter-than-air craft.

Royal Aeronautical Society.—A lecture will be delivered by Dr. Georgii on Wednesday, February 19th, before the Royal Aeronautical Society on Gliding. The lecture will be delivered in the Lecture Hall of the Institution of Electrical Engineers, London, at 6.30 p.m., and admission will be by ticket only. Dr. Georgii is Professor at the Technical High School in Darmstadt and holds the chair of Aeronautical Meteorology. He is also Director of the Institute of Research of the Rhon-Rossitten-Gesellschaft, which deals with the scientific questions of gliding. Before he was called to Darmstadt he was Director of the Department of Meteorology at the German Maritime Observatory in Hamburg and Professor of the University of Hamburg. His scientific career as private lecturer began in 1919 at the University of Frankfort. He will be accompanied by Herr Stamer, one of the leading experts on gliding in Germany, who will also speak. Tickets for the lecture may be obtained on application to the Secretary, Royal Aeronautical Society, 7 Albemarle Street, W.1.

Law Cases.

WHAT IS A PUBLIC PLACE?
PLYING FOR HIRE.

THE meaning of "plying for hire in a *public* place," was discussed by a King's Bench Divisional Court (composed of the Lord Chief Justice and Justices Swift and Branson), in an appeal against a refusal of the Mortlake Justices to convict a motor coach proprietor for plying for hire with a "stage carriage" on a public place without a licence. The case was in the list as "White v. Cubitt," the respondent being a Barnes motor coach proprietor.

Mr. H. D. Roome, appearing for the appellant, explained that, on the 1st May, 1929, the respondent was charged at the instance of the Commissioner of Police for the Metropolis, with being the owner of a stage carriage, viz., a motor coach that plied for hire in a public place without a licence, contrary to the provisions of Section 7 of the Metropolitan Public Carriage Act, 1869. It appeared that Mr. Cubitt's vehicle stood regularly on a piece of concreted ground at the side of a public house at Barnes. The ground was the property of the public house proprietor, and was not used by the public unless they were going to the house. It was level with the roadway and was not separated from it except by a row of granite setts that were not raised in any way. Four people approached the motor vehicle. They were asked if they wanted to go to the Richmond Golf Links, and, being charged 6d. each, were driven there. It was proved that the vehicle stood on that spot every day, and was used to carry anybody who wanted to play golf to the golf links, at the stipulated charge of 6d. Mr. Cubitt argued before the justices that there was no plying for hire, and, if there was, that the spot on which it happened was not a public place, seeing that the place on which the vehicle stood was not repairable by the public at large. On the other hand, the police contended that there was a plain plying for hire of a stage carriage not duly licensed for that purpose by the Commissioner of the Metropolitan Area, while the spot on which it plied was a public place because it was not fenced off in any way. The justices, however, held that the vehicle was not in any street, road or public place when the passengers boarded it, and dismissed the summons.

Mr. Roome argued that the spot was a public place because the public could use it to get to the public house. He also argued that there was ample evidence of plying for hire because there was an actual solicitation of passengers by the respondent.

Mr. Moresby, for the respondent, argued that this case was no different from that of a person going into a private motor garage and hiring a car.

Mr. Justice Swift: You agree that where the vehicle stood was a place, therefore, the only question is, whether it was a public place.

The Court allowed the appeal with costs.

The Lord Chief Justice said the case really depended upon the true interpretation of an expression in Section V of the Metropolitan Public Carriage Act, 1869, which ran: "the term 'stage carriage' is defined to be any carriage for the conveyance of passengers which plies for hire in any public street, road or place, and in which the passengers, or any of them, are charged a separate and distinct fare." It had been conceded by Mr. Moresby that his client may have plied for hire, and it was not denied that the spot on which the vehicle stood was a place, but it was contended that it was not a public place within the Section.

The matter was not concluded by any previously decided legal authority. Here the whole scheme and purpose of the respondent's proceeding was to enable this motor vehicle to ply for hire to attract the public by being placed near the highway to which the public had resort, and upon which there was no sort of barrier. This place was as public as could be, and was selected by the respondent because it was public. Therefore, the justices were wrong in finding, having regard to the mischief at which this Act was directed, that this was not a public place.

Justices Swift and Branson agreed.

TIME WITHIN WHICH PROCEEDINGS CAN BE TAKEN.

A TEST case on the question how long after the commission of an alleged offence under the Metropolitan Public Carriage Act, 1869, the authorities must bring proceedings, was argued in a King's Bench Divisional Court (composed of the Lord Chief Justice and Justices Swift and Branson).

Mr. H. D. Roome explained that New Empress Saloons, Ltd., with one of their drivers, were summoned before the Stratford justices for plying for hire with a motor coach not licensed by the Commissioner of Police for the Metropolis, the proceedings being taken under the Metropolitan Public Carriage Act, 1869. There seemed all the elements of an offence of plying for hire, as well as aiding and abetting, but the defendants to the summons took the point with success that the proceedings were out of time, their contention being that the Act said that summonses must be issued within seven days of the commission of the alleged offence. In this case they were taken out within three weeks, and he (counsel), contended that the Act gave six months in which to take proceedings. If proceedings had been taken under the earlier Stage Carriage Acts, he could not argue the appeal, but the 1869 Act contained no such restriction as seven days.

Counsel for the respondents agreed that the point had a fatal simplicity, but it was he said, adopted by the justices with celerity (laughter). However, all the earlier Acts that dealt with licensing of stage carriages imposed the restriction of seven days from the commencement of legal proceedings for penalties, and there was no reason why it should not be taken for granted that the stipulations in those Acts governed alleged offences under the 1869 Act, seeing that legislature condemned the practice of keeping people with charges hanging over their heads. Counsel added that all the respondent's vehicles and drivers had now been licensed both in London and Southend.

The Court allowed the appeal with costs, the Lord Chief Justice stating that the case was a perfectly plain one. The justices wrongly accepted the contention that the summonses should have been brought within 7 days, whereas the law was that a term of six months was allowed in which to institute proceedings. Therefore the case would go back to the justices with the intimation that the summonses were brought in good time.

NEWSPAPER VAN IN COLLISION.
QUESTION OF LIABILITY.

BEFORE Judge Shewell Cooper, in the Mayor's and City of London Court, Mr. W. D. Chambers, 110 Ridge Road, Winchmore Hill, N., taxicab owner driver, sued the Evening Standard Co., Ltd., 46 Shoe Lane, E.C., for £4 10s. damage to his cab on July 27th, 1928, at the junction of Bloomsbury Street and Great Russell Street. The plaintiff, giving evidence, said that the actual damage to the cab, which he could not recover from his insurance company, amounted to £2 10s., and he claimed £2 for loss of use for two days. The amount of damages was not disputed by the defendants. Continuing, Mr. Chambers said that at a quarter to 8 in the morning he was taking a passenger from Euston to Victoria, and was going along Bloomsbury Street at about 8 miles per hour, and just as the bonnet of his cab emerged from the line of buildings, he saw in the turning on his near side, a motor taxicab suddenly approaching. At the same time he looked to his right, but saw no vehicle coming from that direction. The other taxicab stopped, and the driver waved witness on. He got about three yards over the crossing, when a newspaper van came from the turning on witness's off side, at a great pace. He could see that a collision was inevitable, and so he immediately turned sharply into Great Russell Street, keeping to the near side, if possible, to allow the defendants' van to pass between the two taxicabs. Witness had brought his cab to a stop when it was struck by the defendants' van, which bounded off and skidded across the road on to the other taxicab. Mr. Chambers estimated the speed of the defendants' vehicle at 20 miles an hour, and added that the road was wet and greasy. In cross-examination, witness said that he blew his horn as he approached Great Russell Street, but got no answering signal from anyone. He agreed that he could see a little way down the part of Great Russell Street, which was on his off hand side, say, about 20 or 30 yards, but when he looked, the defendants' vehicle was not in sight.

At this point, Judge Shewell Cooper observed that the crossing was a very dangerous one as that part of Great Russell Street, which lay on the plaintiff's right hand was not at right angles with Bloomsbury Street, but made a more acute angle. Consequently, plaintiff could not see as far down the turning as would be the case if the crossing street made a right angle.

Mr. Frank Humm, driver of the taxicab referred to by the plaintiff, confirmed the plaintiff's statement that he stopped and waved Mr. Chambers on, and further said that at the speed at which the defendants' vehicle was going, 15 to 20 miles an hour, it would have been impossible for him to pull up to avoid the accident owing to the state of the road. The witness added that when the defendants' vehicle struck his taxicab, after hitting the plaintiff's vehicle, it broke his off side footboard right off.

Robert Watkinson, driver of the defendants' van, said he had been delivering a special edition of the Daily Express, published in connection with a big fight, and was returning to the garage to go home. At this point, Mr. Soskice, counsel for the defendants, said that it would seem that the

Digitized by Google

plaintiff was suing the wrong party, as Watkinson was in the employment of the Daily Express, and the van had been hired from the Evening Standard. Mr. Howard, however, for the plaintiff, pointed out that throughout the pleadings, which were of some length, and in all the solicitors' letters, of which there were a considerable number, the defendants had behaved as if they were the proper party to be sued. He agreed that there was a difficulty, and in the circumstances, the defendants had put themselves in a peculiar position.

Judge Shewell Cooper said he would hear the evidence and arrive at a conclusion on the facts, and the question of the right party to be sued could be dealt with subsequently.

Continuing his evidence, Watkinson said he was going down Great Russell Street at about 8 miles an hour. Approaching Bloomsbury Street, he "blew up and pulled up," and went across the junction at about 6 miles per hour. Just as he was about to reach the easternmost part of Great Russell Street, plaintiff's taxicab came out directly in front of him and the two vehicles collided with a glancing blow, owing to Mr. Chambers making an effort to turn into Great Russell Street. The witness denied that he was doing anything like 15 miles an hour, and explained his inability to pull up in time by stating that the road was too greasy to put the brakes on too harshly.

Mr. Soskice said that in view of the defendants' driver's evidence he could not contend that Watkinson was entirely free from negligence. Nevertheless, he asked his Lordship to say there was contributory negligence on the part of the plaintiff.

Judge Shewell Cooper said that he came to the conclusion that the plaintiff was proceeding in a perfectly proper way, and was entirely free from blame. The accident was due to the defendants' driver proceeding at a speed too great considering the state of the road. Watkinson himself had admitted in evidence that he did not expect much traffic at that time of the morning, and in his (His Lordship's) opinion, that explained the accident. The damages having been agreed at £4 10s., someone would have to pay the plaintiff. He therefore adjourned the case in order that those concerned might ascertain who was the proper party to be sued, and, if possible, to avoid the necessity of a second trial.

Mr. Soskice, for the defendants, submitted that they were entitled to be dismissed from the action as there was no evidence of any kind against the Evening Standard Co., Ltd. Judge Shewell Cooper refused to do this, and said that he hoped in a case in which the amount was so small, the matter could be disposed of without further litigation.

AN ALLEGED DEFECTIVE TRAMLINE.

AN accident which, it was alleged, arose out of a defect in a tramline, was the subject of an action at Lambeth County Court, before Deputy-Judge Mullins and a jury. The plaintiff in the action was Edwin John Mark Johnston, of 14 Baker Street, Brixton, S.W., and he sued the London County Council to recover £63 damages, being as to £51 for damage done to his taxicab, and £12 for loss of use. The plaintiff's claim set out that owing to a defective tram track in Brixton Road, outside Nos. 203-5, his cab had been involved in a smash.

The plaintiff, in his evidence, said that on February 12th, 1929, he picked up a fare at Kennington Church at about 1 o'clock in the morning. He was going along Brixton Road on his near-side tram track, when his steering wheel was wrenched out of his hand. He swerved across the road, smashed into a barrow which was in the kerb belonging to the Lambeth Borough Council, careered on, struck the kerb, and overturned. He and his passengers were imprisoned under the cab for some time.

Police evidence was given to the effect that there was no mark of a skid, but what was apparent was a whitewash line coming from the tram track to where the cab overturned. It was thought that this mark had come off the side of the tyre. The lines, as far as the police were concerned, were in a fairly good condition.

William Pether, a consulting engineer, gave evidence as to the result of an examination he made of the tramline, and expressed the opinion that it was in a very bad state.

For the defence, Ernest Heathcote Beale, engineer in the Tramways Dept. of the L.C.C., said he had inspected the tram track, and except for a slight depression before the place where it was alleged the swerve started, the line was in perfectly good order. In his opinion the line as it was could not have possibly caused the accident.

In cross-examination, he suggested that the driver might have been asleep.

Evidence was also given by Sidney Albert Brett, the passenger in the taxi, who said that he got into it at Kennington Church with his wife. Going along Brixton Road, he saw the barrow, and saw that the driver made straight for it, without deviating from his course. There was no swerve or skid.

This evidence was corroborated by Mrs. Brett, and after counsel and his Honour had addressed the jury, the jury retired, and on returning into Court gave a verdict for the defendants.

Judgment was accordingly entered with costs.

TIME-TABLE PROSECUTIONS.

THE Stoke-on-Trent Corporation recently prosecuted a number of owners for failing to maintain a regular bus service by non-adherance to their time-table.

Mr. W. L. Allen, for the Corporation, said that in consequence of complaints as to the irregularity of the service, a census of buses on the Hanley-Smellthorne route was taken on three days in October, when it was found that buses belonging to the defendants were not running to time-table. Sergeant Wilson, who superintended the census, said various excuses were given by the owners, and his evidence showed that they blamed one another for the disorganisation. The sergeant, however, said the owners had made no honest attempt to run to time, and it was impossible to single out one and say he was to blame. Mr. Abberley, who appeared for some of the defendants, said they welcomed the prosecutions. They had been anxious to comply with the time-table, but they found that so long as their competitors were not doing so, it was impossible to carry on adhering to the time-table with any hope of getting a fair share of the traffic.

There had been a consultation between the bus owners and the Chief Constable, with a view to reorganising the times, and since then he understood that there had been no cause for complaint. He gave an undertaking that there should not be in future. In view of these assurances, the Stipendiary imposed a fine of £1 only on each of the defendants, or defendant firms.

International Exhibitions in Belgium.—We have received particulars of three International Exhibitions to be held this year in Belgium, this being the centenary of Belgium's Independence. An Exhibition of Colonial, Maritime and Flemish Art is to be held in Antwerp from April to November, the opening day being the 26th April, under the auspices of the Belgium Government and the patronage of Their Majesties the King and Queen. In Liege an Exhibition of Industry, Science, and Old Walloon Art will be held from April to November, and in Brussels an International Commercial Fair is to be held from April 2nd to 16th inclusive. The offices of the Antwerp Exhibition are 17, Canal des Recollets, Antwerp; for the Liege Exhibition the offices are at 4, Place Saint-Lambert, Liege, and for the Brussels Commercial Fair all enquiries should be addressed Palais de l'Habitation, Clinquantenaire, Brussels.

Motor Notes.

Albion Orders. — The Albion Motor Car Co., Ltd., Scotstoun, Glasgow, have just received from the Anglo-Persian Oil Co., Ltd., an order for a fleet of thirty 4-ton vehicles mainly for use in this country. This follows an order recently received from the same Company for a number of 2½-ton and 3-ton vehicles for use in the Persian oil fields.

Willys Overland Crossley for Provision Transport.—The illustration shows three Willys Overland Crossley

WILLYS OVERLAND CROSSLEY FOR PROVISION TRANSPORT.

commercial vehicles, one being a Willys-Manchester 50 cwt. six-wheeler; another a Willys-Manchester 2-tonner and the third a Willys-Manchester 30/35 cwt. in service for Messrs. R. Johnson & Sons, Salford.

An Economical Haulage Fleet.—No doubt the best advertisement a motor manufacturer can have is a satisfied user of his vehicles. In this connection Morris Commercial Cars, Ltd., Foundry Lane Works, Soho, Birmingham, have sent us a copy of a letter they have received from Mr. George Buss, carman and contractor of Hastings, who owns the fleet of 7 Morris commercial

THE MORRIS-COMMERCIALS REFERRED TO IN TEXT.

vehicles shown in the picture, two of which are 30 cwt. trucks and the other five 1-tonners. The following is an extract from Mr. Buss' letter:—"Besides their reliability, I have found these Morris-Commercial vehicles very economical to run, and I should like to mention that my total repairs bill to date is only forty-four pounds, six shillings (£44 6s. 0d.) which, divided amongst seven lorries over nearly two years, is I think very good, especially considering the mileage run; the original vehicle having done over 40,000 miles." The vehicles were supplied through the motor agents, D.M.S., Ltd., St. Leonards-on-Sea.

The Charrilock Magazine.—We have received a copy of No. 4, Vol 2 December issue of "The Charrilock Magazine," the house journal of Charrington, Gardner Locket & Co., Ltd., 16 Mark Lane, E.C.3, the well-known coal, coke and patent fuel merchants. Beautifully illustrated and excellently compiled this journal deals with the many activities of the firm and gives one a good idea of its huge ramifications.

Traveller Wanted.—We know of an opening for an experienced traveller who is well known and has a live connection in the London district to sell a range of famous motor accessories.

For Coal Transport.—The photograph shows a 3-ton Guy lorry supplied to the Ebbw Vale Colliery Company, which is undoubtedly an interesting order.

A GUY 3-TONNER FOR COAL TRANSPORT.

"Sentinel" Sales.—We are informed by the "Sentinel" Waggon Works, Ltd., Shrewsbury, that during the past few weeks they have received orders for their well-known double-geared rigid six-wheeler—the "Sentinel" D.G.6.—from the following:—Sir Robert McAlpine & Sons, Ellesmere Port, 7 wagons; A. J. Gupwell, Ltd., Birmingham, repeat order; Lewis Bros., Minsterley; Wm. Morris, Birmingham; R. J. Hibbert & Co., London, S.W.1, 2 wagons, repeat order; J. Oxlade & Sons, Landore; Peter Walker & Son (W. & B.), Ltd., Hine Bros., Gillingham, repeat order; E. & H. Edney, Waterlooville, repeat order; J. Baker & Sons, Chilcompton, repeat order; J. Lewis, Llanybyther; W. E. C. Clark, London, S.E., 2 wagons; Wm. Bater & Sons, Skewen, repeat order; Thos. Wood & Sons, Swanley, repeat order; Lewis Rugg & Co., Ltd., repeat order; F. A. Tye, London, E.16; Cannon & Gaze, Erith, repeat order; Pentecost & Son, S.W.18; P. Westhead & Sons, Liverpool; The Garston Haulage Co., Garston; E. Baron & Son, Crank, Lancashire; Charles Kirby, Hanwell, W.7, repeat order; Willment Bros., London, S.E.1, repeat order; Balmule Quarry Co., Dunfermline; Cement Marketing Co., repeat order; E. Harries, Pontardulais; and E. H. J. & J. Davis, Bridgwater, Som. Some of these wagons will be fitted with tipping and others with standard bodies. The following have placed orders for the double-geared four-wheeled model (the D.G.4.), which is still in great demand:—E. Mears & Son, Byfleet; Erdington Haulage Co., Birmingham; Wm. Wisley,

Digitized by Google

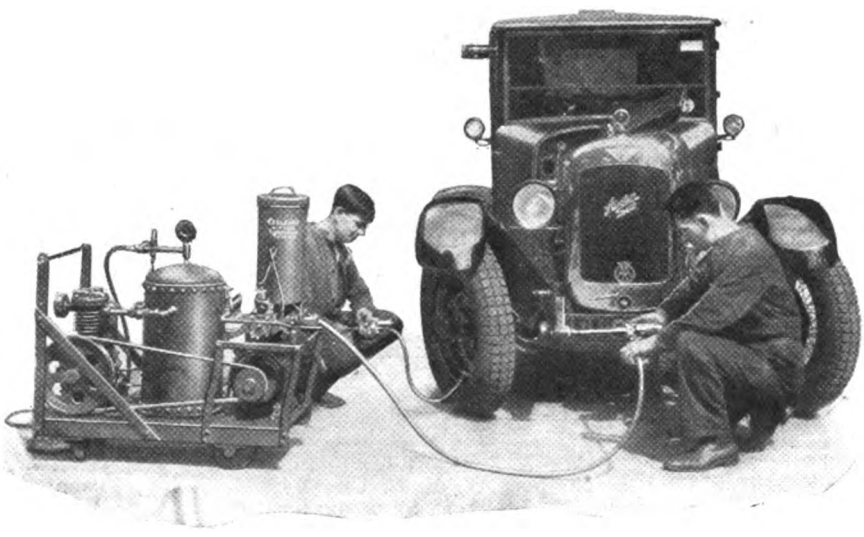
Aberdeen; Nevill's Dock & Railway Co., Ltd., Llanelly; J. M. Liddell, Glasgow, repeat order; Oates & Green, Halifax; P. H. Haydock, Chorley; Burchall & Co., Waltham Cross; W. G. Jerwood & Sons, Kingsbridge; Dorman Long & Co., Ltd., Middlesbrough; Hinder & Sons, Thornbury, near Bristol; A. & W. Hemphill, Glasgow; Cement Marketing Co., two wagons; The Griffin Eng. Co., Jo'burg, South Africa, repeat order. Orders for the "Super-Sentinel" are still coming in and among others the following repeat orders are noticeable:—Griffin Eng. Co., Jo'burg, South Africa, three wagons; Cadbury & Fry, Bristol; and J. B. Kind, Ltd., Burton-on-Trent, while orders for "Sentinel" Trailers have been placed by the following:—Tate & Lyle, Ltd., Liverpool, six, repeat order; Cadbury & Fry, Bristol, repeat order; W. L. Morgan, Swansea and R. & J. Garraway, Glasgow, E.1.

The Chloride Chronicle.—The Christmas number of the "Chloride Chronicle," the house organ of the Chloride Electrical Storage Co., Ltd., Clifton Junction, makes very entertaining reading. There is an excellent portrait of Mr. W. S. Naylor, M.I.E.E., the Chairman of the Board of Directors, with particulars of his career, and there are illustrations of many topical events.

Market for Motor Cars and Lorries in Persia.—A confidential report on the market for motor cars and lorries in Persia has been prepared by the Department of Overseas Trade from information furnished by the Acting Secretary in charge of Commercial Affairs at the British Legation, Tehran, and issued to firms whose names are entered on its Special Register. United Kingdom firms interested and desirous of receiving a copy of this report should communicate with the Department of Overseas Trade, 35 Old Queen Street, London, S.W.1., and quote Reference No. AX. 8931.

"The Inner Ring."—The Christmas number of "The Inner Ring," the house magazine and internal jottings of the Skefko Ball Bearing Company, Ltd., of Luton, is an excellent production. "The SKF Laboratories" and "The World's Largest Trailer" are two very interesting articles, whilst "Tales That are Told" and "The Cause—and the Effect" are most amusing.

The Airline Lubrigun.—B.E.N. Patents, Ltd., 92, Tottenham Court Road, London, W.1, have sent us a leaflet recently issued by Tecalemit, Ltd., showing their Airline Lubrigun mounted on the B.E.N. dual air unit. The combined unit, as illustrated, may be used for tyre inflation, cleaning and for lubrication purposes. The Airline Lubrigun is claimed to be the most efficient time saving unit on the market, and by using it in combination with the Dual Air unit, it brings it within the reach of every up-to-date garage. It consists of a mobile unit

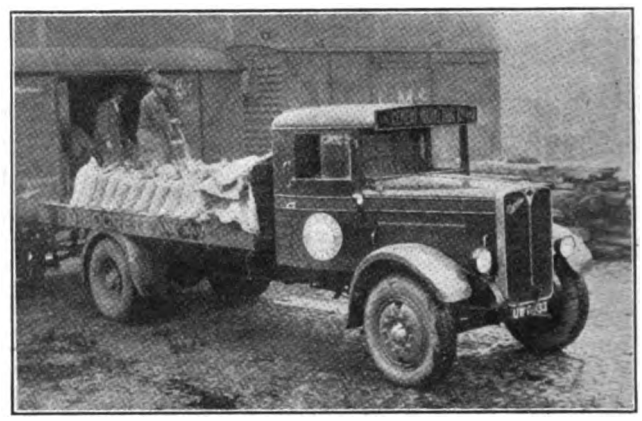


THE AIRLINE LUBRIGUN MOUNTED ON THE B.E.N. DUAL AIR UNIT.

easily moved as required, fitted with a ¾ h.p. A.C. or D.C. motor driving a compressor to give a maximum pressure of 150 lb. and with a tank of seven gallons capacity tested to 300 lb. pressure. The equipment consists of the Airline Lubrigun, tyre hose and chuck. Price £64 15s. 0d.

Firestone Tyre and Rubber Company's British Tyre Factory. — The Firestone Tyre and Rubber Company (1922), Ltd., has issued a very attractive illustrated booklet forming a souvenir of the official opening of the British Firestone tyre factory at Brentford on October 16th, 1928. The booklet demonstrates by word and picture how this British built and British staffed factory is equipped to make the best possible tyres for motorists and users of industrial vehicles throughout the British Isles. It reveals that the most advanced practices in the highly scientific work of modern tyre building are all incorporated in the British Firestone factory, whilst in combination with these is to be found that welcome human note which assures the best possible conditions of work and recreation for the multitude of British employees there engaged.

The A.E.C. "Majestic."—The Cement Marketing Co., Ltd., are the first operators of the A.E.C. 110 h.p. 6-cylinder o.h.v. "Majestic" 6-tonner, one of the new A.E.C. range of commercial vehicles. The vehicle as shown in



THE CEMENT MARKETING COMPANY'S A.E.C. "MAJESTIC."

the photograph taking on board bags of cement at a rail centre in the Midlands, is attached to the Birmingham depot of the Cement Marketing Company.

European Benzole Conferences.—A meeting of a small Committee of the International Conference of Benzole Producers was held at Bochum, Westphalia, on 12th December last. The present conditions of the market were reviewed, and the meeting was followed by a visit to the research laboratories of the German Benzol Verband. The press has attached undue significance to the aims and objects of the First International Conference of Benzole Producers recently held in Paris. It was never the intention to form an international combination in the manner which has been suggested by a section of the press. The meetings have for their object the periodical exchange of views with regard to the best method to be employed in marketing and encouraging the use of benzole as a motor fuel in all countries, and the standardization of benzole specifications. Both English and German benzole producers already have their separate organisation for marketing benzole, which is sold mainly in the form of a blended mixture. The marketing organisation in this country, which is owned and controlled entirely by the producers of British benzole, is the National Benzole Company, Limited, and the form in which the British benzole is sold is as an admixture branded as National Benzole Mixture. The use of benzole as a motor fuel is becoming increasingly popular in both England and Germany.

Ball and Roller Bearings.—The Universal Ball Bearing Repair and Manufacturing Co., 111 & 115, The Grove, Hammersmith, London, W.6, have sent us their abridged ball and roller bearing price list for 1930. The firm are factors, manufacturers and repairers of ball bearings. The ball bearings stocked are Hoffmann, Skefko, S.R.O., M.A.B., R.I.V., F. & S., Norma, R. & M., R.F.B., Auto., N.D., N.K.A., Auto, Bock, Timken, Hoffmann, Hyatt. The firm states that repairing bearings is their speciality. All sizes of steel balls and rollers and phosphor bronze balls are stocked and special thrust and journal bearings are manufactured to specification.

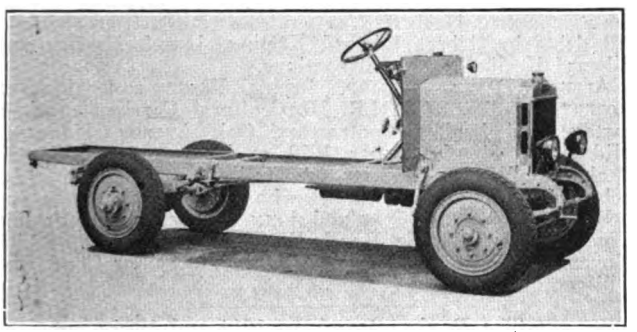
The New W. & G. 30-cwt. Chassis.

THE serviceable and attractive chassis shown in the illustration is the new W. & G. 30-cwt. model manufactured by W. & G. du Cros, Ltd., Acton, London, W.3. It is specially built for handiness in traffic and speed when used for long distance delivery. It is a sturdily built vehicle fitted with long and flexible springs and 32 in. by 5 in. and 32 in. by 6 in. Dunlop pneumatic tyres, singles both front and rear, fitted on steel disc wheels. The engine is a four cylinder monobloc casting 89 m.m. bore and 120 m.m. stroke, giving 19.6 h.p. R.A.C. rating. Lubrication is by pump. The carburetter is a Zenith and ignition is by Simms magneto which is driven in tandem



THE W. & G. STANDARD 30-CWT. CHASSIS.

with the dynamo on the left side of the engine. The carburetter is fed by gravity from the tank on the dash. Power is transmitted through a multiple plate clutch to a three speed gear box with central change. The rear axle is a steel casing which carries the whole weight of the vehicle and it houses the worm drive and differential. Both hand and foot brakes operate expanding shoes on rear wheel brake drums. The equipment includes a five light electric lighting set, electric horn, speedometer and mileage indicator. The wheelbase is 10 ft. 7¾ in., overall length 16 ft. 1 in., and the measurement from the back of the driver's seat to the end of the frame is 8 ft. 6 in.

A.E.C. Horse Boxes.

WE have received a booklet from the Associated Equipment Co., Ltd., Southall, Middlesex describing and illustrating a special horse box mounted on an A.E.C. "Reliance" 6-cylinder 95 h.p. chassis. The booklet is entitled "From Stable to Stable." The bodywork of the horse box, it is stated, is by A. P. Hammond of Newmarket. The box can be built to hold either two or four horses. The framing of the box is built of best selected ash, and the exterior is panelled in Venesta Plymax. A special low loading ramp is built on either side of the vehicle and the patent Monarch door spring enables each ramp to be easily raised and lowered by one man. Behind the ramps are two swing doors which open outward over the lowered ramp and form guides over the sides making for safe loading.

The partitions are faced 42 inches up, and 12 inches along the surface of the floor from the sides and ends with 20 gauge motor panel steel in order to prevent damage by the kicking of restive horses and at the same time it prevents moisture reaching the timbers. The floor of the stalls is made of oak boards and each stall has two drains provided with metal scoops and wind shields to prevent draughts from coming up into the stalls.

The horses' fore feet stand on cocoa fibre mats over a resilient and semi-pneumatic rubber mat in each stall. These can be easily folded for spraying and washing. The centre bales are framed in ash with a stout diagonal brace, and are swung on hinges at the rear end of the stalls. These, with the swinging head bales and chest boards, are well padded with horsehair, and then covered with washable canvas instead of the more usual insanitary matting.

A special feature of the box is that either of the two stalls can be used as a loose box by removing the posts on which the centre bales are hung. This with the adjustable chest boards gives a clean smooth loose box with no projections. The centre portion of the horsebox forms a grooms' compartment, having a separate door and adjustable windows with seating and forage accommodation. All doors and bales are fixed by spring loaded keys, or by self-locking, and flush fitting bolts. The mangers (one for each horse), are let into well made lockers.

The ventilation of the horse box is excellent, there being six special air-vac ventilators fitted in the satin walnut roof, and all round the sides of the vehicle there are circular ventilators, groups of which may be opened and closed at will. A horse box of this description was to be seen on the A.E.C. stand at the Royal Agricultural Show, Harrogate.

A New 3-Point Oil Fountain.

THE illustration herewith shows generally the new type of 3-point oil fountain, recently introduced by the Sydney Smith Patent Pump Co., Ltd., Aldwych House, W.C.2.

This unit has been prepared specifically to meet the requirements of oil companies, which prefer to have their most popular brands served from the one unit.

THE SYDNEY SMITH PATENT PUMP CO.'S NEW 3-POINT OIL FOUNTAIN.

The constructional detail of this new device is based on the same principles as this Company's 6-point unit, namely, vacuum-operated filling of the oil to the visible glass containers, and pressure discharge, although many modifications have been introduced into this 3-point unit, as a direct result of the two years' experience the Company has had with its earlier type of "Straight Six" oil fountain.

The great advantage of this unit, apart from its exclusiveness, is that the oil drums or barrels can be housed at any distance, within reason, from the fountain itself. They may be carried above the unit, or underground, or alternatively can be housed in any convenient store.

The working operations are perfectly simple. The handle of the cock under the container to be charged, is set to the "fill" position. The pedal is then depressed to the extent of its travel, the suction thus produced drawing the oil from the store to the container. The cock-handle is then set to the "shut" position. To serve, the cock-handle is set to the "serve" position, and the pedal is released, the whole operation of filling and discharging occupying a matter of seconds.

One important improvement incorporated in this machine, is the fitting of a hand-lever, which works either in conjunction with, or independently of the pedal. The whole unit is brilliantly illuminated at night. It is made of heavy gauge steel, and when locked, is self-contained and free from any unauthorised interference.

We understand that substantial orders have been placed for this 3-point oil fountain by the leading oil companies.

Sydney Smith have also added to their range during the year, two other units which are of the portable and self-contained types, the same principle of design being applied in both cases.

A.E.C. Monthly Gazette.—There are still, perhaps, some firms and individuals operating A.E.C. vehicles who may not be receiving regularly a copy of the monthly magazine issued by The Associated Equipment Co., Ltd. We are asked to state that the Company will be pleased to send a copy each month to any user of A.E.C. vehicles or any persons interested in Motor Transport. Enquiries should be addressed to Publicity Department, Associated Equipment Co., Ltd., Southall, Middlesex.

County Court Judgments.

THE following returns from the Registry of County Courts' Judgments, Whitehall, have been received relating to judgments entered up in the respective County Courts of England and Wales. Publication does not imply inability to pay. Many judgments may have been settled between the parties or paid. Judgments settled otherwise than through the Court may appear unless "satisfaction" is entered up within twenty-one days from judgment or allocatur. Registered judgments are not necessarily for debts. They may be for damages or otherwise, they may relate to actions *bona fide* contested between the parties, or they may be against defendants, liable in a representative capacity, and not personally; but no distinction is made on the register. Judgments are not returned to registry if satisfied in Court books within twenty-one days.

New Companies.

Green's Haulage, Ltd. (244,411).—Private Company. Registered December 18th. Capital £500 in £1 shares. Objects: To carry on the business of haulage contractors, etc. The directors are: B. Green, Miss/ F. Green. Registered office: 101, Beverley Road, Hull.

Compass Transport Company, Ltd. (244,483).—Private Company. Registered December 20th. Capital £500 in £1 shares. Objects: To charter, build or otherwise acquire motor and horse drawn vehicles, ships or aeroplanes, and to carry on the business of carriers and transport agents, etc. The directors are: A. D. Thomson, B. E. Thomson, K. D. Thomson. Registered office: 142/6, Finsbury Pavement House, E.C.2.

Pullman Lounge Coaches, Limited. (244,520).—Private Company. Registered December 21st. Capital £15,000 in 7,500 7½ per cent. cumulative participating preference shares of £1 and 15,000 shares of 10/- each. Objects: To acquire the business of H. S. Pratt, trading as "Pullman Lounge Coaches" at Southtown, Gt. Yarmouth, to construct, maintain, and work motor coaches, omnibuses, etc. The directors are: H. S. Pratt, C. L. Pratt, H. J. Maddieson. Secretary: H. F. Bacon. Registered office: 81, Southtown Road, Great Yarmouth.

Chris. Miller, Ltd. (244,869).—Private Company. Registered January 4th. Capital £8,000 in £1 shares. Objects: To acquire the business of a haulage contractor, carter, etc., carried on at Mona Garage, Croft Street, Preston, as Chris. Miller, etc.; to carry on the business of haulage and transport contractors, carriers, and carters, constructional engineers, proprietors of motor omnibuses, tractors and carriages, garage proprietors, etc. The directors are: C. Miller, J. Miller and A. Miller. C. Miller is permanent director and chairman. Secretary: C. Harrison. Registered office: Mona Garage, Croft Street, Preston.

Collingwood Motor Engineering Company, Limited. (15,819).—Private Company. Registered January 7th in Edinburgh. Capital £1,000 in £1 shares. Objects: To carry on the business of motor engineers, motor vehicle owners and hirers, haulage and general contractors, etc. The first directors are: Margaret Munn, D. M. Smith. Secretary: J. C. Muir. Registered office: 69, Possil Road, Glasgow, C.4.

M. E. M. Blackburn & Company, Limited. (244,948).—Private Company. Registered January 8th. Capital £300 in £1 shares. Objects: To acquire the business of M. E. M. Blackburn hitherto carried on by him and to carry on the business of general carriers, forwarding agents, bonded and common carmen, runners of motor vans, lorries, waggons, trucks, carts, coaches, chars-a-banc, omnibuses, etc. M. E. M. Blackburn is permanent governing director and chairman. Registered office: 150, Regent Street, W.1.

Industrial Motors (Greetland), Ltd. (244,937).—Private Company. Registered January 8th. Capital £2,000 in £1 shares. Objects: To carry on public motor services, and the business of proprietors of motor omnibuses, motor chars-a-banc, touring carriages, etc. The first directors are to be appointed by the subscribers.

Newman's Express, Ltd. (244,981).—Private Company. Registered January 9th. Capital £2,000 in 1,900 8 per cent. preference shares of £1 each and 1,000 ordinary shares of 2/- each. Objects: To carry on the business of omnibus and char-a-banc proprietors, proprietors of hackney carriages and taxicabs, etc. The permanent directors are: F. S. Collis, P. W. Newman.

W. F. McNab & Company, Limited. (244,990).—Private Company. Registered January 9th. Capital £250 in £1 shares. Objects: To acquire the business of a haulage contractor and carrier carried on by A. C. McNab at 14, Buckingham Road, Edgware, as "W. F. McNab & Co." The first directors (to number not less than 2 nor more than 3) are: A. C. McNab, A. L. Morgan. Registered office: 14, Buckingham Road, Edgware.

Collister & Co., Limited. (245,016).—Private Company. Registered January 11th. Capital £1,000 in £1 shares. Objects: To carry on the business of shipping, forwarding, haulage, transport and general removal contractors, packers, carriers and transporters, aviation, forwarding, shipping and general agents, storage and garage proprietors, etc. The first directors are not named.

R. W. Watkinson, Ltd. (245,055).—Private Company. Registered January 13th. Capital £1,000 in £1 shares. Objects: To acquire the business of a road transport contractor carried on by R. W. Watkinson at Apson Chambers, 68, Albion Street, Leeds. The first directors (to number not less than 2 nor more than 5) are: J. Hartley, R. W. Watkinson (both permanent).

Lacey's (East Ham), Ltd. (245,050).—Private Company. Registered January 13th. Capital £7,500 in £1 shares. Objects: To carry on the business of haulage and transport contractors formerly carried on by O. de Rosario, C. M. J. L. de Rosario, and W. T. Lacey, at 254, Barking Road, East Ham, and that of jobmasters, motor coach, omnibus and motor car proprietors, etc. The first directors (to number not less than 2 nor more than 5) are: O. de Rosario (managing director), C. M. J. L. de Rosario, W. T. Lacey (all permanent). Secretary: C. M. J. L. de Rosario. Registered office: 254, Barking Road, East Ham.

Wendrome Motor Services, Ltd. (245,113).—Private Company. Registered January 15th. Capital £6,000 in 4,000 cumulative participating preference shares of £1 each and 20,000 ordinary shares of 2/- each. The cumulative participating preference shares confer the right to a fixed cumulative dividend of 10 per cent., and subject to a dividend of 10 per cent. on the ordinary shares, to 25 per cent. of the surplus profits available for dividend in any year. Objects: To carry on the motor transport business formerly carried on by H. Smith and C. W. Neate, to run motor omnibuses, and to carry on the business of garage, aerodrome and carriage proprietors, etc. The directors (to number not less than 2 nor more than 5) are: H. Smith (chairman), C. W. Neate (both permanent).

Henry Long & Sons (Manningham), Ltd. (245,128).—Private Company. Registered January 16th. Capital £8,000 in £1 shares. Objects: To carry on the business of proprietors and letters on hire of motor cars, cabs, chars-a-banc, lorries, vans, omnibuses and vehicles of all kinds, carriers haulage and transport contractors, railway, forwarding and passenger agents, etc. The first directors (to number not less than 2 nor more than 5) are: Hannah Long (permanent), J. Long, F. Long, N. C. Mansley, C. Whitley.

Liverpool Cartage Company, Ltd. (245,134).—Private Company. Registered January 16th. Capital £60,000 in £1 shares. Objects: To adopt agreements (1) with Thomas Allen, Ltd., and (2) with Elder Dempster & Co., Ltd., to acquire and hold shares, stocks, debentures or other securities and to carry on the business of carriers by land, sea or air, transport, freight, cartage, haulage or general contractors, ship and barge owners, lightermen, carmen, railway or forwarding agents, etc. The directors are: Sir Alfred H. Read, J.P., J. H. Sharrock, R. W. G. Barnett, P. R. Turner. Secretary: J. D. Copp. Registered office: 2, Strand Street, Liverpool.

Modern Travel, Ltd. (245,159).—Private Company. Registered January 17th. Capital £2,000 in 2,000 8 per cent. preference shares of 10/- each and 20,000 ordinary shares of 1/- each. Objects: To carry on the business of motor omnibus and coach proprietors formerly carried on by A. M. Kemp-Gee, as "Modern Travel Services" at Southampton. The first directors (to number not less than 2 nor more than 5) are: A. M. Kemp-Gee, W. G. Darvill, H. W. Cusworth. Secretary: W. G. Darvill. Registered office: 68, St. Mary's Road, Southampton.

Norwest Transport, Limited. (245,160).—Private Company. Registered January 17th. Capital £100 in £1 shares. Objects: To carry on the business of shipowners, bargeowners, lightermen and carriers of passengers and goods, railway, shipping, forwarding and transport agents, etc. The directors are: G. V. Engert, Kathleen V. Engert, F. R. Curson, A. Dickson. Secretary: A. Dickson. Registered office: 9, The Viaduct, South Harrow.

Rowlands Gill Haulage Co., Limited. (245,183).—Private Company. Registered January 18th. Capital £1,000 in £1 shares. Objects: To carry on the business of haulage contractors formerly carried on by W. E. Parker as the Kepwick Haulage Company at "Riversdale," Rowlands Gill, Co. Durham. The first directors (to number not less than 2 nor more than 5) are: W. E. Parker (permanent), R. W. Snaith. Registered office: "Riversdale," Rowlands Gill, Co. Durham.

District Omnibus Services, Ltd. (245,196).—Private Company. Registered January 20th. Capital £2,000 in £1 shares. Objects: To carry on the business of constructors, maintainers and workers of omnibuses, motor vans, motor cars, traction engines, garages, etc. The directors are: H. Lintott (permanent director and chairman), Mrs. D. E. Lintott.

Cattermoles (Transport), Ltd. (245,351).—Private Company. Registered January 27th. Capital £1,000 in £1 shares (500 "A" ordinary and 500 "B" ordinary). Objects: To acquire the business of a cartage contractor formerly part of the business of H. Cattermole & Sons, Ltd., and now carried on by F. G. Voller at Union Mews, Orleston

Digitized by Google

Road, Islington, and 3, Furlong Road, Islington. F. G. Voller shall be permanent managing director.

Irish and General Travel Association, Ltd. (15,834).—Private Company. Registered in Edinburgh January 28th. Capital £200 in £1 shares. Objects: To carry on the business of tourist, travel, railway and forwarding agents, garage keepers, proprietors and hirers of motor omnibuses, motor cars, etc. The first directors are not named.

Modern Super Coaches, Ltd. (245,378).—Private Company. Registered January 28th. Capital £4,300 in £1 shares. Objects: To carry on the business of motor coach proprietors formerly carried on by Vine & Wells at 4, Tramway Avenue, Lower Edmonton, N., and that of carriers of passengers and goods, etc. The first directors (to number not less than 2 nor more than 7) are: E. L. Vine (chairman and managing director), W. A. Wells. Registered office: 4, Tramway Avenue, Lower Edmonton, N.

Calder Carrying Company, Ltd. (245,405).—Private Company. Registered January 29th. Capital £5,000 in £1 shares. Objects: To acquire the business carried on by the Calder Carrying Co. at Halifax and elsewhere, and to carry on the business of common, private and other carriers, general transport agents by land, water and air, etc. The directors are: T. Nevin, W. H. Wilson, G. R. C. Fox, F. E. Wright, J. Morton, A. W. Horsfall.

J. B. Brown (London), Ltd. (245,410).—Private Company. Registered January 29th. Capital £2,000 in £1 shares. Objects: To carry on the business of transport contractors and general engineers formerly carried on by J. B. Brown, W. Robinson and E. E. Hulcoop at 29, Dovedale Road, S.E.22, and 18a, Nunhead Lane, S.E.15, and that of coach builders and motor agents, cab, car, omnibus and van proprietors, etc. The first directors (to number not less than 3 nor more than 5) are: J. B. Brown (chairman), W. Robinson, E. E. Hulcoop (all permanent). Registered office: 18a, Nunhead Lane, Peckham, S.E.15.

Western Star Motorways, Ltd. (245,446).—Private Company. Registered January 30th. Capital £2,000 in £1 shares. Objects: To carry on the business of carriers of goods and passengers, transport agents, proprietors of omnibuses, carriages, motors and other vehicles, railway and forwarding agents, garage keepers, etc. The first directors (to number not less than 2 nor more than 5) are: Miss Alberta Ann Allen and Miss Elizabeth Ann Allen (permanent). Registered office: "Fleur de Lys," Uxbridge Road, Hayes, Middlesex.

Morris Jacobs (General Transport), Ltd. (245,435).—Private Company. Registered January 30th. Capital £100 in £1 shares. Objects: To carry on the business of haulage contractors, transport agents, general carriers, hackney carriage owners, etc. The permanent directors are: M. Jacobs, Mrs. Amelia Jacobs, C. A. Bowyer.

Ardwick Haulage & Engineering Company, Ltd. (245,447).—Private Company. Registered January 31st. Capital £2,000 in £1 shares. Objects: To carry on the business of haulage contractors, furniture removers, and garage proprietors as formerly carried on by E. O. Ainsworth at 1 and 4, Brodie Street, Ardwick, Manchester, and that of motor omnibus, tractor and carriage proprietors, etc. The directors are: E. O. Ainsworth (permanent chairman and governing director), W. Rafferty, W. Aldred. Secretary: W. Rafferty.

H. Cox & Sons, Ltd. (245,480).—Private Company. Registered February 1st. Capital £4,000 in £1 shares. Objects: To carry on the business of motor haulage contractors, general carriers, railway and forwarding agents, warehousemen, household furniture removers or warehousemen, etc. The directors are: F. J. Cox (permanent), F. Cox.

Mortgages, Charges and Satisfactions.

Renown Traction Company, Ltd.—Debenture dated December 30th, 1929, to secure £1,940, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: Christopher Dodson, Ltd., Cobbold Road, Willesden, N.W.

Coulson and Company, Ltd.—Issue on December 31st, 1929, of £1,000 debentures, part of a series already registered.

Wm. Hill & Son (Carriers), Ltd.—Mortgage dated January 1st, 1930, to secure £1,000, charged on properties, etc., in Leeds. Holders: W. A. Lupton and J. P. Wilson, Leeds, both solicitors, trading as "Lupton and Fawcett."

Westminster Omnibus Company, Ltd.—Second debenture dated January 1st, 1930, to secure £4,800, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: C. Dodson, Cobbold Road, Willesden, N.W.10.

Cliffords (Fulham), Ltd.—Particulars filed of £28,000 debentures authorised January 3rd, 1930, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

Janes Bros. (Contractors), Ltd.—Debenture charged on the company's undertaking and property, present and future, including uncalled capital, dated January 6th, 1930, to secure all moneys due or to become due from the company to Barclays Bank, Ltd.

The Growing Importance of Air Travel.

IT is reported that the removal of the London Air Port from Croydon to some site near to the city is under consideration. This is significant of the growing importance of air transport. The cost of making such a move would be enormous, but even its contemplation is sufficient to show how rapid is the progress of civil aviation. The rapidity of the growth of suburban London is of course a factor which makes it necessary to look well ahead of immediate requirements and it may well be that, eventually, these requirements will become so great that an aerodrome in the centre of the Metropolis itself will be regarded as a necessity whatever the expense may be. There is still a great shortage of houses but, with the growing tendency to migration to the suburban districts, in a few years time it may be possible to demolish one of the extensive slum areas and use the site for an aerodrome instead of for flats or factories. But speculation of this kind is not the object of this article; it is to draw attention to the ever growing popularity of air travel and also the transport by air of such commodities for which rapidity of delivery more than compensates for the additional cost of carriage. Although we are sufficiently accustomed now to the aeroplane that we scarcely trouble to look up when we hear one in the sky, still when living off the trade routes we can form little opinion of the increase in numbers taking the air. It is only when schemes of the magnitude of the one to which we now refer, are brought to our notice that we begin to realise that air transport has already become an established and important factor in the business life of the nation. The railways have taken a lesson from their former dilatoriness in recognising a formidable rival in road transport and have lost no time in acquiring air transport powers and putting them into practice. The proposal to move the London air port nearer to the centre of the city suggests that it is equally urgent for local authorities, who may have already selected sites for their aerodromes, to reconsider them with a view to locating them nearer to the centres of their cities. In all forms of transport the avoidance of terminal delays is important. In the case of flying over great distances such delays are relatively unimportant to the time saved; but for flying within the boundaries of our own shores, terminal delays may easily be much longer than the time occupied in transport itself. We have been assured for some ten years past and we continue to be assured by air experts, that we are as yet only on the threshold of air transport development. Also we continue to be assured by those who do not wish to be convinced, that air transport is never likely to become a self-supporting commercial proposition. It is curious that though the man in the street has accepted the motor car, he cannot bring himself to believe that aircraft can possibly become of equal importance in its own sphere of utility. We are still rather inclined to disbelieve in spite of the evidence of facts. The experts have already justified their belief and the headway they have made is even beyond their expectations. Our first aerodromes were no more than crudely levelled grass fields. To-day the rapidly increasing frequency of use requires a well paved surface, the provision of which is already beginning to exercise the ingenuity of engineers. In the event of another war, in addition to actual fighting planes, it might be that we would have to depend largely upon air transport for food supplies and, in this connection it is interesting to note that the Air Service branch of the War Department has succeeded in extracting from a Government notably reluctant to increase expenditure on the fighting forces, an extra million pounds sterling or thereabout, for air service development. Private flying is also being encouraged and is making satisfactory progress though it has not yet taken hold of the people as a popular pastime such as that of motoring. The future of the airship is as yet purely a matter for speculation. It labours against many disadvantages which time alone can prove whether they can be overcome or not. Air transport, in all its different aspects is perhaps the most fascinating of all modern engineering achievements, and even though it is acknowledged to be only on the threshold of development there is ample evidence that it has long passed its babyhood and already reached a state of lusty youth.

Comment on Current Topics.

Taxation and the Heavy Oil Engined Lorry.

The motor industry, including manufacturer and user, is kept in a continual state of uncertainty and anxiety with regard to what new rules and regulations are to be enacted for it and what further taxation it may have to bear. Not only is the fate of the McKenna duties causing unrest amongst motor manufacturers, but there are also new rumours that the petrol tax is to be increased in order to permit reduction of the horse power. Mr. Snowden, however, has not been remarkably communicative as to what his budget is to contain, but it may be taken for granted that though he may alter the incidence of taxation there will be no reduction in the total amount collected. If he removes the McKenna duties he will impose them on the motorist in another way and it will then be the home industry which will have to bear the brunt. The private motorist has always pressed for petrol taxation in lieu of the horse power tax and no doubt, as far as he is concerned, the principle is a good one as he would then pay exactly in proportion to his car mileage. But for the business motorist such a change of incidence would be a very serious matter. The business motorist to-day is not only he who employs commercial vehicles. The use of the motor car has entirely changed the business system of the country and there are probably as many owners of private motor cars using their cars all day and everyday for business purposes as there are those who use them entirely for pleasure. It is only the week-end motorist who would have cause for hailing with delight a petrol tax, in lieu of a horse power tax. It is evident then that a petrol tax would be a direct blow to industry itself because the industrial motor user would have to pay the largest share. The heaviest sufferers, however, would be the public service passenger and goods transport owners. Undoubtedly the effect of the last imposed petrol tax has been to stimulate the development of the heavy oil engine for heavy motor cars and a very great deal of progress has already been made. We have recently described several of these heavy oil engine vehicles in these pages and, on another page of this issue, we illustrate and describe a single-deck bus so fitted, the first of its kind in this country. The importance of this development cannot be exaggerated as it provides a means of economising to the extent of from 10/- to 15/- per hundred mile journey for the classes of vehicle for which it is at present suitable. An ordinary double-deck bus uses approximately 20 gallons of petrol per day and included in the price it is paying for petrol there is 4d. tax, representing 6/8 per day or about £114 per year, allowing for only 340 working days. 48-56 seater buses, therefore, are paying approximately £200 per annum in taxation if fitted with pneumatic tyres, or £222 per annum if fitted with solid tyres. An additional 6d. per gallon petrol tax would bring these figures up to £370 and £392 per annum respectively. The tax does not fall quite so heavily on the heavy goods carrying vehicles, unless engaged regularly on long distance transport, in which case it is far heavier, but no wonder every effort is being made to develop the heavy oil engine. Invariably there is a fly in the amber and in this case it is what will happen in the event of the heavy oil engine supplanting the petrol engine to such an extent that there is a serious reduction of revenue from the petrol tax. The advantage the heavy oil engine already offers in respect of fuel is sufficiently alluring to attract users, but an additional petrol tax would make it still more attractive and its growth in popularity would result in a correspondingly greater reduction in petrol tax revenue. The possibility of special taxation is, we believe, the only adverse contingency manufacturers and users of the new type of engine have to fear and even that is somewhat remote. That the price of heavy oil is likely to be increased by its use for motor vehicles we regard as being entirely improbable as the amount they will use will scarcely be appreciable in proportion to the quantity used for all purposes.

Road Transport Working Hours.

The Road Traffic Bill, which is now in the Committee stage in the House of Commons, contains a clause dealing with the number of hours which a driver may work and this has been the subject of long and serious consideration and discussion between the Minister of Transport and the Employers' Associations and the Trade Unions concerned. As a result, an agreed clause has been reached which, as is usual in such cases, is a compromise and does not satisfy either employers or employed. A saving clause, however, has been inserted giving the Minister of Transport, in consultation with the Minister of Labour, power to vary the periods of time prescribed in that clause, provided he is of opinion that such variation is not likely to be detrimental to the public safety. There is a good deal of heart searching amongst members of the trade on this clause, many of whom are of opinion that such a trade as road transport cannot be worked on hard and fast lines and definite hours of labour, as is practicable in other industries. The driver of a motor vehicle is away from the control of his employer and has a very large measure of liberty and must be trusted to carry through his duties without unnecessary and avoidable delay. While we all deprecate such cases as are occasionally heard of where excessively long hours have been worked, to the danger, not only of the driver himself, but of other traffic on the roads, yet in the main the business is carried on with consideration to the driver and he is quite satisfied to complete his journey wherever practicable. Unfortunately in these days business is not allowed to be carried on by such mutual goodwill and understanding, but must be hedged round by legislation and regulations, which are bound to be more or less rigid and not sufficiently elastic to meet the needs of each particular trade. In this issue we have a special article dealing with the Washington Convention as it affects road transport, and in view of the announcement made by the Prime Minister recently that an Hours Bill will shortly be introduced it is of very great importance that every road transport employer should understand the seriousness of the position and give his trade association the utmost support in its efforts to look after and safeguard trade interests.

Manchester Coach Owners.

In this issue we give particulars of what is rightly called an interesting experiment which is to be carried out in Manchester during the coming motor coach season, the arrangements having been made by the combined Transport Owners' Association and the Commercial Motor Users' Association in Manchester. This is a system of co-ordination whereby the individual owners will work together for the improvement of motor coach transport and the alleviation of congestion without in any way affecting their individual standing or attempting to amalgamate their interests financially. The scheme, which will be watched with interest by all private motor coach owners, will undoubtedly be followed in other business centres if it proves workable, as there is every reason to suppose it will, provided the members of the joint association throw themselves wholeheartedly into the work of making it a success. We congratulate Mr. H. Howard Robinson, the Secretary of the combined organisation, upon this well thought out scheme and we hope it will have the success it deserves.

Personal Notes.

Mr. W. R. Shephard becomes President of the Motor Trade Association.—Mr. W. R. Shephard, the Managing Director of Tilling-Stevens Motors, Ltd., of Maidstone, has been appointed President of the Motor Trade Association. Mr. Shephard was educated at Bablake School, Coventry, where he was a Major Exhibitioner. In his early years he was associated with John Griffiths Cycle Corporation, the B.S.A. Company, and the Dunlop Company, and subsequently gained experience of shipping in Germany and Spain. He joined the Daimler Company at the end of 1901 and there obtained considerable experience of works organisation. He was the Secretary of the Daimler Company 1909-1910, subsequently becoming Managing Director of Italian Daimler Company and afterwards Foreign Sales Manager. During the War he was Personal Assistant to the Controller of Petrol Engines at the inception of the original Air Board, and afterwards Commercial Adviser to the Director of Mechanical Transport Supplies. In the year 1918 Mr. Shephard was made an Officer of the Order of the British Empire. At the conclusion of the War he became Sales Manager of the Daimler Company and was given a seat on the board in 1923, which was retained until the end of 1926. For the last three years Mr. Shephard has been Managing Director of Tilling-Stevens Motors, Ltd., and he is also Chairman of Kent Carriers, Ltd. He was Senior Vice-President of the Motor Trade Association and represented that body at the World Motor Transport Congress in New York in 1926, and again in Rome in 1928.

MR. W. R. SHEPHARD, O.B.E.

Mr. J. L. Clewes Accepts Important Transport Appointment.—Mr. J. L. Clewes has resigned his appointment as Transport Manager to Lipton, Limited, having accepted the position of London Traffic Superintendent to the group of Companies known as Unilever, Limited. He was formerly General Inspector to the Chief Goods Manager of the Midland Railway of England, with which Company he had an exceptionally wide and varied training. He was afterwards General Manager of the Derwent Valley Railway, Yorkshire, and also General Manager and Accountant of the Londonderry and Lough Swilly Co. He came to London at the end of 1916 and held his appointment with Lipton, Limited, for twelve years, during which time he built up an extensive road transport system throughout the British Isles. Mr. Clewes is a Foundation Member of the Institute of Transport, and a Vice-Chairman of the Commercial Motor Users' Association.

Mr. D. Norman Pollock. New Appointment. — Many of our readers will be interested to know that Mr. D. Norman Pollock has recently been appointed Sales Manager with Scammell Lorries, Ltd., of London and Watford. Mr. Pollock was trained as an engineer, serving in the shops of William Beardmore & Co., Ltd., he then joined the Scottish Motor Traction Co., Ltd,. and during this period served for nearly four years during the Great War in the Royal Flying Corps. Some time after the end of the War he came to England and was with Commer Cars, Ltd., Luton, and afterwards with the Saurer Commercial Vehicle Co., Ltd. The best wishes of his many friends will be with him in his new sphere of activities.

MR. D. NORMAN POLLOCK.

M.A.A. New President.—Mr. Walter Welch, of W. H. Welch & Co., of Bristol, has been elected President of the Motor Agents' Association for 1930.

Goodyear Appointment.—The promotion of Mr. A. G. Robertson to the position of General Sales Manager of The Goodyear Tyre & Rubber Company (Great Britain), Limited, whose factory is at Wolverhampton, necessitated the appointment of a new Scottish Manager. Mr. S. Stanger, who has been with Goodyear for some ten years, latterly as their Representative on the Aberdeen territory, has been appointed to this position. Mr. Stanger will take care of Goodyear's interests in Scotland, making his headquarters at their Branch Offices at 61 Bath Street, Glasgow.

Railway Clearing House Civil Engineers' Committee.—Mr. A. Newlands, Chief Engineer of the London, Midland and Scottish Railway, has been elected Chairman of the Railway Clearing House Civil Engineers' Committee for this year.

Coventry Transport Appointment.—Mr. Arnold Arthur Jackson, of Sherwood, Nottingham, has been appointed Deputy Transport Engineer to the Coventry Corporation. Mr. Jackson has been with the Nottingham Corporation Passenger Traffic Department since 1916, and as Chief Assistant for the last four years.

Obituary.

Robert Neal Tough.

WE deeply regret to announce the death on 18th February last of Mr. Robert Neal Tough, who had for many years been the sole proprietor of the well-known firm of Tough and Henderson, Licensed Lightermen, Steam Tug and Barge Owners, of 53 Upper Ground Street, Blackfriars, London, S.E.1.

He was born at Old Barge House, Blackfriars, in 1859, and was the son of Mr. Robert Thomas Tough, the founder of the firm, who are engaged in the carrying trade in the Port of London, and were the pioneers of steam towage on the upper reaches of the River Thames. The firm was established over 70 years ago, and on the death of his father, Mr. R. N. Tough succeeded to the senior partnership in the business, and a few years later, on the retirement of Mr. Henderson, junior, he became the sole proprietor. He was a Freeman of the City of London, a Liveryman of the Merchants Taylors' Company, Past Master of the Carmen's Company, a member of the Council of Master Lightermen and Barge Owners, a member of the Junior Institute of Engineers, a member of the United Wards Club and of the Constitutional Club. Since 1909 he represented the Ministry of Transport on the Thames Conservancy Board, to whom his knowledge of all matters pertaining to the river and the trade generally was of inestimable value. He took a prominent part in many Parliamentary Inquiries and Commissions, always appearing as his own Counsel, and his sound judgment, his business acumen and his particular ability in matters of this kind always ensured him a sympathetic and often successful hearing. In private life he was most hospitable and generous to a degree, and his one aim in life was to make other people happy. He will be much missed and his place will be hard to fill.

Mr. Henry Slater Corney, who has been with Tough and Henderson for 38 years, and Mr. Arthur William Alchin, who is a nephew of the late Mr. R. N. Tough, and has been with the firm since 1908, will continue the management of the business as hitherto.

Washington Convention.

8 Hour Day—48 Hour Week.

For years past the possibility of this country ratifying the Washington Convention fixing the hours of labour has been hanging, like the Sword of Damocles, over the head of the road transport industry. For some considerable time the prospect of ratification sank into the background, but with the present Labour Government proposing to introduce an Hours Bill based on the Washington Convention it is opportune to give a considered report on the Convention as it would affect road transport employers. We commend to the attention of all our readers this important contribution, which has been specially contributed.—EDITOR.

The Convention was drafted by the General Conference of the International Labour Organisations of the League of Nations at Washington in 1919, held in accordance with the Labour part of the Treaty of Versailles of June 28th, 1919, and of the Treaty of St. Germain on September 10th, 1919.

It provides for the application of the principle of an eight hour day or of the 48 hour week to all industrial undertakings.

TERMS OF THE CONVENTION.

Under Article :—

I. (d) "Transport of passengers or goods by Road" is included as an industrial undertaking.

II. (a) "The working hours . . . shall not exceed eight in the day and 48 in the week" with the exception hereunder provided.

(b) "Where by agreement between employers and workers' representatives the hours of work on one or more days of the week are less than 8, the limit of 8 hours may, by agreement, be exceeded on the remaining days of the week by not more than one hour."

V. In exceptional cases where it is recognised that the provisions of Article 2 cannot be applied, agreements between workers and employers' organisations concerning the daily limit of work over a longer period of time may be given the force of regulations if the Government so decides, but the average number of hours worked shall not exceed 48.

VI. Regulations made by public authority shall determine for industrial undertakings—

(a) The permanent exceptions that may be allowed in preparatory or complementary work which must necessarily be carried on outside the limits laid down for the general working of an establishment, or for certain classes of workers whose work is essentially intermittent.

(b) The temporary exceptions that may be allowed, so that establishments may deal with exceptional cases of pressure of work.

These regulations shall fix the maximum of addition with the organisations of employers and workers concerned, if any such organisations exist. These regulations shall fix the maximum of additional hours in each instance, and the rate of pay for overtime shall not be less than one and one quarter times the regular rate.

VIII. Every employer shall be required to—

(a) Post notices in conspicuous places in the works or other suitable place setting out the hours at which work begins and ends. These hours shall be so fixed that the duration of the work shall not exceed the limits prescribed by this Convention, and when so notified they shall not be changed except with such notice and in such manner as may be approved by the Government.

(b) Notify in the same way such rest periods accorded during the period of work which are not reckoned as part of the working week.

(c) Keep a record in the form prescribed by law or regulation of all additional hours worked under Article VI.

It will be an offence against the law to employ any person outside the limits fixed under paragraph (a) or during the intervals in paragraph (b).

This Draft Convention was duly signed by the representatives appointed by the British Government. Under the Treaty each Government is under an obligation to submit it to Parliament within 18 months, and if Parliament declined to ratify, then the Treaty expressly exempts that Government from further obligation.

In July, 1921, the Convention was submitted to Parliament when after full deliberation and discussion the House of Commons by 164 votes to 53 decided not to ratify.

The present Government has expressed its intention to again submit the terms of the Convention to the House of Commons for ratification during the current Session.

The decision of the 1921 Government not to ratify was largely influenced by the fact that Foreign Governments, which had ratified, were interpreting the term "working hours" as "hours of effective work" which in some cases permitted of the 8 hour day being spread over a day of 10, 11 or even more hours. Under such interpretation international uniformity could not be secured and this led the British Government to invite representatives of other European Governments to a Conference in London in March, 1926, with a view to adjusting the difficulties which had arisen.

This Conference drafted an agreement which purported to give a fuller interpretation of the Articles of the Convention, two points of which call for special notice—

1. Article VI. (a)—

"The term 'essentially intermittent' work is defined under the London Agreement as such occupations as doorkeepers, watchmen, works firemen and other workers which are not concerned with production properly and which by their nature are interrupted by long periods of inaction during which these workers have to display neither physical activity nor sustained attention and remain at their post only to reply to possible calls."

"Essentially intermittent work" has been given such a narrow definition under the London Agreement that it is almost inconceivable that road transport although of an essentially intermittent nature can be brought within the scope of this clause under that category. The term would appear to have been interpreted so as to apply to an individual and not an industry.

It is appropriate at this point to ask what is intermittent work?

In a debate on the Convention in the House of Commons, Mr. Steel Maitland (then Minister of Labour) put this pertinent point—

"It is quite clear that one or two of the things that we thought we had got clear at the London Agreement do not seem now to be quite clear. Others have come up since. For instance, I have had the question of preparatory and complementary work put to me, as one that affects Lancashire and the cotton-spinning industry. I would ask the Hon. Member for Westhoughton, who believes we could sign so quickly, whether he has himself analysed the question

Digitized by Google

of intermittent work and what it means. Is road transport intermittent work, or is it not? It is no good saying "Go ahead," unless you can answer questions of that kind and know what you want. Road transport is a question that has arisen since the London Conference. It is an industry whose development has largely taken place since the date of the Washington Convention and we have to know now it is to be regarded. The Germans have precisely the same difficulty that we have and they are considering it, and I am sure that they too found it difficult and puzzling. In the draft of their law, road transport is, I believe, regarded as intermittent work. Yet it is difficult to see how under the London Agreement it could be considered intermittent."

On Article VI. (b) in the same debate the Minister said—

"Take the question of overtime. The usual view over here held by other lawyers than those whom the Hon. Member has quoted is that under a strict British legal interpretation of the Convention, taken by itself, the present overtime system in force in this country and accepted by both workmen and employers in this country would be impossible whether on the railways, in the engineering trades or in an industry such as ship repairing."

"The reason why we had the meeting in London was to try and get some of these difficulties clarified, and agreement reached on them. We did, with regard to some of them. One of our objects which we thought we had attained—I would say to the Hon. Member for the Exchange Division of Manchester—was to get an agreement reached as regards overtime which would enable the system of agreed working between employers and employed on the railways, in engineering works and in such industries as ship repairing to be carried on without dislocation. I take it from my Hon. Friend that they have doubts about this. I put it to the House, and to anyone who wants to get a practical instrument, that while we thought we had got it by the London Agreement, yet we certainly have got to get it clear when you go into a question of this kind that covers all the industries in this country, the moment you dig into it you find what you have to cover."

2. Article VI. (b)—

"It is agreed (by the London Agreement) that the maximum limit to the number of additional hours that may be worked under Article VI. (b) (of the Convention) is within the competence of National Law."

This must not be considered as being of general application. It is strictly limited to Article VI. (b) "the temporary exceptions to deal with exceptional cases of pressure of work."

The term "exceptional cases of pressure of work" is very indefinite but no matter how wide or narrow an interpretation the official mind might eventually place upon it, approval can only be given by regulation after consultation with the recognised organisations and any regulation "shall fix the maximum of additional hours in each instance."

This provision was presumably made to cover the railway conditions in England where the 48 hour week is spread over six working days and Sunday duty is treated as overtime as the London Conference made the following specific reference to railways under this Article—

"It is agreed that railways are covered by the Convention. In so far as Article V. and Article VI. (a) are not sufficient for the needs of the railways, the necessary overtime is permissible under Article VI. (b)."

Competent legal authorities have expressed the view that this extension is contrary to the principle underlying the Convention and that the present arrangements of the companies would be forbidden under the Articles of the Convention. The Minister of Labour also expressed some doubt upon this point.

We, therefore, come to the position that having consideration both for the Convention and the subsequent London Agreement, Road Transport would be operated under either—

Article II. "An 8 hour day and 48 hour week."

Article V. "By an extension of the daily limit, but not to exceed a weekly average of 48 hours."

Article VI. "To get a permanent exemption owing to the intermittent nature of the work, but still governed by regulation as to the additional number of hours which shall be worked."

It will, therefore, be noted that Article II. of the Convention lays down the general limit of an 8 hour day and 48 hour week. Article V., provides that in "exceptional cases" where Article II. cannot be applied the daily limit of work can be extended over a longer period of time, but the average number of hours must not exceed 48 per week.

It must be borne in mind that the Convention is dealing with "Industries" and not with individual undertakings.

Assuming that the "Road Transport Industry" would be treated as an "exceptional case" it would be possible to spread the 48 hours over a 5 instead of a 6 day week, provided first that the Trade Unions agree, and secondly, the State will sanction. It does not follow that if this system could be adopted that individual firms could operate under the 5 or 6 day week at their own discretion. The terms of the Article imply that it must be by "agreement between workers and employers organisations" which may be given the force of regulations. Further, it will be noticed that under Article VIII., the hours once fixed and notified shall not be changed except by approval of the Government and any departure therefrom will be treated as an offence.

There is an alternative to this Clause by securing part of Article V. and part of Article VI. so that the Industry shall not only enjoy the extension of the daily limit as provided in V., but shall also be scheduled as a permanent exception under Article VI. which would allow of a fixed additional number of hours per day or per week.

The views of the law officers of the late Government, however, were that if an industry secured an extension of the daily limit the industry—not the worker—would be deprived of the right to work beyond the average of 48 hours per week.

As a further alternative there is the question of treating commercial road transport as "intermittent work." Reference has already been made to the very narrow interpretation which the London Agreement has placed upon "essentially intermittent work." The fact that Germany has been compelled to place "Road Transport" within this category is in itself an acknowledgment of the difficulty of putting stringent conditions upon an Industry under which it cannot be operated.

An important factor bearing upon this point has arisen within our own experience in connection with the Road Traffic Bill. In that Bill the Minister of Transport endeavoured to limit the hours of mechanical road transport workers to a maximum of 10 hours per day. In consequence of strong opposition he withdrew the particular clause with a view to redrafting after consulting the interests affected. A Conference representative of employers and workers which was convened by the Minister to advise him upon it was unable to get unanimity,

Digitized by Google

but a compromise was reached that 11 hours per day should be the maximum excluding any rest periods, with a proviso that a clause be inserted for regulations to be made to allow of elasticity of working beyond the stipulated period to meet the exigencies of certain sections, on the recommendation of representative organisations of the Industry.

The Minister accepted the provision of the 11 hour day, but declined at first to accept the permissive clause. A further Conference was unable, after long deliberation, to provide any other condition which would meet the peculiar needs of the Industry, and its unanimous submission to the Minister was that a permissive clause was essential and this he eventually accepted.

It cannot be ignored that the freedom of negotiation which has hitherto been enjoyed by the employer will under the Convention practically cease to exist. The authority which the Convention gives to the Trade Unions will place industries absolutely within their power and it will enable them to restrict any extension of hours to the narrowest possible limits and at the same time provide them with an instrument by which any concession on their part could be made the subject of a bargain.

Consideration must also be given to the fact that the development of commercial road transport has largely taken place since the Convention was signed. It is also what is known as a "sheltered Industry" and at no time or place enters into competition with workers in other countries. It is the handmaiden of other industries which are dependent upon its mobility and service for the maintenance and distribution of their commodities. The development of road transport has provided these Industries, the Trader and the general public with a cheaper and more efficient system of distribution than hitherto prevailed.

As the Convention now stands, its application to goods transport by road would create chaotic conditions with disastrous results to those industries which are dependent upon it. It may be conceded that the terms of the Convention could be applied to workers in a factory where the system of control is circumscribed within the four walls.

Road Transport is work of an essentially intermittent nature and cannot be operated under rigid limitation of time imposed by statute. On account of its mobility it cannot be conducted in the same manner as a factory where the system of control is circumscribed within the four walls. When vehicles leave the yard or garage the owner has no further contact until their return and they cannot be operated to the accuracy of a time-table on account of congestion, traffic blocks and delays at delivery and receiving points.

R.P.B.

Carter, Paterson & Co., Ltd.

29th Staff Dinner.

A very enjoyable evening was spent on Monday, March 3rd, when the directors and staff of Carter, Paterson & Co., Ltd., met for the 29th Annual Staff Dinner at the Hotel Victoria.

Mr. James Paterson (Managing Director) presided, and was supported by Messrs. Herbert Paterson, Arthur Paterson, F. W. Carter and W. Henderson Gray, Directors. The numerous guests present included:—Messrs. J. Ballantyne (Chief Goods Manager L.M. & S. Railway), A. Maynard (Assistant Chief Goods Manager G.W. Railway), J. F. Heaton (Thomas Tilling, Ltd.), F. G. Bristow (Commercial Motor Users' Association), C. E. R. Sherrington (Railway Research Service), W. T. Wise (Sutton & Co., Ltd.), E. H. Davies (L.M. & S. Railway), Hugh Green (Town Clerk, Finsbury), A. F. Cole (District Surveyor, Finsbury), and C. S. Blake (McNamara & Co., Ltd.). The toast of His Majesty the King having been drunk with enthusiasm, Mr. C. Cunningham, the Veterinary Surgeon to the Company, proposed the toast of the firm and said it was a great pleasure to propose the toast of the Company in which they were all most interested, not only the members of the staff, but a large number of the visitors also. After an existence of seventy years the firm was stronger than ever. Its efficiency had been maintained and would be maintained in the future. Many changes had taken place, all with the object and the result of increasing the efficiency of the Company.

Mr. R. W. Mitchell, one of the Traffic Superintendents, in seconding the toast referred to his recent visit to America with three other members of the staff. The thing which struck him most was the marked attention to business, and this was not always the case over here.

Mr. James Paterson responding, referred to the visit to America which was arranged by the firm, and in exchange four members of the staff of the American Express Co. came over here. Referring to the business, he said that the Company had carried many thousands more packages last year than ever before. They had continued their programme of pulling down old buildings and replacing them by new ones, and their new buildings at City Basin were well above ground.

The Visitors.

The toast of the visitors was proposed by Mr. F. W. Carter, one of the Directors, who said he could not imagine what a staff dinner would be without a good sprinkling of guests.

Mr. J. Ballantyne (Chief Goods Manager L.M. & S. Railway) replying, said he felt sure that he voiced the views of all the visitors when he said that they had had a most enjoyable dinner. They had been privileged to be associated with the firm of Carter, Paterson & Co., Ltd., a firm of seventy years standing which they all admired.

A very enjoyable musical programme was given for which Mr. W. H. Cross was responsible and to whom special appreciation for his services in this connection was accorded by Mr. James Paterson. A very enthusiastic reception was given to Mr. Herbert Paterson, who is still a Director of the Company, although he retired last year from the position of Joint Managing Director. He was asked to say a few words and delighted the company with a number of after dinner stories. A most successful evening closed with the singing of "Auld Lang Syne."

Obituary.

James Wigglesworth Hancock.

It is with regret that we record the death of Mr. James Wigglesworth Hancock, one of the best known members of the Manchester transport industry, who passed away on 8th February last, in his 52nd year.

He was principal of the firm of James Hancock, haulage contractors of Ancoats, Manchester. A son of one of the founders of the Manchester Teamowners' Association, he was a member of the Committee of that organisation for many years, and since 1919 had been Hon. Treasurer of the Manchester Transport (Owners') Association, Ltd. He also served on the Area Committee of the Commercial Motor Users' Association, and was a member of the Institute of Transport.

Mr. Arthur Hancock succeeds his brother, the late Mr. James Wigglesworth Hancock, as principal of the firm of James Hancock, haulage contractors, Ancoats, Manchester.

Road Traffic Bill.

Read Second Time and Committed to a Standing Committee.

The Minister of Transport (Mr. Herbert Morrison) moved the second reading of the Road Traffic Bill in the House of Commons on February 18th last.

The Minister said that he had to thank Lt.-Col. the Right Hon. Wilfrid W. Ashley, the late Minister of Transport, for a great deal of preparatory work which was done during the period of office of the late Government in connection with the Bill. He had also to thank Lord Russell for the admirable way in which he conducted the Bill through the House of Lords and for the great assistance which he had rendered in the preparation of the Bill. The Government had also to express appreciation of the advice and assistance they had received from various associations, local authorities, motoring bodies, etc., and they had in particular to express their indebtedness to the Royal Commission on Transport, under the able chairmanship of Sir Arthur Griffith-Boscawen, for the really excellent work they had done in the preparation of their two Reports.

The Speed Limit.

Referring to clause 10 of the Bill dealing with speed limits, the Minister said that the observance of the existing speed limit was not supported by general public opinion. In fact, if the 20-miles speed limit were universally enforced, the congestion on the streets would be much worse than it is at the present time. The Government recommended that the speed limit should be terminated for light motor cars. In the case of heavy motor cars, their weight and momentum in a smash were much more serious than in the case of the light motor car: they were much more dangerous and less under control and that was the case for imposing a speed limit upon them. A very heavy motor going at a very high speed would do an undue amount of damage to the highway and from the point of view, particularly of the highway authorities and incidentally the Road Fund, they must protect themselves against undue speeds on the part of the heavy vehicles. Further, the safety of the passengers in public service vehicles must be meticulously safeguarded, and finally, it must be remembered that the drivers of most of the heavy motor cars were employed persons, and there would be a danger of them being speeded up unduly by their employers if a speed limit in their case was not imposed.

The Minister then drew attention to clauses 11 and 12 dealing with dangerous and careless driving. Clause 11 increases materially the penalties for dangerous driving. Mr. Morrison said that the getting of good conduct on the road was, in his judgment, not in the end so much a matter of law and repression as of education, co-operation, and the encouragement of road sense—therefore, provision had been made in the Bill which would enable them to spread the light of knowledge, and to encourage good conduct.

The Bill provided that in the case of locomotives two persons should be employed in driving or attending to the locomotive, with an additional person for each trailer in excess of one. The Royal Commission on Transport recommended that there should be one person for every trailer in excess of two, but the Government did not think that was enough.

Drivers Hours of Duty.

Clause 19 dealt with the maximum hours for the drivers of heavy motor vehicles, including large public service vehicles. Cases had come to notice where men, particularly on long-distance transport had been working inhuman hours of labour and it constituted a positive danger to the public. The Clause provided that there should not be a continuous period of driving beyond five and a half hours, and that there should not be an aggregate in any one day of more than 11 hours in any period of 24 hours. The Clause also provided that the drivers of the vehicles referred to were to have an interval of at least 10 hours for rest in every consecutive 24 hours, except that the period of 10 hours might be reduced to nine hours to allow for district changes, if the driver was allowed an interval of 12 hours for rest in the next period of 24 hours. Any two or more periods of time were to be deemed to be a continuous period for rest and refreshment. Any time spent on work in connection with the vehicle or its load was to be reckoned for the purposes of the Clause as if they were spent in driving.

In connection with the maximum hours for drivers, Mr. Morrison said that there had been considerable negotiations with the representatives of the employers' organisation and the representatives of the trades union. He informed them that he was determined about the matter and that he was sure the House of Commons would want to meet the essential point, and that it was far better for the employers and the workmen to get together, with the representatives of the Ministry, to thrash out the practical difficulties which existed and to get a Clause acceptable to the greatest extent to them, so long as it met the principle with which he was concerned when drafting the Measure. He had to thank the representatives of the employers' organisation and of the trade union for the friendly co-operation which they had extended in the matter. At the end of several days they said: "The Clause that we have now agreed with you, altered from its original draft, goes a long way to meet our difficulties, but there will be difficulties that we cannot foresee and difficulties which, if they are embedded in a Statute, will tie us up to some absurd position, if we cannot get elasticity." Therefore their old friend, administration law, was introduced to get them out of the difficulty. He had agreed, with the concurrence of the Minister of Labour that:—

> "The Minister may, on the application of a joint industrial council, conciliation board, or other similar body, or on a joint application, by such organisations, representative of employers and workpeople in the industry, as the Minister of Labour may certify to be proper bodies to make such an application, and after referring the matter to the Industrial Court for advice, by order, vary the periods of time prescribed in this section, provided that he is of opinion that such variation is not likely to be detrimental to the public safety."

He hoped that the Clause, which had been drafted in consultation with the employers' organisation and the workmens' organisation, would be accepted.

Compulsory Third Party Insurance.

Referring to Part II. of the Bill dealing with compulsory third party insurance, the Minister said that there had been a large number of cases of persons, sometimes poor persons, killed or injured in a motor accident, where the driver was convicted of negligence or bad driving, but because the driver was not insured and because the driver was not a person of substance, the relatives of the person killed or the person injured were unable to get damages for the injury done. As against that, the Government had to face the great difficulties involved in compulsory third party insurance, but, on balance, they decided that they would face the difficulties and deal with an intolerable injustice which ought not to be allowed to exist. The Clauses would deal with death and injury only. He was not going to say that the Clauses were absolutely watertight. For example, if a person was injured and the motor driver had not been negligent, no compensation would be payable in the new circumstances any more than at the present time. If a car was stolen and driven by someone else, there would be no remedy, and there would be no remedy in the case of the use of an unauthorised car. Those were points which one could not possibly meet, much as they would desire to meet them. Although the majority of cases where the motorist was negligent and culpable would be covered there would be a minority of cases which would not be covered. He did not see how they could find legislative provision to meet every possible case.

Regulation of Public Service Vehicles.

Coming to Part IV. of the Bill dealing with the licensing of public service vehicles the Minister said that this section was exceedingly important. We must have a national policy of road transport, a policy of national co-ordination, and he had to choose between local government proper or national government proper, and in view of the big national concern in this matter he went for a national policy which was the policy embodied in the Bill and also the policy of the Royal Commission on Transport.

It was proposed to have 12 traffic areas with 12 sets of commissioners, all of whom would be appointed by the Minister of Transport. One would be a paid member who would be appointed for a period of seven years and might be re-appointed. He would be the chairman of the

C•

Digitized by Google

authority and would be a full-time member of the Traffic Commission. He would be assisted by two members, one appointed by the Minister from a panel constituted on the nominations of county councils, and another from a panel constituted on the nominations of county borough, non-county borough and urban district councils. So that although they would be national institutions they would have a connection with and an experience of local government, which would be valuable, and at the same time they would be able to get a national scheme. Their duties would be mainly administrative. Their main task would be to co-ordinate and to organise transport. Of course, it would be of the utmost importance that their tasks should be discharged with fairness and equity to all the interests concerned, and every provision would be made to that effect. The Commissioner appointed by the Minister of Transport would be subject to the directions which would be incorporated in the Statute, and he would be subject in a general way to regulations which the Minister would have power to frame for the purpose. But, subject to that, they would be independent people, independent authorities, who must exercise individually their own judgment according to the evidence of the case which was before them. After they had done that, if the parties liked to exercise their right, there would be an appeal to the Minister of Transport, as was provided in the existing law. Likewise, they would be concerned with the administrative problems of co-ordination, and he was certain that whoever was Minister of Transport, he would be fair and just in the administration of the law.

The commissioners would have power to issue two forms of licence, one in respect of the vehicle and the second a road service licence, and they would be able to attach to a licence various conditions which would be very helpful in connection with co-ordination. The operators would have to deposit a schedule of times, and that would enable the speed limit to be checked in various ways. The commissioners would have to take into account traffic which was already upon the road, public service vehicles already on the road, and the alternative provision of transport provided by public service vehicles or by railway. He thought that as time went on they should find that they had a set of machinery not merely for licensing, but great machinery for co-ordination, and machinery that could be used with advantage in any further alteration of the law that might come along.

Colonel Ashley here interposed to ask whether, when an application was made to them, the commissioners would be entitled to consider, for a road service, say, from A to B, that there was already in existence efficient railway transport more or less parallel?

Mr. Morrison said that that would be one of the statutory duties of the commissioners. They must take into account all other forms of passenger transport that existed including transport by rail, not for the purpose of compelling the public to travel by rail, but the commissioners should take into account the whole of the transport requirements of the area. If we were to have a proper system of transport the commissioners would have to take into account all the various forms of transport that existed and not recklessly multiply them.

THE POWERS OF LOCAL AUTHORITIES.

Referring to the original Part V. of the Bill which gave powers to certain local Authorities to run public service vehicles, to enter into working and other agreements, etc., which section was deleted by the House of Lords, the Minister said that this original part of the Bill was related to the Debate which they had in that House on February 7th.* The Government felt that it was increasingly important, if they abolished the licensing powers of the local authorities, that they should have absolute equality before the licensing commissioners whom it was proposed to set up. They could not have that equality if every time they wanted to operate an omnibus route they had to come to Parliament. Therefore, subject to suitable safeguards set out in the original Part V., they had made provision enabling the local ruthorities already possessing transport powers to appear before the commissioners and to make their case in the same way as private undertakers could do. In the Debate referred to they carried the Omnibus Bill on Second Reading by a substantial majority and he hoped they should agree to an instruction to the Committee upstairs to amalgamate the two Bills.†

In his judgment, the Bill opened up a vast statutory and administrative opportunity to order and consolidate road traffic in Great Britain. It gave them an opportunity to encourage better conduct on the roads. It enabled them to co-ordinate a great industry, namely, passenger transport by road and by rail; and it enabled them to bring it into proper relations with other forms of transport. The machinery that the Bill would set up would be there if and when further co-ordination comes. The Bill said that the roads must be used for the purpose of carrying goods and persons, which was what transport was for. If we recklessly provided transport in excess of reasonable and legitimate requirements we were imposing a burden on industry, and to that extent were making transport inefficient.

Mr. Morrison spoke for approximately 1¼ hours. The debate which followed lasted some hours and eventually the Bill was read a Second time without a division and committed to a Standing Committee.

The Bill in Committee.

The Standing Committee of the House of Commons which is considering the Bill is now sitting under the chairmanship of Sir Hugh O'Neill.

An amendment to make Part I. of the Bill dealing with the regulation of motor vehicles applicable to all classes of road vehicles was moved. The Minister of Transport pointed out that penalties applicable to all vehicles for neglect of traffic directions were prescribed in another part of the Bill.

Colonel Ashley asked why savage penalties should be imposed on motorists for dangerous driving while light penalties were to be imposed on drivers of horse-drawn vehicles who might be just as culpable and deserving of blame? What was desired was an ordered rule of the road applying to all kinds of traffic.

Mr. A. E. Brown, who opposed the amendment, said that while the number of accidents caused by motor traffic was increasing, there was a decrease in the number due to horse-drawn traffic.

The amendment was defeated by 41 votes to 11.

An amendment was moved by Sir B. Peto for the purpose of including in the classification of motor vehicles motor lorries with trailers fitted with pneumatic tyres which should be allowed to travel at the same speed as motor omnibuses carrying passengers. Mr. Morrison said that the problem of trailers was difficult and it would be unwise to add to the types of vehicles which could use them. He promised, however, that the question raised would be considered.

On Clause 3 which provides that it shall not be lawful to use a motor vehicle or trailer which does not comply with the regulations as to construction, weight, equipment and use, Lt.-Col. Ashley moved an amendment to limit the maximum penalties for breach of the regulations to a fine not exceeding £5 for a first offence and £10 for subsequent offences. He contended that the penalties prescribed (in the case of the first offence a fine not exceeding £20 and in the case of a second or subsequent conviction to a fine not exceeding £50, or to imprisonment for a term not exceeding 3 months) were absurdly severe. Imprisonment should be imposed in serious cases, such as dangerous driving, etc., but not inflicted merely for breach of the regulations in that Clause.

The Minister of Transport said that the proposed regulations would not apply until the various associations interested in road transport had been given an opportunity of making representations on the draft regulations which would first be prepared. Only after such representations had been considered would regulations be framed. After the regulations had been made, everybody should know what they were, and non-compliance with respect to the construction of vehicles would be a serious thing which ought not to occur at all. It might seem that breach of the regulations was not a very serious offence, but on the other hand, it might be very serious.

Sir J. Melville, Solicitor-General, said the reason why the maximum penalty of £20 was laid down for a first offence was that, while some breaches of the regulations might be merely technical and would involve no more than payment of costs of the case, there might be first offences of a very serious character. The object of the Bill was to make those offences not worth committing.

The Committee divided, and the amendment was defeated by 19 votes to 18. The clause was then agreed to.

* This was the debate on the Omnibus Bill which seeks: "To make provision for enabling local authorities to provide and run omnibuses within and without their districts"—presented by Lieut.-Commander Kenworthy and supported by Mr. Scurr and others. This Bill was read a second time.

† In the House of Commons, on February 20th, the Minister of Transport moved: "That it be an Instruction to the Committee on the Bill that they have power to consolidate the Road Traffic Bill (Lords) and the Omnibuses Bill." The motion was debated, and on a division there voted for 245 against 147.

Institute of Transport.

Annual Dinner.

THE tenth dinner of the Institute of Transport was held at the Savoy Hotel, London, on March 12th last.

SIR JOSIAH C. STAMP, G.B.E., the President of the Institute, was in the chair, and amongst those present were:—

Lady Stamp, Mr. Herbert Morrison, M.P. (Minister of Transport), Sir William Bragg, K.B.E., F.R.S., Sir Herbert Jackson, K.B.E., F.R.S., Air Vice-Marshal Sir W. Sefton Brancker, K.C.B., A.F.C. (Immediate Past-President), The Rt. Hon. Lord Ashfield of Southwell (Past-President), The Rt. Hon. Lord Aberconway of Bodnant, Sir Henry P. Maybury, G.B.E., K.C.M.G., C.B. (a Past-President), Mr. Roger T. Smith (a Past-President) and Mrs. Smith, Colonel Sir Thomas S. Purves, O.B.E. (President, Institution of Electrical Engineers), Lt.-Col. F. Kitson Clark, T.D., Mr. Sidney E. Garcke (a Vice-President) and Mrs. Garcke, Mr. R. J. Howley, C.B.E., (a Vice-President), Sir Alfred Read (a Vice-President), Mr. J. Maughfling, C.A. (President, Society of Motor Manufacturers and Traders), Mr. W. W. Grierson, C.B.E. (President, Institution of Civil Engineers), Mr. R. Fane de Salis (President, Canal Association), Mr. B. L. Nairn (President, Dock and Harbour Authorities Association), Mr. G. Cole Deacon, Mr. A. L. Barber (Vice-President) and Mrs. Barber, Major E. G. E. Beaumont, O.B.E., and Mrs. Beaumont, Sir Herbert E. Blain, C.B.E., Mr. F. G. Bristow and Mrs. Bristow, Mr. H. P. Currie, Sir John Eaglesome, K.C.M.G., and Lady Eaglesome, Sir Henry Fowler, K.B.E., Mr. C. le M. Gosselin, Mr. A. Winter Gray (Secretary), Major-General W. H. Grey, C.B., C.M.G., and Mrs. Grey, Sir Frederick Leith-Ross, K.C.M.G., C.B., and Lady Leith-Ross, Major-General S. S. Long, C.B., Brig.-Gen. Sir H. Osborne Mance, K.B.E., C.B., C.M.G., D.S.O., and Lady Mance, Mr. D. J. Owen (General Manager, Port of London Authority) and Mrs. Owen, Mr. J. Paterson, M.C., Lt.-Col. J. A. A. Pickard, D.S.O., Mr. O. C. Power, Mr. D. Ross-Johnson, C.B.E., and Mrs. Ross-Johnson, Mr. C. J. Selway, C.B.E., and Mrs. Selway, Mr. W. R. Shephard, O.B.E., Mr. G. S. Szlumper, C.B.E., and Mrs. Szlumper, Sir John Timpson, K.B.E., Sir George W. Truscott, Bart., Mr. H. A. Watson, C.B.E., M.V.O. (a Vice-President) and Mrs. Watson.

THE PRESIDENT announced the inability of His Excellency General C. G. Dawes, C.B. (the American Ambassador) and Mrs. Dawes to be present owing to the Embassy being in mourning for Ex-President Taft. Sir Josiah Stamp said how much all present had been looking forward to hearing General Dawes, who was to have responded to the toast of "Our Guests." General Dawes had sent his very best wishes for a happy evening and said he hoped to be with them upon another occasion. (Applause.) His Excellency the Spanish Ambassador would have been with them in view of the special connection between the subject of transport and the forthcoming International Congress to be held in Madrid in May, in which His Excellency was taking a great interest, but he had been prevented from attending in consequence of a family bereavement. His Excellency had sent them his best wishes. They also regretted the absence owing to illness of Mr. Geo. Monro, C.B.E. (President, Commercial Motor Users' Association) and Professor W. Morgan (President, Institution of Automobile Engineers).

MR. HERBERT MORRISON, M.P., Minister of Transport, proposing the toast of "The Institute of Transport," said that if it was permissible, without undue conceit, he would venture to make the claim that the present Government had a particularly firm grip of transport problems and a clear determination to apply a well-defined transport policy. The Government was, through Mr. Thomas's Development (Loan Guarantees and Grants) Act, 1929, achieving a large measure of modernisation and improved technical efficiency in transport and electricity undertakings. By the proposals contained in parts IV and the original part V of the Road Traffic Bill, it was creating valuable machinery by which it would achieve a beneficial revolution in the organisation of road transport based on the principles of co-ordination and public service. Further, the principles enunciated by him on behalf of the Government in connection with the London traffic problem would, he hoped, secure for the first time a great co-ordinated passenger transport system in the Metropolis based on the sound principles of public accountability and vigorous business management.

The Royal Commission on Transport had already rendered distinguished public service by the production of its two interim reports. During the present year he hoped to receive the final report of the Royal Commission covering what was probably the most difficult part of their terms of reference, namely, the co-ordination of various forms of transport, both for passengers and goods.

It was not without significance to note that the machinery which the Government were establishing for the licensing of public service vehicles under Part IV of the Road Traffic Bill was capable of use for other purposes, and might have a direct bearing on any recommendations the Royal Commission might put forward in their final report in regard to the complicated question of the co-ordination of road transport in general, including transport of goods.

Continuing, Mr. Morrison said that the railways must get on or get out. He believed that railways performed and would continue to perform an important and vital function in our transport system. His desire was to encourage the railways to develop, but entirely without prejudice to making road transport a service of the highest efficiency. There was room for both, and he had been glad to be able to inaugurate a new programme of Trunk Road reconstruction estimated to cost nearly ten million pounds.

As illustrations of other developments which were being assisted through the Development Act, he quoted improvements in operating facilities and equipment at the docks of one railway to a total of £3,000,000—a development of great importance to the export trades, a general scheme of modernisation in connection with the Mersey Docks at a cost of £2½ millions, and an expenditure of £9,000,000 for electrical standardisation in the north-east coast area.

It was, of course, inevitable that Part I of the Road Traffic Bill should excite more public interest than Part IV and Part V as introduced in the Lords. He was glad to know that there was a wide public interest in the control of motor traffic, and in the steps taken to reduce road accidents—a matter which was very near to his heart. But from the point of view of making essential changes in the whole organisation of road transport, Part IV and Part V were perhaps of more interest to the Institute of Transport.

THE NEW LICENSING SYSTEM.

The new licensing system set up by Part IV of the Road Traffic Bill would enable the Ministry of Transport to take a broad national view, to cut out an enormous amount of waste and inefficiency in the public service vehicle system, to secure better services, more security, higher standards for transport workers, and real co-ordination. Overlapping and needless competition meant waste, and in the end waste had to be paid for by the passengers and the transport workers no less than the proprietors of the undertakings.

There were some people who thought that the more road transport endeavoured to hit the railways, and vice versa, the better it was for passengers. Such a view was economic lunacy. The duties of the Traffic Commissioners would be, not ruthlessly to dictate to the public as to whether they should ride by road or by rail, but to enforce proper co-ordination between the two services and to put their foot down firmly on reckless and wasteful competition.

ROAD PASSENGER TRANSPORT POWERS OF MUNICIPALITIES.

Part V of the Road Traffic Bill, which had been deleted by the Lords, must in substance be put back in order that the great municipalities, who were important agencies in road passenger transport, might play their part under proper control where appropriate and in co-operation with private enterprise in the great co-ordinated system of passenger transport which was to be established. It was possible that the railway companies and other people interested in private enterprise in road passenger transport had not liked to scrap the cumbrous and expensive methods by which municipalities now obtained powers to operate omnibus services. They must, however, realise that, given the support of the municipalities themselves and of Parliament, he was determined to go on with the plan, for it was not consistent with a proper view of co-ordination that municipal enterprise should be strangled. He was perfectly willing to negotiate on points of detail, but if private operators preferred a stand-up fight to a finish on the main principle, he thought they would find that they had made a mistake.

In conclusion, Mr. Morrison paid a tribute to the work of such bodies as the Institute of Transport. Valuable work had, he said, been done by the separate transport associations connected with particular branches of the

Digitized by Google

industry. Their great Institute, representing all branches of transport, could take a broad view of the transport problem and could introduce a scientific and detached element into discussions which was of the greatest value. (Applause.)

SIR JOSIAH C. STAMP, G.B.E., the President of the Institute, responding, said he heartily thanked the Minister of Transport for the way in which he had proposed the toast. He had the honour to be the President of the Institute of Transport for this year, and there was a great distinction between the Minister of Transport and the President of the Institute of Transport—the Minister of Transport had the opportunity of going on for ever and ever, whereas the term of office of the President of the Institute was for one year. (Laughter.) Yet in other respects they had interests very much in common.

The health of the Institute of Transport had been proposed and considering its age it had already reached years of discretion and was gaining in intelligence very rapidly. The Institute of Transport was ten years old and was healthy. Various doctors had passed opinions upon it and were prepared to guarantee that it had a first-class life. (Laughter.) Its numbers kept up and were increasing and great interest was maintained in the meetings of the Institute and the papers read were full of information and led to remarkably energetic discussions. (Applause.) The circulation of the Journal of the Institute was increasing rapidly, and it was now the recognised vehicle for the publication of all kinds of scientific contributions on transport and was known all over the world.

The examinations of the Institute continued both to tease and attract, and the number of candidates was as great as ever. The activities of the student societies showed remarkable vigour.

THE PROVINCIAL CENTRES.

It had been his lot as President to visit the various provincial centres of the Institute, and he was pleased to be able to report that the branches were just as prosperous, just as energetic and just as much looking forward, as they were in London, in fact it would be impossible for the Institute to function as it did without the aid of the valuable work which was going on in the provincial centres, which were the local experimental areas where many transport problems were being tried out, and the circulation of information about results achieved was of the greatest value to the science the Institute was establishing.

GREAT PROGRESS OF THE INSTITUTE.

It was rather remarkable that after only ten years of life so much activity was being shown in the Institute and that there should be such signs of vigorous growth, because when they looked at the reports of proceedings in the early years of scientific institutions they found that in most cases there were signs of considerable difficulty, and in ten years of work they did not attain to anything like the adult stage as had the Institute of Transport. Therefore they had reason to rejoice at the far seeing imagination of those who realised the necessity for the Institute of Transport and worked to establish it; their efforts had been not only justified but abundantly justified. (Applause.) After all the Institute of Transport did not enjoy many of the advantages and assets that made for strength and growth that were enjoyed by other institutions and societies. The Institute of Transport was not the indispensable gateway to a profession. Many institutions enjoyed a monopolistic position by making it necessary for anybody who wanted to enter their professions to do so by way of a particular institution or society if he desired ever to achieve anything and to have any standing. The Institute of Transport had not yet reached that position and he did not know whether at present it was desirable that it should, yet, of course, a system of registration or monopoly gateway to a profession was an enormous factor tending towards growth and stability.

It was the purpose of the Institute to find the most suitable way of performing the service of transport, and they desired that in their task they should speak a common language, and no matter what rivalries existed they should not remain in ignorance of each others point of view, but should understand each others problems; they should harmonise or might he say maximise the services they could render to the public. (Applause.)

They were delighted to have the Minister of Transport with them that evening because a short time ago, before the advent of Mr. Morrison to the position of Minister of Transport, the Ministry had undergone a process of rumoured absorption, but it had survived and seemed to have acquired new vitality, and they were glad as it enabled the Minister to come amongst them. (Applause.)

WHERE TRANSPORT CAN BE CONSIDERED AS A WHOLE.

There were two places in which so far as he could see there was an opportunity of considering transport as a whole and to think of it as a single problem, one place was the Ministry of Transport and the other the Institute of Transport. The Institute of Transport would fail in its purpose if at successive meetings, at which were to be discussed matters relating to railways, roads, sea and air, they had a different audience. If members took no interest in any other form of transport than that in which they themselves were engaged, they would not achieve their ideal. They must take a real and widespread interest in each others problems. Equally the Ministry of Transport would not be able to deal fully with its problems if it was merely a collection of separate departments. The Minister of Transport had a difficult task because he had to consider all the various interests, as well as to see that the amenities of the countryside were not destroyed. In the Institute of Transport they hoped that they would successfully learn from each other and study points in all branches of transport, and learn a great deal not only on the technical and scientific side of transport, but also on the commercial side; a member should ascertain the best standards in his own particular field and also study in analogous fields. The Examinations of the Institute were tending to become an exacting discipline, but they knew that in the long run by not lowering the standard of qualifications for Membership or Associate Membership the Institute would be better prized. No-one valued things which were obtained without effort.

SIR HENRY P. MAYBURY, G.B.E., K.C.M.G., C.B., proposing the toast of "Our Guests," said that he was an old member of the Institute of Transport and knew that they always had the support of distinguished guests at their Annual Dinner. They were glad indeed that the efforts of the Institute in endeavouring to achieve an ideal had been so much appreciated and approved, and they thanked their guests for their presence that night and hoped they would come again. (Applause.)

SIR WILLIAM BRAGG, K.B.E., F.R.S., responding, said that transport owed a little to the scientific men, who gave to it the compass to guide it across the seas, the engine to carry it on the railways and the aeroplane. Sir Henry Maybury had referred to his ideal which seemed to be the inauguration of a new era in which science and industry would live happily side by side. He (Sir William) had noticed that if men were connected with some particular development for some time they became to some extent petrified and lost that outlook which was so desirable, and that was one of the great points they had to keep continually in mind, as by looking all round a thing helped towards progress. They should encourage men and give them the opportunity of looking at a question from some other point of view than their own.

SIR HERBERT JACKSON also responded.

MR. SIDNEY E. GARCKE proposed the toast of "The Chairman" and said that the health of Sir Josiah Stamp was not merely of importance to those engaged in the transport industry but to the nation as a whole, and, having regard to the international work their President had done, he might say that the toast was of importance to the civilised world. (Applause.) Notwithstanding the many activities of their President he devoted a great deal of his valuable time to the affairs of the Institute and he found time to visit the various provincial centres. (Applause.)

Sir Josiah Stamp, responding, said that his work as President of the Institute of Transport was extremely engrossing and enjoyable, and his one anxiety was as to whether he would prove in the least degree worthy of his high office when he remembered the line of illustrious Presidents who had preceded him.

Association of Railway and Forwarding Agents.

Twentieth Annual Dinner.

THE twentieth annual dinner of the Association of Railway and Forwarding Agents was held at the Connaught Rooms, London, on March 10th last.

Mr. Edward C. Cooke presided, and a large number of officials of the railway companies were the guests of the Association.

Mr. F. Gerner (Herd & Gerner, Ltd.) proposed the toast of "The Railway Companies," and pointed out that the prosperity of the members of the Association was bound up largely with that of the railway companies. The railways had passed through a rather bad time during late years but members were glad to know that since they met for their Annual Dinner last year the companies had fared somewhat better. If the railways did better business then the railway agents, if worth anything, did better business, and members did know that the dividends announced by the railway companies during the past few months were ahead of those declared twelve months ago. (Applause.)

The Association was honoured that night with the presence of a large number of railway officials and the members were delighted to entertain them as it afforded them an opportunity of coming into social relationship with gentlemen occupying high positions in the railway service. They were particularly pleased that Mr. Ashton Davies, of the London, Midland and Scottish Railway, and Mr. H. R. Campfield, of the Great Western Railway, were able to be with them.

The members wished the railway companies all prosperity as their success denoted that the trade of the country was prospering. (Applause.)

Mr. H. R. Campfield, of the Great Western Railway, responding, thanked Mr. Gerner for his kind observations regarding the railway companies. There was no doubt that the interests of the railway agents and the railway companies were mutual, and although the railways had been going through a rather strenuous time during the past few years, he thought that at last they were beginning to see a silver lining to the clouds and the higher dividends paid by the railway companies during the past year were, he ventured to suggest, a very good omen. (Applause.) Undoubtedly there was plenty of business to be done, and the people of this land were travelling more than they ever did, and if people travelled, merchandise travelled, and therefore all were looking forward to better times.

On behalf of the railway companies he thanked the agents for the good work they were doing and had done for many years, and if an agent in any particular district wished the railways to give special attention to any new industry growing up in that neighbourhood they would be only too pleased to come along and do anything they could. (Applause.)

Mr. W. J. Wigley, of the Southern Railway, who also responded, said that if the railway agents were doing well the railways hoped to follow on and do well also; on the other hand, when the agents did badly the railways felt the effect immediately. Although the railways had been going through a comparatively bad time recently the passenger traffic, so far as the Southern Railway was concerned, had been increasing for the past twelve months and he hoped it would continue, and when they met in twelve months time he trusted that the railways and the agents would be able to report excellent progress. (Applause.)

Mr. Ashton Davies, of the London, Midland & Scottish Railway, proposed the toast of the Association. He said that notwithstanding serious trade depression and notwithstanding road transport competition, there was one phase of the business of the railway companies that had always been going up and year by year the railways had recorded an increase in the traffic represented by the activities of the Railway and Forwarding Agents. He was very glad to be with them that night as he wanted to meet the men who produced that result. (Cheers.) On looking round the room he thought he had found out their secret, as he realised that the members of the Association were entertaining a large number of friends and, of course, big business was done through friendship. It had been said, and it was true, that the Association represented the trade of the country. If the Association did well then the railway companies did well, and in toasting the Association they were toasting British commerce and the future of British trade. (Applause.)

Mr. Edward C. Cooke, the Chairman, responding, said that the Association of Railway and Forwarding Agents was founded in 1902, and at that time the appointed auxiliary agents represented about twelve different railway companies; to-day, in consequence of amalgamations, that number was now about four. No doubt the Association was a very happy medium for maintaining contact between large business houses and traders in London and the railway companies.

The toast of the visitors was proposed by **Mr. Walter Boon.** He extended a hearty welcome to all, and expressed the hope that the guests would honour the Association with their presence on a future occasion. Although the Association was small in numbers they should remember that the best goods were often wrapped up in the smallest parcel. (Laughter.)

Sir Edward Penton, K.B.E., J.P., responding, said he was quite sure that the railway companies and the agents did nearly as well for traders as they said they did. (Laughter.) The railway companies and the members of the Association rendered the traders great service and he thanked them for what they did six days a week throughout the year. (Applause.)

Mr. W. H. Barnes, who also responded, said that Mr. Boon referred to the best things being wrapped up in small parcels; he did not know whether he was referring to their chairman or to himself. (Laughter.) He joined with Sir Edward Penton in wishing the Association every success. He felt sure that a revival of trade had set in, and he hoped the year would prove prosperous for all.

Mr. James E. Thompson, the Hon. Secretary of the Association, proposed the health of the Chairman. He said that Mr. Edward C. Cooke was one of the best and as a shipping agent he served the railways by forwarding traffic to the various ports for transit to all parts of the world. Their Chairman was greatly respected and liked, and he could assure him that he had the goodwill, good fellowship and the good opinion of every member of the Association. (Applause.)

The toast of the Chairman was accorded musical honours, and, responding, **Mr. Cooke** said that every member of the Association who occupied the chair did his best to uphold the prestige of the Association, and he had simply done his best. He sincerely thanked Mr. Thompson for his kind remarks, and would remind the company that Mr. Thompson had occupied the chair many times and all being well would do so again next year and then they would see how the duties of chairman should be carried out. (Laughter.)

Mr. James E. Thompson proposed the health of the President of the Association, **Mr. Alfred Myers, J.P.** The members were delighted, he said, that their President was able to be with them. Mr. Myers was known personally to every railway man present and the members of the Association were proud to have such a man at their head.

Their President was a Justice of the Peace and should, unfortunately, any member of the Association be brought before the Bench upon which he adjudicated he hoped that Mr. Myers would treat him leniently. No member had as yet come before him, and Mr. Walter Boon was in the wrong district. (Loud laughter.)

The toast was drunk with enthusiasm.

Mr. Alfred Myers, J.P., responding, said he was very proud to be present that evening because they had as their guests gentlemen who occupied important positions in the railway world and who held a high place in the esteem of each member of the Association. He hoped that when they met for their next Annual Dinner the railway companies would be even more triumphant than they were to-day, and so far as traffic was concerned might the blessing of God be upon them as having that they had all. (Applause.)

The toasts were interspersed with excellent musical items arranged by **Mr. Walter Boon.**

Mr. Walter E. Phillips was the Master of Ceremonies.

Southern Railway Re-Organisation.

At a meeting held last month the directors of the Southern Railway Company agreed to a scheme of re-organisation of the operating and commercial departments of the railway.

Under the present system the chief operating superintendent deals with all questions affecting the running of trains, and the chief commercial manager deals with all questions affecting the procuring of traffic and the fares and rates to be charged. It has been found that this division of responsibility has not always tended towards the greatest efficiency, and it is with a view to achieving this that the new organisation has been decided upon. Under this scheme the two departments will be combined under a traffic manager. Associated with him will be a number of assistants, representing the various operating and commercial activities of the railway and divisional superintendents who, with suitable assistants, will have charge within their districts of both operating and commercial matters.

Photo] [Elliott & Fry
MR. EDWIN C. COX, C.B.E., M.V.O.

In order to give effect to this scheme the following appointments have been made:—

Mr. Edwin C. Cox, chief operating superintendent, to be traffic manager.

Mr. J. B. Elliot, assistant to the general manager (public relations and advertising), to be assistant to the traffic manager (development of traffic).

Mr. H. E. O. Wheeler, assistant operating superintendent for train services, to be general assistant to the traffic manager.

Mr. F. Bushrod, assistant chief operating superintendent, to be superintendent of operations.

Mr. G. H. Wheeler, superintendent, Somerset and Dorset Joint Railway, to be commercial assistant to the traffic manager.

Mr. E. J. Missenden, London (East), divisional operating superintendent, to be assistant superintendent of operations.

Mr. C. Graseman, western divisional assistant operating superintendent, to be public relations and advertising officer.

The changes will take place on March 31st next, when Mr. H. A. Sire, at present chief commercial manager, will relinquish his post, but will be retained in the company's service in an advisory capacity until the end of the year, when he will retire. Mr. G. Knight, secretary of the company, will retire on March 31st, and will be succeeded by Mr. F. H. Willis, who at present acts as assistant to Mr. Sire, as indoor commercial manager. Mr. G. T. Hedge, outdoor commercial manager, will also retire on March 31st.

* * * *

Mr. Edwin C. Cox, C.B.E., M.V.O., entered the service of the South Eastern Railway in 1883, and, after three years training, was transferred to the office of the Outdoor Superintendent, where he gained experience in every branch of traffic work. In 1902 he was appointed Assistant Indoor Superintendent of the combined South Eastern and Chatham Companies.

During the South African War he was responsible for the heavy military traffic that passed over the railway.

He was appointed Assistant Superintendent of the line in 1910, and Superintendent of the line in 1911, when he ranked as the youngest railway superintendent in the Kingdom.

From 1902 to 1911 he was Chairman of the S.E. & C.R. St. John Ambulance Centre.

He was a member of the Committee of Railway and Government Department Representatives appointed to control the supply of wagons for Government traffic from 1915 to 1919.

From March, 1919, to the end of 1920, Mr. Cox was Chairman of the Railway Clearing House Superintendents' Conference, and during this period he was, in addition, Chairman of seven different committees appointed to negotiate with the trades unions the standard rates of pay and conditions of service of the traffic staff in the conciliation grades of the railways throughout the country, also of station masters, controllers, men and women clerks, etc., and the standardisation of nomenclature for grades in the traffic, goods, locomotive and engineering departments. Since then has been a member of the panel of railway officers on the National Wages Board.

He was Chairman of the Railway Clearing House Superintendents' Conference (Operating) for the year 1926.

He was a member of the Committee appointed in October, 1920, by the Minister of Transport, to consider and report upon the question of automatic train control, and is also a member of the similar Committee now considering this question.

He holds the rank of Lieut.-Colonel in the Engineer and Railway Staff Corps; is a foundation Member of the Institute of Transport, and a Member of the Council at the present time.

Mr. Cox was awarded the Gold Medal of the Institute of Transport in 1928, for his Paper on "Electrification of the Southern Railway."

The following honours have been conferred upon him:—Commander British Empire, 1918; Member Victorian Order, 1926; Hon. Associate of the Order of the Hospital of St. John of Jerusalem, 1920; Chevalier de l'ordre National de la Légion d'honneur, 1927; Chevalier de l'ordre de Léopold, 1918; Officer of the Crown of Roumania, 1924; Order of the Nile, 1928.

* * * *

Mr. F. H. Willis, who as already announced has been appointed Secretary to the Southern Railway Co., as from April 1st next, has completed thirty years railway service, having joined the South Eastern and Chatham Railway in the year 1899. Mr. Willis is the second son of the late Judge William Willis, K.C., and was educated at Haileybury College and Trinity Hall, Cambridge, obtaining the degree of Bachelor of Arts in 1893. He entered the Middle Temple in the following year and was called to the Bar three years later. He then decided to enter the railway service and joined the South Eastern and Chatham Railway in the rates department of the Goods Manager's office, where his legal training enabled him to specialise on rates disputes. In 1911 Mr. Willis was appointed Assistant Goods Manager, and in June, 1920, he became the Goods Manager of the Railway. On the amalgamation of the railway companies he was appointed Indoor Commercial Manager of the Southern Railway and now relinquishes this position to take up his very important appointment as Secretary to the Company. He gave evidence before the Rates Advisory Committee appointed in 1920 to inquire into the principles governing the fixing of tolls, rates and charges and classification of merchandise traffic, and also before the Railway Rates Tribunal which revised the Rates and Charges under the Railways Act. Mr. Willis twice served as Chairman of the Goods Managers' Conference—1923 and 1929. Mr. Willis is a member of the Institute of Transport.

MR. F. H. WILLIS, B.A.

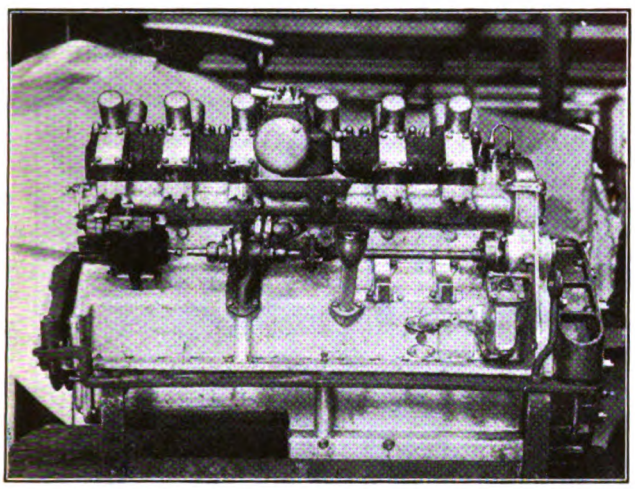
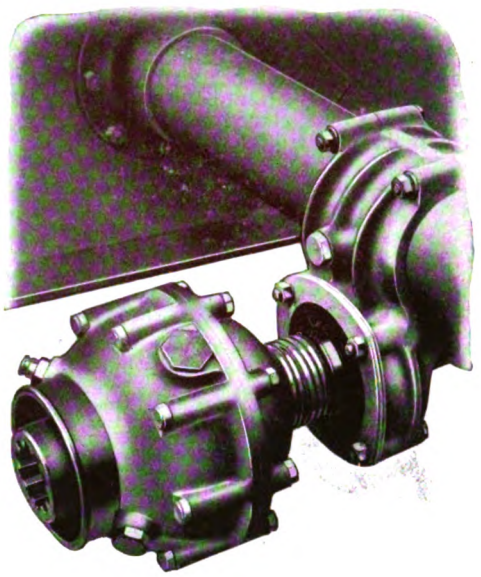
The Maudslay Six-Cylinder Passenger Chassis.

There is very little difference between the Maudslay six-cylinder coach chassis and the six-cylinder double-deck bus chassis. The frame of the latter is dropped considerably behind the rear axle to permit a single step to the entrance platform, and the engine for the single-deck chassis is slightly more powerful than that for the double-deck chassis, the former having a 110 m.m. bore and 130 m.m. stroke giving 45 h.p. R.A.C. rating and 120 maximum b.h.p. and 100 b.h.p. at 1,700 r.p.m. The double-deck bus engine has 100 m.m. bore and 130 m.m. stroke giving 37 h.p. R.A.C. rating and a maximum b.h.p. of 100 developing 75 b.h.p. at 1,500 r.p.m.



NEARSIDE VIEW OF THE MAUDSLAY SIX-CYLINDER ENGINE FOR PASSENGER CHASSIS, SHOWING EXCEPTIONAL ACCESSIBILITY OF MAGNETO, WATER PUMP AND OTHER AUXILIARIES.



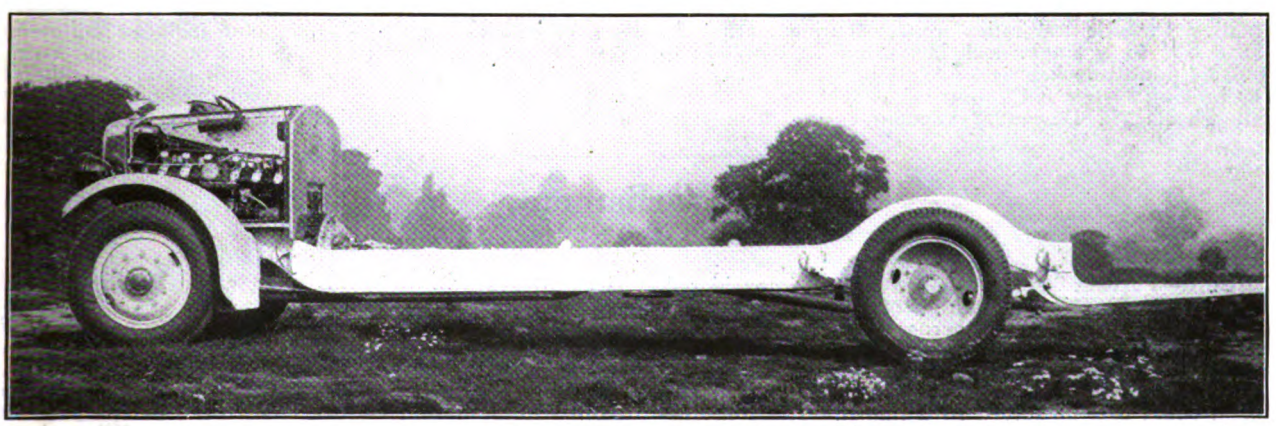
THE MAUDSLAY SELF-ALIGNING ROLLER BEARING AND UNIVERSAL JOINT OF THE DIVIDED PROPELLER SHAFT.

The engine is a monobloc casting. The cylinder water-jackets and crankcase consist of a single aluminium casting and the cylinders have centrifugally-cast iron cylinder liners. The detachable cylinder heads consist of two units of three. The crankshaft is supported in seven bearings. The pistons are die-cast in the firm's special light alloy and the connecting rods are machined from duralumin. The cylinder heads are hemi-spherically constructed and wholly machined, and the sparking plugs are positioned directly central over the pistons. The two camshafts, each with seven bearings, are mounted on the near and off-sides of the engine respectively below the cylinder head joints, and the valves are set at an angle of 90° to each other and are operated through rockers housed in pockets integral with the heads.

Lubrication of the engine is achieved by two separate oiling systems, each supplied independently by two gear type pumps fitted in tandem in the lower portion of the engine sump. The one forces oil to the crank journals and pins and the other supplies the camshaft bearings, valve rockers, sleeves and timing gear. Each system has its own strainer. Cooling is by centrifugal pump with thermostat control and a vertical gilled tube—block radiator mounted integral with the engine so as to insulate it from frame distortion. A heavily plated white metal cowl and expanding metal pressing gives the radiator a honeycomb effect.

Concerning the overhead valves: more than ordinary care has been taken to guard against the exhaust valves becoming overheated. The coring around the seats permits the free circulation of cooling water. In addition each valve and spring are enclosed in a separate cylindrical cover which acts as an oil retainer, and the stems are continuously fed with a stream of cooling lubricant. Furthermore, there is no side-thrust on the stems.

The magneto, water-pump and lighting dynamo are all on the nearside of the engine and well above the frame. The starter motor is housed on the engine off-side. The carburetter is a Solex carried on a vee-faced "rabbet" casting which registers between the two cylinder head blocks and forms an effective hot spot heated induction and water cooled exhaust expansion chamber.



THE MAUDSLAY SIX-CYLINDER M.L.7 TYPE DROPPED FRAME CHASSIS FOR DOUBLE DECK OMNIBUS.

Power is transmitted through a single dry plate clutch provided with fabric lined clutch stop and withdrawal ring mounted with large "no-gap" ball bearing. The gear box is mounted unit with the engine and clutch housing. The entire unit is inclined towards the rear axle. The front end of the unit is supported by enclosed rubber blocks mounted trunnionwise in a steel bridge casting which spans the frame. Special shock absorbing mountings are provided at the two rear suspension points. The gear box provides four speeds and a reverse. The gears are of the sliding spur gear and splined shaft type. A departure from usual practice is the locating of the constant mesh wheel at the rear end of the one piece main shaft, the sole duty of the latter being to transmit driving torque. The primary and secondary shafts are mounted on roller and ball bearings. The gear ratios are: first—5.03 to 1; second—3.01 to 1; third—1.72 to 1 and fourth—direct.

The propeller shaft is the open tubular type divided midway. The tail end of its forward portion is mounted in large self-aligning roller bearing which is carried in a capped housing bolted to a cross member. The front and rear ends have enclosed star type universal joints mounted with ball bearings.

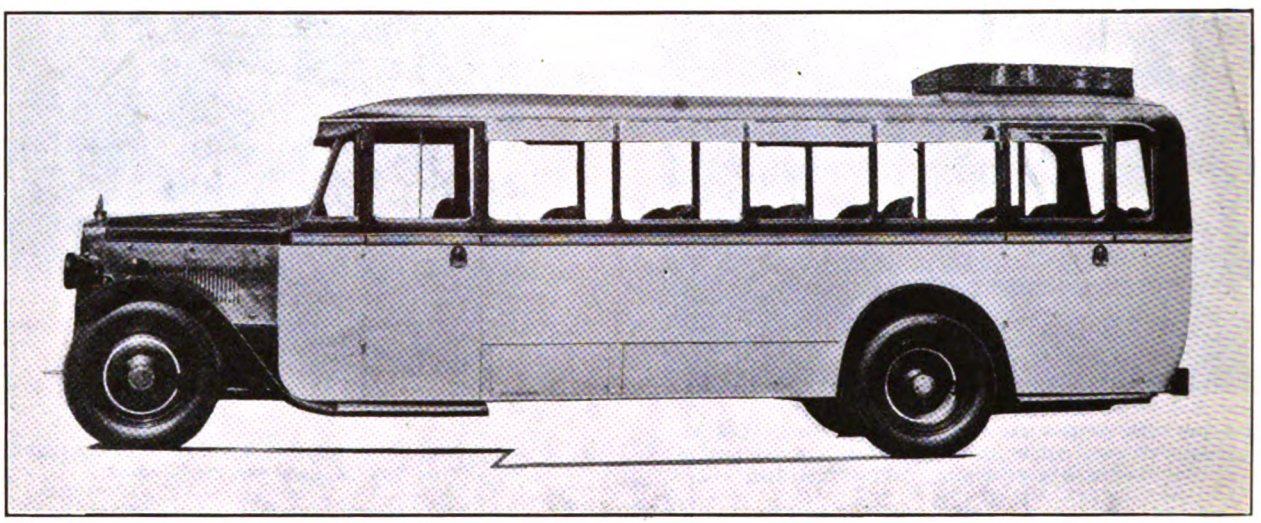
brake bands are toggle operated and a powerful self wrapping action takes place either for forward travel or when reversing. The hand operated emergency brake acts on the rear wheels.

The front axle is specially designed to resist the tortional stresses of the front wheel brakes in addition to imposed weight. The stub axle and swivel pins are mounted with roller bearings and ball thrusts. The swivel pins are inclined so as to facilitate centre point steering.

The steering is the enclosed worm and wheel type mounted throughout with taper roller bearings. The main frame members are of extra deep channel section dropped between both axles. There are six wrought steel tubular cross members each of which faces the main channel with a reinforcing plate of liberal area. Bolts are used throughout.

The springs are of great length with solid forged eyes fitted with renewable bushes. The front pair of springs have rebound plates and they are inclined so as to resist horizontal shocks, and they work practically flat under load. Chassis lubrication is by grease gun with nipples placed at most accessible points.

The road wheels are steel disc pressings with hubs



THE MAUDSLAY SIX-CYLINDER LONG DISTANCE SALOON TOURING COACH FOR 28 PASSENGERS.

The final drive consists of an underslung worm and wheel set, with roller bearings and ball thrusts throughout. The main axle is the Maudslay form of double-banjo produced weldless from nickel-chrome steel. The floating differential shafts permit the taking of the final gear-set adrift without having to use the jack. The alternative rear axle gear ratios are, for touring coaches, 5.8 to 1; or 6.25 to 1; single deck buses, 6.25 to 1 or 6.75 to 1; and for double-deck buses, 7.33 to 1.

The braking system is the four-wheel type foot operated to all wheels via Dewandre vacuum servo. The steel mounted on roller and ball bearings. The tyres for the double-deck chassis are front, 36 in. by 8 in. single, twin rear, 38 in. by 9 in. or 34 in. by 7 in. For the coach chassis the sizes are 38 in. by 7 in. in high pressure, or 38 in. by 8.25 in. in low pressure, twin rear.

A speedometer drive is provided at the rear end of the gear box layshaft. The equipment includes an electric starter motor, a 12-volt lighting dynamo constant voltage type, two head, two side and one tail lamp, a mechanical tyre pump, speedometer, fuel level indicator, thermostat control in water circulation, and electric bulb and horn.

In Parliament.

Dartford—Purfleet Tunnel. Asked if he had considered, in view of the depressed condition of the steel trade, the erection of a steel bridge across the Thames as an alternative to the proposed tunnel at Dartford? **Mr. J. H. Thomas** (Lord Privy Seal) said that in the light of all the advice available, he was satisfied that this traffic problem could best be solved by a tunnel. The construction of a tunnel would involve large orders for iron work and steel work.

Stationary Vehicles. Sir G. Penny asked the Minister of Transport whether he would consider the advisability in the Road Traffic Bill of making it obligatory for all stationary vehicles on country roads at night to be turned the way traffic is going so that overtaking vehicles would see a red rear light instead of white head lights, which on misty nights were apt to be mistaken for an on-coming vehicle? In reply, the **Minister of Transport** drew **Sir G. Penny's** attention to the provisions of Clause 48 of the Road Traffic Bill under which it would be an offence to permit a vehicle to remain at rest on any road in such a position or in such condition or such circumstances as to be likely to cause danger to other persons using the road.

Traffic Noise. Asked whether the Metropolitan Police were supplied with any instrument by which they could ascertain when the noise of motor vehicles was excessive? the **Home Secretary (Mr. Clynes)** said, No. An instrument had been subject to certain tests, but as yet without satisfactory results. Mr. Freeman: What is the present basis of assessing whether it is excessive noise or not? Mr. Clynes: That is one of the difficulties. There is no basis.

Direction Indicators for Motor Vehicles. Captain Bullock asked the Minister of Transport whether he had under consideration the compulsory use of some type of direction indicator by all motor vehicles; and what were his intentions in this connection? **Mr. Herbert Morrison,** in reply, said that Clause 30 of the Road Traffic Bill would enable him to make regulations on this subject if it were thought desirable to do so. On that point he was not at present prepared to express an opinion.

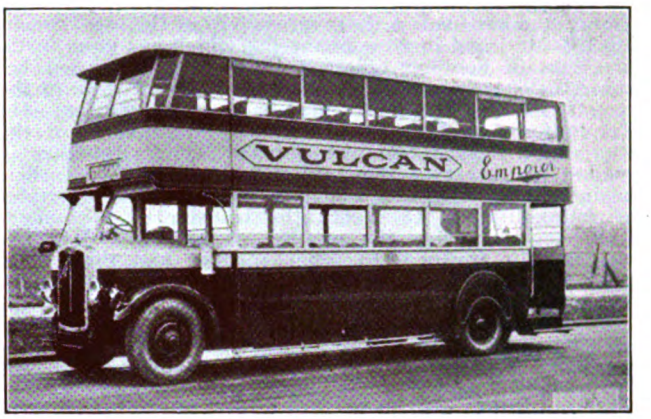
Motor Coach and Bus Notes.

Thornycrofts in New Zealand.—The omnibus shown in the photograph has been supplied by John I. Thornycroft and Co., Ltd., Thornycroft House, Smith Square, London, S.W.1, to one of their customers in New Zealand. The body, which is mounted on a Thornycroft "A6" six-cylinder chassis, was built in New Zealand. There are large numbers of Thornycroft vehicles in operation in New Zealand.

A THORNYCROFT A.6. SIX-CYLINDER BUS IN NEW ZEALAND.



THE VULCAN "EMPEROR" 51-SEATER BUS.

Bradford Bus Licences.—The Watch Committee of the Bradford Corporation recommends that the number of licences issued to any person, firm or company in respect of "spare" buses be limited to 25 per cent. of the total number of licences issued to them in respect of buses.

Refused.—The Watch Committee of the Guildford Corporation has refused to grant an application from the Aldershot and District Traction Co., Ltd., for permission to operate buses of a length of 27 ft. 6 in.

L.M.S. Chooses the A.E.C. "Regal." — In connection with their road services the London, Midland and Scottish Railway has chosen the A.E.C. 95 h.p., 6-cylinder "Regal" Pullman Saloon Coach, which we illustrate. The body is by Harrington, of Brighton. It has a Walman centre sliding roof, and is designed with double seats on one side and single seats on the other. The seats are of the bucket type upholstered in natural grained furniture hide and have flush tables with combination rug-rails fitted to the rear. Lighting is effected by pillar type lamps on each pillar; and ventilation by "Ashanco" roof ventilators and cowl louvres. Acetex Safety Glass is used throughout and passenger comfort is considerably enhanced by the provision of an interior heating system.

The Vulcan "Emperor" Double-deck Bus. — The accompanying illustration shows the "Emperor" 51-seater bus built by the Vulcan Motor & Engineering Co. (1906), Ltd., Crossens, Southport. It is fitted with the Vulcan Monarch six-cylinder engine. The bus body has been built to provide maximum comfort for passengers in accordance with present day demand. The engine has been specially designed for this chassis and it incorporates Ricardo patents. Rated at 45 h.p. it develops 100 b.h.p. at 1,700 r.p.m. and 137 b.h.p. at 2,800 r.p.m. Accessibility is a feature. The gear box is mounted unit with the engine and a speedometer is provided, and there is also incorporated a drive for an air pump. Steering is the cam and roller type. Vacuum servo assisted brakes are fitted as standard and operate in 17 in. diameter drums on all four wheels. The hand brakes operate in the rear wheel drums only. The petrol tank holds 50 gallons and the carburetter is fed by an Autovac mounted on the dash.

Manchester Coach Fares. Official List. — Manchester and district motor coach owners should note that the following prices have been fixed by the motor coach section (Trade Administration Committee) of the Manchester Transport (Owners') Association and the C.M.U.A. (joint organisation) for return day journeys (except on Bank Holidays and Saturdays):—Buxton, 4s. 6d.; Rudyard, 6s.; Blackpool, 6s.; Chester, 6s.; Southport, 6s.; Bakewell, 7s.; Matlock, direct, 8s. 6d.; Matlock Circular via Sparrow Pit, 9s. 6d.; Llangollen, 9s. 6d.; Morecambe, 8s.; Morecambe and Blackpool Circular, 10s. 6d.; Alton Towers, 8s.; Rhyl, 10s. 6d.; Colwyn Bay and Llandudno, 12s. 6d.; Windermere, 12s. 6d.; Trentham Gardens, 7s. 6d.; Baslow and Chatsworth, 8s.; Shrewsbury, 9s. 6d.; Lilleshall, 9s. 6d.; Wrekin, 10s.; Beeston Castle, 6s.; Tarporley, 6s.; Buxton (Cat and Fiddle), 5s. 6d.; Ashbourne via Thorpe Cloud, 10s.; Dovedale, 9s.; Dukeries (via Worksop), 12s. 6d.; Harrogate, 10s.; Harrogate (via Skipton Circular), 12s.; York, 10s.; Scarborough, 17s. 6d.; Wirral Peninsular via Liverpool or Chester (exclusive of ferry tolls), 9s. 6d. On Saturdays and Bank Holidays these fares will be advanced from 6d. to 1s. 6d. per passenger according to the journey. It should be noted that the London rate of 15s. single and 25s. return will be advanced from 7th June to 16s. 6d. single and 30s. return.

TWO VIEWS OF THE A.E.C. "REGAL" 95 H.P. SIX-CYLINDER PULLMAN SALOON COACH FOR THE L.M.S. RAILWAY.

Manchester Coachowners Plans for 1930.

AN interesting experiment in securing co-operation amongst motor coach owners is now being undertaken by the Manchester Transport (Owners') Association and the Manchester Area Committee of the Commercial Motor Users' Association (Joint Organisation).

Throughout the winter months the Trade Administration Committee has made a thorough survey of the local coaching industry, and in view of the fiat which has gone forth, that certain booking offices will have to be closed because they tended to aggravate the congested state of the streets, the Committee felt they had a dual function:—(1) To conform as far as possible with the wishes of the city authorities, and (2) band coach owners together in such a manner that they will be able to conduct their businesses with greater efficiency by adopting principles of rationalisation, to secure the transfer of passengers from vehicles when the number of bookings does not warrant the journey, to other coaches and thus avoid light running. Another objective has been to establish a minimum price list.

For many seasons Manchester has been a hot-bed of competition; yet there has been an increasing tendency for operators to secure city premises which have been used as booking and inquiry offices. This resulted in a great number of coaches being brought into the city area, causing at times congestion of the highways which could have been avoided by mutual arrangements amongst coach owners. These had now been brought about by the organisation, of which Mr. H. Howard Robinson is the Secretary.

Mr. Robinson, in an interview with the *World's Carriers*, explains that it has been necessary, to facilitate the operation of a scheme of co-ordination, to divide the city of Manchester into four districts each of which is in charge of a representative who is responsible to headquarters. Every motor coach owner in the city of Manchester is in one of these areas, and is allotted the use of scheduled booking offices. The duties of the district representative are to receive and to deal with reports from individual coach owners principally under two headings: (a) Owners who may require immediate coach accommodation for passengers they have booked—overload passengers, and (b) owners who require extra passengers to complete a load for an advertised journey. Where a motor coach owner has not secured a minimum number of bookings to warrant him sending his coach on tour, he will have the alternative either of passing his passengers over to another operating concern or putting forward an application to the district official for the required number of bookings to enable him to make his journey according to plan. It might be that three or four motor coach owners have each advertised a tour and have booked between them passengers only sufficient for one coach load. In such a case, instead of all of them making an unprofitable journey, one would execute the contract and relieve the three others of their commitments by accepting the fares, less an agreed booking commission.

All communications to the district representative will have to be telephoned before 8.45 each morning, so that he can pursue his inquiries to accommodate the various owners. Each of the four district representatives will be functioning simultaneously, their duties being the same in each case. Their activities will be co-ordinated in the Central Office organisation, which will be kept advised by telephone of the progress of bookings and the number of vacant seats on each coach in commission that morning. If necessary, coaches will be sent from one area into another in order to cope with traffic; in this way owners carrying on business in even the remotest parts of Manchester will have an equal chance with the city owner of getting a reasonable quota of traffic. It is provided that all coaches will leave their stations or depots at 9 a.m. for day tours.

Every motor coach member of the Motor Transport (Owners') Association, and C.M.U.A. (Joint Organisation), will receive a complete list of members, together with their telephone numbers and a table of the scheduled booking offices, approved by the Watch Committee. When names and addresses are printed in capital letters that will denote district representatives.

Quite apart from traffic conditions, the Manchester Watch Committee express the desire that passengers should be fully insured by the motor coach owner against all risks. This matter has been given very careful and thorough consideration, and we understand that owners will take out policies giving individual travellers adequate and reasonable protection.

Salford and district motor coach owners being in a different municipal area are not affected by the decision of the Manchester Watch Committee and are, therefore, outside the orbit of the scheme described above. It is, however, of interest to learn that the Salford coach owners, who are also members of the Motor Transport Owners' Association and C.M.U.A. (Joint Organisation), intend to organise a scheme on parallel lines.

London Traffic.

Waiting, Loading and Unloading of Vehicles.

THE Minister of Transport, after consulting the London and Home Counties Traffic Advisory Committee, has, under the powers conferred on him by Section 10 and the Third Schedule to the London Traffic Act, 1924, made the London Traffic (Waiting, Loading and Unloading of Vehicles) Regulations, 1930, to have effect in the areas comprising Piccadilly Circus, Marble Arch, and St. Giles' Circus and short lengths of the thoroughfares leading into these areas.

The Regulations came into force on the 17th February last and supersede the London Traffic (Loading and Unloading of Vehicles) Regulations, 1928.

In the above-named areas the Regulations provide, *inter alia*.

(i) That between the hours of 12 noon and 7 p.m. on Monday to Friday and 12 noon to 3 p.m. on Saturday, vehicles may not wait in any street in the scheduled area for a longer time than is necessary for persons to board or alight therefrom;

(ii) That in any case where the loading and unloading of vehicles can be conveniently undertaken in a side street outside the scheduled areas it shall not be effected in a thoroughfare within such areas;

(iii) That where the loading and unloading must be performed within those areas a vehicle shall not stand for a longer period than 15 minutes.

The Regulations also place under control certain practices in connection with the loading and unloading of vehicles which cause obstruction to traffic, e.g., depositing goods on the footway and carriageway, the use of ropes, chains, etc., across or over the carriageway or footway whether by the use of cranes, derricks, etc., or otherwise, and the passing of goods from hand to hand across the footway or carriageway.

A specific exception is made in respect of vehicles employed on building operations and exceptions are also provided in favour of persons in charge of vehicles used in connection with the removal of obstructions to traffic or urgent repairs to the streets, pipes, mains or underground conveniences.

Any person acting in contravention of any of the provisions of the Regulations will be liable to a penalty not exceeding £5.

The operation of the Regulations will be kept under close observation for an experimental period.

Copies of the Regulations, which contain illustrative diagrams of the areas to which they relate, are obtainable from H.M. Stationery Office, Adastral House, Kingsway, W.C.2, either directly or through any bookseller at a cost of 2d. per copy.

Automatic Wind-screen Wipers. — The Watch Committee of the Leeds Corporation has asked the town clerk to communicate with the Ministry of Transport intimating that in the Committee's view, the provision of automatic wind-screen wipers on all motor vehicles should be made obligatory.

Opposition to Leeds Corporation Bill.—At the Parliamentary Committee of the Leeds Corporation, the town clerk reported that it is the intention of the Leeds and District Motor Bus and Char-a-banc Proprietors' Association to oppose the Leeds Corporation Bill which seeks further bus powers.

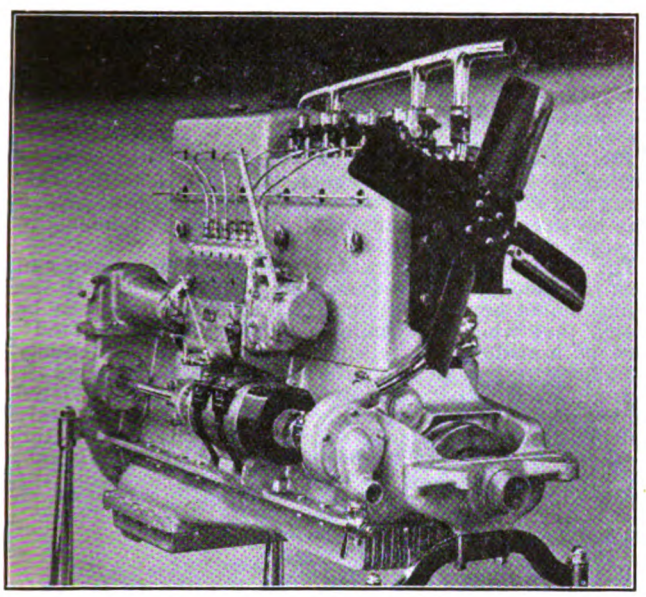
A Heavy Oil Engined Bus Chassis.

A very important experiment is now in progress in Sheffield, which, if successful, will result in a revolution in public passenger service chassis design. This consists of a Mercedes-Benz heavy oil engine fitted to a Karrier six-wheel bus chassis and which is now being tried out in Sheffield in ordinary bus service. The heavy oil engine is, as our readers are aware, making rapid progress as

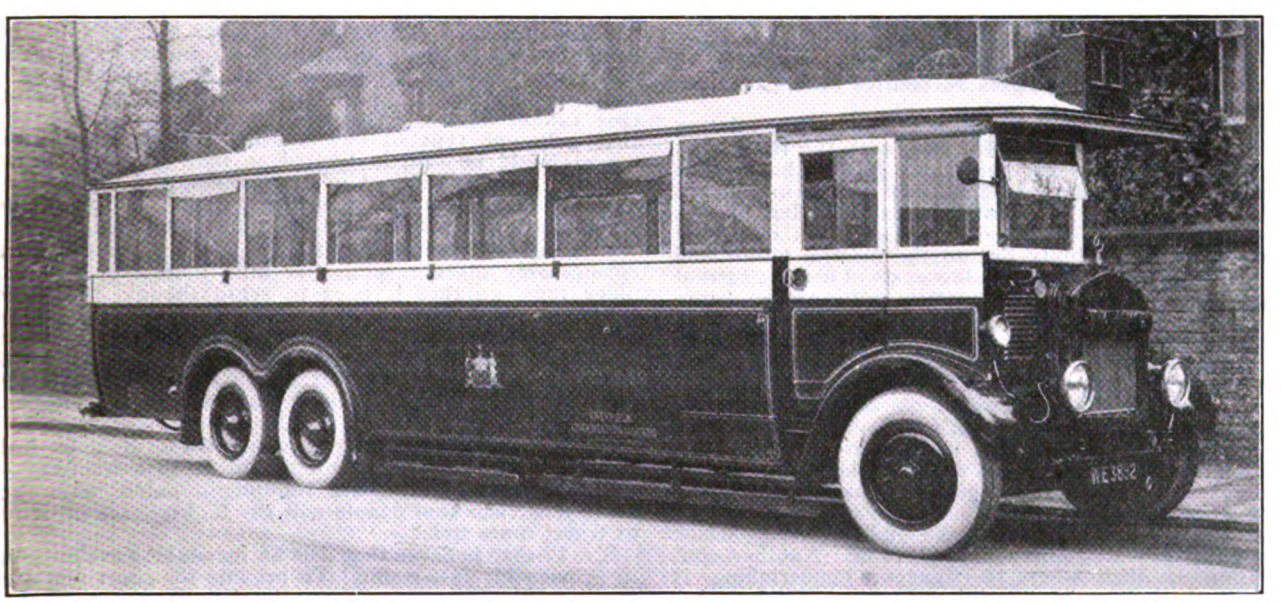


THE MERCEDES-BENZ ENGINE REFERRED TO IN TEXT.

the power unit for heavy goods transport vehicles, but until the Sheffield experiment it has not been tried in England for passenger work. The great incentive to the adaption of the heavy oil engine for passenger or indeed any other class of service, is the remarkable fuel economy provided. Comparing two ordinary bus chassis, one fitted with a petrol engine and the other with a heavy oil engine, we understand there is a fuel economy of approximately 15/- on a 100 mile run, in favour of the heavy oil engined vehicle. Needless to say the possibility of such a saving is most attractive. Though the heavy oil engine is already doing good service for goods transport it has hitherto been reported as being too noisy and evil smelling for passenger work. When one considers the present highly developed state of the British industrial petrol engine, too much credence need not be given to such reports as, no doubt, they are not always circulated without bias. The average public service vehicle owner, however, cannot afford to take risks. The patrons of public service vehicles are rapidly becoming educated to demand a very high degree of comfort in the vehicles they use and any dissatisfaction on their part may easily result in considerably greater loss in fares than the saving effected in fuel. For this reason the experiment now in progress in Sheffield is of the utmost importance, and will be watched with the keenest interest. We understand that Mr. A. R. Fearnley, M.I.A.E., General Manager of the Sheffield Corporation Transport Department, who is partly responsible for the experiment, is so far quite satisfied with the results.

We had an opportunity of inspecting this vehicle and taking a short trial run on it in the London streets before it was despatched by road to Sheffield. During the run we were impressed by the easy handling and the easy running generally of the vehicle as well as the flexibility of the engine. It is important to note that the chassis had not been constructed for this type of engine. It is a standard six-wheel Karrier bus chassis, and it had been sent by British Mercedes-Benz, Ltd., Kings House, 37 Davies Street, Grosvenor Square, London, W.1, to the Mercedes-Benz factory, in Germany, where it was fitted with the diesel engine. A chassis designed specially for this type of engine would undoubtedly give better results, though as we have stated there was very little to complain about in the vehicle we tested.

With regard to the engine: it is a six-cylinder unit with a 100 m.m. bore and 150 m.m. stroke and cubic capacity 6,460 c.c. The cylinders are of the precombustion head type with overhead valves operated by push rods. The crankshaft has seven bearings. Fuel is fed to the cylinders by Bosch type fuel pumps fitted to the off-side of the engine. A feature of the engine is the great weight reduction effected by adopting petrol engine practice. The weight for b.h.p. is we understand only 6½ lb. The engine rating is 37.1 h.p. and it develops 77 b.h.p. at 1,650 r.p.m.



A KARRIER SIX-WHEELER FITTED WITH MERCEDES-BENZ HEAVY OIL ENGINE.

Visit to Dunlop Cotton Mills at Rochdale.

Every motorist and user of commercial motor vehicles is more or less familiar with the processes through which the crude rubber goes before it emerges in its finished form as a tyre suitable for road use, but we venture to state that very few realise how important a part cotton plays in the manufacture of these indispensable adjuncts to modern road transport. It was, therefore, with special pleasure that we took the opportunity to go over the spacious cotton mills owned by the Dunlop Rubber Co., Ltd., at Rochdale, to see what is being done and how vitally necessary the output of their cotton mills is to the world-wide position which Dunlop tyres hold.

Mr. T. Andrew, the Managing Director of Dunlop Cotton Mills, Ltd., who is in charge of the whole of the mills, in welcoming us gave a few particulars which are of special interest. The Dunlop mill at Rochdale is claimed to be the largest cotton mill in the world under one roof, and since 1921 has employed over 3,000 operatives on full time, and this during the great trade depression in the cotton industry of Lancashire. The wages paid are over £7,000 per week, averaging for man, woman and child £2 4s. 0d. per week. The output is 1,000 bales a week, the average cost being £33 per bale. Mr. Andrew emphasised the point that provided the McKenna Duties stand they have every prospect of working full time for years to come.

The mills are employed in the manufacture of cord and fabrics for use in Dunlop tyres, made to the specifications of the technical experts at Fort Dunlop, Birmingham. In this department the Dunlop Rubber Co. claims to be unique as they are the only tyre manufacturers who can make and control in their own cotton mills every pound of cord and fabric that goes into Dunlop tyres, in this way ensuring uniformity of tyre quality.

The work at Rochdale in making a tyre cord may be briefly summarised. The raw cotton, which is highly compressed in bales, has first to be opened, cleaned, carded or combed; then grouping, attenuating and slightly twisting the fibres and arranging them in more or less parallel order. Cotton is the name given to seed hairs of a plant which, for tyre purposes, is principally grown in Egypt.

The cotton yarn has practically no strength or elasticity up to this point. The two important final operations are spinning and folding, and it is during these processes that the cotton is twisted to give the combined fibres strength and elasticity, which means mileage to the completed tyre.

The point of vital importance is the number of twists which these fragile hairs should receive. A cotton thread without twist has practically no strength, and, on the other hand, by excessive twisting the hairs are weakened and fractured. The problem, therefore, is to discover the point in fibre twisting at which maximum strength and "working" elongation have been reached. Working elongation is that elongation which is left in the cord when in the inflated tyre. The total elongation, commonly but incorrectly termed "elasticity," is referred to for tyre purposes as being comprised of "Static" and "Working" elongation. Static elongation is removed during tyre manufacture; the Working elongation is that which makes the tyre flexible.

The satisfactory solution of that problem is demonstrated at Rochdale on a simple machine in which two cords are clamped in two pairs of grips, both of which may be stretched simultaneously or separately to measure strength and elongation.

The cord used in the manufacture of Dunlop tyres can thus be simply compared with any other cord, and the results noted beyond dispute. As an example, it can be shown that when a "Dunlop" and an "Extra-twisted" cord, both made from the same cotton and simultaneously stretched to breaking point, that the Dunlop cord is approximately 15 per cent. stronger than the extra-twisted cord; also that the "working" elongation is approximately equal in both cords—that is to say, when Dunlop cord and the Extra-twisted cord are both stretched until they break, the Dunlop cord lasts to that degree longer than the other.

Some Transport Problems.

Mr. R. Stuart Pilcher Suggests Remedies.

An informative address on "Some Transport Problems" was given by Mr. R. Stuart Pilcher, General Manager of the Manchester Corporation Transport Department, before the members of the Manchester, Liverpool and District Section of the Institute of Transport, at Manchester, on 28th February. He said that as the necessity for transport increases, the necessity for public control will increase. Local authorities will require to exercise more of the power which they have, and will require to be vested with additional powers to control road passenger services.

Manufacturers are devoting more attention to the design and improvement of the trolley bus, with the result that the modern vehicle is very efficient. Makers have taken advantage of the latest development in the motor bus and have incorporated the best features of the bus chassis, whilst retaining the electric drive. The result is a good combination of reliability due to the electric motor and low operating costs, due to the low costs of electric current compared with petrol. It is generally stated by the manufacturers that railless traction is cheaper to operate than either tramway cars or motor buses. It is stated also by several important operators that railless traction is cheaper to operate than motor buses. It is certainly a fact that the type of vehicles used, with an electric drive and electric current as the propelling force, should be cheaper to operate than tramway cars, because of the absence of the maintenance of rails, and because the electric drive is simpler than the drive of a petrol engine.

The railless vehicle can never be used as a fleet of motor buses is used. It is not so mobile, and this lack of mobility has a definite financial value. Another consideration is that where a transport undertaking is operating both tramways and buses, there will be a reluctance to introduce a third system of traction with its separate organisation for stores, repairs, etc.

Standardise.

Motor bus enterprises have grown from small beginnings and their fleets, at least in the early stages, have consisted of numerous types, but an undertaking with many different types of chassis in use can never be such a success as an undertaking in which standardisation has been followed. Miscellaneous types are apt to make complications in every department—in addition to being difficult and expensive to operate. It is advisable to concentrate on a few types which are known to be efficient. One cannot advocate standardisation to such an extent that only one type of bus is used, but the number of types should be strictly limited so that the spare parts required may be reduced to a minimum, and the cost of renewals kept down to the lowest point. It is in the repair shop that standardisation counts most.

In practice it is found that a low loading bus will earn considerably more revenue per mile than a bus of the older type, so that it pays to scrap the old type and adopt the more modern design. Every garage should be provided with modern plant for washing buses. Buses should be parked in such a way—herringbone plan—as to avoid shunting. A driver should be able to get his bus out of the garage without having to move another bus.

A bus can be made remunerative with an hour or half hour service, and this is not possible with a tramway.

The express services are fulfilling a public want because it is clear that people will pay higher fares in order to travel more quickly.

Mr. Pilcher believes that it is an inevitable development to provide for fast traffic. To provide for short distance traffic would mean a reduction in the average speed and consequently the buses would not be any faster than the tramcars.

The Watch Committee of the Colchester Corporation has granted the following applications to run bus services:—Messrs. W. Jacobs, South Woodford (Monty Coaches)—London to Clacton-on-Sea. Messrs. Harrison and Ives, Ltd., Norwich (Eastern Motorways)—Cromer and Norwich to London via Colchester.

The Licensing Committee of the Ossett Corporation has granted licences to the Yorkshire (Woollen District) Electric Tramways, Ltd., and the Yorkshire Traction Co., Ltd., to pick up and set down passengers in the borough in connection with the services Harrogate—Leeds—Bradford to London and Bradford—Leeds to Birmingham.

News from all Parts.

Western Welsh Omnibuses, Ltd.—Preparations for a record season are being made by the Western Welsh Omnibuses, Ltd., now operating in six counties of South Wales. Recently, Mr. W. B. Cownie, the Managing Director, paid a special visit of inspection, and after seeing the six Depots he congratulated the General Manager, Mr. A. Gray, upon the evident progress made. Mr. Cownie was specially pleased with the plans for the new garage (100 buses) and offices at Ely, near Cardiff, where the eight acre site will also provide pitches for cricket, football, and lawn tennis, as well as a hall for a canteen, billiards, etc.

Drivers' Hours. Protest Against Clause in Road Traffic Bill.—At a meeting of drivers employed by members of the Commercial Motor Users' Association, West Midland Division, held at Birmingham on February 17th, the following resolution was passed unanimously.—"That this meeting of drivers employed by members of the Commercial Motor Users' Association protests most strongly against Clause 19 in the new Road Traffic Bill." It will be remembered that the Clause in question seeks to restrict the number of hours which a driver may spend on a vehicle, either in driving that vehicle or in any other capacity than as a passenger.

Leyland "Hippo" 12-tonner Demonstrated by Blythe and Berwick (1928), Ltd.—A large crowd on the Bradford Exchange watched the departure recently from the

10-12-TON LEYLAND "HIPPO" SIX-WHEELER, DEMONSTRATED BY BLYTHE & BERWICK (1928), LTD.

Bradford Conditioning House of a huge Leyland "Hippo" lorry. This vehicle was on demonstration by Messrs. Blythe & Berwick (1928), Ltd., the well-known firm of road transport contractors, of Bradford. The vehicle is one of Leyland Motors, Ltd. latest 10—12 ton six-wheeler type with six-cylinder engine and pneumatic tyres. It was laden with 53 bales press-packed wool for Liverpool, there to be shipped to Russia. The approximate weight of the load was 12 tons.

"Overseas Removals."—We have received a copy of the January issue of "Overseas Removals," published by Woodbridge & Co., Ltd., the well-known international removers, packing and storage experts, whose head office is at 88 Fenchurch Street, London, E.C.3. This interesting publication, which is now in its eleventh year, appears monthly, and its object is to keep the trade clients of Woodbridge & Co., Ltd., as well as members of its own organisation, conversant with the latest developments arising in connection with the transport of removals between Great Britain and every other part of the world.

Institute of the Motor Trade.—The Ninth Examination of the Institute of the Motor Trade will be held in London and the Provincial Centres on 25th April, 1930, commencing at 10 a.m. The Council are offering Gold, Silver and Bronze Medals for the three Candidates securing the highest number of marks in the 1930 Examinations (April and November). Candidates desirous of presenting themselves must give notice to the Secretary on or before the 1st April, 1930. Full particulars and Entry Forms can be obtained on application to the Secretary, The Institute of the Motor Trade (Inc.), 157 Great Portland Street, London, W.1.

Big Vulcan Bus Body Order.—The Vulcan Motor and Engineering Co. (1906), Ltd., Crossens, Southport, have recently received an order from the Birmingham Corporation for 35 double-deck omnibus bodies.

The Emancipation of Labour.—A gang of Kaffirs was repairing an African road with picks . . . when suddenly appeared a "Caterpillar" Thirty, newly purchased from dealer Stephen S. Palmes by the Cathcart Divisional Council. Said the Road Inspector: "Would we had purchased the tractor long ago!" For in the first two hours of work ¼ mile of road was scarified . . . over two days' work for a gang of 20 Kaffirs. *Caterpillar Magazine*, Caterpillar Tractor Co., California, U.S.A.

* * * *

MERSEYSIDE.

L.U.T. Bus Undertaking.—We have received a copy of the Annual Report of the directors of the Lancashire United Transport and Power Company in which is summarised the working results of the company's undertaking. Traffic receipts amount to £359,329 compared with £330,576 in 1928. The further development of the motor bus services has called for greater expenditure.

Traffic Conditions. — Conditions in the cartage and motor haulage trades on Merseyside continue to be disappointing, particularly the cotton traffic. The port of Liverpool is feeling the full effects of the depressed state of the textile industry, imports of raw cotton and exports of manufactured goods being very modest.

Exemption from Lighting Act.—As the result of representations by the Wallasey Corporation, the Ministry of Transport has granted an exemption order under the Road Transport Lighting Act, 1927, for horse-drawn vehicles whilst they are carrying cotton, within the county borough of Wallasey, provided that the vehicles are not proceeding faster than at walking pace. This exemption has been granted on acount of the inflammable nature of the commodity, and brings Wallasey into line with the adjacent Mersey boroughs and the dock estate.

Liverpool Horse Parade.—At a luncheon given by the Lord Mayor of Liverpool on 14th February, it was decided that the Annual Parade of Horses should take place on Saturday, 31st May. Ald. W. Muirhead said that it was up to cart owners to help the stockbreeders to breed fine shire cart horses and to show to the world that England was determined to continue in her pre-eminence. The Lord Mayor accepted the position of patron. Ald. Muirhead will continue to act as President; Mr. R. J. Hall, Vice-President; and Mr. Eaton Jones as Secretary.

Liverpool C.M.U.A.—Liverpool Area Committee of the Commercial Motor Users' Association held its Twelfth Annual Meeting on 13th February. Mr. T. Lawrenson presided. After the report and accounts for last year had been adopted, the following members were re-elected to serve on the Committee for three years:—Messrs. F. G. Birch (Tate & Lyle, Ltd.); R. W. G. Barnett (Liverpool Cartage Co., Ltd.); A. C. Bloomer (J. Crosfield & Sons, Ltd., Warrington); M. Braithwaite (J. Bibby & Sons, Ltd.); T. Davenport (Peter Walker & Son, Warrington and Burton, Ltd.); E. L. Foster (Greenall, Whitley & Co., Ltd., St. Helens); A. E. Masheder (Liverpool Co-operative Society, Ltd.); A. Slee (Liverpool Warehousing Co., Ltd.). Mr. W. Bennett (Bennett's Haulage, Warehousing and Wharfage Co., Ltd.) was re-appointed hon. auditor for the ensuing year. The meeting closed with a vote of thanks to the Chairman (Mr. T. Lawrenson) and the Hon. Treasurer (Mr. F. G. Birch) for their services during the past year.

Liverpool Cart and Motor Owners' Association.—At a meeting of the Committee of the Liverpool Cart and Motor Owners' Association Mr. Thomas Taylor, of John Taylor and Sons, Union Street, Liverpool, the Vice-President, was appointed President in succession to Mr. W. T. Roberts, who was President 1927—1929, and who has just vacated office. Mr. W. J. Harper was elected Vice-President and Mr. Frank Jones was re-elected Hon. Treasurer. Mr. J. A. Irving, of J. Irving and Co., Ltd., was re-elected trustee in addition to Messrs. W. Edwards, W. T. Roberts and J. C. Harper.

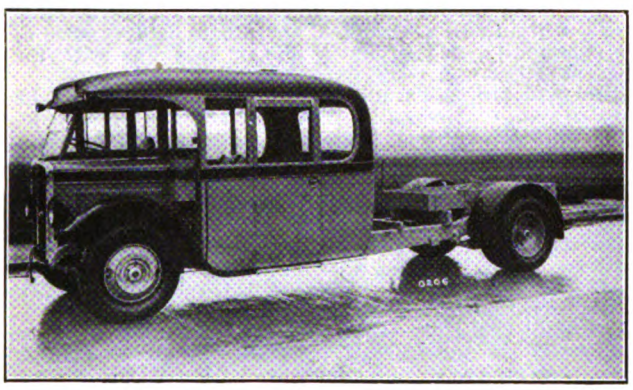
Traction Vehicles Required for Patras.—Reuter's Trade Service learns that the Municipality of Patras, desirous of providing means of communication for their town, invite tenders up to May 1st next for any kind of traction-system vehicles. Conditions, specifications and other information can be obtained from the Greek Legation in London, the Mayor of Patras, or the Technical Chamber at Athens.

Digitized by Google

947,303 Miles a Year.—The Dunlop Test Fleet covered a total mileage of 947,303 tyre and wheel miles during last year. This heavy mileage is undertaken over all classes of roads as part of the Dunlop programme of making tests in the interests of tyre users which lead to many improvements in tyre construction. The motor cars lead with 624,228 miles, approximately 2,100 miles a working day, or, in round figures, 12,000 miles a week, which is probably more than the average motorist does in twelve months. It means that every ten days the Fort Dunlop cars cover a mileage which would girdle the globe. Lorries are second with 175,507 miles; motor cycles third with 115,680; and the "push" bikes completed 31,888 miles in the twelve months, mostly over rough road surfaces as the ordinary macadam road is of very little use for cycle tread wear tests.

A Useful Catalogue.—Andrew Page & Son, Ltd., motor accessories factors, head office, 99 Albion Street, Leeds, are now distributing their 1930 catalogue to the motor trade. This contains over 400 pages of the latest information regarding motor and motor cycle, etc., accessories and garage equipment. The pages are fully illustrated. For easy reference the articles are in alphabetical order. The firm invite all traders who have not yet received a copy of this catalogue to get in touch with them.

A Novel Demonstrator.—We illustrate a novel demonstration vehicle which is now being used by the Associated Equipment Co., Ltd., Southall, Middlesex. The body—by Strachans (Acton), Ltd., and mounted on an A.E.C. 95 h.p., 6-cylinder "Regal" single-deck passenger chassis—is designed to carry seven persons in special long distance coach seats, and a large window in the limousine back enables the rear part of the chassis to be studied while the vehicle is in motion. The nearside door is fitted with a louvre and spring step. A special tray for carrying a test load is affixed over the rear axle,



THE A.E.C. DEMONSTRATION VEHICLE REFERRED TO IN TEXT.

and wings and stays are also fitted at the rear. The half cab for the driver incorporates a full door, sloping all-metal windscreen, and sliding glass on the nearside and behind the driver. A prospective operator is enabled to judge, in absolute comfort, the performance of the chassis under conditions equivalent to carrying a full load.

Hay's Wharf Cartage Co., Ltd.—An enjoyable evening was spent by the staff of the Meat Department, of Hay's Wharf Cartage Co., Ltd., and their friends at their Seventh Annual Dinner, held recently at the Manchester Hotel. Councillor E. K. Minter presided, and proposing the toast, "Prosperity of the Firm," dealt with the evolution of the transport industry. After causing amusement by referring to Noah as the world's first meat carrier, he reminded his audience that their allied company, Messrs. Pickfords, Ltd., was one of the first concerns to engage in the transport industry, and their lead had been fully maintained and shared in by Hay's Wharf Cartage Co., Ltd., who to-day were operating an entirely new type of vehicle. He expressed confidence that the future would show the continued realisation of the subject of the toast. The toast of "The Chairman," proposed by Mr. T. G. Perrott, was received with unusual warmth and accorded musical honours. Councillor Minter thanked the staff for their loyal co-operation and said he hoped that when the time came for him to take a less active part in the business the same support would be extended to his son, Mr. Harold F. Minter. The Chairman then expressed the pleasure it gave him to present, on behalf of the staff, a gold watch to Mr. H. Palmer to commemorate the esteem and good wishes which he carried with him when he recently resigned from the company's service to set up in a business of a different kind in Harrow. The toast of "Our Guests" was entertainingly submitted by Mr. H. F. Minter.

* * * *

MANCHESTER.

Re-organisation.—Arrangements are being made for the re-organisation of the Manchester Corporation Hackney Coach Department which will be re-named the Public Carriage and Transport Department. The staff will remove from the present offices in Jackson's Row to London Road Police Station.

New Services.—Amongst the new passenger transport services, which have been approved by the Manchester Watch Committee, are the following:—Manchester Corporation Transport Department and the North-Western Road Car Co., Ltd., joint service between a garage in Lower Mosley Street and Northwich, Knutsford and Warrington. Manchester Corporation Transport Department; (1) from New Moston along Moston Lane to Charlestown Road; (2) Bolton to Hyde via Manchester. L.M.S. Railway Company, Manchester to Sheffield via Hyde, Glossop and Ashopton.

Amalgamation. — The Underwood express motor bus services between Sheffield, Manchester, and Blackpool, was amalgamated from Monday, 24th February, with the existing omnibus service of the L.M.S. and L. & N.E. Railways.

More New Buses for Manchester.—Manchester Corporation Transport Committee has approved of a report of the General Manager regarding additional motor buses and recommending that tenders be obtained for the supply of 30 motor bus chassis and 15 single-deck motor bus bodies, and that 15 single-deck bus bodies be built at the Hyde Road Car Works.

STEWART AND ARDERN'S NEW REGIONAL DEPOT AT CROYDON. FRONTAGE OF SHOWROOMS AND ENTRANCE TO SERVICE AND REPAIR WORKS, ETC.

Morris Vans and Morris Commercial Vehicles. Stewart and Ardern's New Regional Depot at Croydon.—Messrs. Stewart & Ardern, Ltd., the sole London distributors of Morris Cars, Morris House, 103 New Bond Street, W.1, have acquired extensive premises at "Morris House," Bensham Lane, Broad Green, Croydon, Surrey, opened on Monday, February 3rd, so that all Morris owners will have a "Morris House" in the Croydon district. In these Showrooms will be displayed a range of Morris cars and Morris commercial vehicles—the service and repair works adjoining will enable their clients to obtain adequate and efficient service, and a large stock of Morris spare parts will be available. We understand that a daily transport service is in operation between the Central Control Service Depot at Acton, which will enable all special orders being completed with the utmost despatch.

Institution of Automobile Engineers. — Mr. H. R. Ricardo will read a paper entitled "Combustion in Diesel Engines" at a meeting of the Scottish Centre of the Institution of Automobile Engineers, to be held at the Royal Technical College, Glasgow, on March 17th at 7.30 p.m. This paper has been read already in London and Bristol. Captain J. S. Irving will deal with some of the problems encountered in the design of the famous "Golden Arrow" in a paper which he will read at meetings of the Institution, to be held on Tuesday, 18th March, at The Engineering and Scientific Club, Queen Street, Wolverhampton, at 7.30 p.m., and on 26th March at The Engineers' Club, Albert Square, Manchester, at 7 p.m. There will be a meeting of the Leeds Centre on Wednesday, 19th March, at The Metropole

Digitized by Google

Hotel, King Street, at 7.15 p.m., when a paper will be read by Mr. W. Lewis Morgan on "Organisation of Public Service Motor Vehicle Repair and Maintenance Systems." Cards of invitation to admit visitors to any of the above meetings may be obtained on application to the Secretary, The Institution of Automobile Engineers, Watergate House, Adelphi, London, W.C.2.

NORTH-EAST COAST.

Newcastle's Proposed Bus Purchases.—Newcastle Corporation Transport and Electricity Committee proposes to buy nine new motor buses, at a cost of £16,384, and to replace worn-out buses as required, at a total cost of £70,000.

L. & N.E.R. Company Acquires Another Bus Service.—The latest development of the L.N.E.R.'s bus policy is the acquisition of a service of some 25 buses running between Newcastle and Blaydon and formerly owned by a combine of private owners.

United Automobile Services New Garage.—A £40,000 super garage, with accommodation for from 150 to 200 buses, is to be built by the United Automobile Services, Ltd., upon what were private tennis courts, at the corner of Jesmond and Portland Roads, Newcastle-on-Tyne. The scheme provides for offices, mess rooms for employees, etc.; the building will be on handsome architectural lines with porticoed front, with roof on the cantilever principle.

Northern General Transport Company's Dance.—More than 1,000 officials and employees of the Northern General Transport Company from all parts of Northumberland and Durham attended the dance of the company's sports club in the Oxford Galleries, Newcastle. Those present included the General Manager of the company and Chairman of the sports club, Mr. J. Petrie, and Mr. R. B. Maxwell, Vice-Chairman.

* * * *

PICKFORDS ENGAGED ON A BIG CONTRACT WITH THE MICHELIN TYRE COMPANY, LTD.

Big Removals by Pickfords, Ltd. — Pickfords, Ltd., recently carried out the removal of the general office furniture, records, and the household effects of the staff of the Michelin Tyre Company, Limited, from London to Stoke-on-Trent. The contract included a stipulation that it was not to be sub-contracted and also a penalty clause as to time. The work was carried out during two week-ends, and comprised 68 van loads. Work was commenced at 8 a.m. on each Saturday and was completed by 11 p.m. on both Sundays, and was carried out entirely by the firm's own removal plant and completed without mishap of any kind. This speaks well for the firm's organisation, especially when it is remembered that the collection of the furniture of the staff was from addresses in all parts of London and Suburbs. On completion of the contract Messrs. Pickfords received a warm letter of appreciation from the Michelin Tyre Company. The firm have recently also carried out the removals of the office furniture and records of the following Companies: United Africa Company, from Liverpool to London (105 loads); Royal Mail Steamship Company, Moorgate to Leadenhall Street, London (197 loads and 22 safes); Prudential Insurance Company's records, from Fetter Lane, London, to Grays Inn Road, London (869 loads).

Royal Show at Manchester.—The London and North Eastern Railway Company announce that additional siding accommodation and a new loading stage is being constructed at Wilbraham Road Station, Manchester, to deal with traffic to and from the Royal Agricultural Show, which will be held in July next.

British Percheron Horse Society. — A Meeting of the Council of the British Percheron Horse Society was held at the Society's Offices, 12 Hanover Square, London, on March 3rd, the President, Lieut.-Colonel Sir Merrik R. Burrell, Bart., occupying the Chair. Classifications for Percheron Horses have been arranged at the undermentioned Agricultural Shows this year:—Royal Agricultural Show, at Manchester. Peterborough Agricultural Show, at Peterborough. Hertfordshire Agricultural Show, at Hatfield. Cambridge Agricultural Show, at Histon. Norfolk Spring Stallion Show, at Norwich. It is also hoped to secure Classes at the Great Yorkshire Show at Hull.

* * * *

MIDLANDS.

The Coming Motor Coach Season.—Coach proprietors are very busy preparing their plans for the coming season. As far as the Midlands are concerned it is evident that there will be more coaches and buses on the road than ever this summer. In some quarters bookings are already very heavy. A big season is anticipated.

Tram Scrapping.—One by one tram services are disappearing in the Midlands, the latest to go being the services from Dudley to Stourbridge, Brierley Hill, Amblecote, Kinner, etc., while the system from Dudley to Cradley was abandoned towards the end of last year. The cars are being replaced by petrol buses.

Filling in the Services.—All the big bus companies in the Midlands serving wide areas are busy filling in gaps in services and making them more convenient. Rural districts are being better served, many time-tables being made more frequent. Connections with trains and outgoing long-distance services are being improved at all important points. On this matter the enterprise of the Midland "Red" deserves praise. Another noticeable feature of present developments is the inauguration and augmentation of long-distance services. Everything is being done for the comfort and convenience of passengers, and the finest vehicles possible will be put on the road.

* * * *

Railways and their Present Day Activities. — On February 26th last, Mr. F. K. Pelley, District Goods Manager, Great Western Railway, Birmingham, delivered an address to the Industrial Transport Association at the Chamber of Commerce, Birmingham, the subject being "Railways and their Present Day Activities." Mr. Pelley drew attention to the railways as a national institution and as a national asset, and after referring to their unfortunate position after the War, sketched the efforts which have since been made to bring them up to date. Included in these activities were:—The speeding up of freight traffic; the handling of transfer traffic (smalls); train time-tables (for freight traffic); registered transits by the Great Western Company; rail-head deliveries and collections; concentration centres; motor lorry services; containers; high capacity wagons. Mr. Pelley said that the aim of the railways was to keep abreast, if not ahead, of the demands of industry. The railways were proving and trying every mechanical device for ensuring safe and speedy work and saving labour, and at the same time were studying their customers needs to a greater extent than ever before.

Roads and Bridges. £1,000,000 Programme.—A scheme to cost over £1,000,000, and covering improvements of many roads and the construction and improvement of bridges in the county, has been prepared by the Northumberland County Council. The proposals cover a five years' programme.

Digitized by Google

Progressive Bristol.—We have received from Mr. H. V. Hindle, the Secretary to the Bristol Development Board, a copy of an interesting booklet entitled "Progressive Bristol." This booklet, as may readily be guessed, is published in order to make known the many advantages of the Port of Bristol and also of Bristol and district for factories and workshops. The booklet is intended for circulation amongst Chambers of Commerce, Branches of the Federation of British Industries, industrial agencies and manufacturing concerns in Great Britain, the British Empire and the U.S. of America. The booklet is well illustrated and sets forth in a clear and concise way the advantages of the Port of Bristol; gives illustrations of some of the great factories for which Bristol has so long been noted; draws attention to the great population with a comparatively small radius and emphasises the fine navigable waterways in the river Severn and the Avon which gives Bristol such wonderful transport facilities.

Tingle, Jacobs & Co.—Remembering as we do the firm of Tingle, Jacobs & Co., and recalling a very interesting article which we wrote many years ago describing this old established firm of town carmen and cartage contractors, it is interesting to record that they have kept

A 30-CWT. CHEVROLET LORRY IN THE SERVICE OF TINGLE, JACOBS & CO.

abreast of the times and although retaining their old designation as carmen, are also motor transport contractors. They have recently purchased a 30-cwt. Chevrolet Lorry the body of which is built for any class of traffic and is used for all purposes in their very varied business. They find it equally serviceable in London and for long country journeys and the engine economical as regards consumption of petrol and oil.

* * * *

HULL.

Proposed New Bridge across the Humber.—Sir Douglas Fox & Partners, the eminent engineers who were called in to advise on the bridging or tunnelling of the River Humber, have concluded their report. Publicity has not yet been given to their detailed findings, and the reasons upon which they base them, but our Hull correspondent has the authority of the Lord Mayor, to whom the report has been delivered, for saying that the consultants favour a bridge in preference to a tunnel, and place the estimated cost at £1,750,000. The bridge will provide accommodation for vehicular, pedestrian and railway traffic, and the suggestion is to throw it across the Humber a few miles above Hull.

* * * *

London Van Horse Parade Society.—The 22nd Annual Parade of London van horses, organised by The London Van Horse Parade Society, will be held in the Inner Circle, Regent's Park, London, on Easter Monday, 21st April, 1930. Horses must be used exclusively for trade purposes, but not in licensed vehicles, omnibuses or cabs. They shall be able to trot, and shall not be what are known as cart horses, or be eligible for the Cart Horse Parade. The Society's entry lists are open to the whole of London's van horses. So long as the horse is properly groomed, well looked after, and continuous attention has been given to its harness, and the van is clean, every driver has an equal chance of securing the Society's First Class Award and the R.S.P.C.A. Merit Badge. Entries close first post on Monday, 31st March, 1930. The Parade is divided into the following classes:—Section 1. Single-horse vehicles. Section 2. Pair-horse vehicles. Horses in Sections 1 and 2 must be shown in the actual vehicle and harness in which they perform their daily work, and must have been so used for at least three months prior to the Parade. Section 3. Barge horses, to be led and shown in working gear. (All exhibits must have been used regularly for towing barges since 1st January, 1930.) Money prizes, award cards and rosettes will be awarded. For the 1929 Parade 610 entries were received, 569 received 1st class awards, 36 received 2nd class awards and 29 horse foremen received a Certificate of Merit for showing teams of four first-class prize winners. Entry forms and full particulars may be obtained on application to Mr. R. A. Brown, Secretary, The London Van Horse Parade Society, 12 Hanover Square, London, W.1.

King's Cross Motor Coach Station.—In our last issue we gave some particulars of the motor coach station at King's Cross which is now being built. Messrs. E. H. Stodart & Co. to whom we were indebted for the information which we gave, ask us to point out that this station has no connection with any other coach station which may be contemplated at Victoria or elsewhere in London and that owing to certain circumstances connected with finance the architectural work will not now be carried out by themselves, but by Messrs. Trehearne & Norman.

* * * *

SOUTH WALES.

Great Western Railway Company Absorbs Old Llanelly Firm.—The Great Western Railway Company has taken over the 60 years old Llanelly firm of carting and haulage contractors, Messrs. D. Davies & Son, of which for the past 37 years Mr. Sam Phillips has been Manager. The company did some 20,000 tons of collection and delivery annually for the G.W.R. Company alone. Mr. Tom E. Thomas, for over 30 years with Messrs. Davies & Son, and latterly chief clerk, has been presented with a gold albert and inscribed pendant by the G.W.R. Llanelly goods dept. on the merger taking place. The G.W.R Company takes over the employees, cars, lorries and premises, etc., of Messrs. Davies and Son.

South Wales Bus Services Merger. — The Red and White Services, Ltd., Lydney, Managing Director, Mr. J. H. Watts, have absorbed the following South Wales bus services:—Western Services Co., Ltd.; the Valleys Motor Bus Services, Tredegar; the Valleys Motor Co., Ebbw Vale; Aberdare Motor Services, Ltd.; South Mon. Motors, Ltd.; Gloucestershire Transport Co., Ltd., and Hereford Transport Co., Ltd. The Red and White Services, Ltd., will control these companies, and have made a number of running agreements with other companies.

* * * *

De Dion-Bouton Vehicles.—The well-known French motor car manufacturers, De Dion-Bouton, are at present negotiating with new concessionaires in this country with a view to assembling the firm's chassis at works in London, and for the exclusive agency for De Dion-Bouton products for Great Britain and her Colonies. Pending completion of such negotiations, the Company can supply their spare parts direct from the Works at Puteaux (France), and Mr. H. O. Duncan, The De Dion-Bouton British representative, 5, rue de l'Isly, Paris, will give immediate attention to all enquiries.

Sentinel Waggon Works, Ltd.—The Report by the Directors of the Sentinel Waggon Works, Ltd., Shrewsbury, submitted to the Tenth Ordinary General Meeting of Shareholders, held on February 19th last, mentions that the introduction of new models in both road and rail vehicles resulted in the Works being fully employed for the greater part of the year. The confidence which the Board expressed in last year's Report as to better trading prospects had been borne out during 1929, and the results were considered satisfactory. Trading conditions, however, still remained difficult, but with the economies in production and selling which had been instituted as mentioned in last year's Report, it was hoped that the good results shown would continue.

* * * *

SCOTLAND.

New Booking Office.—A new general booking office has been opened by Thomson's Travel Bureau at 52/56 New City Road, Glasgow, who are now members of the British Passenger Agents' Association for world wide tours. Numerous agencies for shipping companies have also been secured and Imperial Airways is now also included in the bookings which the Bureau undertake.

Edinburgh—London Service.—Long distance tours are increasing, and one of the latest is a day and night ser-

Digitized by Google

vice between Edinburgh and London. The vehicles used are of the double-deck type.

Passenger Agents' Social. — The Scottish Passenger Agents' Association held their Annual Dance in the Central Station Hotel, Glasgow, and great success attended the function over which Mr. William Bell, of Motherwell, the President, acted as a genial host.

Scottish Commercial Motor Users' Association.—The Annual Meeting of the Scottish Commercial Motor Users' Association was held in Edinburgh recently, and in his Report the Secretary, Mr. John W. Loudon, S.S.C., states that the Association continues to make progress. During the past year various Corporations have promoted Provisional Orders asking for powers which would be most injurious to the industry if granted. Certain clauses were objected to by the Association and these, largely asking for monopoly powers, were not granted to the petitioners. The office bearers elected for the ensuing year were:—Edinburgh Area, Mr. E. Graham Guest, J.P. (Chairman); Bailie J. W. Thomson, J.P. (Vice-Chairman). Committee: Messrs. J. Chalmers, Coull, Cranston, Smart, Hutchinson, and Sloan. Glasgow Area, Mr. J. C. Caldwell (Chairman); Mr. A. Rodger (Vice-Chairman). Committee: Messrs. Beaton, Howie, Mudie, Hamilton, Rankin, Stevenson and Sir David Mason. Dundee Area, Mr. C. H. Marshall (Chairman); Mr. Thomas W. Watson (Vice-Chairman). Committee: Messrs. Callander, Horsburgh, Meredith, Reid, Valentine, Robertson, and Watson. Aberdeen Area, Mr. W. Wisely, Jun. (Chairman). Committee: Messrs. Seggie, Hird, and Brown. Mr. Loudon was re-elected General Secretary.

• • • •

Change of Address.—The address of the Birmingham Branch of David Moseley & Sons, Ltd., the well-known India Rubber Manufacturers of Ardwick, Manchester, is now 17, Ombersley Road, Balsall Heath, Birmingham. Telegrams: Moseam, Phone, Birmingham; Telephone: Calthorpe 1285.

Channel Motor Car Ferry.—The Channel motor car ferry service between Dover and Calais, which was discontinued in December, will be resumed on April 15th. The service is worked by Townsend Bros., Ferries, Ltd., 101, Leadenhall Street, E.C.3.

Drivers Hours.—At a meeting of the Birmingham Horse and Motor Vehicle Owners' Association, Mr. J. H. Stirk presiding, a resolution was unanimously passed declaring the view that Clause 19 of the Road Traffic Bill, as amended on report, must be deleted, as it would seriously interfere with the road transport industry. "The operation of the clause," the resolution stated, "would be impracticable and ruinous to owners of road transport vehicles, who have substantial financial interests involved." The clause in question limits the time for which drivers of certain vehicles may remain continuously on duty.

• • • •

NORTHERN IRELAND.

Railway Company's Road Motor Services.—The Great Northern Railway Company's (Ireland) road motor services earned a revenue of £51,330 last year and the Company's accounts under this heading showed a credit balance of £395. Most of the buses, however, were only operating for a few months and the return for a full year is expected to be better. The Company have 65 buses on the road and 20 on order and the route mileage covered is 535. It is proposed to purchase a number of additional motor lorries to augment the Company's road motor service.

Road v. Rail.—Mr. Thomas Richardson, Chairman of the Belfast and County Down Railway, does not expect bus competition to become more severe unless bus fares are raised. His own company made the first application heard by the Ulster Bus Fares Tribunal and were given permission to increase the bus fares between Belfast and Holywood, a distance of four or five miles.

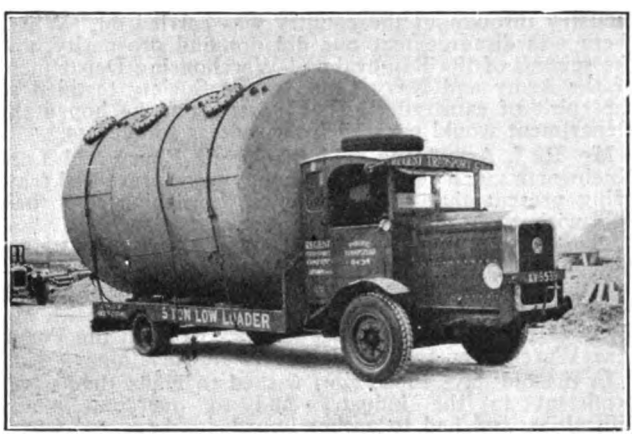
• • • •

Market for Motor Vehicles—China.—A short confidential memorandum on the market for motor vehicles in China has been prepared by the Department of Overseas Trade from information furnished by the Acting Commercial Secretary, British Consulate-General, Shanghai, and issued to firms whose names are entered on its Special Register. United Kingdom firms desirous of receiving a copy of this report should communicate with the Department of Overseas Trade, 35, Old Queen Street, London, S.W.1, and quote reference number A.X. 9227.

New R.A.C. Port Office.—An additional office has been opened by the Royal Automobile Club at Dover for the convenience of motorists arriving at or leaving from that port with their cars or motor cycles. By the courtesy of Messrs. Frederick Hotels, Ltd., the office is actually in the Lord Warden Hotel, being most conveniently situated for members requiring any information appertaining to cross Channel or other formalities relating to the shipment of a motor vehicle. The new office is supplementary to the existing R.A.C. office on the Marine Station at Dover Harbour.

Road Vehicles—Great Britain.—A return has been issued by the Ministry of Transport giving particulars of the number of motor vehicles registered for the first time under the Roads Act, 1920, during the month of December, 1929. Copies (price 2/6) can be obtained from H.M. Stationery Office, Adastral House, Kingsway, W.C.2 The return shews the number of each class of vehicle registered for the first time by each Licensing and Registration Authority analysed in detail according to various taxation scales, e.g., motor cars under headings of horse power, goods vehicles under headings of unladen weight, hackney vehicles under headings of seating capacity, etc.

Latil Low-loading 5-ton Chassis for Bulky Loads.—The Regent Transport Co., of 33-35 Holmes Road, Kentish Town, London, N.W.5, inform us that they find the Latil low-loading 5-ton chassis ideal for carrying bulky or awkward loads, especially where the goods have to be man-handled, and that the manufacturers are to be congratulated on putting on the market a really good front wheel drive job; further, this forward drive mounted on giant pneumatics eliminates the front wheel skidding peculiar to some of the Regent Transport Company's



A LATIL TYPE NP5LL LOW-LOADING 5-TON CHASSIS IN THE SERVICE OF THE REGENT TRANSPORT CO., OF KENTISH TOWN.

other low type lorries, whilst the cost per mile for tyres is much lower than for small solids. The model illustrated is one of a range of chassis for which Latil Industrial Vehicles, Ltd., 11 Albert Embankment, London, S.E.11, claim to have a solution for every transport problem.

• • • •

IRISH FREE STATE.

Bus Owners and Motor Legislation.—A deputation from the Irish Bus Owners' Association recently waited on the Minister for Industry and Commerce in Dublin, and placed before him the views of the Association in respect to the Bill which is to be introduced in Dail Eireann in due time. The deputation reminded the Minister that intensity of competition and weight of taxation in the Free State were gradually destroying the present operators, and that those operators who endeavoured to give the best service and the best conditions suffered most in this struggle. It was also pointed out that the third recommendation of the Report of the Government Court of Inquiry suggested the curtailment of licences to bus owners, and it was urged that the adoption of this recommendation would be best because: (1) It would help the present operators; (2) it would secure economical conditions; and (3) it would preserve individuality. It was stated that the only hope for the development of transport in the Free State lay in the adoption of the third recommendation, whereby licences would be curtailed, and the present operators, having some fixity of tenure, would be induced to make greater efforts to provide the necessary facilities. The Minister discussed the recommendations with the members of the deputation, and said that the points raised would have his careful consideration.

The Army and Navy Co-operative Society Ltd.

THE Annual Dinner of the Removals and Warehousing Department of the Army and Navy Co-operative Society, Ltd., Victoria Street, Westminster, London, was held at the "Comedy Restaurant," Haymarket, on February 22nd last.

Mr. R. J. Armstrong, A.M.Inst.T., Manager of the Removal and Warehousing Department of the Society presided, and at the conclusion of the dinner submitted the toast of "The King," which was honoured in the usual loyal manner.

On behalf of the staff Mrs. R. J. Armstrong made presentations to Mr. Eckett and Mr. White, who have retired from the service of the Society, the former after 44 years work and the latter, 36 years.

Mr. Victor Brown, J.P., C.C., S.C.C., proposing the toast, "Removal and Warehousing Dept., A. & N.C.S., Ltd.," said how very pleased all were that Mr. Armstrong was regaining his health after his recent accident. He then referred to the rapid growth of the Department since the year 1886, and said that he sometimes wished he had himself chosen to be a furniture remover as were so many of his friends and he believed he might have been better off (laughter).

Their gathering that night emphasised the happy relations existing between the management and the staff, and was indicative of the spirit in which the work of their industry throughout the country was carried on. Where there was disagreement one did not find prosperity, and the success of the Removal and Warehousing Department of the Army and Navy Co-operative Society testified to the spirit of camaraderie that existed, and he hoped the Department would proceed from success to success.

Mr. R. J. Armstrong said that Lord Ebury and Lord Knebworth much regretted that they were prevented from being present that evening. Their Lordships sent their best wishes to the staff for a happy time.

Continuing, Mr. Armstrong thanked Mr. Victor Brown for proposing the success of the Department.

Although not a Removal Contractor, Mr. Victor Brown knew the difficulties of the trade, and years ago with Mr. Byng Hall and others, he set to work to form the Furniture Warehousemen and Removers' Association.

In the old days those who wished to make themselves proficient in the industry had to overcome many difficulties, and had to gather knowledge how and where they could. To-day they had their pupils and apprentices, and as time went on the industry and the public should gain by a more efficient service.

As Mr. Victor Brown had said, the Removals Department of the Army and Navy Co-operative Society was started in earnest in the year 1886, and its career had been one of steady progress. Not only had the home trade increased, but the Foreign Department had always had a fair share of work. The Cross Continental business of the Society was as interesting as the Cross Country work. They had carried out contracts from Ireland to Scotland, Wales to Scotland, Scotland to Canada, Portugal to France, Spain to South America, France to Jamaica, the Midlands of England to East Africa, including furniture, horses and a pack of hounds. They visited the German Palace recently to collect what remained of the effects they had taken there in 1914.

It was a pleasure to see all so happy together, and it was the one gathering of the year the staff looked forward to most (applause).

Mr. G. H. Wilson proposed the toast of the ladies and visitors and in the course of his remarks mentioned that it had been said that real friendship did not exist in business, but personally he believed that it did exist, even in these days of keen competition, provided that the competition was healthy, and gatherings such as their annual dinner created an atmosphere of good fellowship, and it did one good to meet one's competitors.

Mr. F. G. Cressy, J.P., Chairman of the Brentford and Chiswick Urban District Council, responded and mentioned that their Chairman had recently become a member of the Brentford and Chiswick Urban District Council, and had proved to be a very useful member (applause).

In the course of the evening Miss W. F. Gilbert presented a handsome bouquet to Mrs. R. J. Armstrong and conveyed to her the best wishes of the staff.

The musical items were enjoyed greatly. Mr. R. Stewart Armstrong fulfilled the duties of accompanist with ability.

Amalgamated Horse and Motor Owners' [illegible]ion.

THE Twentieth Annual Gene[illegible]ing [illegible] Horse and Motor Owners' Association (Ma[illegible] Seventh Annual General Meeting of the [illegible] Motor Users' Association (S. East Lancashire Area), the Quarterly Conference of members of the Joint Organisation, were held at the Boar's Head Hotel, Radcliffe Bridge, Radcliffe, on 1st March last.

Mr. J. S. Howarth (Secretary) presented the Report of the General Council and touched on several m tters of importance which had been recently dealt with. [illegible] meetings of Committees of the joint organisa[illegible] been held to analyse the various sections in Traffic Bill. Amendments had been drafted t[illegible] number of clauses contained in the Bill and su[illegible] the Minister of Transport for inclusion in the

Traffic Control by Lights. — A memorandum by Minister of Transport dealing with traffic control by l[illegible] signals had been considered by the Committee, suggested that the pillar light in the centre of a crossing; where such crossing is of a suitable character for a pillar light, should be put forward as a standard light, for crossings of that description.

Surrender of Licences.—At the request of the organisation a local Member of Parliament had taken up the question of the surrender of licences on motor vehicles. It is provided that such licences be posted not later than the last post the day previous to the first of the month, failing which no allowance to be made until the following month. The matter was taken up in consequence of a member being refused an allowance although he took the licence to the local licensing officer the following morning, by ten o' clock. One of his vehicles had only been out one day during the first 14 days of the quarter, and on that outing had met with an accident which made the vehicle useless for further running. The member concerned went to the Licensing Officer and told him that the machine had been out and, therefore, he was liable for the licence duty, but an accident had happened which made the machine beyond repair and he would be claiming an allowance at the end of the month, when most likely he would surrender another licence in connection with one of his other machines.

In consequence of the attitude taken up by the Local Licensing Officer, Mr. Howarth personally interviewed the local M.P. for the district, who had taken the matter up with the Minister of Transport. The Minister, in his reply to the local M.P., stated that in accordance with the regulations the licence should be posted not later than the last post the day previous to the first of the month, otherwise no allowance can be made. The local M.P., in communicating with Mr. Howarth, said he is not prepared to let this matter drop, as the Regulation is a stupid one, and ought to be amended. Mr. Howarth pointed out that when a licence is issued the holder of that licence is entitled to use the vehicle up to 12 o' clock on the last day of the month, when the quarter ends on that day, as there is nothing in the Act which states that the licence expires previously. Under these circumstances he was hoping that some fresh regulations would be made whereby the holder of a licence can use his machine up to midnight on the last day of the quarter, and that the restrictions now in force will be altered accordingly.

Farriers Charges.—A reply has now been received from the Bolton, Bury and Radcliffe districts of the Master Farriers' Association, stating that they are not prepared to make any reduction in the charges for the shoeing of horses in their districts.

Corporation Bills.—Several authorities have introduced private Bills into Parliament, including the Manchester Corporation and the Rochdale Corporation. The Manchester Corporation Bill in one clause are seeking powers to stop vehicles from passing stationary tram cars when picking up or depositing passengers. This clause is being opposed by the various organisations, and it is hoped that some arrangements will be come to before the Bill comes before Parliament. In respect to the Rochdale Corporation Bill one section of the Bill is asking for powers to run special omnibuses with [illegible] any limit as to distance. This matter has been ta[illegible] and it is hoped that some agreement will be ar[illegible] same comes before Parliament.

Five new members have been accepte[illegible] quarter.

London Shipping and Forwarding Agents' Social ...rence.

A ... station Hotel, G... ndon Shipping and Forwarding Agents' Association held tended the function, over... held on Wednesday, Motherwell, the President of the Conference, Mr. Scottish..., was in the Chair, and the following members of the Council were present:—Mr. H. K. Coppendale (Annu... Pollexfen & Blair, Ltd.); Mr. F. J. Gerson (Rosenberg, Loewe & Co., Succrs., Ltd.); Mr. H. Gilbert (G. W. Sheldon & Co., Ltd.); Mr. C. McEwan (Thos. Cook & Sons, Ltd.); Mr. W. Narracott (Van Oppen & Co., Ltd.); Mr. G. Perry (British Commercial Transport Co., Ltd.); Mr. L. G. Stockwell (Stockwell & Co., Ltd.); Mr. ... field (Chas. Atkins & Nisbet).

... for ... y for absence was intimated from Mr. P. Th... herland International Despatch, Ltd.).

E... The minutes of the last Council Meeting ... been circulated) were approved and signed.

... Arising from Minutes. *Competition by a certain ...hip company*, who, it was reported at the last Council ..., had been issuing circulars soliciting forwarding business. The President reported that he had had an interview with a representative of this firm. This interview had been confirmed by a letter, which was read to the meeting. The company stated that they had no intention of working without profit and had no wish to deprive agents of business they already held. In the case of new business, however, they would compete on ordinary economic terms.

It was decided that no further steps should be taken unless it was found that the company did not act in accordance with the terms of their letter.

Over-entry Certificates. In accordance with the decision reached at the last meeting of the Council, the President had interviewed representatives of the Customs authorities with regard to the possibility of over-entry certificates being allowed for duty overpaid on goods landed at members' own wharves. The Customs authorities, however, could not see their way to do anything in the matter.

Correspondence. (1) A letter was reported from the Port of London Authority in which they asked whether the Conference wished the names of its members to be inserted in the forthcoming revised edition of their handbook, "General Information as to the Shipment of Goods through the Port of London," in the original edition of which a list of the Conference members had appeared. It was agreed that the names should be inserted in the revised edition. (2) Letters had been received from member firms concerning proposed new export rates on rubber which seemed likely to benefit some agents interested in this particular traffic to the detriment of the others. Representatives of the firms concerned, who were present at the meeting, explained the position fully, and considerable discussion took place. It was agreed that the Conference should support the members affected by the new arrangements, and a course of action was decided upon. (3) It was reported that a letter had been received from a member-firm dealing with Bill of Lading and Port Agents' Commission on f.o.b. contracts. This was noted as a matter of interest. (4) A letter from another member dealt with the likelihood of greater restrictions being placed on the issuance of Customs Brokers' licences in New York.

Applications for Membership. Two applications for membership of the Conference were considered, of which one was accepted and the other referred to the membership committee.

Insurance Scheme in Force Among German Forwarding Agents. Some discussion took place with regard to this scheme which the Council have had under consideration for some time, with a view to drawing up a similar scheme which might be suitable for adoption by the Conference. It was decided that the German scheme should be considered by each Section at its next meeting, and that a committee consisting of representatives from each Section should then be appointed to formulate a scheme for submission to the members of the Conference.

Blue Star Line.—Mr. Leonard Dewey, general manager of the Blue Star Line, has returned to London from an extended tour in the Far East.

Brisbane as Terminal Port for P. & O. Vessels.—Mr. A. E. Moore ... Premier of Queensland, has announced that ... of the P. & O. Line would later in the ... Liverpool Shipping and Forwarding Agents' Association.

Traders' Conference.—Mr. S. L. Jude, secretary of the Liverpool Shipping and Forwarding Agents' Association on Thursday, February 27th, represented the Association at the Railway Traders' Conference held at Liverpool. A number of questions of interest to shipping and forwarding agents were brought forward and were received sympathetically by the railway companies representatives who promised to give consideration to various points raised. Recently the Shipping and Forwarding Agents' Association circularised members requesting, if they had any difficulties which might be usefully discussed at the Conference, to communicate them to the secretary so that he could act on their behalf. The response generally, was quite satisfactory.

Appointments.—At a recent meeting of the Council of the Liverpool Shipping and Forwarding Agents' Association, it was decided to send a letter of congratulation to the President, Mr. David Jones of Messrs. Elder Dempster & Co., Ltd., on his election to the position of President of the Chamber of Shipping. Another member of the Association, Mr. L. M.. Clark, of Messrs. Larrinaga & Co., Ltd., 30, James Street, Liverpool, has been honoured by the shipowners. He has been appointed chairman of the Liverpool Steamship Owners' Association.

Successful Membership Campaign.—The membership campaign of the Liverpool Shipping and Forwarding Agents' Association is bearing good fruit. The latest adherents to the Association are Messrs. Vogt and Maguire, 29, South Castle Street, Liverpool, and Charles G. Dunn & Co., of 19, James Street, Liverpool. Several inquiries had been received from prospective members and some of these, it is almost certain, will satisfactorily mature. There are not many shipping and forwarding agents in the port of Liverpool now outside the membership of the Association.

Manchester Shipping & Forwarding Agents' Conference.

THE Annual General Meeting of the Manchester Shipping and Forwarding Agents' Conference was held at Manchester on Wednesday, 26th February.

Mr. H. P. Lumb, who presided, mentioned that progress had been made, and much work had been done by the British Association of Shipping and Forwarding Agents to which the Association was affiliated. It was pleasing to remark that the London Shipping and Forwarding Agents' Conference had also become affiliated to the British Association of Shipping and Forwarding Agents.

MR. NORMAN N. BIRD.
CHAIRMAN,
MANCHESTER SHIPPING AND FORWARDING AGENTS' CONFERENCE.

Trade in Manchester throughout 1929 had been bad, and many members were feeling the effects of the general depression. The outlook for the future was not too good, but probably the state of trade would be more settled after April 14th (the date of the Budget statement).

The Treasurer presented his account, showing a very satisfactory balance in hand.

The following officers were elected:—Chairman, Mr. N. N. Bird; Vice-Chairman, Mr. H. P. Lumb; Hon. Secretary, Mr. J. H. Allen; Hon. Treasurer, Mr. A. V. Reeves. The foregoing will form the Executive Committee. Messrs. Armstrong and Worrall & Co. were asked again to act as Hon. Auditors.

E

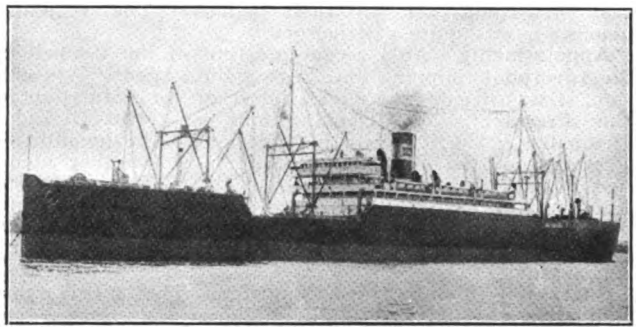
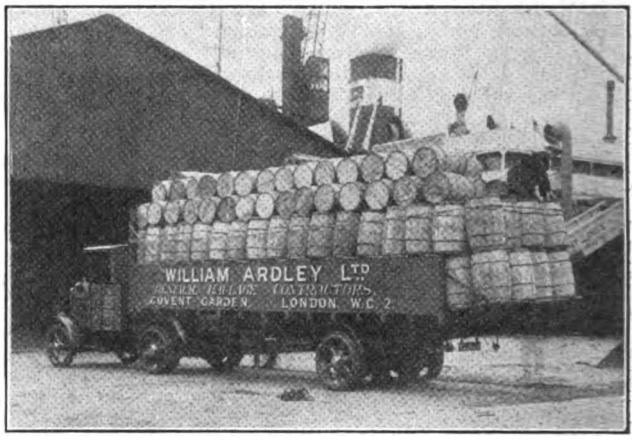
American Merchant Lines.

WE took part in a very interesting event on February 19th last when Runciman (London), Ltd., the United Kingdom Agents (Freight and Operating) of American Merchant Lines entertained a few friends on board the "American Merchant" in the Royal Albert Dock. The guests were taken down in two luxurious motor coaches, identical with those in which passengers are taken to the docks, the party being in the charge of Mr. E. Shand, the Traffic Manager, and having as its host, Mr. Philip Runciman. On arriving at the ship's side, to which we were taken direct by the motor coaches, we were received by Capt. Mitchell and the officers of the ship and were surprised to find the splendid accommodation given on these boats. While mainly cargo vessels they have accommodation for 85 passengers, the tourist cabin class, and all the appointments are most comfortable and up-to-date. Dinner was served in the saloon and we were informed that the very enjoyable menu which was served to us was exactly that given to the passengers on the ship. The five ships comprising the fleet are named:—s.s. "American Banker," s.s. "American Shipper," s.s. "American Farmer," s.s. American Trader," and s.s. "American Merchant," and these maintain a weekly service between London and New York.



ONE OF THE FLEET OF AMERICAN MERCHANT LINES.

Mr. Philip Runciman, in welcoming the guests at the close of the dinner, stated that the policy of the company was to provide the utmost service for its customers and to co-operate with them and with the agents in every possible way. At the close of the proceedings we were able to see something of the arrangements made for the comfort of the passengers, both in the sleeping accommodation and in the very comfortable lounge, or Social Hall as it is called. There is also ample deck space for exercise and games while at sea. American Merchant Lines are prepared to cater for all requirements for goods transport, whether for ordinary general cargo, live stock, or refrigerator cargo, for all of which they have facilities to meet all requirements. The entire fleet is fitted with modern refrigerator installation so that the various chambers can be kept at independent temperatures. The loading berth is specially well situated, having direct rail and road connections. All enquiries, either for passengers or goods, should be addressed to American Merchant Lines (Runciman), Ltd., 52-54, Leadenhall Street, E.C.3.



A SCAMMELL LORRY TAKING 200 BARRELS OF APPLES TO MARKET FROM THE DOCKS.

Port of London Authority.

JANUARY was a very good month as regards shipping for the Port of London. During that month 4,967,570 net register tons used the Port, an increase of 173,873 net register tons compared with January, 1929.

The figures for the Port for the ten months ended January, 1930, are also satisfactory and are as follows:—

	net reg. tons
10 months ended January, 1930 ...	49,319,869
10 months ended January, 1929 ...	47,010,451

The ten months ended January, 1930, were thus better than the ten months ended January, 1929, by 2,309,418 net register tons or 9.7 per cent. During the period under review the total tonnage of vessels that used all United Kingdom ports increased by 14.3 per cent.

* * * *

Although statistics of the movement of goods for the whole of the Port of London are not available, the tonnage of goods handled by the Port of London Authority gives a fair indication of affairs. During the ten months ended January, 1930, the goods landed were 147,983 tons or 8.3 per cent. more than during the corresponding period of 1928/1929.

* * * *

The Port of London Authority have received a further letter from Mr. F. Maclure Sclanders, Commissioner of the Saint John Board of Trade (New Brunswick), emphasising "the great opening in Canada for Old Country commodities."

In his letter Mr. Sclanders says:—

> "The whole purpose of my letters to you was to impress that the volume of traffic between us was capable of very great expansion—*if British exporters would take some real, practical, energetic, business-like interest in their Canadian possibilities.* I unhesitatingly contend that, of all export markets, Canada has been the most neglected by the exporters of Great Britain; and the figures I have given surely clinch that contention beyond all peradventure. Therefore, the task confronting an important body such as yours—a task that seems fundamental—is to exert yourselves towards the development of business between the Old Country and Canada by convincing Old Country manufacturers of their wide, splendid, previously neglected Canadian opportunities. May I suggest that a campaign of this nature on your part would, as it were, kill two birds with one stone. It would make your organisation the medium responsible for increasing business between the Old Country and Canada.
>
> In fine, the main thing that concerns us as good subjects, and concerns British manufacturers who need all the business they can get, is that your manufacturers are permitting their United States competitors to predominantly possess the Canadian market. It is agitation and advertising on the other side that is so urgently needed; not on this side.
>
> The main thing is to awaken British manufacturers to their Canadian opportunities. Once do that properly, and all else will be added to the Port of London."

* * * *

Tilbury Passenger Landing Stage.—The Port of London Authority announce that the new passenger landing stage in the river at Tilbury will be opened on Friday, the 16th May, 1930. The ceremony will be performed by the Prime Minister. The new facilities for the embarkation and disembarkation of passengers at Tilbury have been carried out by the Port of London Authority in conjunction with the London, Midland & Scottish Railway Company. A floating stage and a baggage hall on shore have been constructed by the Port of London Authority, and the railway company have reconstructed and enlarged their railway station adjoining. The Tilbury passenger landing stage renders it possible to discontinue the practice of embarking and disembarking passengers by tender between the shore and vessels lying in the river, or, alternatively, of passengers waiting on board ship until the vessel reaches her berth in dock.

The Port of Bristol and Birmingham.

BIRMINGHAM is very important to Bristol and it is claimed, with a good deal of reason, that Bristol is the most convenient port for serving the important area which Birmingham represents. It was, therefore, only natural that the Port of Bristol should have a very attractive stand at the British Industries Fair at Birmingham, comprising a large scale model of the docks, and a daylight cinema showing some of the facilities of the port and its manifold activities in connection wth the import and export of goods.

In the same connection a very interesting and enjoyable function took place on February 21st, when a luncheon was given to about 200 guests, presided over by Mr. Walter Bryant, the Lord Mayor of Bristol. He was supported by Alderman E. M. Dyer, Chairman of the Port of Bristol Authority, and a number of members of the Authority. Leading officials of the docks who were present included:—Mr. T. A. Peace, the General Manager; Mr. Frank Brown, Assistant General Manager; Mr. W. P. Wordsworth, Chief Assistant Engineer, and Mr. C. F. England, Deputy Commercial Manager.

Amongst the distinguished guests who were present were:—The Lord Mayor and Lady Mayoress of Birmingham, Alderman and Mrs. Lancaster, Sir Austen Chamberlain, K.G., and the Mayors of neighbouring midland towns. In addition, a considerable contingent travelled from Bristol to be present, these representing the numerous trades interested in the Port of Bristol.

In his speech, proposing the Toast of the British Industries Fair, the Lord Mayor of Bristol stated quite frankly that the luncheon was a business gathering and they felt that Bristol and Birmingham could co-operate much more closely than they did at the present time as they had much in common. He asked them to regard Bristol as their neighbour. In point of equipment and appliances the Bristol Port probably ranked as the first in the United Kingdom and they were told recently by responsible authorities that they were twenty years ahead of requirements in this respect.

The Lord Mayor of Birmingham, in responding to the Toast, agreed that it was all to the good that Birmingham and Bristol should be brought closely together. He then went on to deal in a very able and statesmanlike way with the problem of unemployment, emphasising that the only way to cure the trouble was to increase the trade and commerce of the country.

Alderman E. M. Dyer proposed the Toast of "Our Guests" and emphasised in more detail the reason for the meeting, which was to secure more business for the Port of Bristol from the Birmingham area.

Sir Austen Chamberlain, replying to the Toast, complimented the Lord Mayor of Birmingham on the way in which he had dealt with the subject of unemployment. Sir Gilbert Vile and Mr. W. Wilson Hamill, Managing Director of Morris Commercial Cars, Ltd., also replied to the Toast. Mr. Hamill expressed regret that the previous speakers had not seen their way to refer more fully to the question of tariff reform, and emphasised his opinion that a complete change in our fiscal policy was necessary to restore the prosperity of the country.

Antwerp's International Exhibition, 1930.

THE Executive Committee of the International Exhibition to open in Antwerp on April 26th next, have just published a list of the twenty-eight foreign countries which will be officially represented.

These are: Algeria, Brazil, Canada, Chile, Colombia, the British Colonies, Costo Rico, Denmark, Ecuador, France, Finland, Great Britain, the Dutch Indies, Italy, Japan, Letland, Lithuania, Morocco, Norway, Portugal, Sweden, Tunisia, Uruguay, New Caledonia, Holland, Peru, Persia, Poland. This list leaves no doubt as to the success of this International Colonial, Maritime and Flemish Art Exhibition, which Antwerp is organising to commemorate the Centenary of Belgium's Independence. The town of Antwerp will on the same occasion inaugurate in a worthy manner, its gigantic new maritime installations, which will treble the commercial capacity of its port.

Besides this, there is the programme of the World's fair which does not limit itself exclusively to colonial and maritime matter. In fact, there is also a Transport Section (Transport by motor and by air), in which Belgium's participation will alone cover an area of about 5,000 m2. The Agricultural and Horticultural Section will take in halls and other spaces in the grounds for a total of about 7 to 8 hectares.

This extensive programme will be completed by a great exhibition of Flemish Art throughout all ages, and by the creation of a miniature city, called "Old Belgium," both of which will greatly contribute to show the national character of this Centenary Exhibition.

In addition, a series of pageants, festivals and attractions of all kinds have been planned. We may mention the construction of a vast "Luna Park," of an area of about 3½ hectares; the organisation of international sports' meetings, and at night, an original scheme of illumination, the cost of which is said to amount to millions of francs.

Air Transport Notes.

R.38 Memorial Prize.—The R.38 Memorial Prize of the Royal Aeronautical Society has been awarded for 1929 to Miss Hilda M. Lyon, M.A., A.F.R.Ae.S., for her paper entitled "The Strength of Transverse Frames of Rigid Airships."

Imperial Defence College. Appointment of Commandant.—The Air Ministry announces that Air Vice Marshal Sir R. Brooke-Popham, K.C.B., C.M.G., D.S.O., A.F.C., Royal Air Force, at present in command of the Royal Air Force in Iraq, has been selected for appointment as Commandant of the Imperial Defence College, in succession to Major General W. H. Bartholomew, C.B., C.M.G., the present Commandant, who is due to vacate the appointment at the end of December, 1930. The appointment is at present for a period of two years, and is filled by each of the services in turn.

London—Cairo—Karachi—Delhi Air Service.—Imperial Airways, Ltd., Airways House, London, in circulating the time table for the London-Cairo-Karachi-Delhi air service as it is now operating, call attention to the fact that the original route via Basle and Genoa and the West Coast of Italy has now been replaced by the alternative route through Central Europe to Athens. As the Winter conditions on certain sections of the route through Central Europe remain to be carefully studied and, solely as a temporary arrangement, the sector London-Cologne only is flown, the Orient Express being used Cologne-Athens. Eventually, it is hoped the air route will be Cologne, Nuremburg, Vienna, Budapest, Belgrade, Uskub, Salonika, Athens, giving an accelerated through service. Until, however, it is possible for this through air connection to be made, passengers from London to Egypt or India may follow the same route as the mail to Athens and thence by air, or alternatively direct from London to Athens on the Simplon Orient Express, or by steamer to Egypt to connect with the air departure from Cairo. In either case Imperial Airways, Ltd., will be happy to undertake all the necessary arrangements for the convenience of passengers, or to provide any further information desired.

More "Bristol" Bulldogs for Latvia.—Some months ago the Latvian Government took delivery of five "Bristol" Bulldog all steel single-seater fighters fitted with the Jupiter Series VI. engine, from the Bristol Aeroplane Co., Ltd. On a basis of the general satisfaction obtained the Latvian Government has now placed a further order with the Bristol Company for seven additional Bulldog machines. Five of these will be fitted with direct drive Jupiter engines and two with supercharged Jupiters.

Handley Page 21st Birthday.—The firm of Handley Page, Ltd., will be celebrating its 21st birthday in June next, and in a special number of the "Handley Page Bulletin," a brief survey will be made of the history of the firm, and illustrations will be given of some of the many different types of aeroplane produced. The development of wing slots up to the present time will also be outlined.

Spain and Aviation.—From Madrid comes the news that five Spanish machines will take part in the International Tourist Circuit Air Contest in June next.

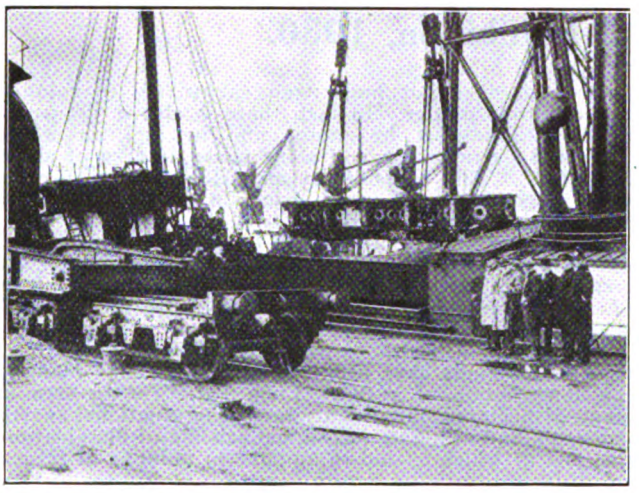
Midland Aerodromes. — A combined municipal and private aerodrome for Coventry was foreshadowed at a recent Ministry of Health inquiry into the application of the City Council to borrow £12,850 for the purchase of the Home Farm, Bagginton. Mr. Vernon Younger (Deputy Town Clerk) also explained that negotiations for the use of the private aerodrome of Sir W. G. Whitworth-Armstrong Aircraft, Ltd., at Whitley, which lay to the north of The Home Farm, were well advanced. He did not want to say anything to prejudice the negotiations but there was likely to be some arrangement made with the aircraft company for a combined municipal and private aerodrome. Municipal aerodromes are to be established at Nottingham and Stoke-on-Trent. These, it is understood, will be managed and equipped by National Flying Services, Ltd., as lessees under the Corporation. At Wolverhampton a private company has been formed—the Wolverhampton Aviation Co., Ltd., to establish an aerodrome in the town. The Corporation has had the matter under consideration for some time. The company has secured an option on some land four miles out of the town, and it is hoped to have it ready for flying in five or six months. Other towns in the Midlands having similar matters under consideration are Worcester, Hereford and Nottingham.

Civil Aviation in Canada.—A significant growth during 1929 in the light aeroplane club movement in Canada is shown in a review published by the Department of National Defence. As compared with 1928 the number of clubs increased from 15 to 23. The clubs, says Reuter's Ottawa correspondent, are subsidised by the Dominion Government, which lends aircraft to groups of at least ten approved flyers and thirty other members, collaborating for the purpose of training pilots, and it is understood that the Government will this year ask Parliament for an increased appropriation. Money grants are made by the Government of $100 (£20) for each student qualifying as a pilot.

International Air Transport. — It is reported in Paris that an agreement has been reached between Farman Air Lines and the Dutch K.L.M. (National) concern regarding the operation of the Paris—Brussels—Rotterdam—Amsterdam air service. The agreement, which provides for the allocation of special machines for freight so as to allow of increased passenger accommodation, will enter into force on April 7th. A similar agreement has been reached between the French air line and the Danish and Swedish air transport undertakings respecting the service between France and Scandinavia, providing for the exclusive control of traffic in their various countries by the respective lines.

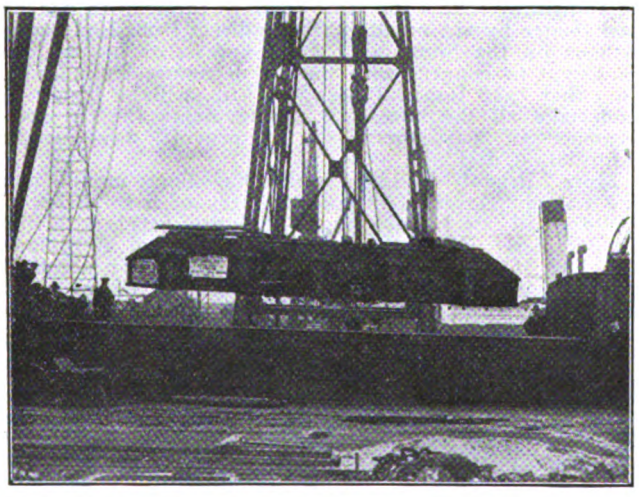
Transporting 80-Ton Press Beds.

In the course of a conversation with Mr. A. Johnson, Managing Director of Henry Johnson, Sons & Co., Ltd.,



FROM SHIP TO RAIL.

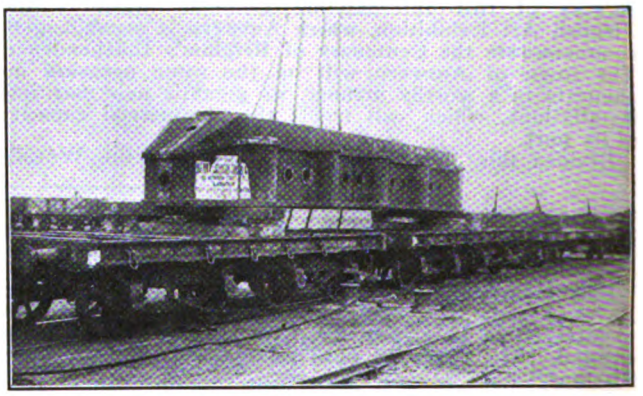
the well-known Shipping, Forwarding and Custom House Agents, we were interested to learn of a remarkable trans-



LIFTING 80-TON PRESS FROM SHIP'S HOLD.

port contract which they had recently undertaken and carried through with complete success. The writer was recalling to Mr. Johnson his visits a quarter of a century ago to the offices of the firm in Great Tower Street. This period, long as it may seem, is but a small portion of the firm's history, as it was established in the year 1814. Messrs. H. Johnson, Sons & Co., Ltd., who now occupy a noticeable building, almost on Tower Hill, at 18 Byward Street, hold a special position as the agents for continental traffic of the London, Midland & Scottish Railway.

Our illustrations show the nature of the job for which they had to provide facilities. The load consisted of two steel press beds weighing 80 tons each, these being shipped from Rotterdam to Cardiff and then unloaded on to special trucks and taken by rail to large works in the Birmingham district.



DROPPING PRESS ON TO RAIL TROLLEYS.

On the successful accomplishment of the contract Messrs. Johnsons received a letter from their client which reads as follows:—

> "It is with pleasure that I write you to congratulate you on the very efficient manner in which you handled the two press tables from f.o.b. Continental Port to delivered Birmingham area.
>
> It was appreciated by me that this was no easy task and required the closest attention, and a thorough understanding of your work; and it is extremely gratifying to me to know that these went through without a hitch, and were delivered in perfect condition and entirely to the satisfaction of my Principals."

This is an interesting example of the co-operation between shipping and railway transport, with the shipping and forwarding agent in charge of the entire operations, with his expert knowledge, to see that everything was carried out in a smooth and efficient manner.

News from the Ports.

Goods on the Quays; Watching Charges.—Mersey Docks and Harbour Board has amended Bye-Law No. 11 of the Master Porters Bye-Laws which governs the watching of goods on the quay. It is provided that a master porter shall continue to watch goods discharged from a vessel for which he is acting as master porter until the goods are actually loaded off from the quay, but he is not under any obligation to watch:—(1) goods remaining on the quay when all the goods belong to the master porter; (2) goods remaining on the quay in respect of which the consignees or consignee of all such goods shall have given notice in writing to the master porter that the watching of the goods is no longer required; (3) log timber remaining on the quay (whether there are other goods remaining on the quay or not) in respect of which the consignees or consignee of all such log timber shall have given notice in writing to the master porter that the watching of the timber is no longer required.

Ten Million Freight Tons Per Annum.—It was mentioned at the annual dinner of the Liverpool staffs of the associated companies of the Ellerman Lines that the fleet known as the Ellerman Associated Lines, of about 190 steamers, had a total dead weight carrying capacity of 1,400,000 tons. Allowing, say, for three round voyages a year from each of those steamers, it meant the concern was in a position to deal with 10,000,000 freight tons of cargo per annum. Mr. F. T. L. Princep (director of the Ellerman Lines, Ltd.) said nothing was more striking than the amount and quality of foreign tonnage upon the seas to-day. Foreign shipowners had the support of their own governments, whereas British shipowners did not get the support of their government.

The Late Sir Arnold Rushton.—The Liverpool Shipping and Forwarding Agents' Association recently lost a good friend by the death of Sir Arnold Rushton, whose firm, Messrs. J. H. Welsford & Co., of Cunard Buildings, were members of the Association. Although Sir Arnold had been ill for some time and it was known that his condition was grave, his sudden death was unexpected, as he was at his office only a few days before. As a youth he entered the firm of J. H. Welsford, shipowners. He steadily advanced in business until he was appointed manager of the company which became known as J. H. Welsford & Co., and on the death of Mr. Welsford, became one of the firm's leading directors. He was elected Lord Mayor of Liverpool in 1924. He was probably the only man elected to the dignity after only five years in the City Council.

* * * *

Indian Freights.—Indian shippers carrying on business in Manchester have co-operated with Bradford traders' and recently waited on Conference Lines, Liverpool, to discuss the rate on piece goods and yarns to India for the ensuing year. The steamship companies were somewhat impressed by the decline of the traffic in piece goods and held that they were reasonably entitled to improved rates of freight. This was strongly resisted by the shippers who pointed out that such an increase would be detrimental to the trade. Finally, however, the steamship companies agreed that the rate for piece goods to the specified India ports should remain unchanged for the year 1930.

Traffic Conditions.—Conditions in the Manchester shipping and forwarding trades continue to be clouded by the prevailing depression in the textile industry. Efforts towards rationalisation are being watched with interest, particularly as so many overseas markets are affected. Whilst de-rating will yield some benefit, apprehension has been stimulated by the forthcoming budget.

Consular Appointment.—Mr. Albert R. Thompson has been appointed Consul for the United States in Manchester in succession to the late Mr. E. Halliday.

Manchester Ship Canal.—The report of the directors of the Manchester Ship Canal Company for the year 1929, shows that there was an increase of £11,766 in the receipts from Ship Canal Tolls, Ship Dues, and Miscellaneous Receipts, and an increase of 322,689 tons in the net weight of sea-borne traffic on which Ship Canal Tolls were paid as compared with the year 1928. All the Company's Works have been fully maintained during the past year.

* * * *

Scottish Ship Canal.—This much discussed and criticised project continues to receive attention. Speaking at Falkirk, Mr. David W. Shaw said that if a new canal was constructed, a great new waterway would be opened up in the heart of Scotland providing unrivalled export and import facilities. The canal, he understood, would present no great engineering difficulties and the contour of the country along the route made the project quite feasible.

* * * *

Southampton Docks.—The year opened auspiciously so far as the shipping activities of Southampton are concerned for the volume of traffic entering the docks during January reveals a substantial advance upon the total recorded for the first month of 1929. On March 20th, the two most notable ships of the North German Lloyd's fleet will be handled at Southampton for the "Europa" calls en route to New York, whilst the "Bremen," the present holder of the Atlantic Blue Riband, will land passengers, etc., from the United States.

* * * *

Port of Bristol.—The official handbook of the Port of Bristol Authority for the current year, shows that no effort has been spared to render the equipment of the Port so complete and efficient as to meet every modern requirement. The Port of Bristol has a history extending back over two thousand years, but Bristol is not content to live on its ancient records or its past achievements. By reason of its geographical position it has an assured place in the exchange and distribution of overseas traffic, and this publication brings prominently to notice the activities of this Western Gateway of England. The book is beautifully illustrated and there are a number of maps and plans. The Docks comprised within the Port are:—The Royal Edward and Avonmouth Docks, situated on the east side of the mouth of the river Avon; the City Docks, entered through Cumberland Basin, abouut seven miles up the River Avon; these docks traverse the city of Bristol; and Portishead Dock, situated to the westward of the mouth of the River Avon. The head office of the Port of Bristol Authority is at Queen Square, Bristol.

Bristol Channel Shipowners.—The Annual General Meeting of the Cardiff and Bristol Channel Shipowners' Association, elected as chairman for the ensuing year Mr. Richard H. Read. Mr. Read, who was vice-chairman of the Association last year, is director of Foster, Hain & Read, Ltd., and the Hain Steamship Company, Ltd., and of the North of England Protection Association. His firms control 42 vessels of 346,960 tons dead weight. Mr. J. E. Emlyn-Jones, joint managing-director of Emlyn-Jones, Griffin & Company, Ltd., and a director of Green Star Shipping Company, Ltd., and of Armstrong, Emlyn-Jones & Company, Ltd., the British Company, Ltd., well known removers and hauliers, Econoil, Ltd., and Mountstuart Dry Docks Company, Ltd., was elected vice-chairman. He was formerly M.P. for North Dorset.

Tees Great Project.—A great project for the reclamation of the Tees foreshore on the north bank is to be undertaken by the Tees Conservancy Commission. It is part of a huge plan to develop the river industrially and has been approved and classified by the Ministry among port improvements of special urgency. The scheme will cost £300,857, of which the Government will contribute £120,000, spread over 15 years. The work will take five years to complete, and 1,000 men will be employed for the first 18 months and 150 thereafter. An area of 267½ acres has been scheduled for reclamation and this area, served by road and railway as well as having an extensive river frontage, will provide an ideal site for new works and new industries. The project is the first instalment of reclamation work proposed by the Conservancy Commission which will ultimately embrace the whole of the tidal foreshore on the north bank of the Tees to Greatham Creek—an area of 1,875, acres.

REUTERS TRADE SERVICE.—By special arrangement with Reuters Trade Service we are publishing news items from all parts of the world dealing with transport matters.

Railway Notes and News.

L.N.E.R. (N.E. Area) Headquarters Staff Ball.—The Ninth Annual Ball, promoted by the L.N.E.R. (N.E. Area) Headquarters Staff, was held in the Assembly Rooms, York, on February 7th. Over 370 guests attended, among the company being Sir Ralph Wedgwood, C.B., C.M.G., and Lady Wedgwood, Sir R. Francis Dunnell, Bart., K.C.B., Mr. and Mrs. Thos. Hornsby, Mr. and Mrs. C. M. Jenkin Jones, Mr. and Mrs. Paul Gibb, Mr. and Mrs. A. Collinson, Mr. and Mrs. H. A. Watson, Mr. and Mrs. W. R. Mole, Mr. A. Gaunt, Mr. E. P. Merritt, Mr. C. M. Stedman, Mr. and Mrs. J. P. Allix, Mr. and Mrs. A. E. Sewell, Mr. and Mrs. A. S. Pearson, Mr. F. Goodricke, Mr. and Mrs. O. H. Corble, Mr. and Mrs. H. Wood, Mr. and Mrs. H. F. Sanderson, and other officers of the Company. During the evening a fancy dress parade took place, and the costumes were judged. Lady Wedgwood afterwards presented the prizes to the successful competitors. Mr. E. Layton and Mr. N. E. Coning undertook the duties of M.C.'s.

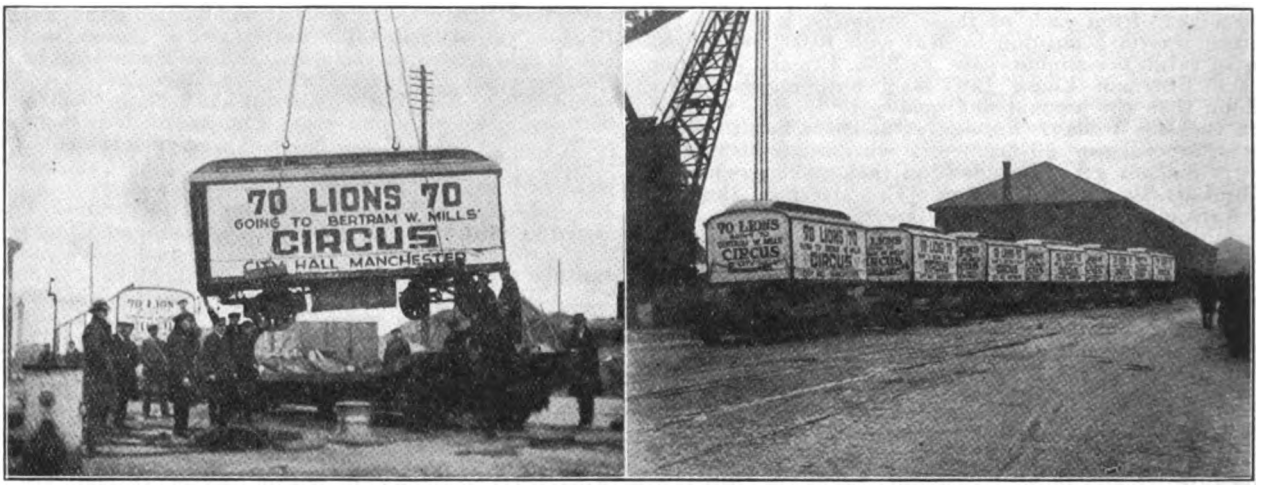
A Rather Unusual Load on the L.N.E.R.—There arrived at Hull Docks recently from Bremen, en route to Manchester, seventy lions. The animals were on their way to the City Hall at Manchester for Bertram W. Mills well-known circus.

The Railway Barometer.—The railway traffic receipts of the four group railway companies for the first 8 weeks of 1930 compared with the same period in 1929, are as under:—

	1930	1929
	£	£
Passengers, Parcels, etc. ...	9,309,000	9,167,000
Merchandise, etc.	9,823,000	9,571,000
Coal, Coke, etc.	5,943,000	6,144,000
	25,075,000	24,882,000

In spite of reduced coal carryings, a substantial increase has been obtained in the total result. It should be borne in mind that the 7th and 8th weeks of 1929 were adversely affected by severe frosts.—"Railway Newsletter," March issue.

Large Wagons for L.N.E.R.—The L.N.E.R. have placed contracts with the Metropolitan-Cammell Carriage, Wagon and Finance Co., Ltd., Birmingham, and Head Wrightson and Co., Ltd., Thornaby-on-Tees for 100 40-ton



A RATHER UNUSUAL LOAD ON THE L. & N.E. RAILWAY. BERTRAM W. MILLS CIRCUS EN ROUTE BREMEN TO MANCHESTER VIA HULL. LEFT: LOADING ONE OF THE CAGES OF LIONS FROM QUAY TO WAGON AT ALBERT DOCK, HULL. RIGHT: SOME OF THE CAGES LOADED ON TRUCKS AT HULL FOR CONVEYANCE TO MANCHESTER.

South African Railway Contract Secured by Germany.—The Berliner Machinenbau Company has secured a contract to supply fourteen locomotives for the South African Railways at a price of £84,321. The Company submitted the lowest tender.

L.M.S. Shunting Engine. Experiments with "Sentinel" Type. — The L.M.S. Railway have ordered from the Sentinel Waggon Works, Ltd., four "Sentinel" shunting engines for experimental work in shunting yards. This type of locomotive, when confined to goods yards, can be operated by one man. It has a quick steaming boiler working at a pressure of 275 lbs. to the square inch, and is provided with a super-heater. It has two gears for working at high or low speed as required, and is fitted with steam and hand brakes. It is expected that economies in both coal and water consumption will be obtained.

Great Western Railway Activities.—The G.W.R. announce that as a result of increasing demand 100 special trucks are to be built at their Swindon works for the conveyance of new cars from manufacturers' works (at Birmingham and Oxford) to all parts of the country and docks for export. A further 50 covered containers and 25 insulated containers, for the conveyance of meat and other perishable traffic, are to be ordered. Last year the Company recorded an increase of 211 per cent. in tonnage carried in containers over 1928. The Company now have 518 in daily use.

British Rail Motors to be Tried in Belgium.—A Brussels message says that the Board of Directors of the National Railway Company has decided to purchase several steam rail motors, of the British "Sentinel" type, in order to make comparative trials with the Diesel motors now in use on the line between Ghent and Eecloo.

bogie plate wagons. An order for 25 50-ton wagons has also been given to the Metropolitan-Cammell Carriage, Wagon and Finance Co., Ltd. Although the last mentioned wagons are primarily intended for the conveyance of bricks the vehicles are equally suitable for ironstone, slag and other heavy traffic.

L.M.S. Goods Depots.—The L.M.S. Railway are about to embark on schemes for the improvement and modernisation of several important Goods Depots throughout the country. These improvements will make it possible to effect a considerable speeding up in the handling of wagons at the various Depots and in the handling of merchandise, etc., once it has been received at the Depots. The schemes are included in the £450,000 to be expended by the L.M.S. Railway on Goods terminal accommodation improvements in connection with the remission of the Government Passenger duty.

L.N.E.R. Electrification.—The London and North Eastern Railway have given careful consideration to the development of their suburban traffic in the neighbourhood of Liverpool Street. A scheme for electrification has been prepared, but they are satisfied that no such scheme will by itself be an adequate solution of the problem. They are accordingly considering the construction of a tube for the conveyance of suburban traffic between Liverpool Street and Ilford, and they are in communication with a well-known firm of engineers with a view to the preparation of a plan together with an estimate of the cost of a tube of this description.

L.N.E.R. Farm Services.—The L.N.E.R. farm collection and delivery services are now in operation at 245 stations South of the Humber.

Law Cases.

TYRES AND SPEED.

A CASE, which had been remitted from the High Court, was heard recently in the Bournemouth County Court, in which the Bergougnan Tyre Company, of White Lion Street, Islington, claimed £58 2s. 2d., balance due for solid tyres supplied to Messrs. Newland and Company, haulage contractors, Malmesbury Park Road, Bournemouth. There was a counter-claim for the same amount.

Counsel for the plaintiff company said that four tyres were supplied at a price of £118 16s. 8d., of which sum £43 odd was admitted, and he believed, had been paid, leaving a balance of £58 2s. 2d. The point was whether the defendants' lorry was driven too quickly, having regard to the load it bore. The tyres cost a good deal more, but were sold under a guarantee under which, the other side said, they were entitled to a "pro rata" deduction if they broke down.

Counsel for the defendants said that the lorry was used on a regular service between Bournemouth and London. The tyres were supplied in May, and on June 6th when the lorry, with a normal load (there was no charge of overloading) was on its way to London tyre trouble developed between Winchester and Basingstoke. The driver noticed the lorry was bumping badly, and he discovered that one of the twin tyres at the back had gone wrong. All the tyres were very hot. The driver went on a few miles, and then pulled up to telephone to headquarters at Bournemouth. Mr. Newland instructed him to drive on slowly and complete the London journey, then show the tyres to the plaintiffs. On the way he had to stop every few miles to let the tyres cool down. Two tyres burst and the other two were hot and distorted. It was contended that the speed of the lorry never exceeded 20 miles an hour.

The plaintiffs claimed that they were not liable because the lorry was driven at an excessive speed.

Mr. Harold Newland said the new tyres were fitted on May 23rd, and after ten or eleven days' running, collapsed. On June 6th, when the mishap occurred, the lorry had a load of two tons 18 hundredweights. The lorry was of 36-40 h.p.

Walter Haines, the driver of the lorry, said his average speed was 12 to 15 miles an hour. This was the speed he maintained on June 6th. Sometimes he got up to 25, but not very often. When he got to Winchester he felt the lorry bumping, and when he got out to investigate he saw a "bump" on one of the back tyres. The others were hot. He went towards Basingstoke, and during this journey the tyre burst and the contents ran out, "just like water." Later two other tyres burst.

Expert evidence on the manufacture of rubber for tyres was given by Mr. Hamilton Allen. He said that all rubber tyres were made of a mixture to harden them up. Pure rubber would wear very fast. The mixture was "cured," which was an exacting process. If not "cured" up to a certain point the mixture would become "doughy." A tyre made of this mixture would heat up even at a low speed—nine or ten mile an hour.

Evidence for the plaintiff firm was given by the secretary, Mr. Sydney Edgar Standen. He said he had examined the tyres after the mishap, and his opinion was that they had been run at an excessive speed.

His Honour, giving judgment, said he had come to the conclusion that it was not due to excessive speed that the tyres burst. They had covered only about 700 miles, and it was impossible to believe, even if the motor lorry were driven at times at 25 to 30 miles an hour, that the tyres would burst in the way they did.

Judgment was entered for the plaintiffs on the claim by consent of the defendant, and judgment for the defendant on the counter-claim.

UNREASONABLE RISK.

IN the Mayor's and City of London Court, before the Recorder of London, Sir Ernest Wild, K.C., a case was heard in which the touching of the hubs of two vehicles in Middlesex Street, on September 9th last, resulted in a stall laden with china and glassware being upset, and the whole of the goods rendered unsaleable. The stall-owner, Mr. Henry Lyons, claimed £85 against Ford, Ltd., contractors, of 23 Paternoster Square, owners of a one horse van, and Mr. W. Ware, 58 Lime Grove, Lewisham, owner of a motor van, for negligence. The plaintiff's evidence was that he was standing opposite his stall when the two vehicles, one going towards Aldgate, and the other towards Bishopsgate, passed at a spot opposite his stall. Suddenly the rear of the single horse van swung round and upset all his goods. He received a cut finger. The driver of the horse-drawn vehicle declared that the accident was caused by the motor van pulling out to pass a vehicle standing in the kerb opposite the plaintiff's stall. Mr. Ware, the owner and driver of the motor, sought to cast the blame upon his co-defendants' driver, alleging that he was too far on his off side and should have stopped to allow witness to get through. The Recorder held that both drivers took an unreasonable risk in a very crowded thoroughfare, and accordingly gave judgment against both defendants, for £85, and costs.

DERATING. IMPORTANT DECISION.

AT Liverpool, Mr. E. G. Hemmerde, K.C., the Recorder, heard a case in which the Liverpool Assessment Committee defended an appeal made by the Revenue Officer in respect of the garage of Messrs. Tate and Lyle, Ltd., who operate a big fleet of steam and petrol lorries. The Assessment Committee had decided that the premises used as a garage should be included with their main factory and then participate in de-rating. The factory itself is on an island site and the garage is some little distance away. Mr. Rose, who appeared for the Revenue Officer, held that under the 1928 Act it was laid down that premises used for the housing or maintenance of vehicles, or as stables, should not be deemed part of the factory. He submitted, therefore, that they could not be treated as an industrial hereditament, i.e., factory or workshop.

Mr. H. P. Glover for the Assessment Committee and Mr. F. A. Sellers for Messrs. Tate and Lyle, Ltd., argued that the Act did not say that garages should not form part of an industrial hereditament, although it said they were not to be deemed part of the factory. This exclusion related only to a subsequent apportionment for rating purposes where the non-industrial part of the hereditament was at least 10 per cent. of the total value. They contended that the premises should be aggregated with the factory and should, therefore, be de-rated. The Transport Department was originally on the site now occupied by the factory whose development caused the displacement of the garage to another site. The garage was now on the other side of the street, but it was still, he contended, used as part of a single factory.

Mr. Rose disagreed. There would not be the slightest hope of de-rating, he said, if the garage had been a quarter of a mile from the factory.

Mr. E. G. Hemmerde, K.C., in dismissing the appeal by the Revenue Officer, said he was prepared to state a case to a higher Court.

Messrs. Tate and Lyle, Ltd., also figured in another appeal case concerning their premises in Chisenhale Street which were used for the re-conditioning of motor vehicles.

The Revenue Officer took the view that as they were separated from the factory by a canal, they could not benefit from de-rating.

The solicitors, who appeared for the Assessment Committee and for Messrs. Tate and Lyle, Ltd., argued that "contiguous" meant "near, in close proximity but not in contact."

Mr. Hemmerde, K.C., in dismissing the appeal said he was willing to state a case. As the whole object of the Act was to relieve industry, he did not think the courts would construe points such as had been raised against industry.

WHEN PERMISSION MUST BE OBTAINED.

A REMINDER to motor vehicle users that when vehicles are used in the streets principally for advertisement purposes, the sanction of the local authority to such use should be obtained, was a case heard by the Cardiff magistrates recently.

Defendants were Universal Pictures (Ltd.), Film House, Wardour Street, London, who were summoned for using a motor lorry, chiefly for advertisement purposes, without first obtaining the written consent of the local authority, the Cardiff Corporation. The driver and his assistant were also summoned for alleged aiding and abetting.

Prosecuting solicitor said that the vehicle attracted considerable attention in the streets of Cardiff. It was constructed to represent an American river show boat, and had two funnels and a paddle at the rear. It was advertising one of the company's films which was to be shown at a local cinema.

Defending solicitor said his clients must plead guilty to the offence, but urged in mitigation that defendants and many other people were wholly ignorant of the regulations in this matter.

The magistrates ordered defendants to pay costs, remarking that there was no reason to suppose that had application for consent been made it would have been refused.

DAMAGE TO FURNITURE.

IN the Shoreditch County Court, before Judge Cluer, M. Aaronson & Sons, of 25 Downham Road, Kingsland Road, E., furniture manufacturers, sued H. Stevens, of 421 Hackney Road, E., transport contractor, to recover £20 7s. 6d., damage alleged to have been done to two wardrobes, two dressing chests, two dressing tables, a bedstead, and three sideboards. The plaintiff's case was that on August 22nd, the defendant was commissioned to carry a quantity of furniture to Birmingham, but failed to carry it safely as damage was caused when passing under a bridge.

Mr. Aaronson gave evidence, and said his claim rested on the fact that the defendant must have improperly loaded the van with the furniture as it struck a bridge on the journey. He said that he rang up the defendant and asked him if he could take a load of oak furniture to Birmingham, and he agreed to do so for £3. There was some delay in the return of the delivery note, and after about four or five days, much to his astonishment, the lorry was brought back by a different driver, with the top of the lorry completely smashed, and the furniture inside broken. He refused to accept it back in such a condition, and he saw the defendant with reference to it, and he said: "That will be quite all right, we will make good any damage done." Owing to the broken and scratched condition of the furniture, he told defendant it might cost £17 to put right, and defendant said he would see to it.

In cross-examination, the witness said that he never said it would be only £8 or £9.

Judge Cluer: If he did say so, why not jump in at once and say, "Here is the £8" and settle the matter. It seems to me a small sum, and if it is reasonable, why not pay. You undertake to deliver these goods whole, unless you stipulate otherwise.

The defendant produced an invoice of his, on which the wording appeared, "All goods carried at owners risk unless otherwise arranged."

Judge Cluer: But that does not mean that you can be careless.

Defendant: I say we were not careless.

Judge Cluer: Well, your driver was in going under the wrong bridge. You have no defence, and the only satisfaction you have is that you will partially support our honourable profession.

Judgment for the plaintiff for £20 7s. 6d., with costs.

COLLISION STORY.

ALTHOUGH two vehicles concerned in an accident in Queen Victoria Street bore no marks of collision, Judge Shewell Cooper, in the Mayor's and City of London Court, held that Messrs. Pritchett & Gold, and E.P.S. Co., Ltd., Dagenham Dock, Essex, were entitled to recover £64 2s. 9d. from Mr. F. W. Prowse, Fleet Garage, Hackford Road, Brixton, taxicab proprietor, following an accident which occurred on July 30th in Queen Victoria Street. The driver of the plaintiffs' motor lorry said that after a hold-up of traffic, he was proceeding from Blackfriars towards the Mansion House, when a taxicab overtook him on his off side. At the moment of passing the steering was knocked out of his hand and the lorry ran into the front of the Baynard Castle public house, knocking down a wall and receiving extensive damage itself. A companion of the driver said that after the accident he looked at the hub of the off side wheel of the lorry and saw a straight graze on the metal. He suggested that it had been caused by the rubber tyre of the taxicab striking the hub. The driver of the defendant's motor cab said he knew nothing of the accident until he was some 50 yards past the public house, when he heard a shout and pulled up. He had two passengers at the time and thought perhaps that something had fallen from his cab. He denied touching the motor lorry and said that his vehicle bore no marks of contact of any kind. A witness who was walking along the pavement towards Blackfriars said that as the taxicab passed the lorry he saw the lorry driver's hand fly up as if the wheel had been torn from his hand. It was contended on behalf of the plaintiff that the taxicab must have struck the lorry for the accident to have happened. On behalf of the defendant, however, Mr. Lever stressed the absence of any mark on either vehicle which could be ascribed to a collision between them. He pointed out that an expert called by the plaintiffs had said that mark described by the lorry driver's companion would not correspond to one caused by contact with the cab's tyre. The Judge said that it was a difficult case, but he came to the conclusion that the mounting to the pavement, and subsequent damage caused by the lorry, could only have arisen through some contact between the cab and the off side front wheel of the lorry. He gave judgment for the plaintiff for the amount claimed, with costs.

A PORTMANTEAU WHICH DISAPPEARED ON A CHAR-A-BANC TRIP.

IN the Bow County Court, before Judge Bairstowe, K.C., Annie Smith, of 19 Frederick Place, Bow, E., sued Messrs. A. & M. Jacobs, 387 Mile End Road, E., motor coach proprietors, to recover £29 7s. 6d., for the loss of a portmanteau handed to the defendants to convey to Broadstairs, when the plaintiff was going for her summer holidays, in August, by char-a-banc. She claimed that amongst the things in the portmanteau were a navy silk coat, value £10; a black georgette frock, £4; a navy frock, £3; three voile and one crepe de chine dresses, £5; and a large quantity of shoes and wearing apparel of all sorts. The portmanteau had disappeared when claimed at Broadstairs. The defence was a denial of negligence, as the agent who handled the portmanteau was not in the employ of the defendants, and they alleged that he was an independent contractor. The defendants stated that the firm ordered a coach to be supplied on August 3rd by a Mr. Lacy, who in turn ordered a coach from the Avondale Safety Coaches, of East Ham. Under the circumstances they alleged that the driver of the motor coach who took the plaintiff to Broadstairs was not in their employ, and they were not liable.

Mr. Samuel Lincoln appeared as counsel for the plaintiff, and said there was no appearance on behalf of the defendants. The plaintiff took a ticket in the ordinary way in the June for the journey to Broadstairs, and got a ticket for her luggage. This might have been handed over to some other contractor, but that had nothing to do with her.

Mrs. Smith said that when she arrived at Broadstairs the portmanteau was missing, with the result that she had to return the next day from Broadstairs, giving up her holiday, and paying the boarding-house landlady half her fees.

Judge Bairstowe said that failing to put in an appearance, the defendants were liable, and he would enter judgment for the plaintiff for the amount claimed, with costs.

ILLEGALLY PLYING FOR HIRE.

WHEN two men were summoned at the West London Police Court for plying for hire with an unlicensed vehicle the magistrate (Mr. Halkett) remarked that from his own observation there seemed to be a good deal of this sort of thing going on.

An officer of the Public Carriage Office, New Scotland Yard, agreed that it was prevalent, but said that the difficulty was that, owing to the enormous increase in the work of the department, the police were able to devote very little time to its detection.

The defendants, who had offered to take passengers to a football match in a Crossley tender, were fined 20s. each.

Birmingham Horse & Motor Vehicle Owners' Association.

THE Annual General Meeting of the Birmingham Horse and Motor Vehicle Owners' Association, held recently was presided over by the Chairman, **MR. O. CECIL POWER**, in the absence abroad of the President, Mr. Lawrence C. Tipper.

The Report of the Executive Committee for the past year, read by the Secretary, Mr. Thomas Hawkins, J.P., made reference to the continued progress of the Association and to its very satisfactory financial position. The Committee records that the Vice-Chairman, Mr. J. H. Stirk, has been honoured by being placed on the Commission of the Peace, and that a member of the Committee, Mr. Councillor Painter, was re-elected to the City Council last November.

During the year, many important matters affecting the members have received attention. The Birmingham City Council embodied in their recent Parliamentary Bill clauses to construct motor bus bodies, and to licence and supervise all motors and horse passenger-carrying vehicles, and the Association, in conjunction with the Motor Legislation Committee, had successfully opposed both clauses.

The suggested by-law, introduced by the Birmingham Public Works and Town Planning Committee, to the effect that a vehicle should not be used on a public highway for the purpose of carrying ashes, coal, refuse, etc., unless constructed and kept in repair so as to prevent any part of the contents falling on to the highway, and that no person should bring on to the public highway cart, vehicle, agricultural implement or machine without having previously removed, so far as practicable, any mud, etc., adhering to the wheels likely to injure the surface of the highway, was vigorously opposed by the Association, in conjunction with other trading organisations through the Chamber of Commerce, and resulting from the opposition it was referred back, and it is assumed that nothing further will be heard of it.

Regarding the Royal Commission on Transport the Committee have kept in close touch with other organisations in endeavouring to avoid any innovation that might be detrimental to the members' interests, and it is hoped that in due course satisfactory legislation will be passed for the betterment and improvement of the Transport Industry.

In connection with the prohibition of heavy transport over certain railway and canal bridges, it is pleasing to report that the railway authorities are not taking such drastic action as heretofore, and as the Ministry of Transport, in conjunction with local authorities, is considering the re-construction and re-conditioning of several weak bridges, it is hoped that this work will shortly be commenced and bridges made suitable for modern transport.

The traffic problems of the City are causing much thought and anxiety to members, and the City Council has decided to set up a Traffic Control Committee, and it is hoped that improvements will result. The members' trading interests are solely dependent on transport, hence every care must be taken to see that their rights and privileges are not in any way encroached upon.

Funeral Directors' Section.—This Section has had a very successful year, and general improvements have resulted from the friendly relationship which exists between the Parks and Cemeteries Committee and the members of the Section. Quite recently the members of this Section formed themselves into a Guild called "The Birmingham Funeral Directors' Guild," enabling them to extend their activities in various directions to improve the funeral directors' trade in general.

Cartage Contractors' Section.—The Cartage Contractors' Section has certainly improved during the year, and it is intended to hold regular monthly meetings. Many important matters have been dealt with.

Chars-a-banc Proprietors' Section. — The members of this Section have experienced a better period than for some years past, but owing to the increased competition of railway and omnibus companies, and more particularly to the development of the Birmingham Corporation bus routes, the future prospects are not too good as far as local trade is concerned.

Hackney Carriage Proprietors' Section.—The number of public hire hackney carriages exceeds the demand, and although applications have been made for a limitation of the number, the appeal has not yet been successful, but it is hoped and anticipated that a limitation of the number of licensed vehicles will result, and that better times will be experienced.

Co-operative Society.—The Co-operative Society, allied to the Association, has again had a successful year. Preferential prices to members for provender, etc., are arranged, and the Management Committee invite the members of the Association to take full advantage of the benefits that are to be derived from membership.

In moving the adoption of the Report and Balance Sheet, the Chairman referred to the urgent need for improving railway and canal bridges. He said that owing to the compulsory detour to avoid weak bridges members owning heavy vehicles had been greatly inconvenienced, and he was glad that prospects of improvements were favourable. He made an appeal to the members to do their best to increase the membership and improve the work of the Association.

The Report and Balance Sheet were approved and adopted.

Mr. Lawrence C. Tipper was re-elected President and Mr. O. C. Power and Mr. J. H. Stirk were elected trustees for the current year. Mr. G. Bayley was re-elected Hon. Treasurer and Mr. Byner, F.R.C.V.S., was re-elected Veterinary Surgeon. The following were elected as the Executive Committee for the current year:—Messrs. Albright, Badland, Edwards, Element, Gazey, Jones, Lambert, Mason, Painter, Shotton, Strong, Wood, Wheatley, together with the officers of the Association as ex officio members.

Mr. Thos. Hawkins was re-elected Secretary of the Association and thanked for his services.

A hearty vote of thanks to the Chairman concluded the business.

ANNUAL DINNER.

The Annual Dinner, which was held at The White Horse Hotel, Congreve Street, Birmingham, on February 5th last, was exceptionally well attended.

The Chairman, Mr. O. Cecil Power, M.Inst.T., presided.

Mr. G. H. Withington, President of the Birmingham Branch of the National Cyclists' Union, proposed the toast of the Association, and referred to the Road Traffic Bill. He said that those who drafted the Bill had thought it necessary to insert a speed limit for chars-a-banc. If speed restrictions were to be removed from private vehicles it might very well be removed from public service vehicles. With regard to the traffic question generally, Mr. Withington said that what was wanted was a Mussolini to regulate the traffic.

Mr. O. C. Power, responding, said that there were clauses in the Road Traffic Bill which, no doubt, would materially help members of the Association. No one, he thought, could grumble at the provision that the age of drivers of heavy motor vehicles should be increased from 18 to 21. He also approved of the provision to make dip and swivel headlights compulsory. On the other hand, there were grandmotherly proposals in the Bill. There was a suggestion that a driver should not drive more than five hours without having some sort of refreshment; then after he had gone on for another five hours he must not drive again within the 24 hours. "How some of us are going to carry on certain portions of our business under conditions like that I don't know," Mr. Power commented. "I hope that before the Bill becomes law certain clauses like those to which I have referred will be made to conform to what is right and proper for the various industries we are connected with." The larger vehicles on pneumatic tyres should be allowed to travel at thirty-five miles an hour, and some would like to see the limit 40 miles per hour. Thirty miles per hour was not enough.

Mr. Thomas Hawkins, J.P., Secretary of the Association, who also responded, said it was his opinion that control of the traffic should not be exclusively in the hands of the City Council. As the problem was one which affected all sections of Road Transport, the Control Committee should include representative members of all recognised transport undertakings.

The Rev. G. H. Moore proposed the toast of the Visitors, which was responded to by Mr. A. C. Baker, A.M.I.E.E., General Manager of the Birmingham Corporation Tramways Department. Mr. Cecil Cox also responded.

The Toast of the Chairman was proposed by Mr. W. H. Watson, and Mr. Power, responding, said he was pleased to take his full share of the work in improving the Transport Industry, which had become a very important factor nationally as well as locally.

Features of the Crude Oil Engine for Road Transport Use.

By George E. Forster, A.M.I.A.E.

THE development of the Crude Oil Engine for road transport work has now aroused such keen interest, and so rapidly has improvement been made that this type of internal combustion engine now threatens to challenge the supremacy of the petrol engine in certain spheres of operation.

Internal combustion engines fall into two categories, those employing external vapourising devices, such as carburetters burning a gaseous fuel where control of the quantity of mixture by some throttle device governs the speed, and engines burning a solid fuel which is injected direct into the engine, the speed being regulated by determining the amount of combustible fuel admitted.

THE BERNA DIESEL-ENGINED LORRY.

The former class embraces the petrol motor which is an explosion engine, its fuel requiring to be burned under an increasing pressure, and the latter an expansion engine more akin to the steam engine where the fuel is consumed under a diminishing pressure.

Upon small throttle openings the compression pressure in the petrol engine is variable and is governed by the amount of mixture admitted to the engine, while in the Diesel type engine as there is no throttle the compression ratio is constant.

When it is desired to increase the power of the petrol engine the ignition is advanced, causing the explosion to occur earlier before the piston has reached the top of the stroke, in order to create the necessary conditions of increasing pressure above mentioned relying upon the kinetic momentum stored up in the flywheel to carry it through this part of the cycle, though the explosion, which detonates with a hammer like blow, actually has to be overcome by the rotation of the flywheel and relies upon reaction, after the top dead centre has been passed, for the development of power. It must also be remembered that the piston momentarily comes to a standstill at the top of the stroke, consequently much of the heat is dissipated in losses through the water jackets instead of being expended in useful work while so caged in the cylinder head.

The petrol engine has a thermol efficiency of 22 per cent., while the crude oil engine exceeds 30 per cent.

It would be instructive now to examine the heat values of the fuel used in the respective types.

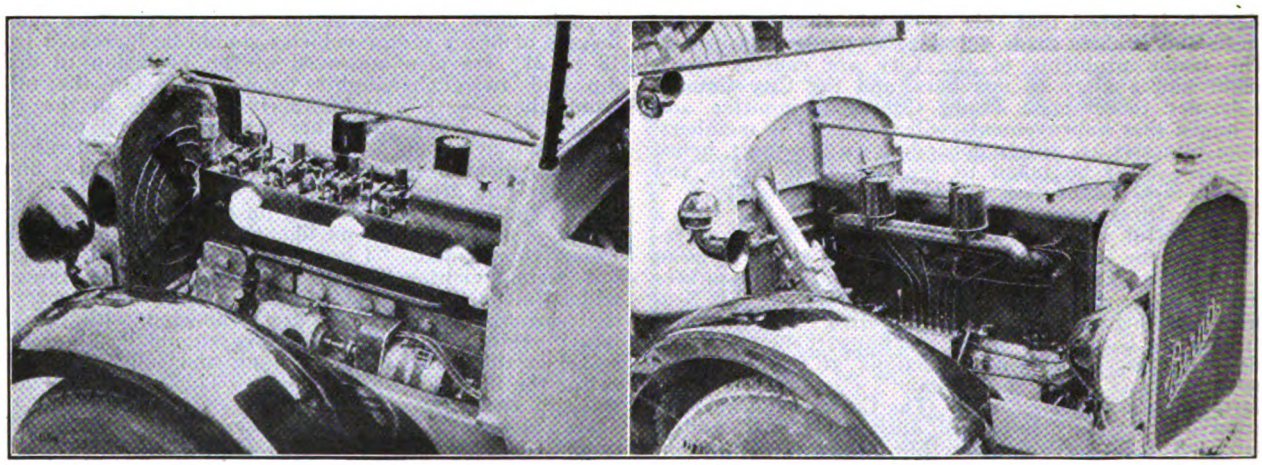
One pound by weight of commercial grade petrol costing 1/2d. per gallon would have a calorific value of 18,800 B.T.U., whereas one pound of diesel oil, costing one third the price, would contain 19,000 B.T.U., consequently not only does the crude oil engine use a cheaper form of fuel, but owing to its increased thermal efficiency it gets more out of it.

The result is a much better fuel consumption, 10 miles to the gallon with the Diesel as compared with 6 miles with a petrol engine, on vehicles of equal load capacity.

Again, the method of utilising the fuel is less wasteful with solid injection because while an automatic carburetter upon the petrol engine must be set so that nowhere in its varying range is the mixture too weak for the engine, and the unburnt gases are emitted in the exhaust. With the Diesel motor the cylinders are charged to their full capacity, every cycle with pure air, and the fuel oil is injected subsequently, always leaving a surplus of air after combustion and developing maximum power obtainable from the fuel forced into the engine.

We now come to a characteristic of the crude oil engine, which is unapproachable by any other type of prime mover with the exception of the steam engine, namely, the expansion of its fuel gases under diminishing pressure.

Combustion of the fuel in a Diesel motor does not take place until after it has been introduced into the cylinder on its working stroke. The air drawn into the engine has by then been compressed to about 500 lbs. per square inch and has reached such a temperature that the fuel which is injected at 1,100 lbs. is immediately ignited and at once expands keeping just ahead of the otherwise diminishing pressure in the cylinder which would be due to increased displacement as the piston descends.



NEAR AND OFF-SIDE VIEWS OF THE BERNA DIESEL ENGINE.

This pressure is maintained for practically the whole of the stroke with the result that the crude oil engine develops much more power over a wider range of engine revolutions and particularly at slow speeds, than the petrol motor.

In consequence, therefore, the Diesel "hangs on" better on hills and is a very suitable vehicle for dealing with really heavy loads or trailer haulage.

Digitized by Google

We will now proceed to examine in detail a representative Diesel engine, and are indebted to Messrs. Lawson Pigott Motors, of King Street, Hammersmith, who represent the interests of Messrs. Berna in the United Kingdom for particulars of the Deutz engine embodied in this chassis, which is the product of the Motorenfabrik Deutz, the oldest firm engaged in the manufacture of internal combustion engines anywhere in the world, this Company being, in fact, founded by Herr Otto, the pioneer of the gas engine.

They have sponsored nearly all the more noteworthy improvements in Diesel engine construction, which are accepted as common practice to-day. It is the knowledge gained from their long experience, their resources for research and the improvements borne of constant development, which are exemplified in the engine now reviewed.

This Diesel transport vehicle engine is of the solid injection pre-compression type, which is now recognised as being the most satisfactory form of design, providing for a wide range of speed and clean combustion whether idling or running upon full load.

As the power developed by a crude oil motor is directly proportional to the amount of fuel consumed the *main spring* of a Diesel engine is its fuel injection and fuel control system with the important addition of effective means to secure complete combustion of the fuel products, so as to avoid any deleterious exhaust.

These problems have confronted the designers of all types of Diesel engines, but more particularly the makers of light high speed Diesel motors, ever since their inception, but some have now been solved in the Berna Deutz in a remarkably simple way, by taking advantage of a special form of combustion head design enabling a much lower pressure fuel pump than normal to be made use of which is, in consequence, infallible in action and controlled injection varying in proportion to the engine's demands.

The Berna Diesel motor develops 80 h.p. at 1,300 r.p.m. There are six cylinders having a bore of 115 m.m. and a stroke of 170 m.m. A seven bearing crankshaft is employed. The cylinders are cast in pairs and fitted with detachable heads. The combustion stresses are taken through tie bolts passing through the head and extending below the main bearing housings of the crankshaft, this arrangement enabling a very much lighter form of cylinder crankcase construction to be employed.

Large exhaust and inlet valves are fitted in the head, while at the side of each combustion chamber is formed a pre-combustion chamber, the purpose of which is explained later.

The engine is governed to run at speeds between 500 r.p.m. minimum to 1,300 r.p.m. maximum.

Lubrication is by forced feed pump with a pick-up from the crankcase sump.

The starter equipment consists of a 6 h.p. Bosch motor and incandescent plugs in the cylinder heads operated by a push button on the dashboard.

The fuel service is provided for by simple pumps having only one suction and delivery valve and one pump plunger, these being operated by an inclined profile cam group which regulates the quantity of fuel distributed to the respective cylinders in proportion to the demands made upon the engine.

For the purpose of starting up in very cold weather the fuel pump is driven through an impulse gear which increases the pressure on the fuel in phase with the timing, positively ensuring its passage through the needle nozzles.

The injection of the fuel into the combustion heads is governed by flat seated spring controlled needle valves, which ensure a tight closure of the fuel pipe immediately after the injection, and prevent dripping and consequent fouling up of the nozzle apertures. The pumps and injectors are most carefully tested and, once set, cannot be upset by vibration or interfered with by hand.

The fuel consumption is only 190/200 gr. per h.p. hour on full load as against 250/300 gr. per h.p. with an external vapourisor type of engine.

The positioning of the cam group actuating the pumps so as to govern the ignition point is controlled from the steering wheel, the cam block being turned by means of a sleeve, having a suitable thread.

The fuel is injected at a pressure of 75 atmospheres into a small anti-chamber in the combustion head of which the cubic capacity is about one-fifth of the total combustion chamber space.

A sufficient compression takes place in this chamber to cause catylitic ignition of any fuel injected into it, and when running light only about 20 per cent. of the fuel normally consumed is injected.

A BERNA TYPE G.5.D. 6-7 TON DIESEL-ENGINED LORRY WITH 6-7 TON BERNA TRAILER.

On load the ignition first takes place in the pre-combustion head from which the fuel is blown in finely atomised particles into the combustion chamber proper to which, of course, the flame promulgation extends effecting complete combustion.

A further advantage of the pre-compression chamber method is that owing to its small size and isolation the heat developed in it remains practically constant even under light loads.

With a pre-compression chamber engine the use of an artificial source of heat when starting up from cold is necessary. This is provided for by the provision of electrically heated plugs in the combustion head, the current being supplied from the starter battery. These plugs are wound with heat resisting steel wire which causes their incandescence when contact is made by a press button on the dashboard.

While the engine remains hand warm, it can be started without the aid of the plugs.

It has been suggested that as the number of crude oil lorries increase, the present low price of the fuel will be forced up. When it is stated that an average motor ship consumes 80 tons of fuel oil per day, and as there are nearly 3,000 such vessels in service using 240,000 tons daily, while one lorry doing 15,000 miles per annum only uses 6 tons in a year, the absurdity of this argument is at once apparent.

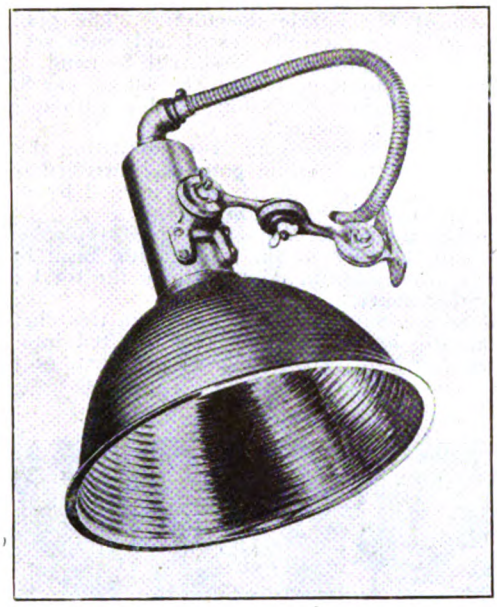
Motor Notes.

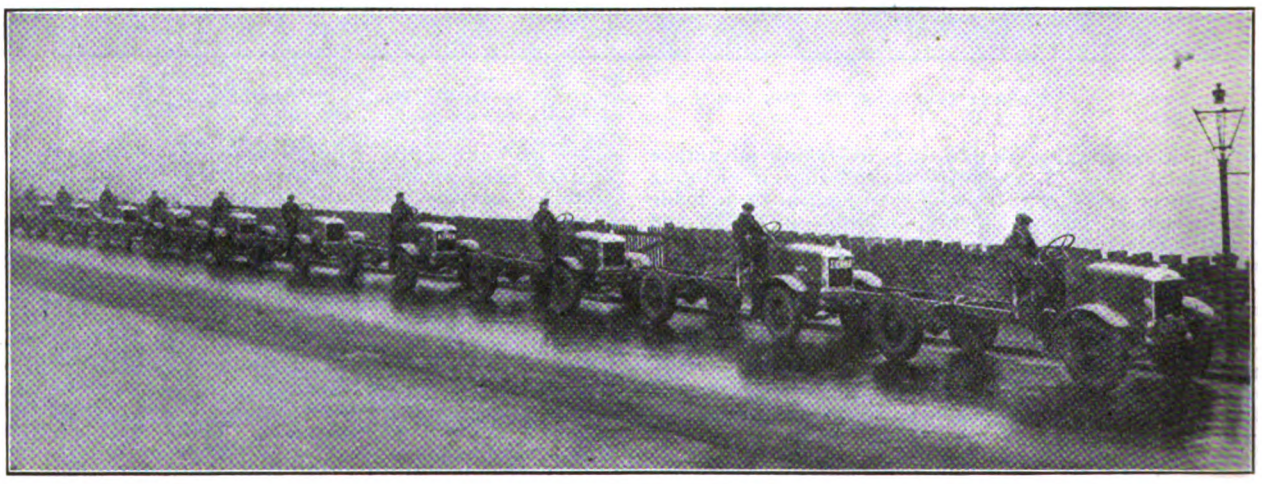
Flood Illumination.—Owners of motor showrooms, garages, service stations, and other premises where good exterior lighting is of importance are likely to be interested in a new form of electric flood lamp. This is known as the Priest-Lite re-active ray super floodlight. It is sold by Equipments Limited, of 159-161, Great Portland Street, London, W., who inform us that it



THE PRIEST-LITE FLOOD LAMP.

operates upon the principle of re-active rays. There is no centre beam, and an absolutely uniform projection of light is provided. The reflector contains a bluish element which bleaches out the yellow rays and makes possible the projection of a real white light, the nearest possible approach to actual daylight. It is unbreakable and its reflecting surface will not tarnish, wear off or break. It is economical in current consumption. It is also suitable for the illumination of garage yards and parking places. It has a universal mounting, enabling its light to be projected in any required direction.

B.P. Karriers. — The photograph shows a convoy of



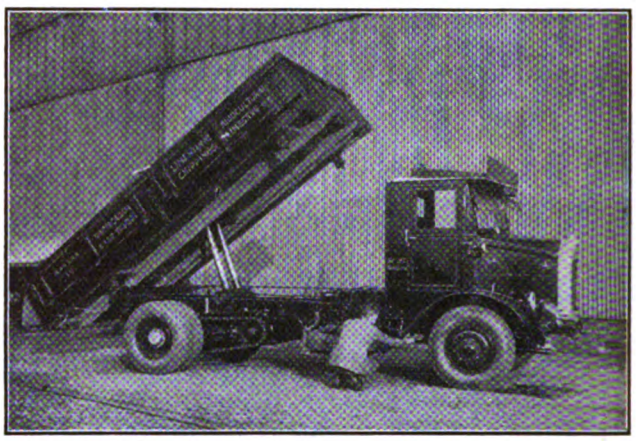
A FLEET OF 50-CWT. KARRIERS FOR THE BRITISH PETROLEUM CO., LTD.

50 cwt. Karrier chassis recently leaving the works of Karrier Motors, Ltd., Karrier Works, Huddersfield, and form part of a large batch of similar vehicles at present being manufactured to the order of the British Petroleum Co., Ltd. The machines are of the "CY2" type, modified to carry a net load of 50 cwt. The chassis are fitted with four cylinder engines developing 47 h.p. The wheels are shod with 34 in. by 7 in. pneumatic tyres front and 36 in. by 8 in. rear, all mounted on Sankey wheels. Tecalemit Zerk lubrication system is fitted and both the tyre pump and speedometer are driven from the gear box.

Albion Orders.—United Motors, Ltd., of London, have placed an order with the Albion Motor Car Co., Ltd., Scotstoun, Glasgow, for sixteen 30 cwt. chassis, which are to be used for running under contract for Debenham and Freebody.

Tangye Oil Engines.—We have received from Tangyes, Ltd., Cornwall Works, Birmingham, their latest catalogue No. 382, giving full particulars and illustrations of their low compression cold starting heavy oil engines.

The First K.S. Diesel Lorry Delivered.—Kerr, Stuart



KERR, STUART'S FIRST DIESEL LORRY DELIVERY.

and Co., Ltd., California Works, Stoke-on-Trent, have sent us the accompanying illustration of a diesel engined lorry as recently described in these pages. This particular lorry represents the firm's first delivery and is in service for F. W. Lougher & Co., Pontalun Quarries, Bridgend.

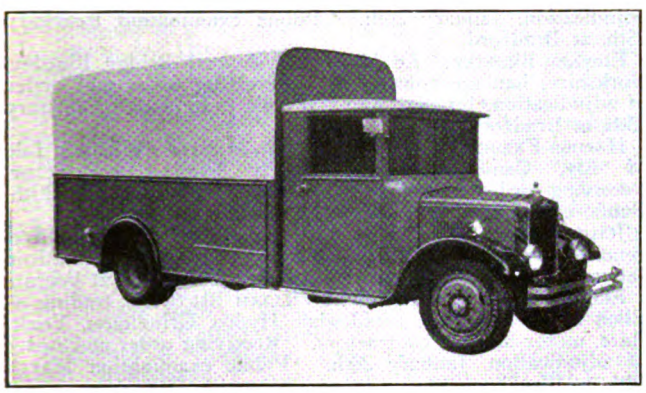
Indestructible Glass. — We have received from the British Indestructo Glass, Ltd., Chase State, Park Royal Road, London, N.W.10, an excellently compiled catalogue describing and illustrating the firm's "Indestructo" glass which is unsplinterable because it is a laminated product of alternating layers of polished plate glass bound with a flexible transparent material. Visibility and protection are the two outstanding claims made for this glass.

"Lodemor" Trucks. — We have received particulars from the Laycock Engineering Co., Ltd., Victoria Works, Millhouses Station, Sheffield, of a new type of industrial truck known as the "Lodemor." It is a truck of 25 cwt. with which it is stated it can climb a gradient of 1 in 8,

Digitized by Google

and on the level it can draw an extra 2 tons on the trailer. The speed is 8 miles and its price is £149. Power is provided by a 500 c.c. four-stroke petrol engine, and the chassis is mounted on coil springs front and rear, and the wheels are fitted with 15 in. by 3½ in. solid rubber tyres. Two speeds are provided. The back axle is the crown and bevel type and is driven through a universal jointed propeller shaft.

The B.A.T. 2-ton Tilt Van.—The 2-ton tilt van illustrated, is mounted on a B.A.T. 27/60 h.p. 6 cylinder cruiser chassis. The body is framed in oak and ash and has deal floor boards, tilt hoops boarded and covered with prepared cloth; the interior is slatted and the outside is panelled in aluminium; there is a hinged tailboard with a pair of vertical doors above; the separate enclosed driver's cab has wide side doors and frameless plate glass drop lights with mechanical winders and plate glass windscreen in metal frame. There is a locker under driver's seat and one in side panels below frame for spare petrol tins, etc.; the wheel arches are boxed square inside. The



2-TON TILT VAN MOUNTED ON THE B.A.T. 27/60 H.P. 6-CYLINDER CRUISER CHASSIS.

dimensions are: length, 12 ft. 6 in.; width, 6 ft. 3 in.; height, 6 ft. 6 in.; cubic capacity, approximately 495 cubic ft.; floor approximately, 2 ft. 6 ins. from ground loaded.

Approved by Scotland Yard.—Harris & Hasell (1929), Ltd., St. George's Road, Bristol, manufacturers of the B.A.T. Cruiser chassis for 20 passengers or 2-ton loads, announce that the "Cruiser," which is built to Ministry of Transport regulations, has now been definitely approved and passed by Scotland Yard for service in the Metropolitan area. Immediate deliveries of the Cruiser chassis are available.

Commer Car Deliveries.—Amongst recent interesting deliveries made by Commer Cars, Ltd., of Luton, are the following:—4-tonners for Maynards, Ltd., Reynolds Sons & Co., Ltd., Parke, Davis & Co., and the English

A 4-TON COMMER FOR MAYNARDS, LTD.

Electric Co., Ltd., Rugby, also a 2-ton van for Blades, East & Blades, Ltd.

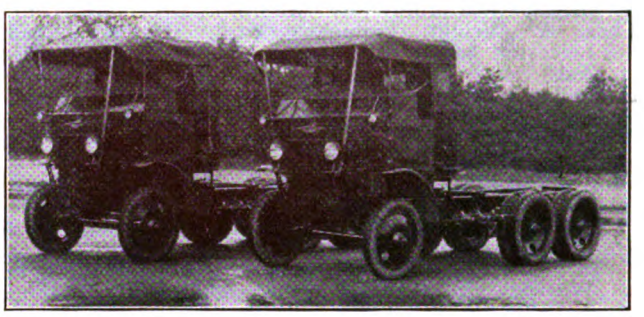
To Adopt Double-Deckers.—To enable them to cope with heavier traffic, Southport Corporation Tramways Committee has been viewing a number of double deck motor buses, including A.E.C., Thornycroft, Crossley, Vulcan and Leyland.

"Germ" Lubricating Oils.—Our illustration shows two Sentinel wagons with trailers hauling a consignment of 12,000 gallons of "Germ" lubricating oils from the works

TWO SENTINEL WAGONS WITH TRAILERS TRANSPORTING "GERM" LUBRICATING OILS.

of the Henry Wells Oil Co., Ltd., Salford, Lancashire, to the Manchester Docks for export.

Garners for the War Office.—The photograph shows two of a number of Garner Light six-wheeled chassis



GARNERS FOR THE WAR OFFICE.

supplied under contract to the War Office, complete with driver's cab and fittings for army tools. The cab provides full protection for both driver and passenger. It is detachable as one unit and is built of angle steel framing, reinforced in all corners and covered with double-sided galvanized steel Plymax with aluminium mouldings to finish. Full and immediate accessibility to the engine is provided by the Garner patent system.

Lubrication for Morris Vehicles. — Sternol, Ltd., 110 Cannon Street, London, E.C.4, announce that Morris Motors, Ltd., have decided to recommend officially Sternol W.W. Medium for the engine lubrication for Morris cars and liquid Ambroleum for gear box, back axle and chassis lubrication.

A Testimonial for Bean Cars.—Bean Cars, Ltd., Tipton, near Birmingham, have received the following letter from the Revo Electric Co., Ltd., Britannia Works, Tividale, Tipton, Staffs:—"We think you may be interested to know that one of our fleet of Bean 30 cwt. vans has just completed 80,000 miles. This vehicle was purchased from

THE BEAN 30-CWT. VAN REFERRED TO IN TEXT.

you on the 3rd April, 1928, and during the whole of this period, it has only been off the road three working days for repairs. Another van purchased from you 31st January, 1929, has just completed 48,000 miles, with four working days off the road for repairs. The driver's report still reads "Van O.K." This speaks volumes for your products, and our judgment was good when we standardised Beans for our 30 cwt. class."

County Court Judgments.

THE following returns from the Registry of County Courts' Judgments, Whitehall, have been received relating to judgments entered up in the respective County Courts of England and Wales. Publication does not imply inability to pay. Many judgments may have been settled between the parties or paid. Judgments settled otherwise than through the Court may appear unless "satisfaction" is entered up within twenty-one days from judgment or allocatur. Registered judgments are not necessarily for debts. They may be for damages or otherwise, they may relate to actions *bona fide* contested between the parties, or they may be against defendants, liable in a representative capacity, and not personally; but no distinction is made on the register. Judgments are not returned to registry if satisfied in Court books within twenty-one days.

Road Transport and Hours of Employment.

THE report of the Annual Meeting of the London Cartage and Haulage Contractors' Association, which appears in this issue, should be read with the keenest interest by every member of the road transport industry, and more particularly those engaged in goods transport by road. It was unfortunate that the meeting of members was not a larger one, and it is difficult to decide whether this was due to apathy or to great confidence in the officers of the Association. There never was a time when it was so imperative that every member of the trade should support his association, not only by his subscription, but by his presence at important meetings and by taking an active interest in what is being done. Road transport is being attacked on all sides, it is being overwhelmed by heavy taxation, it is seriously affected by railway competition, and now it is face to face with legal restrictions which threaten to make it impossible for its work to be carried on, on a remunerative basis. Our report, which is taken as the Minutes of the Annual General Meeting, will reach members of the industry not only in London but in every part of the United Kingdom, and we commend to our readers the Presidential address, dealing as it does with matters of the very greatest importance to the trade. Two matters are discussed at some length, first the Road Traffic Bill, now being considered in Committee of the House of Commons, and secondly the Hours of Industrial Employment Bill, which has already been referred to by the Prime Minister and which will shortly be introduced by the Minister of Labour. The Road Traffic Bill will have a very serious effect on road transport, and the vital clause in the Bill has already been passed in Committee, namely, Clause 19, which deals with the number of hours the driver of a motor vehicle is allowed to drive without a break and the total number of hours he may be employed at one time. This clause was fought very strenuously by the associations representing different sections of road transport, and it was only after long and protracted negotiations that an agreement was come to and a compromise effected, leaving some loophole for elasticity, without which it would be impossible for road transport to be carried on efficiently and successfully. Another point stressed by Mr. Turner, the President of the Association, was the speed limit for goods vehicles. At the present time these limits are 20 miles per hour for vehicles fitted with pneumatic tyres and 16 miles per hour for those fitted with solid tyres. This is in contrast to similar passenger vehicles, the speed limit of which is 35 miles per hour. We have already stated our belief that the distinction between the two classes of vehicles as regards speed will be unworkable, and we are glad to see that this point is being pressed by the Association with all its influence. We are convinced that if the clause goes through as it is, we shall have just the same anomaly as we have at present of vehicles habitually breaking the law, because the law is unreasonable and impossible to carry out. In our last issue we dealt with the Washington Convention, giving an article specially contributed which set forth the points of this Convention as it affected road transport. The proposed Hours of Industrial Employment Bill was discussed at considerable length by Mr. Turner, and although the Bill is not yet published, the Association, as one of the chief parties interested, have had access to a special memorandum giving its main features, to enable them to submit their views. If the Bill should become law, imposing an eight hours day and a forty-eight hours week, without either exempting the road transport industy or making concessions which will minimise its hardships, then road transport will receive another serious blow against its prosperity. It is for this reason that we urge very strongly upon every member of the road transport industry his duty to support his association and through it the National Road Transport Employers' Federation, who are fighting his battles and who look to him for the utmost support which he can give.

The Channel Tunnel Report.

Those who have followed the vicissitudes of the Channel Tunnel Company and have admired the way in which Baron Emile d'Erlanger and his colleagues have kept their end up and have maintained their confidence in the practicability of a channel tunnel, will have read with great interest the report of the Channel Tunnel Committee appointed in April last. The report, which is an eminently practical one, for the first time considers the question of the feasibility of a Channel Tunnel solely from the economic standpoint and has nothing to say about the military arguments which have formerly been so strongly opposed to the scheme. The Committee took evidence over a period from April, 1929, to February, 1930, from Government Officials, Railway Managers and Engineers, from the Chairman of the Channel Tunnel Company, and from others with expert knowledge interested in the scheme. As a result the Committee consider that the scheme put forward by the Channel Tunnel Company was the only practicable one deserving of serious consideration and they are of opinion that the geological and engineering difficulties likely to be encountered could be successfully overcome. In stating this, however, they point out that there must always remain an element of doubt until the pilot channel, which it is proposed to construct at an estimated cost of £5,600,000, has been successfully driven right across the Channel. This means that the scheme is of a highly speculative character and must be considered as such by those who are prepared to undertake it. At the same time it is a risk which the Channel Tunnel Company are ready to take, and they have no hesitation in saying that the sum of £30,000,000 required for the entire undertaking can be found without difficulty. The Committee considers that the work should be carried out by private enterprise and should not be accorded any special financial assistance by the Government. This, we believe, is in accordance with the views of the promoters of the scheme and should not adversely affect its progress. Although the construction of the tunnel, to be spread over some seven years, will provide work for a considerable number of skilled men, it is not looked upon as a scheme which will seriously benefit unemployment. The Committee believes that a Channel Tunnel could be built, maintained, and operated by private enterprise at a cost which would permit of the traffic through it being conveyed at rates no higher than those at present in force on the short cross-channel route. Naturally the railway companies are closely interested in the scheme, which may affect them either advantageously or adversely according to their geographical position. The Southern Railway is particularly interested and on former occasions the South Eastern & Chatham Railway, now part of the group, strongly supported the proposals for a tunnel, realising that the effect would probably be to concentrate continental traffic over their system and take it away from other railway companies. The position is somewhat different now, but Sir Herbert Walker, in his evidence, stated that should it be decided to construct the tunnel, it would have the support of the Southern Railway. The Committee considered very exhaustively the question of traffic through the tunnel, both for passengers and goods. The effect is difficult to estimate as regards passengers and it may be that the Continent will gain considerably more than this country will by making it easier to get to the other side. It is felt by many that the advent of a Channel Tunnel will be a bad thing for this country as enabling passengers to get abroad more easily, to the detriment of their own country and its health and seaside resorts. We do not think this fear is likely to materialise as changes of this kind have a way of finding their own level and adjusting themselves so that on balance the result is much the same as before. The Committee considered other methods of cross-channel communication, including a Channel ferry, a combined railway and road cross-channel bridge, as well as other proposals. The only one practicable on financial and technical grounds was that for a channel ferry, but they were satisfied that the Dover-Calais and Folkestone-Boulogne routes were unsuitable for such a service.

Hydra-Headed Transport.

Twenty-one motoring associations and clubs have recently drawn up and sent to the Chancellor of the Exchequer a memorandum of protest against the present excessively heavy motor taxation. It is a curious thing that these motoring organisations did not band themselves together for the purpose of promoting the interests of the industry as a whole many years ago. It is good, however, to note that the various classes of motorists are now beginning to realise that they depend upon each other for their welfare and prosperity. The general public has now to be made to appreciate how much its happiness and comfort are depending upon fluid transport. It is shown in the table appended to the memorandum in question that the estimated revenue derived from motor taxation, including the petrol duty, is £42,300,000 for the current year, this being 70 per cent. of the £60,000,000 estimated for road expenditure for the current year. The heavy taxation has been imposed avowedly to restrict road transport, but it is a well known axiom that to tax transport is as great an evil as to treat capital as revenue. The whole history of transport shows it to be the most important factor which, above all others, must be fostered and nurtured; it is, in short, the prime mover of industrial progress and indeed of civilisation itself. Time and again it has been proved that the only practical method of developing sparsely populated productive countries is to provide cheap transport, in many instances by subsidising it, so that the produce can be moved cheaply from the source of production where it is not required to any extent to the place where it is required to a great extent. Without such encouragement Great Britain and many other parts of the world would to-day be without cheap supplies of foods, clothing and other essentials to existence. Why, then, when the various forms of transport have created sufficient volumes of traffic to become self-supporting, should we proceed to tax them? We do not refer to any particular form of transport but to all forms of proven practicability—rail, water and road. Air transport is not yet self-supporting and therefore has to be subsidised. It proves how hydra-headed transport is. It is the one commercial enterprise which refuses to be killed, for the simple reason that we have to admit we cannot live without it. If we tax it, we tax it to our hurt. Air transport is raising a healthy head in spite of the barrenness of the soil on which it grows. We cannot help ourselves. We are compelled to water and fertilize the barren soil because we know full well that our very existence, not in the very remote future, may be entirely dependent upon this youngest of all forms of transport. The railways in this country have recently obtained some slight preference in the matter of taxation, but, we regret to say, not on the principle that the taxation of transport is bad policy but rather on the principle of "robbing Peter to pay Paul." Of all forms of transport, until air transport made its appearance, road transport has had the hardest battle to fight for its existence. It

Digitized by Google

is obvious now that it has reached a stage of adolescence, and this memorandum which has been sent to the Chancellor of the Exchequer should, if it results in no immediate advantage, be a timely reminder that road transport has become a factor in our policy too strong either to be imposed upon or to be ignored. As far as industrial transport is concerned, the fallacy of taxing it can be simply explained. Suppose, for instance, the householder insisted upon his tradesmen, who supply him with commodities, paying for admission to his premises; they would either avoid him or make an additional charge for the goods with which they supply him and in the end he would be the loser. He would injure himself and he would injure his tradespeople because he would pay more and get less or get goods of an inferior quality. One of the main reasons that the householder pays local rates is that he may provide easy access to his premises so that he may obtain his goods cheaply. If he pays directly and collectively he has a voice in the expenditure of the money so that he may obtain best value for it. If he taxes the individual he loses control and pays more. The only reason that the taxation of road transport has reached such disproportionate magnitude within the British Isles is that the road transport industry has hitherto been disunited and a victim of misleading propaganda, one section of it being against the other and one form of transport against the other. The railways now have the powers they sought and there can no longer be any reason why they, with their enormous interest, should not throw in their weight in the cause of transport generally, so that a transport system may be built up which will add to the prosperity of the British Isles and the British Empire.

Traffic Control by Light Signals.

An interesting experiment is being made at Ludgate Circus, where traffic is to be controlled mechanically by automatic coloured lights, regulated by a policeman placed in a kiosk on the Farringdon Street side of the Circus. This is following the precedent set by various important towns in the provinces, but it is the first attempt to adapt this system to London and if it is successful it will undoubtedly be extended to other important thoroughfares where there is a large amount of cross traffic. It is anticipated that the new system will increase the safety of the streets for both vehicles and pedestrians; will produce an easier and more regular flow of traffic, with consequent reduction of congestion and delay, and will effect economy by reducing the number of police constables required to regulate the traffic. It is proposed to have four sets of double signals, one at each corner of the Circus controlling the four important streets which meet there. Knowing Ludgate Circus as we do, we do not see any reason why the experiment should not be successful and the only difficulty which we foresee is with regard to traffic wishing to proceed up St. Bride Street, the fifth turning, which adds very considerably to the traffic congestion by reason of motor buses and other vehicles wishing to turn and having to wait in the centre of the Circus until they can get across.

Street Accidents.

The subject of street accidents in all parts of the country, but particularly in London, is a perennial source of anxiety, and the latest returns do not tend to make those responsible any easier in their minds concerning alterations which are being made in traffic regulations. We consider that, quite rightly, the authorities are emphasising more and more the need for increased care on the part of pedestrians and we believe that lack of care is the reason for a very large percentage of the accidents which everyone deplores. We strongly advocate a new campaign to alter the rule of the road for pedestrians, making it the rule that they should walk on the left of the pavement instead of the right and in this way face the oncoming traffic. This change was strongly advocated some years ago by the National Safety First Association, but unfortunately was not supported by those in authority, with the result that at the present time every pedestrian seems to be a law unto himself and walks either on the left or the right or in the centre of the pavement at his own sweet will. If it were made the rule that all pedestrians should walk on the left side of the pavement we believe that a very big step forward would be taken in reducing the number of accidents due to the carelessness of the pedestrian. The Minister of Transport, in Committee of the Road Traffic Bill, spoke strongly about the responsibilities of pedestrians and suggested that the time was coming when heavy penalties might have to be imposed on pedestrians who were the cause of accidents.

Unloading of Vehicles.

The notice, which we published in our last issue, recently issued by the Minister of Transport, dealing with the loading and unloading of vehicles in London deserves careful attention and its results will be watched with special interest by firms engaged in road transport in the London area. The order, which covers the areas comprising Piccadilly Circus, Marble Arch, and St. Giles' Circus, together with short lengths of the thoroughfares leading into these areas, prescribes regulations for dealing with traffic which have the effect of curtailing very drastically the right of standing in these streets during schedule hours. It is stated that this is an experiment and close observation is being kept to see the effect.

Personal Notes.

Derby Transport Appointment.—Mr. S. G. Davy, Traffic Superintendent, Exeter Corporation Tramways and Omnibuses, has been appointed Traffic Superintendent of omnibuses and tramways under the Derby Corporation, and he will take up his new duties on May 1st. Mr. Davy commenced his transport career in 1912 with the Rotherham Corporation. He joined H.M. Forces on the outbreak of the Great War and served with the York and Lancaster Regiment, and whilst in France was promoted to Company Sergeant-Major and in 1918 was gazetted Second-Lieutenant and posted for duty with his old regiment. At the end of the war he again took up his work under the Rotherham Corporation and held the post of Traffic Inspector from July, 1919, to May, 1924, when he was appointed Traffic Superintendent, Exeter Corporation Tramways and Omnibuses.

Earl of Cottenham Joins Lancia (England), Ltd.—The Earl of Cottenham, who is well-known in the motoring world both as a racing driver and a writer on motoring matters, has joined Lancia (England), Ltd. In this company Lord Cottenham will occupy himself in many things, but principally as head of the experimental department.

A Motor Consulting Engineer.—Major E. G. Beaumont, O.B.E., A.M.Inst.C.E., M.I.Mech.E., M.Inst.T., the son of the late Mr W. Worby Beaumont, has resumed work as a consulting engineer, at 20, Essex Street, Strand, W.C.2. Major Beaumont was associated with his father in his practice as a consulting engineer, prior to 1914. On the outbreak of war he was attached to the Inspection Branch, Mechanical Transport, Royal Army Service Corps, and was engaged throughout the war on technical duties and towards the end as Assistant Senior Inspector at the War Office. He returned to civil life with the rank of Major and the O.B.E. Military class. For over nine years Major Beaumont held the position of Motor Superintendent of the Anglo-American Oil Co., Ltd., and during this period the motor fleet increased from 700 vehicles up to a total of nearly 3,000. In this connection he has had extensive experience of road transport operation and maintenance problems. Apart from works training and subsequent power plant

Digitized by Google

experience Major Beaumont has been professionally engaged for over 25 years in connection with motor vehicle design, construction, and operation. During the very active development period 1903 to 1914, covering the introduction and rapid increase of use of commercial vehicles for passenger and goods transport, his work brought him into contact with Government Departments and public authorities at home and abroad, and also with the principal operating companies and manufacturers of all types of vehicles. He was President of the Institution of Automobile Engineers, 1927/8, and now returns to the work which was interrupted by the War. He will be occupied primarily in the automobile engineering and road motor transport field. Mr. Leslie N. Burt, M.I.Mech.E., who has been engaged continuously with the same practice for over 25 years will collaborate, particularly in general engineering matters.

MAJOR E. G. BEAUMONT, O.B.E.

A Popular Chairman. — Mr. Edward Charles Cooke, this year's Chairman of the Association of Railway and Forwarding Agents, presided at the Annual Dinner of the Association, a report of which appeared in our last issue. Mr. Cooke is head of the firm of Elmore, Cooke & Co., Ltd., shipping and forwarding agents, of 4½, Marshall Street, Regent Street, London, W. 1. The firm undertake the collection and packing of all classes of merchandise and ship to all parts of the world. They have their own fleet of road vehicles which includes Chevrolets and Fords. A speciality of the firm is the packing of fine art treasures, and they have carried out contracts for the transport of old masters in connection with exhibitions held in this country as well as overseas.

MR. EDWARD C. COOKE.

Mr. T. B. Keep Appointed Director and General Manager of Commer Cars, Ltd.—Mr. T. B. Keep, who was originally associated with the Dennis Company and was for some years a Director of Rootes, Ltd., has now resigned his position with the latter company and has been appointed Director and General Manager of Commer Cars, Ltd., commercial vehicle manufacturers, Luton, where great things are confidently anticipated.

L.N.E.R. Continental Traffic Organisation. — We are officially informed that the L.N.E.R. Company, in consequence of the recent death of Mr. H. Allaway, who was Assistant General Manager (Shipping) and Continental Traffic Manager (North), have appointed Mr. A. L. Gibson, Continental Traffic Manager (South), to be Continental Traffic Manager to the Company. The Company have also appointed Mr. J. H. Smith, at present Assistant to the Continental Traffic Manager (South), as Assistant to the Continental Traffic Manager in respect of the Humber Services, with Headquarters at Hull.

* * *

Mr. A. L. Gibson has been in the service of the London and North Eastern Railway Company for more than 30 years, having joined the Great Eastern Railway in 1899, entering the office of the General Manager. His experience of Continental traffic has been a long and wide one and he was engaged on special work in Paris during the Great War. Following this, in 1919/1920, he was attached to the General Continental Agency connected with the Company, and in the latter year was appointed Assistant Continental Traffic Manager. In March, 1924, he was promoted to the position of Continental Traffic Manager (South).

MR. A. L. GIBSON.

MR. T. B. KEEP.

Mr. John Moore joins A. J. Stevens & Co. (1914), Ltd.—Mr. John Moore has joined A. J. Stevens & Co. (1914), Ltd., the well-known passenger and commercial vehicle manufacturers of Wolverhampton, and holds a responsible position. Mr. Moore's experience in the commercial vehicle world dates back many years, and he will be remembered as holding a responsible position with Guy Motors, Ltd.

Mr. H. Mozley's Retirement.—Mr. H. Mozley, General Manager of the Burnley Corporation motor bus and tramways undertaking, retired on superannuation on 29th March. Altogether Mr. Mozley has a record of 62 years service in connection with transport.

MR. JOHN MOORE.

Swindon Transport Appointment. — Mr. H. C. W. Ludgate, General Manager of the Morecambe Corporation Omnibus Department, has been appointed General Manager of the Swindon Corporation Passenger Transport Department.

Digitized by Google

Road Traffic Bill.

Progress in Committee.

No doubt by the time this issue is in the hands of our readers Standing Committee C of the House of Commons will have completed the discussion of Part I of the Road Traffic Bill dealing with the regulation of motor vehicles. At the time of writing the Committee have disposed of 22 clauses. There are 34 clauses in Part I.

Age of Drivers.

Clause 9 of the Bill places restrictions on driving by young persons and sub-section (3) of this clause reads: "A person under twenty-one years of age shall not drive a heavy locomotive, light locomotive, motor tractor or heavy motor car on a road unless on first applying for a licence after the commencement of this Act he satisfies the licensing authority that he was during the six months immediately preceding the first day of January, nineteen hundred and thirty, regularly engaged in driving a motor vehicle of that class."

Amendments moved by the Minister of Transport to leave out the words "regularly engaged in" and to insert the words "in the habit of," and at the end of the sub-section to insert the words "Provided that a vehicle being an agricultural tractor shall not be deemed to be driven on a road within the meaning of this sub-section while it is being so driven in the course of the internal operations of a farm," were agreed to.

Sub-section 2 of this clause reads: "A person under seventeen years of age shall not drive a motor vehicle other than a motor cycle on a road." Lieut.-Colonel Ashley moved to insert at the end of this sub-section the words: "(3) A person under eighteen years of age shall not drive a heavy motor car on a road." He said that as the Bill stood no one was to be able to drive a heavy motor car until he had reached the age of 21. He had no objection to the fact that 21 should be the age for heavy locomotives, light locomotives and motor tractors, but he thought that the Government had gone too far in including heavy motor cars in the restrictions. Two communications had reached him from the motor manufacturers and from the Showmen's Guild pointing out that there might be hardships to individuals if the provisions in the Bill were adhered to and that a situation would be created which might even be prejudicial to the public interest. The motor manufacturers pointed out that the limit of 21 would prevent test drivers under that age in factories driving heavy vehicles to and from the works and would also interfere with the existing practice of owners of commercial vehicles of training lorry drivers by employing them as lorry boys with occasional spells of driving under experienced regular drivers. The Showmen's Guild of Great Britain made the point that many of their young men of 18 who were strong and healthy owned their own motor lorries which they used for transporting their shows, etc., and to employ a second person as driver would be quite impracticable. His remarks applied to cars unladen at the weight of 2½ tons which, when fully laden, might go up to five or six tons. It seemed a little incongruous that men should not be allowed to drive such cars when the Bill allowed a youth to drive an ordinary car which might go up to three tons.

Colonel Howard-Bury suggested that the age might be raised by one or two years. The existing age was 17 and it was proposed to suddenly raise it to 21. Was that fair to all the existing firms who had men of 18, 19 and 20 years of age in their employment? What was going to happen to the men who were being trained and kept for the purpose of driving? It was the practice to use these younger men as a "second string." He agreed that it was not usual to give them charge of a vehicle until they were about 20, but there were occasions when it was necessary for these second men to be on a heavy lorry.

The Minister of Transport said he agreed that when a person was approaching the age of 21 some provision should be made whereby he might be gradually evolved into a fully competent and responsible driver, but with the large scale operations of modern transport undertakings it was highly probable that in a large number of cases those undertakings could give a man the necessary training on the lighter vehicles, where it was legal for him to drive when he was under 21 years of age. In-so-far as a man was allowed to practice on private property, in commercial goods yards, etc., it was perfectly competent for him to receive training a little before the age of 21 in readiness for the time when he might lawfully become a driver. The driving of the lighter heavy motor vehicle of 2½ tons unloaded but which might have a total weight of five to six tons was a fairly responsible task. When it came to driving a vehicle beyond the private car and beyond the light goods vehicle they got into the category of heavy motor cars and he felt there was much to be said for the view that had been put forward that it was a man's job and not a youth's. Public service vehicles were not covered by the amendment, and he was glad that the Right Hon. Gentleman did not object to the age of 21 for the driving of public service vehicles. Quite of number of the more reputable public service vehicle firms, before any question of compulsion arose, decided in their own interest that they would fix the minimum age for drivers of such vehicles at 21. In the case of the transport of commercial goods it really ought to be done.

The amendment was rejected by 26 votes to nine and the clause, with minor amendments, was ordered to stand part of the Bill.

The Speed Limit.

There was considerable discussion on Clause 10 of the Bill dealing with limits of speed. This clause makes it unlawful to drive a motor vehicle at a speed greater than the speed specified in the First Schedule to the Act. There is to be no speed limit for the private car. The speeds proposed for other mechanically propelled vehicles will be discussed when the Schedules to the Bill come up for consideration by the Committee.

Mr. Hall-Caine, who moved that the speed limit for any motor vehicle should be forty miles an hour, said that as he understood the Bill it was proposed that in the case of the light vehicle there should be no speed limit, but the omnibus and the char-a-banc, which he said he might call the poor man's motor cars, were still to be subject to some speed limit.

Dr. Salter, who moved as an amendment to the proposed amendment that there should be a speed limit of 35 miles an hour, said that the increased number of deaths and accidents happening to-day was almost entirely attributable to the light car and the private motorist. So far as heavy cars and commercial vehicles were concerned the increase in the number of deaths and accidents was practically proportionate to the increase in the number of cars, but so far as light cars and private cars and motor cycles were concerned the number of persons killed and injured was more than double the percentage increase in the number of the vehicles themselves.

Major Hills contended that we must have proper roads. We must have special motor roads, as they had in the United States and the north of Italy—fenced roads, and he said that we should be driven to provide these special roads.

The Minister of Transport (Mr. Herbert Morrison) said that with the knowledge and experience possessed by the Department they did not believe that speed was necessarily the primary cause of accidents. It was one of the factors in accidents, and it would continue to be one of the factors regarded by the law under the Bill. What he should like to be known to the general public was that the Bill was not going to say that any speed was a safe speed. Clause 11 as framed was far better than a speed limit. It said that it was an offence if the speed in all the circumstances of the case was dangerous. He believed that the Bill, in a number of important if not spectacular ways, would enable them to reduce accidents. They would have far better control over public service vehicles. Speeds would be easier to control.

In reply to a question, the Minister said that it was perfectly clear, under Clause 45, that local authorities would be able to apply to the Minister to make restrictions on the use of vehicles on specified roads; and one of the restrictions for which they would be entitled to ask was a restriction on speed. The Minister might or might not hold a public inquiry, and he came to a decision on the matter, but the right of the local authority to apply to the Minister for a speed limit was preserved under that clause.

The Clause was ordered to stand part of the Bill.

Clause 13 ("Prohibition of motor racing and speed trials on roads") was agreed to, and ordered to stand part of the Bill.

With regard to this clause, Dr. Salter moved an amendment to prohibit also reliability trials, but the Minister said that the amendment as drafted would, he was afraid, be

Digitized by Google

incapable of administration. He did not see how they could distinguish between an organised reliability trial and an ordinary club run, which one could not say of itself was harmful. He appealed to his Hon. Friend to withdraw the Amendment on the understanding that between then and the Report stage he would look into the matter and see if they could find some means of giving some measure of control.

Reliability Trials.

Colonel Howard-Bury said he took it the Minister did not mean to prevent or prescribe every form of reliability trial? If he did it would be a very great blow to the motoring industry. Reliability trials were of very great assistance to them. They had to sell cars abroad, and anything which hindered the testing of vehicles over different types of country would be a definite disadvantage to the motoring industry.

Colonel Ashley said that if he understood the Minister of Transport aright he was not going to forbid all reliability trials, and that what he proposed to do was to give the local authority, the county council or the county borough a voice as to the roads on which these reliability trials should take place.

The Minister said that Colonel Ashley had substantially expressed his own views. All he wanted was to get for the local people and the local police reasonable control.

Requirements as to Employment of Drivers and Attendants.

Clause 17 of the Bill requires that in the case of heavy and light locomotives two persons should be employed in driving or attending the locomotive whilst being driven on any public highway.

Mr. Remer moved that both persons should be licensed.

The Solicitor-General pointed out that under the Bill if both persons were employed in driving they would have to be licensed and that should be sufficient. If the other person was only employed in attendance there was no reason why he should be required to be licensed. They should hesitate somewhat before they inflicted an added cost upon transport by saying that a motor lorry must carry two licensed men.

The Amendment was, by leave, withdrawn.

Sub-section (2) of Clause 17 requires that where a motor vehicle is drawing more than one trailer on a road, one or more persons, in addition to the persons employed in driving and attending to the vehicle, shall be employed for the purpose of attending to the trailers at the rate of one such additional person for each trailer in excess of one.

Mr. March said that if the employers in their wisdom thought it advisable to have two men with licences driving a motor lorry and had a trailer attached, there should be a third man for the two lorries, one for the trailer, which meant three men. He moved to leave out of the sub-section the words "more than one" and to insert instead the word "a."

The Minister of Transport said he proposed to accept the amendment, but at the right time he should move to insert the words "Provided that if two persons are employed in driving or attending the vehicle one such person may be regarded as employed for the purpose of attending such trailer."

Restriction on the Number of Trailers Drawn.

Clause 18 lays it down that the number of trailers, if any, which may be drawn by a motor vehicle shall not exceed:—(*a*) In the case of a heavy locomotive or light locomotive, three; (*b*) in the case of a motor tractor, one, if laden, or two, if unladen; (*c*) in the case of a motor car or a heavy motor car, one; or such less number as may be prescribed in relation to vehicles of the respective classes aforesaid.

Sir J. Lamb moved to limit the number of trailers to be drawn by a heavy or light locomotive to two. He thought it very undesirable that there should be locomotives with three trailers behind. They were a source of great danger.

The Minister of Transport said that in the Sub-section he was entitled to prescribe a less number if he was convinced that it ought to be done. He had very great sympathy with the object of the Hon. Member. He did not like long trains of trailers, and he was bound to say that some of them were doing a job which something else ought to be doing, but he was advised that there were sometimes certain goods or machinery which had to be transported which a railway could not manage. There was the case of the showman and certain cases in which agricultural interests considered that they required three trailers. If they made it that in no case might there be three trailers he was advised that genuine hardship would ensue in a number of cases.

Amendment was withdrawn.

The Clause, as amended, was ordered to stand part of the Bill.

Limitation of Time for which Drivers of Certain Vehicles may remain continuously on duty.

There was considerable discussion on Clause 19 which seeks to restrict the hours which a motor driver may work.

Mr. Remer moved an amendment, but later it was withdrawn, to provide that drivers of public service vehicles, heavy or light locomotives or motor tractors, or any other motor vehicles for the carriage of goods, could be on duty continuously for a period not exceeding six hours, instead of 5½ hours.

Lieut.-Col. Ashley said he was not hostile to the principle of the clause. The Committee ought to consider, however, whether the hours of work proposed in the clause were workable, because it was one thing for Parliament to insert certain hours in a Bill and another thing for industry to carry out the law.

The Minister of Transport said that it had been found necessary to insert this clause in the Bill to meet a serious state of affairs. Cases had come to notice in which there was reason to believe that accidents had been caused by the fatigue of drivers owing to long hours of continuous work. Mr. Morrison then referred to the negotiations which had taken place between him and the interests concerned, both employers and employed, that had resulted in the proposals in the clause that the period of continuous driving should not exceed 5½ hours, and that the aggregate period of work should not exceed 11 out of 24 hours. Provision had also been made to meet exceptional cases on joint application being made by the representatives of employers and workers.

Clause 19, as amended in Committee, now reads as follows:—

(1) With a view to protecting the public against the risks which arise in cases where the drivers of motor vehicles are suffering from excessive fatigue, it is hereby enacted that it shall not be lawful in the case of:— (*a*) any public service vehicle within the meaning of Part IV of this Act; (*b*) *any* heavy locomotive, light locomotive or motor tractor; or (*c*) any motor vehicle constructed to carry goods other than the effects of passengers; for any person to drive or cause or permit any person employed by him or subject to his orders to drive:—(i) for any continuous period of more than five hours and one half; or (ii) for continuous periods amounting in the aggregate to more than eleven hours in any period of twenty-four hours commencing two hours after midnight; or (iii) so that the driver has not at least ten consecutive hours for rest in any period of twenty-four hours calculated from the commencement of any period of driving:

Provided that it shall be a sufficient compliance with the provisions of paragraph (iii) if the driver has at least nine consecutive hours for rest in any such period of twenty-four hours provided that he has an interval of at least twelve consecutive hours for rest in the next following period of twenty-four hours.

(2) For the purposes of this section:—(*a*) Any two or more periods of time shall be deemed to be a continuous period unless separated by an interval of not less than half an hour in which the driver is able to obtain rest and refreshment; and (*b*) any time spent by a driver on other work in connection with a vehicle or the load carried thereby, including in the case of a public service vehicle any time spent on a vehicle while on a journey in any other capacity than as a passenger shall be reckoned as time spent in driving; and (*c*) in the case of a vehicle which is being used in the course of operations of agriculture or forestry a person shall not be deemed to be driving the vehicle or to be spending time on work in connection with the vehicle or the load carried thereby so long as the vehicle is elsewhere than on a road.

(3) The Minister may, on the application of a joint industrial council, conciliation board, or other similar body, or on a joint application, by such organisations, representative of employers and workpeople in the industry, as the Minister of Labour may certify to be proper bodies to make such an application, and after referring the matter to the Industrial Court for advice, by order vary the periods of time prescribed in this section, provided that he is of opinion that such variation is not likely to be detrimental to the public safety.

Any order made under this sub-section may be revoked or varied by a subsequent order made in like manner and subject to the like conditions.

(4) If any person acts in contravention of this section he shall be guilty of an offence:

Provided that a person shall not be liable to be convicted under this section if he proves to the court that the contravention was due to unavoidable delay in the completion of any journey arising out of circumstances which he could not reasonably have foreseen.

(5) This section shall not apply to motor vehicles used for fire brigade or ambulance purposes.

London Cartage and Haulage Contractors' Association.

Annual General Meeting.

The Annual General Meeting of the London Cartage and Haulage Contractors' Association was held at the offices of The Rubber Growers' Association, 2 Idol Lane, Eastcheap, London, on March 31st last.

The President of the Association, **Mr. Philip R. Turner, M.Inst.T.**, presided.

The Minutes of the last Annual General Meeting having been published in *The World's Carriers* were taken as read and signed.

The Balance Sheet for the year ended 31st December, 1929, was placed before the meeting and passed unanimously. The accounts showed a good surplus of income over expenditure.

The President, Mr. Philip R. Turner, M.Inst.T., was received with applause upon rising to review the work done during the past year and to refer to some of the very important matters now engaging the attention of the Industry. He said: Gentlemen: I am sorry that the meeting to-day is of small dimensions. I should have thought, considering the important matters we have in view, that this room would not been large enough to hold us. I know that in past times of trouble and strife we have often had difficulty in getting all the people into one of the largest rooms at the Cannon Street Hotel, but perhaps business, or lack of appreciation has caused some to stay away to-day.

I find, on referring to the excellent report of our last Annual General Meeting, which appeared in *The World's Carriers*, that this is the fifth time I have had the honour of addressing you as your President.

Last year I said that the staff of this Association were in for a very arduous twelve months, and I think that prophecy has been fully realised. It has indeed been a year of very heavy work, and I would like at the outset to voice my appreciation of the confidence and support I have received throughout the year from the Council and also from Mr. Bailey and his staff. Mr. Bailey has always worked very ungrudgingly for this Association, and the work he undertakes with the greatest willingness is always very well done. (Applause.)

MR. PHILIP R. TURNER, M.INST.T.
PRESIDENT.

I invariably take this opportunity of appealing for support for the Association, and I do feel that if the rank and file only appreciated the way in which their interests are continually watched over and the amount of real hard work that is put in on their behalf, we should receive a greater measure of enthusiasm and support than we do.

I think it is quite fair to say at the present time that, as a trade, we are under a cloud. I think the clouds started to form heavily in 1927 with an increase in taxation of unprecedented heaviness, and to-day we are faced with a very onerous clause in the Road Traffic Bill which will undoubtedly have a very far reaching effect on the industry if it becomes law. We are faced also with a projected measure known as the Hours of Industrial Employment Bill which is shortly to be introduced into the House of Commons by the Minister of Labour. Generally speaking, it is true to say that we suffer and suffer very badly from the burden of general taxation as well as from special taxation, and I do not find that the outlook affords us much confidence. When an individual spends more than his means entitle him to spend, very harsh terms are applied to him and often very harsh measures are adopted, and it does seem with regard to the Government of this country that a different system of morality prevails inasmuch as additional burdens are imposed on the people to meet new items of expenditure, and there is a grave omen in the fall of the rate of production of a penny on the income tax; this is falling very rapidly in value and it shows quite clearly the state of affairs in the country.

From the agenda you will see that we have to report on the Road Traffic Bill and on the Hours of Industrial Employment Bill. Both of these Bills will impose on this industry additional heavy costs, of that I think there can be no two opinions.

During the year there have been a number of outstanding matters dealt with, and I will now refer to some of them.

Articulated Eight-wheelers.

Last year the Minister of Transport promulgated an order dealing with articulated eight-wheeled vehicles. He proposed that such vehicles should not exceed 33 ft. in length. We approached him by deputation and pointed out that the regulation would make illegal a large number of vehicles already on the roads and would make illegal also those which were at present under construction. The Minister agreed, after considerable pressure, and it was only after considerable pressure, to amend the date when the order would come into force to the 30th June of this year, and he also inserted a clause to make the vehicles already on the road and those under construction legal during the course of their useful lives. That was, I think, quite a satisfactory result from the point of view of the trade.

Lateral Overhang of Motor Vehicles.

We have also given some attention to a request from the Minister of Transport with regard to the lateral overhang of mechanical vehicles. The Minister feels that something should be done to limit this overhang. He says that if through force of circumstances a vehicle is obliged to go as near to the kerb as possible it often endangers persons on the footway because the load sometimes considerably overhangs the wheels. The Minister wanted our advice together with that of other organisations as to what limit should be placed on lateral overhang, and the omnibus interests have prepared a memorandum, which has been formulated by a body of engineers. I do not think that the recommendations they make would suit us. However, the matter is still under discussion and it will be considered by the National Federation and in due course we hope to get the backing of the best people and to try and get a general memorandum submitted to the Minister in order, in any case, that our interests may be safeguarded so that we do not get something imposed upon us which we may find very irksome.

Royal Commission on Transport.

Last year I reported very fully on the evidence we submitted as a Federation to the Royal Commission on Transport. Since then the Commissioners have issued two reports and they form the subject of the Bill which is now before the House of Commons. A third report is expected shortly, which will no doubt deal with the question of the co-ordination of transport, and we have been told that this third report will be followed by further legislation. There is no doubt that the Minister of Transport will introduce such further legislation as soon as he can, and it would be a matter of grave concern to us. It will be necessary for us to very carefully examine his suggestions and possibly to be heard on a number of points that might arise.

Excessive Noise Regulations.

During the year the Minister of Transport made an order dealing with excessive noises caused by motor vehicles, and we find at the present time that commercial vehicle users particularly are being subjected to very considerable inconvenience and interference through these regulations and we feel that, in many cases, the police are not interpreting the order in the manner in which it was intended it should be interpreted. We have made representations on the matter to the Home Office and have put forward the suggestion that a warning should be issued instead of direct action being taken in the case of a first offence. Whilst the Home Office has no power to make such a recommendation to the police authorities throughout the country, yet it has the power to say a word and I hope that that word will be said, and if so I think it will be very helpful to us.

May I here be permitted to refer to items 5 and 6 on

Digitized by Google

the agenda. Item 5 deals with the Road Traffic Bill and item 6 with the Hours of Industrial Employment Bill. We shall again come to these items later for any discussion that may be necessary.

Railway Competition.

Before I do so, however, there is still one item I should like to refer to and that is railway competition. We have had complaints from a number of members who are feeling the effect of the competition of the railways on the roads. In some cases traffic has been lost through the railways quoting not only unremunerative rates but ridiculously low rates, and in some cases the losses which must fall upon the railway companies through doing work at such prices must be very heavy indeed. This is quite apparent to anybody who knows anything at all of the trade. It raises a serious question in our minds, and we feel that in the face of this sort of competition it is impossible to go on with our present wages agreement as the railway companies have a far more favourable wages agreement than we have. If it continues I think we shall have to see that our conditions are eased in order to get more into line with them.

Road Traffic Bill.

It has been commented on from time to time that the present road traffic legislation is undoubtedly out of date on account of the rapid advance in mechanical traction, and that most of the laws and regulations have become obsolete. I think you will remember that the Minister of Transport in the last Government drafted a Bill which he proposed to introduce into the House of Commons as a non-contentious measure, but owing to the pressure of Parliamentary business he found it impossible to do so. The late Government did, however, appoint the Royal Commission on Transport and following the Commission's two reports a new Road Traffic Bill has been brought in. From our point of view the most important feature in the Bill is clause 19 which seeks to restrict the hours which a motor driver may work. I want to point out to you that whilst the second report of the Royal Commission was issued at the end of October, the Bill was not printed until December 2nd and was introduced into the House of Lords on December 9th, so that very little time was afforded to give it due consideration. We, with other bodies, moved for the deletion of clause 19, which was clause 18 in the Bill when first introduced into the Lords, and the opposition was so strong that Lord Russell withdrew the clause in order that it might be re-drafted. Following that, the Minister of Transport called a conference of all interested parties, both from the employers side and from the trade unions side. At the first meeting the Minister referred to the opposition the clause met with in the House of Lords, and said that he knew quite well what our attitude was and that we wanted deletion, but he said that he intended to have a clause of this nature for the protection of the public. He said further that he had withdrawn the clause for re-drafting in order to meet the opposition as far as possible, but that if we insisted on the deletion of the clause he was quite prepared to fight us on the floor of the House of Commons, and he was perfectly sure that he would get the clause agreed to. The meetings were rather protracted, there were five altogether and they each took at least four hours. It was found, during the course of the discussions, that it was quite impossible to fix hard and fast limits to the hours of work in this industry. Every effort was made to produce a clause of the greatest elasticity, and I think the result is that the clause is elastic. The Minister himself realised the difficulties that might arise, and when introducing the measure in the House of Commons, he said: "There will be difficulties that we cannot foresee and difficulties which, if they are embedded in a statute, will tie us up to some absurd position if we cannot get elasticity." I think that as a result of the conferences with the Minister of Transport we have a clause which will be as little onerous as possible to this trade, but will in some measure restrict the hours a man may work.

Speed Limits for Commercial Vehicles.

Whilst we have this restriction, we have also to bear in mind the restriction of speeds contained in the Bill. Under the Bill the speed limits are 20 miles per hour with pneumatic tyres and 16 miles per hour on solid tyres. We are of the opinion that these speeds do not conform with present-day practice. They are out of date already, and we feel that this, in conjunction with the restriction of hours, will be a serious handicap. We are moving an amendment, in conjunction with other bodies, to bring the speeds for all commercial vehicles on pneumatic tyres up to 35 miles an hour, which is the same as the speed proposed for very heavy coaches and buses, and that vehicles on solid tyres should be able to travel up to 20 miles an hour.

Some other amendments which are being moved deal with clause 3 which refers to non-compliance with regulations as to construction; clause 4, licensing of drivers; clause 9, restriction of driving by young persons; clause 18, restriction of the number of trailers drawn; clause 22, duty to stop in case of accidents; clause 25, use of bridges by motor vehicles, and clause 45, use of vehicles on specific roads.

Under clause 98 of the Bill the penalty for certain minor offences is a maximum of £20 for a first offence and £50 or a term of imprisonment for a second offence; an amendment is being moved to alter this to a maximum of £5 for a first offence and £10 for a second or subsequent offence.

8-Hour Day—48-Hour Week.

The Washington Hours Convention has again been revived, but on this occasion we have it in a different form. It is now called "Hours of Industrial Employment Bill." We are not suggesting that the Hours of Industrial Employment Bill is an actual ratification of the Washington Convention because it is not, it varies materially. Nevertheless, it is a measure that directly arises from the Washington Convention. As you will appreciate, this Bill is entirely separate and distinct from the Road Traffic Bill. The Hours of Industrial Employment Bill has not yet been published, but we have had submitted to us a document giving the proposed heads of the Bill. This Bill applies to all industries, and it is an attempt really to bring in by law an eight-hour day and a forty-eight hour week.

Some time ago when the Government announced in the King's Speech that they intended to ratify the Washington Convention we formed part of a deputation to the Minister of Labour. We put forward our difficulties and asked for the exclusion of Road Transport. Whether due regard was then paid to the case we made out I do not know, but it is quite certain that the provisions of the present Bill are not nearly so onerous as they would have been under the Convention. They are, however, quite sufficiently drastic, and they cause us very serious concern. With reference to this Bill, we have worked in conjunction with the National Conferedation of Employers' Organisations, which is a body representing over 9 million workers in this country, and that is considerably more than half the industrial population. The National Confederation of Employers' Organisations made out an excellent case in principle against the Bill, and submitted a considered document to the Minister of Labour. They also went in deputation, and this deputation was powerful enough inasmuch as it represented 45 distinct industries. The Minister received the deputation with consideration, and also agreed to receive deputations from individual groups representing common interests. We went to a further meeting with the Minister of Labour on March 17th in conjunction with the railways, and you have received the statements which were then submitted to her on our behalf. Mr. Edwards made the case for horse transport and I gave the case for motor transport. The Minister did not hold out any hope at all that we should be excluded from the scope of the Bill, but she did say that she had no wish to strangle industry, or to place impossible conditions upon us, and that when the Bill was drafted she would see that the case we had brought to her notice received the greatest possible consideration, and that the greatest measure of elasticity should be introduced into the Bill so far as we were concerned. The Bill will apply to all industrial undertakings, and while road transport is included at present owner drivers or members of an employer's family are excluded.

Subject to certain modifications the Bill provides for (a) an eight hour day and forty-eight hour week for six days; (b) where the hours of work on any day are less than eight the limit on other days may be increased to nine; (c) provisions will be made to allow for working in excess of the daily limit where work is so arranged that the workers are employed for not more than five days a week, subject to the daily limit; (d) there will be power to provide by regulation based on agreements for other limits of hours in particular cases, subject to an average of 48 hours over a specified period; (e) overtime will be permitted up to a maximum of 32 hours in any 4 weeks, subject to payment at not less than time and a quarter. Power will be taken to prescribe a higher or lower maximum in any case by regulation after consultation with employers and workers organisations. Sunday work, except in the case of continuous processes and the week-end change over of shift workers will be remunerated at not less than time and a quarter, and will be counted against the permitted overtime hours; (f) provision will be made for the notification of working hours, the keeping of records, inspection and penalties.

When this Bill is published it will be necessary for us

Digitized by Google

to very carefully examine its contents, and to make such representations as may be necessary on behalf of the trade. We hope, and sincerely hope, that if this Bill is introduced it will be so modified as to meet the reasonable objections we have already made to the Minister. We want exclusion if this industry is going to function properly.

Well, gentlemen, I think that closes my remarks on the year's work, and I hope that I have given you an idea of the two main points we have to watch in the future, namely, the restrictive clause 19 in the Road Traffic Bill and the general restriction on working envisaged in the Hours of Industrial Employment Bill. I think these two points alone should be sufficient to make the industry realise that it is more necessary now than at any time to keep together and to work together.

The President resumed his seat amidst applause.

Mr. P. R. Turner Re-elected President.

Mr. W. H. Hixson proposed that Mr. Philip R. Turner be re-elected President for the ensing year. He said that their President had shown marked ability in the work he had done in connection with the Association. As the President had told the meeting the matters dealt with, and the important questions now demanding attention had called for most careful attention, and Mr. Turner had rendered inestimable service to the industry. They needed a man of the strongest personality at their head at the present time, and it therefore gave him the greatest pleasure to ask the members to re-elect Mr. Turner as President for the coming year. (Applause.) They had heard a summary of what had been done during the past year, and as business men they must all appreciate the amount of time and work entailed. It was his good fortune to be in the House of Commons recently when their President submitted the case for their industry to one of the Ministers of the present Government, and he could assure the members that their case did not lose anything in its presentation. Mr. Turner was a tremendous asset to the cartage and haulage contractors in London, and they owed him a deep debt of gratitude. The whole question of transport was in a state of flux at the present time and they did not know what was going to happen, and it was very necessary to retain Mr. Turner as their President. (Applause.)

Mr. F. Hoar, seconding the proposition, said that unfortunately for himself he was, he supposed, the oldest member of the London Cartage and Haulage Contractors' Association. He had served under more than one President, and was one of the active lieutenants under their old President, Mr. G. A. Dutfield, and he would say at once that the Association would always owe a very deep debt of gratitude to Mr. Dutfield. During the war they went through most strenuous times, and Mr. Dutfield had to devote at least two days in every week to the service of the Association throughout the war, and at that time members wondered what they would do if Mr. Dutfield should ever resign. He did not mean to say that they did not think there were other gentlemen in the Association with ability, but he did not think they had another gentleman who could devote the same amount of time to the work of the Association as did Mr. Dutfield. However, Mr. Dutfield did resign and he was happy to say that they induced Mr. Philip R. Turner to take his place. He could not say, out of respect for his predecessors, that Mr. Turner was the best President they had ever had, but he did say quite genuinely that he was as good a President and that they would never have a better. (Loud Applause.)

The proposition was carried with enthusiasm.

Mr. Philip R. Turner, acknowledging his re-election to the Presidential chair, said that whilst it was quite true to say that there was a certain amount of work involved in occupying the position of President of the Association, nevertheless it was work which to him was very interesting. He had been fortunate in having around him an experienced Council the members of which had assisted him in every possible way, and this had made his position much easier than it would have been. Whilst he had the confidence of the members and occupied the Presidential chair he would do his utmost to carry out the wishes of the members, and if in so doing he could help the trade to climb to a better position he would feel that he had been amply repaid for any time he had spent or trouble he had taken on behalf of the Association.

The following gentlemen were re-elected Vice-Presidents:—Mr. N. F. Wentworth, Mr. Herbert Paterson, and Mr. F. Hoar.

Mr. G. H. Lloyd, who was unanimously re-elected Honorary Treasurer, remarked that as regards service rendered to the Association their President represented the maximum whilst he represented the minimum.

The Council were re-elected en bloc with the addition of Mr. W. F. French (United Service Transport, Ltd.).

The Council for the ensuing year is constituted as follows:—Mr. H. H. Crow, Mr. Guy Fairclough, Mr. T. Feast, Mr. W. H. Hixson, Mr. W. H. Kinner, Mr. D. J. Maile, Mr. A. H. Park, Mr. T. B. Pettit (Pickfords, Ltd.), Mr. A. E. Prior, Mr. G. L. Polkinhorn (Carter, Paterson and Co., Ltd.), Mr. J. Pollitzer, Mr. A. Rickards, Mr. J. Spurling, Mr. J. Sullivan, Mr. L. A. Taylor, Mr. J. H. Turner, Mr. John Wells and Mr. W. F. French.

With regard to the Hours of Industrial Employment Bill the President pointed out that at present they had only had a copy of the proposed heads. If when the Bill was published it was found to contain very onerous provisions he thought it would be advisable for the Association to obtain an opinion of all members within the Federation as to the effect of the Bill so far as the casualisation of labour is concerned.

Motor Taxation.

The President referred to a memorandum on motor taxation which had been forwarded to the Chancellor of the Exchequer. The memorandum had been drawn up by a conference of motor organisations representing twenty-one kindred organisations. The memorandum stated that the taxation of Road Transport, and the principles, methods and results of that taxation formed a subject of high national importance, and various points were advanced to justify a reduction in motor taxation at the earliest possible moment. The memorandum recommended a 33⅓ per cent. reduction on all classes of motor vehicle taxation; (2) a more flexible system of short-term licences in order to induce all-the-year-round use of vehicles; and (3) a comprehensive and continuous policy of road and bridge widening, improvement, and development, to be financed by the capitalisation of a portion of the Road Fund revenue.

A cordial vote of thanks to the President for presiding concluded the business.

London Traffic—Broken Down Vehicles.

In September, 1925, the London Traffic (Broken down Vehicles) Regulations were made imposing a duty upon the owner and driver or other person in charge of a broken down vehicle in a street within the London Traffic Area to remove it as soon as possible. In addition, the Regulations empower a police constable in uniform, if he is of opinion that the owner, driver or other person in charge of a broken down vehicle has failed to take all necessary steps to remove it, or that the vehicle constitutes a danger to traffic, to remove it himself or use the services of any other person or persons to remove it, and the expenses incurred by the police in connection with such removal are recoverable from the owner.

The above-mentioned Regulations have recently been reviewed, and on the recommendation of the London Traffic Advisory Committee, the Minister now proposes to revoke the existing Regulations and to issue revised Regulations which will provide:—

1. For the incorporation of the provisions of the existing Regulations referred to above—with the addition that any contravention thereof will be made an offence and render any person offending liable to a fine not exceeding £5.
2. That no owner, driver or other person in charge of any vehicle shall permit it to be in any street within the London Traffic Area in such a condition or with such a load that it breaks down in any such street: provided that it shall be a sufficient defence to any proceedings if the person charged satisfies the Court that he has taken all reasonable steps to maintain the vehicle in proper condition, or to prevent its being overloaded, or that he was acting under the express instructions of his employer. Any person acting in contravention will be liable to a fine not exceeding £5.

Copies of the draft Regulations are obtainable from H.M. Stationery Office, Adastral House, Kingsway, W.C.2, either directly or through any bookseller at a cost of 1d. a copy.

Any person who desires to make representations in regard to the draft Regulations should make them in writing to the Secretary, Ministry of Transport, 7 Whitehall Gardens, S.W.1, not later than 19th May next.

Southern Roadways, Ltd.

A Southern Business Romance.

It is a far cry from Fashion Street, Spitalfields, in 1904 to Bournemouth and the shores of Poole Harbour in 1930, and the connecting link is Mr. Alan H. Scammell, the Managing Director of Southern Roadways, Ltd., a business which has grown to large dimensions since it was founded in 1923, and to which the term "a Southern Business Romance" can very aptly be applied.

When we first met Mr. Scammell, it was as a young man engaged with his father and his brother, now Lt.-Col. A. G. Scammell, D.S.O., in the old established business of coachbuilders and engineers which was so well known to the cartage trade of London. On the outbreak of the Great War Mr. A. G. Scammell joined up, and after serving throughout the War with great distinction, returned to business as Lt.-Colonel, with the Distinguished Service Order medal to his credit. Mr. A. H. Scammell was left to carry on a business of very great importance to the nation in war time, and this business was kept working night and day on war work. As a result when the War finished Mr. Scammell collapsed through overstrain and was invalided to Bournemouth in 1920. Given three months to live, he decided not to give in and eventually recovered sufficiently by 1922 to take up business again, but with the proviso by his doctors that he should not ever contemplate returning to work in London.

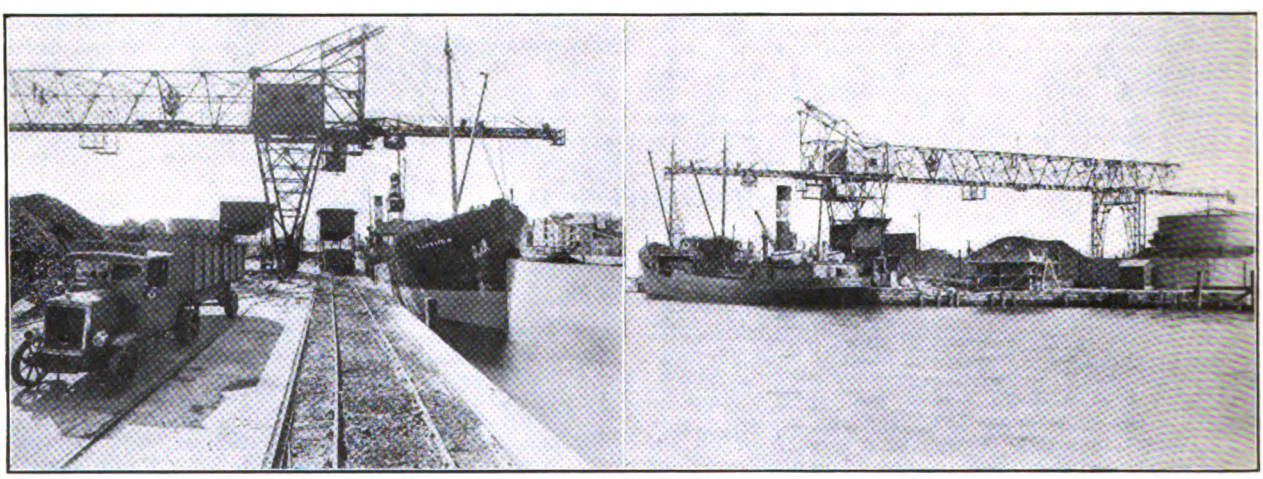
A SNAPSHOT OF MR. A. H. SCAMMELL, MANAGING DIRECTOR.

Tiring of doing nothing he asked his firm—Scammell Lorries, Ltd.—to send down a six-wheel vehicle, this type then being in its infancy. They did this, but at the same time expressed the view that they did not consider much could be done with a 10-12 ton vehicle in the Bournemouth area, this being practically entirely a pleasure resort. Mr. Scammell succeeded in selling one or two of these vehicles to progressive firms, who recognised their value, but he generally found the vehicle ridiculed as a freak with no future. Knowing its true commercial value Mr. Scammell was determined to go ahead somehow and he therefore formed The Southern Roadways, Ltd., with a small capital to operate transport in connection with West Shore Wharf at Poole, Dorset, which at that time utilised some three lorries for its transport work. At the same time he concluded negotiations which eventually led to his company taking over a wharf.

MR. J. A. BRIGHT, GENERAL MANAGER.

At this time (1925) the fleet consisted of 4 Scammells and 2 Thornycrofts, and the tonnage handled for the wharf amounted to about 6,000 tons per annum. To-day the company has branches in London, Birmingham, Manchester, and Liverpool, and is operating a fleet consisting of 27 8-wheeled 18/20 ton Scammells; 10 6-wheeled 12 ton Scammells; 1 pneumatic tyred 10/12 ton Scammell; 2 6/7 ton 4-wheel Scammells (new type); 3 6/7 ton Leylands; 6 4-ton Albions; 1 30 cwt. Albion; 1 30 cwt. Morris; 3 Mercedes-Benz fuel oil lorries; 1 Associated Daimler; and 1 Manchester lorry.

In addition the company have acquired large additional wharves and erected an Arrol-Temperly transporter together with equipment for the rapid handling of bulk coal at a cost of approximately £20,000.



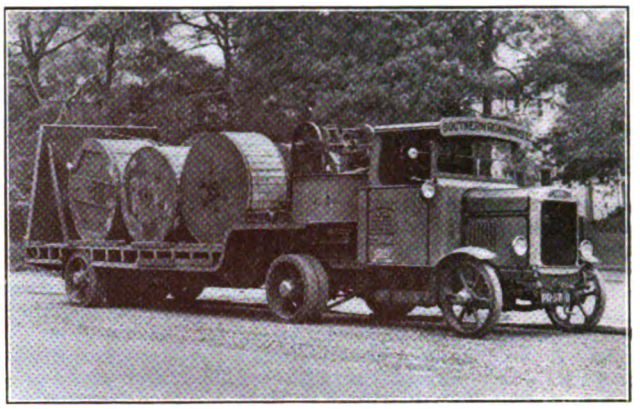
TWO VIEWS OF HAMWORTHY WHARF SHOWING ARROL-TEMPERLY TRANSPORTER.

The Company also have erected large capacity stores for the storing and handling of store goods, and to-day the tonnage handled over the wharves alone of all commodities, such as bulk coal, granite, flour, sugar, cement, artificial manures, etc., amounts to approximately 150,000 tons a year, as against approximately 6,000 tons five to six years ago.

Digitized by Google

During the past few months the Company have taken over and organised all the Transport in connection with Mr. Ernest Debenham's magnificent new milk factory at Milborn St. Andrew, Dorset, where it is anticipated that, in the near future, 20,000 gallons a day will have to be dealt with inwards and outwards.

A SCAMMELL 15-TON HYDRAULIC TIPPER.



A SCAMMELL 8-WHEELED CABLE CARRIER.

The Company has also undertaken all transport in connection with Mr. Debenham's very large Agricultural Estate which runs to about 14,000 acres.

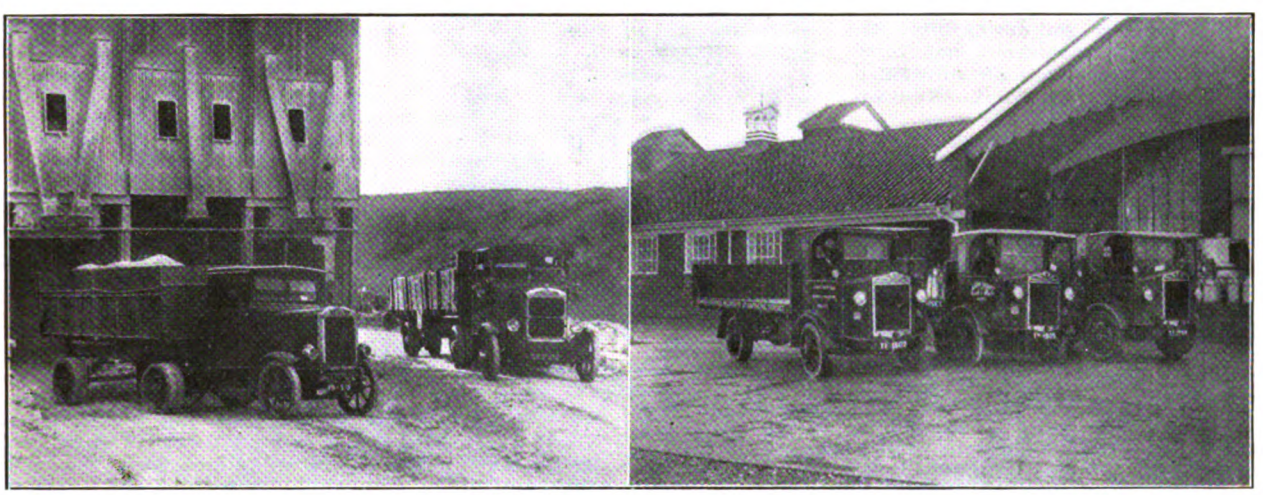
In connection with this development, Mr. Ernest Debenham himself, and his son, Mr. Piers Debenham, have joined the Board of Directors of "Southern Roadways."

It should be mentioned also that some few years ago Mr. A. H. Scammell exploited the Transport possibilities of the well-known Purbeck Stone area, with the result that he formed another Company known as "Worth Quarries, Ltd.," which developed a lime stone quarry on The Quarry Company are also about to enter on a large scale into the lime business, again relying on road transport, as there is no rail at the Quarry.

During the last few months Southern Roadways, Ltd., have taken over the control of Messrs. Hack & Co.'s business at Liverpool, and have effected a fusion with the "Mayhew Transport Company," in which connection Col. Mayhew joins the Board of Directors.

In spite of adverse trade conditions, they still find their trade rapidly increasing owing to the service they have given, and although it takes approximately 1,000 tons a day to load their fleet, they still have to employ a large number of sub-contractors to help them with their ever-expanding business.

Mr. Bright, the General Manager, who is now also a Director, seeing the possibilities of the Scammell vehicle, associated himself with Mr. Scammell at the inception of the Company, and it is largely due to his initiative and energy that the company now controls one of the most important transport fleets in the country with branches at Poole, London, Birmingham, Manchester, and Liverpool.



LEFT: A SCAMMELL 12-TON TIPPER AND AN 18-20-TON GENERAL SERVICE 8-WHEELER DRAWING AWAY FROM THE STONE CRUSHING PLANT AT WORTH QUARRIES. RIGHT: THREE OF THE FLEET OF ALBION MILK LORRIES AT MR. DEBENHAM'S BLADEN MILK FACTORY.

most up-to-date lines, and from which now approximately 25,000 tons per annum are produced, all of which has to be transported by lorry, mostly by heavy Scammells.

Shire Horse Society.

A MEETING of the Council of the Shire Horse Society was held at 12, Hanover Square, London, W.1, on April 8th.

In accordance with elections made by the Members at the Annual General Meeting at the Show, Mr. David Davies was formally installed as President of the Society, and Mr. N. W. Smith Carington, M.P., as President-Elect, i.e., President in 1931.

Mr. S. E. Thompson was elected as a Steward of the London Show for the ensuing three years, and Messrs. Sexton, Grimwade & Beck were re-elected official Auctioneers to the Society. Mr. B. J. Dare, Mr. Richard Forshaw, Mr. Arthur Smiles and Mr. Herby Ward were elected as Shire Judges at the London Cart Horse Parade, and Mr. H. W. Bishop and Mr. Norman R. Lloyd will represent the Society at the Liverpool May Parade of Horses.

It was reported that the Committee had every reason to be highly satisfied with the fifty-first Show held in February last. Every cog in the wheel of organisation worked smoothly, while as an exhibition of a particular breed of live stock it would be difficult to surpass. With the reducing number of entries only the best found their way to the London Show, which is now regarded as the "acid test" of an animal. Nowadays almost every exhibit was worthy of recognition by the Judges, and, indeed, very few were passed over.

Metropolitan and Home Counties Road Transport Contractors' Association.

Annual Dinner.

TWENTY-ONE years ago there met together at Hampstead a handful of earnest men who realised, even in those days, the urgent need for association and co-operation in the transport trade, and there and then they founded the Metropolitan and Home Counties Road Transport Contractors' Association, a body that has assisted in guiding the industry through many critical periods, and in the process has grown strong and influential. To-day its advice is sought by Government Departments when matters affecting the industry are under consideration.

The Annual Dinner and Dance of the Association was held at the Restaurant Frascati on 19th March last.

Mr. J. H. Turner, the President of the Association, presided, and in the course of his speech, which was retrospective and prospective, announced his retirement from the leadership of the Association. For some fourteen years Mr. Turner has occupied the Presidency and it is difficult to visualise such a happy function as the Annual Dinner of the Association minus his genial presence in the chair. We do not know whether Mr. Turner's decision is irrevocable, but we do know that our hope is shared by every member of the Association and it is that Mr. Turner will still feel able to lead the Association, particularly in view of the important matters affecting the industry immediately facing it.

The guests were received by Mr. and Mrs. J. H. Turner, and during the evening each lady was given a handsome souvenir of this festive night, presented with the compliments of the Association.

Mr. E. W. Willis, Editor of *The World's Carriers*, proposing the toast of "The Association," said he felt it to be a great honour to be entrusted with the task, because for some twelve years he had been in intimate touch with them and knew what useful work the Association had done.

Whilst a great deal depended upon the head of an Association, yet every member had the urgent duty to do his utmost by loyalty, enthusiasm, and by using every ounce of his ability to help forward the cause for which the Association stood. (Applause.)

MR. J. H. TURNER, PRESIDENT.

Some might feel that things were going too slow, that they were not getting a move on, and so were apt to get impatient and say "I am not going to have any more of this, let us get out and have nothing to do with it," yet when they did that they always found they were left behind. It was their duty, to whatever Association they belonged, to stay with it and to use their whole influence to push it along.

The present were critical times. He did not think there ever was a time when it was so necessary for all to pull together. (Applause). To-day road transport was faced with very great questions. The Road Traffic Bill was passing through the House of Commons and it would no doubt place upon them burdens difficult to bear. There was, in addition, the prospect of the Government introducing a Bill to restrict very drastically the hours of labour. The Association, of course, had these matters under consideration, but they were points that should be well in front of every member of the trade, because it seemed that slowly yet surely fetters were being fastened upon industry which would make it more and more difficult for them to carry on their work.

Under such conditions their Association had to do its work and it was necessary that it should carry every ounce of influence when presenting its case to those in authority and to Parliament, and that was where such a man as their President, occupying the important position he did in trade, having so great a knowledge of the industry and being looked upon with so much respect and honour by those in high authority, could do so much to help and to guide in such very difficult times. (Loud applause.)

As its President, Mr. Turner added lustre to the Association. (Applause.)

Mr. J. H. Turner was enthusiastically received when he rose to reply.

He said it was twenty-one years since those grand old originals met at Jack Straw's Castle and formed the Association, and nearly all those who were present on that occasion were with them that evening. (Applause.)

TWENTY-ONE YEARS OF WORK.

In 1911 there was the great dock strike, and that was the first occasion the Association was called upon to exercise its influence for good. He thought that at that time there was something to be said for the grievances nursed by the workers against what they contended was the unfair exploitation of their labours, and the Association had the opportunity then, with others, of starting the trade in the right direction by putting their men on a proper basis with regard to wages.

In May, 1912, another endeavour was made to call a strike. That was destined to be a failure because the men's action was neither right nor necessary, but the employers became more determined to do the best they could at all times for their men.

The members of the Association got together to see what could be done to lift up the industry and to give it greater prestige. They were fairly successful, and then came the 4th August, 1914, bringing difficulties of a very serious character, and the years 1916, 1917 and 1918 proved to be the darkest days not only for their own Association but for the whole of civilization. But their motto was the same as that for the whole of the British Empire, "Carry on," and they did so to the best of their ability, and whatever sunshine they found during those days they took care not to turn their backs upon it in order to grumble at the shadows. During those years the Association saw to it that they did all they possibly could to assist the country.

Then came the joyful news of the armistice, and the next thing they found was that they must again organise with the same goodwill to win the peace.

Their Association was called upon for many strenuous efforts during the next year or two and it was found necessary to call many meetings and to conduct intricate negotiations.

He was happy to recall that throughout the 21 years there had not been a stoppage in the road transport industry particularly as far as London and the Home Counties was concerned. (Applause.) That proved at least that they had always done the right thing at the right time and in the right spirit in regard to those upon whom they depended to carry out their orders and their instructions. (Applause.)

They were faced with another serious crisis in 1926. They had been passing through a very difficult period and it culminated in the great strike of that year. Again the Association played its part and did what was right and proper to see that our great country and Empire did not fall into the hands of those who were ever willing to take but gave nothing.

Digitized by Google

They could look back with pride and satisfaction to the work they had done, and remember with gratitude those who started the Association in 1909.

About the years 1927 and 1928 they found the dice somewhat loaded against them in the form of the Railways Road Transport Bill. Again they put their shoulders to their wheel and did their best to see that the industry was not too badly injured, but they were not strong enough to stay the flowing tide. Now they found themselves severely taxed in order that some things might be made possible for others at the expense of their industry.

Difficulties Ahead.

That night he was presiding over them as their President for the last time. They had before them the Road Traffic Bill which was going to present very great difficulties to the road transport industry as a whole. Coupled with that, and probably coming into force at about the same time, would be a measure based on the Washington Convention making statutory an 8 hour day—48 hour week. Unless industry in this country was to be seriously hampered and handicapped it would not be possible for the road transport industry to comply with those hours at all times, and he knew of nothing that could be more destructive to industry than an enactment of that nature. Having regard to conditions on the road it was impossible for the transport industry to function under such regulations if it was to give the best possible service to industry as a whole.

Whatever had been the vicissitudes of the last 21 years he could assure them that there was greater need to-day than there ever was for organisation, co-operation and an intelligent interest in the trade to which they belonged, and above all for goodwill each towards the other. (Applause.) He hoped that whoever would be their President in the future that the members would give him the same loyal help that they had at all times extended to himself during the 13 or 14 years he had been their President. No one could enter into negotiations either with the Government or with trade union officials with his hands tied. He must have the goodwill and confidence of members.

He would like to say how much the Association appreciated what Mr. Willis, through the medium of his journal *The World's Carriers*, had done for the industry, and he hoped he would continue that work in the same fearless way that had been his custom for many years.

He sincerely thanked Mr. Bailey and his staff for the great work they had done on behalf of the Association. Mr. Bailey was a very busy man, and fortunately was also the Secretary of the London Cartage and Haulage Contractors' Association as well as of the National Road Transport Employers' Federation, and the Metropolitan Association were very fortunate to have his guidance. In the difficult times ahead he was sure Mr. Bailey would play his part, as he had always done, to see that the members of the Association were protected.

Joint Industrial Councils.

Some years ago it was agreed that the proper solution of labour difficulties would be found by the efforts of a Joint Industrial Council, provided that the Council had statutory powers to give effect to its findings. Unfortunately, their own Joint Industrial Council was doomed to failure because the Government gave them no power to enforce their findings on the whole of the industry. Mr. Bailey fought many battles in that connection and it seemed that in the not far distant future he would be called upon for still greater efforts.

He thanked the members of the Council for the support they had so loyally and ungrudgingly accorded to him. He trusted that the Association would go on prospering and anything he could do to assist whoever might be their President he would most loyally do, and he would promise him every encouragement and support.

London Traffic Committee.

At the present time he had a very busy task as a member of the London and Home Counties Traffic Advisory Committee, and he would remind them that although that Committee had advised many regulations during the years he had been sitting on that body, there had not been made a regulation dealing with street traffic that had not excluded, and purposely excluded, all demolition, excavation and constructional building work. (Applause.)

Unilateral Traffic System.

But there would be fresh regulations coming along in the near future. There would, no doubt, be an order made bringing into operation what would be known as the unilateral traffic system which would affect carriers delivering or collecting goods in certain areas in London as they would only be allowed, in certain scheduled streets, to deliver and collect on one side of the street on Monday, Wednesday and Friday and on the other side of the street on Tuesday, Thursday and Saturday between the hours of 11 a.m. and 7 p.m. He thought the regulations would be limited entirely to streets that did not have room for more than three lines of traffic, and it would be done to see whether the traffic could not operate with greater fluidity than was the case at the present time. It was nothing to be alarmed about. It would be an order that would put money into the pockets of members of their own and other organisations in London because it would speed up their traffic.

Once more he thanked everyone for what they had done for the Association. He trusted they would continue their support and would see to it that the Association progressed and extended its influence, and that it would prove not only to the members but to the community as a whole a great boon and blessing. (Loud applause.)

Mr. E. Griffith Price, a past president of the Association, said that if Mr. Turner really meant that that was the last occasion upon which he would preside over them as their President, he felt that one of the "old brigade" should tell him how much they all appreciated the work he had done in the interests of the trade. (Loud applause.) He sincerely hoped that Mr. Turner would reconsider his decision to resign and he (the speaker) would be one of the first to applaud should their President decide to carry on. If, however, pressure of work prevented Mr. Turner from so doing, he knew he would be only too happy to assist the gentleman who took over the position. They wanted Mr. Turner to feel how much they all appreciated the work he had done for the Association in the past. (Applause.)

Mr. J. H. Turner thanked Mr. Price for his kind remarks and said that he did appreciate all that he had said.

The President proposed the toast of "Our Guests" and extended to all a very hearty welcome.

He said he hoped that the ladies would appreciate the little souvenirs that had been presented to them which had been selected by his wife, who still played an important part in the life of the Association and did a very great deal for it. (Applause.)

Expressing the hope that the ladies present would honour the Association with their company on a future occasion, Mr. Turner said that women to-day were playing an important part in the life of the country and would play a still greater part at the next election, as he thought that they were beginning to realise what a disastrous effect the system of doles was having upon the country. He believed it would be found that people would rather have their loaf of bread at double the price and know that they had earned it than that they should be receiving the dole. (Applause.)

Mrs. Spears, who replied for the ladies, was very cordially received.

She said that there was nothing very strenuous about her task, and it was very different from that undertaken by some women who spoke for their sex during the struggles that took place in the early days of the movement for women's enfranchisement, memories of which had been revived and illustrated in the daily press quite recently. (Laughter.) Those pictures reminded them that statesmen and policemen had their difficulties and problems then as now. No statesman was allowed to forget the woman question in those days. We had travelled a long way since then and no statesman needed reminding now what women had done and could and would do again if necessary. The war years gave women their opportunity and they had proved themselves. (Applause.) Her little sketch of the past and present prompted her to sum up her remarks in two words which were the motto of one of the London Boroughs—Respice, to look back, Prospice, to look forward. It had been the good fortune of the ladies to enjoy many banquets of the Association upon which they looked back with pleasure. They treasured their souvenirs so thoughtfully chosen again by Mrs. J. H. Turner. They offered their thanks to the Committee for such a happy evening, and they thanked also those husbands, brothers and others who had brought them that night and, looking forward, they hoped to be brought again next year. (Applause.)

Mr. Fred Lewis, who also responded, gave the company a most interesting account of a fifteen months tour round the world from which he has just returned.

The speeches were interspersed with musical items, rendered by Miss Betsy de la Porte, Miss Julia Larkins and Mr. Kit Keen.

The dance following the banquet was much enjoyed. Mr. Arthur Crudge's Orchestra provided the music.

The Worshipful Company of Carmen.

Livery Dinner.

"If anybody will find the money I will find the solution of the traffic problem," was a promise made by Mr. Ben Smith, M.P., Treasurer of the Household, at the Livery Dinner of the Worshipful Company of Carmen, at Carpenters' Hall on Friday March 14th last. "It is money that is wanted," went on Mr. Smith, "not ideas."

He referred to the roundabout scheme for the City, which had been objected to not for traffic reasons but on business grounds, and said that the scheme ought to have its way. The City had made its contribution to the relief of traffic congestion, but that great problem remained with us.

Transport filled a very important position in our society. "Our traffic to-day is a chaos," he went on. "It need not be so. Given goodwill between the motorists, pedestrians and those who use the road for a living, I think we could find a solution. But while we are going for each other we shall not do it." He referred to the days when he had "more dinner times than dinners," and spoke of the spirit of hospitality which allowed people of different political beliefs to meet as good friends.

Sir George Hume, J.P., proposed the toast of the Lord Mayor, Sheriffs and Corporation of London; the Lord Mayor (Sir William Waterlow), who was acompanied by the Sheriffs, replying. Sir George said that in the presence of men so closely interested in traffic he spoke with some anxiety. "We politicians," he continued, "should come before you in sackcloth and ashes. You try to get about the place and we do nothing to help you. We talk about it. We make proposals, but the best of schemes are not carried through because of political difficulties. I do not know whether this Company can produce a Mussolini, a strong man for whom the people cry out. I have hopes of Mr. Ben Smith. He knows the inside and outside of the subject. The problem is an exceedingly difficult one because of the atmosphere in which it has to be handled. Like the questions of industry and commerce it should be taken out from the sphere of party politics. Get down to the subject and see whether the City and the County of London cannot be freed from the congestion which now exists, and which threatens to become worse."

SIR PERCY VINCENT, KT., J.P., C.C.
MASTER.

The Lord Mayor spoke of the happy relations between the Corporation and the London County Council. He knew, said his Lordship, that there were still a number of members of the Carmen's Company who carried on the trade connected with the Guild, and did so in the City. Unfortunately, he supposed, such men were growing fewer. "Being one of those who still drive horses about the City, I take an interest in the other men of the City who are interested in horses. I should be very sorry when horses are excluded from the City. When we come to talk about traffic we are on very dangerous ground. I hope the Lord Mayor and the Sheriffs will still be allowed to handicap the traffic when they go abroad."

Mr. W. Austin Balls, Master of the Bakers' Company and a member of the Court of Assistants of the Carmen's Company, gave "The Guests," to which Sir John Pakeman, C.C., and Mr. Ben Smith jointly responded. Mr. Austin Balls said that the hospitality of that Company, like that of the other City Guilds, was the finest of the English hospitality on which we prided ourselves.

Sir John Pakeman congratulated the Company on its selection of guests, and complimented it on a most enjoyable function. The Labour Party meant well, and if it depended on Mr. Smith it would do well. Sir John spoke of the speculative and adventuresome spirit of London merchants which had helped in large measure to build our Empire, and urged the need of not "resting on the oars."

Sir Ernest Wild, K.C., the Recorder of London, submitted the toast of the Company, in the customary words —"Root and Branch may it continue and flourish for ever." He remarked that the Carmen's and Coachmakers' Companies were established when mechanical contrivances replaced to some extent the human feet. Since the early days of vehicular traffic the pedestrian had been regarded as a worm upon the earth, the only trouble being that the worm would so often turn. Ever since the days of Henry VIII the Carmen's Company had pursued the uneven tenor of its way, and he was pleased that at the present time it was on the upgrade. In talking of the speed limit they might think of the Master of the Company, Alderman Sir Percy Vincent, J.P., and what he had accomplished during his eight years of civic work. He was delighted that in a few years' time Sir Percy was assured of filling the office of Lord Mayor.

In replying to the toast, Sir Percy Vincent, who, as Master, occupied the Chair, thanked the Carpenters' Company for the use of the Hall, and said that the Carmen's Company at one time had a hall of its own, in Harp Lane. Mentioning that the Company received the Livery in 1838, the Chairman recalled that last year the Livery was extended from 100 to 150. He had an idea that a further extension to 200 would have to be requested from the Court of Aldermen of the City. The fact that there had been 44 new members during the year indicated that it was a live Company. Although theirs was not one of the "big twelve" Livery Companies, it was going to be a force in the future.

The Master proposed the health of the Clerk, Mr. J. Woodman-Smith, B.A. the successor to Mr. Under-Sheriff Capper, who died some months ago, after over 30 years in the position.

Mr. Woodman-Smith remarked that under the Charter granted by Henry VIII the Clerk's duties were many and arduous. It was his duty to see that the members did not exceed the maximum charge of 4d. for loads carried within the city walls! If, however, a load was carried outside the walls, the charge might be 5d.! The Company had to carry without charge the King's ales and wines. The Clerk had to test wines and cigars before they were placed before the Court of Assistants at its quarterly luncheon. He was very fortunate, concluded Mr. Woodman-Smith, in taking office under such a charter.

The Master was supported by the immediate Past Master, Mr. G. T. Hedge, O.B.E.; Mr. G. H. Lloyd, Senior Warden and Past Master; Mr. E. E. Coxhead, Junior Warden; Mr. H. A. Easton, C.C., Past Master; others present in addition to those already referred to included Sir Henry Jackson, Sir Henry Maybury, Mr. George Lavington, C.C., a Past Master, and Mr. H. A. Jager, a Past Master.

A very excellent musical programme added to the enjoyment of the evening and the entire company joined in community singing during the passing of the loving cup.

Nottingham Chamber of Commerce Transport Department. — The regular services run by the Nottingham Chamber of Commerce Transport Department have now been extended to deliveries to the following towns in South Wales:—Aberdare, Abergavenny, Barry, Blaenavon, Bridgend, Caerphilly, Cardiff, Chepstow, Llanelly, Merthyr, Monmouth, Mountain Ash, Neath, Nelson, Newport (Mon.), New Tredegar, Pontypool, Pontypridd, Port Talbot and Aberavon, Porthcawl, Rhymney, Swansea and district, Tonypandy, Tredegar.

Tyre Sales Champions.—The Quota Cup presented by Sir Charles Higham to the Dunlop organisation for the best regional sales has been won for 1929 by the West Midland Region and presented to Mr. Arthur Smith, the Regional Sales Manager, by Mr. H. L. Kenward, Sales Manager at Fort Dunlop. In handing over the trophy, Mr. Kenward said that the success of the West Midland Region was particularly noteworthy in view of the fact that they were operating in the heart of competitive activity.

Commercial Motor Users' Association.

Annual Meeting.

The Annual Meeting of the Commercial Motor Users' Association was held on Wednesday, April 2nd, at the Royal Automobile Club, Mr. George Monro presiding. Supporting him were Mr. C. le M. Gosselin, President-elect, Major-General S. S. Long, C.B., and Mr. E. W. Rudd, Hon. Treasurer.

The President briefly reported on the work of the Association during the past year and mentioned a few outstanding features—the twenty-fifth annual banquet and the luncheon next day, with the presentation to Mr. E. S. Shrapnell Smith, the General Election Statement issued to all the candidates, the Road Traffic Bill—a bill which had undoubted benefits in it, but also some very serious points for the members of their Association as road users. Clause 19 was the most vital clause of the Bill as far as they were concerned. The Bridges Act was being carried out with good results, and would have great benefits for their members in enabling the passing of goods from one part of the country to another. Local crossings were a great deterrent to the free passing of their vehicles. They had maintained their touch with all Government Departments, and the standing of the Association had, if possible, improved. Government Departments recognised that they represented road transport, and they valued the advice which the Association gave them.

The report and Treasurer's account were adopted unanimously.

The Secretary (Mr. F. G. Bristow) then spoke briefly on various points of the Road Traffic Bill.

MR. C. LE M. GOSSELIN, PRESIDENT.

The New President.

The Chairman then proposed the election of Mr. C. le M. Gosselin as President for the ensuing year. He had been President-elect for the past twelve months and he had worked with him in perfect harmony. He had a very great knowledge of the industry and had been a member of the National Council for twenty-five years. The proposal having been seconded, Mr. Gosselin was elected unanimously and briefly replied expressing his thanks for the great honour.

Mr. Monro then placed the badge of office on his successor who took the chair.

A resolution of hearty thanks was accorded to Mr. Monro for his services as President.

President-Elect.

On the proposal of Alderman W. H. Wort, seconded by Mr. J. H. Stirk, Major-General S. S. Long, C.B., was elected President-elect. General Long briefly thanked the members.

The Vice-Presidents and members of the Council were re-elected en bloc.

* * * *

Mr. C. le M. Gosselin, the new President of the Commercial Motor Users' Association, is a pioneer in road haulage, and his wide experience will be of the greatest value to the Association during the coming twelve months, as it has been throughout the many years in which he has taken an active part in its work. Mr. Gosselin is the Chairman and Managing Director of H. Viney and Co., Ltd., Motor Transport Engineers and Forwarding Agents, whose headquarters are at Preston, with branches at Manchester and Liverpool. Born in Guernsey in 1876, Mr. Gosselin was educated at Cheltenham College and Dover College, proceeding to University College, London, where he took the three years' Engineering Course, obtaining the diploma conferred by the College. His association with the firm of H. Viney & Co., Ltd., goes back to 1906 when he became a Director, and two years later he was appointed Chairman and Managing Director of the Company. Mr. Gosselin acted as Transport Officer of the 1st Volunteer Battalion, Loyal North Lancashire Regiment during the War with the rank of Lieutenant, and he was also Assistant Commissioner for Transport at the North-West Divisional Office, Ministry of Food, and served on the North-Western Divisional Road Board as its representative. Mr. Gosselin is also Chairman and Managing Director of Lancashire Petrol Deliveries, Ltd., a company engaged in the bulk transport of petrol and oil. He is a Foundation Member and Member of Council of the Institute of Transport, and Chairman of the Manchester, Liverpool & District Section of the Institute; he is a member of the Institution of Automobile Engineers, and is Deputy Chairman of the Preston Chamber of Commerce. In 1927 he was awarded the Road Transport (Goods) Gold Medal of the Institute of Transport for his paper "A Survey of Road Transport" read during the 1926 Session. Mr. Gosselin is a strong advocate of the development of road transport, which he has done so much to encourage and which has formed his life interest in business, but although holding strong views he is popular in all transport circles, and his opinions are received with the consideration and respect which they deserve.

Institute of Transport.

The following gentlemen have recently been elected to Membership of the Institute of Transport:—

Members.

Cumming, David	Director, Railway and Tramway Institute, New South Wales.
Davidson, Robert	General Manager, Leeds and Liverpool Canal Company.
Debenham, Arthur John	Engineer in Chief, Sydney Harbour Trust, New South Wales.
Fitzpayne, Fred Andrew	Transport Manager, Edinburgh Corporation.
Taylor, Ernest	Chief Accountant, London, Midland and Scottish Railway.

Associate Members.

Bickford, Charles Reginald	Principal Assistant Engineer, Sydney Harbour Trust, New South Wales.
Burton, Harold Lister	Aire and Calder Navigation (Leeds).
Davies, Joseph Edward	Secretary, Commercial Motor Users' Association, New South Wales.
Denniss, Albert George	Traffic Officer, Railway Commissioners' Office, New South Wales Government Railways.
Fitzpatrick, Leo John	Assistant District Superintendent, New South Wales Government Railways.
Hirst, George Walter Cansdell	Chief Mechanical Engineer's Office, New South Wales Government Railways.
Hussey, George Sherriff, M.C.	Assistant to Vice-President, London, Midland and Scottish Railway.
Lowe, Harry Gordon	London and North Eastern Railway (Darlington).
Parker, George Edward	Southern Railway (London).
Salter, John Edwin Francis	South African Railways and Harbours (Johannesburg).

Institution of Engineers-in-Charge.

30th Annual Dinner.

Mr. H. G. Burford, M.I.Mech.E., M.I.A.E., President of the Institution, presided at the Annual Dinner held at the Holborn Restaurant on Friday, April 4th. He was supported by Mr. T. Cooper, M.Inst.C.E., Past President, and the following Vice-Presidents:—Messrs. Asa Binns, M.Inst.C.E. (Port of London Authority); E. A. Sandford Fawcett, C.B., M.Inst.C.E. (Ministry of Health); H. E. Stilgoe, M.Inst.C.E. (Metropolitan Water Board), and Lieut.-Col. J. P. K. Restler, O.B.E., M.Inst.C.E., M.I.Mech.E., M.I.E.E.; Mr. G. A. Hughes, Chairman of the Institution was Vice-Chairman. Amongst the guests were Sir Henry Maybury, G.B.E., K.C.M.G., C.B., Col. Sir A. R. Holbrook, K.B.E., M.P., Air Vice-Marshal Sir Vyell Vyvyan, K.C.B., D.S.O. (Vice-President, Royal Aeronautical Society), Mr. A. E. L. Chorlton, C.B.E., M.Inst.C.E. (Vice-President, Institution of Mechanical Engineers), Brig.-General Magnus Mowat, C.B.E. (Secretary, Institution of Mechanical Engineers), Mr. F. C. A. Coventry, M.I.A.E. (Superintendent, Road Transport, G.W. Railway).

The Institution.

Mr. A. E. L. Chorlton, in proposing this toast, said the Institution was composed of practical engineers and they were not appreciated as they deserved. Engineers ought to obtain better recognition than they got. They must devise means to bring about the same recognition that other professions had secured. To obtain this they must combine with other bodies. They had got to get together.

The President, in replying, said they had tried to raise the status of the engineer. That was what he had been trying to do all his life. There must be organisation and co-operation amongst engineers. Fellowship was one of the great assets of life.

During his two years as President of the Institution he had learned what co-operation and organisation meant, through his work with the Secretary. The increase in membership had been considerable during the past year. There had been many other applications, but the standard had been kept very high. The position was that the Institution was in a better state than ever before. He appealed to the younger men to work and to bring their influence to bear so that the Institution might go from strength to strength.

Engineering.

The toast of Engineering and its application to Health and Progress was proposed by Sir Henry Maybury. The thirtieth dinner synchronised with the passing of the great Act of Parliament, the Local Government Act. He could recall a good many changes in Local Government. He found that things worked out reasonably well and that in practice the changes did not do much harm even if they did little good.

He considered that as engineers they took too much for granted. They had the great responsibility and then others walked away with the great rewards of office. The engineers in this country are strong only if they pull together to get that recognition which they so well deserved. Consider what great strides had been made in engineering in the present century.

Mr. Sandford Fawcett responded and said that speaking as an engineer he had the very highest respect for the engineers-in-charge.

The toast of "Our Guests and Friends" was proposed by Mr. Asa Binns and replied to by Sir Arthur Holbrook, M.P.

The toast of "Our President" was proposed by Mr. G. A. Hughes (Chairman of the Institution) and briefly acknowledged by Mr. Burford. The great work of the Hon. Secretary, Capt. A. E. Penn, was emphasised during the evening and particularly by the President, who drew attention to the fact that they would have to consider the appointment of a whole time secretary as it was quite impossible for an honorary secretary to continue to give the time which Capt. Penn had given so generously.

Round the Lancashire Associations.

S.E. Lancs. C.M.U.A.—At the Annual Meeting of the Commercial Motor Users' Association (S.E. Lancs.), held at Radcliffe, the following area committee was elected:—Messrs. J. R. Etheridge (Radcliffe); J. Jagger (Oldham); W. Patton (Bury); W. Mitchell (Heywood); J. Grindrod (Rochdale); J. Meeks (Rochdale); S. Kay (Middleton); V. L. Morton (Mossley); G. W. Leggott (Manchester); H. Burrill (Littleborough); and Councillor W. Farnorth (Middleton).

Amalgamated Horse and Motor Owners' Association.—At the Annual Meeting of the Amalgamated Horse and Motor Owners' Association the following officers were elected for the ensuing year:—President, Mr. Charles Lissett (Oldham); Vice-Presidents, Messrs. T. G. Cousins (Rochdale), J. Walker (Radcliffe), J. Bramall (Hyde), G. W. Leggott (Clayton, Manchester), S. Kay (Middleton), and Councillor J. Eastham (Bury). Trustees, Messrs. G. W. Leggott (Clayton), J. G. Thompson (Shaw), and I. Smith (Hollinwood). Committee, Messrs. S. Berry (Leigh), T. Raynor (Farnworth), J. Clegg (Radcliffe), W. Gee (Bury), A. Oldfield (Rochdale), H. Humphreys (Manchester), W. R. Butterworth (Oldham), M. C. Wilson (Oldham), W. Mitchell (Heywood), Councillor W. Farnorth (Middleton). The newly elected General Council at its first meeting elected Mr. T. G. Cousins to fill the office of Chairman; Mr. J. Walker and Councillor W. Farnorth, Vice-Chairmen; and Mr. J. G. Thompson, Treasurer. The Secretary, Mr. J. Howarth, reported to the meeting that as the result of negotiations, the clause in the Rochdale Corporation Bill seeking powers to run special motor omnibuses without any limit to distance, had been withdrawn. Next year will be the twenty-first anniversary of the formation of the Association, and the question was raised as to what steps should be taken to celebrate the event. It was decided to seek the views of the next quarterly conference. Five new members were elected.

Liverpool C.M.U.A. New Officers.—At the meeting of the General Committee of the Commercial Motor Users' Association (Liverpool Area) on 13th March, Mr. A. C. Bloomer (Joseph Crosfield & Sons, Ltd., Warrington) was unanimously elected Chairman for the ensuing year, and Mr. J. T. Mount (Thos. Wilson), Vice-Chairman. Mr. F. G. Birch (Tate & Lyle, Ltd.) was re-appointed Hon. Treasurer and Mr. R. W. G. Barnett (Liverpool Cartage Co., Ltd.), representative of the Association on the Liverpool Chamber of Commerce. The Traffic and Motor Parade, Emergency, and Rates Committees were also appointed. The desirability of having increased the weights allowed on the floating bridges at Liverpool and Birkenhead was discussed. It is understood, however, nothing can be done in this matter because 18 tons is considered by the authorities to be the safe limit for motor lorries and trailers passing over the bridges named.

Short Cart and Motor Owners.—Under the auspices of the Liverpool and District Short Cart and Motor Owners' Association, a Whist Drive was held in Reeces Cafe, Dale Street, Liverpool, on 19th March. The prizes were distributed by Mr. C. W. Harvey, the Chairman. The Entertainments Committee responsible for the organisation of the function comprised Messrs. H. Carruthers, J. Mason, J. Rowberry, and F. S. Jones.

New London Service Depot.—We are informed by the "Sentinel" Waggon Works, Ltd., of Shrewsbury, that owing to the ever increasing number of "Sentinel" Steam Waggons in the London area, they have found it necessary to build new and more commodious premises, to enable them to deal with service and overhauls, at North Acton. The old depot in Fernhead Road, Paddington, will therefore be closed on Thursday, the 17th April, and business will be resumed on Wednesday, the 23rd April, at the new depot, which is situated in Minerva Road on the Chase Estate, Acton, N.W.10.

Licences Granted.—The Licensing Committee of the Blyth Corporation has granted the application from Messrs. T. Allen and Sons, to run a half-hourly service to Newcastle.

Steam Vehicles in Blackwall and Rotherhithe Tunnels.—The Public Control Committee of the London County Council reports that the bye-laws relating to Blackwall and Rotherhithe tunnels provide that persons shall not drive through the tunnels any vehicle (excepting a fire engine) emitting smoke or visible vapour so as in any manner to be a nuisance or to endanger, or to be likely to endanger, the safety, or interfere with the convenience, of any person using the tunnels. Police officers on duty in the tunnels take action against drivers in cases in which they consider the bye-laws have been infringed, and the Commissioner of Police of the Metropolis has been asked to arrange for special attention in this connection to be given to steam-driven vehicles.

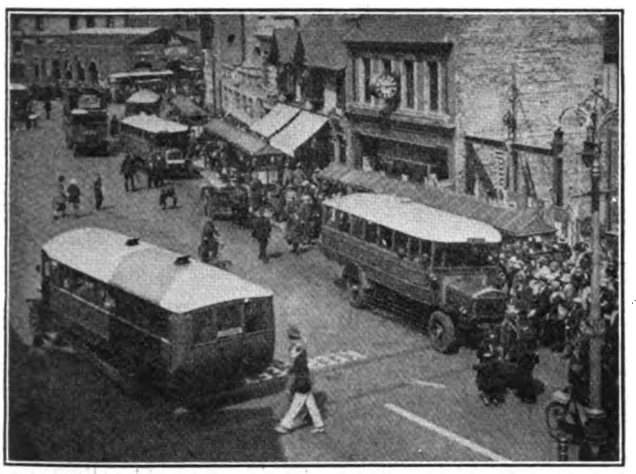
Five Hundred Departures Daily.

Worcester as a Passenger Centre.

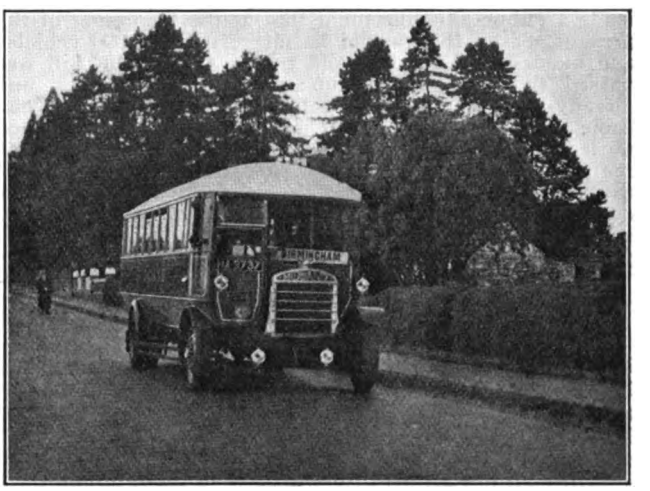
Five hundred applied to bus departures in a town of 50,000 inhabitants is a large number. But it is no exaggeration to say that throughout the greater part of the year the average number of passenger vehicles leaving Worcester daily is in that region. The number of Midland Red scheduled departures on the average is nearly 200 daily. Messrs. George Burnham, Messrs. P. Owen and Sons, and Mr. Arthur Moore between them account for 40 to 50 scheduled departures. These four firms arrange special services and trips by bus and coach which must be added. A number of other proprietors run regular services, though they issue no time-table. Among them are Mr. C. J. Marks, Mr. G. Woodward (Malvern and Cradley).

The average of the above departures is few short of five hundred. But there are others. During the season, Messrs. Bailey and Turner and Mr. F. Hall, of Silver King coaches, run daily coach trips. Then there are daily departures for London and other parts by Black and White Motorways, of Cheltenham, to Birmingham and Gloucester, by the Glider long-distance bus, and Red and White Services, of Lydney, and other long distance services to Aberystwyth, Bristol, Bournemouth, Torquay, Manchester and the North.

We have not finished even yet, for the Midland Red services are doubled at certain seasons to Birmingham and Malvern by a fifteen instead of a thirty-minute service, and the number of "scotching up" buses put on most routes during busy weeks and week-ends, makes the number stupendous. And bus traffic has shown up much more in the city since the Midland put on buses to operate the local services in place of the trams which have now been discarded.



LOADING UP SCENE AT WORCESTER.



MIDLAND "RED" VEHICLE ON THE LIMITED STOP SERVICE BETWEEN WORCESTER AND BIRMINGHAM. SNAPPED AT FERNHILL HEATH.

The question why a town with only 50,000 inhabitants should be so important in the transport world may well be asked, and the answer is not easy to give. No doubt, position has much to do with it. In railway parlance, Worcester would be described as a "junction town." It is just that for road transport. All traffic from the Birmingham area and the north of that city must pass through Worcester before branching off for the South and West. Much of the through traffic for this direction must pass through Worcester and cross the Severn there or at Gloucester. There is also a tendency for traffic in the opposite direction to converge on Worcester for the same reason.

Large numbers of people come by bus to Worcester to junction off elsewhere. The county itself has many attractions of scenery and historic interest, and being situated comparatively near to the industrial area on the North, it is a great holiday county. The river Severn, the Teme, the Avon and the Malvern Hills, and the Avon at Evesham, each have many worshippers. Worcester city is very compelling in the life of history, the Cathedral and the Porcelain Works completing a fine round of pleasure.

There are factories, too, which add to the importance of the place as a road passenger and goods transport centre, but on the top of the lot comes the fact that it is the market centre for a wide and fertile rural area. The district is renowned for its fruit and vegetable growing, and not only do growers come to market to sell these things, the eggs, pigs, sheep and cattle, but the whole countryside people for miles around flock into the city two or three days a week to spend their money. All these conditions combine to bring about a very busy transport time. The fact that Worcester is partly industrial, helps to maintain a steady volume of traffic that is absent in a purely rural market town, and the many thousands of visitors who come by bus, and people on their way to different parts of the country for holiday during the summer add greatly to the regular volume of traffic. Looking back only a few years, one notices a great change, and transport business undertakings with small beginnings have firmly established themselves in the district. All, I should say, are paying concerns, and many of them are prosperous. Fifteen years ago, there were but few buses being operated, and these were only put on in place of the old horse buses worked in conjunction with the trams to Fernhill Heath, Ombersley, Powick and Kempsey. Now every road is part of a net-work of reliable, efficient, and for the most part, rapid services which are being increased daily in the number of vehicles and routes operated, and in general convenience. The first firms to make a success of buses in the district were those private owners mentioned earlier. Mr. P. Owen was one of the first, and Burnham's and Moore's started somewhere about the same time with, of course, one vehicle each. These businesses, which are very substantial to-day, were built upon the foundation of the carrier's cart connection which all these firm's maintained long before the motor as a commercial carrier was ever seriously thought of. The owners now have their reward. They mostly hold each to his own territory, having endeavoured to consolidate and keep what they had rather than go beyond their early capital and perhaps ability to open up extensive services. When the Midland Red took over the Worcester bus services and began to open up the county with services on a large scale, these firms were not swamped; they plodded their own quiet way, displaying genuine pride in the success of their pioneer work.

They were the first to introduce the safety coach and bus into the district after the war. They have now numbered among their fleets some of the finest vehicles on the road.

The services operated were at first mostly of a Saturday and market day nature, but are now daily with many extra services at week-ends. Messrs. Burnham have headquarters at Clifton-on-Teme, which, though approached by steep hills, proved a good place in which to start a bus service. There is no town or railway station within ten miles of it. Burnham's buses have effectively put an end to the previous inaccessibilty of Clifton-on-Teme, the whole of the area being covered by their services. They connect Clifton-on-Teme, Martley, Wichenford and some other outlandish parts with Worcester, Kidderminster, etc., and Worcester with Tenbury.

At one time all vehicles belonging to this firm were garaged at Clifton, but during recent years it has been found

Digitized by Google

advisable to garage some in Worcester so that an outward run may be made early in the morning without having to run first from Clifton. In other words the town is proving to be the best centre even for a country service.

Mr. A. Moore and Messrs. P. Owen and Sons, make their headquarters at home, Whitley and Abberley respectively, the old destination of their carrier's cart. Speaking in general terms, Mr. Moore's route extends from Stanford Bridge to Worcester and Stourport and Kidderminster, covering Stockton, Abberley, Witley, Holt, Grimley, Shrawley, Eardiston, Lindringe, Martley, and Broadheath. Some long distance services are now operated by these firms.

Abberley and Whitley are curiously enough adjoining villages, and Owen's and Moore's cover some of the same country, though mostly by different routes for at least portions of the journey. In addition, Messrs. Owens' go to Crows top and Cleobury Mortimer (Salop). The latter firm was actually the first to introduce the motor bus into Worcester.

Needless to say, the big business of the local bus world is in the hands of the Midland Red, and Worcester should be one of the plums of that firm's territory. The main route and the one that carries more traffic than probably all the others in the county put together, is that to Malvern and Birmingham, the distance being about thirty-five miles. Worcester is the centre for arrivals and departures of this traffic. Birmingham is twenty-six miles from Worcester and Malvern about nine. During the dead of winter the regular service on this road is reduced to one every forty-five minutes in each direction from Monday to Friday, otherwise it is half-hourly, and in the busy times during holiday weeks and week-ends, becomes a fifteen-minute service with "scotchers up" into the bargain. The journey between Worcester and Birmingham which used to take two hours and twenty minutes, can be done now on the expresses in about ninety minutes. The buses are greatly patronised for the whole journey and the services have now been extended to Cheltenham and Gloucester.

Blackpool Motor Coach Owners' Association.

Annual Meeting and Dinner.

Blackpool Motor Coach Owners' Association whose annual meeting was held last month, has sent a deputation to interview the Ministry of Transport respecting clauses in the Road Traffic Bill calculated to adversely affect small privately owned passenger transport undertakings.

Mr. J. W. Horsfall (of Messrs. Horsfall, Salthouse and Co.), who presided at the Annual Dinner of the Association, held at the Queens Hydro, Blackpool, said that there never was a time in the history of the motor coach industry that was more serious or fraught with possibilities than the present. In 1928 the railway companies were interested in 348 motor vehicles. There had just been made a public announcement that at the beginning of the present season they would be interested in 8,000 vehicles and hundreds of services and routes. Since the Bill was passed they had bought up services and coaches, and already they had sunk a capital of £5,000,000. Then came the Road Traffic Bill. In the past there had been no legal regulation of prices, but in the present Bill such regulation was provided for. The Ministry did not want to put it in force but desired the coach owners to fix their own prices in a proper way. The service which gave value for money and did not exploit the public would be protected from those who tried to run them off the road.

Mr. R. Marshall, of Marshall and Sons (Blackpool), Ltd., declared that Blackpool had always been a pioneer in motor coaching. The firm of which he (Mr. Marshall) was a member started to run coaches for hire in 1902, and in 1908 had a vehicle to carry 30 passengers. The motor coaches belonging to members of the Blackpool Association transferred on an average 10,000 passengers in and out of Blackpool every day during the holiday season. They could claim to be second only to the railways. In conclusion he hoped that the efforts of the early season movement would meet with every success.

The Mayor of Blackpool said the motor coach industry was only in its infancy.

New Officers.

The officials of the Blackpool and District Motor Coach Owners' Association for the ensuing year are as follows:—President, Mr. J. W. Horsfall (Horsfall, Salthouse and Co.); President-elect, Mr. E. V. Standerwick; Vice-Presidents, Councillor J. R. F. Hill, Messrs. R. W. Marshall, J. E. Taylor, J. W. Dewhurst; Hon. Treasurer, Mr. J. H. Jackson; Hon. Secretary, Mr. H. Hardman; Committee, Messrs. W. Salisbury, Butterworth, Meadows, S. Wood, Mann, Wolstenholme, A. Leavesley, Waddington, E. Taylor.

South-East Lancs. Coach Owners.

Motor Coach owners in Rochdale, Littleborough and Heywood have responded to the efforts put forward by the South-East Lancashire C.M.U.A., and the Amalgamated Horse and Motor Owners' Association to secure the recognition of a minimum price list for tours during the approaching season. Nearly all the coach owners in these districts are members of the joint organisation. Mr. J. S. Howarth, Secretary of the C.M.U.A. (S.E. Lancs.) and the A.H.M.O.A., organised meetings of coach owners in Oldham and Bury districts, but in these towns it was decided not to adopt new rates. Last season's fares will, therefore, continue to operate. In Rochdale the Corporation has consented to coach owners making use of the Town Hall square in return for the payment of a fixed weekly sum per coach. In order that each coach owner might enjoy the reasonable use of the best loading positions, a rota has been arranged. Every week during the season, Mr. Howarth will send to the Chief Constable and to the members of his organisation, a list showing positions the coaches will occupy on the stands on the following seven days. Thus each firm will enjoy equality so far as the use of the Town Hall square is concerned. The stands may be reserved up to 10 a.m. each day. Before this arrangement, coaches were put on the road as early as 5 a.m. or 6 a.m. in order to secure the leading places on the stand. The new rates have been compiled not entirely on a mileage basis, but with regard to the popularity of the destination and the fares that ruled last year. Compared with last year the tariff reveals minor adjustments sometimes in the passengers favour, sometimes against. Here is the official schedule for tours from Rochdale:—Heywood and Littleborough, minimum charge for half day runs, 4s. 6d., passengers to pay all tolls and ferry charges; Alton Towers, 8s.; Alderley, 5s.; Altrincham, 3s. 6d.; Ashopton Circular, 9s.; Ashbourne, 3s.; Aldridge, 12s. 6d.; Arnside, 10s.; Ambleside, 11s.; Blackpool, 6s. 6d.; Buxton (Cat and Fiddle), 8s.; Bakewell, 7s.; Baslow, 7s.; Bolton Abbey, 7s.; Burnsall and Grassington, 8s.; Bridlington, 13s.; Chester, 6s. 6d.; Chatsworth, 9s.; Colwyn Bay, 12s.; Coniston, 13s.; Castleton, 7s.; Doncaster, 8s.; Fleetwood, 7s. 6d.; Grange-over-Sands, 11s.; Harrogate, 9s., 9s. 6d. and 10s.; Haydock, 5s.; Heatley and Warburton, 5s. 6d.; Hoylake and Chester, 10s.; Harrogate, 8s.; Ilkley and Skipton, 7s.; Knutsford, 5s.; Kendal, 9s. 6d.; Keswick, 13s.; Kettlewell, 8s.; Kirby Lonsdale, 10s.; Llangollen, 9s.; Liverpool, 6s. 6d.; Llandudno, 13s.; Matlock, 9s.; Morecambe, 7s. 6d.; Morecambe via Settle, 10s.; Matlock via Snake, 10s.; Pickmere, 5s.; Rhyl, 11s.; Rudyard Lake, 6s.; Redcar, 13s.; Richmond, 12s.; Southport, 6s. 6d.; Scarborough, 12s. 6d.; Southport via Whalley, 7s. 6d.; Skipton, 6s.; Settle, 6s. 6d.; Shrewsbury, 10s.; Shrewsbury via Chester, 11s.; Trentham Gardens, 7s. 6d.; Windermere, 10s. 6d.; Whalley and Higher Hodder, 5s. 6d.; York, 8s.; Yorkshire Dales, 12s.; York, Harrogate, Knaseborough, 10s.

Co-ordinated Motor Coach Services.—The plan for the co-ordination of the activities of Manchester motor coach owners is ready to be put into operation immediately, that is by Easter. At the time of writing, it is not possible to add anything to what appeared in our last issue, but we are informed by the Manchester Transport Owners' Association, of which Mr. H. Howard Robinson is Secretary, that the list of proposed booking offices is almost ready for issue. The approval of the Watch Committee to a few extra addresses, however, is awaited.

Outlook for Summer in Scotland.—The Spring Holiday (as it is called in Scotland) is much later this year, but it is expected that given favourable weather the bus traffic will be heavy from Good Friday onwards. Several new routes have been opened up. Last year MacBrayne ran finely upholstered coaches on the Lochgilphead route, and they will be more popular this year when the public realise the comfortable nature of the service. Tours to Edinburgh are increasing and the Border counties around Galashiels are attracting more visitors.

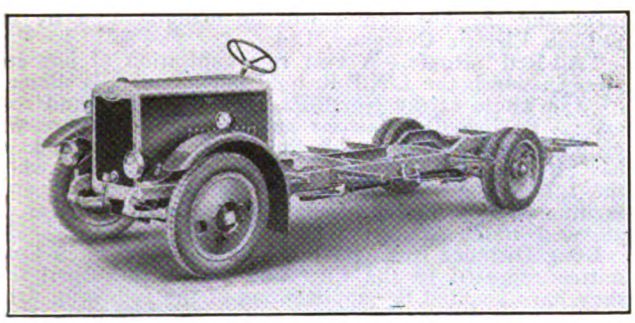
Dennis Passenger Vehicles.

A Model for all Requirements.

The range of Dennis motor coach and bus models comprehends the requirements for size and power of most buyers from a low-load line double-deck bus to a luxury type of low-load line 20-seater coach, with four and six-cylinder side and overhead valve engines and with front and rear driving positions. Besides this range there is a new 12-tonner rigid wheel-base six-wheeler with six-cylinder engine which is outside the present survey.

The "Dart" Model.

This model has a six-cylinder overhead valve engine with liner-fitted cylinder 80 by 120 m.m. (3.34 in. by 4.72 in.), and is for a 20-seater body. It develops 60 h.p. but has a normal output of 30 h.p. at 1,000 revs. The layout embodies details dealt with in the review of the new 2-ton chassis in this number, with a difference of gear ratios and an axle gear ratio of 5.6-1. The unit construction and overhead Dennis worm-axle, four-wheel brakes and under-slung rear springs are features. The frame is anchored over the rear axle. The engine is equipped with an Auto-Klean oil filter which is automatically operated in step with the clutch control pedal. The equipment includes 33 in. by 5 in. single front and twin rear air tyres. The overall length of the frame is 20 ft. 6¾ in. and width 6 ft. 5 in.; the wheelbase and track are 13 ft. 2¾ in. by 5 ft. 2 in. (rear) and 5 ft. 0⅛ in. (front). There is 6½ in. ground clearance below the axle. This chassis costs £625 at the Works and is now in production.



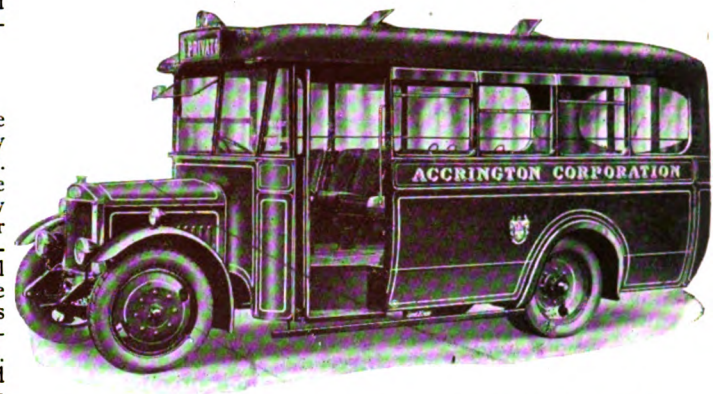
NEARSIDE VIEW OF THE "DART" CHASSIS.

The "Arrow" Model for 32-Seater Single-Deck Bodies.

This model, which was new at the late Olympia Show, claims more space than can be spared. A leading feature of the six-cylinder (100 by 130 m.m.—3.93 in. by 5.11 in.) engine with Duplex chain driven overhead cam-shaft and offset valves is that the rocker assembly is hinged to fold back about the camshaft, with resultant time saving and freedom from disturbance of the timing. The frame is arched over the back axle and the rear suspension is below the axle. The overall measurements are:—length and breadth 25 ft. 4 in. by 7 ft. 5 in. and wheelbase and track width 16 ft. 6 in. by 5 ft. 10½ in. (rear) and 6 ft. 3⅜ in. (front). The ground clearance below the axle is 7 in. and with 38 in. by 8½ in. air tyres the frame height is 24 in. The chassis weighs approximately 2 tons 19 cwt. The equipment includes a dynamo lighting and starting set and four-wheel brakes with vacuum servo control.

The "G.L." Type Low-Load Line Coach Model.

This model has a more powerful engine and other improvements after a year's experience. It has a four-cylinder, 85 by 120 m.m. (3.34 in. by 4.72 in.), overhead valve engine resembling the new 2-ton chassis which is reviewed in another section. The output is 42 b.h.p. at 2,300 revs., and 22 b.h.p. at 1,000 revs. A power starter is an extra but is provided for in the engine and battery. The frame is arched over the under-type worm-axle and the rear suspension is underslung. The general utility of this model for passenger service may be gathered from the following data. The chassis weight is about 38 cwt., 21-seater body 15 cwt., live load with driver 27 cwt., making a total gross weight of 4 tons. The turning circle is 50 ft.; wheelbase and track 12 ft. 4 in. by 5 ft., and overall length and breadth of chassis 19 ft. 3⅝ in. by 6 ft. 7¼ in. Laden, the frame height is 21½ in. The chassis costs £450 with seven 32 in. by 6 in. tyres and spare disc wheel The variety of bodies fitted to this chassis show that it has a popular and useful range and is specially suitable

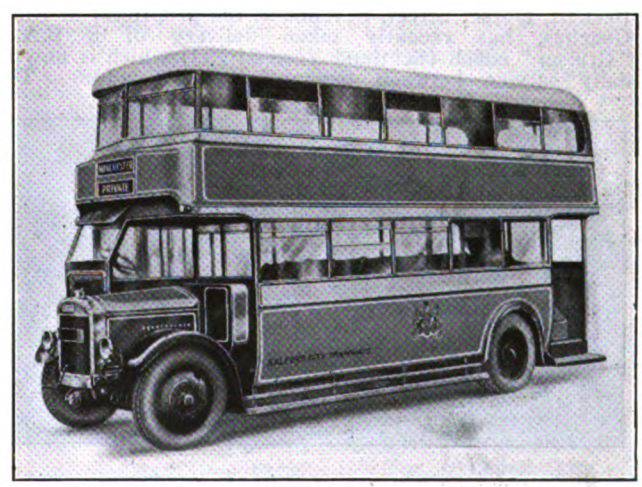


A DENNIS 20-SEATER SINGLE-HANDED BUS ON THE NEW "GL" TYPE O.H.V. 4-CYL. CHASSIS.

for driver single handed control. Braking and power alike are well proportioned, a feature indicated by the list of owners operating over some of the most hilly districts of Wales and North-East Lancashire. Four-wheel brakes with a vacuum servo assisted control are included.

The "H.S." Low-Load Line Double-Deck Bus Model.

This is essentially and solely a front-driving position model similar to the "E.V." coach model. The engine is a four-cylinder (110 by 150 m.m.—4.33 in. by 5.9 in.) side valve model with an output of 64 h.p. at the moderate speed of 1,500 revs. and has a standard fuel consumption average of 0.58 pt. per b.h.p. hour. It is powerfully braked by four-wheel interconnected brakes and an independent lever brake operating at the back axle; the pedal set having a servo control at will. The robustness of details of this model is no less a feature than its modest weight, 72 cwt., for the chassis which has a wheelbase and track of 16 ft. 6¾ in. by 6 ft. 5¾ in. (front) and 5 ft.



THE DENNIS "H.S" TYPE 4-CYL. DOUBLE-DECK BUS.

10⅞ in. (rear), though these dimensions can be increased proportionately. There is 7 in. clearance below the axle, which has an under type worm axle-gear and under-slung rear suspension The overall dimensions of the chassis are 25 ft. by 7½ ft. The body space lengthwise is nearly 21 ft., so that the rear overhang is comparatively small. The frame height from the ground when loaded (the tyre dimensions being 38 in. by 7 in. (front) and 40 in. by

Digitized by Google

8 in. (rear) is 24½ in. or 25½ in.) which enables the overall height of a double-deck bus to be kept as low as 13 ft. The foregoing remarks as to dimensional literature apply also to this model; indeed, it may be stated with truth that better examples of condensed yet fully informative illustrated and understandable literature we have not found.

The "E.V." and "F.S." Low-Load Line Coach Models.

These are powerful chassis with a large four-cylinder (110 by 150 m.m—4.33 in. by 5.9 in.) side valve engine and separate gear box, vacuum servo four-wheel brakes, long low frame and underslung worm-drive and under-placed rear springs, arched chassis over the axle and 25 ft. 4 in. or 5 in. length of frame. The "E.V." model has some minor chassis differences of dimensions from the "F.S." model, but the weight of both is the same, viz., 3¼ tons. The "E.V."model has the side-of-bonnet position for the driver; the alternative—behind the bonnet position—being the feature of the "F.S." model. Advantages as to increased body space within the same chassis length resulting from the forward driving position are obvious, though from the variety of body types listed, it is certain that there is quite a good demand for the alternative type. Some handsome and roomy specimens of both models are featured in the maker's latest literature, from which it would appear that the forward drive position is preferred for the single-deck bus and the rear drive position for coaches of the touring type. It will suffice to recommend to readers interested the dimensional drawings of the two layouts which are featured in the literature referred to.

Motor Coach and Bus Notes.

Merseyside Coach Owners Meeting.—Although there is no association of Liverpool and District motor coach owners, the initiative was taken recently by Mr. W. J. Lake, of the Merseyside Touring Co., Ltd., 30 Islington and 17a St. John's Lane, Liverpool, in convening a meeting of operators to discuss the question of rates for the 1930 season. In the past this has always been a very thorny subject owing to the difficulty not only in securing unanimity on the rates themselves but in enforcing them. As a matter of fact rates questions were the rock on which the Liverpool, Cheshire and North Wales Motor Coach Owners' Association, which functioned about ten years ago, foundered after a brief life. The meeting of Liverpol owners, held at the office of Mr. C. F. Rymer, James Street, Liverpool, was a very amicable one and owners agreed to the proposed fares submitted by the Merseyside Touring Co. They are as follows:—London, 15s. single, 27s. 6d. return; Scarborough, 15s. single, 22s. 6d. return; Torquay, 25s. single, 44s. 6d. return; Great Yarmouth, 27s. single, 37s. 6d. return; Bournemouth, 22s. 6d. single, 40s. return; Bristol, 15s. single, 27s. 6d. return. Agreement was also reached on another point. If passengers miss the coach by which they have been booked to travel, but are in time to secure accommodation on a vehicle owned by another company, a transfer may be made. The company carrying a passenger in these circumstances will be paid the ordinary fare less a booking fee which will go to the company that issues the ticket. In cases of breakdowns, owners will undertake to provide transport for passengers to whom tickets have been issued.

A "B.A.T." for London—Sevenoaks Service.—Mr. J. K. Beckett, Dorset Street, Sevenoaks, the proprietor of Anne Coaches, has recently taken delivery of a B.A.T. "Cruiser" coach (Scotland Yard Model) which is now in daily service between Sevenoaks and London. The vehicle runs four trips daily from Monday to Saturday, and on Wednesdays it does a late evening trip in addition. On Sundays there are two trips and the weekly mileage amounts to 1,620.

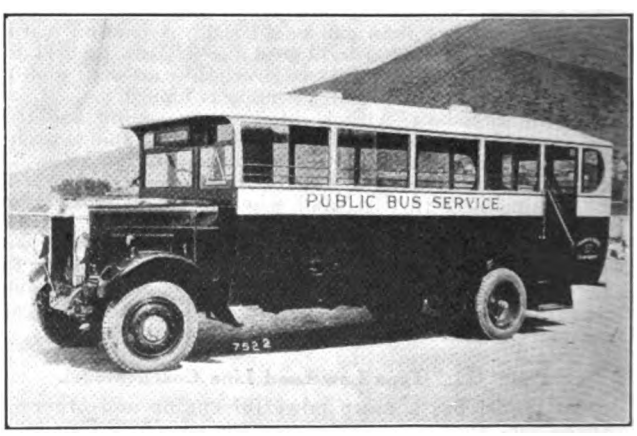
THE B.A.T. "CRUISER" REFERRED TO IN TEXT.

A.E.C. "English Electric" Trolley Buses.—As manufacturers of petrol buses and electric trolley buses respectively, the Associated Equipment Company, Limited, and the English Electric Company, Limited, have arranged to collaborate in putting on the market a line of single-motor low-loading trolley omnibuses. These vehicles, which will shortly be put on test, will have as their basis the A.E.C. "Regal," "Regent" (4-wheel) and "Renown" (6-wheel) chassis. The line of vehicles will include single and double-deck types with the following wheelbases and seating capacities:—Model "661T" 50-52 seat double-decker (4-wheeled), wheelbase—15 ft. 6½ in. Model "662T" 30-34 seat single-decker (4-wheeled), wheelbase—17 ft. Model "663T" 60 seat double-decker (6-wheeled), wheelbase—16 ft. 6 in. The last mentioned model can be supplied with a wheelbase of 18 ft. 7 in. In these new vehicles the Associated Equipment Company will manufacture the chassis and components. The electrical equipment and the bus bodies will be manufactured by the English Electric Company, Ltd.

"All-Red" Route.—A vast re-organisation of bus services in which the L.N.E.R. hold big interests is planned for the whole of the North-Eastern area. Rail and road are to be linked up as far as possible, and there will probably be interchangeable tickets for rail and road. It has already been decided that all the buses with which the L.N.E.R. is connected will be painted red. Special facilities for tourists circular tours will doubtless be afforded in the summer season.

Long Distance Bus Services.—Manchester Watch Committee reported to the City Council on 2nd April that they have granted the applications of the following firms to run long distance motor omnibus services from Manchester:—Taylor and Wallace, C. A. Hegginbottom and Sons, Wyatt and Neville, Auty Bros.; and Douglas Webb.

Leylands in Capetown.—Leyland Motors, Ltd., Leyland, Lancs., announce that their "Badger" chassis is becoming increasingly popular in South Africa. The illustration shows a long wheelbase "Badger" fitted with a neat 27-seater body by a Cape Town body builder. The machine is running in the service of the Public Bus Service in Cape Town.



THE LEYLAND "BADGER" REFERRED TO IN TEXT.

Merging of Motor Bus Interests.—Negotiations for the transfer of the Claremont Bus Service, Ltd., Burnley, to the Rishton and Calder Co., have had a satisfactory outcome. The Claremont Services from Clitheroe to Blackburn, Preston, Lancaster, passed over to the new owners

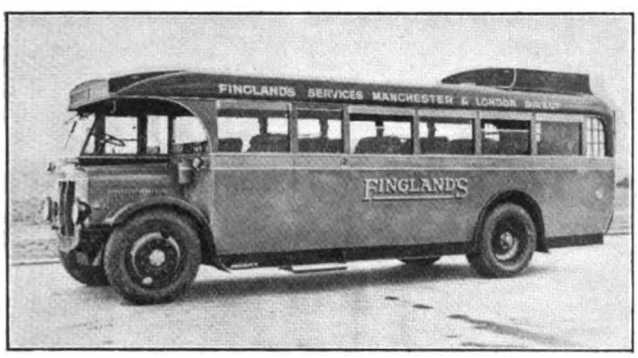
Digitized by Google

from the 24th March. The motor bus undertaking of William Lees, Limited, Radcliffe, has been acquired jointly by the Lancashire United Transport and Power Company, Atherton, and the Bury Corporation. Messrs. Lees operated two routes: (1) Radcliffe Bridge to Farnworth, which will be taken over by the L.U.T. Co., and (2) Blackford Bridge to Unsworth, which in future will be worked by Bury Corporation.

Daimlers for Newcastle and Lancaster.—The tramways undertaking of the Newcastle-on-Tyne Corporation have recently placed a further contract with the Daimler Co. for ten double-deck, and eight 32-seater single-deck C.F.6. Daimler buses, these making a total of twelve single-deck and sixteen double-deck Daimlers ordered by that Corporation including their first order in September last. The Lancaster Corporation have also brought their fleet of C.F.6. Daimlers up to eleven since their first order for three buses placed last April.

Blackpool Motor Coach Figures.—Mr. H. Hardman, the Secretary of the Blackpool Motor Coach Owners' Association, in an address to the Blackpool Rotary Club on 27th March, said that the first motor coach was introduced in Blackpool about 1903. No less than £300,000 of capital, he said, was sunk in motor coaches in Blackpool; £300,000 in garages and parking stations, while employment was found for over 500 people during the season. Blackpool's fleet of coaches last season used 650,000 gallons of petrol and 55,000 gallons of oil, while 5,200,000 miles were travelled in carrying 1,716,000 people. Unfortunately road development and legislation had not kept pace with the times.

A Luxurious Tilling-Stevens Coach.—The "Express" coach shown in the photograph supplied by Tilling-Stevens Motors, Ltd., 5 Iddesleigh House, Caxton Street, London, S.W.1, is luxuriously appointed for long distance service and is one of a number supplied to Fingland's Hire Cars, Ltd., of Manchester. It has a 16 ft. wheelbase and low loading frame. It is provided with a lavatory



ONE OF FINGLAND'S HIRE CARS, LTD., TILLING-STEVENS "EXPRESS" 26-SEATER COACHES.

and interior luggage arrangement on the off-side of the rear end. It has 26 luxury seats upholstered in moquette. Fingland's Hire Cars, Ltd., run daily coach services to Blackpool, London, South Coast, Glasgow, North Wales and Newcastle. The firm are supplied with Tilling-Stevens coaches through Garlick, Burrell & Edwards, Ltd., of Liverpol and Manchester, the Tilling-Stevens agents. The coach work was carried out by Mr. H. V. Burlingham, of Blackpool.

Headroom in Motor Coaches.

THE Commissioner of Police of the Metropolis has caused the following circular letter to be circulated:—

> "I am directed by the Commissioner of Police of the Metropolis to inform you that it has been brought to his notice that some doubt appears to exist as to the minimum inside height measurements required for public service vehicles, and that in certain cases coach bodies with sliding roofs have been constructed, the inside height measurements of which fall considerably short of official requirements.
>
> The Commissioner desires, therefore, to direct your attention to the fact that the official requirements laid down for the minimum inside headroom of public service vehicles fitted with permanent tops apply also to vehicles fitted with roofs comprising a combination of the permanent and the sliding types."

The requirements are as follows:—

1. Vehicles with seating capacity not exceeding 20. Minimum headroom, 5 ft. 3 in. 2. Vehicles with seating capacity exceeding 20. Minimum headroom, 5 ft. 10 in.

World Tractor Trials.

THE official list of entries for the World Tractor Trials marks the notable advance made during recent years in the application of power machinery to agriculture.

No fewer than thirty-three machines, including entries from the leading manufacturers in the British Isles, America, France and Germany, have been accepted for the Trials by the Royal Agricultural Society and the Institute of Agricultural Engineering, Oxford, acting as the joint organising bodies. These various machines, in their different classes, the latest standard models, embody all the most recent improvements.

The Trials, which are to be held during the Summer and Autumn of the present year, will be exhaustive, and the published reports, giving full particulars of the various performances under the most searching tests, will enable British agriculturists to decide which machines are best suited to farming conditions in this country. British manufacturers will also be enabled to show how their improved models compare in efficiency with the latest American and continental types.

Two features of the entries are of especial interest as showing the important advances made by British manufacturers during recent years. Crude oil engines, using a cheap fuel, will, it is anticipated, reduce the working costs of power machinery on the farm, and of the eight entries of this type no fewer than six come from British firms. Again, in the section devoted to tractor cultivators suitable for use by market gardeners and smallholders, the only machines on trial, three in number, are made by British firms. Much interest will attach to the official reports on these "market garden tractors."

The following is the full list of official entries:—

The Trials, which are to be held near Wallingford, will be divided into two parts:—(a) For extended tests of a scientific and practical nature which will be conducted in private; and (b) public demonstrations, to be held during September, when the machines will be seen in operation under strict working conditions.

Licences Granted.—The Watch Committee of the Eastbourne Corporation has granted two licences for chars-a-banc to Mr. E. J. Pratt on condition that he gives an undertaking that he will not sell the vehicles or transfer his business or any interest therein to any other person or company without the express consent of the Committee.

Digitized by Google

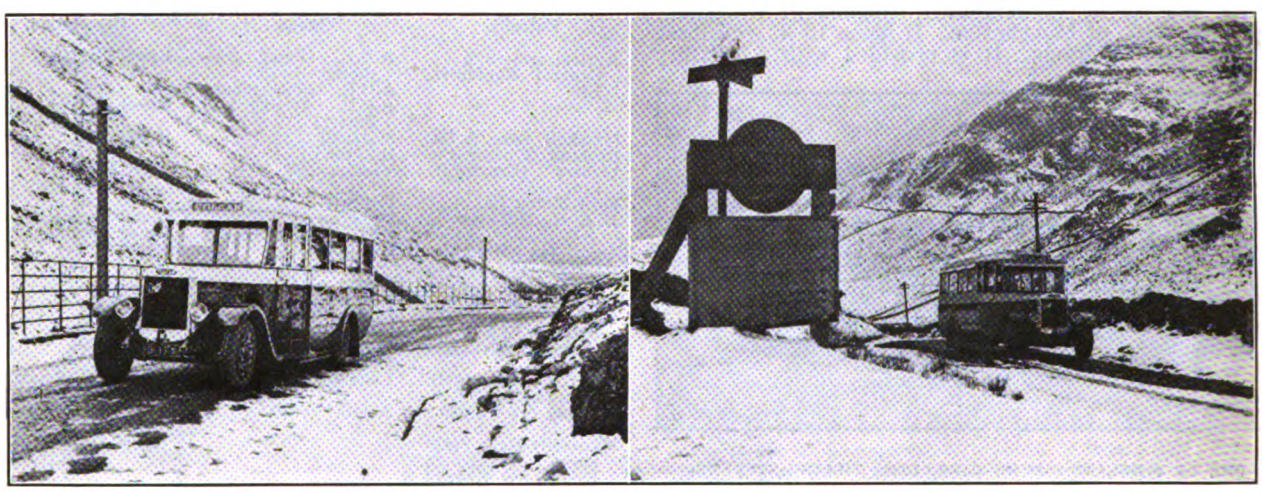
Over Kirkstone in Winter with a Vulcan "Duke."

The Vulcan Motor & Engineering Co. (1906), Ltd., of Southport, have long been known as manufacturers of passenger vehicles, and their products are deservedly popular. One of the lighter models they produce is the "Duke" 4-cylinder 20-seater bus, which is well known on many bus routes and which also is popular overseas. The Hong Kong and Shanghai Hotel Co., in addition to their larger Vulcan buses, operate a fleet of "Dukes," and recently sent in their fourth repeat order for buses, comprising several of this type. Before shipment each of these vehicles is given an exhaustive test, and in this case it was decided to test them over the well known Kirkstone Pass.

The bus, which was loaded with ballast equal to the weight of a full load of passengers, left the works at 10.43 a.m. and then proceeded at an average speed of thirty miles an hour to Preston. The seventeen miles to Preston were covered in 37 minutes, and Lancaster was reached fifty minutes later. Arriving at Kendal at one o'clock a stop was made to have lunch, and to examine the bus, afterwards proceeding on the journey to Shap. The "Duke" climbed Shap exceedingly well, most of the climb being made on top and third gear. At the top of the slightest touch of the wheel. All gears were easy to engage, and owing to all gears and shafts being ground the gear box was exceptionally quiet. The brakes too, were excellent, and on the few occasions when it was necessary to apply them full on, the vehicle pulled up smoothly and without jar in a surprisingly short distance. The steering lock was wide enough to take the most difficult corners with ease, whilst in towns the "Duke" was as easy to manage as a touring car. The engine showed little or no signs of vibration and pulled excellently.

Leaving Kendal at five minutes to six, the bus maintained a steady average of thirty miles per hour all the way through Lancaster and Preston to Tarleton, about six miles from home, where the petrol supply ran out, and a few minutes were spent in refilling. The time taken for the return journey from Kendal to the Works, including the stop at Tarleton, was two hours twenty minutes, or just three minutes more than on the outward run. For the last two hours the bus was running in darkness, there being no moon, but the excellent beam from the lamps rendered travelling in the dark easy.

On the return to the Works the oil level was tested, and it was found that only half a pint had been used on the



TWO VIEWS OF THE VULCAN BUS ON KIRKSTONE PASS.

Shap the temperature of the water in the radiator was taken and found to be 178°F.

Leaving Shap the bus followed the main road to Penrith, but turned off before reaching that town and made for Pooley Bridge which was reached at three-fifteen. From here a narrow road wound along by Ullswater to Patterdale, and here the "Duke" showed what a good top gear performance it could give, the engine picking up well and accelerating quickly from very slow speeds. Leaving Patterdale the climb up Kirkstone commenced. The roads were in very poor condition and snow lay six inches deep in most parts of the pass. The bus pulled remarkably well for the whole of the climb, and when the one in four part of the gradient was reached and first gear had to be engaged, it was noticeable that even then there was plenty of reserve power. The time taken to climb the pass was twelve minutes, during which several photographs were taken.

At the top of the pass the bus was stopped for a few minutes whilst further photographs were taken, and then the run was resumed through Troutbeck to Windermere, which was reached at 4.45 p.m.

Very little traffic had been met with on the roads in the Lake District, and so it was possible to test to the full the "Duke's" capabilities. On the level it had shown a very good turn of speed, and though it had never been opened out to its maximum speed, forty-five miles per hour was reached and held with ease. All hills had been taken easily and only once, at the top of Kirkstone, had first gear to be used. The steering was delightful on all conditions of road surface, and the bus answered to run of 182 miles. The petrol consumption worked out as just over ten miles to the gallon, which is very good considering that such climbs as Kirkstone and Shap had been made, and an average speed of thirty miles an hour maintained where possible, and also taking into account the general stiffness of the new vehicle.

The body, which of course has been specially designed to meet overseas conditions, is exceptionally roomy, and the seating arrangement well thought out. Both interior and exterior are finished in a way that maintains the high standard of excellence.

The "Duke" has a 4-cylinder engine with a bore and stroke of 100 by 130 mm., the cubic capacity of which is 4,084 cc., the Treasury rating 24.8 h.p. and which develops 49 b.h.p. at 2,000 r.p.m. A four-speed gear box is provided as a separate unit and is supported at three points to insulate it from frame distortion. The foot brake operates, with servo assistance, internal expanding shoes of large diameter in drums on the front and rear axles, while the hand brake operates similar size shoes in the rear axle drums. Both front and rear springs are long and underslung, giving excellent riding comfort, and low loading height. 32 by 6 British Goodrich straight side type pneumatic tyres are fitted singles front, twins rear and spare. The equipment is full and complete and comprises:—Two electric head lamps, two electric side lamps, electric tail lamp, electric self starter, electric horn, bulb horn, speedometer, clock type oil pressure gauge, Ki-gas injector, driver's mirror, automatic windscreen wiper, and full kit of tools. The wheelbase is 13 ft. and the track 5 ft. 1 in., whilst the chassis weight is 48 cwts.

The Six-Wheel Drive Six-Wheeler.

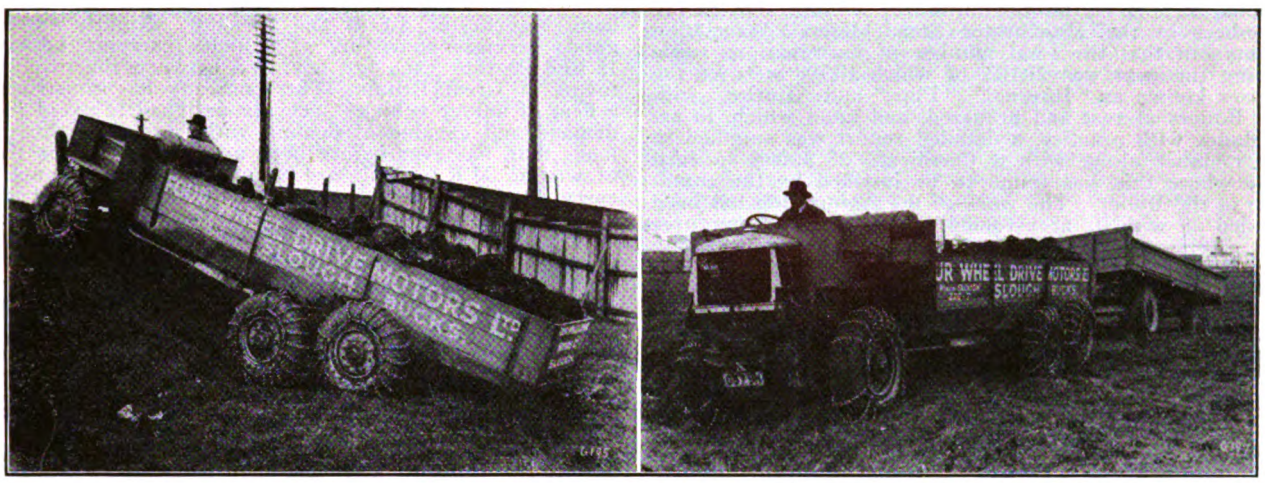
It is only in the War Office mechanical transport demonstrations that one has opportunities of studying the performance of vehicles under the most exacting conditions. Always at these demonstrations it has been noticeable that whilst the rigid six-wheeler with bogey drive only can travel with ease over remarkably rough ground and climb what at first appear to be impossible inclines, it is immediately put out of action when encountering deep ditches or trenches such as would be ordinarily encountered in modern warfare. The reason for this is, of course, that the front or steering wheels are entirely dependent for their propulsion upon the bogey driving wheels. They have no "lift" or "life" in themselves. When a ditch is encountered and the obstruction comes above the front axle, that is to say above the line of drive, the effect is to drive the front wheels deeper into the obstruction instead of over it. To provide a sound mechanical front wheel drive is an engineering proposition not easily achieved. As is well known to our readers, however, Four Wheel Drive Motors, Ltd., have had many years experience of this particular drive and they have now been able to modify it in such a manner that the construction is sufficiently robust to withstand the severest stresses set up under the most trying circumstances.

This achievement was amply demonstrated recently at Slough by a six-wheel drive vehicle built by Four Wheel Drive Motors, Ltd., 46 Charing Cross, London, S.W.1. The vehicle crossed ditches both deep and muddy and this it did without the slightest indication of jibbing. It did not take the obstacles with a rush; on the contrary it was deliberately halted when in the worse positions for restarting and it did restart easily, it not being necessary even to accelerate the engine to any extent.

The wheels were fitted with 40 in. by 9 in. high pressure pneumatic tyres equipped with non-skid chains. The ability of the machine to climb out of apparently impossible positions is provided by the combination drive. The push of the rear bogey keeps the front driving wheels to the face of their work so that as they tear down their obstruction they throw the debris behind them and override it. Without this assistance from the rear driving wheels they would, of course, merely bury themselves.

The demonstration amply proved that the vehicle can easily overcome obstacles which no other vehicle has yet been able to overcome except of course vehicles of the tank or creeper track order which are, however, not intended to fulfil the same purpose.

This F.W.D. six-wheel vehicle is fitted with an A.E.C. six-cylinder overhead camshaft engine developing 48 h.p. at 1,000 r.p.m. rising to 92 h.p. at 2,400 r.p.m. The drive is taken through a single dry plate clutch to a four speed gear box and an auxiliary two speed gear box. The bogey axle is built to the War Office pattern and the front axle is the fully floating spiral bevel type. The chassis is type R.68 being similar to the gun tractor chassis supplied by F.W.D. to the War Office, but it is modified, having a long wheelbase so as to provide additional body space for ordinary transport.



TWO VIEWS OF THE F.W.D. SIX-WHEEL LORRY.

For the purpose of the demonstration the vehicle was loaded with 5 tons of scrap iron and was hauling a Reading trailer with an additional 4 tons. With regard to the Reading trailer: this will be dealt with later in a separate article as it is a vehicle of great interest and possibilities so constructed as to be suitable to negotiate ground over which the prime mover is able to travel.

This six-wheeler is by no means a freak vehicle as it has an excellent turn of speed under favourable conditions and was demonstrated to our representative that its speed on a good road surface was upwards of 30 miles an hour, and we understand that it can do 40 miles per hour. It is a vehicle essentially suitable for pioneer work in undeveloped countries.

Furniture Warehousemen and Removers' Association.

Annual Meeting.

The Annual Meeting and Dinner of the Furniture Warehousemen and Removers' Association will be held at the Hotel Victoria, Northumberland Avenue, London, on Wednesday, 21st May next.

The following is the provisional programme:—

10.15 a.m. Annual General Meeting of the British Association of International Furniture Removers.

11.0 a.m. Annual General Meeting of the Association. The special business includes:—(a) Design registered when the Association's Publicity Scheme was under consideration; (b) suggested issue of Certificates of Membership; (c) conferment of Degrees; (d) general publicity.

12.30 p.m. Annual General Meeting of the Benevolent Fund Committee.

2.30 p.m. Address by Mr. G. H. Price on "Railways and Removal Traffic," followed by discussion.

3.15 p.m. Address by Mr. J. Godden on "Hours of work, etc., and their relation to the Road Traffic Bill, and the proposed ratification of the Washington Hours Convention; the Road Traffic Bill," followed by discussion.

4.0 p.m. Address by Mr. G. H. Good on "Co-operation in the Industry," followed by discussion.

6.30 p.m. Reception by the President of all guests, members and their ladies attending the Dinner, and Musical Entertainment. Evening dress optional.

7.0 p.m. Annual Dinner and Musical Entertainment. (Members and ladies tickets 12/6 each, excluding wines).

As this is the most important meeting of the Association held during the year, it is hoped that there will be a large attendance of members accompanied by their ladies, and all are urged to help to make the meeting a pronounced success.

The business to be dealt with is of great importance, and this gathering affords members the opportunity of meeting those with identical interests.

News from all Parts.

Road Vehicles—Great Britain. — A return has been issued by the Ministry of Transport giving particulars of the number of motor vehicles registered for the first time under the Roads Act, 1920, during the month of January, 1930. Copies (price 2/6d.) can be obtained from His Majesty's Stationery Office, Adastral House, Kingsway, W.C.2. The number of new motor vehicles registered was 25,362 and included 533 hackney vehicles and 5,292 goods vehicles. The return shows the number of each class of vehicle registered for the first time by each licensing and registration authority analysed in detail according to various taxation scales, e.g., motor cars under headings of horse-power, goods vehicles under headings of unladen weight, hackney vehicles under headings of seating capacity, etc.

Manchester Steam Users' Association. — The 1929 Annual Report of the Committee of Management to the members of the Manchester Steam Users' Association points out that the total number of examinations made during the year was 21,103, of which 10,798 were of the classes known as "Internal," "Flue," and "Entire," with the Boilers at rest and prepared, and upon which, in accordance with practice, a detailed report was supplied to the member along with a Certificate of Safety in each case where this was found to be justified by the condition of the Boiler. The work of the Association has been carried on with its accustomed regularity, the Committee ever keeping in view that faithful and efficient inspection for the prevention of explosion was the guiding principle of the Association's founder. Though the primary work of the Association is the periodical inspection of its members' Boilers with the specific object of carrying out the purpose of its founders, the Committee would draw special attention to the fact that a specially trained Staff is employed in inspecting and testing new Boilers, etc., in progress of construction and on completion before delivery in order to certify their compliance with Specifications and drawings.

* * * *

MERSEYSIDE.

Transport Employers' Application. — To consider the Liverpool transport employers proposal for alterations in working conditions, an important special general meeting of members of the Liverpool and District Carters and Motormen's Union was held at Liverpool on 30th March. The proposal of the employers is that the existing agreement should be amended by the insertion of an optional clause whereby motormen may be employed upon the accumulative week system. It is understood that the object of the proposal is to enable Liverpool employers to meet the severe competition arising from outside districts where this system of working is in operation.

Chaos in Transport Industry.—Speaking at the Annual Meeting of the Leeds and Liverpool Canal Co., the Chairman, Mr. R. W. Wickham said: "It is quite wrong that a man should be permitted to buy an old motor van for a £10 note and cut freight rates down to nothing without consideration of wages or hours and picking the best paying stuff. This problem, it seems to me, will have to be tackled before long and some sort of traffic pool set up. The present chaotic system or lack of system, cannot possibly go on. The only pity is that it was not tackled when the trouble first began to show itself and before so many vested interests had grown up."

Cartage Tenders Accepted. — Liverpool Corporation Water Committee has accepted the following tenders for cartage:—Liverpool Corporation (Health) Committee; Messrs. C. Howell, Liverpool; Mr. Joseph Dyson, Liverpool; Messrs. Lawrence F. Briggs, Ltd., Liverpool; Messrs. M. Halligan & Sons, Liverpool; Mr. James Young, Liverpool; Mr. J. E. Levis, Liverpool; Messrs. Leece Motors, Liverpool; Messrs. Robt. Jones and Sons (Contractors), Ltd., Liverpool.

New Purchases.—At a recent meeting of the Liverpool City Council the purchase of the following motor vehicles was approved:—Three special motor vehicles and twelve horse-drawn containers for collection of household refuse, Walker Bros., Wigan, £5,787 10s.; 25 h.p. Daimler special ambulance chassis and body, J. Blake & Co., Ltd., Liverpool, £990; 25 cwt. Bean chassis for patrol wagon, J. Blake & Co., Ltd., £218; two motor ambulances, Vulcan Motor and Engineering Co., £455 each; two motor bedding vans, A. W. Webb, Ltd., Berry Street, Liverpool, £275 each.

Warrington Horse Parade.—Warrington Horse Parade has been fixed for Saturday, May 3rd. The horses will be judged out of their vehicles, at Victoria Park, will be re-harnessed, and the parade will take plaec immediately afterwards. Two silver cups have been presented, one by the Warrington Horse and Motor Owners' Association, to the driver of the best kept horse, whose owner is a member of the association, and one by the manufacturers of a special food, for the best-kept horse fed regularly on that food.

Fleet of 6 and 8 Wheelers.—M.R.S., Ltd., of Liverpool, whose rolling stock comprises a Scammell 14-wheeler lorry, together with a fleet of 6 and 8 wheeler lorries, tractors, trollies and steam locos, are acquiring six additional eight-wheeled vehicles capable of carrying 20 tons each, two additional drop frame 30 ton boiler and machinery carriers and two 100 tons special machines. The company has depots at Liverpool, London, Birmingham, Manchester, Leeds and Glasgow. Nightly express goods services consisting of vehicles carrying between 15 and 20 tons each are operated between the principal towns of Great Britain. The Company has constructed a fleet of unique vehicles specially designed to avoid road damage and capable of dealing with larger and heavier loads than has ever before been attempted. At the time of writing M.R.S., Ltd., are completing arrangements to carry from Plymouth a lathe weighing 250 tons and measuring 74 feet long and 17 feet wide to a place on the East Coast.

* * * *

The Motor and Cycle Trades Benevolent Fund.—The 1930 Handbook of the Motor and Cycle Trades Benevolent Fund contains the Rules and Bye Laws, Lists of Officers, Members and Associates, Reports of the General Hon. Secretary and Treasurer, and of the Branch Centres for 1929, the Accounts, and information regarding the Children's Home, the Lord Wakefield Educational Fund, and the Sir William Morris Propaganda Fund. A new feature is the listing of Life Associates, i.e., Associates who have paid their annual subscription for not less than twenty years, under each Centre. It is interesting to note that in this, the twenty-fifth year of the Fund, the Life Associates number no fewer than 237. The General Secretary of the Motor and Cycle Trades Benevolent Fund is Mr. A. H. Dawson, and the offices are at 42 Bedford Row, London, W.C.1.

A.E.C. Move Their Bristol Branch.—The lease of the A.E.C. Branch Depot at 141 Victoria Street, Temple, Bristol, having expired, the Sales, Spares and Service Departments of this Branch have been temporarily transferred to the premises of The Bath Tramways Motor Co., Ltd., Kensington Garage, London Road, Bath. The telephone number is Bath 3261 Extension 6, and the telegraphic address "A.E.C. c/o Touring Bath."

* * * *

MANCHESTER.

United Transport Workers' Association and an Application for an Advanced Rate of Pay.—The United Transport Workers' Association has made an application to the Manchester Corporation for an advanced rate of pay for duties which their members perform between the hours of 8 p.m. and 6 a.m. The Workmen's Special Committee of the Council decided to inform the Association that the Corporation cannot deal with the application as the wages and working conditions of transport workers are regulated by the Joint Road Transport Council, and that, in accordance with the Corporation's prevailing practice, the decision of that Council in the matter will be given effect to by them.

"Better Served by Buses." — Mr. R. Stuart Pilcher, Manager, Manchester Corporation Transport Committee, in a report to his Committee recommended that having regard to the present development of transport, tramways should not be constructed in Mauldeth Road West and Broadway, Moston. The Committee agreed that the routes could be better served by buses.

Team Hire Contracts.—Contracts for the hire of team labour and haulage of materials for six months ending 30th September, have been placed by the Manchester Corporation Paving, etc., Committee with the following Manchester firms:—G. Massey & Sons, J. Holt, J. Hancock, A. Mountfield, G. Welsby, J. Crossland, Jr., J. H. Peck and Sons, Ltd., W. Hayes, J. Bray, James W. Cage, R. Melling, T. Lamb, W. Tonge, P. Lawless, S. Thorpe, J. & G. Evans, C. Cooper, T. Seward, D. Clays, G. H. Brocklehurst, A. Peck, G. Farrell, J. W. Street, J. A. France,

Digitized by Google

South Manchester Coal Co., G. Barrow, G. Wilson, W. and S. Royle, D. Middleton, C. G. Stephens, J. Biesty, J. A. Shafto, Mrs. S. A. Green, I. Wharton, H. H. Evers, E. & R. Hughes, J. Bacon, J. Walker, A. R. Hughes, W. Lancashire and J. Walmsley. Haulage of materials—The L.M. & S. Railway Co., Manchester. Manchester Gas Committee has accepted the tender for the hire of horses and carts for the year ending 31st March, 1931, submitted by Messrs. J. Biesty, J. Bray, H. Evers, J. Hancock, S. Hynes, R. Melling, A Mountfield, and T. Wheeldon—all of Manchester.

New Motor Bus Station.—Mr. R. Stuart Pilcher, General Manager of the Manchester Corporation Transport Committee, has submitted to his Committee a report suggesting the provision of a central motor bus station. The Committee approved of the principle of a central station and directed the General Manager to make enquiries as to alternative sites.

* * * *

Thomas Tilling, Limited.—The Report of the Directors of Thomas Tilling, Limited, road transport contractors, for the year ending 31st December, 1929, shows that the Company made a profit for the year, after providing for Debenture Stock and other interest, of £225,120 7s. 3d., to which must be added the balance brought forward from the previous year, viz., £67,693 4s. 1d., making a total of £292,813 11s. 4d. Before arriving at the profit, adequate provision has been made for the depreciation of rolling stock, plant, etc., horse renewals and for the amortization of leases.

A SIGN OF THE TIMES. ONE OF THE COLCHESTER CORPORATION'S OMNIBUSES WHICH HAVE SUPERSEDED THE TRAMS ON NORTH STATION ROAD.

U.S. Automobile Industry.—Information compiled by the National Automobile Chamber of Commerce, 366 Madison Avenue, New York, N.Y., shows that 5,621,709 units, i.e., 4,811,108 passenger cars and 810,601 trucks were turned out by the U.S. automobile industry and U.S. owned assembly plants in Canada during the whole of 1929, as against 4,601,130 motor vehicles produced in 1928. Comparison of the figures for the year 1929 over those for the 12 months of 1928 shows an increase of 19.8 per cent. in passenger car production and 41 per cent. in commercial vehicle production, or 22 per cent. in the production of all motor vehicles combined. A total of 1,009,595 motor vehicles, or 664,456 passenger cars and 345,139 trucks were sold outside the United States during the whole of 1929, compared to exports of 825,146 units (615,586 passenger cars and 209,560 commercial vehicles) during the 12 months of 1928, showing a gain of 8 per cent. in passenger car exports and 65 per cent. in those of commercial vehicles.

* * * *

NORTH-EAST COAST.

Municipal Bus Stations.—Associated bus companies who have agreed to use the Marlborough Crescent terminus in Newcastle have undertaken to pay between them £2,000 a year for facilities which are to be provided by the Corporation in the way of roofing, loading platforms, waiting rooms, etc. The annual payment is subject to re-adjustment, the Corporation not being desirous to make profit from the station.

Getting Rid of Bridge Tolls. — Over 12 months ago Alderman Rd. Mayne (Chairman of Newcastle Corporation's Transport Committee) carried a resolution in the City Council to enter into negotiations with the L.N.E.R. and the Redheugh Bridge Co. for the abolition of tolls on those bridges, so that traffic might be more evenly distributed. A deputation from the Corporation has been interviewing the Ministry of Transport on the matter, and some solution of the problem at an early date is hoped for.

City Tramways' Purchase. — Newcastle Corporation Transport Committee has placed a further contract with the Daimler Company for 10 double-deck and eight 32-seater single-deck Daimler buses, these making a total of 12 single-deck and 16 double-deck Daimlers, ordered by the Corporation, including its first order in September. Seven A.E.C. double-deck buses are also on order.

Higher Bus Fares.—From March 31st the bus fares on the Coast Road route between Newcastle and Whitley Bay and Newcastle and Tynemouth have been raised from 1/- to 1/2d. return. It was common knowledge that the fare was an uneconomic one. Newcastle Corporation, United Automobile Services, Wakefield's Motors, and the Tynemouth Tramways Co. have working arrangements on the Coast Road.

Blaydon Buses Sold.—Messrs. Robert Emmerson and Co., Ltd., have taken over the fleet of 25 buses belonging to the Blaydon "A" services which operate between Newcastle and Hexham.

* * * *

R.A.C. Tourist Trophy Race. — Amongst the entries received for the R.A.C. Tourist Trophy Race in Ulster on 23rd August next, are a team of three 8-cylinder front wheel drive Alvis cars; three supercharged Austin Sevens; four Alfa Romeos entered by Captain Malcolm Campbell; a Lea Francis entered by Mr. D. K. Mansell, the well-known motor cycle competition rider, and Triumph and Riley cars.

London Van Horse Parade. — The annual Parade of London's van horses will again be held in Regents' Park on Easter Monday, April 21st, and the Lord Mayor and Lady Mayoress of London will indicate their interest in this typical London function by arriving at noon to present the prizes. The exhibits will as usual come before well known judges including Lord Daresbury, Col. Percy Laurie, Sir George Hastings, and Sir Hugh Turnbull. The horses will naturally be varied in type, but each horse must be able to trot, and as the exhibits are judged on merit the small greengrocer's horse stands an equal chance against the "Prize winning" exhibits of the large London firms. Entries are coming in from practically every suburb and a large show is anticipated. Those who wish to view the parade should apply to Mr. R. A. Brown, Secretary, London Van Horse Parade Society, at 12 Hanover Square, London, as only a limited number of passes are available.

* * * *

HULL.

Proposed New Bridge Across the Humber.—The engineers, Sir Douglas Fox and Partners, called in by the local authorities of Hull, the East Riding of Yorkshire, and North Lincolnshire to advise on the alternative methods of bridging or tunnelling the Humber, have decided in favour of the former method. They estimate that an adequate road bridge can be constructed for £1,725,000, and that is what they recommend. Other estimates put forward by them are:—Railway tunnels (two tunnels, each 18 feet diameter), £4,600,000; road tunnels (two tunnels, each 27 feet 6 in. diameter), £7,200,000; and combined road and railway bridge, £4,000,000. They wipe out the idea of providing facilities for a railway, as they understand that the London and North Eastern Railway Company do not regard, as a commercial proposition worth consideration, the finding of the capital required for their share of a crossing. "In our opinion (they say) no case for the construction of a railway crossing can be established, and we advise that this feature of the proposals should not be pursued." The suggested bridge is of the cantilever type and would be thrown across the Humber, a little distance above Hull, between Hessle on the Yorkshire side and Barton on the Lincolnshire side. It would be 36 feet wide to carry four lines of traffic, and its total length, including approaches, would be 3¼ miles. To avoid interference with shipping going up the Humber to Goole there will be a central single span of 900 feet with a clear height of 90 feet, and there will be two anchor spans each of 264 feet, and 21 subsidiary spans each of 250 feet. The allowance under the central span is 15 feet more than on the Manchester Ship Canal, and six feet more than under the new Tyne bridge. Whether the scheme is carried into effect or not depends upon the amount of financial assistance the Government is prepared to give.

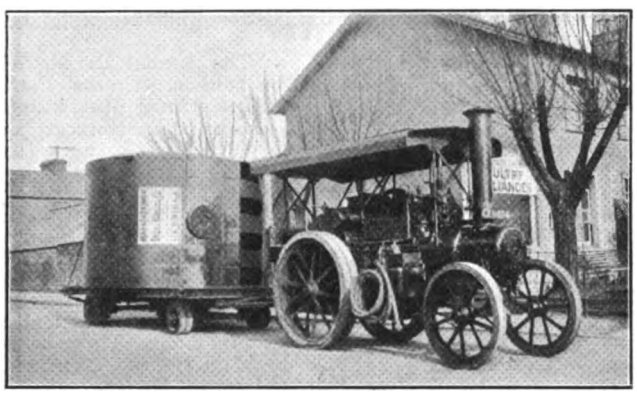
National Horse Association of Great Britain. — The Report of the Council of the National Horse Association of Great Britain for the year 1929 mentions that the Committee for the slippery roads campaign has been very active during the year, and the Chairman and members have undertaken an extended tour of the South Western Counties, covering some 975 miles and including the counties of Oxford, Wilts, South Devon, Somerset, Dorset, Gloucester and Buckinghamshire, while many other road inspections have been carried out in all parts of the country. The second report of this Committee recently issued to all members contains a full account of their activities, and the recommendations made with a view to finding road surfaces which will be safe for all forms of transport. A special sub-committee has been formed which replies to the various allegations constantly appearing in the daily press that the horse is the contributory factor of street congestion in London and the large cities, and the various repudiations of this statement have called forth the approval of a large number of firms utilising horse transport. It has been abundantly proved that the horse is the cheapest form of transport for short journeys, the only method possible for the small trader, and more adaptable in narrow thoroughfares. Further the Council maintain that horses are mainly used in streets collateral to main passenger routes, and to put any restriction on their use in, and the crossing of, main routes would debar them from less frequented thoroughfares, and be to the detriment of economic transport by traders. The horse for certain trades where short distances only are necessary is essential and cheaper.

Transport by Coulson & Co., Ltd. — Our illustration shows a Stator frame on an Eagle trailer, load 12 tons, being hauled by a Garrett tractor from the works of



COULSON & CO., LTD., TRANSPORTING A HEAVY STATOR FRAME.

the Steel Barrel Co., Ltd., at Uxbridge, to West Drayton. The transport was carried out by Coulson & Co., Ltd., heavy haulage contractors, Coronation Road, Park Royal, London, N.W.10.

* * * *

SOUTH WALES.

New Swansea Bus System.—The Swansea Watch Committee has received a report, which it has approved, which will mean the introduction to the Borough of a one-way gyratory bus routes system. The bus traffic will be divided into four sections—north, east and west and Town Hill sections, all of which will have defined one-way routes and stopping places and strictly limited, five minutes maximum, waits at town centres before making return journeys.

Tare Weights.—The police are active in South Wales examining into the correctness of stated tare weights of road vehicles. As fines have been imposed for incorrectness it would be well for owners to check such weights. Bagged and loose commodities sold by weight have also been inspected for production of weight tickets where weight exceeds two cwt., and weighbridges have also been a matter of police investigation for accuracy and to see that they have the Board of Trade stamp. A well-known firm was fined £2 for an unstamped weighbridge use. The accuracy of the machine was not questioned but it was of French make and had not been stamped by Board of Trade officials.

Cardiff's Parliamentary Bill.—The Select Committee of the House of Commons in refusing the application clause in the Cardiff Corporation's Bill for extra boundary powers of bus running by making arrangements with other owning local authorities for reciprocal inter-areas rights asked what, if power was granted for a twenty-four miles route, Cardiff to Merthyr, was to prevent authorities running buses to London and other long distance centres. The Committee also declined to admit a clause seeking undefined powers of control of buses running in the Cardiff area.

Haulage Rates at Swansea.—At Swansea Council meeting the matter of acceptance of low haulage tenders by committees was discussed. A member objected to tenders being on too low basis which tended, he said, to rule out many firms who rigidly adhered to rates of wages standard for their employees from tendering as the basis of tendering, he contended, often did not admit of profitable contracting and payment of standard wage rates. He asked how a tender at 9/6d. per day could possibly pay the standard rate of 9/- per day to employees and maintain horses and carts. The matter is having attention of council committees.

* * * *

Newbury District Bus Proprietors and Carriers' Association.—The Annual Dinner of the Newbury District Bus Proprietors and Carriers' Association was held recently at the "Hatchet" Hotel. Mr. W. Chalk, the Chairman of the Association, presided and the chief guest was Mr. Councillor C. W. Burns, Chairman of the Parking and Playing Fields Committee of the Town Council. A most enjoyable evening was spent. Mr. Burns in the course of his remarks emphasised the fact that the Carriers belonged to the oldest trade in the world. Transport became necessary when commerce began. It was a big factor in building up the Empire and in the development of the world.

S.M.C. Four and Six-Wheel Commercial Chassis.—The Sunbeam Motor Car Co., Ltd., of Wolverhampton, announce that the prices of the S.M.C. four and six-wheel commercial chassis are now as follows:—52/110 h.p. S.M.C. six-cylinder four-wheel chassis, £1,075; 70/142 h.p. S.M.C. six-cylinder six-wheel chassis, £1,550.

Change of Address.—The London address of Henry Wells Oil Co., Ltd., is now 736-739 Salisbury House, Finsbury Circus, London, E.C.2. The change was made as the firm required larger premises. The telephone number is Metropolitan 4283. The address for the firm's works is still:—Henry Wells Oil Co., Ltd., Salford, Manchester.

A.E.C. at Dublin Spring Show.—We are asked to announce that the Associated Equipment Co. will again be exhibiting at the annual spring show to be held at Balls Bridge, Dublin, May 7th—10th, where three representative types of the new A.E.C. range of vehicles will be on view. The A.E.C. Stand number will be 125.

Change of Address.—The new address of Messrs. U.M. (1928), Limited, Unic Concessionaires for Great Britain, is 303/305 Cricklewood Broadway, Cricklewood, N.W.2. Telephone: Willesden 6701-6702.

R.A.C. Provincial Offices.—In order to provide for the large extension of work produced by increased membership, the Royal Automobile Club last year found it necessary to enlarge and improve the office accommodation at the Club's Manchester, Leeds, Bournemouth, Birmingham, Newcastle and Liverpool offices. In addition a new Provincial office was opened in Edinburgh, and new port offices at Dover, Harwich, Folkestone and Liverpool. Extensions are also being carried out in connection with the offices at Cardiff, Oxford and Belfast. The R.A.C. Provincial offices are completely equipped for the supply of touring and other information, and are not only a great boon to members living in the locality, but also to those touring in the district and requiring a convenient local headquarters.

Mechanising British Canals.—Mechanisation plays an important part in the schemes of canal development now under the consideration of the Government. The £500,000 project submitted by the Grand Union Canal Company is a typical example. One of the chief objects of the promoters is to make their 240 miles of waterway, between London and Birmingham, suitable throughout its whole length for the passage of the most up-to-date mechanically-propelled boats. The process of mechanising the canals of this country has been in progress for many years, but much still remains to be done. Not only the bigger firms of boat owners, but canal carriers on a smaller scale are anxious to bring their equipment and methods into line with modern requirements. Before this can be done, however, wider and deeper canals, with banks specially protected against the effects of faster craft, are absolutely essential, and the decision of the Government in regard to the development schemes is anxiously awaited.

Lancs. Canal Transport.—The Leeds and Liverpool Canal Company on last year's trading suffered a loss of revenue receipts principally in tolls to the extent of £7,149. During the year 1,618,556 tons (including 1,089,397 tons of coal) passed along the canal, an increase of 28,617 tons, yet the toll receipts were down because a large percentage of the tonnage was carried a shorter distance. Mr. R. W. Wickham who presided at the annual meeting at Liverpool referred to the amalgamation of four of their by-traders businesses under the title of Canal Transport Ltd. In view of the keen competition by road and rail, the directors considered that the four firms should be amalgamated. The problem of road competition would have to be tackled before long and some sort of traffic pool set up. It was a pity it was not tackled before so many vested interests had grown up.

Van Oppen & Co. Ltd. and the Italian Art Treasures.—The great Italian Art Exhibition at the Royal Academy has come to an end and the task of returning all the masterpieces for which they were responsible to their respective owners in Sweden, Denmark, Germany, Belgium, Holland, Switzerland, France, etc., has been accomplished by Van Oppen & Co., Ltd., International and Overseas Shipping and Forwarding Agents, of 90-91, Bartholomew Close, London. How this firm arranged for the collection and delivery of the pictures in London was

VAN OPPEN & CO., LTD., LOADING MASTERPIECES AT THE CLOSE OF THE ITALIAN ART EXHIBITION.

outlined in an interview we had with Mr. W. H. Brothers, the firm's international removals manager, and the information he then gave us was published in our January issue. The Louvre, Paris, and the Museum at Tours having suddenly decided to hold a short period exhibition desired to have the pictures returned to them very quickly. This meant that the pictures had to be taken from the walls of the Royal Academy immediately the exhibition closed at 9 p.m. on March 20th. A sling lift van was at the doors of Burlington House just as the lids of the last cases were being screwed down. The pictures were handed over safely to their French custodians in Paris on the Monday morning. We illustrate the pictures being loaded in one of Van Oppen & Co's. specially constructed lift vans at the Royal Academy, London under the supervision of Mr. Brothers. The photograph also shows Dr. Buschbeck of the Vienna Galleries as well as Mr. Roberts of Van Oppen & Co. Ltd. who escorted this particular van to the Docks, and we may mention that not only every van but every case of pictures, where they were sent separately was so escorted.

MIDLANDS.

Signalling Perplexity at Wolverhampton.—Drivers of motors in Wolverhampton profess to be in a dilemma as to what the red, green and yellow lights really mean. The Borough justices held, in a recent case of a motorist who passed the danger light while there was no traffic, that as there was no other traffic about there was no negligent driving, but Mr. Edwin Tilley, the Chief Constable, says that if any motorist passes the red light he shall prosecute. Pedestrians now that they have got used to them look to the signals and not to the traffic when about to cross the road and signals are for the guidance of pedestrians as well as for vehicular traffic.

Suggested Cheaper Fares for Birmingham.—The Birmingham City Council on April 1st discussed the proposal to offer cheaper travelling facilities in the City. One proposal is a return fare of 4d. or something approaching that figure. Another is to provide cheap return tickets for bus and tram passengers arriving in the city before 9 a.m. The matter is left for report of the responsible Committee to be presented next July, but as a quarter of a million profit was made last year it is felt that some concession will be made.

* * * *

Institution of Automobile Engineers.—At the Annual Meeting of the Institution of Automobile Engineers held recently it was announced that Sir Herbert Austin would be President of the Institution for the forthcoming Session, the Vice-Presidents being Mr. C. R. F. Engelbach, Mr. L. H. Pomeroy, Mr. W. J. Tennant, and Mr. W. A. Tookey. It was also announced that the following had been elected to fill the vacancies on the Council: Mr. W. Cannell, Mr. R. F. Clayton, Mr. W. W. Constantine, Mr. C. K. Edwards, Mr. N. Endacott, Mr. A. J. Hancock, Mr. A. G. Ionides, Mr. A. E. Johnson, Mr. J. W. Mills, Mr. H. F. L. Orcutt, Maj.-Gen. S. O. Peck, Mr. G. S. Wilkinson, Mr. A. P. Young. The Summer Visit of the Institution will this year be held on Thursday, June 26th to Saturday, June 28th, inclusive. The members will proceed down the Thames by launch, visiting places of interest on the way, and will make their headquarters at Tilbury, from whence excursions will be made. The offices of the Institution are at Watergate House, York Buildings, Adelphi, London, W.C.2.

Nottingham Chamber of Commerce. Road Transport Committee.—In the Report of the Road Transport Committee of the Nottingham Chamber of Commerce presented to the Council of the Chamber on March 31st last it is stated that in spite of adverse trade conditions, the accounts showed an even larger increase in turnover than during the half year ending June 30th last. There was an increase of 10 per cent. on the whole of the traffic handled, and in connection with the "smalls" services the increase was approximately 25 per cent. A regular daily service had now been put into operation to serve towns in South Wales. The heavy traffic moved by the Department also continued to show an increase which undoubtedly would be much greater under better trade conditions. Mr. H. A. Bennett paid a tribute to the work of Mr. Donaldson Wright, manager of the road transport section and his staff, and said that undoubtedly the department was doing useful service. Sir Ernest Jardine, who presided, said that from his own experience, regarding the transport of typewriters, the Road Transport Department's service was cheaper and quicker than railway transport.

* * * *

SCOTLAND.

Bus Traffic Regulations. — Glasgow Corporation have imposed strict regulations on bus services within the city boundaries. The Chief Constable is also asking for additional conditions for insertion in certificates to be granted at the next annual licensing court. One of the new proposals is that a bus shall not be driven at an exceptionally slow speed for the purpose of allowing passengers to enter or leave at unauthorised places.

More Mergers.—The Scottish Motor Traction Company are continuing to extend their interests. Mergers and amalgamations with services on the East Coast have been carried through. The railway companies it is understood are taking part in these extensions and developments which have now assumed a big scale.

Removers Busy.—Orders for removals in Scotland are coming in and between now and May several firms will be kept busy. In this connection the horse-drawn vehicle is still holding its own more particularly for smaller loads. While motor vans are increasing the horse is not so extinct an animal as some people suppose and a Scottish authority has stated that there are some 3,500 in regular work in Glasgow alone.

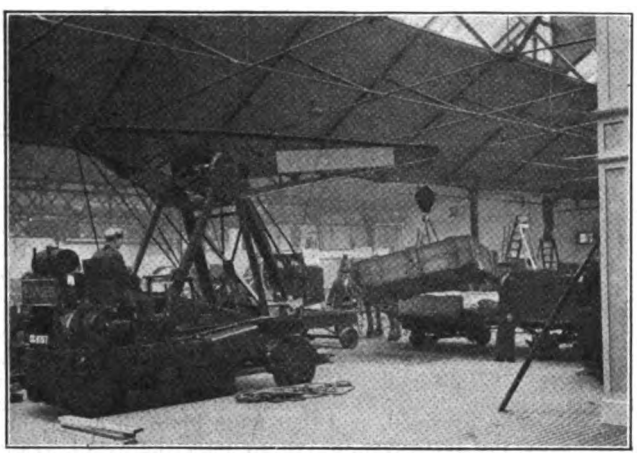
Twelfth Congresss of the Federation of Chambers of Commerce of the British Empire.—The Twelfth Congress of Federated Chambers of Commerce of the British Empire will be opened by H.R.H. The Prince of Wales on Monday, May 26th next, and will continue throughout the week. The Sessions will be held at the Guildhall, London, through the courtesy of the City Corporation. The

Digitized by Google

Congress will be a great assembly of representatives of commerce and industry from all the principal cities of the British Empire. The object of the Congress, in brief, is to find the best method of rationalising trade and industry within the Empire; to bring about, as far as possible, uniformity in commercial law; to improve methods of communication and transport; to substitute arbitration for legal procedure in commercial disputes; to remove the trade barriers which hamper the free exchange of goods within the Empire; to develop Empire production; to educate the coming generations to a thorough knowledge of the Empire; to ensure that every citizen of the Empire shall first buy from, and sell to, his fellows within the boundaries of the Empire. An attractive brochure dealing with the Congress has been issued giving details of various tours arranged and of social functions to be held. The offices of the Federation of Chambers of Commerce of the British Empire are at 97, Cannon Street, London, E.C.4 and the Secretary is Mr. A. de V. Leigh, M.B.E., M.A.

Morris Crane for Exhibition Work. — The interesting photograph which we reproduce has been lent to us by Messrs. Beck & Pollitzer, the well-known road transport contractors, shipping and forwarding agents and removal contractors of Queen Victoria Street, London, E.C. Messrs. Beck & Pollitzer have also a very important Exhibition Department in which they specialise in all work connected with the numerous large exhibitions held in the course of the year. Our illustration shows a crane built by Herbert Morris, Ltd., Loughborough, capable of lifting five tons, engaged in exhibition work at the Royal Agricultural Hall before the last Laundry Exhibition. This crane is specially suitable for this class of work, and, if required, can be transported under its own power.



A HERBERT MORRIS 5-TON CRANE USED BY BECK & POLLITZER IN CONNECTION WITH THEIR EXHIBITION WORK.

Walter Gammons Limited Open a Shipping Department.—Walter Gammons Limited, the well-known Road Transport Contractors, head office, 65-66 Basinghall Street, London, E.C.2, have opened a Shipping Department which will be concerned solely with the Export trade and not Imports. After careful study of all the facts, the firm have come to the conclusion that our vanishing Export Trade is due to the fact that British Manufacturers have not been educated up to the changed conditions abroad, and that the Foreign and Colonial Buyer is expecting from him more than ever before. For the purpose of bringing the British Manufacturer in closer touch with Export requirements, Walter Gammons Limited have opened a Shipping Department in charge of one who has had over twenty-four years' experience in the Export Trade, including many years Abroad, and included in the service the firm offer to the Manufacturer are the following: To take a manufacturer's price list or catalogue and work out for him the prices of his goods delivered to all ports of importance in the world; At Messrs. Gammons' own risk to collect and deliver the goods at destination for the difference in prices as calculated by them; To prepare and see through all Shipping Documents, Insurance, Consular and Preferential Invoices, Customs, etc., as required. It is pointed out that the scheme will not in any way affect any existing arrangements manufacturers may have as regards Export Agents or Agents overseas. The firm will act only for British Manufacturers.

Road Transport Insurance.—Messrs. Edward W. Tilling and Thomas Wolsey, who are on the Board of Thomas Tilling, have ceased to be directors of the Road Transport and General Insurance Company. Mr. John F. Heaton also has resigned his position as Vice-Chairman.

IRISH FREE STATE.

To Check Overcrowding of Buses in Cork.—With a view to the checking of overcrowding of buses in Cork City, bus conductors, as well as bus drivers, have to be licensed, under the control of the Cork City Manager. Recently, a bus conductor was summoned for having acted as bus conductor without a Corporation licence. It was the first prosecution of the kind, and the defendant was fined the nominal sum of one shilling. His Solicitor submitted in Court that bus conductors in Cork were not aware of the necessity of being licensed. Mr. Galvin, the Solicitor for the Corporation, said that the importance of having bus conductors, as well as bus drivers, duly licensed, was realised in order to prevent overcrowding on buses.

The Question of Reducing the Licence Tax on Motor Lorries Fitted with Pneumatic Tyres in the Irish Free State.—The question of seeking for a reduction of the licence tax on motor lorries fitted with pneumatic tyres in the Irish Free State came on for consideration at a meeting of the Council of the Cork Incorporated Chamber of Commerce and Shipping recently. The fact that there is an allowance of 20 per cent. off the licence tax of such vehicles in Great Britain was discussed, and the Council decided to recommend to the Association of Chambers of Commerce of the Irish Free State that application be made to the Minister for Finance for a similar concession for the Free State.

In Parliament.

The Tariff Truce Conference. Mr. Wardlow-Milne asked the President of the Board of Trade when he expected to be able to give the House the results of the Conference in regard to the proposed traffic truce; and whether it was his intention to issue a White Paper on the subject? In reply, **Mr. W. Graham** said he could not say when the Conference would conclude its labours. The proposals of the Conference in their final form would be communicated to the House.

Railways and Road Transport. Mr. Albery asked the Minister of Transport approximately to what extent the road transport systems of the country were now controlled by the railway systems? Replying, **Mr. Herbert Morrison** said that the proportion of the passenger road transport undertakings of the country actually controlled by railway companies, was, he believed, small. At the same time he understood that the railway companies had acquired financial interest in a large number of such undertakings. As to goods services by road, apart from their collection and delivery services, the railway companies had, so far as he was aware, as yet acquired no considerable interest.

Washington Hours Convention. Mr. Mander asked the Minister of Labour to what extent the legislation passed by other countries with reference to the Washington Eight Hours Convention was dependent as to its coming into force on similar action being taken in this country? **Miss Bondfield** (the Minister of Labour) said that the following countries had ratified the Convention, but on condition that their ratification did not become operative until the Convention had been ratified by other countries, of which Great Britain was one: Austria, France, Italy, Latvia, Spain. **Mr. Mander:** Does that not show the urgent importance of passing a Measure through the House? Can the Right Hon. Lady give any undertaking as to when it is going to be introduced? **Miss Bondfield:** I agree that it does, and I hope I shall be able to introduce a Bill before very long.

Rear Lights and Reflectors on Road Vehicles. Asked whether he could state the number of persons prosecuted during the 12 months ended to the last convenient date, under the Road Transport Lighting Act, 1927, for not being provided, between the hours of darkness, with a red rear light or, alternatively, an efficient red reflector? **The Secretary of State for the Home Department** (Mr. Clynes) said that figures were not available for the whole country, but in the Metropolitan Police District the number of prosecutions taken during the 12 months ended 31st December, 1929, in respect of failure to provide a red rear light or an efficient red reflector during hours of darkness, was 4,935.

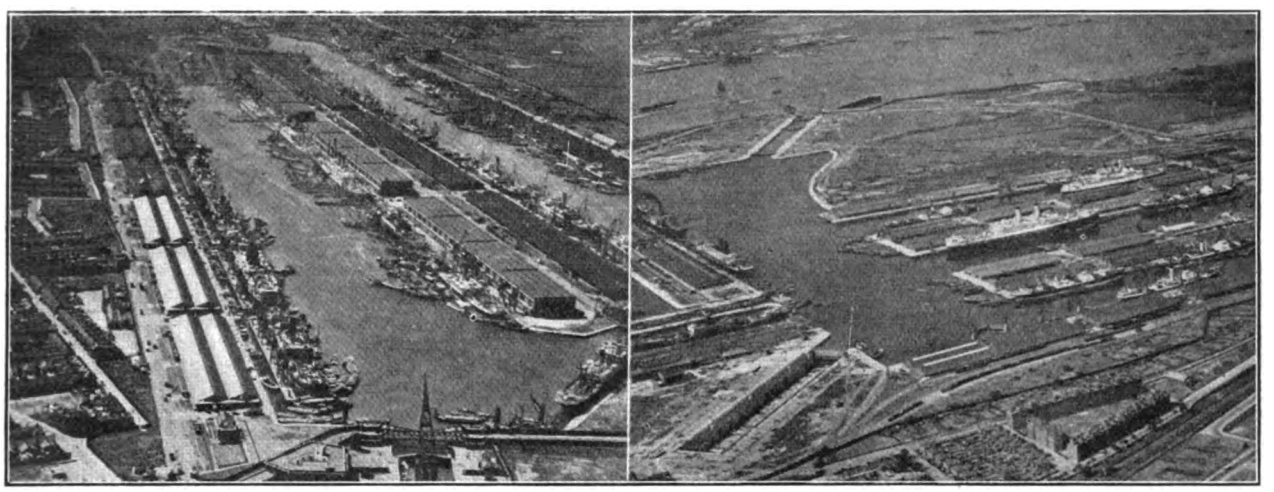
The Port of London Authority.

Twenty-One Years of Progress.

Twenty-one years have now passed since the Port of London Authority was entrusted with the control of the world's greatest port.

The task they were called upon to face at the outset of their career was a very serious one as will be seen from the concluding paragraph of the report of the Royal Commission, appointed in 1900, and which ably summarised the disabilities from which the Port then suffered and indicated the complex character of the responsibilities which would devolve upon the body entrusted with their amelioration.

"Our enquiry into the conditions of the Port of London," states this historic pronouncement, "has convinced us of its splendid natural advantages. Among these are the geographical position of the Port; the magnitude, wealth and energy of the population behind it; the fine approach from the sea; the river tides strong enough to transport traffic easily to all parts, yet not so violent as to make navigation difficult; land along the shores of a character suitable for dock construction and all commercial purposes. In addition to these advantages, London possesses docks, which though they are not in some cases upon the level of modern requirement, are yet capacious and capable of further development. The deficiencies of London as a port are not due to any physical circumstances but to causes which may easily be removed by a better organisation of administrative and financial powers. The great increase in the size and draught of ocean going ships has made extensive works necessary both in the river and in the docks, but the dispersion of powers among several authorities and companies has prevented any systematic execution of adequate improvements. Hence the Port has for a time failed to keep pace with the developments of modern population and commerce and has shown signs of losing that position relatively to other ports, British and foreign, which it has held for so long. The shortcomings of the past cannot be remedied without considerable outlay. We are, however, convinced that if in this great national concern energy and courage be shown there is no reason to fear that the welfare of the Port of London will be permanently impaired."



LEFT: KING GEORGE V AND ROYAL ALBERT DOCKS. RIGHT: TILBURY DOCK (NOTE NEW DRY DOCK IN BOTTOM LEFT HAND CORNER).

The Authority and its Powers.

As constituted by Act of Parliament, the Authority consists of 28 members, one of whom is appointed by the Admiralty, two by the Ministry of Transport, four by the London County Council, two by the Corporation of the City of London, and one by Trinity House, and the remaining 18 being elected by the payers of rates, wharfingers and owners, and owners of river craft. The Act also empowers the Authority to appoint a Chairman and Vice-Chairman from outside their number.

The first Chairman, who was appointed by the Board of Trade was Sir Hudson Ewbanke Kearley, M.P., and he continued to hold office until 1925, when on his retirement he was succeeded in 1925 by the Right Honourable Lord Ritchie of Dundee. Viscount Devonport, as he became, had been Parliamentary Secretary to the Board of Trade and had played an important part in the passage of the Bill through Parliament.

The duties vested in the Authority were to take over and make good any deficiencies in accommodation, equipment and service both for ships and goods; become conservators of the estuarial waters of the Thames; police the docks; take over the duties and powers of the Watermen's Company relative to the registration and licensing of craft and boats and the control of watermen, draw up a schedule of rates for approval by the Board of Trade and generally "take into consideration the state of the river and the accommodation and facilities afforded in the Port of London and take such steps, subject to the provisions of the Act, as they may consider necessary for the improvement thereof."

The purchase price fixed by the Act was, it may be pointed out, £22,362,859, bearing annual interest charges of £802,993. Other liabilities had also to be taken over and at the close of 1910 the capital expenditure of the Authority amounted to £23,028,166. At present the total authorised borrowing powers stand at £43,000,000, out of which there is an unexercised balance of over £4,242,042.

The Improvement of the River.

The first task of the new Authority was to deepen or otherwise improve the navigable channel, as instances were cited before the Commission of vessels having passed Gravesend en route to some up-river dock being compelled to return because they missed the tide and there was no suitable anchorage in the intervening reaches. The scheme upon which the Authority embarked was a comprehensive one as it embraced the whole fairway from the Nore to London Bridge, so that the famous Pool was brought within the scope of its operation. Its completion involved the removal of 47,000,000 tons of material at a cost of £2,000,000.

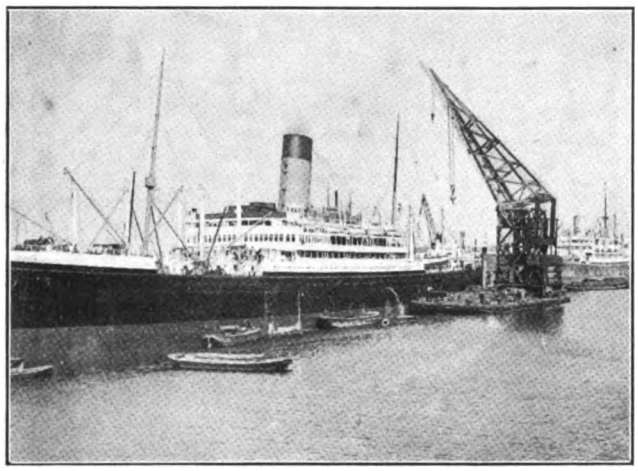
This extensive dredging programme was commenced in 1910, but its completion was retarded during the War owing to the difficulty of obtaining suitable labour and the fact that the Government requisitioned a considerable part of the plant. In all 26 vessels were chartered from the Authority, some of which were converted into tankers and others into general cargo carriers, the remainder being utilized for their original purpose of dredging.

With regard to this phase of the Authority's activities, it is interesting to note that during the year 1928-29 the quantity of material removed during the maintenance and improvement of the channels was close upon 2,000,000 cubic yards while the mud dredged from the docks was over 1,000,000 tons.

Digitized by Google

The tendency of shipowners to build bigger ships has, since the Authority came into existence, become still more pronounced, and the fact that it was so intelligently anticipated by the channel they decided upon shows that they read the signs aright and were determined that the port should be prepared to meet such developments. No shipping undertaking using London as its home port has to consider the depth of the navigable channel to the main London Docks when designing a new ship, as the present fairway admits of the passage of deeper vessels than London owners have yet built, or are likely to build for years to come. The average size of the units of some of the merchant fleets based on London is very striking and shows that the Thames, both in its sea approach and its docks, merits, equally with any other harbour, the appellation of "deep water" port. Thus the Orient fleet averages 16,785 tons, Nelson Line 14,130, Aberdeen and Commonwealth Line 12,958, Atlantic Transport 11,221, P. & O. 10,837, New Zealand Shipping Company 10,398, and Shaw, Savill and Albion 10,606 tons.

Of "20,000 tonners" there are quite a number which regularly use the port. Orient Line have five of these leviathans and the Atlantic Transport two, while the enterprise of the P. & O. has required that they should have reinforced their fleet with vessels of this size; some of the Cunard ships included in their London services are also of this size. By day or night they have been able to navigate the channel and the entrances to the docks, and the immunity from accident in so doing directs attention not only to the spaciousness of the fairway and



THE S.S. "MINNETONKA" IN THE KING GEORGE V DOCK WITH THE P.L.A. 150-TON FLOATING CRANE ALONGSIDE.

the absence of awkward angles but also to the excellence of the buoying and lighting system and the efficiency of the pilotage service.

Dock Improvements.

The docks have a water area of considerably over 723 acres with 33 miles of quays, enormous warehouse accommodation and dry docking facilities which are equal to present-day demands and have recently been supplemented by a new dry dock at Tilbury 750 feet in length and which, should the necessity arise, can be extended to a total length of 1,000 feet. Some features of the development programme have already been mentioned as effected either prior to, or during the War period. Among the later works carried out is, of course, King George V Dock. With the other "Royal" docks, Victoria and Albert, the group has a water area of 245 acres, the largest sheet of dock water in the world. The entrance lock to King George V Docks is 800 feet long with a width of 100 feet and a depth on sill of 45 feet. The Graving Dock adjacent has a length of 750 feet and a width of 100 feet. The north side of the dock is equipped with 3 pairs of sheds, the top floors of which extend over each pair. The cargo handling equipment embodies the latest economical practice. On the quay side are 18 3-ton electric luffing cranes of 60 feet radius and there are two lines of railway. The upper floors of the warehouses have a verandah on their quay side on which goods intended for storage are deposited. Underslung electric cranes of 1-ton capacity with 5 motions move this merchandise as required and also lower it into road or rail vehicles on either side of the warehouse. Runabout electric cranes and trucks operate in other parts of the warehouses and cartage areas while electric wall cranes are also included in the equipment. The opposite side of the dock, which has a length of over 4,500 feet, is of unique design. Parallel to the quay and 32 feet away from it are seven dolphins, 522 feet by 22 feet, to the outside of which the ships are moored, the space between quay and dolphins being for barges. Each dolphin has 6 movable 3-ton electric cranes and cargo is transferred between ship, barge or adjacent single storey transit shed, on both sides of which are special facilities for dealing with railway traffic. This group of docks enjoys an enormous transit trade, the net tonnage of the shipping using them in a year being about 8,000,000 tons, while 1,200,000 tons of produce pass over their quays.

The most seaward of the London Docks are at Tilbury, 26 miles below London Bridge. Here the Authority have made big improvements and are still engaged upon the final stage of a very comprehensive scheme. These docks form the most modern section of the estate, dating back no longer ago than 1886. In 1912 the extension of the main dock was commenced and was completed in 1917. This added 17 acres to the water area while the capacity for goods was increased by the 3 transit sheds which were erected.

These additions to Tilbury's facilities, however, required to be supplemented when the big ships now running between London and Australia were projected. The new Scheme included a graving dock 750 feet by 110 feet by 37½ feet and a lock entrance 1,000 feet long 110 feet wide and 45½ feet below Trinity High Water and equipped with the most modern plant and devices for overhaul or repair work. These facilities came into operation in September, 1929, a year ahead of the contract time.

The part of the Scheme, however, which has most appeal to the public imagination is the Passenger Landing Stage, work on which was commenced in 1926. This floating structure has a length of 1,140 feet and a depth alongside of 30 feet at low water so that ocean liners can go alongside and land or embark passengers at any state of the tide. Bridges connect it with a commodious hall for the examination of baggage and the new station which the London, Midland & Scottish Railway are building, whilst adjacent is the Tilbury Hotel, of which the Port of London Authority are the proprietors. These new facilities should do much to popularise London as an ocean passenger port. During recent years this business has grown considerably despite the inconveniences attaching to embarkations or debarkations in dock or by tender.

In 1925 the P.L.A. ordered a self-propelling floating crane capable of lifting 150 tons. This vessel, the "London Mammoth," has shown herself to be a very useful asset to the Port.

The Surrey Commercial Docks, the only docks on the south side of the river, have been materially developed. Their combined area is 378 acres, and they cater for the Canadian Trade and the Soft-wood imports into London. Of these, the quantity of timber landed on the quays amounts to well over 450,000 tons in a year, in addition to that discharged overside into barges. Of storage there is 74 acres of storage space in the open and 70 acres under cover and the improvements carried out have been mainly in the direction of increasing the shed accommodation. New discharging berths have also been provided and an impounding plant will maintain a constant level of water throughout the whole system.

London's Supremacy.

There are several standards by which the relative positions of British ports may be assessed. One is the value of Import and Export trade which they handle. Taking this as a basis, London easily occupies first place, as it also does in regard to the volume of shipping using its facilities and the amount of tonnage registered. The total imports and exports of the United Kingdom for the year 1928, exclusive of coastwise goods were valued at £2,039,460,746, and of this enormous business London handled more than one third! How this compares with our other leading ports is shown in the accompanying table:—

	Value of imports and exports in £'s.
United Kingdom	2,039,460,746
London	692,730,351
Liverpool	485,386,171
Hull	108,349,364
Manchester	98,464,723
Southampton	94,885,022
Glasgow	88,181,943

Digitized by Google

Shipping Traffic.

The Board of Trade statistics relative to the shipping trade of the United Kingdom, as gauged by arrivals and departures of the ships engaged, show that London enjoys an overwhelming supremacy.

Thus during the twelve months ending December 31st, 1929, the last year for which complete figures are available, the net tonnage of vessels that arrived and departed from the port was over 57½ million tons. How this compares with other ports is shown in the following table:—

Port.	Arrivals and Departures.
London	57,540,136 net reg. tons.
Liverpool	34,851,572 "
Southampton	25,073,822 "
Hull	12,016,146 "
Manchester	8,400,598 "
Bristol	7,033,046 "
Other Ports	217,205,157 "

Liverpool Shipping and Forwarding Agents' Association.

Proposed Benevolent Fund. — For some months the Council of the Liverpool Shipping and Forwarding Agents' Association (Inc.) has had under consideration the desirability of establishing a Benevolent Fund, the need for which in these days of rapid change, must be immediately manifest. The Council has taken legal opinion, and is advised that it is not possible to employ the surplus funds of the Association for benevolent purposes, without altering the memorandum of the Association. It has, therefore, been decided not to do anything at the moment, though the subject might be approached from a different angle. It is certain that if a fund were created on a contributory basis, and its advantages put before staffs and the principals of all the Merseyside shipping and forwarding agents, the cause would command ready sympathy.

At the last meeting of the Council consideration was given to the campaign of the Liverpool Organisation for encouraging the sales of goods made in Lancashire. The Council voted ten guineas to the fund.

Freight Anomalies.—Mr. S. L. Jude, who attended the meeting of the Railway Traders' Conference, reported that there was some discussion on the question of differential rates on cotton piece goods from Manchester to Birkenhead and Liverpool respectively. Members of the Association take the view that the Birkenhead—Manchester rate should be 6s. 10d. as against 9s. at present, so as to make the respective rates for Birkenhead and Liverpool uniform. The railway companies replied that the Liverpool rate had been introduced so as to meet the competition that was exerted by road haulage companies, but apart from that, the extra mileage to Birkenhead, about 16, justly entitled them to the extra remuneration. The chief argument, however, was that of retaining or regaining traffic from the road hauliers.

Loss of Goods in Transit.—Efforts are being made by the Association in conjunction with other bodies, to persuade the railway companies to accept liability for loss of goods in transit as was the case before the last Railway Act operated. This contention has been advanced in various parts of South West Lancashire, notably in the cotton spinning towns, where traders take the view that the railway companies should shoulder the risk of loss or damage by fire. While the railway companies do not refuse *ex gratia* payments in respect of some claims they strongly resist the argument that they are under any legal obligation to meet claims for loss or damage. The Council of the Liverpool Shipping and Forwarding Agents' Association has decided to support the United Trades Association in their efforts to get the railway companies to accept responsibility.

L.M.S. Cargo Service.

Commencing on April 1st the London, Midland and Scottish Railway, who run in conjunction with the Tilbury-Dunkerque Steamship Service, inaugurated a daily service in each direction for the transport of fruit and vegetable traffic from the Continent. The service will be continued until the end of September. Two fast steamers, the s.s. "Crossbill" and s.s. "Coniscrag" maintain the service. The steamer from Dunkerque is timed to arrive at Tilbury at midnight; the return journey is usually made in ballast. Special train services have been arranged on the Continent to connect with the cargo boats from Dunkerque. On this side of the Channel a special service connects the boat, and traffic arrives in London in time for the early morning markets. Particular advantage is given in transit for traffic to the Provinces which is sent direct, thus avoiding transhipment and cartage in London.

Manchester Shipping and Forwarding Agents' Conference.

In our report of the Annual General Meeting of the Manchester Shipping and Forwarding Agents' Conference, given in the March issue of this journal, we regret that by an unfortunate transposition in the information supplied to us we announced the election of Mr. Norman N. Bird as Chairman, whereas Mr. H. P. Lumb, who had occupied this important position previously, was re-elected for the ensuing year. Mr. H. P. Lumb, who is a Director of The British Commercial Transport Co. (Northern), Ltd., has done good work for the Conference as its Chairman. Mr. N. N. Bird, who was re-elected Vice-Chairman, holds a similar position in the National body, the British Association of Shipping and Forwarding Agents.

MR. H. P. LUMB, CHAIRMAN.

Cardiff as a Transatlantic Port.

Owing to the sailings from Cardiff of Transatlantic Passenger Liners during the past few years, public attention has been very generally drawn to the excellent facilities of the Port for Liner traffic—its reputation as a coal-shipping and general cargo port having previously been world-wide. The Canadian Pacific Liner "Minnedosa" berthed at the Queen Alexandra Dock on 26th March, and sailed the same day with about 250 passengers mainly emigrants. The s/s "Minnedosa" belongs to the fleet of the Canadian Pacific Railway, operating between this country and Canada. With a length of 520 feet, a breadth of 67 feet and a depth of 41 feet, the s/s "Minnedosa" has a gross tonnage of 15,186 tons. The arrangements for the docking of this vessel were in the hands of the Great Western Railway Company, the owners of the South Wales Docks. The Queen Alexandra Dock, in which the vessel was accommodated, has a deep water area of 52 acres, and a lock entrance 850 feet long and 90 feet wide. The Great Western Railway Company made special arrangements for passengers from London and the South of England, by running special non-stop boat trains to the steamer's berth in the Dock. The trains ran over lines specially constructed a year or two ago by the Great Western Company, which enable the special trains conveying the emigrants to run direct to the commodious shed alongside the quay where the Liner was berthed, thus ensuring the utmost comfort and convenience for the passengers. The Customs and other formalities are conducted in the shed, and the passengers walk direct therefrom on to the Liner.

REUTERS TRADE SERVICE.—By special arrangement with Reuters Trade Service we are publishing news items from all parts of the world dealing with transport matters.

Digitized by Google

International Federation of Forwarding Organisations.

The third congress of the International Federation of Forwarding Organisations will be held at Antwerp on Thursday, June 5th next. The actual place of meeting has not yet been decided upon and will be announced later.

Social gatherings have been arranged spread over the period from Wednesday, June 4th, to Friday, June 6th.

The business meeting is timed to begin at 9.30 a.m. on June 5th, when, in addition to routine business the following matters amongst others will be discussed:—

To elect the required number of arbitrators from the names submitted by the affiliated organisations in the various countries.

To consider proposed general conditions of carriage applicable to the forwarding trade.

To consider the adoption of a system of universal nomenclature for services rendered by forwarding agents.

The advisability of publishing a list of members of bodies affiliated to the federation.

Unification of custom house formalities.

International terms of payment.

Discussion of questions relating to licensing conditions for the forwarding trade.

Creation of a uniform insurance policy.

To consider a resolution regarding negotiable bills of lading.

To adopt the annual report.

Associations affiliated to the Federation are cordially invited to send delegates to the congress. Should any affiliated organisation wish to bring forward any matter for discussion, they are requested to kindly send particulars to the General Secretary of the Federation as quickly as possible.

The social arrangements for the Congress are in the hands of a special committee consisting of Belgian Colleagues of the Federation acting under the Chairmanship of M. de Ryckere, Antwerp, Rue de l'Olivier 17.

On Wednesday, June 4th, a new film dealing with the port and docks of Antwerp will be exhibited by the Town Council in the Town Hall.

On Thursday, June 5th, the various Boards of directors of the shipping and forwarding companies of Antwerp will hold a reception. At 1 p.m. the delegates to the Congress are to be entertained to luncheon by the Town Council at the Town Hall.

In the afternoon a visit will be paid to the docks of Antwerp, a special steam launch being placed at the disposal of the delegates and guests.

In the evening there will be a banquet.

On Friday, June 6th, delegates will take part in an excursion to Liege by kind invitation of the shipping and forwarding agents in that town. There will be an official reception by the Town Council of Liege and a visit will be paid to the International Exhibition as well as to several works and places of interest.

If the business meeting does not conclude on Thursday, June 5th, the discussions will be resumed on June 6th at Liege.

The Federation hope that as many members as possible accompanied by their ladies will take this opportunity of visiting Antwerp, as they will be able to combine business with pleasure and inspect the treasures of some of Belgium's greatest towns.

The Gladstone Dock Electric Model.

The Exhibit of the Mersey Docks and Harbour Board at the Antwerp Exhibition, to be opened at the end of April next, consists of an electric model showing a section of the River Mersey and the latest and most up-to-date of the North Docks at Liverpool, including the new Gladstone Docks, which were opened by His Majesty, King George V., in 1927. Only a section of the Port of Liverpool can be shown because of the large scale.

The model is constructed to a scale of 30 feet to one inch, which enables the spectator to visualise the great extent of these particular docks, and more especially to see the ease with which the largest vessels afloat can dock and undock, through the Gladstone Entrance Lock at any state of the tide, which has a range of 30 feet between high and low water. Such facility enables vessels to pass from the Gladstone system, to the other docks to the southward, at all hours.

In detail, the model shows all docks, warehouses, railways, cranes and other salient features, accurately modelled to scale, together with eighteen steamers, representative of those regularly trading to the Port of Liverpool, all afloat in the docks or river. Two of these steamers enter the Gladstone Docks, move to their respective discharging berths and pass out again into the River Mersey, at varying stages of the tide; while another vessel steams directly up and down the river.

If the tide is high the dock gates will open automatically, but if high water is passed or has not arrived, the vessel will enter the lock, the outer gates will be closed, the water in the lock levelled to the water level in the dock, and the inner gates opened to allow the vessel to proceed to her berth. As can be imagined the mechanism required to carry out the movements is both extensive and intricate. The electrical plant has required to be specially constructed, and the general construction to carry the tracks and the heavy tanks is much more elaborate than will appear on the surface. The delicate mechanism to regulate the rise and fall of the water, open the dock gates and alter the strength of the magnetic current, though not visible, is worth noting.

Port of London Authority.

The following 21st Birthday message has been received from the Rt. Hon. David Lloyd George by the Port of London Authority:—"It gives me very special pleasure to congratulate the Port of London Authority upon its coming of age. As President of the Board of Trade, I was responsible for framing the Act of Parliament by which the Authority was set up, and my last task before passing from the Board of Trade to the Exchequer, was to introduce this measure before the House of Commons. Looking back now across the years it is a source of deep gratification to know how well and truly laid were the foundations of the new body, and how valuable and efficient has been the superstructure of achievement which the Authority has accomplished for the benefit, not only of London, but of the commercial prosperity of the whole nation. I am confident that in the coming years the Port of London Authority will advance still further on its already magnificent record, in its maintenance and improvement of the river and riverside services of London as a port for the merchandise and the ever-growing commercial intercourse of the world."

* * * *

The Hon. T. M. Wilford, K.C., High Commissioner for New Zealand, on March 20th, accepted on behalf of the New Zealand Government, a framed water-colour painting of a scene in the Port of London, from Lord Ritchie of Dundee, representing the Port of London Authority. The picture shows a vessel being discharged at the Royal Albert Dock, and has been specially painted for the Port Authority by Mr. W. Walcot, R.B.A., and is intended to be hung in Parliament House at Wellington. The link between New Zealand and the Port of London is a very strong one. In 1882 the first shipment of about 106 tons New Zealand frozen meat was received in the Port and from this small beginning the great New Zealand meat exporting trade has been built up very largely through the selling, distributing and financial facilities of London. A similar policy of centralising in London the disposal of the bulk of New Zealand exports to the United Kingdom of dairy produce and fruit has been equally successful. The development of New Zealand trade in London has been encouraged by a good deal of capital expenditure on dock handling and storage facilities by the Port of London Authority.

* * * *

The utility of the new entrance lock over the old lock at Tilbury Docks was well illustrated recently when the R.M.S. "Chitral," 15,248 tons, was docked at low water, an achievement which could not have been accomplished with the old entrance. The operation involved admitting 1,760,000 cubic feet or 50,000 tons of water through the sluice from the dock in order to lift the vessel 16 feet to the dock water level.

News from the Ports.

Your Exports to the Baltic.—Pickfords & Hay's Wharf Shipping and Forwarding Co. Ltd., have issued an attractive folder illustrating the various wharves on the Thames controlled by their organisation. The firm load and discharge the steamers of the United Baltic Corporation to Danzig, Memel, Libau, Riga and Reval and The Polish-British Line to Danzig and Gdynia. Goods are conveyed direct to the steamer's loading berth and shipped immediately with the one handling. All goods from the provinces should be consigned to Hay's Wharf, Ltd., to the order of Pickfords & Hay's Wharf Shipping & Forwarding Co., Ltd., 55 Great Tower Street, London, E.C.3.

Europa Beats Bremen's Record.—The New Norddeutscher Lloyd Liner Europa beat her sister ship Bremen's record for the Trans-Atlantic crossing, and has thus duplicated the Bremen's achievement of winning the Blue Riband on her maiden voyage. Her sea-time was 4 days, 17 hours and 6 minutes. The Bremen's time between the two points which are universally accepted as the starting and finishing points, namely the Breakwater at Cherbourg and the Ambrose Channel Lightship, New York Harbour, was 4 days, 17 hours, 42 minutes, or an average speed of 27.83 knots.

The Hamburg Amerika Line. Annual Report.—The Annual Report of the Hamburg Amerika Line shows gross receipts of 59,500,000 Marks (just under £3,000,000), or a net profit of 11,500,000 Marks (£550,000). The Company's tonnage at the end of the year amounted to 1,110,618 tons gross. Eight fast freight steamers are under construction with a total tonnage of 58,000.

Southampton Docks.—The past few months have witnessed several changes in the Southern Railway Company's fleet of cross-Channel steamers based at Southampton. One of the Company's smallest freighters, the "Cherbourg," after rendering useful service over a lengthy period of 57 years, has been disposed of, whilst the "Alberta" which until December last was a popular unit of the passenger fleet engaged on the Channel Islands service has also completed her long career under the Company's flag. Transport facilities with the Channel Isles will, this season, be considerably enhanced by the addition of two new steamers to the service in the "Isle of Jersey" and the "Isle of Guernsey." These ships have only recently been delivered from the builders' yard at Dumbarton, and besides being most commodious embody all the latest improvements for the comfort and convenience of passengers by this route. The "Isle of Jersey" made her inaugural trip from Southampton on the 12th March, whilst the "Isle of Guernsey" will also be placed on the service in time for the Easter traffic. A very notable addition to the Rotterdam Lloyd's fleet engaged in the passenger and freight service between Southampton and Java is represented by the placing in commission of the motor vessel "Baloeran" of 18,000 tons gross. This is the first of two new ships ordered by the Company for their Dutch East Indies trade.

Portuguese East Africa. Steam-Driven Tug.—His Majesty's Consul-General at Lourenco Marques reports that the Marine Department of the Colony of Mozambique is calling for tenders, to be presented in Portuguese East Africa by the 26th April, 1930, for the supply and delivery of a steam-driven tug. Firms desirous of offering British built tugs can obtain further particulars of this call for tenders upon application to the Department of Overseas Trade, 35, Old Queen Street, London, S.W.1 Reference number A.X. 9263 should be quoted.

Cardiff New Officials.—Mr. John Powell (John Powell and Co., Cardiff) has been elected President of the Cardiff Chamber of Commerce. He is Chairman of the South Wales Coal Exporters' Association and on the Executive of the British Coal Exporters' Federation. Mr. D. Rupert Phillips (Chairman and Managing Director of Franklin, Thomas & Co. [Ltd.]) has been elected Vice-President, and Mr. J. W. Duncan is the other Vice-President. Mr. Duncan is partner in the Cardiff shipowning firm, J. T. Duncan & Co., and a former Chairman of the Cardiff and Bristol Channel Shipowners' Association. Mr. Phillips was Chairman of the Cardiff and Bristol Channel Pitwood Importers' Association.

More Optimism Needed.—Major T. A. Eckes, speaking at the Annual Dinner of the staff of Messrs. Langstaff, Erembert and Co., shipping and forwarding agents, Royal Liver Buildings, Liverpool, said his only regret was that the depressed condition of trade had prevented their numbers being further increased. In many directions and particularly in the River Plate and Brazil, Liverpool was not reaping the benefit of her favoured geographical position, due, in some measure, to the vexed question of through rates. It was an absurd position that goods were conveyed from places like Dundee to Southampton at the same rate as from Dundee to Glasgow or Liverpool, with the result that the steamship company paid the rail charges and the ship got less freight than would be the case if the goods were despatched from the nearest and most suitable port. Alluding to the efforts in Liverpool to attract factories and new industries to alleviate the distress due to unemployment, he expressed anxiety that it should not be overlooked that the main trouble was the lack of work at the docks. He was proud their firm had sustained their reputation of helping the exporter in every possible way and he felt sure that if Lancashire would display a little more cheery optimism they would help considerably to improve the trade outlook. The toast of "The Firm" was proposed in the absence through illness of Mr. A. Dovaston, the member of the staff with the longest service, by Mr. W. R. Wild, whose record now covers 38 years.

Obituary.—A well-known personality in the Liverpool shipping industry has passed away in Mr. John Craig, a director on the London board of Messrs. Elder Dempster and Co., Ltd. He resided at Birkenhead and had an association with Liverpool shipping which extended over nearly 61 years, beginning in May, 1869, when he entered Elder Dempster and Co., as an apprentice. After passing through a number of departments he specialised on the financial side of the company's operations. In July, 1907, he became a partner of Sir Alfred Jones and Mr. W. J. Davey. Subsequently he became Managing Director of the Company at Colonial House, Liverpool, and later, Chairman of the board of Liverpool Managing Directors. He gave up the Chairmanship in 1919 and was then elected a Director on the London board. He was also a Director of the West African Lighterage and Transport Co.

G.W. Railway's £3,000,000 Scheme of Improvements at South Wales Ports.—The Great Western Railway has submitted to the Government and received approval of schemes involving an expenditure of £3,000,000 for further improvements to its docks. During the last nine years since the South Wales Docks came under the control of the railway, the Company have spent some millions of pounds on improvements. The South Wales Ports are capable of dealing with over 50 million tons annually, and large cold stores of the latest design equipped with all modern appliances are provided at Cardiff, Newport and Barry. The Company have spent large sums of money in the adaptation of the docks for the handling of general merchandise. Liner services connect the ports with all the principal ports of the world.

A Remarkable Record. — The Newport Chamber of Commerce in March passed a vote of congratulation to Mr. W. E. Heard, J.P. (Jones, Heard & Co., Ltd., Newport), on his attaining the age of 95 years. Mr. Heard is the oldest member of the Chamber and one of its first presidents. He still attends his office for business.

Blue Star Line for Newport.—The Blue Star Line has now arranged a regular monthly service by their Conference steamers from Newport to the Far East (China, Japan and Straits), taking alternate sailings with Messrs. A. Holt and Co., Blue Funnel Line. The Newport agents are Messrs. Jones, Heard & Co., Ltd. The first sailing will be that of the "Doric Star" (10,440 tons gross), which closes for cargo about May 2nd.

Extending Newcastle Quay.—It is hoped that £206,000 may be granted by Lord St. David's Unemployment Grants Committee for quay extension work at Newcastle. The scheme is to lengthen the quay eastward by 708 feet, providing 200 feet width of quay and 30 feet depth of water.

Tyne Improvement Commission's Progress. — At the last meeting of the Tyne Improvement Commission, when Lord Kirkley presided, Mr. Fras. Priestman (Chairman of the Finance Committee) said that in 1929 the Tyne was ahead of any of the other coal exporting districts. The exports of coal and coke formed a record for post-war years, and the Commission had increased its revenue, reduced maintenance expenditure, and showed a surplus of £84,000. A promising start had been made in 1930 with coal and coke exports, but there was a slump in ferry passenger traffic between North and South Shields.

Railway Notes and News.

Sir Henry Thornton Honoured.—Sir Henry Thornton, K.B.E., Chairman and President of the Canadian National Railways, has been selected as worthy of honour by the University of Pennsylvania Club, being deemed an outstanding graduate of the University. At a dinner of the Club in New York it was announced that the name of Sir Henry has been inscribed in the "Guggenheim Honour Cup," on which each year is engraven the name of a graduate whose work and fame have brought credit to the University of Pennsylvania. Sir Henry Thornton graduated in 1894, with the degree of Bachelor of Science. He obtained a position as draftsman in an engineer's office and from that start began a railway career which included work in the United States of America, England and Canada and war-time service, during which he rose to the post of Inspector General of Transportation for the Allies, with the rank of Major General in the British Army.

Attracting the American Tourist.—The British railway companies have for many years past made special efforts, through their agents in the United States and Canada, to induce tourists to visit this country. This year an approach is being made to intending visitors to Europe through the medium of American newspapers, and a special edition of the "Railway Newsletter" has been issued for this purpose. In this issue Sir Josiah C. Stamp, G.B.E., D.Sc., LL.D., Chairman of the London, Midland and Scottish Railway of Great Britain, in a message of welcome to Americans, says:—"Your Secretaries of State and other leaders of American opinion have been here in the interests of universal peace; now is the opportunity for the 'man in the street' to come over and second by personal contact those efforts of his countrymen. The memory of such a visit will never fade. To University students, to professors planning their 'Sabbaticals,' to successful men in commerce and industry (wanting to mix much pleasure with a little business), to those with English forbears and family traditions, to all our American friends who are planning their first vacation in Great Britain, and to those who are renewing their acquaintance with the Old Country, I extend a very hearty welcome. Great Britain sends you an open invitation to come and see her infinite variety of scenery, her ancient cities and her literary and historic shrines. It is your aim and our hope that you should enjoy your visit and I can assure you that the British Railways will do their utmost in helping you to achieve that end."

International Exhibition at Antwerp.—The London and North Eastern Railway Company, in conjunction with the Societe Belgo Anglaise des Ferry-Boats, have taken a Stand, the area of which is 400 square feet, in the British section of the International Exhibition at Antwerp to be held from the 26th April to the end of October, 1930. The principal features of the London and North Eastern Railway exhibit will be:—(1) A specimen single-berth cabin as provided on the steamships sailing nightly to and from the English port of Harwich; and (2) an illuminated diagram map of a special mechanical nature illustrating the steamship routes by means of moving lights. On the Ferry side of the Stand the main object of interest will be a scale working model of the Ferry steamers plying daily between Zeebrugge and Harwich. It will demonstrate the shunting of the railway wagons on board and the boat leaving the pier, the operations being reversed as the boat returns to the shore.

L.N.E.R. Collection and Delivery Services. — The L.N.E.R. have inaugurated a collection and delivery service of parcels and merchandise traffic in the districts of Potters Bar and Brookman's Park.

Railway Returns, 1929.—A preliminary statement containing summarised particulars of the financial accounts and statistical returns of the railways in Great Britain for the year 1929, compared with the years 1927 and 1928, has been published, and copies (price 2/6d.) can be obtained from H.M. Stationery Office. In addition to totals for Great Britain the statement shows separately the figures for the four amalgamated companies constituted under the Railways Act, 1921. The tables show the capital expenditure and receipts, the revenue receipts and expenditure from railway working, the total net receipts, the net revenue and appropriation and a summarised balance sheet. They also show the number of passengers carried, the tonnage conveyed, the average receipt per ton, and per ton-mile, and the leading operating statistics. The complete railway returns will be issued later in the year.

A Useful Publication.—We have received a copy of a very useful booklet issued by the Great Western Railway Development Department, Paddington, containing a list of the principal agricultural, cattle, etc., shows, to be held during this year to and from which the Company carry. Other features include:—Country cartage arrangements, list of country cartage services, list of docks, holiday resorts, fixtures at Olympia and Agricultural Hall, list of officials—both passenger and goods departments, road rail containers, warehouse accommodation, etc.

The Railway Barometer.—The railway traffic receipts of the four group railway companies for the first 12 weeks of 1930 compared with the same period in 1929, are as under:—

	1930 £	1929 £
Passengers, parcels, etc. ...	13,979,000	13,992,000
Merchandise, etc.	15,006,000	14,778,000
Coal, coke, etc.	8,935,000	9,496,000
	37,920,000	38,266,000

Apart from the continued poor results from coal traffic, the 1930 receipts are adversely affected by Easter being three weeks later this year than last, as certain advance bookings, etc., would be included in the above figures for 1929.—"Railway Newsletter," April issue.

SKF Axle Boxes for the Metropolitan Railway.—The first of the five new trains built to the order of the Metropolitan Railway by the Birmingham Railway Carriage and Wagon Co., Ltd., has been put into service. The train is fitted throughout with SFK spherical roller bearing axle boxes as specified by the Metropolitan Railway, and consists of two motor coaches, two driving trailers, and one ordinary trailer (third class), and two trailers (first class). It is the first complete electric train to run on SKF axle boxes in this country, and it is anticipated that the following advantages will be gained:—A reduced current consumption at starting, lower maintenance charges and increased reliability.

Active Railway Construction in Western Canada.—The Canadian National Railways 1930 programme of new branch line construction in Western Canada calls for the expenditure of £1,800,000. This amount is exclusive of money to be spent on the Hudson Bay Railway and for improvements and other work on lines now in operation. Work to be undertaken this year includes 261 miles of grading, the laying of 201 miles of track and 280 miles of ballasting. When this is completed the company will have in actual operation 290 of the 518 miles of new lines included in the three-year building programme authorised at the last session of the Canadian Parliament. Engineers are confident that in addition to the 290 miles of new line, which will be placed in operation this year, a further 213 miles of grading and 90 miles of track laying will have been completed before the beginning of 1931.

South African Railways.—The Minister of Railways, Mr. Malan, speaking on the railway estimates in the Union House of Assembly, said that the total expenditure for 1929-30 would be £31,205,941 and the revenue £30,916,377. A deficit of £289,564 which would be liquidated by a withdrawal from the Rates Equalisation Fund. Goods and coal traffic in 1929 had increased as compared with the previous year, but passenger traffic was smaller. Mr. Malan estimates an increase in revenue in 1930-31 of £795,146 due to natural expansion, but there will also be an increase of expenditure, consequently it is expected that there will be a deficit of £145,712 for 1930.

Plight of New South Wales Railways.—An offer to distribute nearly half his salary among distressed railway workers was made recently by Mr. Cleary, Chief Railway Commissioner of New South Wales, to a deputation of members of the Railway Union. He informed them that the losses of the State Railways in the last eight and a half months had amounted to £1,250,000 and pointed out that it would be necessary to ask the employees to work short time as the only alternative to dismissal. He added that he proposed to reduce his own salary of £5,000 a year by one half, of which £2,000 would be distributed among distressed railway workers and the remaining £500 put towards a reduction of the railway deficit.

Civil Aviation.

In the course of his Air Estimates Speech in the House of Commons on the 18th March last, Mr. F. Montague, M.P., Under Secretary of State for Air, dealt with the work of the Air Ministry in relation to civil aviation.

He said that existing agreements with the light aeroplane clubs would terminate in the course of this year, with two exceptions. Very careful consideration had been given to the future of these clubs. The work which they had done in promoting a practical interest in flying throughout the country had been excellent, and after the most sympathetic consideration of the possibility of giving them financial assistance when their present agreements expired, the conclusion had been come to that it would be equitable and justifiable to give them assistance on the same scale as that now given to National Flying Services, Ltd.

The service to South Africa was due to commence in a few months' time. The negotiations with the various Union Governments and Administrations concerned, more particularly His Majesty's Government in the Union of South Africa, for the installation of a weekly service between London and Cape Town, had been brought to a successful issue during the year. The Union Government would make a substantial contribution towards the requisite subsidy over a five years' period and would lend their support and co-operation generally. The other Administrations concerned, the Sudan, Kenya, Tanganyika, Uganda, Northern and Southern Rhodesia, had also undertaken to contribute and co-operate in a similar manner. The survey of this route was well advanced and everything was proceeding according to plan.

It was contemplated that a regular service between Alexandria and Tanganyika should commence in the autumn of this year and the through service to Cape Town in the spring of 1931.

Referring to the position of the projected service to Australia which will complete the other great outstanding Imperial Trunk route, Mr. Montague said that the Government of India had now extended the England-India service from Karachi to Delhi by means of aircraft chartered from and operated by Imperial Airways. The preparation of the ground organisation of the route across India was being vigorously pushed forward. The section to Calcutta would be ready by the end of March, and it was hoped that by the Autumn sufficient progress would have been made to render possible operation to Rangoon. The Government of India were now examining the question of the possibility of extending the air service from Delhi to Calcutta and to Rangoon at the earliest opportunity.

Proposals had also been submitted to the Air Ministry for the operation of the remaining section between Rangoon and Australia, and it was hoped to find means in conjunction with the Governments of India and Australia to inaugurate the through service to Australia as soon as possible after the route along the coast of Burma had been organised.

Coming to the question of airships Mr. Montague said that the R.100 had a gas capacity of well over 5,000,000 cub. ft. whilst R.101 would exceed that capacity when the alterations now in hand were completed. R.101 was moored out during the whole of November, and confounded the prophets of disaster by successfully riding out storms in which the wind gusted up to 83 m.p.h. There was no doubt that from a constructional point of view the completed airships had definitely disproved many of the gloomy forecasts, ranging from minor defect to utter disaster, which had been made from time to time.

The meteorological investigations of the Indian route, which had been proceeding steadily, showed that conditions would generally be adverse on the return journey both between Karachi and Ismailia and Ismailia and Cardington, with a consequence that a large reserve of fuel would have to be carried for the first experimental flight to the East of R.101. Allowance also must be made for the fact that the lift of an airship decreased as the temperature rose and the barometer fell, since its lift was determined by the weight of the volume of air which it displaced, and warm air was lighter than cold air. For these reasons, having regard to the need for a "safety" policy in a programme of that expensive character, it was decided not to attempt the return flight to India in March or April. The flight might well have been attempted with success, but unnecessary risks would have had to be taken. Consequently, an extra bay would be inserted in R.101 during the summer which would increase her capacity by 500,000 cub. ft. and give her an additional net lift of about 9 tons. The suggestion that had been made of this additional bay providing for an unanticipated defect was not true.

The proposed programme for 1930 for R.100 consisted of flights to Montreal and back between May and September, and between October and March scheduled flights between Cardington and Ismailia. For R.101 a flight to Karachi and back in September or October, then again to Karachi in December or January, after which there would be mooring trials and experimental flying from Karachi. The minor alterations to R.101 should be completed by the end of April, and certain flights might take place preliminary to the programme mentioned.

Regularity, of course, was essential for commercial operation and before that stage was reached it was obvious there must be a period of experimental flying on the Indian route to acquire operational and financial data and data for further technical developments.

Air progress would, he was convinced, be rapid in the future, both in technique and safety.

Air Transport Notes.

Atlantic Air Line.—A New York Message says that Dr. Eckener, the Commander of the Graf Zeppelin and Mr. Charles Mitchell, Chairman of the National City Company, announced on March 24th that contracts had been signed with prominent financial and aircraft interests in the United States and Europe for the establishment of a lighter than air Line for Mail and Passengers across the Atlantic.

40-Seater Air-Liners.—The new four-engined 40-passenger air liners which are in construction for Imperial Airways by the Handley Page Company will be the largest and most luxuriously-equipped of their kind on any aerial service. Each machine will have two cabins accommodating 20 passengers, while leading off the corridor connecting these cabins will be toilet accommodation, a steward's pantry, and a completely-equipped cocktail-bar.—"Imperial Airways Gazette," March issue.

Development of the World's Airways.—In 1919, when civil aviation began, there were about 3,000 miles of organised aeroplane routes throughout Europe. To-day, according to the latest figures, which include the airlines operated by Russia, the total stands at more than 50,000 miles. The air-route mileage of the world has grown steadily, year by year, until it now attains a total of between 90,000 and 100,000 miles. It is estimated that approximately 400 towns and cities are now served by aerial routes. Aerial transport has emerged definitely from its pioneer phase. What is now being embarked upon is an era of widespread progress on sound, well-devised lines, the aim being to open up new routes, and extend existing ones, until the world possesses a completely globe-girdling system of high-speed airways. —"Imperial Airways Gazette," March issue.

Royal Aeronautical Society.—At the Annual General Meeting of the Royal Aeronautical Society held on March 25th last, the ballot papers for election of the new council were counted. The voting was the heaviest in the history of the Society. The following is the composition of the new Council:—President: Colonel the Master of Sempill, A.F.C., A.F.R.Ae.S., Past President: Air Vice-Marshal Sir W. Sefton Brancker, K.C.B., A.F.C., F.R.Ae.S., Vice-Presidents: Air Vice-Marshal Sir Vyell Vyvyan, K.C.B., D.S.O., Lieutenant-Colonel J. T. C. Moore-Brabazon, M.C., F.R.Ae.S., M.I.Ae.E., Mr. H. E. Wimperis, C.B.E., F.R.Ae.S., Council: Captain P. D. Acland, Prof. L. Bairstow, C.B.E., F.R.S., F.R.Ae.S., Major T. M. Barlow, M.Sc. (Eng.), M.Inst.C.E., M. I. Mech. E., F.R.Ae.S., Mr. Robert Blackburn, O.B.E., A.M.Inst.C.E., M.I. Mech.E., F.R.Ae.S., M.I.Ae.E., Mr. M. L. Bramson, A.C.G.I., F.R.Ae.S., M.I.Ae.E., Mr. Griffith Brewer, F.R.Ae.S., Major J. S. Buchanan, O.B.E., A.M.I.Mech.E., F.R.Ae.S., Major G. P. Bulman, O.B.E., B.Sc., A.F.R.Ae.S., Wing Cmdr. T. R. Cave-Browne-Cave, C.B.E., M.I. Mech.E., A.M.I.N.A., F.R.Ae.S., Mr. C. R. Fairey, M.B.E., F.R.Ae.S., Captain F. T. Hill, F.R.Ae.S., M.I.Ae.E., B.Sc., Wh. Ex. Captain A. G. Lamplugh, F.R.Ae.S., M.I.Ae.E., Mr. W. O. Manning, F.R.Ae.S., Major R. H. Mayo, O.B.E., F.R.Ae.S., Mr. T. O. M. Sopwith, C.B.E., F.R.Ae.S., Mr. C. C. Walker, Assoc.M.Inst.C.E., F.R.Ae.S., Mr. L. A. Wingfield, M.C., D.F.C., A.R.Ae.S.I., Honorary Treasurer: Major D. H. Kennedy, O.B.E., F.R.Ae.S.,

In Parliament.

London Terminal Aerodrome.—Asked whether he had considered any schemes for a central aerodrome for London nearer the heart of the City than Croydon; and whether any committee was now sitting to consider the matter? Mr. F. Montague, Under-Secretary of State for Air, said that the question of the provision of a more central aerodrome for London than Croydon was fully considered by the Civil Aviation Advisory Board, who presented their Report in January, 1923, and, on their recommendation Croydon aerodrome was retained as the London terminal aerodrome, and was enlarged and improved. The answer to the second part of the question was in the negative, but very careful consideration would continue to be given to this difficult problem.

Municipal Aerodromes.—Mr. Day asked the Under-Secretary of State for Air the names of all the municipal authorities which had established aerodromes; and how many applications had his Department for them at the present time for which no definite decision had been arrived at? Mr. Montague replying said that the answer to the first part of the question was Blackpool, Bristol, Hull, Manchester and Nottingham. No applications were awaiting decision at the Air Ministry, but a large number of municipalities were either still considering or negotiating for the purchase of sites for aerodromes, of which a considerable proportion had already been inspected by the Air Ministry.

Light Aeroplane Clubs.—Mr. Everard asked the Under-Secretary of State for Air whether the light aeroplane clubs at present in existence and which had received at present no subsidy would rank with the subsidised clubs for State assistance in 1930-31? Mr. Montague replying said that any light aeroplane club which conformed to the condition of membership and otherwise of the existing subsidised clubs was now at liberty to apply for official recognition as an approved club. If so approved, it would be eligible for payments in respect of such of its members as qualified at the rates applicable under the new arrangements, as from 1st April.

Publications Received.

The Problem of Oil.—By Christopher T. Brunner (Ernest Benn, Ltd., Bouverie House, Fleet Street, London, E.C.4. Price 15/- net). This is a publication which makes the most interesting reading. Though there are many books dealing with the subject of oil there are very few confined solely to a non-technical review of the oil industry, and previous to this one, there was none, we believe, dealing more particularly with the industry as it affects Great Britain. In his introduction the Author deals with the uses of oil and the world production of oil. He shows how transport particularly is becoming more and more dependent upon plentiful supplies of oil, not only for fuel for the engine but also for lubricating machinery. The demand for lubricating oil is, in fact, one of the most reliable gauges of industrial progress. He deals with the development of the oil industry in Great Britain up to the time of the war, during the war and since the war. He quotes Lord Curzon's famous statement—"The Allies floated to victory on a wave of oil." Of such great importance has oil become to nations during either war or peace, Governments have been forced to take a much keener interest in oil than they did before the war, an outstanding instance of this being the acquisition by the British Government of financial interest in the Anglo-Persian oil fields as a safeguard against a possible shortage of fuel in time of war. The author devotes a chapter to the activities of the three main oil groups operating outside the United States, these being the Shell group represented in Great Britain by Shell-Mex, Ltd.; The Standard Oil group, represented by the Anglo-American Oil Company; and the Anglo-Persian group, represented by the British Petroleum Company. The Russian oil interests form a fourth and the smallest group, and they are represented in this country by Russian Oil Products, Ltd. Interesting details are given of the development and activities of these great undertakings. A considerable part of the volume is devoted to the distribution of oil. The author states in his preface: "The uses to which the various derivatives of oil are put, the methods by which they are placed in the hands of the consumer, and the organisation of the industry and firms undertaking the service of distribution, form the subject of this book."

Famous South Coast Resorts.—By Harold Clunn. (Published by T. Whittingham & Co., Ltd., 35 Bucklersbury, Queen Victoria Street, London, E.C. Price 7/6d. net). Mr. Harold Clunn, the author of this book, is well known to many of our readers in connection with the old established firm of forwarding and shipping agents, Geo. W. Wheatley & Co., Ltd., whose name for a great many years has been familiar in all parts of the world. The author, however, has found time to collect information from many sources in writing this book and he deals with the historical associations, the rise to fame, and a forecast of the future developments of the following leading south coast pleasure resorts:—Brighton, Bournemouth, Hastings, Eastbourne, Torquay, Folkestone, and Worthing. Those of us who visit regularly some of these resorts know how their charm and interest grows by long acquaintance, and there are very many, therefore, who will be particularly interested in such a book, which goes back to the beginnings of these towns and describes their early days and shows how they became popular and developed into the very large and prosperous holiday resorts as we know them to-day. Pride of place is given to Brighton, and this is only right because its history makes it, without doubt, the most fascinating reading of any of the watering places of this country. The illustrations, of which there are a very great number, are also particularly interesting, showing the great changes which have taken place both in customs and in dress, as well as in the appearance of the places described.

The Handy Royal Atlas.—Published by W. & A. K. Johnston, Ltd. (Edinburgh. Price 30/-). A well printed, clear and reliable atlas is so important to every business man that we welcome the opportunity to draw attention to the Handy Royal Atlas which contains 54 large scale maps, each map (17 inches by 13 inches) covering a double page, and 12 single map pages. The greatest care has been taken to show every feature with the utmost clearness while all necessary details are inserted. The overcrowding of names has been avoided and different kinds of type have been used to indicate the relative importance of places as regards size and population. The maps are divided into three sections—physical maps, which have been specially chosen to illustrate areas of considerable extent, highland and lowland being shown by means of carefully chosen contour lines and suitable shades of colouring; political maps, in which the divisions of each country are named and coloured. On the maps of countries of Europe the new boundaries are drawn in accordance with the terms of the Peace Treaties settled at the end of the Great War, while in other parts of the world the revised boundaries of the mandate territories are carefully indicated; sectional maps, of which there is a large number, these being in addition to the full page map of the country. For example, Great Britain is divided into four parts and these sectional maps enable each county, or group of counties, to be printed in a large enough way to be studied in considerable detail. India has been divided into a northern sheet and a southern sheet; Africa into seven sectional maps; the United States into five; the Dominion of Canada into four; and the Commonwealth of Australia into three. There is a comprehensive index at the end of the atlas containing more than twenty-six thousand place names.

The Anglo-American Year Book, 1930. — Edited by H. Russell Amory. (Published by the American Chamber of Commerce in London, Aldwych House, Aldwych, London. Price 15/- net). The Anglo-American Chamber of Commerce in London is a very important body, comprising leading men connected with trade and commerce between this country and the United States. The Year Book, which is published under its auspices, is therefore of particular interest to business men either importing or exporting goods to or from America. The volume for 1930, which has just come to hand, contains a Preface by Mr. C. G. Dawes, the American Ambassador to this country, and an introduction by Mr. Albert Halstead, the American Consul-General in London. It contains a great deal of useful information on a very varied range of subjects. It gives a complete list of the members of the Chamber and a residential directory of American residents in the British Isles. Another interesting feature is the American and Anglo-American "Who's Who" in Great Britain and Ireland. This is followed by a commercial directory of firms interested in Anglo-American trade and carrying on business either in the British Isles or in the United States.

Law Cases.

BUS OWNERS WIN APPEAL.

A singular prosecution and conviction on the question of plying for hire was set aside by a King's Bench Divisional Court, composed of the Lord Chief Justice and Justices Avory and Branson, on Thursday, March 27th.

The successful appellants were Ribble Motor Services, Ltd., of Preston, who run services of motor buses over different routes in Lancashire. They appealed against a conviction by the Burnley Justices on an information preferred by the Town Clerk of Burnley, at the instance of his Corporation Watch Committee, charging them with having, on October 9th last, while being the proprietors of an omnibus, unlawfully permitted it to be used as a hackney carriage plying within the Borough for hire without a licence. They were fined 40/- and 5 guineas costs.

It appeared that the bus in question was licensed to ply for hire within the Borough of Burnley for 12 months subject to the condition that the vehicle should ply only over a route approved by the Watch Committee. That route was Burnley to Bury. On 9th October the appellants permitted the bus to ply on the Burnley-Bury route with indicators that the vehicle would go beyond Bury to Manchester. Tickets were issued to Manchester and passengers were carried there.

The Town Clerk, before the Justices, contended (1) that the licence was issued to the company conditional on the approval of routes by the Watch Committee and that having regard to Section 14 (3) of the Roads Act, 1920, that condition was reasonable and proper; (2) that "route" included commencement and destination of the service as well as the roads traversed, otherwise the Committee could not consider properly the adequacy of existing services; (3) that already an adequate Burnley-Manchester service was maintained and the Watch Committee were entitled to control the services by means of conditions attaching to licences to prevent wasteful competition; (4) that a breach of the conditions made the licence void and the company became punishable for plying for hire without a licence.

Appellants argued (1) that the bus having plied for hire only on the route approved and having travelled along that route to Bury in conformity with the conditions of the licence it was no breach of the licence or its conditions that the bus subsequently travelled to Manchester; (2) that the jurisdiction over the bus of the Borough of Burnley was limited and confined to the boundaries of the Borough; (3) that if conditions purported to extend the jurisdiction of the Watch Committee beyond the Borough boundaries such conditions were unreasonable, ultra vires and unlawful; (4) that assuming an infringement of a condition it did not constitute a cancellation of the licence; (5) that the bus was, in fact, licensed to ply for hire within the Borough at the time of the summons; (6) and therefore no offence had been committed.

The Justices, however, held that the company had been guilty of an offence under Section 45 of the Towns Police Clauses Act, 1847, and convicted them.

Sir Frank Boyd Merriman, K.C. (instructed by Messrs. W. & A. Blackhurst, of Preston), appearing for the appellant company, submitted that the jurisdiction of the Watch Committee was merely territorial and was confined to the Borough of Burnley. His main point was that the Watch Committee could not claim that the licence had ceased to exist after they had granted it for a year simply because they were of opinion that an infringement of the conditions of the licence had taken place.

Mr. Justice Avory: Has it ever been held, for instance, that a holder of a liquor licence was no longer a licensee because he committed an offence against licensing laws?

Sir Boyd Merriman: I have never heard of such a case. Supposing we had the Burnley, Bury and Manchester licences to ply for hire. The absurd position might arise that at one moment we might be deemed to be unlicensed in any of those places because we broke a condition of one of the licences.

The Lord Chief Justice: Is it part of the duty of the Watch Committee to prevent wasteful competition?

Sir Boyd Merriman: Yes, so far as their own borough is concerned, but not otherwise.

Mr. Justice Avory: I think it has been held that they can refuse a licence if, on any particular route, there are already adequate facilities for travel.

Sir Boyd Merriman said he could not see what objection the Watch Committee could have to a bus going a little longer journey than that for which the licence was granted.

The Lord Chief Justice: Perhaps they think you don't return the Burnleyites back to their borough as soon as they should be returned. (Laughter.)

Sir Boyd Merriman: That is a long way for saying that, because I have gone beyond my route, my licence has become void. Your Lordship will remember that we did not go off our route but only beyond it for a few miles.

Mr. Goldie, K.C. (instructed by Mr. Colin Campbell, the Town Clerk of Burnley), responded for the Watch Committee, and said the licence definitely stipulated the beginning and end of the route and if the bus went beyond that termination it broke the conditions of the licence.

The Lord Chief Justice: The question is, does this bus cease, in those circumstances, to be licensed?

Mr. Goldie: We say it does. Manchester is already adequately served and the Committee does not want this extra service. The Corporation who granted the licence were entitled to say, "If you go beyond your route we shall be perfectly entitled to consider your licence at an end. Had we known you would have run this service to Manchester we would not have granted you the licence."

The Court allowed the appeal with costs and ordered the conviction to be quashed.

The Lord Chief Justice said the dispute dealt with a comparatively simple point. It was common ground that the bus referred to was, at all material times licensed to ply for hire within the Borough of Burnley. That licence, however, was subject to certain conditions, one of which provided that the bus should ply for hire only over a route specified and approved by the Watch Committee. The approved route in this case was Burnley to Bury. No approval was given for the vehicle to go on to Manchester. In this state of affairs the appellants permitted the bus to ply for hire as far as Manchester.

The Watch Committee contended that the route indicated in the licence included not only the commencement but the end of the journey and the bus could not travel outside or beyond that route; that they could control wasteful competition and regard the licences of condition breakers as immediately void.

It was a very plain case. The attention of the Court had been directed to the correspondence that had passed between the parties on the matter and it was quite clear that, in the progress of the controversy, there was a development of the view taken by the Committee through its representatives and officials. At first it was said that, if the bus company did that which they desired to do they must not expect a revision of the time tables so as to increase the number of their buses. Then it was said that, if they did that which they appeared likely to do they must not expect the renewal of their licence, and, finally, as a last stage, it was said in a letter, over the hand of the Town Clerk, that in view of the infringement of the licence, proceedings before Justices would be taken on the ground that the bus had plied for hire without a licence.

That seemed to indicate a contradiction and a suggestion that, if the bus went beyond its destination there was not only an infringement of conditions but a forfeiture of the licence that had been given it to ply within the Borough so that it became an unlicensed vehicle within the borough boundaries. His Lordship could not see the force of such an argument. No suggestion was made that the bus went off the approved route yet it was said that when it went beyond its route it became unlicensed to travel upon that part of the route for which it was licensed. The whole matter was capable of *reductio ad absurdum*. For instance, one of the conditions was that the bus should be kept in good order and scrupulously clean. If the Watch Committee's contention was right, should the bus be found to be dirty for one day its licence became automatically void. He came to the conclusion that the Justices were wrong in upholding the Watch Committee's contentions. Therefore, the appeal would be allowed and the conviction of the company would be quashed.

Justices Avory and Branson agreed.

PLYING FOR HIRE. INJUNCTION GRANTED.

In the Chancery Division of the High Court of Justice, before Mr. Justice Forwell, the Attorney General, at the relation of the Corporation of Manchester, moved on March 14th, for an injunction to restrain Mr. John Sharp, of 251, Stockport Road, Manchester, from plying for hire with motor omnibuses within the City of Manchester without a licence. The Corporation also asked for an injunction to restrain Mr. Sharp from trespassing on the highways of the City or obstructing them by allowing his omnibuses to stand there for a considerable time.

It appeared that Mr. Sharp has a licence to ply for hire with his buses in the districts of Hazel Grove and Bramhall and in the Borough of Eccles, but his applications for

Digitized by Google

a licence in the City of Manchester were refused. Nevertheless, it was alleged that he commenced and continued to ply for hire in the City.

Mr. Grant, K.C. (for the Corporation) said the general principle was that no unlicensed vehicle was allowed, within the prescribed area, to take up a passenger not already booked and no money could be taken within that area for single, return or season tickets. Mr. Sharp had two offices within the City of Manchester and the practice seemed to be that passengers took their tickets and paid for them in those offices.

Mr. Manning, K.C. (for the defendant) said no person was permitted on a bus within the area unless he had taken a ticket beforehand. People had attempted to board the buses without tickets but had been refused.

Mr. Grant: While we admit that no money was taken on the buses it is a fact that it was the habit of the defendant to sell tickets at his offices within the prescribed area, receiving the money there and carrying passengers through the streets of the City to the boundaries or beyond, a proceeding that was, in my contention, clearly a breach of the law.

In reply, Mr. Manning, K.C., contended that the question was whether, having regard to the facts of the case, Mr. Sharp properly could be said to have plied for hire with his buses. His argument was that there had been no solicitation or invitation within the area by the defendant to attract passengers. Unless there was something antecedent to the carrying of passengers in the way of solicitation there could be no plying for hire. Neither the vehicles nor the garages contained any advertisements to indicate that the defendant was prepared to accept passengers, and nothing that was done within the City could be said to be solicitation of the public to travel. The decided legal cases all showed that there must be something of that nature to constitute plying for hire. Concluding, Counsel stated that the Corporation had withdrawn their claim for an injunction in respect of excessive use or obstruction of the highway. He submitted that defendant was entitled to the costs of that part of the issue if the main part was decided against him.

In his judgment, Mr. Justice Farwell held, that, on the facts, Mr. Sharp had been plying for hire within the City of Manchester. If persons ran buses regularly through the streets on a fixed route at fixed times and regularly stopped at particular places to allow passengers to alight and had offices where people could buy tickets and get on the buses, then, in his opinion, that person was certainly plying for hire.

His Lordship did not think it was necessary to create offence for there to be solicitation in the way of posters or advertisements or by persons calling out or attracting attention by means of that kind.

The Corporation was, in consequence, entitled to, and would obtain, an injunction to restrain Mr. Sharp from plying for hire within the City. The Corporation would also have the costs with the exception of those thrown away in connection with the part of the claim they had abandoned.

ALLEGED SHORT DELIVERY OF TIMBER.

In the Southwark County Court, before Judge Moore, John Henry Rendell, trading as Thomas Henry Rendell, of 332 Rotherhithe Street, Bermondsey, S.E., haulage contractor, sued R. E. Alexander, of 6 Hunsdon Road, New Cross, S.E., timber haulage contractor, to recover £11 2s. 11d., for alleged short delivery of timber.

Mr. Pitt appeared as counsel for the plaintiff, and said that on April 8th of last year, Messrs. Horsley Smith and Co., Ltd., a firm of timber merchants, communicated with the plaintiff, and asked if he could collect a load of timber from the Surrey Commercial Docks. He undertook the job, but as he was busy at the time, he asked the defendant if he would do it, and he agreed, and was handed the necessary papers in order to authorise the collection of the timber from the docks. In all, there were supposed to have been 729 pieces of timber, but when they were delivered to Messrs. V. C. Smith at North Finchley, it was found that there were 184 boards short. Messrs. V. C. Smith communicated this to Messrs. Horsley Smith & Co., Ltd., and the latter firm debited £11 2s. 11d. to the plaintiff's account. The plaintiff was now seeking to recover that amount from the sub-contractor, to whom he had entrusted the work of conveying and collecting the timber.

The plaintiff gave evidence, and said he had done considerable work for Messrs. Horsley Smith & Co., Ltd., and this order was received on the evening of April 8th. The delivery note was for 604 boards of specific lengths, and 2,500 ft. in addition of any length, and according to the dock records, this 2,500 ft. was made up by 125 boards of 20 ft. in length. He handed the necessary delivery notes to the defendant, and asked that the timber should be collected from the docks and delivered to Messrs. V. C. Smith the following day. He went to the docks the next day, but found the timber had not been called for, but on April 10th when he got to the docks, he found that this timber was being loaded on to a lorry which had the name of A. Teuten upon the side. He was annoyed that the defendant should have sub-contracted the work. It was not until some weeks later that he was told by Messrs. Horsley Smith & Co., that there had been a shortage of some 184 boards. He then went into the docks to discover whether all the timber had been collected, and was told that it had been, and the amount on the ground bore this out. He was told by Messrs. Horsley Smith & Co. that the 14 ft. and 15 ft. boards were missing. He could not produce a signature from Mr. Teuten's carman to state that he had taken away the proper number of boards, as the Surrey Commercial Docks did not require a signature from a carman taking timber from the timber dept. of the docks.

Two witnesses from the Surrey Commercial Docks gave evidence that the whole of the timber was loaded on the lorry, and Albert Floyd, foreman to Messrs. V. C. Smith, said he checked the timber some time after it arrived, and found it did not tally with the note that had been handed to him.

Judge Moore said he was certain that the whole of the timber taken from the docks had been delivered to Messrs. V. C. Smith, and he would, therefore, have to give judgment for the defendant, with costs, as in fact no timber had been lost and there had been no short delivery as had been alleged.

Preventing Accidents.—The National Safety First Association has just inaugurated a special accident prevention service for industrial undertakings. Briefly, this consists of an intensive campaign each month against one of the principal risks of industry. A pocket magazine entitled "On Guard" for the worker has been issued. "On Guard" is designed primarily for distribution to workers in industrial and transport undertakings, and covers various aspects of health as well as safety at work, in the street, and even in the home. The contributors to the first issue of this monthly include the Hon. Sir Arthur Stanley, Sir Arbuthnot Lane, Sir Gerald Bellhouse, and Sir Felix Pole. A sample copy of the magazine can be obtained price 2d. post free, or quotations for quantities will be given by the National Safety First Association, 119, Victoria Street, London, S.W.1.

Motor Notes.

Morris Commercials for Tipton. — The Tipton Urban District Council have in service a fleet of eight Morris commercial vehicles, two being refuse collecting vehicles, three tipping trucks, two used by the Gas Department, and the eighth is an ambulance.

A FLEET OF MORRIS COMMERCIAL VEHICLES FOR TIPTON URBAN DISTRICT COUNCIL.

Clayton & Shuttleworth Re-organisation.—It is announced that the old established firm of Clayton & Shuttleworth Ltd., Lincoln, the well-known manufacturers of agricultural machinery and transport vehicles has been completely reorganised. Former markets are to be actively cultivated and all customers, whether for thrashing machinery or power, road or transport plant, will find their requirements or individual specifications carefully catered for. With the idea of protecting users of Clayton steam wagons, the new Company has taken over the service and spare parts supply for these vehicles. Owners can now rely upon stocks and prompt delivery when replacements are needed. Similar service departments have been organised to deal with all requirements for Clayton steam engines, boilers, thrashers and other machines, sundries and machinery spares.

Trogon Oils.—Frank How & Co. Ltd., the well-known manufacturers of the Trogon brand of lubricating oils, have secured a further large contract by the Air Ministry for Aero Engine Oil. This, in conjunction with recent contracts with the Great Western Railway Co., and large supplies for the Egyptian Government, represents a total of nearly a quarter of a million gallons of Trogon Oils placed with the firm during the last three months on these three contracts alone. All these oils are blended at their Stratford Works, London, E.15.

A New Type Petrol Tanker.—The Anglo-American Oil Co., Ltd., proprietors of Pratts high test petrol, have recently purchased the low loading 1,500 gallon triple compartment spirit tanker, as illustrated, from the Associated Equipment Co., Ltd., Windmill Lane, Southall, Middlesex. The tank is mounted on the A.E.C. "Regent" chassis, which is fitted with an overhead valve six-cylinder engine. Though this chassis is much used in the passenger vehicle business it is the first time that it has been applied to commercial work. The exceptionally low height of the frame makes for safety in running as well

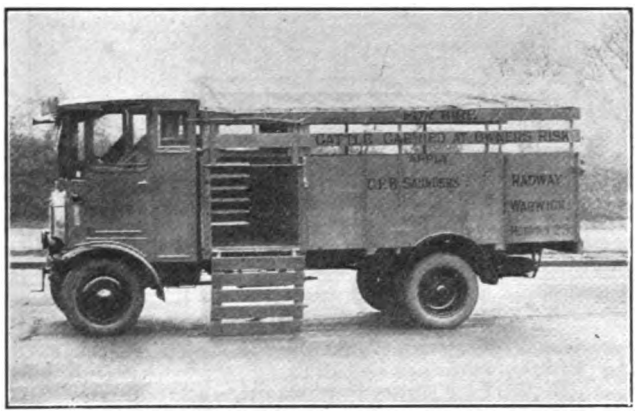
as giving the vehicle a distinctive appearance. It will be noted that the wheel arches are embodied in the tank itself and the valves are all operated from a compartment, fitted with a door, at the rear.

Live Stock by Road.—The cattle truck body shown in the photograph is supplied on a Garner patent forward control overtype 2½-ton chassis supplied by Garner Motors, Ltd., Tyseley, Birmingham. The cattle truck body was supplied through the Warwick County Garage, of Leamington, who supplied the complete vehicle to Mr. Saunders. The body is built suitable for carrying all classes of cattle, with proper protection from the weather by means of a detachable sheet on the top, over bows, with ventilators at the sides. The front compartment is divided from the rest of the body by a detachable gate, which is adjustable to various positions for different size of front compartment. The loading of small animals in this compartment is effected from either side by opening



THE GARNER CATTLE TRUCK.

the lower portion only, or larger animals from a loading dock by removing the upper hinged portion as well as the bottom one. At the rear, a very interesting ramp is employed, being divided into two pieces for small or large animals, with an additional hinged board, to close in the gap between the tailboard and the rear end of the body, to prevent the foot of an animal slipping into the space. Incidentally, the division of the ramp in this manner halves the weight for opening and closing. Means are provided for securing animals in position, and the whole vehicle forms an exceptionally interesting general-purpose carrying cattle lorry.

Commer Cars for Sheffield.—The Sheffield Corporation have recently taken delivery of the three 2½-ton Commer tipping lorries from the Commer Car agents, the Deighton Motor Company of Sheffield. The bodywork was designed and carried out by the Deighton Motor Company.

Mr. W. H. Goddard, A.M.I. Mech. E., Jessamine Avenue, Beeston, Leeds, the Yorkshire agent for the Mercedes-Benz diesel engined chassis:—"The consumption of gas oil with a full load of approximately 9 tons is from 11/12 m.p.g. which works out at about .37d to .40d per mile for fuel as against 2.5d. for petrol." We may also add that the chassis in question was lent to Mr. Goddard by Mr. Fearnley, General Manager of the Sheffield Corporation Transport Department, and sent by him to Germany at Mr. Goddard's request to have the engine fitted. The whole idea was Mr. Goddard's. The bus has now been in service for several weeks and has carried hundreds of passengers not one of whom has ever noticed that it was anything different to a petrol bus.

Tyre Inflation Table.—The following is the load and inflation table for pneumatic tyres (wired type) mainly used for commercial vehicles. It is issued by the Society of Motor Manufacturers & Traders (Standard Department) and is referred to as the I.A.E. Data Sheet No. 168 and it is for tyre sizes additional to those shown on the I.A.E. Data Sheet No. 157.

Nominal Tyre Section.	Axle Loads in cwts. Minimum Inflation Pressures in lbs. per sq. in.													
	27	30	35	40	45	50	52	57	63	65	70	75	80	85	90 cwts.
in. 7·00	45	50													lbs. per sq. in.
7·50			50	55											
8·25				50	55	60									
9·00							55	60	65						
9·75										60	65	70			
10·50													65	70	75

NOTE:

WHEN TWIN TYRES ARE USED FOR ONE AXLE THE LOADS QUOTED FOR THAT AXLE MAY BE DOUBLED FOR THE SAME INFLATION PRESSURE.

Avon Extensions.—The "New Avon" campaign launched in October is already bearing fruit. The company reports a steadily increasing demand for its new tyres and a particularly encouraging increase in February sales. A £35,000 contract has just been placed for the erection at Melksham of yet another big tyre shop, which is needed so urgently that the builders have been given a time limit of four months. The Avon factory is already thoroughly up-to-date as regards plant and processes, but this latest addition will complete lay-out plans for even more efficient and economical mass production.

New A.T. Speedometer Factory.—The A.T. Speedometer Co. Ltd., have removed their works and offices from The

COMMER CARS FOR SHEFFIELD CORPORATION.

Mercedes-Benz Engine—A Correction.—In our article entitled "A Heavy Oil Engined Bus Chassis" in our March number, the weight per horse power of the Mercedes-Benz engine was, owing to a misprint, given at 6½ lbs. instead of 16½ lbs. per b.h.p. Since writing the article referred to we have received the following particulars from

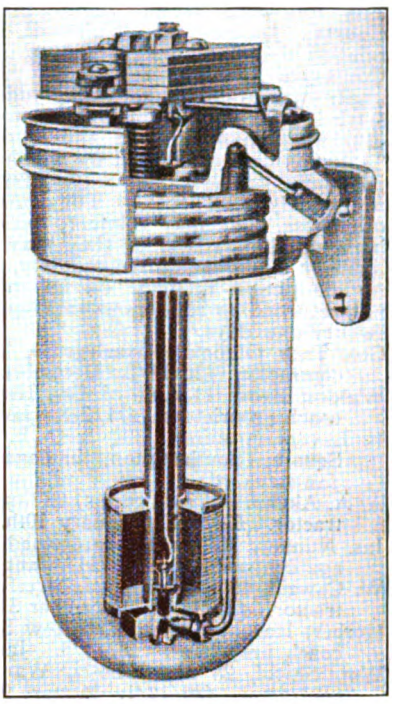
Vale, Acton, to a new factory on the North Circular Road, N.W.2. The new establishment is known as Chronos Works, and is equipped on the most modern lines for all departments of speedometer service.

Chevrolet now a British Product.—Hitherto the Hendon factory of General Motors Limited (which stands on a

Digitized by Google

site of twenty-two and a half acres and covers an actual floor area of six acres) has been employed on the building of Chevrolet cars and trucks. Starting last month Chevrolet trucks are now made from British materials at the Vauxhall factory at Luton. Extra buildings, facilities, etc., have been provided for the large additional amount of work involved in Chevrolet production. Chevrolet prices remain the same as before, when many of the component parts were imported. Employment will be necessary of a very large number of extra skilled and unskilled workmen, not only on the machining, fitting and erecting of Chevrolet engines and chassis, but indirectly of course this work will provide employment in the works of the suppliers of stampings, forgings and all other rough materials required for the use of this new British industry. At the commencement, approximately 70 per cent. of the cost of the Chevrolet chassis will be made up of British labour and materials. When supplied fitted with a body of whatever type, the British percentage will exceed 75 per cent. This British percentage will increase rapidly with every succeeding month's production. In the Luton works there will be approximately 2,000 employees almost immediately, and the number employed will increase considerably as production expands. The number of people directly employed by General Motors in England was 3,432 at the end of February.

The Tecalemit Central Chassis Lubrication.—Tecalemit, Ltd., Mitre House, Scrubbs Lane, Willesden, London, N.W.10, are marketing a central chassis lubrication system claimed to be 100 per cent. automatic, making use of the oscillation of the car when in motion to provide power to force the lubricant to the bearings. The system includes an oil reservoir and central pumping unit consisting of a glass bowl with a removable metal cap, enclosing an inertia weight and the pump. The bowl holds approximately a quart of oil which is poured in at the top of the pump after the metal cap is removed. Under the metal cap is an inertia weight hinged and balanced on a spring. This weight responds by oscillation to the slightest movements of the car. A floating plunger rod operating inside a brass tube connects this inertia weight to the actual pumping unit in the bottom of the glass bowl. This unit is surrounded by a 150-mesh gauze filter. Oil enters through the intake port of the pump and as the inertia weight falls the small diameter plunger forces the oil downwards past two ball check valves. The pressure maintained by continuous pumping distributes the oil throughout the system, forcing it into the bearings through the feed regulator plugs. The high pressure developed results from the very small diameter of the pump plunger which discharges one drop of oil for about every 40 or 50 strokes. The pump develops a pressure of 150 lbs. per inch. There are only three moving parts in the pumping unit, two of which are case-hardened and, moreover, operating in oil as they do, wear is unappreciable. Adjustment for regulating the quantity of oil is provided by a screw in the centre of the inertia weight. A clockwise turn of the screw increases the quantity of oil and the reverse, of course, reduces the quantity.

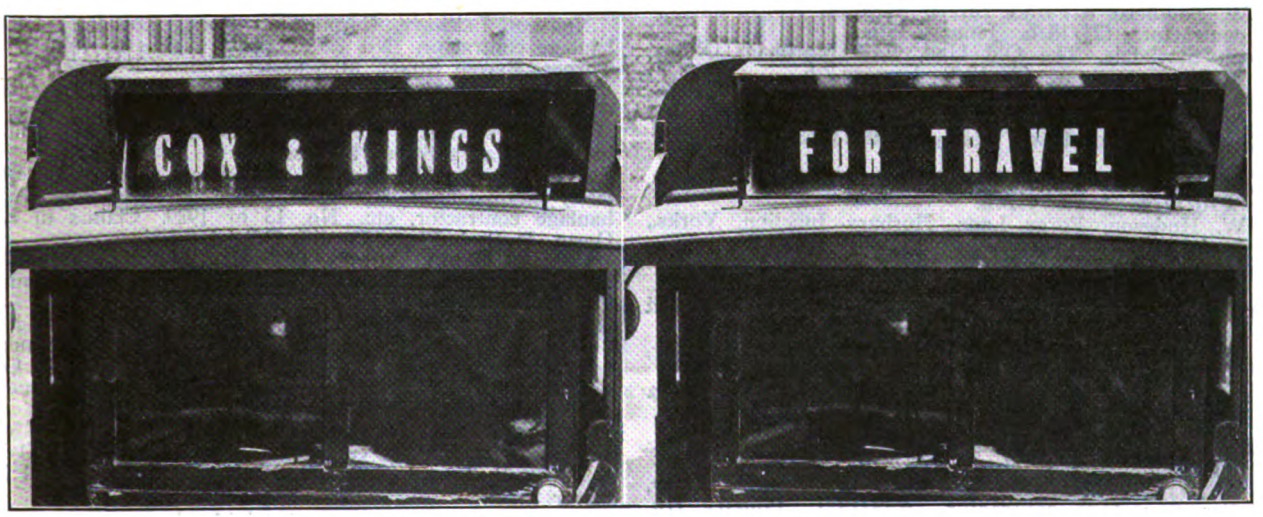


SHOWING THE TECALEMIT CENTRAL CHASSIS LUBRICATION SYSTEM.

Movie-Signs on Vans.

We illustrate one of the Movie-Signs fitted to a van belonging to Messrs. Cox & Kings, the well-known shipping and forwarding agents, and we were interested to have some brief particulars of this attractive advertisement. Movie-Signs on vans require no attachment to engine or to batteries. The signs are actuated by a patented Vibro-Motor, which is self-contained, and costs nothing to run. The signs are simply fixed on the van and after this they work themselves. There are two types of Movie-Signs, the one which we illustrate being the daylight type in which both reading matter and colours change completely, giving two distinct announcements. The second type is called the Rollover Movie-Sign, which has four or six complete changes, according to the height of the window in front. These signs are brilliant in appearance and do not contain any glass. For stationary positions such as shop windows or garages these signs are fitted with British made electric motors which are guaranteed to be trouble-free and consume one unit in thirty hours running. This is a new and interesting form of publicity and all types of Movie-Signs are fully guaranteed by the makers, Movie-Signs, Ltd., 31, Elizabeth Street, London, S.W.1.

We are informed that three of these signs have been sold to Messrs. C. A. Wells, Ltd., for use on their vans.



MOVIE-SIGNS FOR WELL-KNOWN SHIPPING AND FORWARDING AGENTS.

County Court Judgments.

The following returns from the Registry of County Courts' Judgments, Whitehall, have been received relating to judgments entered up in the respective County Courts of England and Wales. Publication does not imply inability to pay. Many judgments may have been settled between the parties or paid. Judgments settled otherwise than through the Court may appear unless "satisfaction" is entered up within twenty-one days from judgment or allocatur. Registered judgments are not necessarily for debts. They may be for damages or otherwise, they may relate to actions *bona fide* contested between the parties, or they may be against defendants, liable in a representative capacity, and not personally; but no distinction is made on the register. Judgments are not returned to registry if satisfied in Court books within twenty-one days.

Geo. Thos. Oldfield, 4 Hazlegrove, Trevor, Denbigh, haulage contractor. £26/16/2. December 11th.

Waldon Bros., 11 Oxford Gr., Ilfracombe, Devon, motor coach proprietors. £71/2/8. January 13th.

E. Lavers (trading as E. & C. F. Lavers), 13 Brunswick Square, Southampton, haulage contractor. £34/14/0. January 3rd.

A. A. Akehurst, Cross Street, Gillingham, Kent, haulage contractor. £33/0/6. January 10th.

Jas. Nunney, 117 Shakespeare Road, Gillingham, Kent, haulage contractor. £28/8/11. January 10th.

W. Cowgill, 15 Raglan Road, Stretford, Lancs., haulage contractor. £21/11/5. December 31st.

Herbert Harold Horton, Chepstow Street, Manchester, motor coach proprietor. £37/4/4. January 14th.

Wm. Shield, 28 Marsh-ho-la, Warrington, Lancs., haulage contractor. £30/12/1. January 9th.

Day at 49a, Gruneisen Road, Portsmouth. The directors are: G. A. Day (permanent governing director), Miss Dorothy K. Day. Registered office: 49a, Gruneisen Road, Stamshaw, Portsmouth.

Coach Services, Ltd. (246,101).—Private company. Registered February 27th. Capital £100 in £1 shares. Objects: To carry on the business of tourist and passenger agents and contractors, etc. The permanent directors are: C. Flowers, H. Bickerton.

Classique Coaches, Ltd. (246,100).—Private company. Registered February 27th. Capital £7,500 in 7,000 ordinary shares of £1 each and 10,000 deferred shares of 1/- each. Objects: To carry on the business of motor garage, coach, charabanc, taxicab, omnibus, cab, fly and other conveyance proprietors, coach builders, etc. The first directors (to number not less than 2 nor more than 3) are: J. W. Munday, S. A. Thixton. Both permanent, subject to each holding £500 shares.

Amalgamated Motors, Ltd. (246,198).—Private company. Registered March 1st. Capital £1,000 in £1 shares. Objects: To carry on the business of cartage, haulage and transport contractors and agents, carriers of passengers and goods, vehicle proprietors, garage proprietors, etc. The directors are: A. Allen, J. W. Morris, A. Buting, H. Andrew, H. Robinson, S. H. Robinson.

Highways Transport (Birmingham), Ltd. (246,186).—Private company. Registered March 1st. Capital £100 in £1 shares. Objects: To carry on the business of haulage, cartage and road transport contractors, general forwarders, shipping and insurance agents, etc. The directors are: W. R. Salmon, (permanent director and chairman), G. H. Brown. Registered office: Room 33, 35, Paradise Street, Birmingham.

Dobinson's Road Transport, Ltd. (246,174).—Private company. Registered March 1st. Capital £100 in £1 shares. Objects: To carry on the business of road transport and haulage contractors, etc. The directors are: N. Proops, H. A. Dobinson. Registered office: 16 Upper St. Martin's Lane, W.C.2.

Probets & Skeggs, Ltd. (246,303).—Private company. Registered March 6th. Capital £1,000 in £1 shares. Objects: To acquire the motor coach and motor hire business carried on by S. R. Probets at Taplow and district. The first directors (to number not less than 2 nor more than 5) are: S. R. Probets, R. L. D. Skeggs, (both permanent). Registered office: "Southdown," Bath Road, Taplow.

Burley's Garages, Ltd. (246,287).—Private company. Registered March 6th. Capital £1,000 in £1 shares. Objects: To acquire the business now carried on at William Street, Aston, Birmingham, as "Burley & Sons" and to carry on the business of char-a-banc proprietors, hackney carriage proprietors, jobmasters, taxi proprietors, etc. The directors are: A. Burley, Mrs. F. Burley. Registered office: 72 & 74, William Street Lozells, Birmingham.

Loumax Omnibus Company, Ltd. (246,337).—Private company. Registered March 7th. Capital £750 in 500 "A" shares of £1 each and 500 "B" shares of 10/- each. Objects: To acquire the business of motor omnibus proprietors now carried on by X. L. P. Grundel and M. Grundel as "L. & M. Grundel" at 60, Lower Road, Harrow. The permanent directors are: Mrs. Violet F. A. Sayers, M. Grundel, R. S. Cole.

Orr, Hill & Dale, Ltd. (246,394).—Private company. Registered March 8th. Capital £100 in £1 shares. Objects: To acquire the business of a haulage contractor carried on by G. F. Crisp at Pinehurst Garage, Farnborough, Hants, as "Orr, Hill & Dale." The directors are: G. F. Crisp, Mrs. Helena Crisp. Secretary: C. Munton. Registered office: Pinehurst Garage, Farnborough, Hants.

Cook's Motorways, Ltd. (246,390).—Private company. Registered March 8th. Capital £100 in £1 shares. Objects: To carry on the business of charabanc, motor bus and coach proprietors, etc. The directors are: A. F. Cook, B. J. Cook, Junr., F. Bennett. Secretary: F. Bennett. Registered office: 31a, Askew Crescent, Shepherd's Bush, W.12.

Gray's Coaching Service, Ltd. (246,413).—Private company. Registered March 10th. Capital £3,500 in £1 shares. (1,200 7 per cent. cumulative preference and 2,300 ordinary). Objects: To carry on the business of motor coach proprietors, hirers and booking agents formerly carried on by J. Gray and F. H. Moore, as Gray's Coaching Service, at 53, Fife Road, Kingston-on-Thames and 49, London Road, Twickenham. The first directors (to number not less than 2 nor more than 7) are: J. Gray, F. H. Moore, F. J. Doddington, M. B. Darling. Secretary and Solicitor: E. M. Brandebourg, 20a, Eden Street, Kingston-on-Thames.

Plymouth and District Express Delivery, Ltd. (246,471).—Private company. Registered March 12th. Capital £1,000 in £1 shares. Objects: To acquire the business of delivery contractors now carried on by J. Metcalfe and S. J. Ruse, at Gibbon Lane, Plymouth, as the "Plymouth and District Express Delivery Co." and to carry on the business of carriers of passengers and goods, caterers for and organisers of vehicular and other excursions, etc. The permanent directors are: J. Metcalfe, S. J. Ruse.

Victoria Motorways, Ltd. (246,475).—Private company. Registered March 12th. Capital £2,000 in £1 shares. Objects: To acquire the business of a motor omnibus, motor charabanc and garage proprietor now carried on by E. M. Sales, at Netherseal, Derby, as "Victoria Motorways." The directors are: E. M. Sales (permanent managing director), J. H. Field.

Speedy Transport & Garages, Ltd. (246,472).—Private company. Registered March 12th. Capital £7,000 in £1 shares (1,500 6 per cent. cumulative preference and 5,500 ordinary). Objects: To acquire the business of motor transport contractors, garage proprietors, etc., carried on by Geraldine Hedges and Patricia G. N. McOstrich, at 88, 94, 96, 98, 48, & 49, Ebury Mews, Eccleston Street, and 73, Lyall Mews, Eaton Square, S.W., as the "Speedy Transport Co.," and to adopt an agreement with the above and Lady Iris M. A. de Vere Capell and G. P. Hargreaves. The first directors (to number not less than 2 nor more than 6) are: Miss G. Hedges, Miss P. G. M. McOstrich, Lady Iris M. A. de Vere Capell, G. P. Hargreaves. The two first named are permanent.

Griffiths & Davies, Ltd. (246,492).—Private company. Registered March 13th. Capital £2,000 in £1 shares. Objects: To acquire the business of motor omnibus and motor car proprietors heretofore carried on by D. Griffiths and W. J. Davies, at Newbridge and Cwmcarn, Mon. The directors are: D. Griffiths (managing director), W. J. Davies, R. Griffiths, J. Griffiths, Winifred Griffiths (all permanent, subject to each holding 200 shares). Secretary: W. J. Davies.

Twickenham Motors, Ltd. (246,507).—Private company. Registered March 13th. Capital £2,500 in £1 shares. Objects: To carry on the business of garage proprietors, proprietors and letters on hire of vehicles of all kinds, etc. The permanent directors are: H. J. Bartlett, J. H. Walford.

Motorways (1930), Ltd. (246,553).—Private company. Registered March 15th. Capital £7,000 in 5,750 6½ per cent. cumulative participating preference shares of £1 each and 2,500 cumulative ordinary shares of 10/- each. Objects: To adopt an agreement with P. W. Grindrod and H. J. Spencer for the purchase of certain assets of Motorways, Ltd. and to carry on the business of motor coach proprietors, travel and tourist agents, etc. The permanent directors are: W. R. M. Churcher (chairman), P. W. Grindrod, L. Currie, H. J. Spencer. Registered office: 44, Cranbourn Street, W.C.2.

Norman E. Box, Ltd. (246,604).—Private company. Registered March 18th. Capital £60,000 in £1 shares.

Digitized by Google

(21,643 6 per cent. cumulative preference). Objects: To acquire the heavy haulage branch of the business carried on by Norman E. Box, Ltd. (incorporated in 1914), and to carry on the same and the business of shipping and forwarding agents, rail, road, ship and manufacturers' agents, general carriers, cartage contractors, Custom House agents, ship owners and brokers, bonded carmen, furniture removers and brokers, depository keepers, etc. The first directors (to number not less than 3 nor more than 15) are: Major Oswald C. Magniac, Sir John Humphery, Owen H. Smith, John E. Humphery, Rupert De la Bare, Henry Mainsbridge, Admiral Sir Audrey Smith, Norman E. Box and Norman F. Wentworth.

Brent Transport Company, Ltd. (246,610).—Private company. Registered March 19th. Capital £100 in £1 shares. Object: To carry on the business of haulage contractors, sand and ballast merchants, builders, builders' merchants, etc. The directors are: E. T. Harlow, G. Taylor. Registered office: Pattern Maker's Yard, Shrewsbury Road, N.W.10.

M. Deal. The first directors (to number not less than 2 nor more than 5) are: G. W. Overton, E. R. Deal, (life directors). Registered office: 11, 12, The Arches, Queen's Road, Battersea, S.W.8.

New Brighton Touring Company, Ltd. (246,768).—Private company. Registered March 24th. Capital £1,500 in £1 shares. Objects: To carry on the business of proprietors and hirers of all kinds of motor vehicles, carriages, aeroplanes, boats and other public or private conveyances, etc. The first directors are to be appointed by the subscribers.

Bence Motor Services, Ltd. (246,952).—Private company. Registered March 29th. Capital £10,000 in £1 shares. Object: To acquire the business of motor omnibus and chars-a-banc proprietors now carried on by W. J. Bence and Sons, Ltd., at Hanham, Glos. The directors are: D. E. Lyddon, J. F. Sambles.

Mortgages, Charges and Satisfactions.

Covent Garden Haulage Company, Ltd.—Debenture dated January 29th, 1930, to secure £2,250, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: Mrs. R. Harris, 201, Southampton Street, S.E.5.

A. Pannell, Ltd.—First mortgage debenture dated January 29th, 1930, to secure £8,000, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: A. I. Pannell, Albert Yard, Glasshouse Street, Vauxhall, S.E.11.

Amersham & District Motor Bus & Haulage Company, Ltd.—Two mortgages (1) on freehold land at Marlow Hill, Chepping Wycombe, and (2) on freehold land and buildings, "The Garage," Broadway, Amersham, with fixtures, etc., both dated February 3rd, 1930, to secure all moneys due or to become due from the company to the National Provincial Bank, Ltd.

Mayfair Transport Company, Ltd.—Debenture dated February 3rd, 1930, to secure £1,750, charged on the company's property, present and future, including uncalled capital. Holder: F. R. Hodgson, Moosomin, Felcourt, East Grinstead.

Beattie Coaches, Ltd.—Mortgage dated February 7th, 1930, to secure £600, charged on five plots of land in Bollo Bridge Road, Acton. Holder: J. W. Poultney, Sumatra Road, West Hampstead.

Viking Motors (Preston), Ltd.—Satisfaction to the extent of £100 on December 4th, 1929, of 2nd mortgage dated June 19th and registered June 2nd, 1926.

A. E. Handscombe & Co., Ltd.—Satisfaction in full on December 31st, 1929, of debentures authorised March 31st and registered April 2nd, 1927, securing £3,400.

Sheppey Motor Transport Company, Ltd.—Satisfaction in full on January 4th, 1930, of charge dated May 5th and registered May 23rd, 1919, and mortgage dated January 23rd and registered January 27th, 1926.

Blue Bus Service (Bridlington), Ltd.—Satisfaction in full on January 20th, 1930, of debenture dated September 21st and registered September 23rd, 1927, securing £3,000.

Cardinal Omnibus Company, Ltd.—Satisfaction in full on January 30th, 1930, of debenture dated June 10th, 1920, in favour of the Commercial Motor Garage and Repair Company, Ltd., and registered June 14th, 1929, securing £400.

Receiverships (Appointment or Release).

Northern Roadways, Ltd.—J. J. Hawkins, of 15 King Street, St. James', S.W., was appointed Receiver and Manager on January 28th, 1930, under powers contained in debenture dated May 18th, 1929.

NOTICES

The World's Carriers is published monthly, on the 15th of each month. Annual Subscription, including **World's Carriers Year Book and Diary**, £1 1s., post free.

Advertisement tariff sent on request.

The Editor, while promising to give prompt consideration to any articles, notes, drawings, or photographs submitted, disclaims all liability in connection with contributions sent in voluntarily. If a properly addressed and stamped envelope is forwarded, every effort will be made to return rejected contributions.

Books, pamphlets, prospectuses, and newspapers (the latter having any special item conspicuously marked) should be addressed to the Editor.

Safety First.

IF any excuse were needed for giving prominence to the National "Safety First" Week, which is being held from May 19th to 24th, the figures issued by the National "Safety First" Association supply all that is required. Briefly, it is stated that in Great Britain each year fifteen thousand persons are killed and over one million injured in various forms of accidents—at work, on the streets, or in the home. The decision, therefore, to promote a "Safety First" Week, during which the subject will be specially brought to the attention of the entire community, should be welcomed by all who are connected with transport in any shape or form. There are many contributory causes helping to augment the tragic figures already given, but when all is said and done road transport is responsible for nearly half of the fatal accidents. It does not follow that owners of vehicles are generally to blame, as we are convinced that in an enormous number of cases the carelessness of the pedestrian is the cause of accidents. Then again the makers of our highway have a big responsibility, as in many cases the slipperiness of the roads after rain is the cause of accidents. Whatever may be the cause, the figures quoted are so staggering that we say once again that it is the urgent duty of every road user, of every association connected with road transport, and of every local or county authority responsible for the roads, to support, both financially and personally, the movement which has been doing such splendid work to educate all concerned as to their duties and responsibilities in avoiding accidents.

In this connection we urge once more the importance of altering the rule of the pathway so far as it affects pedestrians in towns and cities, so that everyone will keep to the left, in this way facing the traffic, instead of as at present having the traffic behind them. We are glad to see a letter in "The Times," under the signature of a number of prominent men, whose names carry great weight in transport matters, advocating this alteration. This rule would not apply to pedestrian traffic on country roads where there is no pavement, but it should be enforced wherever there are side walks. If this can be accomplished we are convinced that a big step forward will have been made in reducing the number of accidents due to carelessness on the part of pedestrians in stepping off the pavement without looking to see the traffic which is coming up behind them.

The National Safety Week has as its Patron H.R.H. The Duke of York, K.G., its Chairman is the Rt. Hon. the Viscount Brentford, and the Vice-Chairmen are Sir Henry Maybury, G.B.E., K.C.M.G., C.B., and Sir Gerald Bellhouse, C.B.E., with Lt.-Col. J. A. A. Pickard, D.S.O., as the Hon. Secretary.

For the past five years the National "Safety First" Association has been conducting a campaign to educate all classes in the necessity for adopting safety first methods, and although the number of accidents has continued to increase there is no doubt that this good work has had its effect and with greater support its efforts should result in an actual reduction in the near future. It must be borne in mind that every year there is a tremendous increase in the number of motor vehicles placed on the roads, and Col. Pickard, in a letter to "The Times," draws attention to the fact, as stated in the House of Commons by the Home Secretary, that the increase in the percentage and in the actual number of accidents in 1929 was the smallest in any year since the War. This fact, coupled with the tremendous increase in the number of motor vehicles licensed, confirms the view that the work of the National "Safety First" Association has been fruitful and that, if its activities can be extended by adequate financial support, a very big reduction in the number of accidents, both fatal and non-fatal, would result. We give in another part of this issue a report of the luncheon which was held to introduce the Safety Week, which we commend to every one of our readers. We are glad to note that many organisations, recognising the value of the work, have largely increased their subscription to the funds while new firms have added their names to the list of contributors.

Comment on Current Topics.

Hours of Industrial Employment.

We give in this issue some particulars of the Hours of Industrial Employment Bill, which has been introduced in the House of Commons by Miss Margaret Bondfield, the Minister of Labour. This Bill, which proposes to regulate the hours of work in industrial undertakings, is one in which transport employers are vitally interested as it proposes to make legal an eight hours day and a forty-eight hours week. We commend very seriously the memorandum, published in this issue, placed before the Minister of Labour by the National Road Transport Employers' Federation, and we have given this in full because of its great importance to all connected with road transport. It sets forth very ably the objections to including road transport in the Bill and if it becomes law the fresh obligations which will be placed upon road transport employers will be of such a nature as to render it practically impossible to carry on their business successfully. It is recognised that when once the driver of a vehicle leaves the yard or garage he is outside the control of the employer until he returns, and he cannot "down tools" on the stroke of the hour completing his legal period as can be done in a workshop or factory. His vehicle cannot be left by the roadside, nor can his journeys be fixed at a definite mileage. His duty is to take the goods which are in his charge to their destination, and nothing but chaos and loss can result from the proposed legislation. Elasticity is one of the essentials of road transport organisations and if a hard and fast line is drawn, beyond which no employer can go, the result will be to drive him off the road. It is to be hoped that the recommendations put before the Minister of Labour will result in keeping road transport outside the scope of the Bill, or if not of making modifications which will meet the serious objections put forward.

Proposed Unilateral System.

A proposal to introduce into London the unilateral system of dealing with waiting vehicles has been recommended by the London & Home Counties Traffic Advisory Committee and a number of streets has been scheduled for the experiment. Put briefly, it means that vehicles will only be able to unload or load on either side of these streets on certain days of the week. This proposal has been taken in the interests of through traffic and with the object of speeding up traffic and reducing congestion. A very strong opposition has been aroused, comprising a large number of important Associations and individual firms who would be adversely affected by the proposed scheme. Meetings were held at Transport House, under the Chairmanship of Mr. W. H. Gaunt, of J. Lyons & Co., Ltd., and with Mr. Archie Henderson, of the Transport & General Workers' Union, as Hon. Secretary. Negotiations took place with the Committee and the deputation were asked to put forward an alternative scheme for consideration. It is felt, and rightly so, that while the regulation would benefit fast moving traffic and omnibuses, which are not to be prevented from taking up and setting down passengers, it would very seriously affect distributors of goods, carriers, and transport firms wishing to deliver their goods to business houses situated in these streets. It is suggested that goods could be carried from one side of the street to the business house on the other side, but if this were permitted it would add to the congestion rather than diminish it. It is only proposed to try the scheme for six months as an experiment, but while it is easy to start it is very difficult to discontinue a new system when once it has been commenced. We do not think the benefits to be gained in increased speed and reduction of congestion will compensate for the hardships entailed on those delivering goods and those receiving them.

Charing Cross Bridge.

The rejection in committee of the Charing Cross Bridge Bill, while unexpected, is not a matter for unrestrained regret. While the London County Council who, together with the Southern Railway Co., were the promoters of the Bill, may have been quite right from their point of view in their decision not to offer any alternative to the site already chosen as the best for the purpose, yet still there has been a strong feeling that a better scheme can be produced, which would avoid the disadvantages inherent in the original proposals. Full sympathy must be given to the Southern Railway who have no wish to withdraw the present Charing Cross Station from its unique position and take up another one on the other side of the river. At the same time they had subordinated their interests, but naturally drove as hard a bargain as they could and insisted on the position fronting the south bank of the river, known as the Lion Brewery site. Many high authorities are of the opinion that the scheme was a bad one, and the suggestion is now made by an eminent architect that there is no need to remove the station at all and that the bridge, which is the really important part of the scheme, can be built to the east of the railway bridge and fulfil all the requirements at a greatly reduced cost and in much less time. This proposal seems a most sensible one, and unless there are objections of paramount importance, it should be practicable for an entirely new scheme to be put forward. It is a retrograde step to take away the facilities which travellers from the Continent and from the south coast have had for so many years in the present terminus of the South Eastern section of the Southern Railway, and there does not seem any real reason why the station should be demolished and transferred to the south side of the river with a great reduction in travelling facilities. We agree with the statement of Sir Henry Cautley, chairman of the select committee, that the Charing Cross Bridge would be an immense improvement to London and that such a bridge will be made. We believe, therefore, that in spite of the regrettable delay, good will come of the action of the committee and after further consideration a new scheme will be placed before Parliament, which will give all that is required, without disturbing the Southern Railway and leaving the south shore of the river to be developed on lines which will make it a worthy companion to the magnificent embankment on the north side of the river.

Loading of Cargo Ships.

The announcement of an International Conference to meet in London on May 20th next to consider the load lines of merchant ships takes one back in thought to the days when the Plimsoll line was introduced. The object of the forthcoming conference is to establish uniform loading limitations for the ships of all nations and to secure that such limitations shall be enforced uniformly in different parts of the world. At the time of going to press the list of countries to be represented was not complete but it includes :— Australia, Belgium, Canada, Chile, Cuba, Denmark, Finland, France, Germany, Great Britain, Hungary, India, Irish Free State, Yugoslavia, Latvia, Mexico, the Netherlands, New Zealand, Norway, Paraguay, Peru, Poland, Portugal, Spain, the Union of Socialist Soviet Republics, and the United States of America. There is already agreement between maritime nations to a considerable extent on the subject to be discussed, but the objects will be to revise the rules in force and to simplify them : to make special provision for timber ships and tankers; it is felt also that the loading limitations

Digitized by Google

to be allowed at different seasons and in different latitudes ought to be settled by agreement and that the entire system should be made universal, if possible.

Accidents by Night.

A letter from Mr. L. H. Pomeroy, M.I.M.E., M.I.A.E., Managing Director, The Daimler Co., Ltd., Coventry, appearing in this issue, is worthy of consideration. His suggestion is that the backs of all lorries and slow moving vehicles should be painted white so that they can easily be seen by faster traffic overtaking them at night. Any suggestion for reducing the number of accidents and for making road transport safer is to be welcomed, and we do not see any reason why Mr. Pomeroy's suggestion should not be carried out with benefit both to commercial motor transport and to the users of private cars.

Furniture Warehousemen and Removers.

The annual meeting of the Furniture Warehousemen and Removers' Association will be held on Wednesday, May 21st next at the Hotel Victoria, and we take this opportunity of drawing the attention of all members of the Association to the importance of this annual conference. After a full morning of meetings, at which Mr. A. E. Millard, the President, will occupy the chair, comprising the annual business meeting of the Association; the annual general meeting of the British Association of International Furniture Removers and the annual general meeting of the Benevolent Fund, the afternoon will be devoted to addresses by leading members of the Association on subjects of great interest to the members. This will be followed by the annual dinner, at which the newly appointed President will preside.

Tramways, Light Railways and Transport Association.

THE Annual Congress of the Tramways, Light Railways and Transport Association will be held at Hastings from June 11th to 13th inclusive. On the evening of June 11th the Chairman of the Council, Mr. E. H. Edwardes, will hold a reception at the Queen's Hotel and there will be a civic reception by the Mayor of Hastings in opening the Congress. Papers will be read by Mr. W. Vincent Edwards, the General Manager and Engineer to the Hastings Tramways Co., Ltd., on "Notes on Substituting a Trolley-Omnibus System for a Tramway," and by Mr. J. L. Burton, Road Transport Manager to the English Electric Co., Ltd., assisted by Mr. H. H. Andrews, the Sales Manager of the Traction Department, on "The Tramcar: Present and Future." Included in the events will be two luncheons, given by the Mayor and Corporation of Hastings and the Hastings Tramways Co., Ltd., respectively, motor coach outings on both afternoons and the Members' Annual Dinner, at the Queen's Hotel, on the evening of Friday, June 13th.

Personal Notes.

Institute of Transport. President-Elect.—The Hon. Sir Arthur Stanley, G.B.E., C.B., M.V.O., who, as announced in this issue, will take office on October 1st next as President of the Institute of Transport in succession to Sir Josiah C. Stamp, G.B.E., whose Presidential year then expires, is the third son of the sixteenth Earl of Derby and a younger brother of the present holder of the title. As a founder member, he took a prominent part in the inauguration of the Royal Automobile Club of which he is Chairman. Sir Arthur takes a keen interest in all forms of transport and is a strong supporter of the movement for better roads in this country. He is a Vice-President of the Roads Improvement Association.

THE HON. SIR ARTHUR STANLEY, G.B.E., C.B., M.V.O., PRESIDENT-ELECT, INSTITUTE OF TRANSPORT.

Appointment.—Mr. G. Cardwell, General Manager of the North-Western Road Car Co., Ltd., has received an appointment with Thomas Tilling, Ltd. His position with the North-Western Road Car Co., Ltd., is being taken over by his principal assistant, Mr. J. W. Woman.

Mr. A. W. Riley joins the Sunbeam Motor Car Co., Ltd.—Mr. A. W. Riley, who has been engaged in the commercial motor industry since leaving the Army at the end of the War, has joined the commercial vehicle department of the Sunbeam Motor Car Co., Ltd. He is concentrating chiefly on the municipal sales side.

Major J. A. Eckes.—Major J. A. Eckes, of Messrs. Langstaff, Erembert and Co., Ltd., shipping and forwarding agents, of Liverpool, has been mentioned as the probable successor of Lieut.-Colonel A. Buckley as chairman of the Liverpool Chamber of Commerce. Major Eckes is the son of the late Mr. and Mrs. J. B. Eckes, of Sefton Park, and is the brother of Mr. E. H. Eckes, who four or five years ago was chairman of the Liverpool Shipping and Forwarding Agents' Association. Major Eckes is keenly interested in the work of the Association.

MAJOR J. A. ECKES.

S.M.M. and T. New Secretary.—Mr. R. H. S. Spicer having resigned his office as Secretary of the Society of Motor Manufacturers and Traders, Ltd., the Management Committee has appointed Mr. D. C. McLagan, D.S.O., O.B.E., lately Secretary of the Accumulator Makers' Association, as Secretary in his stead. Mr. J. C. J. Phillips, the Society's Business Manager, will continue in general control and conduct of the affairs of the Society.

Morecambe's Transport Manager.—Mr. H. B. Sharp, Rolling Stock Superintendent of the Rotherham Corporation Tramways, has been appointed Transport Manager of the Morecambe and Heysham Tramways. Mr. Sharp was formerly associated with the engineering department of the Bradford Corporation Tramways.

Hours of Industrial Employment Bill.

The Hours of Industrial Employment Bill, to regulate the hours of work in industrial undertakings, has been introduced in the House of Commons by Miss Margaret Bondfield, the Minister of Labour, supported by Mr. William Graham, Mr. Attorney-General and Mr. Lawson, and awaits its second reading.

This Bill is based upon the Washington Hours Convention of 1919 and limits the ordinary working hours of workers in industrial undertakings to eight in any day and forty-eight in any week (the "statutory limits"). Extensions of the limits are allowed as follows:—

(a) Workers who are employed for less than eight hours on any day of the week may be employed up to nine hours on all or any of the other days subject to the weekly maximum of 48 hours.

(b) The hours of shift workers may be arranged so as to average not more than 48 hours over two or over three weeks.

(c) The employment of workers upon continuous processes may extend to 56 hours weekly upon an average over three weeks.

For the "statutory limits" of working hours the Minister may by regulations provide other limits on the agreed proposals of organisations of employers and of workers, subject to a weekly average of not more than 48 hours.

The working of 48 hours in a week of five days or less may be permitted by the Minister subject to the agreement of the workers' organisation.

Preparatory and complementary work and essentially intermittent work may be permitted outside the statutory limits.

Overtime may be worked in order to deal with pressure of work which cannot be dealt with during the ordinary working hours of the workers available. The payment for overtime must be at not less than time-and-a-quarter. Overtime must not exceed 32 hours in any period of 28 days; this maximum may be varied by regulation or order.

The restrictions upon working hours do not apply in case of accidents and other emergencies.

Employers are required to notify workers of their ordinary working hours and to keep records of hours worked.

Clauses 8 and 9 of the Bill deal with the enforcement of the provisions of the Bill, including the appointment of inspectors and the penalties for contravention.

Before making any order or any regulation relating to the arrangement of working hours, the Minister is required to consult organisations representing the employers and workers who will be affected. No such order or regulation affecting workers to whom Part IV of the Railways Act, 1921, applies may be made unless it is in accordance with a recommendation by the railway companies and the railway trade unions jointly or by the Central Wages Board or the National Wages Board. All regulations and orders are to be laid before both Houses of Parliament.

Power is taken to suspend the operation of the Bill in case of national emergency.

The Bill applies to work in mines (except underground in coal mines), in quarries, in factories and workshops of all kinds, upon building and works of construction, at docks and upon the warehousing of goods under contracts for such warehousing, and the transport of passengers or goods under contracts for such transport, by railway, motor vehicle, or horse-drawn vehicle.

Industrial branches or departments of non-industrial undertakings are included.

Non-industrial branches or departments of industrial undertakings are excluded, except that the Bill applies to the warehouse and transport branches of industrial undertakings notwithstanding that they may not be engaged upon warehouse and transport work under contract.

The Bill does not apply to undertakings confined to the employer's family, to persons engaged in supervisory, managerial or confidential capacities, to clerical workers, to home workers, to persons employed at sea, to persons employed underground in coal mines, or to persons employed in agriculture.

Workers in industrial undertakings under the Crown or under local authorities are included under the Bill.

It is provided that shorter hours or higher rates of wages secured by custom or agreement shall not be affected by the Bill.

An increased charge on the Exchequer is proposed under Clause 8 in respect of the salaries of inspectors and other officers appointed for the purpose of enforcing the provisions of the Bill. It is contemplated that Inspectors should be appointed under the Bill only to the extent to which the assistance available from the existing industrial inspectorate is insufficient. It is not expected that the additional cost arising under Clause 8 will exceed £50,000 annually.

Institute of Transport.

Election of Officers, 1930-31.

The Institute of Transport announces that the Council has elected the undernamed gentlemen to take office on October 1st next:—

President:

The Hon. Sir Arthur Stanley, G.B.E., C.B., M.V.O.

Past Presidents to serve on the Council:

Sir Henry P. Maybury, G.B.E., K.C.M.G., C.B., Colonel Sir Joseph Nall, D.S.O., T.D., Mr. R. H. Selbie, C.B.E., Mr. Roger T. Smith, Air Vice-Marshal Sir W. Sefton Brancker, K.C.B., A.F.C., Sir Josiah C. Stamp, G.B.E.

Vice-Presidents:

Mr. A. L. Barber, Mr. R. Bell, C.B.E., Mr. Sidney E. Garcke, Mr. R. J. Howley, C.B.E., Mr. J. H. Follows, C.B.E., M.V.O., Mr. D. J. Owen.

Honorary Treasurer:

Sir Henry P. Maybury, G.B.E, KC.M.G., C.B.

Long Distance Goods Haulage.

A National Committee Formed.

A number of the principal firms engaged in long-distance goods haulage has met together to consider the special problems of this section of road transport and to seek their solution. The following firms were represented at the conference:—McNamara & Co. (1921), Ltd., Geo. Monro, Ltd., Southern Roadways, Ltd., Dalgleish & Sons, Ltd., Northern Motor Utilities, Ltd., United Service Transport Co., Ltd., A. J. Gupwell, Ltd., Kneller and Chandler, Ltd., M.R.S., Ltd., Ryburn Garage & Transport Co., Ltd., Nottingham Chamber of Commerce, Transport Dept. A Committee was appointed by the Conference to inquire and report upon these matters, and the following gentlemen were elected to serve:—Sir Maxwell Hicks, C.B.E. (McNamara & Co. [1921], Ltd.); Mr. W. Donaldson Wright (Transport Department, Nottingham Chamber of Commerce); Mr. E. C. Marston (M.R.S., Ltd.); Mr. J. A. M. Bright (Southern Roadways, Ltd.); Mr. L. W. Gupwell (A. J. Gupwell, Ltd.), with Mr. E. B. Hutchinson as Hon. Secretary.

Messrs. Thomas Allen and Co., Ltd., Messrs. A. C. Marston & Co. (Liverpool), Ltd., and Messrs. Carey, Davis & Thomas have since joined the movement, and Mr. P. R. Turner, of Thomas Allen & Co., Ltd., has been added to the Committee.

It is the wish of the Committee to make the scope of its enquiry as wide as possible; to secure co-operation from the trade generally, and to enlist the sympathy of the Press, and it will be pleased to receive communications from firms engaged in the haulage industry. Such should be addressed to the Hon. Secretary, Long-Distance Road Haulage Committee of Enquiry, 12 Grosvenor Gardens, London, S.W.1.

National Road Transport Employers Federation.

Hours of Industrial Employment Bill.

Road Transport (Goods) Deputation to the Minister of Labour.

MECHANICAL TRANSPORT.

1. We expressed the intention, on the occasion of our deputation to you, of submitting for your consideration a statement in support of our representations as to the effect of the Hours of Industrial Employment Bill in relation to Road Transport.

2. It is necessary at the outset that we should clearly state that we are representing goods carriers only and we have no claim or authority to voice the views of the passenger-carrying interests.

3. This Federation is a national organisation embracing associations in London, the Home Counties and the more important towns in the provinces, and our members operate as haulage and cartage contractors by mechanical and horse vehicles.

4. We were encouraged in giving a frank exposition of the actual conditions prevailing in the road transport industry by your assurance to the main deputation on Tuesday, the 11th March, that you would consider these representations as an Industrialist rather than as a Politician.

5. The proposals contained in the confidential document submitted by you have given rise to the greatest misgivings in the minds of all those operating in the road motor industry. As representatives of this industry we feel obliged to say that many of the proposals are entirely impracticable if the industry is to retain a healthy and vigorous condition.

6. In no circumstances can we conceive of the possibility of working to a rigid day, and further, the greatest alarm is felt at the heavy costs the proposed Bill would impose. It should be borne in mind that the industry is already almost unbearably burdened by heavy taxation which has increased by 200 per cent. in less than the last four years.

7. We submit that road transport is work of an essentially intermittent nature and cannot be operated under the rigid limitation of time imposed by statute.

On account of its mobility it cannot be conducted in the same manner as a factory or workshop where the system of control is circumscribed within the four walls.

8. The unforeseeable character of the work undertaken makes it essential that the greatest elasticity possible with regard to working hours shall be maintained. This has always been recognised in the numerous negotiations which have taken place between members of this Federation and the Transport and General Workers' Union, and while the Agreements that have been entered into allow a very good standard of living to the employees no irksome restrictions have been placed on the hours of working.

9. It is indeed impossible to foretell approximately what time will be occupied in carrying out any particular job. It is quite impossible to foresee how long a vehicle will take to load, what time the actual journey will occupy on account of the varying conditions which may be experienced en route, or how long it will take to discharge the vehicle once it has arrived at its destination. This simple illustration should serve to show the utter impracticability of working within the confines of definite hours.

10. When vehicles leave the yard or garage the owner has no further contact until their return.

11. Vehicles attending at docks, wharves, warehouses, railway depots, factories or markets to collect their loads are subject to delays caused by congestion or unfavourable weather conditions interrupting the loading and unloading of vehicles, the non-arrival of ships through tides and other natural causes. It would be a normal condition in dock work for a driver to be on duty for a period of 12 hours during the day, out of which his actual working time would be only 7 or 8 hours.

12. Road transport is the handmaiden of other industries and the strict application of the limited day would create chaotic conditions with disastrous results to those industries dependent upon it.

They rely upon the prompt and early attendance of road transport to deliver their goods when the factory opens, and to be in a position to receive right up to the moment of closing. Those goods have then to be distributed or delivered to docks or railway sidings, and in the case of goods for shipment an inability to deliver may mean missing the ship.

13. The prosperity and well-being of industry generally depends in a very marked degree on an efficient and prompt road motor service. This is particularly so in the case of the textile trade, distributive trades, and meat, fruit and vegetable markets.

14. The difficulty of confining this industry to regulated hours was very efficiently discussed recently with the Minister of Transport and his representatives, the railway companies, the municipal transport undertakings, trade union representatives and this Federation. The discussion centred round what is now Clause 19 of the Road Traffic Bill, and it was found quite impossible to fix hard and fast limits to the daily work of the employees in this industry, and, in consequence, every effort was made to produce a clause of the utmost elasticity. When introducing the Bill in the House of Commons and referring to this particular clause, the Minister of Transport said: "There will be difficulties that we cannot foresee and difficulties which, if they are embedded in a Statute, will tie us up to some absurd position if we cannot get elasticity." We firmly endorse these words as being a bare statement of fact.

15. We would direct your serious consideration to the main factors of these negotiations:—

(a) The representations were made by representative organisations of Employers and Employees.

(b) The Minister admitted the difficulties of applying a rigid restriction of a 10-hour day (which he extended to 11) to drivers of motor vehicles.

(c) That even the limitation of 11 hours should be extended under certain conditions.

(d) That it would be necessary to exonerate from any liability those contravening the clause in the event of unavoidable delays and unforeseen circumstances.

16. There are other headings in the Memorandum which cause us the greatest concern.

While it is proposed to include the road transport industry in the scope of the Bill, it is intended at the same time to exclude certain branches of transport which are in direct competition with us.

We refer particularly to the exclusion of the owner-driver and any members of an employer's family, of coastal shipping seamen and inland waterway workers, of Post Office motor drivers and persons employed in agriculture.

With regard to the first class mentioned, viz., the owner-driver and members of an employer's family, this kind of operator has always occasioned the greatest damage to this industry on account of the uneconomical manner in which work is carried out, and with the great advantage of freedom accorded under this Bill, this damage will be accentuated and well organised firms employing trade union labour on agreed terms will undoubtedly suffer seriously.

Both the trade unions and employers' associations urged the Minister of Transport to include the "owner-driver" in Clause 19 of his Road Traffic Bill and he agreed. We would stress the necessity of his inclusion also in the Hours of Employment Bill if that Bill is to be made applicable to road transport.

With regard to the second class—the freedom accorded to coastal shipping seamen and inland waterway workers will enable them to compete with us on very favourable terms.

The exclusion of the Post Office motor drivers is also very grave as it must be borne in mind that many of our members contract with the Post Office for large numbers of motor vehicles, and under the Bill these men will be subjected to a restricted day.

In the case of agricultural workers we desire to point out that, at the present time, large numbers of these workers drive motor vehicles to various markets on several occasions during a week. We presume that as they must be rated as primarily workers in agriculture, they will be excluded from the Bill.

Digitized by Google

17. The proposal to impose payment at the rate of time and a quarter for all overtime is also extremely onerous. It has always been recognised by the trade union that on account of the nature of the work, some latitude should be given, and the Agreements entered into in every case provided for at least 6 hours a week overtime at a flat rate.

The further proposal to limit the normal working week of 48 hours to six days, and to treat any hours worked on Sundays as "overtime" to be deducted from the proposed maximum of 32 hours overtime in any four weeks, is a further restriction which if applied to road transport will entail the most serious consequences. It is contrary to all accepted conditions hitherto prevailing.

If these clauses are imposed on this industry it will certainly mean the termination of the present wages agreements, as in the circumstances it would be quite impossible to pay the present scale of wages. This would undoubtedly lead to considerable industrial trouble in an industry which has hitherto conducted its affairs in a very peaceable manner, and we cannot accentuate the fact too strongly that it will lead to an enormous casualisation of labour.

18. In the distributive trades in London to-day a driver of a motor vehicle would cover an area of six or seven miles say from Charing Cross. Normally the driver would arrive at the garage at 8 a.m. leaving with his vehicle at 8.30 a.m. He would complete his round and return at approximately 2.30, having at a period convenient to himself taken his meal time. His working time will have occupied 5½ hours. In present circumstances the driver would undertake a second journey, but under the restrictive conditions of the Bill this will be impossible and the man must, therefore, stand aside and the vehicle driven by another man for the second journey. The result being that one man on six days will have performed 33 hours duty and the second man on five days 27½ hours, as Saturday being a short day only one journey will be done.

19. The industry could not possibly continue to maintain these men as weekly servants under such circumstances without enormously increasing the cost of the service. At such times as the summer holiday season, Christmas and other rush periods there are exceptional demands made upon these services which under any shift system or change over of drivers would be completely disorganised. Further, these services furnish perquisites to the drivers, the loss of which would be greatly resented.

From our experience of the drivers we have no hesitation in saying that there is no desire on their part to lessen their duties, and from our knowledge of the long periods of service which many of them have put in with their respective employers they are content in their employment.

The fact that the London Road Transport Agreement between the employers and the union in London was signed in September, 1924, and has continued unaltered to the present date without any approach from either side for any change in its conditions and without disturbance in the industry of any kind whatsoever in the whole of that period is very significant. This may also be said to apply in the other organised areas.

20. Vehicles are let out on contract to traders, and the requirements of the traders may be that both the driver and the vehicles shall be at his disposal for an 8-hour day to meet the ordinary needs of his factory or warehouse. As the vehicles are used on distribution no employer could give a guarantee that the service would not exceed 8 hours, and consideration must also be given to the additional time occupied in travelling to and from the garage.

21. Having regard to the general state of trade the wages and working conditions of road transport workers are highly favourable when compared with other classes of skilled or unskilled labour.

In the more highly organised areas such as ports, the wages paid are:—

Drivers of motor vehicles up to 2 tons	...	66/- per week
„ „ „ „ over 2 tons	...	72/- „ „
„ „ six-wheeled vehicles	... ...	76/- „ „

The men are weekly servants. They are paid for all Statutory holidays and in most cases receive a week's holiday with pay.

They work to a 48-hour week, and any hours worked in excess thereof are paid at flat time rate for the first six hours and time and a quarter thereafter.

Our agreement with the Transport & General Workers' Union provide that a man shall have a rest period between the finishing of one period of work and the commencing of another.

22. We have already urged as strongly as possible before you the necessity for this industry being excluded from the Bill and we must take this opportunity of reiterating with all the force at our disposal, the absolute necessity of this course.

23. In conclusion, we desire to point out that the work undertaken by the employees in this industry is of a far less arduous nature than almost any factory work, that the health of the men in the industry is very good, and that we know of no demand either in the trade or amongst its employees for legislation of the nature foreshadowed.

HORSE TRANSPORT.

1. In considering the application to horse-drawn transport of any legislation in the matter of working hours, such as is contemplated in the proposed Bill it should be borne in mind that all connected with the industry have the full realisation that it is impossible to mechanise this form of employment.

2. It is an industry which is closely akin to agriculture in that it is subject to influence beyond the control of those actually engaged in it and, furthermore, by virtue of the fact that the care and attention of draught animals must be one of the foremost considerations of both employers and employees.

3. The desirability has always been recognised of having the same carter working the same horse or, in the case of teams, the same horses day by day. By doing so there is created that feeling of harmony between the two units which ensures smooth working as horses are temperamental and frequently resent change of control.

In addition there is the satisfaction arising from the knowledge that the carter will see that his animals are properly cleaned, fed and watered. These facts have constituted a serious objection to the introduction of anything in the nature of a shift system in cartage establishments.

4. The closest analogy in this respect in the transport world is to be found in the case of the inland waterways where the same set of men operate the same barge week in and week out, and this is probably one of the factors which have led to the exclusion of this class of transport from the provisions of the Bill.

5. Whilst on this point it is as well to point out that in some centres, e.g., Liverpool, cartage contractors working by means of horse-drawn units are in competition with inland waterways, and it is considered an unfair imposition that the one form of transport should be subject to restriction in the matter of working hours whilst leaving the other to be a free agent.

6. The attention of the Minister of Labour is respectfully called to the fact that her distinguished colleague, the Minister of Transport, during the recent debates in Parliament on the Road Traffic Bill, successfully resisted an amendment having for its object the inclusion of horse-drawn transport within the scope of that Bill; and from this it is natural to infer that Mr. Morrison recognises the peculiarities attaching to this form of transport.

7. Horse transport is essentially local in character and the hours of operation are dictated, not so much from the point of view of agreement between employers and employees, but solely by the demands of trade. In ports particularly there are violent fluctuations in the demand for horse transport, the coming and going of ships being irregular in practice, coupled with the seasonal outbursts of particular commodities. Whether the demand for transport is good or bad there is much time spent by each unit in each day which is wholly unproductive. This time cannot be gauged with any degree of accuracy and fluctuates according to the circumstances under which such units are working.

8. Road transport has been rightly described as the most sensitive link in the whole transport service as it must hold itself ready to meet the requirements of ships, manufacturers, warehouses and other centres where goods for conveyance arise, and any limitation of hours placed upon it will disorganise all industry, preventing the free flow of the raw materials, semi—and manufactured goods, and will interfere disastrously with the free passage of goods over the quays.

9. The difficulties which to-day exist in a port like Liverpool may be gauged from the fact that out of the 48-hour week there are only about 30 hours which, to take the French view, would be classified as "effective hours." Of the remaining 18 hours the local agreement between the employers and the trade union provides for 9 hours to be spent by the carter on tending his horse(s) in the stable, and the balance (9 hours) is spent in getting to the point of loading at the beginning of the day and leaving the point of discharge at the end of the day. Of the 30 hours referred to a certain indefinite and indeterminable proportion is spent in waiting for the opportunity to load or unload, and it is this exceptional feature in the

Digitized by Google

conduct of road transport operations that has influenced the trade unions concerned to concede the principle of certain overtime hours being paid at ordinary rates, the number varying in different centres.

10. The exigencies of business in the ports have always necessitated long hours being worked by road transport. To take Liverpool as an example:—A 65-hour week, with extensive overtime, was formerly found to be essential to meet demands, and although the recognised working week has now been for many years on a 48-hour basis, there has been practically no reduction in the total number of hours demanded per transport unit in the week beyond the slight curtailment of one hour consequent upon the later starting time in industry generally. As a consequence carters with 20 hours overtime in the week are not exceptional.

11. As previously pointed out, this overtime is not worked at the desire of the owner of the transport, but is necessitated by circumstances beyond his control and by outside influences quite distinct from those which affect conditions of working in factories and the like.

12. Compliance with the terms of the Bill would tend to casualisation. It will not be denied that the most valued feature of a man's employment turns upon its permanency and, apart from reasons already given, it is most undesirable that any legislation should be imposed upon road transport which would bring in its train those undesirable characteristics of dockside employment, viz., casual employment, involving daily and twice-daily attendance at stands, with all its demoralising effects.

13. It is not going too far to assert that carters would take the greatest exception to any proposals which would interfere with their earning capacity, leading to constant pressure from their organisations for an enhanced scale of wages to compensate them for their lost overtime earnings, and such could only be conceded by increasing charges.

14. The proposal to exclude from the provisions of the Bill owner-drivers of horse-drawn transport, and members of their family working with them, has no justification when regard is given to the unfair competition with employing-owners which it originates, and the possibilities it affords to the unscrupulous of gathering around him a number of owner-drivers and their driving relatives who, in the aggregate, would constitute a grave menace to the better class employers whose establishments have to conform to the law.

15. The Minister of Transport has recognised the case against preferential treatment being accorded to this class of trader by including owner-drivers of motor transport within the terms of the clause in the Road Traffic Bill limiting the hours of continuous employment of motor men (Clause 19), a course he took after consultation with organised employers and the trade unions jointly.

16. Experience has shown that the enforcement of agreed working conditions upon small establishments is a more difficult proposition than in the case of concerns employing a considerable number of carters.

17. The drastic proposals of the new Bill would aggravate this problem, leading to collusion in the case of small concerns between the employer and his small number of employees to contravene the requirements of the law.

18. In view of the fact that the hours a man will be required to work is not known from day to day, neither his starting nor finishing time, it will be appreciated that "notification" as it is intended to provide in the Bill, could not be conformed to.

19. Taking a broad and general view of the terms of the proposed Bill in relation to horse-drawn transport, it is the considered opinion of those interested that, it being work of an essentially intermittent nature it cannot be operated under rigid limitation of time by statute.

20. The present precarious position of the horse-drawn transport industry has been brought about by the continued depression in trade, as it will be appreciated that all forms of transport are very sensitive to the conditions of industry.

21. It is, therefore, highly undesirable to throw upon this vital link in the chain of commerce any burden which would bring in its train increased charges and/or inadequate and inefficient services.

22. In conclusion, on account of the peculiarities of the horse-drawn transport industry—peculiarities quite distinct from any other activity except agriculture—the Minister is respectfully asked to exclude this form of transport from the provisions of her Bill.

In Parliament.

Street Accidents. Mr. Dukes asked the Home Secretary the number of accidents resulting in death or personal injury which were caused by vehicles and horses in the streets and public places of Great Britain during the year 1929, together with the number of persons killed or injured in these accidents? The reply of the **Home Secretary,** circulated in the Official Report, was as follows:—In 1929 there were in Great Britain 151,801 such accidents, 6,505 of which were fatal and 145,296 non-fatal; 6,696 persons were killed and 170,889 persons were injured. Of the total number of accidents, 5,830 fatal and 116,933 non-fatal accidents were attributable to mechanically propelled vehicles (including 108 fatal and 5,797 non-fatal accidents attributable to electric tramcars and trolley omnibuses), 177 fatal and 4,307 non-fatal accidents to horse-drawn vehicles and horses, and 498 fatal and 24,326 non-fatal accidents to pedal cycles.

Covent Garden Traffic. Rear-Admiral Beamish asked the Minister of Transport whether any new arrangements were being considered for the introduction of the one-way working traffic system in the immediate district surrounding Covent Garden, with a view to relieving the congestion of traffic in the neighbourhood of Covent Garden market? **The Minister of Transport** said that no new arrangements were under consideration for the introduction of one-way working in the immediate district surrounding Covent Garden, as under existing conditions it would not appear practicable to effect any improvement thereby.

Proposed One-Way Traffic in London Squares. Asked whether he would be prepared to consider issuing Regulations for compulsory roundabout traffic in all London squares, in view of the dangers to pedestrians and motorists of the present disorganisation? **The Minister of Transport** (Mr. Herbert Morrison) said that the suggestion had already received most careful consideration, and he was advised that a general Regulation making compulsory roundabout traffic in all London squares, irrespective of circumstances, would not be desirable from the point of view of either traffic convenience or public safety. Extensions of the one-way traffic system were constantly under consideration and being sanctioned. The Ministry of Transport never separated the question of traffic control from considerations of public safety.

Civil Aviation. Commander Bellairs asked the Prime Minister whether the Government had considered the desirability of making civil aviation entirely independent of military control, and whether he could state the future policy of the Government on this matter? **The Prime Minister** (Mr. Ramsay MacDonald), replying, said that civil aviation in this country was not under military control, the Air Ministry being a Department which had a number of civil, in addition to its military, functions. His Majesty's Government did not contemplate any alteration in the existing system. **Commander Bellairs:** In view of the fact that no confidential details are involved, will the Government consider the advisability of holding a public inquiry into the whole matter of placing civil aviation on the same footing as the mercantile marine, and independent of the Air Ministry? **The Prime Minister:** That is a totally different question, but, if the hon. and gallant Member will put his question on the Paper, I will give him a reply.

Metropolitan Police and Traffic Control. Asked what was the total number of men employed in the Metropolitan Police Force in 1913, and how many of them were engaged on traffic control work, and if he would give the corresponding figures for the year 1929? The **Home Secretary** (Mr. Clynes) said that the strength of the Metropolitan Police Force on 31st December, 1913, was 18,916, and of these approximately 440 were engaged on traffic control. The corresponding figures for 31st December, 1929, were 19,512 and 1,400.

B.A.I.F.R. New Members.—The following firms have been elected to membership of the British Association of International Furniture Removers:—Messrs. Martini and Cie, S/A, 17 Avenue Thiers, Nice, and Julius Schumacher, Billstrasse, 155, Hamburg 27.

Schrader Tyre Gauge.—Messrs. A. Schrader's Son, Inc., of 26/29 New Street, Westminster, London, S.W.1, have issued an attractive poster dealing with the new Schrader Service Tyre Gauge. Copies will be forwarded to any trader who will make application to the Company.

Road Traffic Bill.

Progress in Committee.

Standing Committee C of the House of Commons are continuing consideration of the Road Traffic Bill. At the time of writing Part IV of the Bill, which sets out regulations governing the use of Public Service Vehicles, is being dealt with.

Inquiries Into Accidents.

Clause 23 enables the Minister of Transport to direct an inquiry to be made into the cause of an accident arising out of the presence of a motor vehicle on a road.

Mr. Ernest Brown sought to restrict the scope of such an inquiry to matters of a technical character.

The Minister of Transport said that in the main such inquiries would have a technical objective in view, but the nature of the inquiries and the degree of formality would vary very considerably. There was the type of inquiry which would be public and formal in character, where people could appear on both sides and which clearly would require that public notice should be given. There might, however, be other inquiries of a quite informal character consisting even of merely visiting a garage and examining a motor car which had met with an accident to see whether anything was to be learned which would be of value. He should be sorry if such inquiries were restricted to matters of pure technique, although that would be the main purpose and they would not get very far from technical matters.

Mr. E. Brown moved at the end of Clause 23 to add the following new Sub-section:—(4) Any Report made by or to the Minister as the result of an inquiry under this section shall not be used in evidence by or on behalf of any person by or against whom any legal proceedings are instituted in consequence of the accident to which the inquiry relates.

This amendment was agreed to.

The clause as amended ordered to stand part of the Bill.

Permits for Greater Weights.

Clause 24, which gives power to highway authorities to authorise on specified highways carriage of greater weight than permitted by regulations, was agreed to after the Minister of Transport had pointed out that it was obvious that when a local authority was considering an application for a permit, before it granted the permit it could negotiate and impose conditions.

Colonel Howard-Bury moved to amend the clause to provide that the owner of the trailer should, prior to the receipt of the permit, pay to the highway authority an agreed sum in respect of the damage that would be caused. He said that on various occasions they had enormous and increasingly large tractors coming on the road carrying very large weights.

Mr. Herbert Morrison said that the local authority could say that certain classes of traffic could not use certain roads. Further, there were certain general provisions as to the weights of laden or unladen vehicles upon the roads, and all that the clause did was to provide for exceptional cases. In the course of the negotiations the local authority could impose all sorts of conditions, including financial conditions, but how could it say in advance what the damage was going to be. It might turn out to be considerable, or it might work out that in fact there was no damage whatever. In the Bill the owner was liable for the damage he did, and there was a common law liability in any case.

Lord Erskine asked whether in the case of traffic coming within the clause a local authority would have power to prevent a particular article from travelling on the road. Mr. Herbert Morrison said that was so because a permit could be refused.

Mr. Freeman asked whether there was an obligation on the owner of the trailer to ask for a permit before taking his vehicle on the road, and the Minister of Transport said there was; a person committed an offence under the Act if he did not get a permit.

Major Glyn asked whether the Bill proposed to give any advantages to road hauliers who took the trouble to spread the weight properly over their vehicles.

The Minister of Transport said it was a point which was, in effect, met by regulations. There could be a greater weight carried if the weight was properly distributed. The articulated vehicle was an instance of that, where, in effect, one could get permission to carry a heavier weight by proper distribution of the load.

Power to Prohibit the Use of Bridges by Motor Vehicles.

Clause 25 empowers a bridge authority to specify the maximum weight and speed of motor vehicles using a bridge, provided that the weight specified shall not be less than five tons.

The Minister of Transport, in the course of his remarks on this clause, said that the word "weight" meant ladened weight. The limitation of five tons represented roughly the maximum laden weight of a horse-drawn vehicle. If a bridge was insufficiently strong to carry a weight of five tons, there was nothing to prevent the bridge authority from putting up a notice specifying a lower weight for their own protection at common law, but the infringement of such a notice would not be a summary offence under clause 25.

Sir Gervais Rentoul moved to make the minimum weight eight tons instead of five. He said the amendment was put forward as the considered view of a very influential body of commercial road users. The suggestion was that five tons was too low, and that the weight should be increased to eight tons, because otherwise bridge owners, by putting up a notice, would be able seriously to interfere with proper and reasonable traffic. If a bridge was not sufficient to carry eight tons he would submit that there was an obligation on the owner of it so to reconstruct and strengthen it that it was fit to carry that weight.

The Minister of Transport said no one was more anxious than he was that bridges should be brought up to date, but it was no good compelling an authority to put the limit up to eight tons when they knew that the bridge would not carry eight tons. Sub-section (5) of the clause provided that any person or body of persons who were aggrieved by a notice on a bridge might appeal to the Minister, who could then decide the point.

Major Hills moved an amendment to the effect that nothing in the section should preclude the highway authority from granting permission in respect of any bridge for the use of a locomotive or motor vehicle on a particular occasion subject to the observance of such conditions as the highway authority might think necessary to impose under the circumstances.

Mr. Herbert Morrison pointed out that it was clearly implied in Clause 25, Sub-section (2), as amended, that, if the bridge authority did give consent, the person could drive over the bridge. In the definition Clause 104, "road" included "bridge," so that a permit could be given by the local authority.

Weighing of Motor Vehicles.

Clause 27 deals with the weighing of motor vehicles, etc. It shall be lawful for any person authorised by a highway authority, or for any police constable authorised on behalf of a highway authority, etc., to require the person in charge of any motor vehicle to allow the motor vehicle or any trailer drawn thereby to be weighed either laden or unladen and for that purpose to proceed to a weighbridge or other machine for weighing vehicles. It shall not be lawful to require the person in charge of the vehicle to unload for the purpose of being weighed unladen.

An amendment moved by the Minister of Transport to the effect that if at the time when the requirement was made to weigh a vehicle, the vehicle was more than one mile from the weighing machine, and the weight was found to be within the legal limits, the highway authority on whose behalf the requirement was made should pay in respect of loss occasioned, such amount as in default of agreement might be determined by a single arbitrator agreed upon by the parties, or in default of agreement appointed by the Minister.

This amendment was agreed to.

Third Party Risks.

A general discussion took place on Part II of the Bill, which contains provisions against third-party risks arising out of the use of motor vehicles.

The Minister of Transport summarised the general provisions of this part of the Bill. He said he would like to make it clear that it dealt with the provisions to be

Digitized by Google

made on the part of owners or drivers of motor vehicles to secure that in the event of any person being killed or injured as the result of their negligence, compensation should not fail to be paid owing to lack of means on their part. That was the sole purpose of that part of the Bill. It was not an attempt to secure that in every case where a person was injured as the result of a motor accident compensation should automatically be payable. It would not, in fact, be equitable that where a person was injured as the result of his own negligence he should be entitled to compensation from any other person. Clause 35 provided for heavy penalties in the case of a vehicle being driven without proper cover against third party risks. This cover might be provided either by means of a policy of insurance or by taking out a security bond which would render the giver of the security liable to satisfy any liability dealt with in this part of the Bill which was not made by the person who took out the security. It was proposed to exempt anyone who had made a deposit with the Accountant-General of the Supreme Court of a sum of £15,000. Clause 36 defined the extent of the risks which an insurance policy would have to cover in order to comply with the requirements of the Bill. The clause also contained a provision requiring payments to be made to hospitals in certain cases in respect of the cost of treatment of persons injured in motor accidents. Clause 37 dealt with the requirements in respect of security bonds. These would have to cover the same class of claims as insurance policies and would have to be valid for an amount of not less than £25,000 in the case of an operation of public service vehicles and not less than £5,000 in other cases. The clause made provision for the adequate financial standing of persons or companies who issued a security. Clause 39 provided that the Minister might make regulations requiring the production of evidence that proper cover against third party risks had been attained by any person applying for an excise licence in respect of a motor vehicle.

In the course of the discussion the Solicitor-General pointed out that as the Bill was drawn it did not afford protection to a passenger in a motor vehicle when he was not being carried for reward.

The Minister of Transport mentioned that a person who deposited £15,000 with the Accountant-General of the Supreme Court would get the interest on that sum, and it could, of course, be put into properly recognised securities.

Clause 35, as amended, was ordered to stand part of the Bill.

In the course of the discussion on Clause 36 the question of injury caused to cattle and horses on the roads by motor vehicles was raised. The Minister of Transport said that it had been very carefully considered when framing Part II of the Bill, whether to extend it to property, or to animals, and it had been decided that the really pressing and practical case was damage to human life and injury to human beings.

The Solicitor-General said that in connection with the death or injury of animals on the roads there was nothing in the Bill that would derogate from the common law right of liability and the Bill would in no way affect the liability of the motorist. He was liable to damages if by his negligent driving he caused death or injury to an animal being driven along the road, and the wise and prudent motorist would continue to insure himself against that liability. Clause 40 provides that any person driving a motor vehicle on a road shall, if required by a police constable, produce his certificate of insurance or certificate of security. If the driver within five days after the date on which the production of his certificate was so required, produces the certificate in person at such police station as may have been specified by him at the time its production was required, he shall not be convicted of the offence of failing to produce his certificate.

The Minister of Transport mentioned that the certificate of insurance which a driver would have to carry would be quite small—a small slip. A certificate of insurance as distinct from the policy of insurance would be prescribed. The certificate would be issued, he understood, by the company with the policy of insurance. An owner could take out a comprehensive licence to cover all his vehicles, whoever drove them. The central point was that the vehicle itself must be covered. The question of who was entitled to drive a particular vehicle under a policy must be determined by the terms of the policy itself. Within limits, that was a matter for voluntary arrangements between the insurance company and the person taking out the policy.

Clause 49 was ordered to stand part of the Bill. This clause enacts that any person who for any purpose places or causes to be placed any rope, wire or other apparatus across a highway or any part thereof in such a manner as to be likely to cause danger to persons using the highway, shall, unless he proves that he had taken all necessary means to give adequate warning of the danger, be guilty of an offence.

EXTRAORDINARY TRAFFIC.

There was considerable discussion on Clause 52, containing provisions as to extraordinary traffic.

Mr. Remer said that the compaint of the English timber trade in the past was that six or nine months after a highway authority had done work alleged to be caused by extraordinary traffic a letter would be received from the surveyor of a council saying that the timber merchant had caused damage to the roads, and making a claim upon him. The point that always arose in these matters was as to the state of the road when the timber merchant started the operation. He moved that a highway authority should only be able to recover after the person alleged to have caused the damage had been given due notice and a full opportunity for examination of the complaint by an independent surveyor.

The Minister of Transport pointed out that if any proceedings were going to be taken against a person due notice would have to be given to him, and if the notice was not given until a long time after the alleged offence, that would be part of the defence in Court, and would be valid accordingly. As to the independent surveyor, it would be perfectly competent for a person, who was alleged to have caused damage by extraordinary traffic, to employ an independent surveyor whether or not the Act would entitle him to do so. There was a provision in the proviso to Sub-section (2) that proceedings must commence within 12 months and that was the provision in the Statute which had been working since 1898. If the commencement of proceedings was unduly long after the damage, that was a relevant consideration which the Court would take into account. What would normally happen was that the local authority would negotiate with the person who was alleged to have done the damage, and in three out of five cases perhaps the parties would come to an amicable agreement as to the extent of the damage. If they failed to agree action would lie in the Court. If they put in a period during which the proceedings must begin, then to that extent they ruled out those friendly negotiations.

Captain Sir William Brass moved that traffic necessitated by the normal industries of the district should not be considered as extraordinary traffic or excessive in weight under the section. He did not desire heavy things to be carried about on the ordinary roads. It was the normal traffic in particular areas he was trying to look after.

The Under-Secretary of State for the Home Department (Mr. Short) said there had been frequent decisions upon the definition of "extraordinary traffic" and he understood that, in all the cases, the considerations of the normal industries of the district, and the effect of the carrying of goods over the roads in relation to those industries, had been taken fully into account.

The clause was ordered to stand part of the Bill after an amendment giving the County Courts jurisdiction to hear and determine claims up to £500 instead of £250 had been agreed to.

REGULATION OF PUBLIC SERVICE VEHICLES.

Part IV of the Bill applies to public service vehicles and Clause 58 sets out the classification.

In the course of discussion on the classification, the Minister of Transport said they did not wish the express carriage to be used in improper competition with the stage carriage, which provided a general omnibus service for the general public. Sub-section (4) of Clause 58 was to make it clear that if a person used, or allowed to be used, a vehicle for carrying passengers, the vehicle must comply with the provisions of the Bill as to its fitness for carrying passengers. The only exception was where the vehicle was used for carrying passengers without reward who were the workpeople of the owner of the vehicle. The whole object of the Sub-section was to prevent the use of lorries and similar vehicles for carrying people to football matches, beanfeasts, etc., to the danger of themselves and of other users of the road.

An Amendment made now lays it down that stage carriages are motor vehicles carrying passengers at separate fares, any or all of which are less than one shilling *for a single journey*, etc.

A further amendment made provides that a motor vehicle adapted to carry less than *eight* (originally the number was six) passengers shall not be deemed to be a stage carriage or an express carriage by reason only that on occasions of race meetings, public gatherings and other like special occasions it is used to carry passengers at separate fares.

London Van Horse Parade.

THE London Van Horse Easter Monday Parade is always a popular event with the general public. This year in spite of the dullness of the weather many thousands of interested spectators gathered in and around the Inner Circle, Regent's Park, to witness the judging and subsequent parade of prize winners.

The parade was the second biggest since the war and the third biggest since their inception some 26 years ago. The total number of horses paraded was 747, consisting of 651 entries, viz., 546 single horsed vans, 96 pair horsed vans and 9 barge horses. The quality of the exhibits, too,

THE LORD MAYOR OF LONDON AND THE LADY MAYORESS TOGETHER WITH THE SHERIFFS.
LORD DARESBURY, CHAIRMAN OF THE SOCIETY, IN FOREGROUND.

reached a much higher standard than ever before, no less than 593 first, 45 second and 3 third prizes were awarded. It is interesting to note that not a single entry failed to pass the veterinary examination, a fine tribute to the excellent work of the Society. Lord Daresbury, the Chairman of the London Van Horse Parade Society, said that the condition of the horses was better than he had ever seen it before.

The Society make a special feature of encouraging the small owner-driver, and its success in this direction may be gathered from the fact that this year no less than 62 turnouts were entered for competition, all of which secured first prizes. A notable competitor in this section is Mr. Arthur Green (Carrier), of 29, Felsham Road, Putney, S.W., who with his two horses "Tommy" and "Bessie" has in the course of six years won a Championship, four cups, 37 first prizes, 5 seconds, 5 highly commended and 26 merit badges presented by the R.S.P.C.A. 15 of these have been gained at the Society's Easter Monday Parades. "Tommy" is an ex-Army horse purchased 12 years ago and is 24 years old. As usual the Carrying Trades were well represented. Thos. Tilling, Ltd., having 33 exhibits; Carter, Paterson & Co., Ltd., 27; the railways L.M.S., L.N.E.R. and Metropolitan having 43 entries between them. Other notable carriers with entries were C. A. Wells & Sons, E. Wells & Sons, Chas. Webster, Ltd., Herd & Gerner, John Finch, Hay's Wharf Cartage, Ltd., A. E. Gains & Sons, and T. Fairclough & Sons. Our illustrations show some of these exhibits, all of which secured first prize awards. Each horse exhibited must be passed by the veterinary inspector before being judged.

The following gentlemen officiated in this capacity:—Messrs. F. W. Chamberlain, M.R.C.V.S.; C. Cunningham, M.R.C.V.S.; W. J. Hatton, M.R.C.V.S.; R. C. Irving, F.R.C.V.S.; Major-Gen. Sir John Moore, F.R.C.V.S., and Mr. W. H. Anderson, M.R.C.V.S.

The work of judging was carried out by Sir William Acland, Bart.; Lord Daresbury, C.V.O.; Mr. James Ellis, Mr. Claud F. Goddard; Sir George Hastings; Mr. Percy Hamilton Hughes, J.P.; Major W. Gore Lambarde; Lieut.-Col. Percy Laurie, C.M.G., D.S.O. (Commissioner of Metropolitan Mounted Police); Mr. Henry Tilling, and Lieut.-Col. Sir Hugh Turnbull, K.B.E. (Commissioner of City Police).

Immediately after the judging the Society's awards and the N.S.P.C.A. merit badges were presented to the successful drivers by the Lord Mayor of London and the Lady Mayoress.

The Society's primary objects are the improvement of the general condition and treatment of van and light draught horses, and to encourage those in charge of the horses to take a humane and intelligent interest in their well being, and to encourage a spirit of kindliness towards their animals. Since its inauguration in 1904 the Society has awarded over £7,500 in prize money. This year no less than £650 was awarded. The ever increasing number of entries each year is a severe drain upon its resources. The Society is maintained by voluntary subscriptions and donations. We commend the work of the Society to our readers.

Donations, however small, will be gratefully acknowledged by the secretary, Mr. R. A. Brown. The offices of the Society are at 12, Hanover Square, London, W.1.

Round the Lancashire Associations.

Manchester Committee of Road Users. — The Manchester Committee of Road Users, of which Mr. H. Howard Robinson, A.M.Inst.T., is Secretary, has been in negotiation with the Manchester Corporation on matters arising from the Manchester Corporation (General Powers) Bill (1930), which is being promoted by the City Council. The clauses to which objection was taken by the Committee were:—Clause 36—To run omnibuses beyond the City and to carry passengers, luggage, goods and parcels; Clause 48—To prohibit any person to sell or offer for sale any article or thing from any vehicles in the street without a permit from the Corporation; Clause 70—To stop all traffic at every tramway stopping place when a tramcar is standing; Clause 71—To compel insurance for all Hackney Carriage Proprietors; Clause 72—To appoint stations and places for the starting of omnibuses and also points for setting down passengers; Clause 73—To apply the provisions relating to steam locomotives as to consuming their own smoke to any heavy motor car.

As the result of the negotiations Clauses 48 and 70 have been withdrawn. As Clauses 36, 71, 72 and 73 are covered by the provisions of the Road Traffic Bill, it is thought by the Committee that there is no necessity for the Manchester Corporation to seek powers which will be at variance with general legislation now under consideration in Parliament. The Transport Committee of the Manchester Chamber of Commerce has considered the position and passed the following resolution:—"That the Transport Committee recommends the Board of Directors to put on record its objections in principle to Parliamentary Powers being granted to individual local authorities which should be and are in process of being regulated for the country as a whole by National legislation such as the Road Traffic Bill. To this extent the relevant clauses of the pending Manchester Corporation (General Powers) Bill are open to legitimate objection by traders and ratepayers and should not be proceeded with." At the moment the Corporation has not agreed to withdraw Clause 73, and in the event of this being proceeded with before the Parliamentary Committee, opposition will be offered.

Institute of Transport.—Mr. Harold Moore, M.Sc., read a paper on "Fuel Oils" to members of the Institute of Transport (Manchester—Liverpool and District Section) at Manchester, on 25th April. Mr. Moore said that it was his experience that the majority of mechanical breakdowns were not due to lubrication. The oxidisation test which was used by the Air Board for testing aircraft engine oils consisted of artificially oxidising the oil by blowing air through it while the oil was at a high temperature, and measurng the increase in the coke value and the increase in the viscosity of the oil brought about by this oxidisation. Oils of low specific gravity generally oxidise less than those of high specific gravity.

Manchester Transport (Owners') Association.—Membership of the motor coach section of the C.M.U.A. and Manchester Transport (Owners') Association, joint organisation, has been considerably strengthened in recent weeks. Ninety Manchester firms with over 200 coaches are members. In Salford there are twenty firms with fifty coaches in the coach section of the joint organisation.

National Safety Week.

May 19th to 24th.

The first National Safety Week ever held in this country opens on May 19th next, the idea originating with the National "Safety First" Association, which for the last five years has been waging a continuous educative campaign against all forms of accidents.

At a luncheon given by the National Safety Week Council at the Hotel Victoria, London, on April 14th, Lord Brentford, President of the National "Safety First" Association and Chairman of the National Safety Week Council, who presided, and Mr. Herbert Morrison, M.P., the Minister of Transport, emphasised the importance of the National Safety Week in the campaign for reducing accidents.

Lord Brentford referred to the support being accorded by motoring and road transport organisations to the movement to get people to realise that most accidents are preventable. There were, he said, about 7,000 people killed on the roads every year, and a little more than that number were killed in accidents in industry and in the home. Over a million people were injured in various forms of accidents each year, and by fire every year over £15,000,000 worth of damage was done. Most of these accidents were traceable to human carelessness. He thought they had a great hope and a great means left for reducing the number of accidents, and he believed the real remedy lay in the education of the people. The proprietor of the factory, the manager and the workpeople must be educated.

Nearly the whole of the increase in street fatalities was amongst adults. Fatalities to children, a horrible form of accident, had been pulled up, and the principal road safety activities of the Association were carried out amongst school children.

In those towns where "Safety First" work was going on the rate of accidents had been slowed down, but in places where no "Safety First" organisation existed accidents were increasing. Thus it was almost conclusive that "Safety First" education, whilst it could not entirely stop accidents, it did do a great deal to reduce them.

The aim of the National Safety Week was to bring the important question of accident prevention prominently before the people of the country so that they could realise what was already being done and the urgent need there was for all to take a share in the work, as it must be remembered that the whole community suffered in a more or less degree if a man through his own carelessness met with an accident.

In the First Report of the Royal Commission on Transport the Commissioners said: ". . . the most hopeful method of inducing pedestrians to exercise greater caution is by means of education and propaganda. This is being carried out with marked success by the National "Safety First" Association, of whose work we cannot speak too highly. In our opinion the Association should receive much greater recognition and support."

The Association wanted all the great cities and towns throughout the country to form branches of the National "Safety First" Association and to set up local Councils to get to work to educate the people and so to reduce, as it inevitably would, the number of accidents. The Association wanted more local authorities to help and more of the great carrying companies to enlist the sympathy of their drivers in the "Safety First" competitions which were organised by the Association. They wanted more factories to take the matter up and to put up in the works the various placards issued by the Association.

Motorists must be urged to play the game. The Road Traffic Bill, now passing through the House of Commons, for good or evil, revoked the speed limit so that more and more was there an obligation upon the motorist to play the game with the general public. There were still more users of the road on foot than there were in motor cars.

He wished the Minister of Transport long life and short office. (Laughter.)

Mr. Herbert Morrison (Minister of Transport) said they had all heard of "Safety First" in various directions—they heard of it at the last election (laughter) and it was very pleasing that Lord Brentford as a Conservative politician and himself as a Socialist could join together in urging the importance of "Safety First" in relation to reducing accidents with which he was so concerned.

He joined most heartily with Lord Brentford in commending to the favourable consideration of the public the work of the National "Safety First" Association which had brought together the National Safety Week Council which in turn was organising the National Safety Week to be held from May 19th to 24th.

The National "Safety First" Association deserved the utmost public support and encouragement. The "Safety" code issued by the Association was well compiled and had proved of great benefit to all who used the roads. The Association undertook constant research work into the causes of accidents, and its educative work especially among schoolchildren was particularly encouraging and proving of very great value. It was because of that work that the number of accidents among children had a more hopeful aspect than the rate of accidents among adults.

Lord Brentford had referred to the Road Traffic Bill now before Parliament: "If accidents go up during the first year the Road Traffic Bill is law it will be the end of my political career." (Loud laughter.) He thought that the Bill would prove distinctly helpful, but in the end a successful attack upon the number of accidents and street dangers was dependent upon getting the public to use their heads. They must educate the man who slipped off the kerb without looking to see what traffic was coming. The Bill would abolish the speed limit, but he did not think that would make much difference as it seemed to have abolished itself for a good many years past. He very much questioned whether if the Bill were passed the average rate of speed would be greater than it was at the present time, but they were imposing much heavier penalties for breaches of the law and he hoped that magistrates would not hesitate to administer the law firmly. Standardisation of street lighting required attention—at present there was extraordinary variation.

The National "Safety First" Association deserved every encouragement and financial assistance.

* * * *

The underlying idea of the Safety Week is not the undertaking of an isolated or spasmodic effort. In cities, or establishments, where continuous organised safety activities already exist, it is hoped to attract greater attention. Where such organisations do not already exist, it is hoped to stimulate their creation.

Educational propaganda of a non-controversial character will be employed.

As at present planned, the National "Safety First" Association is proposing to hold special activities:—

(a) In some 27 centres where it has local committees.
(b) In other centres where the local authority is a member of the Association, and would be prepared to undertake some activities, e.g., in respect of school-children.
(c) In as many as possible of the industrial establishments which are members of the Association.
(d) In co-operation with transport owning undertakings who enter their drivers in the annual Freedom from Accidents Competition.

The principal national activity will be the holding of the Annual Congress of the Association, to be opened by H.R.H. The Duke of York at Liverpool, on the 21st May.

The Association will also supply, so far as funds permit, posters, pamphlets, slides, films, hand-bills and similar material, and notes for lectures, sermons, etc.

The organisation of local activities will be in the hands of the various branch Committees, and of member firms.

The offices of the National "Safety First" Association are at 119 Victoria Street, London, S.W.1, and the General Secretary is Lt.-Col. J. A. A. Pickard, D.S.O.

British Empire Trade Exhibition, Buenos Aires, 1931.—The date of the great British Empire Exhibition at Buenos Aires has now been definitely fixed, and it will be open from March 14th to April 27th, 1931. The plans of the extra buildings rendered necessary by the unexpected demand for space are now being prepared.

Omnibus Topics.—Following on the purchase by the London, Midland and Scottish Railway Co. of 100 buses operated by the Belfast Omnibus Co. in Co. Antrim, the latter company have purchased Spence's Triumph Service, which has operated for a considerable time between Belfast and Ballynahinch and other towns in Co. Down.

ACCIDENTS AT NIGHT.

To the Editor of THE WORLD'S CARRIERS.

SIR,—As one who does a great deal of driving at night on the main trunk roads in this country I would like to suggest that many serious accidents would be avoided if the backs of all lorries and slow moving vehicles were painted white. Even a coat of white paint on the rear mudguards would be better than nothing in the case of a lorry fitted with a body of the platform type.

All motorists will agree that when driving at night, particularly in rainy weather, it is a very easy matter indeed to see the light coloured stockings of a girl riding pillion on a motor cycle, whereas, in the case of a man walking along the road, it requires very keen eyesight indeed to see him with the ordinary headlight equipment.

The cost of adopting the above suggestion is insignificant, whilst the security from both the point of view of lorry operators and the motorist is of first-class importance.

Might I ask your Editorial support in this matter?

I am,

Yours faithfully,

L. H. POMEROY, M.I.M.E., M.I.A.E.

The Daimler Works,
Coventry.
30th April, 1930.

ETHYL PETROL.

To the Editor of THE WORLD'S CARRIERS.

SIR,—Now that the Government Committee has given a complete bill of health to ethyl petrol in this country, it may be interesting to note the extent to which other countries have been availing themselves of the advantages of this special fuel during the two years occupied by the Ministry of Health inquiry.

The sales in the United States and Canada have increased from 400 million gallons in 1927 to approximately 1,250 million gallons in 1929, while for this year the sales are at the rate of 2,000 million gallons per annum.

This increase was only to be expected because a tendency in car design had long been towards engines of higher compression, and ethyl petrol was the first fuel specially devised to contribute to this aim of the designer.

It was doubtless partly the growing use of ethyl that influenced the British Government to inquire into its safety in use. To-day its safety has been definitely established and we may therefore expect to find the motoring masses in this country taking a keener interest in its purpose and performance—though it may be mentioned that a great many enthusiasts did not wait for official reassurances, but used ethyl throughout the period of the enquiry.

Yours truly,

F. E. POWELL,

Chairman, Anglo-American Oil Company, Limited.

36, Queen Anne's Gate,
Westminster, London, S.W.1.
23rd April, 1930.

ALLEGED DAMAGE BY DAMP.

To the Editor of THE WORLD'S CARRIERS.

SIR,—An interesting case came under my notice a few weeks ago in connection with a quantity of furniture that had been stored at the Society's depositories for a period of four and a half years.

Six months after delivery of the furniture, the customer complained that four sporting prints had been damaged by damp. An inspection was made, and it was contended that the damage was not by damp, but from some other cause, and under no circumstances could the Society be held responsible, under the conditions of the contract.

It was further contended that the depositories were properly dry.

The customer still maintained his position, and with a view to having the matter cleared up to the satisfaction of all parties, it was decided to have the prints removed and an expert examination made. This was done, and upon stripping the pictures it was found that each spot on the print corresponded with knots in the wood forming the back frame. No discolouration appeared on the brown paper which was glued to the back frame, and it is quite possible that the reason was that the glue had the effect of driving or forcing the resin to the front, intensifying the discolouration, which the customer alleged was damp.

The prints were examined by several experts, and the explanation is as follows:—

It is important to realise that wood is never in a static condition under the influence of temperature and moisture, it is continually expanding and contracting. The presence of knots lead to irregularities in the expansion and contraction, due to the fact that the capacity to absorb moisture of a knot is different from the rest of the timber. Any changes of temperature or moisture it is easily understood will then centralise on the knot or knots.

The result, therefore, is an exudation from the knot of a resinous matter, sometimes of a pitchy nature, possessing strong penetrative powers to produce a brown stain through materials such as paint, paper, canvas and even thick cardboard. That this stain can also be given off in a gaseous state is evinced by the fact that it has been known to penetrate through paper, when the paper has been ½ in. from the knot. That the pitchy nature of the resin is responsible for the darker part of a knot generally shows strongest in penetration, assisting also the theory of giving it off in a gaseous state.

Simply, the finding is as follows:—

Inferior wood, badly knotted, was used in the back framing, and the damage was the result of atmospherics, which would be likely to occur, either at the house or at the depository.

The customer was sent for and was shown the result of the examination, and was promptly satisfied that the damage was the result of the resin knots in the back frame, and immediately withdrew his claim.

I consider that this is a most important matter, and of such interest to the trade that this must be given as my excuse for going into the matter at such length.

Yours faithfully,

R. J. ARMSTRONG,
Manager,
REMOVALS & WAREHOUSING DEPT.
ARMY & NAVY CO-OPERATIVE SOCIETY, LTD.

105 Victoria Street,
London, S.W.1.

COPENHAGEN AS TRANSIT PORT.

To the Editor of THE WORLD'S CARRIERS.

SIR,—We have the pleasure to inform you that the "Cargo Duty" (Vareafgift) which is now charged to all receivers of cargo in Copenhagen, with a deduction of 50 per cent. when goods are shipped on "Through Bill of Lading" or sent through a forwarding agent in transit to a Danish Provincial Seaport, from the 1st of July will be reduced with regard to local consignees and no cargo duty at all will be charged on goods sent in transit via Copenhagen to Danish Provincial Seaports.

This fact will absolutely strongly favour Copenhagen as Transit Port, as the "Cargo Duty" on many articles is rather high. Furthermore the "harbour dues" which the shipowners pay will also be reduced, so that Copenhagen will be one of the cheapest ports in Europe.

We remain, dear Sir,

Yours truly,

E. A. BENDIX & CO.

Copenhagen, K.
28, Amaliegade.
29th April, 1930.

Continental Motor Tours. Holland.—The Automobile Association states that under a new regulation, motorists who reside in Great Britain and Northern Ireland will in future, when visiting Holland, be exempt from the road tax for a period of four months. This concession is made in order to reciprocate the freedom from taxation granted to motoring visitors to Great Britain and Northern Ireland whose stay does not exceed four months.

F. W. & R. A. New Members.—The following firms have been elected to membership of the Furniture Warehousemen & Removers' Association:—Messrs. P. E. Mahoney & Son, 82, Dean Street, London, W.1; J. Phillips, 15 & 15a, Warren Street, London W.1; Sulley & Son, 110, Brixton Road, London, S.W.; and Fred Davis & Sons, 193, Cornwall Road, Notting Hill, London, W.11.

Crow Carrying Company.

"As The Crow Flies."

AN interesting morning was spent recently with Mr. Herbert H. Crow inspecting the premises, the workshops, the garages, and the special facilities provided by this organisation, which has just celebrated its tenth birthday as a motor haulage business. The Governing Director is Mr. Latimer Crow, who, on retiring from the business of Thomas Crow & Sons, Tar Distillers, West Ham and Barking, founded the business in May, 1920, in active co-operation with his son and Co-Director, Mr. Herbert H. Crow.

MR. LATIMER CROW, GOVERNING DIRECTOR.

As both father and son had been brought up in the tar distilling business it was natural that the new concern should specialise in the transport of liquids of all kinds, and they have a high reputation for efficiency and number amongst their permanent customers many well known firms engaged in the petroleum and oil business.

Starting with three motor vehicles, the fleet has increased to thirty-six motors of various kinds, carrying from 1 ton to 15 tons and comprising Beans, Dennis, Thornycroft, A.E.C., and Scammells in the different categories. During 1929 the fleet travelled 512,173 miles, equivalent to nearly twice round the world every month.

MR. HERBERT H. CROW, DIRECTOR.

The business comprises substantial premises and land at Hart Lane, Barking, consisting of 2 acres and including garages, storage facilities and workshops, with a frontage to the river Roding and railway siding facilities on the London, Midland & Scottish Railway. Traffic is handled direct from the Continent via Harwich Train Ferry.

Specialising in the transport of liquids of all kinds by road tank wagon, the firm have in use tanks with a capacity varying from 300 gallons to 3,000 gallons for petrol, benzole, whitespirit, turpentine, industrial alcohol, tar and its products, fuel oil, lubricating oil, and liquid ammonia,

PART OF THE CROW CARRYING CO.'S FLEET LINED UP IN THE GARAGE.

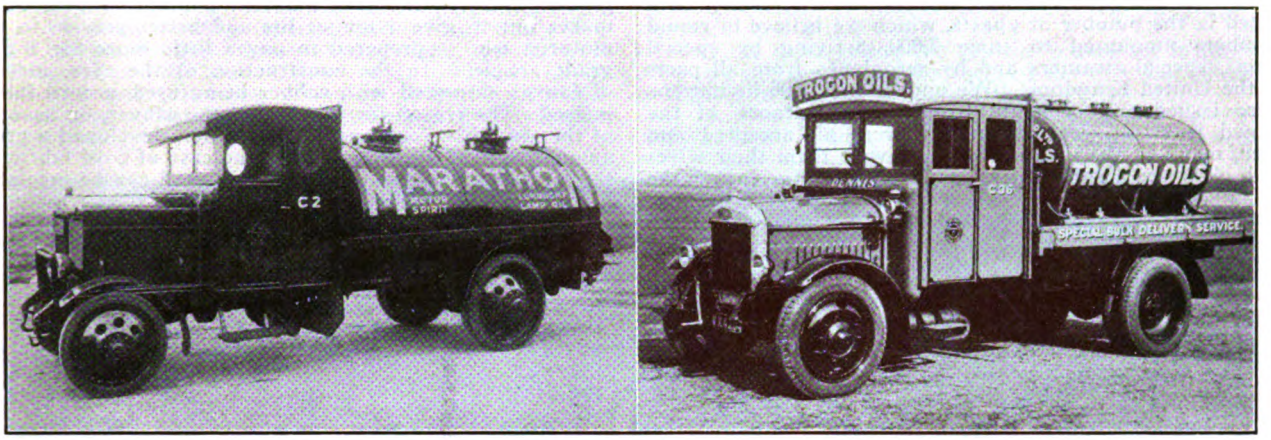
Digitized by Google

and they are prepared to provide on contract tanks for any other liquids, such as milk, linseed oil, edible oil, and acids. The requirements for the gas and tar distilling industries are particularly catered for, but at the same time general haulage is undertaken and a range of vehicles is provided to meet all requirements.

A bi-weekly service to and from Northampton has been maintained for the past nine years and Mr. S. Scott, who drove one of the first three vehicles in 1920, has been on this service during the whole period.

Mr. F. J. Reynolds, M.I.E.C., the Traffic Manager, who has been with the firm from its commencement, has many duties, the chief of which is the apportionment of the work to the vehicles most suited to the requirements of a particular customer. He deals also with enquiries regarding rates.

The engineering side of the business is under the direction of Mr. Harold Brown, with a competent foreman and staff. Maintenance of the fleet of vehicles is facilitated by the employment of spare units, such as engines, gear boxes, axles, and other parts. There is a well equipped workshop with inspection pit, and machine shop with lathe drilling machine, and an engine testing bed, where engines which have been overhauled are run by electric motor and finally run under their own power before being put back into the chassis. An adequate store of spare parts is kept to ensure prompt replacements.

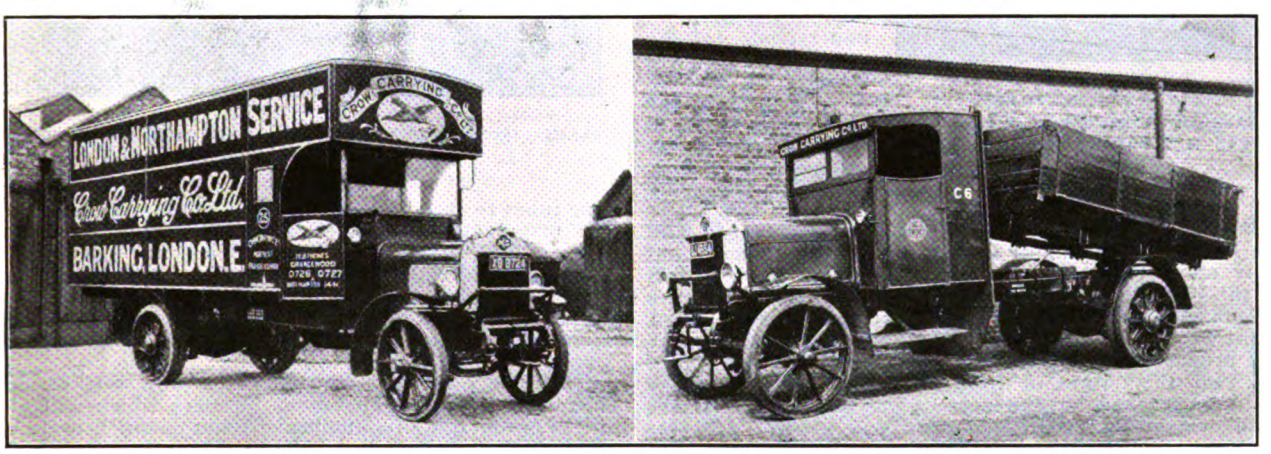


LEFT: THE VETERAN THORNYCROFT, ONE OF THE ORIGINAL VEHICLES. RIGHT: A DENNIS 2-TONNER ON CONTRACT WORK.

There are facilities for the storage of large quantities of motor spirit and kerosene, and several large distributors are at present making use of this service.

The directors are ably assisted by their private secretary, Miss E. Wilkinson, who has contributed a great deal to the success of the business during the nine years she has been with the Company. This is due to her untiring willingness and wonderful memory for detail.

The permanent staff, consisting of office, drivers, van guards and fitters, numbers 55, many of whom have been with the company from the beginning. Careful attention is paid to the appearance of the drivers, who are clothed in neat uniforms. Customers lettering is provided on coats and caps when on contracts.



TWO A.E.C.'S IN THE FLEET.

Liverpool Horse Parade.

THE date of this year's Liverpool May parade of horses, one of the finest exhibitions of Shire horses in the country, is 31st May. The parade has been a popular attraction for over sixty years. One competition open to the United Kingdom is for geldings, four years old and upwards of the Shire type, the prizes being:—Silver cup value £35 and cash prize of £25 for the first; £15 second; £10 third; £5 fourth.

In the heavy horse section twelve silver cups, three Shire Horse Society medals with four premiums of £1, and three Royal Lancashire Agricultural Society medals, will be offered.

In the light horse section there will be five silver cups, with second and third prizes in each class, for tradesmen's two-wheeled and four-wheeled turnouts, and three prizes for two-wheeled turnouts used for business purposes by cowkeepers in the district.

The Hon. Secretary of the Parade Committee is Mr. T. Eaton Jones, 30, Hatton Garden, Liverpool.

After the judging there will be a procession of the main streets of the city.

The India Tyre Factory.

ON April 30th a very interesting and somewhat unusual ceremony took place on the occasion of the Official opening of the new factory extensions of the India Tyre & Rubber Company, at Inchinnan, by the Rt. Hon. J. H. Thomas, Lord Privy Seal. The unusualness of the occasion consisted in the number of guests, which we believe in round numbers amounted to some 7,000, arriving by special trains, special steamers and by aeroplanes from all parts of the United Kingdom. We understand 7,000 invitations were issued and certainly from the appearance of the crowd it would seem that they were all accepted and used, many of the visitors bringing with them their wives and children, their cousins and their aunts. For the most part they represented the firm's agents and distributors. After the official opening and the inspection of the factory, which occupied practically the whole of the day, 400 of the more favoured guests were entertained to dinner in the Central Station Hotel, Glasgow.

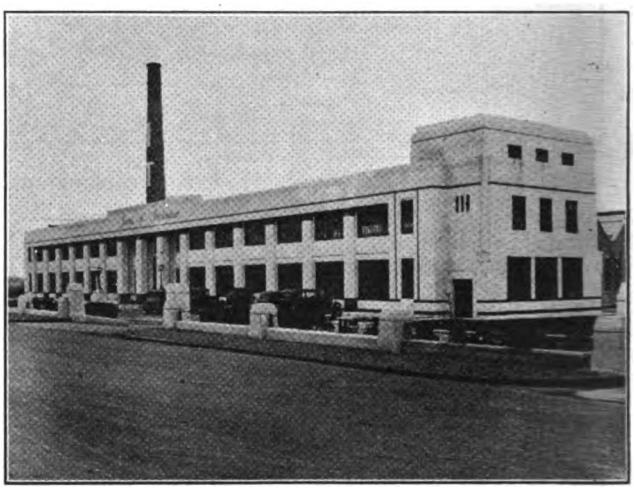
MR. A. M. MELVILLE, MANAGING DIRECTOR OF THE INDIA TYRE & RUBBER COMPANY (GREAT BRITAIN), LTD.

The India Tyre & Rubber Co. (G.B.), Ltd., is the offshoot of the India Tyre & Rubber Co., Akron, Ohio, U.S.A. The development on this side of the Atlantic is due, we understand, to the energy and business acumen of Mr. A. M. Melville, the Managing Director. At first he was sole concessionaire, but on December 7th, 1927, the manufacturing rights for the British Empire were arranged with the India Tyre & Rubber Company and the original Company was formed with a capital of £150,000, the option of the property at Inchinnan, comprising some 66 acres of land and several buildings, having previously been acquired. Plant was put down for the production of 500 tyres per day and production commenced in July, 1928. By the end of the year the output of from 300 to 400 tyres per day had been reached, but the increase was so rapid that it was soon evident that additional plant was needed. It was apparent also that the capital of the Company would have to be increased, and it was decided to do so as soon as the necessary arrangements could be made after the first year's balance sheet was completed.

The first year's trading and manufacture showed a profit of over £30,000 and the capital of the Company was then raised to £750,000, which was issued and fully subscribed on the 8th March, 1929.

The rapid increase in production necessitated the laying down of new plant from time to time and the erection of new buildings to accommodate it. Production has now increased to between 1,200 and 1,500 tyres per day and within the next few weeks with the laying down of still more plant this figure will be increased to 2,000 tyres per day. With regard to the India tyre itself; Mr. Melville has rigorously adhered to his initial policy of producing a tyre not in competition in price with other makes but to give a longer life and better service to the motorist who is prepared to pay a little more for a first grade article. In the construction of the tyre, instead of canvas saturated with rubber being used, a cord fabric is used. The reason for this is that the canvas, on account of the strands criss-crossing each other, developed a great amount of heat by friction. In the case of cord fabric, as the strands all go the one way, each cord can be insulated by rubber from its neighbours and this has greatly increased the life of the tyre.

In addition to the covers the manufacture of tubes has more recently been undertaken and a complete range of



FRONT VIEW OF THE NEW OFFICES OF THE INDIA TYRE & RUBBER COMPANY (GREAT BRITAIN), LTD.

blue tubes to the same specification as the blue tube which was manufactured in America, for the larger sized trucks, is now being produced. It is claimed that this blue tube will withstand better than other types of tubes the internal heat produced by friction and aggravated by hot running surfaces. Only the one quality tube is being manufactured both for heavy vehicles and for passenger car sizes.

The tube production department is now settling down in new and more commodious quarters which will allow of the production of a number of tubes commensurate with the increased production of the tyres.

In conclusion, we would emphasise the fact that the firm is now entirely British and worked with British capital. It brings a new industry into the Glasgow area, this being a much needed development, and the majority of the firm's operatives are recruited from the ranks of unemployed miners and approximately the factory employs some 2,000.

The directors of the Company are as follows:—Mr. W. P. Naismith, Chairman. Mr. Joseph Johnstone, J.P., Major R. S. Grigg, and Mr. A. M. Melville, Managing Director.

Safety First.

The April number of the "Safety First" (Quarterly) Journal, published by the National "Safety First" Association, 119, Victoria Street, London, S.W.1, contains particulars of the general arrangements which have been made in connection with the forthcoming National Safety Week, which will be held throughout the country from May 19th to 24th next. Four Government Departments and nearly thirty other organisations are co-operating with the National "Safety First" Association to make the Week a success, and the support of everyone is invited. One of the main items of the Safety Week will be the Association's Annual Congress which will be held at Liverpool on the 20th—22nd May. H.R.H. The Duke of York is opening the Congress on the morning of the 21st, Lord Brentford (President of the N.S.F.A.) takes the Chair at the Delegates' Dinner the previous evening, when other speakers will be the Lord Mayor of Liverpool and Lord Cozens Hardy. Speakers at the Congress include Sir Henry P. Maybury, G.B.E., K.C.M.G., C.B., Sir Felix J. C. Pole (Chairman, Associated Electrical Industries, Ltd.), Mr. G. Stevenson Taylor, O.B.E., M.I.Mech.E. (H.M. Superintending Inspector of Factories), Mr. John Beard (Chairman of the T.U.C. General Council), Mr. Robert Beveridge (Inspector of Lighting and Cleansing, City of Edinburgh) and Mr. J. R. Howard Roberts (Town Clerk of Hull). Chairmen of Sessions include, in addition to Lord Brentford, the Rt. Hon. Lord Ponsonby of Shulbrede (Parliamentary Secretary to the Ministry of Transport), Sir Gerald Bellhouse, and Mr. E. J. Fox (Managing Director of Stanton Ironworks Co., Ltd., and immediate Past President of the National Federation of Iron and Steel Manufacturers).

Birmingham Co-operative Society.

Annual May Parade.

THE Annual May Parade of horse and motor vehicles of the Birmingham Co-operative Society was held on May Eve, Wednesday, April 30th.

This annual event was inaugurated to encourage the horse drivers to take an intelligent and kindly interest in the animals under their charge, and to encourage the motor drivers to keep their vehicles clean and as well conditioned as possible. Silver cups, gold and silver medals and cash prizes are offered in competition for the cleanest, best conditioned and best decorated turnouts in each section.

Woodward, M.R.C.V.S. Vanners.—Mr. W. H. Watson, M.Inst.T. Dairy Cobs.—Mr. Thos. Wild. Motor vehicles—.Mr. F. G. Bristow, F.C.I.S., M.Inst.T. Immediately after the judging Sir Charles H. Rafter, K.B.E., Chief Constable of Birmingham, presented the prizes to the successful drivers.

After the prize giving the vehicles moved off in procession through the principal streets of the City and suburbs, a huge concourse of spectators lining the routes.

It is interesting to note that the Society, which is Birmingham's largest retail distributor, own and operate

Photos] BIRMINGHAM CO-OPERATIVE SOCIETY'S ANNUAL MAY PARADE. [World's Carriers.
LEFT: A STRIKING TABLEAU. RIGHT: A FINE MAUDSLAY TURNOUT.

This year over 120 turnouts competed for the prizes.

The scene in the streets adjacent to the Society's garage in Great Brook Street, where the turnouts were parked for judging, attracted large crowds of interested spectators. The well groomed horses and decorated vans and motor vehicles with departmental tableaux and slogans lent an air of pageantry to the scene.

The judging of the horse vehicle section was carried out by the following gentlemen:—Heavy classes.—Mr. S. M. over 400 horsed vehicles and 100 motor vehicles, comprising Dennis lorries and motor coaches, Commers, Maudslays, Morris-Commercial, Chevrolets and Ford vans. Over 350 delivery rounds are served daily. The whole of the transport organisation of the Society is under the capable management of Mr. J. H. Stirk, J.P., M.Inst.T., who, with the parade committee, is to be congratulated on the success of the Parade.

Proposed New Association.

A NUMBER of motor haulage contractors in the South West Lancashire area have received particulars of a new haulage owners' association which it is proposed to set up with headquarters in one of the Lancashire towns.

According to the prospectus the organisation will function on a national basis, establish clearing houses in the main traffic centres, formulate schemes for collective buying, etc.

"Such schemes look very nice on paper," said one transport commentator, "but when they are submitted to the test of practice, yield very shadowy results. Why another association? Haven't we enough? If they are not functioning as they ought, with all their accumulated experience, what chance has a new association to succeed? The existing associations are democratic institutions which have been moulded and adapted to meet the wishes and requirements of their members and have been kept in line with rapidly changing conditions in the transport industry. The idea of establishing a chain of clearing houses and a collective buying organisation is not a new, but an immensely illusory, attraction." On the question of clearing houses, the view is expressed that to create traffic for out of work motors newcomers would have to offer those who have the dispensation of loads terms more attractive than those they are now enjoying, and that would result in a still further depression in the level of rates. It is understood that the suggested subscription rate for the proposed new association is 10s. per engine-ton with a minimum of £3 per member.

New Municipal Garage.—Manchester Corporation transport department has opened a new motor bus garage at Parr's Wood, where there is accommodation for between 60 and 70 buses. The Corporation bus fleet now comprises 198 buses and last year they carried 24½ million passengers.

City One-Way Traffic.

THE Court of Aldermen of the City of London have issued draft regulations proposing to make nineteen thoroughfares in the City one-way streets.

The thoroughfares which have been scheduled and the routes vehicles must follow are as under:—

Street or part of Street.	Prescribed route or Direction which all vehicles shall follow.
Addle Street	East to West.
Aldermanbury	North to South.
Ave Maria Lane	North to South.
Bouverie Street	North to South.
Creed Lane	South to North.
Friday Street	North to South.
Ivy Lane	South to North.
King Edward Street (between Newgate Street and Angel Street)	South to North.
Love Lane (Wood Street)	East to West.
Little Love Lane	East to West.
Milk Street	North to South.
Old 'Change	North to South.
Old Bailey (between Ludgate Hill and Fleet Lane)	South to North.
Paternoster Row	East to West.
St. Swithin's Lane	South to North.
Shoe Lane (between St. Bride Street and Fleet Street)	North to South.
Walbrook	North to South.
Warwick Lane	North to South.
Wood Street	South to North.

The regulations will come into force in 14 days after they have received the approval of the Secretary of State.

Licences Granted.—The Watch Committee of the Guildford Corporation has granted 22 licences to the Skylark Motor Coach Company.

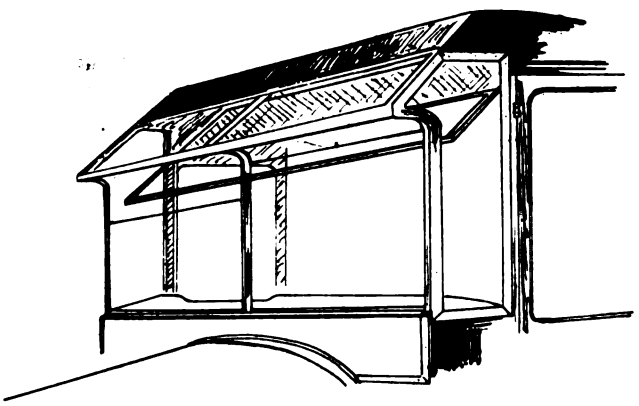
"Sytgap" Clear Vision Windscreen.

WE had the opportunity recently of testing a new device for adding to the comfort of the drivers of motor vehicles, patented by Mr. F. Assheton Taylor, "Ersanmine," Kingswood Road, Tadworth, Surrey, which has been aptly called the "Sytgap" clear vision windscreen. We have to thank Electrolux, Ltd., Regent Street, London, for this opportunity, as the apparatus was fitted to a 2-ton lorry, built for them by Dennis Bros., Ltd., Guildford, who had made the necessary adjustments to embody the novel windscreen. Mr. Taylor, who was formerly in the service of Electrolux, Ltd., was present to explain his ingenious device.

At normal setting this screen provides:—

1. **Clear Vision** through a 2½ in. to 3 in. gap across the full width of the car or driver's cab.
2. **Absolute Protection** from wind, snow dust, and windborne insects, leaves, etc.



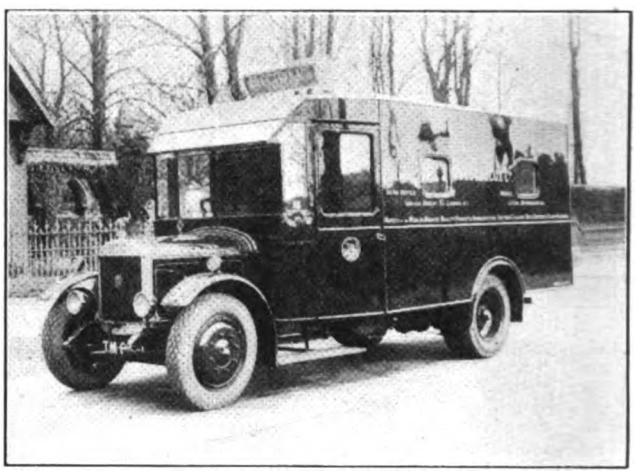
SKETCH OF "SYTGAP" CLEAR VISION WINDSCREEN.

3. **Almost Complete Protection** from even the heaviest rain, so that be-spectacled drivers can proceed without fear of their lenses becoming spotted or misty.
4. **Anti-Dazzle.** The outer top panel may be of tinted glass, thus providing adequate protection from sun-light and approaching head-lights. In the case of lorries, etc., in which the driver is seated high above the road, the upper panels may be both made of opaque material, the outer one providing advertisement space without interfering with the efficiency of the screen.
5. **Adjustability.** The lower panel moves slidably upwards and downwards in side channels controlled by winding or quick-lift mechanism.
6. **Ventilation.** At the normal setting, or any point upwards therefrom, air is gently drawn outward from the interior of the cab, so that the vitiated air in a closed vehicle is steadily and continuously exhausted.

By lowering the movable panel a controllable amount of air may be permitted to enter the vehicle, governed entirely by the width of the "sight-gap." This air stream enters in an upward direction, thus providing effective and pleasant ventilation for cooling purpose during hot weather.

Under exceptional circumstances, the "sight-gap" can be reduced in width according to the weather encountered and the speed at which the vehicle is travelling.

The tests which we were able to make proved conclusively that the windscreen fulfilled all the claims made for it by the inventor and while giving the driver a clear view, protects him from eyestrain and needless mental exertion. The improved ventilation without unnecessary draughts increases the comfort of the passengers, while



DENNIS VAN FITTED WITH "SYTGAP" WINDSCREEN.

the tendency of air to move forward inside a closed vehicle is assisted by the action of the screen, so that in a passenger vehicle smokers can occupy the front seats and the smoke will be drawn out through the gap and carried to the rear over the roof of the vehicle. This was clearly demonstrated, first by holding a silk handkerchief, which was drawn outward and upward by the air coming from the back of the vehicle and passing out through the opening, and by the ash from a cigarette which, instead of being blown back into the face of the driver or passenger, was also carried forward and disappeared between the two panels over the top of the vehicle.

This new device should be of special interest to all owners of motor vehicles, both for passenger and goods transport who have the welfare of their drivers at heart and who are anxious to give the maximum amount of comfort to their passengers.

Motor Vehicle Number Plates.

ATTENTION is drawn to the Road Vehicles (Registration and Licensing) Amendment Regulations, 1930, dated 7th April, which amend the old Regulations dealing with motor vehicle number plates.

The principal alteration affects motor bicycles and light invalid carriages which must carry larger back number plates in future. No alteration is made in regard to the size of the front number plate, but the alternative of illuminating either the front plate or back plate has been withdrawn and under the new Regulations it is compulsory to illuminate the back plate.

The linear dimensions of the new motor cycle back plate are approximately two-thirds those of the ordinary car plate instead of one-half, as at present, the Regulations providing that:—

(i) All letters and figures must be two and a half inches high; every part of every letter and figure must be three-eighths of an inch broad; and the total width of the space taken by every letter or figure except in the case of the figure 1, must be one and three-quarter inches.

(ii) The space between adjoining letters and between adjoining figures must be half an inch, and there must be a margin between the nearest part of any letter or figure and the top, bottom and sides of the black surface upon which the identification mark is inscribed of at least half an inch.

As regards motor vehicles generally, the new Regulations provide that when a back number plate is illuminated by transparency or translucency, the letters and figures of the identification mark may show either white or red, and if they appear red, a separate rear red light is not required. During daylight, however, the identification mark must show white against a black background.

The new Regulations come into operation on the 6th October next, but motor cyclists are advised to have their back number plates changed as soon as possible, as if the matter is left to the last moment they may find it difficult to obtain the new plates in time. This anticipation of the amended requirements is legalised in the new Regulations.

Transport of Passengers and Parcels in Switzerland.

By O. Zipfel.

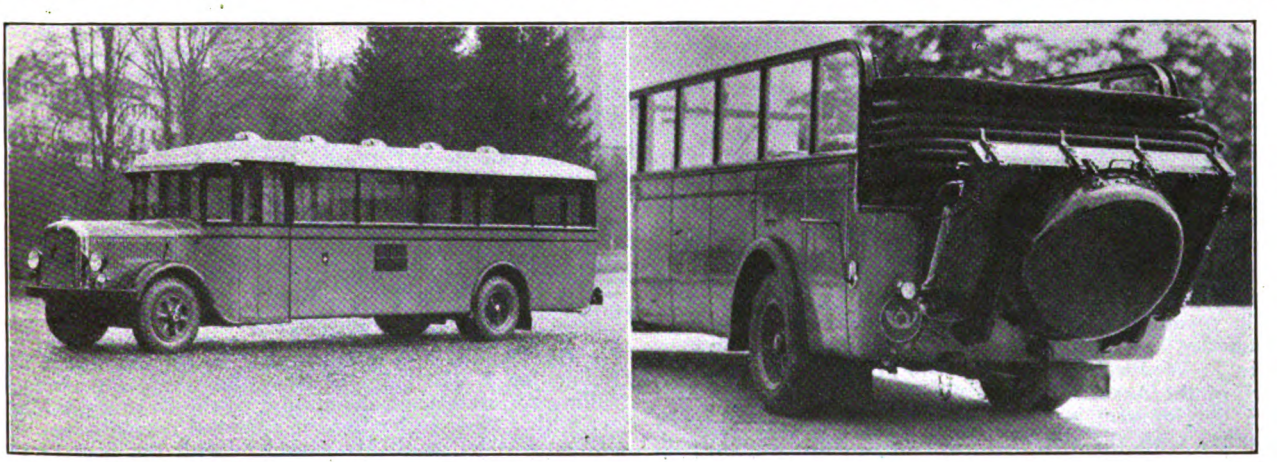
IN comparison with its size and population, Switzerland possesses a very remarkable network of regular motor coach services. This is to be attributed to the circumstance that according to law the Swiss Post Office has alone the right of conveying passengers by vehicles, running according to a time-table, except so far as this right has been transferred to the Railways.

The Swiss Postal Authorities have at all times exercised this privilege by combining the services for passengers and for parcels, and conveying both in the same vehicles. This used to be done by horse-drawn coaches, now by motor coaches. The motor coach routes have been so extended of late years, that practically every village that is not actually on the railway possesses a regular connection with some railway station by motor coach. The service is maintained by three different methods. The Post Office carries on the service as a state monopoly with its own vehicles and staff in every place where the junction of several lines and the amount of traffic render the creation of a group of services possible. The Alpine services, too, are worked as a state monopoly. On short routes and on those where small coaches meet the needs of a sparse traffic, the transport service is thrown open to public competition. There is always a large number of competitors, and those are selected who together with moderate terms can offer the best guarantee for a good and reliable service. They have to provide their own cars and drivers, and to pay all the expenses of the service, in return for which the Post Office pays a fixed commission for each kilometre run, and in addition a grant of ten per cent. of the passenger receipts. The vehicles of the contractor bear the arms of the Post Office and the drivers wear the official uniform.

THE FURKA PASS NEAR THE RHONE GLACIER, 7,400 FEET ABOVE SEA LEVEL.

The Post Office is at liberty to delegate its monopoly in the passenger traffic; that is, it may grant concessions, and in consequence it has granted concessions to about a hundred different contractors. These contracting bodies have for the most part been formed on the basis of public utility, the financial control being shared between those districts interested in the particular service. These concessionaires are under the obligation of conveying all postal parcels, receiving in return a fixed commission from the Post Office. Where the traffic is worked at a loss, some portion of this loss is also borne by the Post Office.

Great advantage is derived from thus combining the passenger service with the carriage of postal parcels. On the one hand, it enables these parcels to be forwarded quickly and cheaply, and, on the other hand, the extra income derived from this transport is very considerable and renders the service a paying concern. The commission on the transport of the postal parcels amounts to a fourth of the entire income of the service. This commission is calculated according to the length of the line, the number of the parcels carried and of the passenger fares, and is also taken into the accounts of the service as income in the services run as of right by the Post Office and on those lines which are under the management of private contractors.



LEFT: 40-SEATER OMNIBUS. RIGHT: REAR VIEW OF AN ALPINE POSTAL COACH FITTED WITH A COVER, A LUGGAGE CARRIER AND, BELOW, A TYRE DRUM.

The Post Office uses on their own government lines in the Alps coaches with seventeen seats almost exclusively, and on their lines in level country coaches with 20-50 seats. The chassis employed on the Alpine routes are of 3 ton capacity, manufactured by the firms of Saurer and

Digitized by Google

F.B.W., and fitted with engines of 100 h.p., and besides the usual brakes on all four wheels they have a powerful motor brake. These motor brakes have stood the test of many years' service extraordinarily well, and are very efficient and not liable to wear and tear. The bodies and fittings are always of the all-weather type, in which the cover of the car runs on a strong frame and can be let up or down by either a small electric motor or a hand crank. By means of the electric arrangement the whole business with the cover can be dealt with during the drive without the driver having to leave his seat. The seats are very comfortable, low and wide, fitted up like a club armchair. There are only three seats in each row, separated by a centre gangway.

On routes open throughout the year, large omnibuses with 40-50 seats are employed as well as the 20 seat all-weather coaches. On the all-weather coaches the postal parcels are carried exclusively in special holds arranged at the back of the car for luggage; the omnibuses have similar holds but can also take luggage on the roof. On routes where the traffic is very heavy, a two-wheeled trailer is also attached for luggage. Gold and valuables are conveyed in special iron receptacles let into the sides of the coach body.

The private contractors employ coaches with 8-20 seats according to the conditions of the traffic. For small sized coaches, large limousines are mostly used, the American cars are the popular ones, such as the Marmon, Cadillac, Chrysler Imperial, etc. In the case of concessionaires, omnibuses with 20-30 seats are used almost without exception, and for excursions all-weather cars.

Since these concessionaires are technically subject to the control of the Post Office Authorities and have to submit to them their balance sheets for acceptance, the whole of the official and regular traffic staff is under one management, which exercises an authoritative control over the arrangements of the traffic, the time-tables and the fares. The fares are therefore fairly uniform, and as only one service is authorised for the same stretch of road, all possibility of competition is excluded.

At the present time forty-four traffic centres are worked by the Post office as state monopolies, with 96 routes open all the year round, and twenty-four routes in the Alps, making altogether 120 routes having a total length of 1,300 miles. The routes run by private contractors on account of the Post Office are 238 with a total length of 1,530 miles. Add to these a length of 890 miles under the concessionaires, and we get a grand total for all the routes of about 3,700 miles, as compared with the Railway total of 3,210.

Manchester and S.E. Lancs. Commercial Motor Users' Association.

MEMBERS of the Commercial Motor Users' Association, Manchester Area, held their annual meeting on 16th April. Mr. H. Howard Robinson, A.M.Inst.T., the secretary, in his report stated that complaints were received from members from time to time respecting bad state of roads in the area. These were promptly investigated and were followed by representations to the authorities concerned. In almost every instance satisfactory repairs or improvements were effected. This work is one which means a considerable service to members by saving unnecessary wear of vehicles using the roads. The Legal Defence Scheme has been used on behalf of members in the case of 72 summonses, in 62 of which fines were inflicted and 10 dismissed. In addition, 21 cases were dealt with by the Secretary in correspondence in order to avoid attendance at court. It is interesting to note that during the year 1929 the number of summonses issued by the police in this area against members and drivers has been considerably reduced. Plying for hire had caused motor coach owners very considerable anxiety and the Association defended a large number of summonses and advised members upon the position from time to time, in order to assist members to continue their business, whilst complying with the law.

Many members reported having experienced difficulty during the year arising from the bridges over railways and canals, and this matter has been very vigorously dealt with. The Bridges Act passed by Parliament has relieved members from a considerable hardship.

The membership for the year was increased by 63 new members.

Mr. R. W. Royle, M.Inst.T., who presided, reviewed the work of the Association and made particular reference to road development work in the Manchester area. The progress with the new Manchester and Liverpool road, and the extensions to a number of local roads, which would take the city traffic into Cheshire by alternative routes, would certainly afford much relief to members.

After the report had been adopted, a discussion took place on the excessive noise regulations, and it was stated that Mr. Robinson's representations to the police had avoided the issue of a large number of summonses for very trifling defects to vehicles.

Another subject discussed was the rationalisation of goods transport which, it was understood, might be dealt with by the Royal Commission in their final report.

OFFICERS FOR 1930/1931.

Mr. R. W. Royle, M.Inst.T., was re-elected chairman for the third successive year. The vice-chairman for the ensuing year is Mr. A. Watkinson, M.Inst.T. Vice-presidents:—Mr. R. C. Reynolds, O.B.E., M.Inst.T.; Col. Sir J. Nall, D.S.O., M.Inst.T.; Mr. John Faulkner; Mr. L. Swain; Mr. J. T. Lawton, M.Inst.T. Hon. Treasurer, Mr. A. J. Green, A.M.Inst.T. Committee:—Messrs. N. E. Box, M.Inst.T.; T. H. Dunbabin, M.Inst.T.; J. Leatherbarrow; A. Hancock; J. S. Redfern; W. E. Hall, jun.; T. Huskinson; W. Brown; D. Green; H. Young; W. H. Burgess; T. M. Grindley; H. Hollingsworth; A. Parriss; E. F. Topham; T. Lamb; J. Smith; E. Tootill; B. Goodfellow; J. Powell, A.M.Inst.T.

SOUTH EAST LANCS.

The South East Lancashire Area Committee of the Commercial Motor Users' Association held a meeting at the Manchester office recently, attended by Messrs. J. R. Etheridge (Radcliffe), J. Grindrod (Rochdale), W. Mitchell (Heywood), G. W. Leggott (Manchester), V. L. Morton (Mossley), J. Jagger (Oldham), and J. S. Howarth (secretary). The main business was the election of officers for the ensuing year. Mr. J. R. Etheridge was re-elected chairman and Mr. J. Grindrod vice-chairman. The following representatives were appointed to the North Western Divisional Committee:—Messrs. J. R. Etheridge, G. W. Leggott, and Councillor W. Farnorth. The Secretary, Mr. J. S. Howarth, reported with reference to the question of the trams stopping in the centre of Bury, discussed at the last meeting, that he communicated with Councillor J. Eastham, of Bury, who said he would be willing to introduce a deputation to the Tramways Manager with a view to having the proposal considered. The matter was left with Mr. Grindrod and the Secretary to deal with. Mr. J. S. Howarth intimated that he had been in communication with the General Secretary respecting the National Council launching opposition to the Omnibus Bill. He received a reply stating that the National Council had taken steps to do this. They urged that individual members should write their local members of Parliament asking them to oppose the Bill when it comes before Parliament. Mr. Frank Hayward, of Rochdale, was admitted to membership of the Association. Concerning motor coaching conditions in Rochdale, the secretary reported that the rota system had been introduced for the use of the Town Hall Square.

Uruguay. Imports of Motor Chassis.—A Montevideo message says that an Executive Decree ordains that motor chassis, forming part of public service omnibuses, may be imported free of duty providing, *inter alia*, that each vehicle carries more than eight passengers and is used exclusively for public service.

New Antwerp-Liege Canal.—A Brussels message says that on May 31st the King will attend the ceremony of turning the first sod of the new canal which is to be built from Antwerp to Liege. The ceremony will take place at Vroolhoven, where His Majesty will start the giant mechanical shovels on their work.

Manchester Coachowners Co-operative Plan.

Scheme extended to Salford.

IT is now possible to give further details of the working arrangements of the co-ordination plan drawn up by the Manchester Transport (Owners') Association, Ltd., and the Commercial Motor Users' Association (Inc.), Manchester Area, for the benefit of Manchester motor coach owners.

District Working.—The city of Manchester is divided into four districts with one representative in each. These are as follows:—North: Mr. W. Cooper, 1, Plympton Street, Harpurhey; South: Central Tours, 23, Lower Mosley Street. Goodfellow Services; East: Claribel Motors, Ltd., Ardwick. Auburn Street; West: Grey Fleet Motors, 546, Chester Road, Old Trafford.

The members in each district must ascertain from each of their booking offices at 8.30 a.m. daily the number of passengers and must commence to pick up immediately afterwards. At 9 a.m. daily the members must advise their district representative how they stand and make arrangements to deal with excess or shortage of passengers. No bookings must be permitted after 9 a.m. for daily services. The city of Salford is in one district and the members will work in conjunction with each other similarly.

It is to be distinctly understood that in giving out work, each member must first call upon the members in his own district and when all the coaches in that district are engaged, he must ask the representative of any other district for assistance. Any difficulty to be reported immediately to the Association (Central 1588). Salford coaches must be used first, if Manchester members are all engaged.

Booking Offices.—These are all scheduled and picking up or setting down of passengers is only permitted at such places. Every endeavour must be made to load or unload with the utmost possible speed.

Prices.—For public hire there is a list of minimum prices which must not be departed from. A separate schedule has been compiled for private hire. A minimum of 2s. 6d. is stipulated by the Manchester Watch Committee and in any special cases where exemption is desired (football matches, etc.) application for a special permit for that day must be made to the Chief Constable (Public Carriage Dept.).

Commissions are regulated and defined to cover all contingencies. Settlement between members to be on a weekly basis every Friday on the tickets presented.

Alleged Breaches.—Any alleged breaches of these working arrangements must be reported immediately to the Secretary (Mr. H. Howard Robinson). Should any coaches be observed to be plying for hire without a licence, report should be made at once to the secretary and particulars must be given as to date, name, registered number of each coach and address where offence committed.

Booking Offices.—Each coachowner has received from Mr. Howard Robinson a schedule of the motor coach booking offices which have been approved by the Chief Constable. These number over 200 and are classified according to area, and identified by a reference number. In the southern area of Manchester there are 108 booking offices, of which eight are owned by South Manchester Coachways, Ltd., twelve by Mr. J. Holt, eleven by Messrs. C. A. Hegginbottom and Sons, six by Messrs. A. F. Holden and Co., four by Messrs. W. Hartley and Sons, six by Mr. E. Spreckley, six by Fingland Hire Cars, Ltd., and the remainder by other owners. Forty-five names and addresses are detailed in the schedule applying to the northern area where the North Manchester Motor Owners' Services (W. Cooper, J. A. Ferrington and J. W. Smith) have eleven offices, Messrs. J. and G. Finch, five; Messrs. F. A. and H. Dean, six; Osborne Motors, six; and Mr. David Green, four. Forty-one booking offices are scheduled in the eastern area, the principal owners being Claribel Motors, Ltd., with seven; Messrs. A. Mayne and Sons with 13; Messrs. Whittle and Field with five; Mr. R. Connolly, five; Mr. T. Heap, five; and G.W.S. Motorways, five. The western area is the smallest and the schedule comprises only 21 names and addresses, principally Mr. A. King, who has five booking offices; Mr. H. Goodier, five; Grey Fleet Motors, three.

SUBMITTED TO TEST.

The co-ordination scheme had its first try-out on Good Friday, but owing to the cold weather the demand for coach seats fell short of expectations. Consequently no great strain was put on the elasticity of the organisation. However, things were different and the new machinery was given a thorough test on Easter Monday. Owing to the necessity for all motor coaches to be licensed, Mr. H. Howard Robinson was fully prepared for contingencies, in case local coach owners required additional vehicles from outside areas to cope with the holiday traffic. On the previous Thursday he ascertained from members what additional coaches they were likely to require from outside the area, and application was made to the Chief Constable of Manchester for permits or temporary licences. These preparations proved to be well justified on Easter Monday, when the scheme in its entirety worked excellently. The only complaint was from a member who did not carry out instructions and who put into service an outside vehicle for which a permit had not been obtained.

So successful has been Manchester's effort to rationalise, that requests have been received by Mr. H. Howard Robinson from coach owners in other areas to organise a similar plan for them.

SALFORD ARRANGEMENTS.

As regards Salford, negotiations are proceeding between the coach owners and the authorities, and as soon as these have been completed the scheme for that city will be put into operation.

The outline of the Salford plan is:—Salford is divided into three groups with one representative in each. These are as follows:—Eccles New Road Group:—Ashford's Garages, 325/9, Eccles New Road, Weaste. Cross Lane Group:—Mr. J. Fieldsend, 231, Cross Lane, Salford. Broughton Group:—Messrs. Lamb and Whittingslow, 137, Radford Street, Lr. Kersal.

The members in each district must ascertain from each of their booking offices at 8.30 a.m. daily, the number of passengers and must commence to pick up immediately afterwards. At 9 a.m. daily the members must advise their district representative how they stand, and make arrangements to deal with excess or shortage of passengers. No bookings must be permitted after 9 a.m. for daily services.

Each Broughton group coach must call at the shop of Mr. C. Cartwright, as the last point in Salford, in order to pick up any excess passengers. In giving out work, each member must first call upon the members in his own district, and when all the coaches in that district are engaged, he must ask the representative of any other district for assistance. Any difficulty to be reported immediately to the Association (Central 1588). Manchester coaches must be used first if Salford members are all engaged, and later any other firm on the membership list supplied.

All booking offices are scheduled. Picking up or setting down of passengers is only permitted at such places. Every endeavour must be made to load or unload with the utmost possible speed.

Transport Statistics.

Changes are pending in the Preston municipal transport services involving the supersession of part of the tramway track by motor buses in the first place and trackless trolley vehicles in the second. The Manager of the undertaking, Mr. H. Clayton, in a report on the relative merits and costs of tramway, trackless trolley vehicle, and petrol vehicle systems of transport, estimate that the modernisation of the tramway system would cost £66,250, against which 23 motor buses would cost £41,400 and 20 trackless trolley vehicles and the adaptation of overhead equipment, £59,500. The loan charges calculated on a capital basis, and inclusive of working expenses estimated on an average of 25,000 miles per vehicle per annum, would be:—Tramways, £32,355; petrol omnibuses taken on eight years life, £6,644, working expenses at 13.5d. per mile, £32,344, total £38,988; trackless trolley vehicles taken on ten years life, £6,221, overhead reconstruction, £1,152, working expenses at 11d. per mile, £22,917, total £30,290. Although the inauguration of a trackless trolley system would involve a greater capital outlay than would the purchase of petrol omnibuses, the working expenses in connection with trolley vehicles are so much lower than in the case of buses, states Mr. Clayton, that they more than counter-balance the additional sums payable in respect of loan.

Motor Coach and Bus Notes.

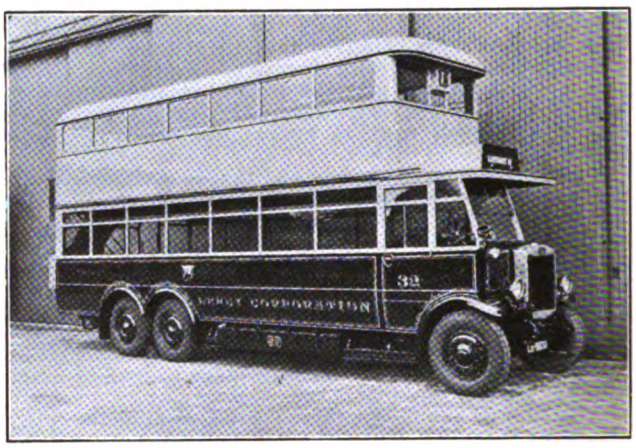
A Vulcan Emperor.—The Vulcan Emperor 51-seater bus has recently been supplied to the Southport Tramways Committee. The photograph shows the bus waiting outside the Southport Town Hall for the inspection by the Tramways Committee. We are informed that the bus

THE VULCAN EMPEROR 51-SEATER BUS.

is much approved in Southport for its smooth running, comfort and power.

A.E.C.'s for Continental Touring. — From Motorways, Ltd., there has arisen a new company known as Motorways (1930), Ltd., which like its predecessor is to provide luxury motor coach tours on the Continent. The countries to be visited include France, Belgium, Holland, Germany, Spain, Italy, Switzerland, Austria and Czecho Slovakia. For the purpose of these tours the Company has acquired five A.E.C. "Reliance" 6-cylinder saloon coaches which are fabric covered and have clerestory roofs. The driver's position is beside the engine in an open compartment but fitted with removable side screens and a folding canopy, and on the opposite side of the engine is a seat for the courier who travels with each coach. An unusual feature is the front dash which is carried across the extreme width of the chassis and so far forward that it entirely encloses the radiator shell. 18 seats of the high back armchair type are provided, fitted with pneumatic cushions. At the back, curtained off from the main passenger compartment, is a lavatory and buffet for serving light refreshments.

Ransomes Bus Bodies.—Our photograph shows a type of bus body supplied by Ransome, Sims & Jefferies, Ltd., Orwell Works, Ipswich, to the Derby Corporation. It accommodates 65 passengers and is mounted on a Guy six-wheel chassis. The firm received two contracts for these bodies, which have now been completed. The body is built to the firm's standard construction, no nails whatever being used. The windows in the lower saloon are fixed,



RANSOMES BUS BODIES FOR DERBY.

ventilation being provided by hinged ventilators controlled by patent fittings, and in the upper saloon three windows on each side are arranged to drop and are controlled by the Beclawat type of fittings. There is only one step to the entrance platform and the stairway to the upper saloon is entirely covered and constructed with a landing in the centre.

Stimulating the Zest for Travel.—In the Liverpool and Manchester stores of Messrs. Lewis', there is a special motor coach bureau, which has been well advertised, where customers may book tours to any part of England, Scotland and Wales. Literature from most of the principal coaching firms is neatly displayed in mahogany cases, and well informed assistants are in attendance to give advice and help to solve any travel problem. "Travel in luxurious vehicles anywhere through England, Scotland and Wales" is the message in gilt letters, which runs over the rear of the Liverpool booking office. This adjoins a customers bank and post office.

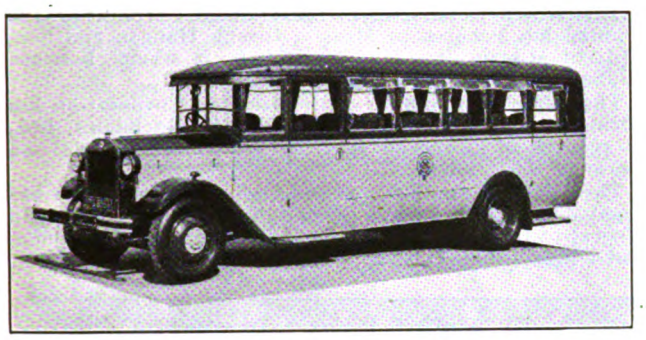
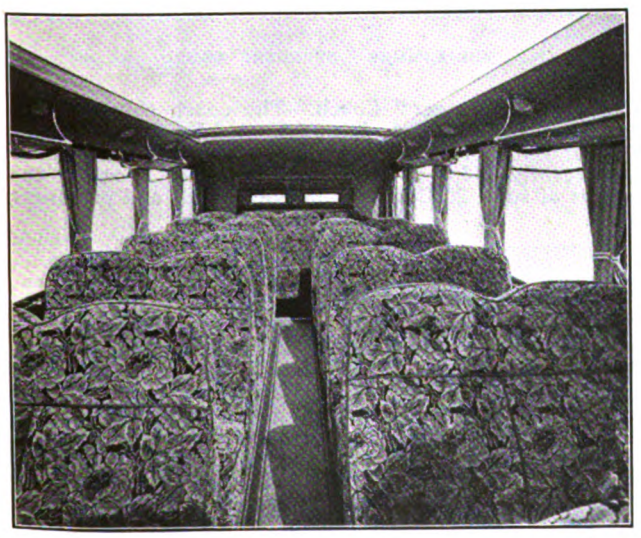
Emergency Door Regulations.—At the Tramways Committee of the Bolton Corporation, the General Manager reported upon the new regulations proposed to be made by the Minister of Transport, so far as they relate to emergency doors on double deck motor buses, fitted with totally-enclosed staircases, and read a letter from Leyland Motors, Ltd., as to the type of staircases on the five buses recently ordered by the Corporation. It was decided that the buses be fitted with open staircases instead of enclosed staircases.

The Lancia All-Weather Saloon Coach.—The Lancia saloon coach as illustrated incorporates the Plein Azur sliding roof and is built to the order of Gray's Coaching Service, Ltd., of Kingston-on-Thames, upon a 6-cylinder "Omicron" Lancia chassis. The bodywork is by London Lorries, Ltd. This is one of the first vehicles of its kind to be put into service in this country. The coachwork is noteworthy, as while in the ordinary way accommodation can be provided for 33 persons when the standard seating plan is adopted, this number can be reduced to 26 in order that extra comfort may be given to the passengers for long distance tours, for which purpose the chassis is primarily designed and constructed. The deeply sprung



THE LANCIA SALOON COACH.

seats are upholstered in moquette, whilst the inside panels are lined in material to match. Rug rail and ash tray are at the back of each seat. Concealed lamps are fitted in the roof. The engine is a 6-cylinder monobloc developing 85/100 h.p. It has a seven bearing crankshaft. Power



INTERIOR VIEW OF THE LANCIA SALOON COACH.

is transmitted through a single disc clutch to a four speed gear box unit with the engine. Transmission is by a two section cardan shaft to a spiral bevel driven rear axle. The foot brake acts on all four wheels and the hand brake on rear wheels only.

Licences Granted.

The Watch Committee of the Cheltenham Corporation has granted the application of the Great Western Express Co., Ltd., for three additional bus licences for operating on existing services.

The Licensing Committee of the Penrith Urban District Council has granted applications to operate two new bus services as follows:—Mr. R. McCombe—Newcastle and Blackpool; and Messrs. Emmerson and Co.—Carlisle and Blackpool.

The Licensing Committee of the Bournemouth Corporation has granted the application from Messrs. Elliott Brothers, Ltd., for 26 licences for additional coaches to be used in connection with existing services.

The Watch Committee of the Sheffield Corporation has granted licences to the East Midland Motor Services, Worksop, for a service between Sheffield to Clowne and Mansfield and between Handsworth and Dinnington.

A Tilling-Stevens Omnibus in the Service of the Southdown Motor Services, Ltd.—We illustrate a service omnibus with seating for 31 passengers, being one of a number of vehicles recently supplied to the Southdown Motor

A TILLING-STEVENS 31-SEATER OMNIBUS FOR SOUTHDOWN MOTOR SERVICES.

Services, Ltd., by Tilling-Stevens Motors, Ltd., of Maidstone. The Southdown Motor Services, Ltd., are one of the many large operating companies who use Tilling-Stevens "Express" vehicles extensively for special inland and long distance trips in the Counties of Surrey, Sussex, Hants, etc., in addition to regular bus services throughout these counties. The chassis is Tilling-Stevens latest type B.10.A.2. with 16 ft. wheelbase, 29/70 h.p. Ricardo engine; bore, 4¼ in.; stroke, 5½ in. The bodywork was carried out by Messrs. Short Bros. (Rochester & Bedford), Ltd., Seaplane Works, Rochester.

The Crossley-Eagle.—The photograph shows three of the fleet of Crossley-Eagle 32-seater omnibuses just sup-

CROSSLEY "EAGLES" FOR THE YORK CORPORATION.

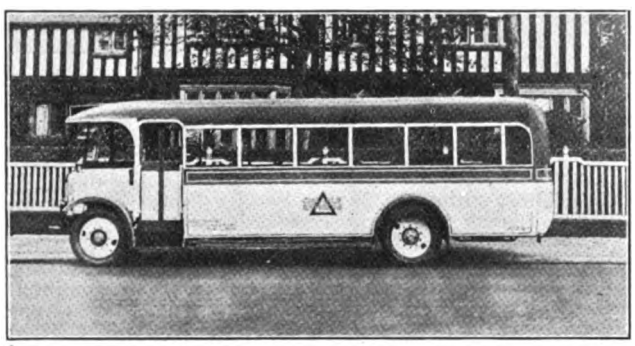
plied to the York Corporation Tramways. The chassis is the 30/70 h.p. 4-cylinder model and the bodies were built by Chas. H. Roe (1923), Ltd., Crossgates, Leeds.

Motor Coach Fares "Up."—Motor coach fares between Manchester, Liverpool and Blackpool to London have been advanced from 5s. to 7s. 6d. for the return journey. In each of the three centres named, the decision to solicit increases has been arrived at by common agreement.

Digitized by Google

During the winter months the Blackpool owners have been charging 15s. single and 20s. return, and to Birmingham 10s. single and 15s. return. The new rates as agreed between Messrs. Charles Smith's Motors, Vance Road, Wood Bros., Ltd., Coronation Street, and W. C. Standerwick, Ltd., King Edward Garage, Blackpool, are:—London—15s. single, 25s. return; Birmingham—12s. 6d. single, 20s. return. From Manchester there are six daily services to London:—Eniway Services, 27 Lower Mosley Street, Fingland's Hire Cars, Ltd., St. Peter's Square, Holt's Yelloway Motors, 55 Peter Street, Majestic Motors, Oxford Road, Manchester Motorways, 52 Lever Street, Roscoe Services, 17 Oxford Road. The old rate to London was 20s. return. It is now 25s. Coming to Liverpool we find the increase is even more pronounced. Up to recently the single fare was 12s. 6d. single and 20s. return; now it is 15s. single and 27s. 6d. return. Mr. G. Taylor, of Chester, and Mr. A. Harding, Birkenhead, both well-known motor coach proprietors, are associated with a new service know as the All-British Line, which has opened a new London service, travel being via Chester. The other operators on the London route are Rymers, 17 James Street, Crosville Motor Co., Imperial Motor Services, 308 Upper Parliament Street, Pearsons "Happy Days" Motorways, Shaw Street, Merseyside Touring Company, Islington, MacShane's Motors, Commutation Row. This month Messrs. Rymers resume their daily services to Glasgow, Bournemouth and Torquay. Their new fleet of 1930 vehicles, which will carry 25 passengers, will be provided with toilet room accommodation. The motor coaching season in South West Lancashire has opened very auspiciously and the prospects are bright.

The Cheadle Express.—The photograph shows another representative type of express coach by Tilling-Stevens Motors, Ltd., 5, Iddesleigh House, Caxton Street, Westminster, London, S.W.1, as operated by Mr. Hugh Wilshaw, Litley Garage, Cheadle, Stoke-on-Trent. The



THE TILLING-STEVENS EXPRESS COACH REFERRED TO IN TEXT.

chassis is type B.10.A.2. with 16 ft. wheelbase and there is accommodation for 34 passengers. The bodywork was carried out by John Buckingham, Ltd., of Bradford Street, Birmingham, and the vehicle was supplied through the Cobridge Motor and Engineering Works, of Burslem, Stoke-on-Trent.

Licences Granted.

The Watch Committee of the Oldham Corporation has granted licences to Mr. Herbert T. Easton, of Redcar, in connection with a bus service between Redcar and Liverpool via Middlesbrough, Stockton, York, Leeds and Manchester.

The Watch Committee of the Eastbourne Corporation has granted two additional motor coach licences to G. B. Motor Tours, Ltd.

The Watch Committee of the Brighton Corporation has granted a licence for a motor coach to Messrs. Thorne Brothers and to the Pilot Motor Services, Ltd., subject to the special conditions applicable for vehicles plying for hire between Brighton and London.

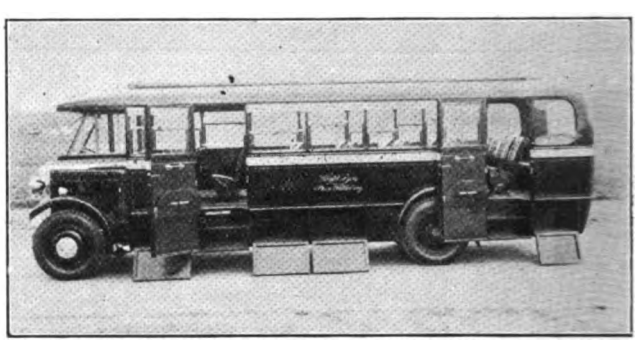
The Watch Committee of the Birkenhead Corporation has granted the applications from Mr. Alfred Harding, of Birkenhead, and Mr. George Taylor, of Chester, for hackney carriage licences in respect of a joint long distance service.

The Watch Committee of the Sheffield Corporation has granted the following bus licences:—L.M.S. and L.N.E. Railways—Sheffield to London and Sheffield to Manchester and Blackpool, and Mr. E. Warriner, Sheffield—Sheffield to Blackpool.

The Watch Committee of the Oldham Corporation has granted bus licences to Messrs. Joseph Hanson and Son, Ltd., of Milnsbridge, Huddersfield, for a service between Oldham and Huddersfield.

The Watch Committee of the Oldham Corporation has granted a licence to Messrs. Holt Bros. (Rochdale), Ltd., in respect of proposed services between Rochdale and Torquay via Oldham.

The Watch Committee of the Oldham Corporation has granted a licence to Mr. Joseph Roscoe, Manchester, in respect of proposed services between Oldham and London and Oldham and Torquay.



THE COMMER "AVENGER" COACH.

Commer "Avenger" Coach.—The coach shown in the photograph has recently been delivered by Commer Cars, Ltd., of Luton, to Wright Bros., of Ealing, and is one of two recently added to their fleet. Wright Bros. are the owners of some 20 Commers of both goods and passenger types.

The New Chantry Bridge, Rotherham.

OPENING the new Chantry Bridge at Rotherham, Yorkshire, on April 28th, Mr. Herbert Morrison, Minister of Transport, referred to the fact that the new bridge replaced one of the extremely rare Chantry bridges but had been so designed as to preserve the original chapel. The bridge, which had been replaced by the one he was now opening, was a composite one, half being mediæval and the other half being of Georgian date. The latter portion had been demolished while the mediæval portion, including the Chantry, had been preserved and now formed an annexe to the new reinforced concrete structure. Although the Ministry of Transport was a modern Department of State, it could be said with truth that wherever it was reasonable to do so, it had taken pains to preserve beautiful relics of past days as well as to encourage new creative efforts. This was an age of machinery and we should be on our guard against forgetting and obliterating the charms of the handicraft and craftsmanship which transfigured the middle ages. The Ministry of Transport was doing its best to serve the cause of archæology and to preserve the traditional charms of village, town and countryside. This was largely the purpose of the 300 miles of by-passes, in the construction of which the Department had assisted. In a number of cases where grants had been given to enable new bridges to be built, the mediæval structures had been left intact. The Ministry was contributing to the cost of planting trees and shrubs and forming grass verges in connection with highways, and it would always welcome proposals of that sort when submitted by local authorities. In preserving antiquities, however, it was necessary to guard against the glorification of spurious antiquities such as weak, narrow and dangerous canal bridges and other public inconveniences of a like character. There was great need for local authorities to grapple with this problem and the similar one of level crossings. The present time was extremely favourable for such work—firstly, because of its value in stimulating employment, and secondly, because on important roads a 75 per cent. grant could be obtained from the Road Fund in suitable cases, the inclusion of fees for consulting engineers being allowed where appropriate. It was particularly necessary at this time that all classes of local authorities should push forward with useful works calculated to absorb unemployed labour. Early preparation of plans and other details was very necessary if undue time was not to be lost.

North Midland Road Transport Joint Board.

AT a Meeting of the Board held in Nottingham on Monday, April 28th, 1930, the following resolution was unanimously passed:—

"That owing to the decrease in the cost of living on April 1st, 1930, to 57 per cent. above pre-war standard, and in accordance with the regulations contained in the Minimum Standard Rates of Weekly Wages Schedule, there shall be a decrease in wages of 2/- per week in the case of those of 18 and over, and 1/- per week for youths under 18; but that 1/- and 6d. only per week of the decrease respectively shall operate as on the first pay day after Monday, April 28th, 1930, and the full decrease of 2/- for adults and 1/- for youths shall only come into operation on the first pay day after Monday, June 16th, 1930.

Any variations of the Index figure during the period before the meeting in July shall not affect the foregoing decision."

The effects of the foregoing resolution upon the Schedule dated 28th April, 1924, will be as follows:—

On the first pay day immediately following April 28th, 1930, the present reduction in force on the schedule figures, of 1/- and 6d. respectively, will become 2/- and 1/-.

On the first pay day after June 16th, 1930, the reduction upon the Schedule will become 3/- and 1/6d.

Hull Traffic Association.

THE Second Annual General Meeting of the Hull Traffic Association was held in the Council Chamber of the Hull Incorporated Chamber of Commerce and Shipping, Bowl-alley Lane, on April 29th last.

Mr. Ed. Dumoulin, J.P., who presided, in moving the adoption of the Secretarial and Financial Reports, congratulated those responsible for the excellent progress of the Association. Referring to the syllabus, he recalled the many interesting lectures, the informative character of which was well known to the members. The Association had been extremely fortunate to have the assistance of such eminent speakers, whilst the influence of the Chairman (Mr. W. A. Winson) in making these engagements possible, could not be overlooked. The Association was doing much valuable work and had established itself as a very useful body for the study of the many complex problems of transport.

After some slight alterations to the rules had been agreed, the election of officers for the 1930-31 session took place, as follows:—President, Mr. Ed. Dumoulin, J.P.; Vice-President, Mr. J. A. Lacey; Chairman, Mr. W. A. Winson; Vice-Chairman, Mr. W. H. Rowley; Hon. Secretary, Mr. C. E. Douthwaite; Hon. Treasurer, Mr. S. Hattan. Committee: Carrying Services.—Mr. W. V. Copeland (Shipping), Mr. G. H. Marshall (Road), Mr. A. Griffiths and Mr. Elliott Taylor (Rail). Industrialists.—Mr. R. W. Bankes, Mr. A. W. Day, Mr. A. J. Foulston, Mr. A. E. Hodge, Mr. E. W. Hodge, Mr. G. W. Hoey, and Mr. C. P. Sykes.

In response to invitations extended to the members, a number of useful suggestions, calculated to increase the already high efficiency of the Association, was referred to the Committee for consideration.

The meeting ended with hearty votes of thanks to the President, to the Chairman, and to The Hull Incorporated Chamber of Commerce and Shipping.

The Ballast, Sand and Allied Trades Association.

WE have received from Mr. G. V. Smith, the Secretary of this newly formed association, some particulars of the first General Meeting together with some facts about its programme and the objects with which it has been formed. The main purposes of the Association are to adopt a system of loading lines for lorries showing cubic carrying capacity and a system of delivery tickets to be used in conjunction with the loading lines, with a view to insuring that the correct amount is collected at the pit and delivered to the consumer. A badge will also be used to enable the consumer to identify immediately a member of the Association. The use of the badge will indicate to the consumer that the seller or merchant has definitely bound himself, or in the case of a company itself, to abide by the loading line and delivery ticket system and this should inspire a feeling of confidence with the consumer. We are informed that the necessity of such an Association has made itself felt to firms engaged in the trade as certain undesirable practices with regard to measurement are assuming such proportions that in a great many instances these are now being regarded as the "custom of the trade." This point was emphasised by Mr. F. Wells, Wraysbury Sand & Gravel Co., Ltd., the Chairman of the Association, in a speech which he delivered at the meeting. The Vice-Chairman is Mr. Joseph Sabey, of H. Sabey & Co., Ltd., and a number of well known men connected with the trade are on the Executive Committee. The offices of the Association are at 124, Tottenham Court Road, London, W.1. It is hoped that all who are concerned with raising the status of the trade will give their support to the Association by becoming members.

R.A.C. Guide and Handbook.

THE 1930 edition of the R.A.C. Guide and Handbook, which is just published, contains over 800 pages of diversified information, and is one of the most valuable Road Books published.

The principal feature of the book is the Directory which is a complete *vade mecum* for the motorist on tour in this country. It contains particulars relating to over 2,000 towns in Great Britain and Ireland, including such information as early closing days, licensing hours, R.A.C. hotels and garages, restaurants, parking places, golf clubs, and places of local interest. Town plans, showing by-passes, are given for all the important towns and a 32 page road map of the country.

Additional to the Directory is a list of the 1,000 odd R.A.C. Inns where the standard R.A.C. 2/- meals are obtainable, a list of camping sites with the name and address of the proprietor, ferry services with time-tables and charges, toll roads and bridges, the best routes in and out of London, the principal hills in the country with length and average gradient, and the position of the 420 R.A.C. Road Telephone Boxes with numbers.

The Foreign Touring Section is invaluable to motorists touring abroad.

The general information includes a summary of the laws relating to the use and ownership of cars and motor cycles; rules of the road, hints on first-aid, speed tables, lighting-up tables and a list with addresses of the various registration authorities. The price, post free to R.A.C. Members and Associate-Members, is 1/6d., and to the general public 4/-.

Summer Shell for Summer Motoring.

OIL companies have for many years recommended changing the grade of lubricating oil according to the season; but in announcing a new blend of No. 1 petrol, called "Summer Shell," the Shell people are the first in the field to provide alternative fuels for winter and summer use. This new summer petrol will be available at the same price as "winter" petrol on and after May 1st.

In a climate which shows a variation of about 40 deg. between the average winter and summer temperatures, it is obviously extremely difficult to prepare a single blend which will satisfy the very different needs of cold and hot weather motoring. The motorist has but to compare the routine for starting in January, say, and in June to appreciate how wide that difference is.

In winter the ideal fuel should contain a big proportion of volatile elements to ensure quick starting. In summer, on the other hand, volatility is not so necessary and may be a definite drawback, since a very volatile fuel on a hot summer day would waste away far too quickly with a consequent serious reduction in mileage.

In blending Summer Shell, therefore, the aim has been to subtract the superfluous, volatile quick-starting elements from "winter" Shell and to replace them with those which will maintain the mileage, and balance with the rest of the blend to give the utmost pulling power, ensure easy, rapid acceleration and be proof against "knocking."

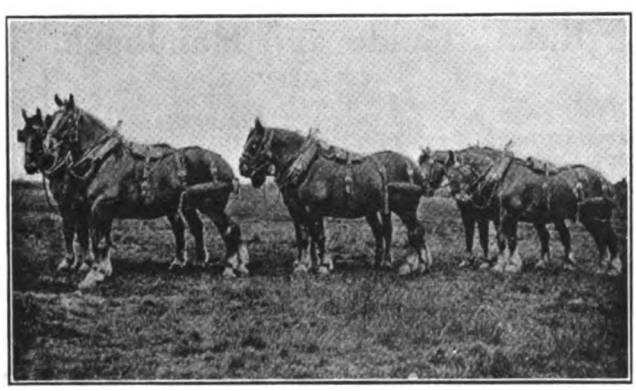
News from all Parts.

Institute of Transport Congress.—The annual Congress and Summer Meeting of the Institute of Transport will be held at Glasgow from July 8th to 12th next, and the undernamed have been appointed members of the Congress Local Committee:—The Rt. Hon. the Lord Provost of Glasgow, Messrs. C. A. Bremner, J. C. Christie, W. Crozier, Ex-Bailie P. J. Dollan, Dr. K. G. Fenelon, Messrs. F. A. Fitzpayne, A. Fulton, E. Graham Guest, J. L. Gunn, W. Johnston, I. Kempt, T. A. Kerr, R. McLeod, T. Moffat, D. P. Morrison, A. Morton, A. H. Roberts, C. H. Stemp, Bailie J. H. Stevenson, Messrs. W. J. Thomson, D. C. Urie, J. N. Wilson, W. Wood, and the Hon. Secretaries, Messrs. R. Killin and L. Mackinnon. At the first meeting of this Committee a smaller Executive Committee was appointed comprising:—Messrs. J. C. Christie, W. Crozier, F. A. Fitzpayne, A. Fulton, E. G. Guest, T. A. Kerr, R. Killin, L. Mackinnon, R. MacLeod, T. H. Moffat and A. H. Roberts. The four main line railway companies, the Metropolitan Railway, and the London Underground Railways and L.G.O.C. Group, subject to the exigencies of each company's business and other material circumstances, will give sympathetic consideration to applications from their junior officers who are members of the Institute, for leave of absence (as part of their annual holiday) to attend the Congress.

London Cart Horse Parade.—By the kind permission of H.M. First Commissioner of Works, the London Cart Horse Parade Society's Fortieth Annual Parade will be held in the Inner Circle, Regent's Park, London, N.W., on Whit Monday, June 9th. This Parade will again be open to all drivers of Cart Horses within the Metropolitan Police area, to whom will be offered cash prizes by the



A FINE TEAM OF SUFFOLKS.

Society in addition to cash premiums donated by the Shire and Suffolk Horse Societies. Brass Merit badges, presented by the R.S.P.C.A., will be handed to each winner of of First prize rosette during the March Past in the afternoon. Borough Councils are eligible to compete in a separate section for the various prizes offered. Prizes for Novices will be awarded, viz., to firms entering the Parade for the first time. The usual Long Service Competition will be open to drivers of not less than twenty-five years service with the same firm. Certificates of Merit will be awarded to Managers or Horse Foremen who have had four First prize winners under their control. Entries close at the single fee on May 19th, and entry forms can now be obtained, together with any other information desired, from the Secretary at the Society's offices, 12, Hanover Square, London, W.1.

Sixth International Road Congress, Washington, D.C., U.S.A.—The Sixth International Road Congress will be held at Washington, D.C., U.S.A., from October 6th to 11th next. This Congress has become one of the great international gatherings of the world. Headquarters are maintained at Paris known as the Permanent International Association of Road Congresses. It meets approximately every three years to review progress made and plan for the future expansion of highway transportation and communication in every nation. The Washington Congress will be opened by President Hoover. Although the Congress will be held under the auspices of the Government of the United States, the automotive and allied interests of the United States have united to place at the disposal of delegates every facility to enable them to visualise the extensive use of the automobile and the building of highways. To assure maximum benefits from the Congress the delegates should reflect all phases of highway transportation.

Institute of Transport. Metropolitan Graduate and Student Society.—In the Annual Report for the Session 1929-30 of the Metropolitan Graduate and Student Society of the Institute of Transport, presented at the annual meeting held in London on May 6th, the Committee record a steady increase in the Society's membership. The Society has been greatly honoured during the Session by the presence of Sir Josiah Stamp, G.B.E (President of the Institute of Transport), on two occasions. The speech which he delivered at the Inaugural Meeting of the Session made a great impression on his hearers, and gave much encouragement to the members: on the occasion of the Annual Re-union the members were also privileged to listen to his very happy speech proposing the toast of the Society. The very practical interest which Sir Josiah Stamp, an Economist of International repute, has taken in the Society is very much appreciated. The ordinary meetings of the Society produced very keen discussions, and the Committee encouraged by the increasing numbers of members taking part in these proceedings have, for next Session, arranged for one of the evenings to be given up to a formal debate. This new departure, if successful, will be repeated in subsequent Sessions. The Committee places on record its great appreciation of the action of the Council of the Institute in arranging a tour in Switzerland during the early summer of 1929, and it is hoped that the Council will continue to arrange similar tours at suitable intervals. The experiences gained during such visits cannot be valued too highly. During the year 43 new members joined the Society. The Society expresses its very grateful thanks to the President and Council of the Institute of Transport for their welcome support during the past Session, and its best thanks for the valuable assistance given by Mr. Winter Gray and his staff.

Argentina. 2 Steam Cranes on Trucks, 50 Metric Tons Capacity. — The Acting Commercial Counsellor, His Majesty's Embassy, Buenos Aires, reports that the Argentine State Railways is calling for tenders, to be presented in Buenos Aires by the 10th July, 1930, for the supply and delivery of two steam cranes for service on track of 1.435 metre gauge. The hoisting capacity specified for each crane, which is to be mounted on a truck is 50 metric tons with a radius of 5 metres and 25 metric tons with a radius of 8 metres. Firms desirous of offering cranes of British construction can obtain further particulars of this call for tenders upon application to the Department of Overseas Trade, 35 Old Queen Street, London, S.W.1. Reference number AX. 9518 should be quoted.

Patents and Trade Marks. — A very useful brochure dealing with Patents and Trade Marks, the writer of which, Mr. Benj. T. King, C.I.M.E., is Managing Director of Kings Patent Agency, Limited, Wardrobe Chambers, 146, Queen Victoria Street, London, E.C.4, has recently been issued. The handbook is quite up-to-date and is the result of 44 years professional practice. The subjects dealt with include the following:—Patents for Inventions; Employees' Inventions; Procedure in Patenting; Patents Abroad; Sale of Patents; Designs; Trade Marks; Copyright. A copy of this booklet will be sent free of charge, to any of our readers who are interested and will make application to Kings Patent Agency, Limited.

Re-elected.—Mr. R. J. Armstrong, A.M.Inst.T., Manager of the Removal and Warehousing Department of the Army and Navy Co-operative Society, Ltd., Victoria Street, Westminster, has been returned a member of the Brentford and Chiswick Urban District Council.

Annual Dinner of the Institute of Transport.—The Institute of Transport announces that its Eleventh Annual Dinner will take place at the Connaught Rooms, Great Queen Street, London, W.C.2., on Thursday, March 5th, 1931.

Air Chief's New Post.—Air Marshal Lord Hugh Trenchard has been elected a director of The Goodyear Tire & Rubber Company.

"Service Supreme."—Stewart & Ardern, Ltd., Morris House, 103, New Bond Street, London, W.1, the sole London distributors of Morris Cars, have issued a very interesting book entitled "Service Supreme." The S. & A. "Service after Purchase" policy is a broad one, having as its basis a desire to make all clients happy and contented Morris owners by supplying care-free motoring

Digitized by Google

both to the inexperienced and experienced. This service is made possible by the application of practical knowledge gained over a long period of years, and this enables the organisation of Stewart & Ardern, Ltd., to class itself as specialists in the sales, service and repair of Morris Cars. This book, which is beautifully illustrated, will no doubt convince the reader that the Stewart & Ardern service after purchase is "Service Supreme." Stewart & Ardern's commercial vehicle showrooms are at 371, Euston Road, London, N.W.1.

Britain's Display at Antwerp. — The Department of Overseas Trade announces that the British Government Pavilion in the International Maritime and Colonial Exhibition, Antwerp, is now open to the public, and a ceremonial inauguration will be held on Tuesday, May 20th, when the British Ambassador, the Right Honourable Earl Granville, will be present. A "British Week" is to be held at the Exhibition from July 17th to 23rd, a period which includes the Belgian National Holiday.

Garrett Spare Part and Service Agents for the Southern Area.—Richard Garrett & Sons, Ltd., of Aldwych House, London, W.C.2, who are associated with Agricultural and General Engineers, Ltd., announce the appointment of the well-known London firm of Messrs. Beck & Pollitzer to act as Garrett Spare Part and Service Agents for the Southern Area. The name of Beck & Pollitzer is well-known in transport circles, their head office being at 133/7, Queen Victoria Street, London, E.C.4. At their premises, situated in Hercules Road, which is off Westminster Bridge Road, London, in a central position, they will carry a full range of Spare Parts for "Garrett" Steam Wagons, both four and six-wheel types, and these spares can be dispatched by the quickest route, direct to the customer, on receipt of a telephone message, telegram or letter. They are also in a position to undertake repair work under skilled fitters who have been trained at the Garrett works, and to send out a break-down gang in the case of accident or mishap. Messrs. Garrett & Sons' works are at Leiston, Suffolk.

Change of Title.—The Seiberling Tyre Co. (Gt. Britain), Ltd., 146-7-8, Tennant Street, Birmingham, inform us that they have changed their name to the Seiberling Tyre & Rubber Co. (Gt. Britain), Ltd., this change having been found necessary as they are now dealing in Seiberling moulded hot water bottles and Seiberling moulded bathing caps.

More R.A.C. Guides.—The Royal Automobile Club is proposing to augment considerably the number of R.A.C. Guides on the road during the coming season. The principal duties of these men are to patrol the roads in order to assist any member who may have need of their services, and to act as traffic controls at cross roads and dangerous corners. Whilst the R.A.C. Guides are primarily concerned with the welfare of R.A.C. members, actually they are of immense value to the whole of the motoring community, not only in their capacity as traffic controllers, but also in their ability and willingness to render assistance in a variety of ways.

American Experts for Russia.—In keeping with the present industrial expansion in Russia, a group of 34 skilled mechanics who are a section of about 350 men who will take charge of and instruct the Russian people in modern American manufacturing methods and high speed production, arrived in this country recently in the White Star liner, "Olympic," from New York. These experts have come from the large plants in Detroit and are en route to Stalingrad where a large tractor plant has just been built and equipped with the latest American machinery. Several other American engineers also came over by the "Olympic" and at the invitation of the Soviet Government are visiting Moscow Nijni Novgorod where the building of an automobile plant also is contemplated.

Road Vehicles—Great Britain.—A return has been issued by the Ministry of Transport giving particulars of the gross receipts from the taxation of Road Vehicles for the period from 1st December, 1929, to 28th February, 1930, and of the number of motor vehicles registered for the first time during the month of February, 1930. Copies (price 2/6d.) can be obtained from H.M. Stationery Office, Adastral House, Kingsway, W.C.2. The gross amount received in payment for licences issued during the three months ended 28th February, 1930, was £16,552,113, compared with £15,733,036 in the corresponding period of the previous year. The gross amount is subject to deductions in respect of rebates, refunds, statutory deductions, including costs of collection and administration and the proportion due to the Exchequer, under the Finance Act, 1926, from the net receipts of the taxation of motor cycles and vehicles taxed on horse power. Particulars are given of the total numbers of licences issued and surrendered during the three months to the 28th February, 1930, and of the approximate numbers of licences current on that date. The total number of motor vehicles, excluding tramcars and trade licences, was approximately 1,608,000, compared with 1,481,000 in the corresponding period of the previous year. The total number of mechanically propelled road vehicles registered for the first time in February, 1930, was 20,694, compared with 18,743 in February, 1929, the figures for the several classes being:—

	February 1930	February 1929
Cars taxed on horse power ...	11,331	10,656
Cycles	4,456	3,902
Hackney Vehicles	676	476
Goods Vehicles	3,833	3,126
Other Vehicles	398	583
	20,694	18,743

Foden Speed Six for Murrell's Wharf, Ltd.—We are interested to learn that Murrell's Wharf, Ltd., Road Transport Contractors, Upper Ground Street, Blackfriars, S.E., have just taken delivery of a new "Foden Speed Six" steam wagon, the first to be fitted with pneumatic tyres. This vehicle created a sensation at the Commercial Transport Exhibition at Olympia last November, and Murrell's Wharf, Ltd., who are great believers in steam traction, have purchased two vehicles, one fitted with Henley's Special Reinforced Tyres and the other with Goodrich Tyres. These steam wagons have a legal speed limit of 20 m.p.h. Murrell's Wharf, Ltd., are also taking delivery of two six ton trailers built by Fodens, Ltd., Sandbach, and these are fitted with similar wheels to the Foden speed six, so that all wheels are interchangeable.

Commer Cars Busy.—It is interesting to record that following on the reception accorded the new Commer models at Olympia last year, the volume of business resulting has so far exceeded all anticipations that to keep pace with the demand a twenty-four hour day has been found necessary in the works of Commer Cars, Ltd., of Luton, and deliveries are, of course, being considerably speeded up.

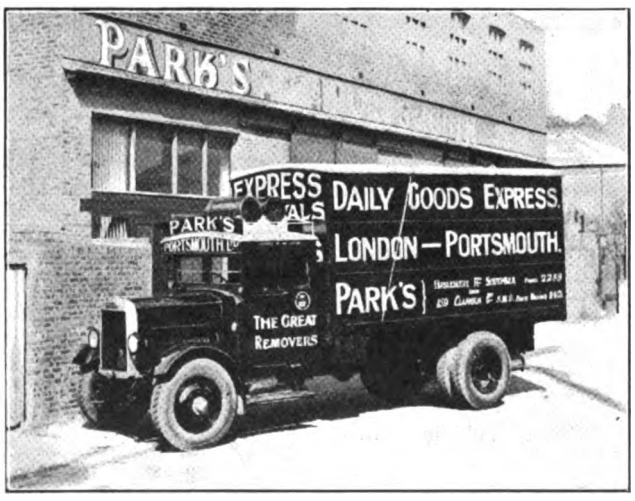
The "A.A." Gets Ready.—The longer, lighter days are here and the Automobile Association has recently laid in a stock of 1930 Road Books. These were printed at Frome in Somerset. In former years they had been brought to London by rail. This year they came by road

THE FIRST OF THE 400,000 A.A. HANDBOOKS LEAVING FOR LONDON ON A.E.C. 5 AND 6-TONNERS EMPLOYED BY H. PYE & SON, LTD.

—400,000 of them. The firm who moved this 150 tons of condensed information on roads, garages and hotels was H. Pye & Son, motor haulage contractors, Cranham Road, London, S.E.16, to-day has twenty-three lorries, and ten of them were used for the A.A. Handbook contract. They were all A.E.C. 5 and 6 tonners.

Simplified Traffic Regulation in Detroit.—A new trend in traffic regulation has been introduced in Detroit where the traffic officers at street intersections are equipped with traffic lights. Red lights are attached to the front and back of their uniform and green ones to their arms. A quarter turn by the officer suffices to stop traffic in one direction and start traffic in the other. The current is supplied from a battery which can be concealed in a pocket.

A Leyland "Buffalo" for Express Goods and Removals Service.—We illustrate the latest addition to the fleet of



A LEYLAND "BUFFALO" IN THE SERVICE OF PARK'S OF PORTSMOUTH, LTD.

vehicles owned by Park's of Portsmouth, Ltd., of Haslemere Road, Southsea. It is a Leyland "Buffalo" 6-tonner and is in service on the firm's daily express goods and removal service between London and Portsmouth.

Society of Motor Manufacturers and Traders.—The annual meeting of the Society was held on May 8th last, the President, Mr. J. Maughfling, C.A., occupying the Chair. In moving the adoption of the report, he said the Society could congratulate itself on the ever-increasing work undertaken by it on behalf of the Trade and its ever-widening interests. The representative nature of the Society and its strong financial position made possible many movements of great value to the industry. In the course of his speech he referred to the Exhibition policy of the Society, which had been a great success and drew attention to the growing attraction of the Commercial Motor Transport Exhibition, the attendances at which had increased considerably. In connection with legislation, the new Road Traffic Bill had been carefully watched by the Motor Legislation Committee, and vigorous representations had been made on behalf of all sections of the industry to the Government on the question of Motor Taxation. The new Council for the year 1930-31 was elected. A report on the finance of the Society was given by Mr. Leslie Walton, this being in a very satisfactory condition. A hearty vote of thanks to the President for his work as Chairman of the meeting was carried unanimously.

MERSEYSIDE.

Warning to Carters.—The Chief Constable of Liverpool has had his attention drawn to the risk of street accidents being caused by carters when leading their horses, not giving warning to following vehicles when turning to the right. Many Liverpool cartage contractors have, therefore, exhibited in their stables the following notice:—"To avoid accidents, carters leading their horse or horses must whenever possible, give a signal to vehicles coming up behind, of their intention when turning to the right."

Negotiations Proceed.—Negotiations are still proceeding between the Liverpool and District Conference of Transport Employers and the Liverpool and District Carters and Motormen's Union on the proposal of the employers that the existing hours and wages agreement should be amended by the insertion of an optional clause, whereby motormen may be employed upon an accumulative working week system. A mass meeting of the men was held to consider the employers proposal, but this did not lead to any conclusive decision on the application. It is expected that a conclusion will be reached some time this month.

"Safety First" Congress at Liverpool.—The city and port of Liverpool which is pre-eminent as a transport centre, has been the venue of many trade conferences in the last five or six years including those of the Institute of Transport, Municipal Tramways and Transport Association and the Institute of Public Cleansing. On 20th, 21st and 22nd May the National "Safety First" Congress will be held in the city. It is an honour to Liverpool to be the first provincial centre to be chosen for this annual conference.

Studying the Driver.—A hostelry for motor lorry drivers is being erected as an adjunct to hotel premises, at the junction of Stopgate Lane and the new East Lancashire Road, Liverpool. The owners of the building, which will be completed in about twelve months time, have shown appreciation of the need for refreshment and rest facilities for the men in charge of long distance haulage vehicles, who very often have to travel during the night hours when the roads are the least congested and snatch what sleep they can in the intervals between loads. In the hostelry referred to, there will be an annexe open day and night where drivers may obtain sleeping accommodation.

Goree Traffic.—One-way traffic has been instituted in the Goree Piazzas, Liverpool. It will be open only to north-bound traffic entering from the James Street end. Traffic proceeding from North to South will be directed by the police via The Strand. Traffic from the south for warehouses, etc., in The Strand, will be allowed to pass direct into The Strand at the James Street end, but through traffic must take Goree Piazzas.

Licences not Granted. — It may be remembered that about twelve months ago the Hackney Carriage Sub-Committee of the Liverpool Watch Committee declined to grant certain licences to the Merseyside Touring Co., Ltd., and other bus companies pending the report on city traffic problems by Sir Henry Maybury. In consequence, the Merseyside Touring Company, Ltd., lodged an appeal with the Ministry of Transport which directed an inquiry to be held. The Ministry in advising the result to the Corporation state that they do not propose to make an order on the Liverpool Corporation to grant the licences asked for.

MANCHESTER.

Mr. H. Howard Robinson.—Mr. H. Howard Robinson, A.M.Inst.T., Secretary of the Manchester Transport (Owners') Association and C.M.U.A. (Manchester Area), joint organisation, and the Manchester Committee of Road Users, has been appointed Chairman of the Transport Committee and the Parliamentary Committee of the Cheadle and Gatley Urban District Council.

Digitized by Google

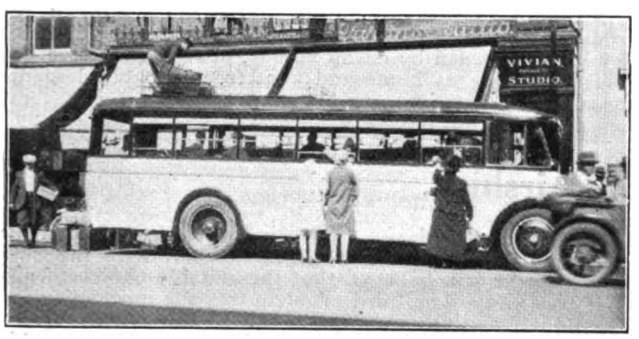
One-Way Traffic.—The one-way traffic system has just been put into operation in several streets off Deansgate, Manchester. Traffic now proceeds down King Street West from Deansgate and up Bridge Street to Deansgate. This scheme was approved some months ago at a conference between the Manchester Committee of Road Users and the Traffic Congestion Committee of the City Council.

Medical Tests for Drivers.—In future the drivers of all public vehicles plying for hire in the city must (if a recommendation of a sub-committee of the Manchester Watch Committee is approved) submit to, and pass, a medical test, in addition to the driving test which is already a condition upon which licences are granted in Manchester.

New Premises.—Messrs. Holt Bros. (Rochdale), Ltd., a firm of pioneers in motor passenger transport in that part of Lancashire where their head office is situated, are developing the furniture removals side of their business and have acquired new premises in St. Peter's Square, Manchester, which will function as a clearing house for goods in transit in and around Lancashire. Messrs. Holt have in commission six large capacity vans in addition to a number of goods haulage lorries. They also control the Yelloway Motor Services which run from Manchester.

MIDLANDS.

Coach Topics.—Quite the most interesting development in Midland transport affairs during the past month is an announcement made the other day that the business of Black and White Motorways, Ltd., of Cheltenham, had been taken over jointly by the Midland "Red" Company and the Bristol Tramways Company. These two companies control an area of local services extending from Somersetshire to Derbyshire. The Black and White



A BLACK AND WHITE MOTORWAYS COACH LOADING UP AT HEREFORD.

Motorways are among the pioneers of long distance services, their first route, London to Cheltenham, being opened in November, 1926, by Mr. G. Readings. The development gives the other two companies a strong interest in the long distance business.

Crude Oil Instead of Petrol.—Walsall Corporation has decided to build a double deck motor omnibus worked on crude oil instead of petrol. This decision has caused much interest among motor manufacturers. The vehicle is being built at a factory in Birmingham and will be ready, it is said, by next August, though the strictest secrecy is apparently being observed in the whole matter. Meanwhile other Midland authorities are considering means for providing cheaper transport.

NORTH-EAST COAST.

Freeing Tyne Bridges.—The freeing from tolls of the High Level and Redheugh Bridges, between Newcastle and Gateshead, with a view to relieving congestion across the new Tyne Bridge, continues to be the subject of negotiation with the Ministry of Transport. The High Level is the property of the L.N.E.R. (to which Newcastle Transport Committee has agreed to pay £10,000 for 15 years in lieu of tolls for its trams), while the Redheugh Bridge belongs to a private company.

Front Exit Trams. — The Newcastle-on-Tyne police authorities are advocating the abolition of front exits from tramcars, with a desire to prevent accidents, but the Chairman of the local Transport Committee, Alderman Rd. Mayne, contends that there is danger either way. He urges that people should step to the nearest footpath on alighting from the tram and there wait till the road is clear. The Gateshead Tramway Co. are unwilling to change from front exit trams, and as the services are interchangeable the matter rests there for the present.

Super Garage.—Plans have been formally passed for a great garage for United Automobile Services, Ltd., at Jesmond, Newcastle-on-Tyne.

Buses for Trams.—The once familiar green trams of the Tyneside Tramway Co., running between Newcastle, Wallsend, and North Shields, have been replaced by double-deck buses.

SOUTH WALES.

Proposed Orbital Road.—For some time past the Cardiff Corporation have contemplated a new orbital road to ease the congestion of traffic in the City, chiefly in Queen Street and Cowbridge Road, which carries the main traffic from Newport and Monmouthshire to the west, through Bridgend to Swansea. The first scheme, decided upon six months ago, from Rumney to Ely, has been abandoned, but the western part of it, to cost £186,000, has been retained. Major Sam Evans, Divisional Road Engineer of the Ministry of Transport, has taken a deep interest in the Corporation proposals and suggested that the new road should emerge in Llandaff at the east side of the Cathedral, the importance of which could be emphasised without disfigurement or injury. There is some opposition to this chiefly on account of the cost of the aqueduct that would be necessary to carry the new road over the extensive low-lying burial ground. Major Evans's line would be more expensive, and he favoured cutting across the Bishop's field on the Cardiff side of the Cathedral with a 40 ft. carriageway, and land on either side for ultimate widening to 90 ft. or 100 ft. One of the most important parts of the Cardiff scheme is a new river bridge over the Taff to connect the two important suburbs on either side of the stream. This scheme would also lead to the opening up of a new garden city on land laid out by the father of the present Marquis of Bute, with stately avenues of now majestic trees, affording a fine view of the Cathedral. Though still considering it, this scheme is likely to be adopted.

NORTHERN IRELAND.

Orders Placed. — Ten of the bodies of the fifty new tramcars required by Belfast Corporation will be built by the Ulster Motor Service Works, Belfast. The order for the remainder has gone to the Brush Electrical Co.

Motor Taxation.—In Northern Ireland the receipts from motor taxation are three times what they were in 1921. During the same period 10½ millions have been spent on road re-construction.

IRISH FREE STATE.

Modern Road Transport and Horse-Drawn Traffic in the Irish Free State.—At a sitting of the De-Rating Commission in Dublin, on April 24th, a memorandum was submitted by Mr. William Deady, of Jerpoint, Thomastown, on behalf of the farming community in the County Kilkenny. This document contained the following passage: Modern conditions of road transport have hit the farmer very hard. The roads, which are mostly maintained out of the local rates, have had to be put in a condition to bear the heavy strain of heavy motor traffic. The rates have had to be increased to bear the extra cost. The withdrawal of the horse from the roads has robbed the farmer of a very good home market, where he formerly enjoyed a good demand for middle-class horses, which were produced on the land cheaply, as also the upkeep of the horse—hay, oats and straw. These sales are now lost to him, and the income from his land is relatively lessened.

Irish Free State Revenue From Motor Vehicle Duties.—For the year ended 31st March last the total revenue derived from motor vehicles duties in the Irish Free State was £868,000. On this basis for the past year, it is now estimated that the receipts for the current year ending 31st March, 1931, will amount to £875,000. In the matter of revenue accruing from taxation, the yield every year from motor vehicles duties comes fifth in the list of receipts in the Irish Free State, the four sources of greater receipts being customs, excise, income tax, and estate duties.

The Question of Tariff on Coach Bodies Imported into the Irish Free State.—In Dail Eireann, Mr. P. S. Doyle asked the Minister for Finance whether the Tariff Commission had yet held a final public sitting on the application made on behalf of the coach building industry for the imposition of a Customs duty on coach bodies imported into the Irish Free State, and whether, having regard to the continued importation of such vehicles, and the consequent threatened closing of coach building firms in the Free State, he would take steps to expedite the issue of the final report? The Minister for Finance replied that the Tariff Commission was considering its report, which he hoped would soon be available.

Railways and Road and Air Transport.

IN a lecture for Graduates and Students of the Institute of Transport, delivered in London on April 15th last, **Mr. R. Bell, C.B.E.,** a Vice-President of the Institute, referred to the Railway investments in Road Transport.

He said that the group railways had used the extended powers conferred upon them by the Road Transport Act of 1928, to enter into partnerships with omnibus companies covering almost the whole country. These transactions involved many thousands of buses, but the problem of securing close working between road and rail was still far from being solved. Optimistic statements appeared occasionally about co-operation having taken the place of competition and "the dangerous competitor of only a few years ago becoming a feeder to the railway." On the contrary, not only were serious inroads being made daily into short distance rail carryings, but both the railways and their associated bus companies had to decide upon a policy for meeting the competition of independent road carriers who were running long distance services between important towns. Were the railways going to imitate some of the American railroads which ran bus services paralleling their lines or were they going to resort to reduced fares and faster trains as a remedy? The railway officer, who was also a director of a bus company, was not going to find it easy to reconcile the interests of the two forms of transport. But for better or worse the railways were now in the road business and one of the first results was almost sure to be the reduction or withdrawal of services on branch lines which did not pay their working expenses.

The railways had recently agreed with "Imperial Airways" that travellers, who had been compelled to break-off an air journey, might travel by train to London without any special payment on presenting their ticket suitably endorsed by a representative of the Air Company. The railways were also prepared to act as agents for "Airways" in the combined transport of freight by air and rail, the parcels being exchanged at the principal London stations. A handbook of "Rail and Air Freight and Insurance Charges" would soon be published. This agreement might bring the day near when the railways would wish to exercise the air powers granted to them last year. The Southern Railway had actually acquired a small shareholding interest in "Airways," coupled with an understanding that any Southern Railway air services, which might be started, would be operated by the Croydon company. The arrangement might well become a precedent for the other railways to follow.

However deeply the British railways became involved in road and air transport, there seemed to be no danger of their passenger trains becoming obsolete. If they assume that each season ticket holder made 600 journeys a year, the four "Groups" carried 1,196 million people last year—nearly 14½ million more than the number carried in 1928. The whole of the increase was in third class travel.

FUTURE PROSPECTS.

At the moment prospects of fresh records in any branch of transport were not bright. The spectre of unemployment would not down. There was a world-wide depression in trade. A large tonnage of shipping was idle. The wise course was to encourage manufacturers to strive to get through the gloomy period by dint of strenuous work, strict economy, the energetic search for new methods and the careful study of the position of each industry regarded as a whole. What was true of manufacture held good of communications. There was no other way of ensuring that adequate and economically organised transport would be ready to deal with the products of the revival in trade the approach of which should be hastened by cheap money, provided that we had industrial peace at home and kept free of entanglements abroad.

Dr. Eckener on Airships.

Dr. Eckener, at a dinner given in his honour at the Athenaeum by Colonel the Master of Sempill, President of the Royal Aeronautical Society, spoke on the future development of the Airship. Dr. Eckener divided the problems which had got to be solved to place airships on a firm commercial basis into three. The first was the necessity for the use of Helium. With an experienced crew there was not the slightest danger from the use of hydrogen, but the time was rapidly coming when there would be many airships, and the crews would not have the necessary experience to ensure that complete regard for safety which was so necessary. Practically all the helium supplies came from the United States, but he thought as a result of his recent visit there that the problem of an ample supply of the gas would be solved. He had no doubt, indeed, that all future airships would be using helium and not hydrogen. Airships were an international problem and the whole organisation of airship traffic must be based on that conception. The second problem to be solved was that of suitable airports. Airports must be chosen not only for the general suitability of their positions for traffic, but so that there was a prevailing wind during most of the year, so that these ships could be taken into their hangars without the difficulty to be faced of a cross wind. He appreciated the experiments which were being carried out with mooring masts, but he still believed that the suitable choice of airports was vital. The third problem was the mechanisation of handling airships on the ground. Many keen brains were working in England, America and Germany on this problem, and when it had been solved one of the greatest difficulties of airship transport would have been conquered. He saw no possibility in the near future of transoceanic traffic for the heavier than air craft, but every possibility for the airship. The third problem he had stated was the one which, when mastered, would be of far-reaching importance to mankind, for it would definitely inaugurate the coming of the airship. There were present at the dinner:—Colonel the Master of Sempill, H.E. the German Ambassador, Herr Dieckhoff, Admiral of the Fleet Sir Charles Madden, Air Vice-Marshal Sir Sefton Brancker, Sir Godfrey Thomas, Rear Admiral Basil Brooke, Lt.-Col. V. C. Richmond, Wing Cmdr. T. R. Cave-Brown-Cave, Flt. Lt. Nixon, Mr. B. N. Wallis, Lt.-Col. M. O'Gorman, Dr. Gerald Merton, Lt.-Col. N. G. Thwaites, Mr. G. H. Thompson, Mr. David Boyle, Captain J. Laurence Pritchard.

Institute of Transport.

THE following gentlemen have recently been elected to membership of the Institute of Transport:—

MEMBERS.

Humpherey, George Edward Woods	General Manager, Imperial Airways, Ltd.
O'Keeffe, James	Manager, Limerick Steamship Co., Ltd.

ASSOCIATE MEMBERS.

Allen, William Percy, M.C.	Dock Superintendent (Middlesbrough), London & North Eastern Railway.
Barton, Charles Edward	Rolling Stock Engineer, Salford Corporation Tramways.
Drury, Richard Gray	Chief Accountant's Office, South African Railways and Harbours.
Lazenby, Williams Edward Carr	Principal Assistant to Chief Officer for Labour and Establishment, London, Midland & Scottish Railway.
Robinson, George William	General Manager, Yorkshire Traction Co., Ltd.
Stanley, Gordon Valentine	Manager, Croydon Corporation Tramways.

ASSOCIATE.

Gage, Lionel William	Transport Manager, Joseph Burton & Sons, Ltd. (Nottingham).

British Association of Shipping and Forwarding Agents.

A MEETING of the Council of the British Association of Shipping and Forwarding Agents was held at the London Chamber of Commerce on 10th April last.

Mr. A. W. Heard (Jones, Heard & Co., Ltd., Newport, Mon.), the Chairman of the Association, presided, and was supported by Mr. M. E. Duffett (J. D. Hewett & Co., Ltd., London) and Mr. Norman N. Bird (Herbert Watson & Co., Ltd., Manchester), two of the Vice-Chairmen of the Association.

The following gentlemen were also present:—Mr. F. H. S. Rouse (American Express Co., Inc., London), the Hon. Secretary and Treasurer, Mr. J. B. Taylor (Immediate Transportation Co., Ltd., London), Mr. W. O'Brien (G. W. Sheldon & Co., Ltd., Liverpool), Mr. G. W. Robertson (Robertson, Buckley & Co., Ltd., Liverpool), Mr. J. B. Bower (F. Bower & Co., Liverpool), Mr. J. B. Ballantyne (J. B. Ballantyne & Co., London), and the Solicitor to the Association.

Apologies for inability to attend were received from Mr. W. H. Elder (W. H. Elder (Shipping), Ltd., Hull), a Vice-Chairman, Mr. F. J. Gerson (Rosenberg, Loewe & Co. (Succrs.), Ltd., London), Mr. J. O. Wood (T. F. Wood & Co., Ltd., York), Mr. A. MacCulloch (MacCulloch, McLellan & Pollok, Ltd., Glasgow), Mr. A. Faulkner (Crowe & Co. (London), Ltd., Manchester), Mr. E. W. Turvey (Nunzi & Co., Ltd., London), and Mr. W. H. James (James & Hodder, Bristol).

The minutes of the last Council meeting, held on the 17th January, 1930, were signed as correct.

The Association's Solicitor announced the progress made with regard to the incorporation of the Association. He said that the incorporation was practically a *fait accompli* and that there only remained the completion of certain legal formalities. Two advertisements had been inserted in the Press and if no public objection was raised within 14 days the matter would go through automatically.

The Solicitor was requested to proceed with his negotiations with the Board of Trade, and also to arrange for the Memorandum and Articles of Association to be re-set in type for printing in book form, the proofs of which would have to be presented for signature by members of the Council.

The Hon. Treasurer presented a statement of Accounts as at 10th April, 1930, which showed a very satisfactory financial position, and it was gratifying to note the way in which this year's subscriptions had come along. The accounts were adopted.

Humber Steamship Owners' Conference.—The Chairman reported that a deputation consisting of Mr. Duffett, Mr. Elder, Mr. Faulkner and himself met the Conference on the 5th March 1930. The Conference, however, did not see eye-to-eye with them and were not disposed to fall in with the wishes of the Association, but it was arranged to dispatch a letter to the Conference suggesting that as they could not see their way to adopt the proposal for a specific charge for Customs' entry for free goods and other services, they should consider an alternative in favour of Forwarding Agents. This letter was despatched on the 5th March and an acknowledgment received on the following day. It was considered that the matter should be left over until the Humber Steamship Owners' Conference had had adequate opportunity of meeting and discussing the matter between themselves.

International Federation of Forwarding Organisations.—Advice was received that the Annual General Meeting of this Federation would be held in Antwerp on the 5th June, 1930, and it was unanimously agreed that Mr. F. J. Gerson be asked to represent the Association at this meeting.

Calcutta Steam Trade Conference Rebates.—The attention of the Association had been drawn by a member of the London Shipping and Forwarding Agents' Conference to a printed note on the Rebate Form of the Calcutta Steam Trade Conference which stated that rebate was not allowed on "freight payable abroad, nor on private effects, passengers' baggage, etc., nor to Shipping or Forwarding Agents."

Road Traffic Bill.—A Glasgow member had drawn the attention of the Council to Clauses 52 and 57 of the Road Traffic Bill and suggested that some protest should be made by the Association against these clauses, as in his opinion they affected all Shipping and Forwarding Agents who have occasion from time to time to employ haulage contractors for the conveyance of heavy goods by road. A letter had been addressed to the London Chamber of Commerce asking what action, if any, was being taken by the Chamber in regard to the Bill, and a reply had been received that no action had been taken. The London Conference had also written to The Commercial Motor Users' Association (Inc.) on the subject and they replied to the effect that, with regard to Clause 52 (Provisions as to Extraordinary Traffic), this merely recited the existing law on the matter, and with regard to Clause 57 (Application to Scotland), this did not affect them as their organisation did not cover Scotland.

A member stated that he had made some enquiries and found that the clauses did not appear to affect the Forwarding Agent at all.

In view of the opinions expressed, it was felt that there was nothing the Association could usefully do by following the matter up, and it was decided that a reply on these lines should be made to the member who raised the point.

Trade Terms.—The Chairman reported that a copy of a brochure of "Trade Terms," Second Edition, price 10/6, had been received from the International Chamber of Commerce, and was in the hands of the Secretary, to whom application should be made if copies are required.

Competition from Steamship Owners.—The Chairman stated that the American Section of the London Conference had received a complaint with regard to certain Steamship Owners who have forwarding departments utilising information gleaned from the manifests of cargo going through in order to canvass clients' traffic, to the detriment of the Shipping and Forwarding Agent. It appeared that the matter had been pursued privately between a certain member firm and the Chairman of the American Section, and it was hoped that from the progress already made the Chairman of that Section would be successful in bringing the whole matter to a satisfactory conclusion. There was a possibility, however, of similar activities in the case of other lines, quite apart from those operating in the American trade, and it was generally agreed that the particular case in point might be allowed to develop and if brought to a successful issue the matter could be pursued in other directions with advantage.

A member reported with regard to the Association joining the North Atlantic Shippers' Conference. He had also taken the matter up with the Manchester Chamber of Commerce and found that only actual merchants and shippers were eligible for membership.

It was reported that a member of the London Conference had raised a complaint concerning the action of a certain Railway Company in canvassing traffic belonging to Forwarding Agents en route for the Continent. The matter had been taken up with an official of the Company concerned, who undertook to look very carefully into it.

A hearty vote of thanks was accorded the Chairman, who thanked the members for their attendance and support. This concluded the business of the meeting.

West African Freight Conditions.—Mr. J. H. Sharrock, the Chairman of the Liverpool Board of Elder, Dempster and Co., presiding over the annual meeting of the African Section of the Liverpool Chamber of Commerce, spoke of the unfortunate circumstances that had arisen between the West African Conference Lines and the United Africa Company. It was to be hoped, he said, that the formation of an association of independent merchants and shippers would provide a medium by which the leading merchants and shippers in the West African trade would be able to co-operate and, in conjunction with the Conference Lines, find a permanent basis for equitable trading conditions for all concerned.

Unique Ship Repair at Tyne Yard.—A unique ship reconstruction and refitment job, costing over £100,000, was carried a stage further recently at Palmers' yard, Hebburn-on-Tyne, when the bow and mid portions of an Anglo-American oil tanker were floated out of the dry dock, where the vessel has been cut in three, and the new mid portion, launched a short time ago, was floated in. The old bow portion will next be floated back into position and the three portions will then be joined up. The vessel is the Anglo-American Oil Company's "Cadillac," of 12,000 tons, one of the largest tankers afloat. The new mid portion is over 300 ft. long and 66 ft. broad and contains 4,000 tons of British steel.

International Federation of Forwarding Organisations.

Third Congress to be held at Antwerp on June 5th.

As announced in our last issue the International Federation of Forwarding Organisations will hold its third Congress at Antwerp and Liege on June 5th next, and already it is evident that this Meeting will be a large and important one. Up to the present affiliated associations in Austria, Belgium, Denmark, Finland, Germany, Holland, Great Britain, Sweden, Norway, Czechoslovakia, Latvia and Switzerland have intimated their intention of being represented, and one may safely assume that this year's attendance will create a record. It is hoped also that delegates from France, Bulgaria, Yugoslavia and Poland will accept the invitation to be present, and will bring their friends in spite of the long distances which some will have to cover, for it cannot be too strongly emphasised that this Congress will afford a really good opportunity for members to get to know each other which is, after all, the basis of all effective associations. The Congress will undoubtedly be a great success, and a manifestation of the conviction of the delegates that the Federation has assumed a position of great importance and influence and assists the progress of each one of the associations affiliated to it.

The Congress will be faced with a long and important agenda which will contain many points of considerable interest, and it is expected that resolutions will be passed of prime importance to the forwarding trade in all parts of the world.

Questions affecting the proposed general conditions of carriage applicable to the forwarding trade; the adoption of a system of universal nomenclature for services rendered by forwarding agents; licensing conditions for the forwarding trade; the creation of a uniform insurance policy, are some of the matters to be discussed.

With regard to the election of the required number of arbitrators from the names submitted by the affiliated organisations in the various countries, it is not out of place to recall that at the Congress held in Berne an International Court of Arbitration was set up to which forwarding agents in all countries adhering to the Federation can submit their differences. The findings of this Court of Arbitration will be valid by law in most countries of Europe, and forwarding agents have, therefore, at their disposal a method of settling differences which is not only considerably expeditious, but infinitely cheaper than the usual processes of the law. A roster of members of this Court of Arbitration was constituted by the submission of names from all the affiliated associations, and the Congress at Antwerp will no doubt confirm the names of these neutral Arbitrators.

With regard to the codification of General Conditions of Carriage for all countries adhering to the Federation, the discussion during the General Meeting at Berne showed that there was unanimity, although it was felt that the aim did not appear possible of achievement in the near future. Nevertheless, the Federation was instructed to undertake preparatory work to this end and to ascertain all existing usages and conditions of carriage, and after a thorough examination to decide whether any General International Conditions could be extracted therefrom. The Associations affiliated to the Federation have been requested to send to the Federation details of the General Conditions under which forwarding agents work in the various countries. After the Meeting held in Berlin on May 9th last, the Federation sent out a draft of general transport conditions, most of which are valid in all countries and can therefore be considered as international custom. These conditions were augmented by clauses from the conditions agreed to between the German forwarding agents and traders, so that a body of conditions was thus drawn up covering all the main activities of the forwarding trade, the object being that after a lengthy period of use they may develop into recognised trade customs. Dr. C. B. Ingwerson (Nordisk Speditor-Forbund, Copenhagen) will read a paper at the coming Congress in Antwerp summing up the results of the activities in this direction. The adoption and use of these conditions would be the first step towards the establishment of uniform conditions throughout the Continent.

With regard to the establishment of a system of universal nomenclature for services rendered by forwarding agents, a Committee was entrusted by the Congress held at Berne with the task of continuing the labours in this matter. It was pointed out that the use of uniform expressions for services rendered, and a uniform method of accountancy between forwarding agents would be a further step towards rationalising the trade. The Federation sent out a questionnaire on this subject in order to collate the facts and the Secretary of the Federation, Dr. Weiss, will report to the coming Congress on this subject.

At Berlin the question was discussed of the Federation publishing a list of the members of all affiliated associations, chiefly in order to advance the idea of mutual co-operation, and Dr. de Jong, of Amsterdam, will read an interesting paper on this subject, pointing out the advantages to be gained by practising a thorough policy of co-operation. It will undoubtedly be agreed that the principle of collaboration will bring benefits to all organisations adhering to the Federation. The principle has not yet been put fully into practise as the best way of bringing about co-operation has not yet been found, and the task of the coming Congress will be to solve this problem.

The Federation has considered the question of licensing conditions for the forwarding trade, and with what regulations an individual had to comply in order to become a forwarding agent. In most countries there are merely certain formalities to be observed after complying with which a man might carry on business as a forwarding agent, without in any way proving that he knows his business properly. The Federation would like to arrange that all individuals desiring to become forwarding agents must obtain licences and would have not only to comply with certain formalities, but shall also have to prove that they possess a reasonable financial standing and really know something about the business.

The Federation has considered the question of the creation of a uniform insurance policy and asked the International Union of Marine Insurance whether it could lend its aid towards bringing about uniformity of policy conditions in cargo insurances. The reply of the Union was to the effect that it would be extremely difficult to deal with the matter on an international basis with much success, but that the matter would be considered at the General Meeting of the Union then about to be held at Vienna. At their preliminary meeting the Cargo Risks Improvement Committee took the view that at present it would be impossible to take a definite standpoint, but that the Committee should keep a close eye on the subject and the following resolution was passed unanimously:— "The 64th General Meeting of the International Union of Marine Insurance is convinced that the question of a unification of cargo insurance conditions, which previously has been discussed by the Union and to which attention has been called by the International Federation of Forwarding Organisations, deserves careful attention." The Meeting expressed the hope that the Union would be able to contribute to the solution of the problem. Since, however, for various reasons the Meeting was not in a position to adopt a definite standpoint on the main question, it was resolved that the matter be passed on to the Cargo Risks Improvement Committee for further study. At the Executive Council Meeting held on the 7th of May last, in London, Mr. A. Rinman, the President of the Union, mentioned the matter again and there was no doubt that many members approved of the proposal in principle. Mr. O. Forsblad, of Göteborg, will report on the matter at the coming Congress of the Federation.

Newcastle Quay Extensions. — The estimated capital cost of extending Newcastle Quay is £206,000, and the Government is granting £75,000 to £80,000 towards the scheme, which has now been formally sanctioned by the City Council. The scheme, which is one of several put forward to provide work for the unemployed, will enable larger vessels to be berthed at the quay, and is now being put in hand.

New Coal Staiths. — The River Wear Commissioners have sanctioned the reconstruction of three of the coal shipment staiths of the Lambton, Hetton and Joicey Collieries, Ltd., at Sunderland. The quay is being rebuilt, with a retaining wall at the rear. The cost of the scheme is to be about £20,000. Lambton, Hetton and Joicey Collieries, Ltd., ship from Sunderland about 2¼ million tons of coal annually.

Digitized by Google

National Federation of Forwarding Agents of Belgium.

(Specially Contributed.)

"RATIONALISATION instead of Competition" is a slogan which has since the end of the Great War been forced upon Industry and Commerce with ever increasing pressure. In every country every branch of commercial activity is realising the necessity of combining into some form of corporate unity for the purpose of mutual defence and support.

Thus we have seen, in the recent past, the establishment (in such countries where they had not previously existed) of National Associations of Forwarding Agents.

One of the most recent of these bodies is the Fédération Nationale des Entrepreneurs de Transports de Belgique, with headquarters at Brussels, which, still in the early years of its existence, is showing a most gratifying activity, profitable to all transport interests no less than to its own members.

During the past twelve months the Federation is able to report a steady increase in membership and valuable work has been done in obtaining the modification or abolition of Communal or National taxation having a hampering effect on the free interchange of commodities.

The Federation has been instrumental in speeding up the remittance of paid-on charges by the Belgian National Railways, a matter of great importance to all traders.

The Federation is fortunate in having as its President Monsieur Jos. Albert de Ryckere, a gentleman with a world-wide experience in the forwarding trade and commerce in general. Its Vice-Presidents and Committee are selected from amongst the most eminent forwarding agents from the principal Belgian cities, and their names are the best guarantee of a businesslike and effective policy.

Particular interest attaches this year to the Federation in that it is acting in June as hosts to the International Federation of Forwarding Organisations, which is holding its third biennial General Meeting at Antwerp.

The British Association of Shipping and Forwarding Agents expects to be represented at this meeting, and those who are already acquainted with the genial personality of Senator de Ryckere have no doubts as to the warm welcome that is in store for them.

Port of London Authority.

THE statistics for the twelve months ended 31st March last, the Port Authority's financial year, show that London's shipping traffic is still expanding. During the twelve months 58,451,685 net reg. tons of shipping used the Port, compared with 55,404,591 net reg. tons during the twelve months previous. Thus there was the substantial increase of 3,047,094 net reg. tons.

Additional tonnage from many parts of the world was recorded; more particularly from India, China, British West Indies, Guiana, British Honduras, Africa, Baltic and North of Europe, U.S.A. and South America. More than 60 per cent. of the total shipping that enters the Port is accommodated in the docks controlled by the Port of London Authority, the balance going to river moorings, riverside manufactories and wharves.

The activity within the Port, apart from the movement of large ships, is clearly shown by the fact that during the year to the end of March last, 152,120 barges, with an estimated tonnage of 9,598,630 tons, entered and left the Port Authority's docks.

There was also an encouraging increase made in the use of the dry docks. 351 vessels with a gross tonnage of 3,422,888 tons were accommodated, compared with 298 vessels of 2,913,047 tons in 1928; an increase of 53 vessels, representing 509,841 tons.

Complete statistics of the tonnage of goods handled in the Port are not available but the figures of the goods dealt with by the Port Authority form a reliable guide to the trend of trade in the Port. These show an increase of 200,776 tons landed during the year, an advance of 9.7 per cent. Fruit and vegetables, wool, wood, paper, wines and spirits, tobacco and cigars, tea and flour were chiefly responsible for the larger total.

The exports handled by the Port Authority were larger by 11,898 tons, or 1.7 per cent.

Stocks of commodities entrusted to the Authority for warehousing totalled 1,161,856 tons in 1930, an increase of 177,053 tons compared with 1929.

All these figures indicate how the development of industry and consequent growth of population in the South of England are making new demands upon the services of the Port of London and increasing the scope of the great markets it serves.

International Maritime and Colonial Exhibition, Antwerp.

THE following are some of the exhibits in the British section of the Antwerp International, Colonial, Maritime and Flemish Art Exhibition now in progress at Antwerp and which continues until October next. Apart from the British Government's own display, there is being shown:—

Model of the River Tyne, measuring 42 feet by 9 feet, showing every detail from the mouth to above Newcastle, including 8,000 buildings, 120 cranes, 45 staiths and elevators and 188 ships. (Tyne Improvement Commission.)

Models of ships frequently seen in the Port of Antwerp. (Clan and Houston Lines.)

Portion of the deck of an Atlantic liner. (White Star Line.)

Full size models of first-class cabin de luxe and single berth cabin. (Union Castle Mail Steamship Co., Ltd.)

Full size model of the front of one of the "Royal Scot" locomotives. (London, Midland & Scottish Railway Co.)

Twenty-seven foot long working model showing methods of working cargo at the port of Accra on the Gold Coast, with African boat boys, cranes and surf boats shown in movement. (Elder Dempster Lines).

Scale working model of the ferry service between Harwich and Zeebrugge, showing shunting of waggons on board the boat. (London and North Eastern Railway and Société Belgo Anglaise des Ferry-Boats).

Electric working model of the Gladstone Docks, Liverpool, showing rise and fall of tide, opening and shutting of lock gates and movement of ships in and out of the docks at any state of the tide. (Mersey Docks & Harbour Board.)

Panoramas of the white cliffs of Dover; York Minster; Edinburgh; and Ireland. (Travel Association of Great Britain.)

Model of compartment boats for carrying coal from Yorkshire collieries to Goole—showing how they are floated on to a hoist cradle and tilted, the coal being tipped down a shoot into a waiting vessel. (Goole Harbour.)

Panorama of the Royal Victoria, Albert and King George V Docks System—the largest sheet of enclosed dock water in the world. (Port of London Authority.)

Weighing apparatus ranging from automatic weighers despatching 4,000 kilos of grain a time to delicate balances for laboratory work. (W. & T. Avery, Ltd., Birmingham.)

Exports at High Level.—At a recent meeting of the Tyne Improvement Commission, it was reported that coal and coke shipments from the Tyne during March were slightly lower as compared with March, 1929, but that for the first quarter of 1930 the total was 4,728,491 tons as compared with 4,577,081 tons last year, an increase of 151,410 tons. During the quarter 17 vessels were launched of 70,791 gross tons, as compared with 18 vessels of 58,705 tons in the corresponding period of last year.

New Deep Water Quay.—The scheme for constructing a deep water quay at Sunderland has received unanimous approval, in principle, from a joint committee representing Sunderland Corporation and the River Wear Commissioners. Estimated to cost £300,000, with £50,000 more for purchasing property, the quay should be built in two years, giving employment to between 200 and 250 men. The Government Grant is expected to be 50 per cent. of the interest only for 15 years.

News from the Ports.

New Director for the White Star Line.—Mr. William Richard Roberts has been appointed a director of the White Star Line and the Oceanic Steam Navigation Company. Mr. Roberts, who has been Manager of the company in Liverpool since December, 1926, was formerly a director and general manager of the Leyland Line (an associated company).

Consular Changes at Liverpool.—Mr. Cyril L. F. Thiel has been appointed as Consul of the United States of America and Senor Don Nicolas Garcia Samudio as Consul-General of Colombia at Liverpool. Senor Don Samudio succeeds Dr. Payan who was held in high esteem by Liverpool shipping and forwarding agents.

Trade Lost by Labour Dispute.—Manchester shipping and forwarding agents in common with the other sections of the mercantile community, suffered by the strike last month of 3,000 dock labourers. After eight days during which time some traffic was diverted to Liverpool, the men returned to work as quietly as when they came out. It is estimated that between £8,000 and £10,000 has been lost in wages.

Better Arrivals of Cotton. — Arrivals of East Indian cotton at Manchester for the first three months of this year considerably exceed those of the corresponding period of last year. One steamer brought a cargo of 10,000 bales and another over 17,000 bales, which easily constitutes a single cargo "record" for Indian cotton.

Manchester Ship Canal Traffic.—From the Manchester Ship Canal Company we have received the monthly approximate traffic return for the month of March, which shows revenue of £106,859, a decrease of £7,844 on the corresponding month of last year. The total for the first quarter of this year was £323,704 as against £336,327 in the corresponding period of 1929, £332,509 in 1928, £346,259 in 1927, and £315,193 in 1926.

Presentation to a Retired Official of the Clyde Shipping Company.—At a meeting of the Waterford Harbour Board, Mr. G. A. Watt, District Agent of the Clyde Shipping Co., at Waterford, who has retired from the service, was presented with a gold cigarette case, suitably engraved, as a token of the high esteem in which he was held on the occasion of his leaving Waterford, where he had been for 24 years past a member of the Waterford Harbour Board. The presentation from the Board was made by the Chairman, Mr. Cassin, in very complimentary terms, and addresses in support were delivered by Mr. Austin H. Farrell, Secretary and General Manager of the Board, Mr. William Friel, Harbour Engineer, and Mr. J. A. Spencer, Vice-Chairman. Mr. Watt suitably returned thanks.

Cold Storage Warehouse at Limerick for the Limerick Steamship Co.—The cold storage accommodation, which the Harbour Board has provided at the port of Limerick, has been rented to the Limerick Steamship Co.

Attracting Business to Hull.—Active steps are being taken by the Hull Development Committee to attract new business to the port. Disappointment is felt at the fact that the scheme, of which much was heard about a year ago, for the establishment of large paper making mills, does not now seem likely to fructify. Amongst recent enquiries received by the Committee was one on behalf of American firms who desired, and were supplied with full local data as a preliminary to a discussion re sites. An important French shipping firm were given general port information, and a similar request came from a Belgian firm. Merchants in Hamburg and Antwerp were given particulars regarding fish meal and soda, and an enquiry respecting cotton seed oil and saga meal for shipment to St. John, Canada, was dealt with. Yorkshire Amalgamated Products, Ltd., Doncaster, and General Refractories, Ltd., Sheffield, are jointly interested in new works at South Cave, a short distance from Hull, for the preparation of moulding sand. These were inaugurated on May 2nd by the Lord Mayor of Hull. The quarries extend over thirty acres and contain the only known deposit in this country of red bonding sand which, with a mixture of silicia, also produced at the quarries, makes a very suitable medium for all classes of moulding, and particularly for castings of steel and iron. The firms hope successfully to compete with Belgian imports.

£15,000,000 for American Shipbuilding.—Three ocean mail contracts for operation between New York and Europe have been signed with the United States Lines calling for an expenditure on American shipbuilding of approximately 78,000,000 dollars (£15,600,000). The New York to Southampton mail contract provides for the construction of two vessels of at least 45,000 tons each, capable of a speed of 28 knots and costing 30,000,000 dollars (£6,000,000).

Southampton Docks. — Passenger movements on the North Atlantic route are now assuming very big dimensions, the predominant trend during the early part of the season being from America to Europe. The extent to which Southampton participates in this important traffic is well illustrated by the list of sailings from this port to the United States, which shows that during May there are no less than forty liners scheduled to embark passengers here for New York alone—an average of more than one sailing per day. This year the Southern Railway Company's seasonal steamship service between Southampton and Caen commences on Friday, 6th June, and will be continued until the latter part of September. The service affords holiday-makers a direct route to the heart of Normandy and one of the most beautiful regions of France. The coming of the summer months coincides with the resumption of organised rail excursions from all parts of the country to the docks, and already some thousands of sightseers have availed themselves of the facilities offered by the Southern Railway Company as dock authorities, and the shipping companies, to view some of the world's largest and most famous ships.

Hamburg-America and North German Lloyd Fusion Ratified.—A Hamburg message says that general meetings of the Hamburg-America Line and of the North German Lloyd have ratified the fusion of the two companies. The agreement recently concluded between the two companies provides for the pooling for fifty years of their interest without, however, interfering with the independence of either of them. The purpose of the merger is to reduce general costs to a minimum, to eliminate competition and to strengthen to the utmost the capabilities of German shipping in international competition. The Combine also includes the Woermann, the German East African Line, and the Hamburg—South America Companies. The total share capital of all the companies is 409,000,000 marks (£20,450,000) and the total tonnage 2,690,000.

Australian Imports Ban. List of Absolutely Prohibited Articles.—Following on the announcement by Mr. Scullin, the Federal Prime Minister, of the complete prohibition of the importation of certain luxury articles, the rationing of others, and of a 50 per cent. supertax in certain cases, the following detailed Customs Proclamation has been issued prohibiting the importation of glucose, biscuits, laundry blue, cheese, candles, confectionery, eggs, lemons, oranges, dried fruits (excepting dates and figs), liquid preserved fruits, cornflour, jams, jellies, jelly crystals and powders, lard, meat preserved in tins and air-tight containers, pork preserved by cold process, dried milk, malt milk, cocoanut and peanut butter, onions, pickles, sauces, chutney, soap and substitutes for starch, custard powders, furs, skins, partly or wholly made-up, blankets, blanketing, rugs (except floor rugs), curtains, textile blinds, tents, sails, barbed wire, cultivators (except hand-worked harrows), stump-jump ploughs, drills, reapers, threshers, harvesters, horse-drawn hay-rakes, chaff-cutters, scarifiers, petrol pumps, electric and gas cooking and heating appliances, wireless sets, headphones, bolts, nuts, nails, electric irons, plate ware (except cutlery), aluminium ware (except spoons and forks), baths, sinks, tiles, opal and sheet glass, sanitary and lavatory articles of earthenware or fireclay, glue, cement, adhesive gelatine, vinegar, cast-iron pipes and fittings, non-flexible shafting, iron and steel beams, and Portland cement. The following are rationed to the extent of 50 per cent. of last year's imports:—potable spirits, manufactured tobacco, cigars and cigarettes, snuff, and locomotives. The following commodities are similarly rationed and are liable to 50 per cent. super-tax; ale and other beers, porter, cider, spirituous perry, perfumed spirits, bay rum, wines, including unfermented grape wine, vermouth, matches and vestas.

Tyne Port Authority.—Alderman J. R. Lawson, of South Shields, has been appointed Chairman of the Tyne Port Sanitary Authority, vice the late Alderman Wm. Clough, of Gateshead, with Councillor John Barker, of Newcastle, as Vice-Chairman.

REUTERS TRADE SERVICE.—By special arrangement with Reuters Trade Service we are publishing news items from all parts of the world dealing with transport matters.

Railway Notes and News.

Railways Act, 1921. — The Minister of Transport has recently made the Southern Railway Order, 1930, authorising the construction of a railway and the acquisition compulsorily or by agreement of lands in the Rural District of Hoo in the County of Kent by the Southern Railway Company and matters incidental thereto.

Great Western Railway Company Assists the Revival of Trade.—In continuance of the policy of assisting the revival of trade, the Great Western Railway Company have placed an order for 100 engines of the 0-6-0 Tank Class, with the following firms:—25 from Sir W. E. Armstrong Whitworth; 25, W. E. Bagwall, Ltd.; 25, Beyer Peacock & Co.; 25, North British Locomotive Co. The value of the order is said to be in excess of a quarter of a million pounds.

Paddington to Penzance. Line Doubled Throughout.—The first of the G.W.R. Schemes, sanctioned by the Government for the relief of unemployment, has just been completed. This is the doubling of the line between Scorrier and Rodruth in Cornwall, a distance of just over 1½ miles. The Company now have a double track throughout from Paddington to Penzance, a distance of 305 miles (except for a short distance over the Saltash Viaduct), and this together with the important improvements to the track now in progress at Westbury and Taunton should materially affect the working of express trains to and from Somerset, Devon and Cornwall, and especially at holiday times when trains from all parts of the country are converging on the West of England.

The Railway Barometer.—The railway traffic receipts of the four group railway companies for the first 16 weeks of 1930 compared with the same period in 1929, are as under:—

	1930 £	1929 £
Passengers, parcels, etc. ...	19,593,000	20,046,000
Merchandise, etc.	20,007,000	19,968,000
Coal, coke, etc.	11,613,000	12,021,000
	51,213,000	52,035,000

The 1929 figures include both "Good Friday" and "Easter" Weeks' traffic, whereas those for the current year are short of the "Easter" Week period.—"Railway Newsletter," May issue.

London & North Eastern Railway Magazine. — The May issue of the L. & N. E. R. Magazine contains the second instalment of Mr. A. L. Gibson's instructive paper on the L.N.E.R. Continental Services via Harwich. Another interesting article describes the Morris Track-Layer, a wonderful mechanical monster which disgorges lengths of track wholesale. Mr. Randall, King's Cross, who knows his subject well, writes on the Railways Act of 1921. There are many other interesting articles most of which are well illustrated.

Hudson Bay Railway to be Ready this Summer.—The Hon. George P. Graham, a Member of the Senate of Canada, drove the first spike for the Hudson Bay Railway, which event took place at The Pas in 1910. While arrangements have not yet been completed regarding the actual date of the ceremony, Senator Graham has been invited to drive the last spike of the road at Churchill some time this summer. In the meanwhile, tenders have been invited for the construction of a grain storage elevator at Churchill, and engineers of the Canadian National Railways declare that the line will be ready for service when required during the coming summer.

Railway Tank Wagons Required in Egypt. — The Egyptian State Railways invite tenders, closing on July 15th, for the supply of twenty ten-ton petroleum tank wagons.

Railways Propose No Increase in Rates and Fares.—The railway companies announce that in connection with the annual review of railway charges under the Railways Act, 1921, they were requested by the Railway Rates Tribunal to state whether they intended to apply for any modifications in the present charges. The following reply has been made by Mr. G. Cole Deacon, the Secretary to the Rates and Charges Committee:—"In reply to the request of the Tribunal that the railway companies should state whether they desire to propose any modifications in the existing standard and exceptional charges at the forthcoming review, I am directed by my Committee to say that, as none of the companies have attained their standard revenue, the provisions of Section 59 (4) of the Railways Act, 1921, would appear to impose upon the Tribunal the duty of making such modifications in the standard and exceptional charges as they may think necessary to enable the standard revenue to be earned. The companies will afford every assistance in their power to the tribunal in the discharge of this duty, but after a full consideration of the position and having regard to the industrial and economic conditions of the country, they are still doubtful whether a general increase of charges at the present time would result in any material improvement in their financial position. The companies do not, therefore, desire to lay any proposals before the Tribunal for a general increase of charges, but I am instructed to emphasise that this must not be taken to preclude them from bringing forward proposals for increasing charges when in their view circumstances justify such a course.

Agricultural Shows in 1930.—The L.N.E.R. Agricultural Shows Booklet for 1930 has recently been issued and may be obtained free from any L.N.E.R. Agency. This booklet contains a list of the Agricultural Shows to be held in Great Britain, lists of London and Provincial horse sales, Weekly and Fortnightly Cattle Markets and Auctions in England, Wales and Scotland, Fairs, and also rates for conveyance of live stock over the L.N.E.R. together with other information.

Officers for Central Vermont. Sir Henry Thornton Re-elected President. — Sir Henry W. Thornton, K.B.E., Chairman and President of the Canadian National Railways, has been re-elected President of the Central Vermont Railway, Inc., a subsidiary of the Canadian National, at the annual meeting held recently. Mr. George A. Gaston was also re-elected Vice-President in charge of the property. Other officers elected by the Board of Directors were:—Vice-President—S. J. Hungerford, of Montreal, who is Vice-President in Charge of Operations, Canadian National Railways. General Counsel—J. W. Redmond, of St. Albans. Comptroller—Edmund Deschenes, of St. Albans, and Clerk and Treasurer—J. B. Wood, of St. Albans. Directors elected at the stockholders meeting were:—Sir Henry W. Thornton, George A. Gaston, S. J. Hungerford, Gerard Ruel, K.C., of Montreal, R. A. C. Henry, of Montreal, J. W. Redmond, E. C. Smith, of St. Albans, J. G. Sargent, of Ludlow, Fred A. Howland, of Montpelier, H. A. Way, of Burlington, and H. J. M. Jones, of Barre. An executive committee, to be composed of Sir Henry and Messrs. Gaston and Redmond, was also elected by the directors.

Big L.N.E.R. Improvements. £1,700,000 to be Expended on Works.—The L.N.E.R. have decided to carry out a large number of works schemes under the Development (Loans, Guarantees and Grants) Act, 1929. The extensive projects, which together total to the sum of £1,700,000, include:—Stratford (Temple Mills)—new sidings; Hornsey (Ferme Park)—new sidings; Bishops Stortford—new sidings; Woodford and Hinton—new sidings; March (Whitemoor)—additional sidings and improvements to engine depot; Mexborough—loop lines and footbridge; Grimsby—dock improvements; Frodingham—new locomotive depot; Hull—sidings, storage ground and docks improvements; Manchester (Ashburys)—new goods depot; York (Northallerton)—main line widening; Bo'ness—sleeper depot; Thornton Junction—new locomotive depot; Inverkeilor—main line widening. In addition to the above new works the L.N.E.R. already have in hand the following schemes under the remission of Passenger Duty proposals on which work is at present in progress:—Romford (East Anglia)—reconstruction of station and doubling of line two miles in length; Hartlepool—additional sidings for coal traffic and the re-arrangement of working facilities. Doncaster—re-modelling of the layout of the Down Mineral Empties Yard; Grimsby (Royal Dock)—installation of electric cranes and construction of upper storey to the transit sheds on the East Side; Doncaster and Spalding—new independent lines between London and Doncaster via March and Spalding; Hull and Grimsby Docks—adaptation of coal shipping appliances for dealing with twenty ton wagons.

New Railway Tariff in Bulgaria.—The administration of the Bulgarian railways has drawn up a new tariff for passenger and goods trains which has been approved by the Minister for Railways. The new tariff, which will come into force on May 15th, has been sent to all foreign railway companies.

Air Transport Notes.

Royal Air Force. Changes in the Higher Commands.—The Air Ministry announces the following appointments:—Air Vice-Marshal Sir John Miles Steel, K.B.E., C.B., C.M.G., now Air Officer Commanding, Wessex Bombing Area, Air Defence of Great Britain, to command the Royal Air Force in India at the end of February, 1931, vice Air Marshal Sir William Geoffrey Hanson Salmond, K.C.B., K.C.M.G., D.S.O., on the latter terminating his period of appointment. Air Vice-Marshal Edgar Rainey Ludlow-Hewitt, C.B., C.M.G., D.S.O., M.C., now Commandant of the Royal Air Force Staff College, to be Air Officer Commanding Iraq Command, in October next vice Air Vice-Marshal Sir Robert Brooke-Popham, K.C.B., C.M.G., D.S.O., A.F.C., on the latter terminating his three years' appointment. Air Commodore Philip Bennet Joubert de la Ferté, C.M.G., D.S.O., now Air Officer Commanding, No. 23 Group, Inland Area, to be Commandant of the Royal Air Force Staff College in September next.

Air Navigators Examination. Successful Candidates.—The Air Ministry announces that the following candidates have passed the examination for 2nd Class Air Navigators Licences held at the Air Ministry, on the 24th, 25th and 26th March:—Mr. P. Bailey, Flight Lieutenant L. K. Barnes, R.A.F., Mr. P. V. W. Foy, Flying Officer A. E. Hill, R.A.F., Flight Lieutenant I. W. C. MacKenzie, R.A.F.O., Flight Lieutenant M. C. Pascoe, R.A.F., Mr. P. Phillips, Miss W. E. Spooner, Miss F. M. Wood. The subjects of the examination were:—International Legislation—Form of the Earth, Maps and Charts—Meteorology—Dead Reckoning and Direction Finding W/T Navigation—The Earth's Magnetism and Compasses—Visual Signalling. To be successful, candidates were required to obtain 70 per cent. of the aggregate marks and not less than 60 per cent. in any one subject. The date of the next examination will be announced later.

Put Irish Air Routes on the Map of Europe!—At a meeting of the Institution of Civil Engineers in Ireland, held in Dublin, a paper on "Aviation and Engineering" was read by Mr. Desmond O'B. McAteer, A.R.C.S., in the course of which he said that when they considered the great amount of trade done between Ireland and Great Britain, and the number of hours spent every year travelling between the two countries, it was obvious that there was a suitable field for the employment of aviation. Cities which wished to be up-to-date must, to his mind, provide their own aerodromes, and the possession of natural aerodromes, like natural harbours, would become an asset to the country. It was high time, at all events, that they should put a few Irish air routes on the map of Europe, and Irishmen could well provide the personnel of such a scheme. Elsewhere Irishmen had built and equipped magnificent aerodromes.

Shell and the Duchess's Flight.—For the record flight of the Duchess of Bedford and her pilot, Captain C. D. Barnard, to the Cape and back, arrangements for the supply of fuel and lubricant were made by the Shell organisation, which supplied a special petrol and "Golden Shell" oil. It is a tribute to the organisation of the Shell Company that its representatives are able to produce the essential supplies at all essential points, however inaccessible, at the shortest notice.

German Flying Concession in Spain.—A Madrid message says that the Cabinet on April 15th approved the concession to Germany of the air services between Barcelona, Cadiz and Seville.

Dunlops and a Record Flight.—The aeroplane in which Captain Barnard flew back to England with the Duchess of Bedford after their record flight to Capetown is equipped with Dunlop wired type tyres and Dunlop patent disc wheels.

Handley Page Bulletin.—The April number of the *Handley Page Bulletin*, published by Messrs. Handley Page, Ltd., Cricklewood, London, N.W.2, contains some excellent photographs of the all-metal Handley Page Clive heavy general-purpose machine which is an entirely new type of Service aeroplane evolved for the Royal Air Force. In response to a number of requests, the *Handley Page Bulletin* will contain month by month pictures of all the different types of aeroplane that have been fitted with the Handley Page wing slots. Many of these photographs possess historical as well as technical interest.

Blackburn Aeroplane & Motor Co.'s Metal "Lincock" Light Single-Seater Fighter Demonstrated in Canada.—In the course of an article appearing in *The Evening Telegram*, Toronto, Canada, on March 26th, the writer says: "In one of the most thrilling exhibitions of aerial acrobatics and mock combat ever viewed by local flying men, a new British-made army fighter, the Blackburn Lincock, was demonstrated at De Havilland's field by Major Geoffrey S. O'Brien. It is the tiniest and most manœuvrable of modern fighting craft ever flown in Canada. The little silver biplane, its blunt nose pugnacious with power, and its swept-back, short wings telling of unlimited manœuvrability, looped and rolled and spun; zoomed under an imaginary foe, dived and twisted, and went up in mighty headlong climbs, in a way which made the ordinary sedate training and pleasure machines seem like road-rollers. The Blackburn Lincock is being demonstrated by the De Havilland Co. to the Royal Canadian Air Force. The same type is used to a large extent by the Royal Air Force in Britain. Its advantages, it is claimed, lie in the fact that the little single-seater is smaller than a Moth, having but a wing-spread of 23 feet, yet has a speed of 150 m.p.h., and can climb three miles into the sky in 20 minutes. Its ceiling is 19,000 feet, although it is not intended to be used for aerial combat at great altitudes. It is equipped to mount two machine guns and oxygen tanks if desired. Should the machine be adopted in Canada it will be manufactured at the De Havilland plant on Dufferin Street . . . . The engine of the Lincock is a 215 h.p. Armstrong-Siddeley "Lynx," yet its performance, owing to its size and design, is claimed to be approximately that of a 400 or 450 h.p. equipped fighting craft."

Brussels-London Air Service.—At 11.30 in the evening of April 14th, a three-engined aeroplane piloted by Cocquyt, with Air Vice-Marshal Sir Sefton Brancker and M. Van Cronbrugge, Director of Belgian Civil Aviation, on board, and carrying about 440 lbs. of mail, left the Haren Aerodrome, Brussels, for London. The flight inaugurated the Brussels-London Night Air Service.

Greater Safety in the Air. International Congress to be held in Paris.—How to improve the standards of aerial safety so as to eliminate to an even greater extent than at present the element of risk, will be the problem facing the International Congress on Aeronautical Safety which will be held in Paris in December. Preparations for the Congress were announced at a luncheon given to the foreign press in Paris recently, at which M. Henri Brunat, of the French Air Ministry, outlined the aims of the movement, which seeks to combine the results of research in the countries where aviation is principally being developed. So far, sixteen nations, including Great Britain, Canada and the United States, have given their practical support to the movement and other adhesions are in prospect.

Aeroplane Services in Canada.—Aeroplanes in the Canadian Government service for the transport of mails have flown 930,000 miles since 1927 with but one fatal accident, says a Reuters Trade Service message from Ottawa. Air mail routes are rapidly stretching out towards the complete spanning of the wide domain from the Atlantic to the Pacific. Eastern ports are already connected by regular services with the larger towns in the Maritime Provinces, Quebec and Ontario, and aerial routes with beacons for night flying now traverse the western prairies. Toronto and Montreal have been recently connected with Winnipeg, so that the Atlantic seaboard is now connected by air with the Rocky Mountains. One link alone remains for the chain across Canada to be complete, and preparations are now being made for the establishment of a service across the Rocky Mountains to the Pacific coast. The Canadian air mail services are not yet entirely self-supporting. Certain sections of the routes have yielded revenues exceeding expenses from the first, but it is believed that it will be three or four years before the air mail comes into sufficiently general use to place the whole system on a paying basis. The air mail rate is five cents a letter, or three cents more than the ordinary letter rate. In one noteworthy case the otherwise uniform five-cent letter rate does not apply. That is in the air service to Aklavik, a little town near the mouth of the MacKenzie river, within the Arctic circle, and over a thousand miles from the northernmost railway point in the western provinces. Except for the aeroplane service established during the past winter, Aklavik for several months in the year is entirely isolated from the rest of Canada and the world. The letter rate to this town is two cents.

Law Cases.

WHAT IS PLYING FOR HIRE?

ANOTHER legal decision to be added to the many that affect the much discussed problem of what is plying for hire was given recently by a King's Bench Divisional Court, composed of the Lord Chief Justice and Justices Avory and Branson. Appellant in the case was the Town Clerk of Burnley, who successfully appealed against an order of the Burnley Justices refusing to convict Mr. Bracewill, bus and motor coach proprietor of Colne (Lancs.) and Nelson, for an offence against the Towns Police Clauses Act, 1847, viz., permitting a motor coach to ply for hire within the Borough of Burnley without a licence from the Corporation.

Mr. H. D. Roome, for the appellant, said what had happened was that the respondent, who ran a service of coaches to London from Colne through Burnley, had an office in the last named place at the premises of Messrs. Wright Bros., in Parker Lane, Burnley. There was exhibited a large notice inviting people to travel by his coaches to London. The cost of each ticket was 25/- either for Colne or Burnley to London, and the ticket entitled the buyer to travel from Colne to London. Each day the coach stopped at the Burnley office for ticket holders who had booked at least 24 hours earlier. It was contended that this was a plying for hire in Burnley, but the Justices held that the case fell within the decided legal authority of "Sales v. Lake" (1922, 1 K.B., 553) and other similar cases and refused to convict.

As a matter of fact, said Counsel, this case was the direct antithesis of "Sales v. Lake." There was no doubt that people booked seats at Wright Bros. premises, paid for their tickets there and boarded the Coach there. Respondent was informed that he would be reported for plying for hire in Burnley without a licence, but he said, "I can't help it, we have applied for a licence." He was not, however, in possession of a licence for the vehicle. The misapprehension that had arisen had come about on the question of antecedent contract.

It was argued that, as the contract was made the previous day for a journey from Colne to London, the fact that Burnley people boarded the vehicles in their own borough did not matter. The antecedent contract was from Colne to London, and it was said that if people who booked from Colne chose to wait until the vehicle reached Burnley before they boarded it, it could not be contended that the bus had plied for hire in that place.

In his submission there was a broad distinction between private hire and general service. This was in the latter category because the coach ran daily over the same route. When a vehicle was hired by an ascertained number of persons for a particular journey in pursuance of a contract made before the journey commenced that was a private hire, but immediately the bus ran daily over a regular route and stopped at all sorts of places to pick up passengers it began to adopt the appearance of a general service. It mattered not whether the fare paid was the same for a part of the distance as for the whole. There were here, in his submission, all the elements of a plying for hire in Burnley: (1) an agent with an office in Parker Lane, (2) advertisements inviting people to travel, (3) the issue of tickets, (4) the daily service and call at Burnley, and (5) the direct solicitation of Burnley people to travel. It was only a little different from the direct plying for hire where a man shouted "Come and ride on this bus." Here the vehicle came along at a specified time whether passengers were there or not, and if passengers were there it picked them up.

The Lord Chief Justice: The tickets are issued for the whole distance.

Mr. Roome: Yes, it is true, but Burnley people naturally do not go all the way to Colne to board the vehicle when it would call for them in Burnley.

Mr. Wrangham, for the respondents, said he could not deny that there was some solicitation but that took place, not on the day on which the offence of plying for hire was alleged, but at least 24 hours earlier.

The Lord Chief Justice: Is not the whole apparatus that of solicitation: (1) the regular periodical service and (2) the office in Burnley where seats might be booked?

Mr. Wrangham: What is charged in this case is that the bus was plying for hire on the Wednesday whereas on that day when it came into Burnley it was completely full with the exception of three reserved seats. If the driver had invited anybody into the vehicle he could not have found him a seat. It could not ply for hire on that day. How can you, at a particular time and place, ply for hire with a vehicle that is already full of passengers?

The Lord Chief Justice pointed out that the plying for hire on one day might have the effect of securing passengers for another day. Although the bus may have been full on the Wednesday it could ply for hire in the sense that it indicated that on the next or some other day it was available for Burnley people who might like to use it.

After hearing further argument, the Court allowed the appeal with costs.

The Lord Chief Justice said the facts of this case were not precisely the same as those in the other cases with which the Court had been concerned on the question of plying for hire. It was perfectly obvious that many minds, not deficient in ingenuity, were at work in the endeavour to see how near the line it was safe to go in these cases without actually transgressing the law.

Here it was argued that no contract was made in Burnley because the journey was from Colne to London. A great deal had been made of the case of "Sales v. Lake": indeed, during the last eight years that case had played a good part in the argument in practically every case dealing with questions of plying for hire. Mr Wrangham had not dealt particularly with that decision and His Lordship would like to say that the decision had to be regarded with reference to the particular facts which there had to be considered. It was an exceptional case and it turned upon the meaning of a Statute where, in order that the offence might be committed, it was necessary that there should be a plying for hire within the Metropolitan Police Area and in a public street, road or place within that district. The present case was not under that Statute at all. It was a case under the Police Clauses Act, 1847, and nothing in it turned on the words "street or place." The question here was whether, on this particular day, the respondent unlawfully permitted the bus to be used as a hackney carriage plying for hire within the Borough of Burnley.

There was in Burnley an office not occupied by the respondent himself but by his agent so that the difference was immaterial. These seats were booked and tickets paid for. Booked and paid for what? For a journey upon a regular daily service to London. There was solicitation of any member of the public to take tickets and if they did so they knew a bus would come along and pick them up in Burnley.

There was a definite distinction between a private hiring and one announced as connected with a daily service between specified places for the benefit of any member of the public who chose to trouble. It had been argued that there was an interval of time between the taking of the tickets and the picking up of the passengers and that, the booking having been made, all the seats were taken and there were no vacant places left. It seemed to him that such cases were immaterial. The case was on all fours with the case of "Griffin v. Grey Coaches, Ltd." (93 Justice of the Peace p. 61). If all the seats were booked in Burnley none other than Burnley people could be taken, and that seemed plain evidence that solicitation had taken place in that borough.

In the circumstances, the Justices had come to a wrong conclusion, for an offence had been committed. Nowhere was there a complete definition of "plying for hire," and it was not right to pick out a particular phrase in any one case and apply it as a proposition of universal force to the different facts in another, or other cases.

Justices Avory and Branson concurred, and the appeal was allowed with costs and the case referred back to the Justices with directions to convict the coach proprietor of an offence.

CLAIM AGAINST HAULAGE CONTRACTOR.

IN the Bow County Court, before Judge Thompson, K.C., Donald Thompson and David Thompson, both of 1a, Brockmill Road, Deptford, S.E., lorry drivers, were the plaintiffs in separate actions against Messrs. Rockman Bros., haulage contractors, of 2, Martin Street, Stratford. Donald Thompson claimed a week's wages in lieu of notice, and David Thompson claimed the balance of a week's money, and a week in lieu of notice.

Donald Thompson gave evidence, and said he was a driver and mechanic to the defendants and had been employed as such for three years. He worked until December 12th, when he fell ill through a swelling in his face. He spoke to the defendants about it, and he was told to go home, and come back when he was well. When he

Digitized by Google

returned on January 7th, he was told there was no work for him. He had never been discharged, and he was engaged on the terms that there was to be a week's notice on either side.

Mr. Rockman said that he put the plaintiff off because he had disobeyed orders. He was instructed to take a lorry from Brixton to Stratford at a certain time, but he did not do so.

David Thompson gave evidence and said he had been employed for eight months, and was engaged as a weekly servant. During one week, he was told to stand off for the rest of the week and return on Friday for two days' money, which he did. He was then told there was no further work for him, and was paid £1 6s. 8d. for the two days he had worked.

Mr. Rockman said that the trouble with David was that he also did not obey orders. All drivers were instructed to immediately telephone to him if they had an accident or breakdown, however slight. Whilst this plaintiff was on his lorry his silencer "blew out," causing a hole, but he did not phone, so the result was that all the fitters had left the premises when he returned and the lorry could not be repaired that night. It was the practice of many haulage contractors to penalise their drivers for disobedience by putting them off for certain periods. He did not know what the law was on the subject but he could only tell them the custom in his trade. He did not know that men so put off could sue him for all their back pay.

His Honour said it was quite a clear case, as weekly notice was the terms of the engagement, and as neither plaintiff had been guilty of gross misconduct to justify instant dismissal, they were entitled to judgment for the amounts claimed, and costs.

THE RIGHT OF LIEN.

In the Bow County Court, before Judge Bairstowe, K.C., William Peters, of the Commercial Garage, 602 Commercial Road, Stepney, E., sued Mr. Wilson, of 42 Nairn Street, Poplar, E., a lorry driver, to recover £9 6s., being as to garage rent for an Austin car at 6s. a week, £6 6s., and £3 the cost of repairs to a gate knocked down by the defendant's lorry.

The defendant said that he garaged an Austin with the plaintiff, but that when he demanded it back and offered to pay what was owing, the plaintiff refused to give it up. Had he let him have it, he could have sold the car three times over. As a matter of fact the car did not belong to him. He had intended to buy it but had decided against it, and what he really wanted to do was to return it to the owner.

Judge Bairstowe expressed surprise that the plaintiff should have held the car simply on the ground that something was owing, when there had been demands for it to be given up.

Mr. Curry, Manager to the plaintiff, said that they were holding the car against garage fees due, and for the damage done to the gate.

Judge Bairstowe said it was quite clear that the plaintiff had no right to charge the defendant garage fees after he had refused the demand to give the car up, but of course there might be some garage money due.

Mr. Curry: We are keeping the car as a safeguard against the gate.

Judge Bairstowe said that the plaintiff had not shown that there was any custom of the trade regarding retaining motor cars in garages if there was an account for rent due, and no custom having been proved it was quite clear the plaintiff had no lien on the car. If the plaintiff chose to keep the car for his own protection for charges he had against the defendant for something, that might be all right, but he could not charge garage rent, and that claim must fail for the charge after the demand for return had been made.

His Honour then went minutely into the matter, and found that before the demand was made £3 6s. had become due for garage rent. He, therefore, entered judgment for the plaintiff for that amount, plus £3 for the gate, making £6 6s. in all, with costs.

THE DE-RATING ACT.
WHAT IS AN INDUSTRIAL HEREDITAMENT.

An appeal of considerable interest to owners of fleets of motor buses was heard in a King's Bench Divisional Court, composed of the Lord Chief Justice and Justices Avory and Branson, on April 15th. The Potteries Electric Traction Co., Ltd., of Stoke-on-Trent, have a fleet of 198 buses and occupy large premises, including a garage for 36 vehicles where they manufacture spare parts. The premises include machine, blacksmith, body building and woodworking shops, and the question for the Court was whether they constituted an "industrial hereditament" that, under the Rating and Valuation (Apportionment) Act, 1928—commonly known as the De-rating Act—was given the benefits of de-rating by the Act. The Assessment Committee of Stoke-on-Trent included the premises as an industrial hereditament in the draft special list and the local Revenue Officer appealed to Quarter Sessions but failed. He now appealed to the Divisional Court on the ground that the premises were not an industrial hereditament and that, on the true construction of the section, they should be excluded from the special list because they were primarily used for purpose of maintaining and reconditioning the buses and not by way of trade or purposes of gain which were the purposes of a factory and workshop within the meaning of the section of the Act.

It was argued for the Company that the premises should be regarded as a whole, and as there was carried on a manufacturing process which brought the premises within the Factory Acts they must be considered to be a factory that should be de-rated. The work carried on was the manufacture of spare parts for motor vehicles.

Giving judgment, the Lord Chief Justice said the questions mainly were whether the premises were primarily occupied for the purposes of a garage, for a motor bus company's undertaking and for the maintenance of the company's vehicles. If they were then they were not de-rated. The case could be narrowed down to a very small point. When the question was asked whether the industrial hereditament came within the Act so as to enjoy the benefit of de-rating it was not enough that it should be occupied and used as a factory or workshop; that circumstance would not avail if, in fact, the premises were primarily occupied and used for any purposes which were not those of a factory or workshop. He was satisfied that this hereditament, at all material times, was primarily used for the purposes of the omnibus company's undertaking; the running of omnibuses and the things appertaining thereto. The spare parts made upon the premises, although they were no doubt made for gain, were manufactured for the upkeep of the buses and not for sale to outside purchasers. In the circumstances, he came to the conclusion that the premises could not be put upon the special list and receive the benefits of the De-Rating Act and the appeal of the Revenue Officer would be allowed with costs.

Justices Avory and Branson concurred.

Belgium.—The Automobile Association has issued a little handbook on motoring in Belgium, which contains particulars of taxes and regulations, hotels and garages. It is issued free to A.A. members.

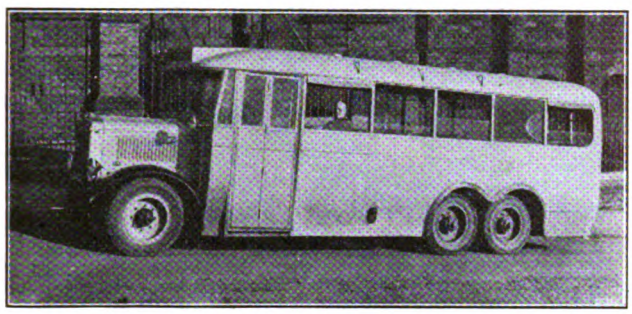
Free Wheeling for Heavy Vehicles.

THERE has lately been placed on the market by Frictionless Mastagear, Ltd., a device known as the Millam free wheel and sprag, which may be embodied in the transmission of any vehicle, light or heavy, and which permits of taking advantage of all down gradients by "coasting" and which yet provides complete safety. It has been recognised for many years past that "coasting" down hill would be an immense advantage, if it could be accomplished without danger. The Millam free wheel and sprag entirely remove this objection by providing absolute immunity from



A KARRIER SIX-WHEELED COACH FITTED WITH THE MILLAM FREE WHEEL AND SPRAG, BEING HELD ON A 1 IN 6 GRADIENT BY THE SPRAG ALONE.

loss of control, as was amply demonstrated to us recently during a 60 mile demonstration run between Newcastle-on-Tyne and Gosforth, the route selected for the return journey from Gosforth via Morpeth being of a particularly exacting nature.

Whilst the Millam patent free wheel is the property of the Frictionless Mastgear, Ltd., Saville Chambers, Saville Row, Newcastle-on-Tyne, the sole manufacturers are Sir W. G. Armstrong Whitworth & Co., Ltd., at their Scotswood Works, Newcastle-on-Tyne. This we consider is an exceedingly important point as what it practically means is that had not this pre-eminently important engineering firm been conclusively satisfied with the performance of the Millam free wheel during the severest of tests covering a long period and with the practicability of the device from purely an engineering point of view, the Millam free wheel would not have made its appearance on the British market, or, at least, not with such an assurance of success as it now has.

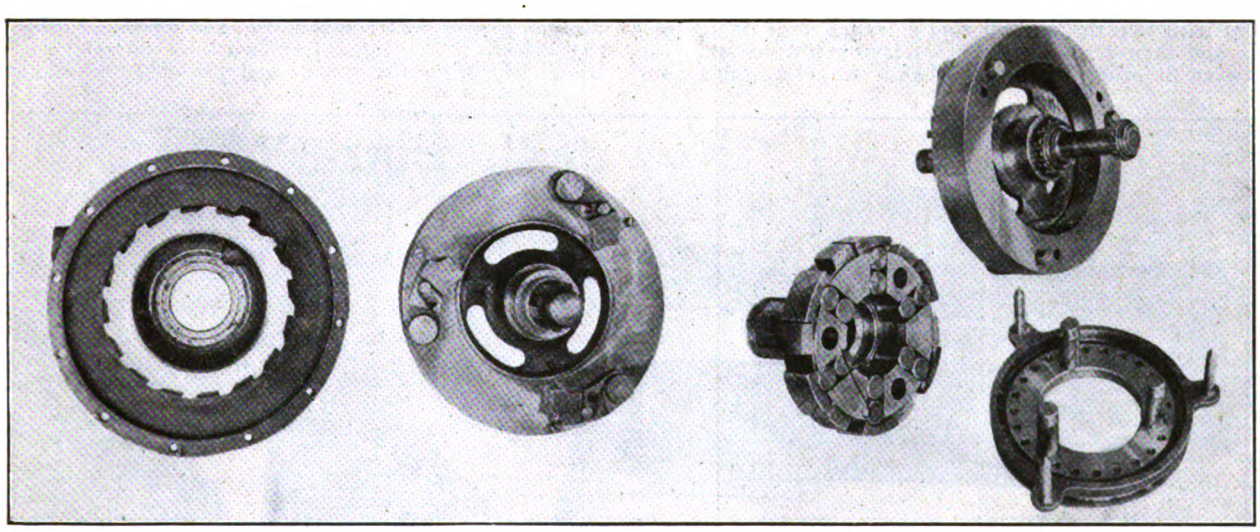
The Millam free wheel is positioned behind the gear box and becomes in fact part of the propeller shaft and taking its drive from the main shaft to which it is attached by a Hardy coupling. The driving portion of the free wheel carries six floating wedges which may be seen in the accompanying illustration. The inside face of each wedge is cut to a special curve so that when the drive of the engine is being transmitted normally to the rear axle, a pair of rollers, also seen in the photograph, force each wedge outward; it is, in fact, a form of expanding clutch. The free action comes into operation when the speed of the rear propeller shaft becomes greater than the speed of the forward propeller shaft. On accelerating the engine so that the speed of the engine is greater than that of the rear propeller shaft the drive is again taken up. The driving proportion of the wheel is enveloped in a casing which constitutes the driven unit, also shown in the illustrations, and it is on the inside face of this casing that the wedges, referred to above, lock when driving and release when free wheeling.

When desired this free wheel equipment may be locked and the drive becomes normal and the full benefit of the braking effect of the engine obtained.

The free wheel also contains a ratchet drum and a pawl plate with three pawls. This part of the mechanism takes effect when the vehicle is brought to rest on an upward gradient. Owing to its braking effect there is no necessity to apply the ordinary brakes; it is, in fact, a safety device of great value as there is no possibility of the vehicle running backward down a slope and, furthermore, it enables the vehicle to be started without the driver having to worry about the brakes, gears, accelerator and clutch, the sprag is in fact perhaps the most important feature of the device.

Another very important advantage provided by the Millam free wheel is that it is not necessary to declutch when changing gear. When a change of gear becomes necessary either up or down, the accelerator is released and the gear lever is moved to the position required and the engagement takes place smoothly. The reason for this is that the gears are not being driven by the rear wheels. When changing going up hill the engine is slowed down and the clutch tipped and then the change can be made instantly.

The weight of the free wheel adds about 1½ cwt. to the weight of a standard bus, nevertheless, as its use relieves many of the transmission units of very considerable stresses it will no doubt be possible to reduce weight in other directions and it is probable that the weight of the free wheel mechanism itself will be reduced in future models.



FROM LEFT TO RIGHT: THE RATCHET DRUM; THE PAWL PLATE SHOWING THE THREE PAWLS; THE DRIVING MEMBER SHOWING THE ROLLERS AND FLOATING WEDGES; (TOP.) THE DRIVEN MEMBER WHICH CARRIES THE SPRAG MECHANISM; THE LOCKING UNIT TO PROVIDE NORMAL DRIVE.

ADVANTAGES CLAIMED.

(1) As the engine, except in exceptional circumstances is not being used as a brake, no oil is pumped on to the top of the pistons where it is burnt producing a carbon

Digitized by Google

deposit, a portion of which finds its way into the sump and destroys the lubricating quality of the engine oil. With the free wheel this fault does not exist and de-carbonisation is reduced to the lowest point and the oil in the crankcase retains its viscosity for a longer period. Furthermore, as for considerable periods whilst the vehicle is free-wheeling, the engine is merely ticking over and the oil in the crankchamber is kept cooler which also helps it to retain its lubricating qualities.

(2) As the clutch is used only about 1/10th as frequently as in the ordinary transmission, its wear and tear is reduced proportionately.

(3) As there is no clashing of gears when changing, the gear box lasts infinitely longer and no metal particles, as the result of gear clashing, find their way into the bearings.

(4) As, when free wheeling, 90 per cent. of the reversal strains are taken off the whole of the transmission, the tendency of the material to crystallise disappears.

(5) With the rear tyres rolling for a large percentage of the distance travelled instead of being driven, there is much less tyre wear.

(6) From trials covering a longer period, the makers state that they have found free wheeling works out at 35 per cent. to 45 per cent. of the total distance covered, which results in a petrol saving of from 10 per cent. to 20 per cent.

(7) There is an oil saving of approximately 60 per cent. the figure being the result of a trial which took place using an old Daimler four cylinder engine bus.

(8) There is a great safety factor in the fact that if the brakes of a bus descending a hill are not acting satisfactorily, there is no trouble in throwing the lever into the lower gear and coupling up the transmission, thus getting an engine brake.

(9) As the driver, except when moving from a dead stand, has not to use his clutch and knows it is not possible to clash his gears, a large proportion of the nervous strain is removed and he becomes a safer and better driver.

CONCLUSION.

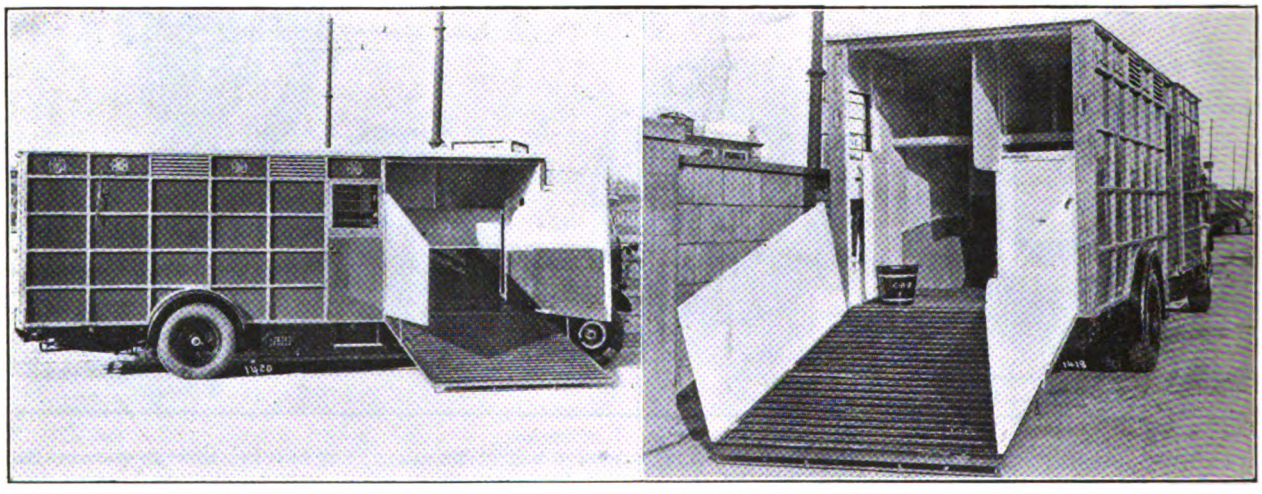
The Frictionless Mastagear, Ltd., and Sir W. G. Armstrong Whitworth & Co., Ltd., state that they were not prepared to permit anyone to see the commercial vehicle type until it has been submitted to the most severe and protracted tests. After these tests the gear was dismantled and was found to be absolutely unmarked.

The following table gives the suggested savings that will be effected by the use of this free wheel on any ordinary bus running from 900 to 1,000 miles per week:—

	Per annum £ s. d.
Petrol saving at 10% ... 1½ gal. per day this at 1/- per gal.—10/6 per week	27 0 0
Oil saving at 10% taking oil at 4/- per gal. ...	2 10 0
Decarbonising twice per annum instead of six times at 35/-	7 0 0
Engine lubrication, Clutch, Gears, Transmission shafts, Back axles, Back tyres — Saving in maintenance, say	25 0 0
Bus will last 25% longer before scrapping, therefore, depreciation will be saved. If the original cost of bus be £1,200 and would ordinarily be scrapped in four years, the depreciation—£300 per bus. An extra year's life to the bus must be worth £300 over the life of the bus now five years—per annum	60 0 0
Total saving per annum ...	£121 10 0

Strachans Horse Vans.

STRACHANS (Acton), Ltd., Wales Farm Road and Victoria Road, North Acton, London, W.3, have recently built to the order and design of Mr. A. P. Hammond, of Newmarket, a four horse box, mounted on an A.E.C. "Regal" chassis, for Captain C. Boyd Rochfort, of Newmarket. The layout of the interior is as follows:—2 stalls at front for horses facing towards rear, then a groom's compartment with two tip-up seats and entrance door on the offside and then 2 stalls for horses facing towards the rear between the wheel arches and then a second groom's compartment with two tip-up seats. The entrance and exit to and from the stalls is by way of two hinged ramps, one at the offside front and one at the rear. These are fitted with speical locking bars and are controlled by "Monarch" patent spring controllers. All interior doors, partitions, etc., are hinged in various ways to facilitate the easy entrance and exit of the horses. The sides of the stalls are covered with cocoa matting to a height of 2 ft. 6 in. from the floor and the remainder stuffed and covered with special quality canvas. Special quality sheet rubber has been substituted for the cocoa matting at the wheel arches in order to withstand the kicking. The floors of the stalls are covered with cocoa matting at the rear and special perforated rubber matting for the remainder. Metal feeding mangers are fitted to the hinged doors at the rear of the stalls. Six "Ashanco" ventilators are fitted in the roof. Just below the cant rail a series of louvre and hit-and-miss ventilators are fitted. A bell push is fitted in the groom's compartment for communication with the driver. The main framework is of ash, the side framing being on the outside and finished in natural grain.



TWO VIEWS OF THE STRACHAN FOUR HORSE BOX.

A second seat is provided in the driver's cab and there is a luggage rail on the roof. Glazing throughout is safety glass. The overall dimensions for the vehicle are:—Length 26 ft. 3 in., width 6 ft. 9¾ in. and height 9 ft. 9 in. loaded. The firm have also built a two horse box mounted on a Reo Pullman type G.E. chassis also to the order and design of Mr. A. P. Hammond, for Mr. R. C. Dawson, Whatcombe, Wantage, Berks. The general design is very similar to the four horse box. The overall dimensions are:—Length 21 ft. 10½ in., width 6 ft. 9¾ in. and overall height 9 ft. 10 in. loaded.

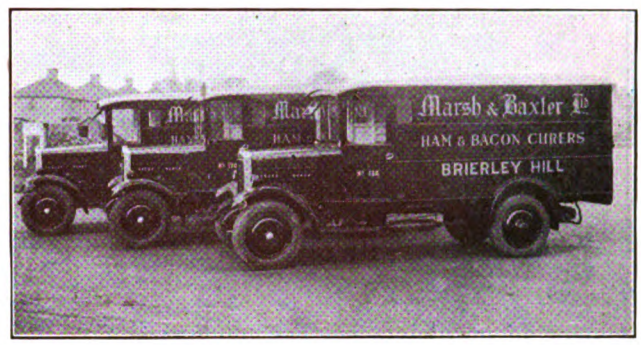
Motor Notes.

Air Compressors.—We have received a list (No. 824) from the Hamworthy Engineering Co., Ltd., Poole, Dorset, of starting compressor sets which are used for supplying compressed air to start large internal combustion engines as well as for other purposes. These compressors, it is stated, will supply air at any pressure up to 1,000 lbs. per square inch.

The A.J.S. "Pilot" Chassis.—Our photograph shows a roomy furniture van body mounted on an A.J.S. "Pilot" chassis supplied to Messrs. Sargents, of Bexhill and St. Leonards, through Messrs. Waghorns, of Bexhill-on-Sea. The coachwork is also by A. J. Stevens & Co. (1914), Ltd., Wolverhampton.

AN A.J.S. "PILOT" CHASSIS FITTED WITH FURNITURE VAN BODY.



MARSH & BAXTER'S 30-CWT. GUY VANS.

A Large Capacity Karrier.—The photograph shows a striking example of a large capacity Karrier van mounted on a rigid frame six-wheel chassis and recently delivered to Nicholas Smith's Garages Ltd., Skipton. The van has a capacity of 9 tons, an overall length of approximately 24 ft. and a body space of 18 ft. by 7 ft. The bodywork, by Ramsden's of Liversedge, Yorkshire, is of plywood reinforced metal. There are two swing doors at the rear together with a chain supported tailboard. The driver and assistants are provided with a comfortable well lighted full-width cab with spring cushions and back rests and an airvac and drop windows provide ample ventilation. Apart from the 50 gallon petrol tank fitted on the off-side the chassis is a standard production being the "KWF6" type. The engine is a four cylinder of 60/82 h.p. The wheelbase is 14 ft. 6 in., track 6 ft. 5 in., turning circle 63 ft. Dunlop tyres 42 in. by 9 in. and there is a 12 volt C.A.V. lighting set.

A KARRIER 9-TON SIX-WHEELER.

FODENS FOR DELIVERY.

A New H.F. Catalogue.—Harvey Frost & Co. Ltd. advise us that they have just published a new catalogue, which they claim illustrates and describes the most comprehensive range of garage equipment yet presented. They inform us that their object has been not so much to describe the merits of each individual item, but to give such data as is required by the garage proprietor when deciding what appliance will best suit his particular needs. The catalogue contains information regarding no less than 20 new items of garage equipment, and traders are invited to write to the Company at 148-150, Great Portland Street, London, W.1 for copies.

Guy's for Bacon Transport.—Messrs. Marsh & Baxter, the well-known bacon curers, have been operating Guy vehicles and have been sending Guy Motors Ltd., Wolverhampton, repeat orders over a long period for various types of light delivery vans. The firm have recently delivered to them the three 30 cwt. vans shown in the accompanying photograph.

The Manley-Page Garage Light.—The Service Equipment Co., Ltd., Drayton House, 30 Gordon Street and Euston Road, London, W.C.1, announce that increasing number of orders enable them to reduce the price of the Manley-Page Garage Light to 42/-.

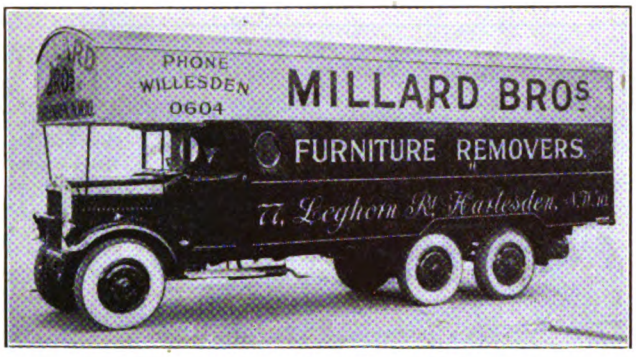
Typical Foden Deliveries.—The accompanying group photograph was taken immediately prior to despatch of the Fodens shown. One is a standard tractor for Messrs. Bartlett Bayliss & Co. Ltd., Parkend, Gloucestershire; the second is a 6-tonner for Mr. George Hall, Builder, Aberdeen, and the third is a 6-tonner with trailer for F. & H. Cremer, Haulage Contractors of Faversham.

The Exide Convention.—The Chloride Electrical Storage Co., Ltd., of Clifton Junction, near Manchester, are holding their annual Exide Service Convention Banquet this year at the North British Hotel, Edinburgh, on Wednesday, 28th May. As is well known to our readers, the Exide service has for its object the caring for customers' batteries, and at the present moment there are few Exide battery owners in the United Kingdom who cannot find an Exide service station somewhere within easy reach of their residences. The first Exide service agent was Mr. John Roberts, of Manchester, who was appointed in 1920. By the end of that year there were 59 agents. In 1921 there were 153 and in 1922, 265. The number has continued to grow until now there are 581 Exide service agents, all of whom have been trained at Clifton Junction.

Digitized by Google

The Exide service agents, spread all over the country, are no longer left isolated. Annual conventions began to shape the separate agents into a single fellowship. Two conventions were held in 1921, one in London for agents in the south and one in Manchester for those in the north. In 1922 there were conventions at Bristol, Birmingham, Manchester and London. At these conventions technical and trading questions were discussed, but the convention did not become an important annual affair until it was centred for the first time at Leamington in 1923. It was at Hendon in 1924 that the conventions began to take a more social aspect and to last for several days, and the firm holds that these conventions create a better *esprit de corps* which is all to the good of the service.

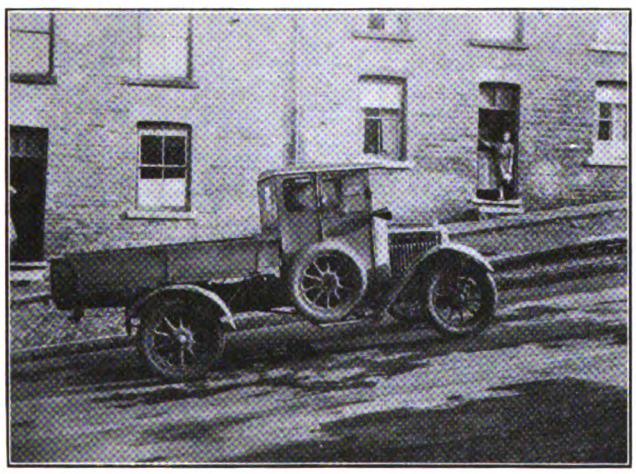
A Bean Pantechnicon.—The illustration shows a Bean model XIV. chassis with six-wheel extension recently



THE BEAN PANTECHNICON REFERRED TO IN TEXT.

supplied by the commercial vehicle department of Pass & Joyce Ltd., 4a, Cambridge Street, Edgware Road, London, W.2, the London distributors. The dimensions of this useful furniture van body are 17 ft. 8 in., behind the driver, by 8 ft. 6 in. in the centre of the body and 7 ft. wide. Further useful space is provided over the driver's cab.

A Morris Commercial in the Coal Trade.—Morris Commercial Cars Ltd., Soho, Birmingham, have received an interesting letter from Mr. T. Miller of Toronto, Bishop Auckland, as follows:—"I have had one of your ton lorries for over two years. During the whole of this

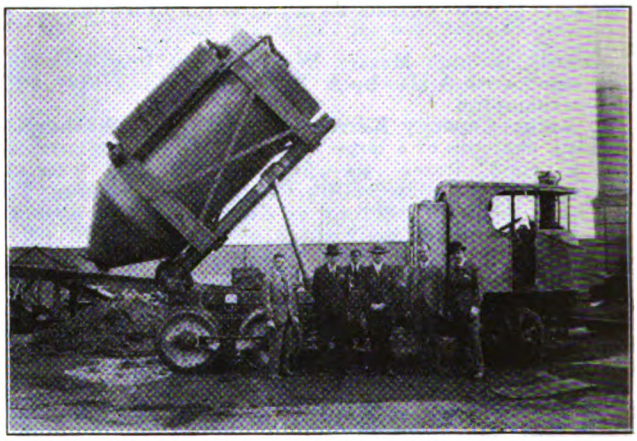


THE MORRIS-COMMERCIAL REFERRED TO IN TEXT.

period, this machine has been carrying coal in the Bishop Auckland area. I roughly estimate the mileage at 100,000 miles, running on an average 14-15 hours per day. To any one who knows South Durham at all, when we mention that the lorry takes loads from Frosterley to Middleton-in-Teesdale, and on some days of the week it goes hourly up Newton Cap Bank, it will give them some idea of the terrific strain there is on this machine. I have been more than satisfied with the performance of this little machine, which was supplied by your agents—Messrs. Motor Supplies (Auckland) Ltd., Bishop Auckland. Owing to the remarkable distance this has done and the slight cost of repairs, and I now have more experience of cars than when I first bought this machine, I can only congratulate you on having turned out such a wonderful job. As I have no connection with the trade, you are at liberty to use this letter if you wish."

The A.E.A. and Register of the Motor Trade.—Arrangements have been made for the names of members of the Automobile Electrical Association to be entered in the new edition of The Register of the Motor Trade which is now in process of revision by The Society of Motor Manufacturers and Traders Ltd. The entries will be distinctive in that they will emphasize the fact that the concern named specialises in automobile electrical service. As the revision is now proceeding, it will be appreciated that early application for membership of the Association is advisable. A neat badge of membership has been designed and blocks are available for use in notepaper headings.

A New Use for the Sentinel.—The Sentinel Waggon Works, Ltd., Shrewsbury, are supplying to the order of the British Steel Piling Company, of Parliament Street, London, S.W.1, a Sentinel double geared rigid six-wheeler, end tipping model chassis, on which is mounted a five cubic yard transit concrete mixer, a photograph of which we reproduce. This Sentinel D.G.6. will be the first vehicle to be used in this country for mixing concrete in transit. This system of delivering ready mixed concrete to sites of works has not yet been attempted in this country; in America, however, it is developing satisfactorily though actual mixing in transit is comparatively new, but it appears to us to have considerable advantages.



THE SENTINEL D.G.6. STEAM WAGGON FITTED WITH THE TRANSIT CONCRETE MIXER.

Its development should be watched carefully as it may result in the opening up of a new field for haulage contractors and others. The correct proportions of cement, sand and aggregate are placed in the mixer at the depot, and during the journey to the site of works the mixer drum is caused to revolve and, a few minutes before reaching the terminal, the correct quantity of water is admitted and the batch is ready for delivery properly mixed on arrival.

As Regular as Clock-Work.—The following is taken from the Buglawton correspondent's notes in a recent issue of the "Congleton Chronicle":—"I understand that the familiar steam wagon which carries coal to the Silver-Springs Bleaching Company at Timbersbrook, is under repair and, therefore, those who are accustomed to using its passing as a kind of clock, so little did it vary in its journeying, are at a loss to judge the time of day? The wagon in question is a "Foden" which was supplied four years ago, its predecessor (also a "Foden") having then completed twenty-four years service for the same Company.

Large Order for Electric Battery Trucks.—The Railway Express Agency of New York has recently placed orders for a notable addition of 50 trucks to its already large fleet of electric vehicles. The battery selected is the Exide-Ironclad, a type which is manufactured in England by The Chloride Electrical Storage Co., Ltd., and in addition to the 50 new trucks, a further 39 spare batteries have been requisitioned.

Roads Improvement Association.

Forty-Third Annual General Meeting.

Sir Arthur Stanley, G.B.E., presided at the 43rd Annual General Meeting of the Roads Improvement Association held at the Institution of Civil Engineers, Westminster, on April 30th last. He was supported by Sir Edward Iliffe, C.B.E., Mr. W. Rees Jeffreys, Major Walter Elliot, M.C., M.P., Major Lloyd George, M.P., Viscount Elmley, M.P., Mr. D. J. Vaughan, M.P., Mr. F. Llewellyn Jones, M.P., Mr. S. March, M.P., Mr. G Dallas, M.P., Mr. John Brodie, M.Inst.C.E., Mr. J. S. Killick, M.Inst.C.E., Col. R. E. Crompton, C.B., Brig.-General E. G. Wace, D.S.O., Brig.-General M. Mowat, M.Inst.C.E. and Mr. George Mitchell.

Opening the proceedings Sir Arthur Stanley said that in spite of intensive work by the various "Safety First" organisations—with whom the Roads Improvement Association co-operated to the fullest extent possible—the number of road accidents in 1929 showed an increase over 1928. Actually 6,696 people were killed and 170,889 injured in road accidents. These were appalling figures and if not the fundamental cause at all events the principal cause was unquestionably lack of sufficient road space.

More and more vehicles were coming on to our roads and circulating upon a continually wider scale—there were considerably more motor vehicles per mile of road in England and Wales than in any other country. Actually the figures were 11 in England and Wales against 7.4 in the U.S.A.

The efforts of the R.I.A. to obtain adequate road accommodation needed every possible assistance.

Mr. W. Rees Jeffreys, the Chairman of the Association, in moving the adoption of the Annual Report said that the pressing problem of the immediate present was how to get some of the unemployed to work on the roads? The country required its roads and bridges modernised. More road space had to be provided to accommodate the increasing traffic. The Government were prepared to find money for road work. The Ministry of Transport had sanctioned a huge programme of work and were prepared to find from 50 per cent to 80 per cent. of the cost. But the work did not get going. There was 30 million pounds worth of work which could have been started in September, but it was not started. There was 40 million pounds worth of work that could be started now taking a large number of men off the unemployed list, but it was not started. The reason was that the highway authorities and the Government were not pulling together. The Government sought to work through local authorities, but had not been able to induce the highway authorities generally to accelerate appreciably their road programmes.

The Minister of Transport addressing the County Councils Association on 26 March, 1930, said that he was not satisfied with the speed with which actual operations were being commenced, and he urged them to put into operation the large number of road schemes already agreed, and to press on negotiations with other schemes. He warned them that the time was coming when the exceptional measure of State assistance would be withdrawn, and of the dangers to local government if it did not function efficiently.

The Minister's speech had not had much effect.

What had now to be done? He would shortly outline three policies open to the Government.

Making Arterial Roads a National Service.

The heroic policy was for the Government to take control of the main roads of the country into their own hands. Should the Government make the construction, improvement and maintenance of arterial roads and bridges a national service? The Government were already paying considerably more than half the cost of maintaining and improving the main and secondary roads. It was only a step further for them to do as the Governments of France, Belgium and other continental countries had done and institute a National Road Department. It was an heroic policy, and there was something to be said for it. There was much to be said against it. The practical objection was that it would mean such revolution that it could not be brought into operation this year, and it was this year that we wanted to see 50,000 more men employed upon the roads and an expenditure of between 10 and 15 millions on new road and bridge construction over and above normal works of maintenance and local improvements.

Power for the Government to Act in Default.

The second policy was that the Ministry of Transport should obtain Parliamentary powers to act in default. If any county council, or other highway authority, was unwilling or unable to proceed with work which was of national importance, the Ministry of Transport should step in and do the work itself. The Ministry of Transport should be given powers to appoint some other person or authority to do the work and charge the defaulting authority with its proper share of the cost.

To Build New Roads.

The third course was that the Government could point out to the local authorities that the maintenance and improvement of existing roads was a local government service, and that the Government had offered them unprecedented financial assistance to enable them to get on with it. They were not getting on fast enough to meet the demands of the public and, therefore, the Government proposed to use the powers Parliament had given them to build and maintain new roads, and intended to take further powers to enable them to deal with five problems at one time—problems which the local authorities were unable themselves to solve, viz.:—(1) Providing sufficient road space for the increasing traffic. (2) Checking the ribbon development which is spoiling the country and making hideous the new roads that have been built. (3) Providing parkways and open spaces to conserve the amenities of the arterial roads. (4) Planning sites for satellite cities. (5) Creating fresh rateable values.

These various policies the Roads Improvement Association proposed to discuss with the All-Parties Parliamentary Committee of the House of Commons. This Committee had already done useful work and the R.I.A. was closely associated with it. It would, he thought, be of very great use.

Major Walter Elliot, M.C., M.P., Chairman of the All-Parties Roads and Bridges Committee of the House of Commons, said that the suggestions submitted by Mr. Rees Jeffreys were of the utmost importance and certainly would be very closely examined by him and his colleagues. Parliament had made very considerable changes in the administration of the roads by the Local Government Act, and some of the delay in carrying out road works at the present time was, no doubt, due to this legislation. Nevertheless there was an urgent need for considerable acceleration in road development.

Major Elliot's remarks were endorsed by **Major Lloyd George, M.P.** He said it was common knowledge that we were much behind in our road development, and it was to the advantage of this country that we should pursue a policy of road development on a much larger scale.

Mr. D. J. Vaughan, M.P., said that in his capacity of Hon. Secretary to the Roads and Bridges Committee he found that the general development of roads was a question that had the sympathy of the members of all parties, and he felt sure that with the assistance of the R.I.A. they would soon make headway with this vital question.

Sir Edward Iliffe said that roads were indeed a vital public service. It could not be too often reiterated that every month 20,000 new cars come on to our roads, and they all needed road space for safe and comfortable travel —each owner paid a substantial tax which was ample, if properly used, to provide him with the road accommodation needed.

Mr. George Mitchell, Chairman of the Propaganda Committee of the R.I.A., said that no one realised more than he the need for a well-lined purse if the propaganda work of the Association was to be carried on efficiently and effectively. He hoped that all interested in the roads would help the Association to get an annual income of £5,000.

Salford Horse Parade.—Salford's annual parade of heavy horses and tradesmen's turnouts will take place on Saturday, 24th May. The Shire Horse Society will again offer medals for the best horses of Shire type. In the trade exhibit classes, entries have already been received from many large firms in the district.

Bus Re-organisation. — Another bus re-organisation in Northumberland and Durham involves the disappearance of the "Eastern" bus services previously run by the L.N.E.R., which are being continued by the Northern General Transport Co., Ltd., and United Automobile Services, Ltd. (with both of which the L.N.E.R. is associated financially).

County Court Judgments.

THE following returns from the Registry of County Courts' Judgments, Whitehall, have been received relating to judgments entered up in the respective County Courts of England and Wales. Publication does not imply inability to pay. Many judgments may have been settled between the parties or paid. Judgments settled otherwise than through the Court may appear unless "satisfaction" is entered up within twenty-one days from judgment or allocatur. Registered judgments are not necessarily for debts. They may be for damages or otherwise, they may relate to actions *bona fide* contested between the parties, or they may be against defendants, liable in a representative capacity, and not personally; but no distinction is made on the register. Judgments are not returned to registry if satisfied in Court books within twenty-one days.

Burndred Bros., Wright Street, Butt Lane, Staffs., haulage contractor. £38/7/0. January 22nd.

Chas. Walklate, Frederick Street, Barrow Hill, Longton, Staffs., haulage contractor. £29/8/11. January 24th.

D. Roberts, St. Ives, Baring Road, Beaconsfield, Bucks. (Tdg. as Frank Roberts & Co.), haulier. £59/0/10. January 31st.

A. G. Hampton, The Bungalow, Setley, Brockenhurst, Hants., hire carter. £76/8/10. February 3rd.

Joseph Barnes (plaintiff), Butlers Lane, Hatton, Middlesex, haulage contractor. £70/1/1. (Counterclaim and costs.) January 6th.

E. J. Mylon, Merrimans, Hayes, Middlesex, haulage contractor. £50/0/11. January 28th.

Ben Ring, 13 Hampstead Street, Camden Road, London, N.W., furniture remover. £20/18/11. January 29th.

Sarah Stevens, 421 Hackney Road, London, E., horse and motor haulage contractor. £22/10/2. December 13th.

Jas. Leonard Dilley, Church Street, Corby, Northants., carter. £55/9/1. January 14th.

W. E. Rowley, 29 Two Ball Lonnen, Newcastle-on-Tyne, haulage contractor. £65/4/8. January 29th.

Geo. Rutherford, 5 Waterloo Street, Newcastle-on-Tyne. (Tdg. as A. & R. Rutherford), haulage contractor. £104/16/6. January 21st.

A. W. Thompson, The Bungalow, Alltami, Near Mold, Flint, haulage contractor. £31/6/1. October 16th.

Sanderson, 5 Rium Terr., West Hartlepool, Durham, carting contractor. £43/5/2. February 5th.

Edwd. S. Kippling, 89 Arragon Road, East Ham, London, E., haulage contractor. £25/2/3. February 5th.

W. Chamberlain, Orchard Farm, Mangotsfield, Glos., haulier. £29/16/10. January 30th.

Jas. Dew Nash, Whitecroft, Nr. Lydney, Glos., transport contractor. £28/7/6. January 22nd.

Geo. Croft, Crofton Park Road, Marton, Blackpool, haulage contractor. £63/2/10. February 1st.

New Companies.

Surrey Film Transport Company, Ltd. (246,780).—Private company. Registered March 24th. Capital £300 in £1 shares. Objects: To carry on the business of road transport contractors, agents, garage proprietors, dealers in cinematograph apparatus, etc. The directors are: W. F. Pettie, (permanent), J. Farmer. Registered office: 55, Camberwell Road, S.E.

E. Wades Transport Co., Ltd. (246,760).—Private company. Registered March 24th. Capital £500 in £1 shares. Objects: To carry on the business of cartage and motor contractors formerly carried on by E. P. Wade, as E. Wade, at 7, Garnham Street, Stoke Newington, N.16. The directors are: E. P. Wade, (chairman and permanent director) W. Wade, W. Harris. Registered office: 29, High Street, Whitechapel, E.1.

Duigenans, Ltd. (246,822).—Private company. Registered March 26th. Capital £1,000 in £1 shares. Objects: To carry on the business of proprietors and letters on hire of motor omnibuses, coaches, chars-a-banc, cars, cabs, lorries, vans and other vehicles, etc. The directors are: E. V. Duigenan, Miss Hilda Hibbert.

Deptford Wharfage & Discharging Company, Ltd. (246,821).—Private company. Registered March 26th. Capital £10,000 in £1 shares. (5,000 "A" and 5,000 "B"). Objects: To carry on business as proprietors of wharves, jetties, piers, warehouses and stores, wharfingers, warehousemen, cartage contractors, dealers in sand, ballast, excavations, rubbish, ashes, clinker refuse and other materials, etc. The directors are: H. Cooper, H. L. Collard, J. Charrington, Junior, J. R. Kelly. Registered office: 16, Mark Lane, E.C.3.

Removal Services, Ltd. (246,911).—Private company. Registered March 28th. Capital £1,000 in £1 shares. Objects: To carry on the business of furniture and general removal contractors, furniture warehousemen and depository proprietors, haulage contractors, general carriers by road, rail, air or water, etc. The permanent directors are: T. G. Richardson, L. R. Turnbull, T. E. Pickersgill. Secretary: F. S. Turnbull.

East Midland Motor Services, Limited was registered as a "public" company on March 28th, with a nominal capital of £150,000 in £1 shares. The objects are: To acquire the business formerly carried on by East Midland Motor Services, Ltd, and now by the London Midland and Scottish Railway Company and the London and North Eastern Railway Company, and to carry on the business of engineers, manufacturers and proprietors of omnibuses, tramways, railways, light railways, piers, motor cars, steam and motor boats, aeroplanes, airships, vans, wagons, cabs, carriages, cycles, and other vehicles, store and garage keepers, carriers by land, sea or air of passengers and goods, forwarding agents, bonded carmen and general traders, electrical, mechanical and chemical engineers, electricians, founders, manufacturers of electrical apparatus, hotel keepers, etc. The first directors (to number not less than 3 nor more than 8) are to be appointed by the subscribers. The file number is 246,920.

Main Lines, Ltd. (246,939).—Private company. Registered March 29th. Capital £100 in £1 shares. Objects: To carry on the business of motor coach, carriage, taxicab, omnibus and other public or private conveyance proprietors, hauliers and transport contractors, etc. The directors are: C. M. Cooper, C. W. Norris, A.M.Inst.T. Registered office: Anglesea Road, Surbiton, Surrey.

G. W. Hetherington & Co., Ltd. (246,983).—Private company. Registered March 31st. Capital £5,000 in £1 shares. Objects: To carry on the business of omnibus proprietors, formerly carried on by G. W. Hetherington, at Coundon, Durham, and that of motor engineers, char-a-banc and garage proprietors, etc. The first directors (to number not less than 2 nor more than 5) are G. W. Hetherington, (permanent managing director), Mrs. Amy A. Hetherington. Secretary: Doris G. Hetherington. Registered office: Cleveland View Garage, Coundon, Co., Durham.

Wynfords, Ltd. (247,007).—Private company. Registered March 31st. Capital £250 in £1 shares. Objects: To carry on the business of barge owners, lightermen, warehousemen, wharfingers, etc. The permanent directors are: R. E. H. F. Wilkie, H. Stoker. Registered office: 9, Goldsmith Street, Cheapside, E.C.3.

Alexander Frew & Son, Ltd. (15,901).—Private company. Registered in Edinburgh on April 1st. Capital £3,000 in £1 shares. Objects: To carry on the business of proprietors of motor cabs, coaches, omnibuses, hearses, launches, boats, flying machines, etc. The directors are: A. Frew, J. H. Frew.

Crossleys (Hyde), Ltd. (247,013).—Private company. Registered April 1st. Capital £3,000 in £1 shares. Objects: To carry on the business of drapers and furnishing and general warehousemen; proprietors of pantechnicon and other vans and vehicles, furniture removers, warehousemen, etc. The permanent directors are: H. Crossley, F. C. Woolstencroft.

Homerton Transport Company, Ltd. (247,040).—Private company. Registered April 2nd. Capital £500 in £1 shares. Objects: To acquire the business of a motor transport contractor, etc., carried on since March 1st, 1930, by N. Forbes as the Homerton Transport Company, and to adopt an agreement between the said N. Forbes and Firmin and Co. (London), Ltd. The first directors (to number not less than 2 nor more than 5) are: H. Leek, N. Forbes.

Rochford and District Motor Services, Ltd. (247,096).—Private company. Registered April 3rd. Capital £1,000 in £1 shares. Objects: To acquire the business of an omnibus proprietor now carried on by L. I. R. Morley at Tylers Close, Tylers Avenue, Southend-on-Sea, as "The Rochford and District Motor Services." The permanent directors are: L. I. R. Morley, and Mrs. M. G. S. Morley.

Neath and Cardiff Luxury Coaches, Ltd. (247,126).—Private company. Registered April 4th. Capital £1,000 in £1 shares. Objects: To carry on the business of chars-a-banc, omnibus, coach, lorry, cab, car or taxicab proprietors, etc. R. G. Llewellyn is the first director. Registered office: 21 Uplands Crescent, Swansea.

South of Ireland Transport Company, Ltd. (7,984).—Private company. Registered April 4th, in Dublin. Capital £500 in £1 shares. Objects: To carry on any of the businesses of owners of lighters, barges and tugs, motor cars, trolley vehicles, aircraft, etc. The directors are: J. P. Goodbody, G. M. Goodbody.

Poole & District Motor Services, Ltd. (247,203).—Private company. Registered April 7th. Capital £3,000 in £1 shares. Objects: To acquire the business of The Poole and District Motor Services heretofore carried on by Mrs. V. W. A. Venner at Parkstone, Dorset. The directors are: C. F. Russett, jnr., A. E. Russett, Mrs. V. W. A. Venner, H. E. Russett, F. E. Russett. Secretary: A. E. Russett.

Chesham & District Bus Company, Ltd. (247,272).—Private company. Registered April 10th. Capital £3,000 in £1 shares. Objects: To adopt an agreement with W. A. Clarke, J. Haddock and W. M. Johnstone, and to carry on the business of motor omnibus proprietors carried on by them at Chesham, Bucks. The directors are: W. A. Clarke, J. Haddock, W. M. Johnstone (all permanent, subject to each holding 50 shares).

Motor Coach Baggage Protection Association, Ltd. (247,321).—Private company. Registered April 11th. Capital £2,000 in £1 shares. Objects: To carry on the business of general carriers, motor coach, railway, shipping and forwarding agents, proprietors of baggage depositories, etc. The permanent directors are: J. L. Harvey (chairman), J. H. John, H. W. Lambert, A. O. Roberts.

Pearce Haulage Company (1930), Ltd. (247,325).—Private company. Registered April 11th. Capital £500 in £1 shares. Objects: To carry on the business of haulage, cartage and general transport contractors, proprietors and hirers of traction engines, motor lorries, pantechnicon and other vans, owners of public garages, etc. The directors are: A. E. Whittaker (permanent managing director), Mrs. D. G. Scott. Secretary: A. E. Whittaker.

H. O. K. Transport Co., Ltd. (247,317).—Private company. Registered April 11th. Capital £2,000 in £1 shares. Objects: To carry on the business of cartage and haulage contractors, general carriers, railway and forwarding agents, bonded and common carmen and any other business solely for and on behalf of and in connection and co-operation with Thos. Hewstone & Co., Ltd. The directors are: T. Hewstone, E. J. Kerslake, J. K. Overall, W. J. Hewstone (all permanent, subject to each holding not less than 50 shares). Secretary: E. J. Kerslake.

Mortgages and Charges.

Attleborough & District Motor Services, Ltd.—Debenture dated January 1st, 1930, to secure £275, charged on the company's property, present and future, including uncalled capital. Holders L. Votier and W. E. Fake, trading as "Votier and Fake," of 56, Marlborough Road, Norwich.

Jeffersons (Goldthorpe), Ltd.—Particulars filed of £250 debentures authorised January 27th, 1930, charged on the

Digitized by Google

company's undertaking and property, including uncalled capital, the amount of the present issue being £100.

G. T. Beard (1929), Ltd.—Particulars filed of £2,000 debentures authorised January 31st, 1930, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

Red & White Services, Ltd. (formerly Gloucestershire Transport, Ltd.).—Six Memoranda of deposit all dated February 3rd, 1930, to secure all moneys due or to become due from the company to Lloyds Bank, Ltd., not exceeding £500, £1,000, £3,000, £1,000, £800 and £1,500 respectively, charged on properties in Gloucester, Cinderford, Monmouth, Aberdare, Lydney and Chepstow.

Red & White Services, Ltd. (formerly Gloucestershire Transport, Ltd.).—Memoranda of deposit dated February 7th, 1930, charged on leasehold land with garage and buildings thereon at Gellygroes, Mon., to secure all moneys due or to become due from the company to Lloyds Bank, Ltd., not exceeding £600.

Standard Wharves, Ltd.—Two mortgages: (1) on 56 and 58, and (2) on 60, High Street, Wapping, both dated February 8th, 1930, to secure all moneys due or to become due from the company to the Midland Bank, Ltd.

Commercial Road Haulage, Ltd.—Particulars filed of £500 debentures authorised February 10th, 1930, charged on the company's undertaking and property, present and future, including uncalled capital and goodwill (subject to a series of £700 first debentures), the amount of the present issue being £100.

G. H. Stammers & Sons, Ltd.—Mortgage and debenture charged on the company's undertaking and property, present and future, including uncalled capital, dated February 15th, 1930, to secure all moneys due or to become due from the company to the Westminster Bank, Ltd., not exceeding £400.

George Ewer & Co., Ltd.—Particulars filed of £20,000 debentures authorised February 18th, 1930, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

R. A. Dagnall (Haulage Contractor), Ltd.—Debenture dated February 24th, 1930, to secure £915, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: E. M. Murphy, 16, Berkeley Place, Wimbledon.

Commercial Road Haulage, Ltd. — Issue on February 25th, 1930, of £200 debentures, part of a series already registered.

Harry Sabey & Son, Ltd.—Debenture dated February 25th, 1930, to secure £6,000, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: Mrs. E. A. Sabey, 197, Fordwych Road, Cricklewood, N.W.2.

W. Freeborn & Son, Ltd. — Debenture dated March 10th, 1930, to secure £400, charged on the company's undertaking and property, present and future, including uncalled capital. Holders: Miss L. Moody and Miss M. Moody, both of 20, Swindon Street, Highworth, near Swindon.

W. S. Ellison, Ltd.—Debenture dated March 10th, 1930, to secure £200, charged on the company's undertaking and property, present and future, including uncalled capital. Holders: Mrs. A. M. Ellison, 33, Cowley Hill Lane, St. Helens, Lancs.

Peraeque Transport Company, Ltd.—Debenture dated March 14th, 1930, to secure all sums due to the chargees (Christopher Dodson, Ltd., Cobbold Road, Willesden), not exceeding £3,298 13s. 4d., charged on the company's undertaking and property, present and future, including uncalled capital, (if any).

Orr, Hill & Dale, Ltd.—Debenture dated March 15th, 1930, to secure £500, charged on the company's undertaking and property, present and future, including uncalled capital. Holders: F. C. Hilbery, 4, South Square, Gray's Inn, W.C.1.

Satisfactions.

Note: Where the amount "originally secured" is stated, that is not necessarily the amount outstanding at the date of the satisfaction recorded below. There may have been previous partial satisfactions, registered or unregistered. The registration of Satisfactions is not compulsory.

G. & H. Green, Ltd.—Satisfaction by transfer of the mortgaged property to Watsons Wharf, Ltd., (subject to the mortgage), on December 31st, 1929: (1) of mortgage dated August 5th, and registered August 16th, 1926, and (2) of mortgage dated August 19th, 1927, and registered September 8th, 1927. (According to the "register of mortgages," the mortgages registered August 16th, 1926, and September 8th, 1927, originally secured £1,000 each.)

Tourist Motor Coaches (Southampton), Ltd.—Satisfaction to the extent of £900 (amount owing on November 1st, 1929), on February 6th, 1930, of mortgage dated June 23rd, 1926, and registered February 10th, 1930.

R. A. Dagnall (Haulage Contractor), Ltd.—Satisfaction on February 11th, 1930 of debenture dated June 21st and registered June 27th, 1928. (According to the "register of mortgages," the debenture registered June 27th, 1928, originally secured £1,650).

North Wales Silver Motors, Ltd.—Satisfaction in full on February 20th, 1930, of debenture dated May 17th, and registered June 5th, 1926, securing all moneys not exceeding £12,724.

G. & H. Green, Ltd.—Satisfaction on February 28th, 1930: (1) of Land Registry Charge, dated January 13th and registered January 15th, 1926, and (2) of Land Registry charge dated September 2nd, and registered September 8th, 1926. (According to the "register of mortgages," the charge registered January 15th, 1920, originally secured all moneys, etc., and the charge registered September 8th, 1926, originally secured £1,000).

Charles W. Webber, Ltd.—Satisfaction in full on September 28th, 1929, of debentures authorised October 15th, and registered October 26th, 1925, securing £700. (Notice filed March 14th, 1930).

M. R. S., Ltd., (formerly Marstons Road Services, Ltd.). —Satisfaction to the extent of £1,805 on March 17th, 1930, of debenture dated March 5th, and registered March 7th, 1928. (According to the "register of mortgages," the debenture registered March 7th, 1928, originally secured £4,000).

Receiverships (Appointment or Release).

Henry W. Hemington & Co., Ltd.—L. J. F. Austin, of Lichfield Chambers, Upper Priory, Birmingham, was appointed Receiver on February 21st, 1930, under powers contained in debenture dated January 7th, 1929.

NOTICES

The World's Carriers is published monthly, on the 15th of each month. Annual Subscription, including **World's Carriers Year Book and Diary, £1 1s.**, post free.

Advertisement tariff sent on request.

The Editor, while promising to give prompt consideration to any articles, notes, drawings, or photographs submitted, disclaims all liability in connection with contributions sent in voluntarily. If a properly addressed and stamped envelope is forwarded, every effort will be made to return rejected contributions.

Books, pamphlets, prospectuses, and newspapers (the latter having any special item conspicuously marked) should be addressed to the Editor.

All remittances should be made payable to "**The Carriers Publishing Company, Ltd.,**" Bangor House, 68 & 69 Shoe Lane, London, E.C.4, and crossed "Midland Bank, Ltd."

Telegrams: KARRIWORL, LUD, LONDON. **Telephone:** CENTRAL 6068 (2 lines).

Our Information Bureau.

FOR THE INFORMATION OF OUR SUBSCRIBERS we have recorded the names of General Carriers, Furniture Removers, Motor Haulage Contractors, and Forwarding Agents in all parts of the world.

Any subscriber requiring the name and address of a carrier, motor transport contractor, furniture remover, or forwarding agent in any particular town can obtain the information by writing us and enclosing a stamped addressed envelope.

FREE INFORMATION COUPON.

Information and advice can be obtained relating to Road Transport matters and concerning Motor Vehicles, such as Buses, Lorries, Steam Wagons, Delivery Vans and Tractors.

Cheapening Transport.

In every branch of industry both practical and scientific methods have been applied during the past decade to reduce the cost of production with, in some instances, astonishing success. In his speech at the Annual General Meeting of the Dunlop Tyre & Rubber Company, Sir Eric Geddes stated that the output per man was now 2½ times as much as that of only a year or two ago, and this was due not only to the willing co-operation of the workers but also to improvements in machinery and labour-saving devices. In industry generally rationalisation is being extensively employed, mainly with the object of cutting down unnecessary overhead expenses and incidentally to avoid over competition. In some quarters it is feared that rationalisation may be overdone, one of the most serious possible results being additional unemployment. This contingency, we imagine, is somewhat unfounded, as experience in the past has shown that price reductions have the effect of increasing sales. Research and applied science are the main factors responsible for greater output and price reductions. British industry has been forced to work along the lines it is now doing in order to face foreign competition. The fear that rationalisation then may lead to monopoly and inflated prices may be discounted. In the motor industry we find that the science of production has materially advanced and evidence of this is to be seen in the prices of vehicles, which are now of far better quality and yet considerably cheaper than was the case before the great war. Price reductions of vehicles and better performance of the vehicles themselves leads to cheaper transport and, as we all know, transport is the life blood of industry. Transport itself cannot be said to have been rationalised but something of the same thing is happening, but it is known by the name of co-ordination. As the wise man is the product of many fools so is road transport the product of adversity. We need not enumerate the handicaps it has had to overcome in order to hold its place against fierce competition, but the result is a vehicle or vehicles of incomparable efficiency, and what at one time appeared to be the ugly duckling of the engineering profession and industry is now recognised as being one of the most important influences which has raised mechanical engineering as a whole to a higher level. In recent issues we have dealt with two new devices which may well have the effect of still further reducing the costs of road transport. We do not say that they will, because we have seen so many very excellent devices which have been apparently relegated to the scrap heap with the same rapidity with which they have come under notice. They have attracted attention, however, they have been appreciated, and no doubt the principles have been incorporated gradually into design though their inventors or originators have failed to reap the benefit of their labours. It is only when something of outstanding merit and of immediate practical value makes its appearance that noticeable revolutionary methods are set in motion. Two excellent examples of this may be cited, namely, the development of the six-wheeler, which had the effect of reducing the weight of the chassis in relation to the useful load carried, and, next, the more recent development of the heavy oil engine. These two developments are destined to have a far reaching influence in the direction of cheapening road transport. The heavy oil engine particularly, though at present only in its early stages of development, is a kind of out-flanking movement. It has caught competition unawares and its ultimate effect will be to reduce the hitherto exceedingly formidable fuel bill to a comparatively negligible quantity. Nothing can hinder its progress except increased taxation imposed to counterbalance the advance made, but we can hardly suppose that any government will be so short sighted as to tax still further an industry upon which so much of the welfare of other industries depends and which is already taxed far beyond the bounds of necessity.

Comment on Current Topics.

The Channel Tunnel.

Another of the great schemes for reducing unemployment has gone by the board—in the rejection by the Government of the proposals to build the Channel Tunnel. Since this journal was started more than a quarter of a century ago, we have given publicity from time to time to the efforts which have been made to secure powers to construct the tunnel and we have always taken a favourable view of the idea, because we believe that every new transport facility helps to extend trade and brings increased prosperity in its train. We must confess, however, that our enthusiasm for the scheme has become somewhat lukewarm as the years have gone by because we are of the opinion that if there were a widespread and determined demand for the proposed channel tunnel the difficulties would have been overcome before this. The Committee, which was appointed by the Prime Minister of the previous Government, did its work thoroughly well and investigated the whole subject from its economic standpoint and presented its report to the Government, giving its views very fully. Following this the Government who, as stated by the Prime Minister, in the last resort must take the responsibility of encouraging the scheme or turning it down, then investigated other aspects of the question and, as in every other attempt to set this scheme going, the military interests turned the scale against the proposals. The White Paper which has been issued by the Government sets forth very clearly, and without any attempt at legal phraseology to obscure the issue, the reasons why the scheme has been turned down. In the first place it is quite evident that apart from those who take an active part in the proposals, very little real interest is taken in the suggested channel tunnel. It is emphasised that the Committee itself, while reporting in favourable terms, is lacking in enthusiasm and has hedged its recommendations round with all sorts of provisos and qualifications. When there is added to this the definite military view that the approach to the tunnel would have to be very strictly protected by strong military forces and increased air defences, at a very heavy financial cost, we cannot but believe that the decision of the Government under the circumstances is a right one. Whether the Channel Tunnel Company, under the able direction of Baron Emile d'Erlanger, will continue its activities, as it has done in the past, in spite of so many setbacks, remains to be seen, but for our part we think there will have to be a very big change in public opinion and in the opinion of business men before valuable time will be taken to consider any proposals of the same kind again.

Long Distance Road Haulage.

In our last issue we gave a brief report of a Committee formed to consider the position of long distance road haulage and although there is nothing further to report at present this Committee has held a number of meetings and has investigated the position very thoroughly. A number of haulage firms engaged in long distance goods transport by road have joined the Committee, in addition to those mentioned in our report, and it is still engaged in considering what further steps it can take. We refer to this matter editorially because, while we are in sympathy with everything that is being done to improve road haulage, whether for passenger or goods traffic, we suggest very strongly for the consideration of the Committee, out of an experience extending over more than twenty-five years, that there is not room for another Association and that the full weight of the members concerned should be secured by linking up with the National Road Transport Employers' Federation—a Federation of road transport trade organisations having affiliated associations in all the important centres throughout the country, which is old established and has been and still is doing good work on behalf of the trade. Like most trade organisations it works quietly behind the scenes and without any flourish of trumpets, but it is well organised, has the ear of the Government Departments, and is able to bring influence to bear on matters affecting the trade in connection with impending legislation.

The Road Traffic Bill.

Since the Road Traffic Bill was introduced in the House of Commons we have devoted considerable space month by month in order to keep our readers advised of its progress and particularly since it has been in Committee. In this issue we report the final discussions of the Committee stage, which deal with several important clauses and the Bill has now been reported to the House. The next step will be on the motion for the third reading, when undoubtedly further strong efforts will be made to remove some of the anomalies and injustices which still remain in the Bill. We commend the report in this issue to our readers and particularly that relating to speed limits. We feel we must reiterate once again our convinced opinion that the Government and the Ministry of Transport are only asking for trouble in adhering to six different speeds for different classes of motor vehicles, and if this schedule is passed into law we believe we shall see a fresh era of police persecution and of futile efforts to make road users keep to a law, which is not only unjust but unworkable. For instance, there are motor cars weighing as much as 2½ tons, for which no speed limit is to apply, whereas a commercial vehicle of the same weight is tied down to a rigid speed mileage. Then again, the anomaly of having one speed for passenger coaches, while the same chassis with a goods body must travel at a slower speed is obviously absurd. The Minister of Transport has promised to see what can be done to simplify the schedule, and it is to be hoped that before it comes up for third reading an amended clause will be ready which will do away with the anomalous position.

Institute of Transport Congress.

In this issue we have devoted special space to the important Annual Congress of the Institute of Transport, which this year is to be held in Glasgow from July 8th to 12th inclusive. The Institute of Transport occupies such an important position, having the support of every branch of transport, that its annual convention is a matter of interest and importance to all our readers. Three mornings will be devoted to papers dealing with various aspects of transport and in the afternoons visits will be paid to well known engineering and other works in the district. The social side will not be neglected and altogether an exceedingly attractive programme has been arranged. We are glad to be able to publish in this issue a number of articles dealing with transport developments in Scotland, including the Clyde Navigation and road transport for passengers and goods, together with a special article describing the well known works and vehicles of the Albion Motor Car Co., Ltd., one of the pioneers of the motor industry. If any of our readers who are members of the Institute of Transport have not yet applied for the necessary papers to attend the Congress, they should take immediate steps to remedy the omission.

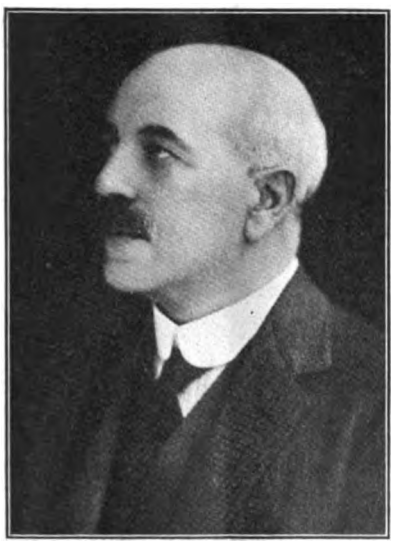
Personal Notes.

Institute of Transport—Vice-President.—Lt.-Col. John Henry Follows, C.B.E., M.V.O., has been elected a Vice-President of the Institute of Transport. Col. Follows has been a Vice-President of the London Midland and Scottish Railway since 1927. He entered the service of the Midland Railway in 1890, was Superintendent of Freight Trains 1911-1912, Divisional Superintendent 1912-1914, Superintendent of Operation 1914-1917, and Acting General Superintendent in 1917-1919. In 1919 he became General Superintendent, and in 1923 Chief General Superintendent, L.M.S.R.

LT.-COL. J. H. FOLLOWS, C.B.E., M.V.O.

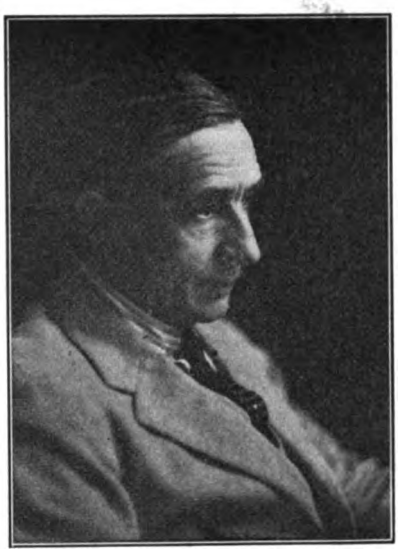
Institute of Transport — Vice-President. — Mr. D. J. Owen, General Manager to the Port of London Authority, has been elected a Vice-President of the Institute of Transport. Mr. Owen, who became General Manager of the P.L.A. in 1922, was in the service of the Mersey Docks and Harbour Board, Liverpool, for 13 years. He was Manager and Secretary to Paul Bros., of Liverpool and Birkenhead, in 1904, and in 1908 became Assistant Manager of Goole Docks, being appointed Manager in 1915. In the same year he became General Manager and Secretary to the Belfast Harbour Commissioners.

MR. D. J. OWEN.



MR. J. K. BRUCE.

Retirement of Mr. J. K. Bruce, General Manager, L.C.C. Tramways. — It is announced that Mr. J. K. Bruce, General Manager of the London County Council Tramways, will retire on June 30th next in consequence of ill health. Mr. Bruce has always been a convinced advocate of the utility of tramways for coping with heavy traffic, and as soon as he was appointed General Manager of the L.C.C. Tramways in 1925 he set to work to infuse a new spirit into the undertaking. Efficiency was increased and economies effected where such could be introduced without detracting from safety and good service. At the time of his appointment Mr. Bruce was faced with keen omnibus competition accompanied with falling receipts on the tramway undertaking, but the facilities offered on the tramways were quickly improved, better cars and better equipment provided, higher speeds were adopted and traffic soon began to be won back and receipts increased, and Mr. Bruce is now retiring at a time when the undertaking is assured of a successful future. Mr. Bruce is a native of Strathmore, and his connection with the L. C. C. Tramways began in the horse car era when he was veterinary surgeon to the London Tramways Co., and also had charge of the depots, for in January, 1899, when the undertaking was acquired by the L.C.C., the services of Mr. Bruce were retained. In October, 1903, Mr. Bruce was appointed Traffic Manager, and Deputy Chief Officer in 1910. In 1924 he was appointed Acting General Manager, and in January, 1925, was chosen as General Manager.



MR. EDGAR H. BLAKE.

Society of Motor Manufacturers and Traders. New President.—As announced in another part of this issue, Mr. Edgar H. Blake has succeeded Mr. J. Maughfling as President of the Society of Motor Manufacturers and Traders. Mr. Blake is Deputy Managing Director of Morris Motors, Ltd., Cowley, Oxford, and for many years has been a prominent member of the Council of the S.M.M. and T. He joined Morris Motors, Ltd., in July, 1924, and prior to that he was with the Dunlop Rubber Co., Ltd., for 27 years.

ALDERMAN F. WALTER PAYNE, J.P.

New Chairman of the Kent County Council.— Alderman F. Walter Payne, J.P., head of the well-known firm of Payne & Birdseye, removal contractors and warehousemen, railway agents, etc., of Anerley Road, London, S.E., has been elected Chairman of the Kent County Council, and we would like to add our congratulations to those which we are sure he is receiving from his wide circle of friends. We have known Mr. F. Walter Payne for many years. He was President

Digitized by Google

of the Furniture Warehousemen and Removers' Association for the year 1911-12 and served as Vice-Chairman of sub-committees for many years, and the excellent work he did for the Association will long be remembered by the members who were particularly pleased to welcome Mr. Payne once more at the Re-union Dinner held last month in London and reported in another part of this issue.

MR. GEORGE STOCKWELL.

Congratulations to Mr. George Stockwell. — Mr. George Stockwell, the Managing Director of Stockwell & Co., Ltd., "Messageries Nationales Express," 16 & 18 Finsbury Street, London, E.C.2, celebrated the Jubilee of his connection with the firm at the end of March last, having joined the business in 1880 with his uncle, the late Mr. Henry Stockwell, who was then the proprietor. In recognition of the occasion and as a token of appreciation, presentations were made in the early part of April; that from the Directors and Shareholders consisting of a silver waiter and a walnut clock, whilst the clerical staff, numbering 140 names on the list, contributed a silver bowl. Each presentation bore an appropriate inscription and accompanying the gifts was a floral illuminated address which reads as follows:—"Presented to George Stockwell, Esq., by the Directors, Shareholders and Staff of Messrs. Stockwell & Co., Ltd. In appreciation of his valuable services rendered during the period of fifty years, they desire to place on record their high appreciation of the kindness and consideration which he has invariably manifested to all associated with him in developing the business of the Company, and wish him many years of happy enjoyment of health, and a continuance of his activities. March, 1930." Stockwell & Co., Ltd., have branches at Hull, Liverpool, Manchester, Paris and Boulogne, and have also an ocean and rail ticket office in London at 25, Beak Street, Regent Street, W.1. They are Foreign and Colonial Shipping and Insurance Agents, Export Packers of motor cars, furniture, and all kinds of merchandise, Bonded Carmen, Passage Brokers, and Customs House Agents.

New L.C.C. Tramways Chief. — Mr. Theodore E. Thomas, Traffic Manager in the Tramways Department of the London County Council, has been appointed General Manager of the London County Council Tramways in succession to Mr. J. K. Bruce who, as announced in another part of this issue, is retiring in consequence of ill-health. Mr. Thomas, who was born in 1882, entered the service of the London United Tramways Co. in 1899, and in 1910 became the District Engineer of the Surrey Lines of that company. Later he was transferred to the staff of the Underground group and was appointed Commercial Superintendent of the group of companies after the absorption of the London General Omnibus Company. Mr. Thomas entered the service of the L.C.C. in 1917 as Development Superintendent of the Tramways Department. He was appointed Traffic Manager in 1925, and later was deputed to act as General Manager in the absence of the latter. Mr. Thomas has been a member of the Council of the Tramways, Light Railways and Transport Association since 1927. He is a member of the Institute of Transport and was awarded a gold medal of the Institute in 1927.

MR. THEODORE E. THOMAS

Albion Motor Car Co., Ltd. Appointment of Joint-Managing Directors. —Mr. G. M. Young, B.Sc., London Manager and Director of the Albion Motor Car Co., Ltd., and Mr. G. Pate, B.Sc., have been appointed Joint-Managing Directors of the Albion Motor Car Co., Ltd., Scotstoun, Glasgow, makers of the well-known Albion motor vehicles. Mr. Young, who is well-known in the motor trade, particularly in the South, has taken an active part in the work of the Society of Motor Manufacturers and Traders. He joined the Company in 1903, having graduated in engineering B.Sc. at Glasgow University in 1901.

MR. G. M. YOUNG, B.SC.

Clyde Navigation. Mr. Harold M. Ford Appointed Commercial Manager. — The Clyde Navigation Trustees, realising the necessity of the commercial development of the Port, have appointed their Secretary, Mr. H. M. Ford, as Commercial Manager. This appointment will undoubtedly prove popular among all classes of shippers and traders. Mr. Ford will concentrate his efforts particularly upon building up reciprocal trade between Scotland and the various parts of the Empire. He has made a close study for several years of all questions affecting marketing and salesmanship. He undertook recently a tour of Australia and New Zealand to study trade possibilities and is convinced that, despite existing handicaps in some directions, there are great opportunities for British industry if marketing and good salesmanship are properly concentrated upon. Mr. Ford's experience and knowledge of all matters affecting trade will undoubtedly stand him in good stead in the work he has now undertaken.

New Appointment for Mr. J. Frost.—Mr. J. Frost, who is so well known in the motor trade, and has been a Sales Representative for Dennis Bros., Ltd., Guildford, for many years, has been appointed to an important position with the Associated Equipment Co., Ltd. Mr. Frost takes up his new appointment on July 1st next.

MR. J. FROST.

Wigan Transport Appointment. — The Wigan Town Council has appointed Mr. Norman Rylance, of Bolton, Traffic Superintendent to the Tramways Department. Mr. Rylance has been employed in the Bolton Tramways Offices for a period of 17 years, and at the time of his appointment to Wigan he was Assistant to the Traffic Superintendent at Bolton. He joined the Loyal North Lancashire Regiment at the outbreak of war when he was eighteen years of age, and obtained a Commission at the age of twenty. He served in France and was badly gassed.

Institute of Transport.

Congress and Summer Meeting at Glasgow.

July 8th to 12th, 1930.

THE Congress and Summer Meeting of the Institute of Transport is being held at Glasgow next month and will cover the period, Tuesday to Saturday, July 8th to 12th.

The Rt. Hon. the Lord Provost of Glasgow (Mr. Thomas Kelly, J.P.) will extend a civic welcome to the Congress on the morning of Tuesday, July 8th, and on behalf of the Corporation has invited members, visitors, and their ladies to a Reception and dance to be held in the Banqueting Hall at the City Chambers the same evening.

The proceedings will include the submission and discussion of papers at meetings on the mornings, and visits on the afternoons, of the Tuesday, Wednesday and Thursday. By courtesy of the Glasgow Corporation the meetings will be held in the City Chambers. Friday and Saturday will be devoted to excursions. There will be evening functions on the Tuesday, Wednesday and Thursday. Special arrangements for the mornings of the Wednesday and Thursday have been made for the entertainment of ladies attending the Congress.

The Congress headquarters and delegates' rendezvous will be at the Central Hotel, Glasgow.

OFFICERS AND COMMITTEE.

President; Sir Josiah C. Stamp, G.B.E.; Joint Hon. Local Secretaries: Mr. R. Killin, C.B.E., General Superintendent, London Midland and Scottish Railway, 302, Buchanan Street, Glasgow, C.2 and Mr. L. Mackinnon, General Manager, Glasgow Corporation Tramways, 46, Bath Street, Glasgow, C.2; Congress Local Committee: Mr. A. H. Roberts, O.B.E. (Chairman); The Rt. Hon. the Lord Provost of Glasgow, Mr. C. A. Bremner, Mr. J. C. Christie, Mr. W. Crozier, Councillor P. J. Dollan, Mr. K. G. Fenelon, Mr. F. A. Fitzpayne, Mr. A. Fulton, Mr. E. Graham Guest, Mr. J. L. Gunn, Mr. W. Johnston, Mr. I. Kempt, Mr. T. A. Kerr, Mr. R. McLeod, Mr. T. H. Moffat, Mr. D. P. Morrison, Mr. A. Morton, Mr. C. H. Stemp, Bailie J. H. Stevenson, Mr. W. J. Thomson, Mr. D. C. Urie, Mr. J. N. Wilson, Mr. W. Wood. Hon Secretary of the Scottish Section: Mr. R. McLeod, The Corporation Transport Department, 2, St. James's Square, Edinburgh; Secretary and Office of the Institute: Mr. A. Winter Gray, 15, Savoy Street, Victoria Embankment, London, W.C.2.

Programme of Congress.

(subject to alteration).

MEETINGS AT THE CITY CHAMBERS.

On Tuesday, July 8th, at 10 a.m., the President will open the Congress and The Rt. Hon. the Lord Provost of Glasgow will extend a civic welcome to the delegates.

Date. 1930.	Hour. a.m.	Title of Paper.	Author.
Tuesday, July 8th.	10.15	"Railway amalgamation and its effect on the workshops."	E. J. H. Lemon. Carriage and Wagon Superintendent, L.M.S.R.
Wednesday, July 9th.	10.0	"The economics of port development and administration."	Sir George C. Buchanan, K.C.I.E.
Thursday, July 10th.	10.0	"Long distance omnibus services — their place in the national scheme of transport."	W. J. Thomson, Managing Director, Scottish Motor Traction Co., Ltd.

VISITS AND EXCURSIONS.

Except where otherwise stated the visits will take place during the afternoon. The detailed arrangements will be announced later.

Date. 1930.	Visit or Excursion.
Tuesday, July 8th.	The Locomotive and Carriage Works of the L.M.S.R. at St. Rollox, and the L.M.S.R. Locomotive Running Sheds at Polmadie. The Shipbuilding Yard of Messrs. John Brown & Co., Ltd., at Clydebank.
Wednesday, July, 9th.	Motor drive. *Morning visit chiefly for ladies.* The Works of the North British Locomotive Co., Ltd., at Springburn. The Works of the Albion Motor Car Co., Ltd., at Scotstoun. The test line of the George Bennie Railplane System of Transport at Milngavie. Visit to Gleneagles by invitation of the L.S.M.R. *Evening Visit.*
Thursday, July 10th.	The Cathedral, University of Glasgow and Glasgow Art Galleries.. *Morning visit chiefly for ladies.* The Coplawhill Car Works and the new Motor Garage at Victoria Road, of the Glasgow Corporation Tramways. The factories of the Scottish Co-operative Wholesale Society at Shieldhall.
Friday, July 11th.	All-day cruise in the new L.M.S.R. turbine steamer "Duchess of Montrose" on the Firth of Clyde, by invitation of the L.M.S.R.
Saturday, July 12th.	Forth Bridge and Edinburgh, commencing in the *morning.*

EVENING FUNCTIONS.

On Tuesday, July 8th, from 7.30 p.m. to 11.0 p.m. the Rt. Hon. the Lord Provost of Glasgow, and the Corporation of Glasgow, will entertain the Congress at a Reception and Dance in the Banqueting Hall at the City Chambers. Evening dress and decorations will be worn.

On Wednesday, July 9th. Visit to Gleneagles by invitation of the L.M.S.R.

On Thursday, July 10th. The Dinner of the Scottish Section at the Central Hotel. Evening dress and decorations will be worn.

VISITS AND EXCURSIONS.

Only one visit can be made on each of the afternoons of Tuesday, Wednesday and Thursday. On the Saturday, those desiring to do so will be privileged to return to London from Edinburgh, the tickets issued by the railway companies at reduced fares being available for use from Edinburgh, an intimation of the arrangements for those desiring to return to Glasgow, will be made later.

Road versus Rail.

Discussion at International Railway Congress.

AT the International Railway Congress, held in Madrid last month, a subject of topical interest discussed was that of the competition of road transport with the railways, introduced by Mr. H. L. Wilkinson, Assistant Superintendent of the Line, Great Western Railway. Mr. Wilkinson's report dealt in the main with the development of road transport, the causes which led to its rapid success and the serious effect it had on railway short distance passenger traffic. Long distance rail traffic, the report said, was now also affected by reason of development of high powered cars and chars-a-banc and radial distribution of goods by traders own fleets. A desire for travel had been created in the minds of the inhabitants of rural districts and, whereas the average radius of travel for the ordinary public prior to the war was perhaps some 8 miles, it was now probably from 20 to 30 miles and the travel habit, both in extent and frequency, was increasing. Road competition with the railways was becoming more acute up to 30 miles. The declared policy of the British railways in dealing with road competition, Mr. Wilkinson's report continued, had been to develop to the full rail travelling at cheap rates and to enter into agreement with existing passenger road undertakings whereby definite results could be achieved by the co-ordination of rail and road services. In certain areas interavailability of rail and omnibus tickets was allowed where railways operated their own bus services or operated them with an outside road company. Counter measures to combat road competition for goods traffic had been taken by reduced rates in order to attract or regain business, accelerating freight services, improving accommodation, introducing containers and railhead distribution, registered transits and country lorry services. The effective utilisation of the road powers of the railway companies was now one of the main problems engaging consideration.

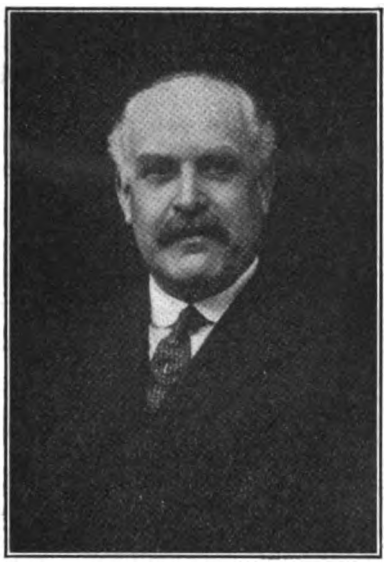
Institute of Transport.

Congress and Summer Meeting at Glasgow, July 8th to 12th.

Some of the Officers and Committee.

SIR JOSIAH STAMP, G.B.E., the President of the Institute of Transport, is the Chairman of the London, Midland and Scottish Railway and President of the Executive. He was born in June, 1880, and completed his education at the London University (Faculty of Economics and Political Science). He entered the Civil Service in 1896 in the Inland Revenue department, being transferred to the Board of Trade (Marine department) in 1898. In 1900 he returned to the Inland Revenue in the Taxes department, and in 1914 was transferred to the secretariat. He was made assistant secretary to the Board of Inland Revenue in 1916, and resigned in March, 1919, in order to enter commercial life. Sir Josiah Stamp received his knighthood in 1920, and the Knight Grand Cross of the order in 1924. He is one of the leading statisticians in the country and has many academic distinctions. He graduated with first class honours in economics at the London University,



SIR JOSIAH C. STAMP, G.B.E., PRESIDENT.

THE RT. HON. THE LORD PROVOST OF GLASGOW. (MR. THOMAS KELLY, J.P.)

MR. A. H. ROBERTS, O.B.E., CHAIRMAN, CONGRESS LOCAL COMMITTEE.

receiving his doctorate in 1916. In 1912 he was Cobden Prizeman and in 1916 the Hutchinson Research Medallist, and from 1919 to 1921, and again in 1923, he was the Newmarch Lecturer in statistics.

MR. ALFRED H. ROBERTS, O.B.E., the Chairman of the Congress Local Committee, is the Superintendent and Engineer of the Docks of Leith. He was educated at Bedford School, and trained as a Civil Engineer. He joined the staff of the late Mr. P. W. Meik, M.Inst.C.E., in 1891, and was engaged upon the construction of various railway and dock works until 1904, and from 1904 to 1909 he acted as Resident Engineer for Messrs. Meik on the Hydro-Electric Power Works of the British Aluminium Company at Kinlochleven. In 1909 Mr. Roberts entered the service of the Leith Dock Commission, as Resident Engineer, for the construction of the Imperial Dry Dock at Leith; in 1911 he was appointed Engineer for Maintenance, and in 1913 Statutory "Superintendent" and Engineer for the Docks, which position he still holds. He has been responsible for the carrying out of extensive works of reconstruction and equipment at Leith, by which the Docks have been brought to a high state of efficiency. Further works are now in hand. Mr. Roberts is a Fellow of the Royal Society of Edinburgh, a Member of the Institution of Civil Engineers, the various grades until 1897 when he became night station master at Carlisle. In 1908, he was appointed Assistant District Superintendent of the Western Division, and in 1910 became Superintendent of the same division. He was appointed Assistant Superintendent of the line in 1912 and in 1916 became Superintendent of the Line. In 1923 he was appointed General Superintendent (Midland Division) on the grouping of the Railways and General Superintendent of the Northern Division in 1924.

MR. R. KILLIN, C.B.E., J.P., JOINT HON. LOCAL SECRETARY.

MR. L. MACKINNON, J.P., one of the Joint Hon. Local Secretaries of the Congress, is the General Manager of the Glasgow Corporation Tramways. His association with the Institution of Structural Engineers and Scientific Societies.

MR. ROBERT KILLIN, C.B.E., J.P., is one of the Joint Hon. Local Secretaries of the Congress and is the General Superintendent (Northern Division) of the London, Midland and Scottish Railway. Mr. Killin joined the Caledonian Railway in 1882, and worked through

MR. L. MACKINNON, J.P., JOINT HON. LOCAL SECRETARY.

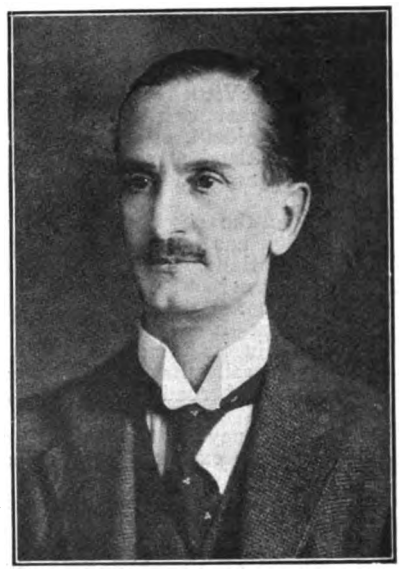
Digitized by Google

with the Corporation of Glasgow dates back to 25th January, 1887, when he started in the Cleansing Department. In 1892, when Mr. John Young was appointed General Manager of the Corporation Tramways, Mr. Mackinnon was transferred to serve under him, and the positions he has occupied during his career with the Tramways are as follows: — Chief Clerk in Traffic Department; Assistant Traffic Superintendent; Organised and had charge of the Purchasing and Contracts Department; Traffic Superintendent; Assistant General Manager, and, latterly, General Manager. Mr. Mackinnon has been appointed Chairman of the Scottish Tramways & Transport Association and he is also representative for Scotland on the Executive Council of the Municipal Tramways and Transport Association and a Vice-Chairman of the Scottish Branch of the Institute of Transport.

MR. R. MCLEOD,
HON. SECRETARY OF THE SCOTTISH SECTION OF THE INSTITUTE.

MR. ROBERT MCLEOD, the Hon. Secretary of the Scottish Section of the Institute of Transport, is the Depute Transport Manager of the Edinburgh Corporation Transport Department. He entered the service of the Department in 1919, occupying the position of Traffic Superintendent for a period of 9 years. He was promoted to the position of Depute Transport Manager in February, 1929. Previous to coming to Edinburgh, Mr. McLeod was employed in the Aberdeen Corporation Tramways Department from 1904 until 1919, and gained experience of the whole of the office work, being promoted to Chief Clerk in 1912, and in 1918 he was promoted to Traffic Superintendent, the position which he held previous to coming to Edinburgh.

MR. A. WINTER GRAY, the Secretary of the Institute of Transport, has been at the head of the secretariat of the Institute almost since its inception. He was appointed Secretary in 1923 and has attended practically every meeting of the Institute, the Council, and its various committees, and is, of course, well known to the members. Born in 1875, Mr. Winter Gray was articled to a London firm of land valuers and surveyors, and in 1896 he entered the department of the engineer and surveyor of the parish and borough of Lambeth, rising from the post of draughtsman to that of senior assistant. In March, 1917, he entered the service of the London Underground Railways as an assistant to Mr. H. E. Blain, now Sir Herbert Blain, and in this capacity Mr. Winter Gray was associated with the inaugurating and administration of the London "Safety First" Council and the British Industrial "Safety First" Association, serving as general secretary of the latter.



MR. A. WINTER GRAY,
SECRETARY,
INSTITUTE OF TRANSPORT.

Institute of Transport.

Nominations for Election to Council, 1930-31.

The following fifteen members of the Institute of Transport have been nominated by the Council to fill the ten vacancies as Ordinary Members of Council resulting from the retirement of present members of Council in September next.

MEMBERS (NINE VACANCIES).

Representing Railway interests (six nominations for four vacancies):—

Castleman, Arthur Louttit	District Goods Manager (London), London, Midland and Scottish Railway.
Fighiera, Felix	Secretary (London), Central Argentine Railway.
Mauldin, Herbert Henry...	Superintendent (Eastern Section), London and North Eastern Railway.
Mount, Alan Henry Lawrence, C.B.E. ...	Chief Inspecting Officer of Railways, Ministry of Transport.
Potter, Frank Rowe ...	Operating Assistant to Superintendent of the Line, Great Western Railway.
*Sire, Henry Alphonse, C.B.E.	Lately Chief Commercial Manager, Southern Railway.

Representing Road Transport interests (three nominations for two vacancies):—

*Gaunt, Walter Henry, O.B.E.	Distribution Manager, Messrs. J. Lyons and Co., Ltd.
Osler, James Bell, O.B.E.	Chief Engineer, Messrs. Carter Paterson and Co., Ltd.
Thomas, Theodore Eastaway	General Manager Elect, London County Council Tramways.

Representing Water Transport interests (three nominations for two vacancies):—

*Abbott, Thomas	Chairman and Managing Director, Messrs. F. J. Abbott, Ltd.
Bustard, Frank, O.B.E. ...	Passenger Traffic Manager, White Star Line.
Pickard, Henry, M.B.E. ...	Chief Engineer, Aire and Calder Navigation, Leeds.

Representing Air Transport interests (one nomination for one vacancy):—

Page, Frederick Handley, C.B.E.	Managing Director, Messrs. Handley Page, Ltd.

ASSOCIATE MEMBERS.

Representing Railway interests (two nominations for one vacancy):—

Darbyshire, George Lionel	Chief Officer for Labour and Establishment, London Midland and Scottish Railway.
Green, Henry John ...	Superintendent of Permanent Way and Outside Assistant to Chief Engineer, Metropolitan Railway.

* Former Member of Council.

Not later than June 21st, 1930, any ten Corporate Members may nominate any other qualified person or persons to fill any or all of the aforementioned vacancies by delivering a nomination in writing to the Secretary and, in the case of each person so nominated, a statement setting forth which branch of transport, transit, locomotion or traffic, or works connected therewith, such person represents, and also his consent in writing to serve as an Ordinary Member of Council, if elected. Forms of nomination may be obtained from the Secretary of the Institute at 15, Savoy Street, London, W.C.2.

Commercial Motor Transport in Scotland.

By J. W. Loudon.
General Secretary, The Scottish Commercial Motor Users' Association.

THE Scottish Commercial Motor Users' Association was started in March, 1921, with Mr. Ed. Graham Guest, of Messrs. MacVitties Guest & Co., as President and Mr. W. J. Thomson, of the Scottish Motor Traction Co., Ltd., as Vice-President, and soon acquired an established position in Scotland attracting to its membership important business firms and contracting and omnibus concerns in Scotland.

Even in the short time it has been in existence the Association has seen unfolded the romance of road transport in Scotland. The War was just over and the motor bus in France had proved its worth, and commercial transport was just at the stage when it needed no visionary to foresee that it would develop to an enormous extent. It is still in its infancy, but the business man and the public generally have been educated up to realise the advantages of road transport over all other forms of carriage.

The efficiency of the internal combustion engine and, above all, the extensive use of pneumatic tyres and their remarkable efficiency, plus the cheapness of the vehicles, has put road transport at the service and within the reach of every commercial enterprise.

FORTH ROAD BRIDGE.

From its initiation the S.C.M.U.A. has been a fighting organisation. One of the very first things tackled was the excessive rates on the ferries across the Firth of Forth. The rates made contracting work hopeless and most firms went by Stirling rather than face the uncertainty of the ferry service and its excessive expense. The objections here necessitated an attendance before the Rates Tribunal in London with, unfortunately, little success. The Forth crossing is still most unsatisfactory and the attitude of the Association is that improved transport facilities across the Firth of Forth are absolutely necessary. They have already passed a resolution to the effect that the road bridge is the most satisfactory solution, and they support the proposition that a road bridge be erected and, further, that although the project is a National one and should be financed out of the Road Fund, it is not unreasonable that the local authorities who would greatly benefit should make some contribution to the cost. The Minister of Transport has reported to the Association that the contributions offered by local authorities, at present, amount to only one hundred and eight thousand pounds, against an estimated expenditure for the bridge exceeding six million pounds. The Minister takes the view that in these circumstances the atmosphere is not very favourable for further negotiation, and he is examining the traffic aspect of the problem and looking into alternative schemes.

PROVISIONAL ORDERS.

Another continuous fighting brief has been the objection of the omnibus proprietors to corporations having running powers outside their city areas, and also to their having monopoly powers.

Last year no fewer than 8 Provisional Orders promoted by corporations and traction companies were opposed in Scotland, with successful results, and this year two Bills have been opposed—Aberdeen, where clauses were adjusted, and Glasgow, which is still being fought. The Association throughout has taken an enormous part in considering all legislation promoted by the Government and, in association with the London Commercial Motor Users' Association, has taken a prominent part in such important fights as the Railway Bills and the Road Traffic Bill, and previously assisted the Royal Commission on the Transport Inquiries with evidence.

ROAD TRAFFIC BILL.

The Road Traffic Bill, as amended by the Select Committee, contains in Clause 19 provisions limiting the working hours of drivers. The Clause is based on safety to the public which makes objection thereto somewhat difficult, but the members of the Scottish C.M.U.A. feel that it would be wiser to delete the whole of this Clause and give the industry a little longer to set its own house in order before placing this Clause on the Statute Book. As regards speeds there appears to be no adequate need to perpetuate the anomaly of stipulating for different speeds for approximately the same type of chassis and engines which it is a forgone conclusion will not be adhered to.

Prior to last year, one of the greatest difficulties which motoring organisations had to face was lack of uniformity amongst themselves, and it was only last year that a meeting was held under the Chairmanship of Lord Stanley at which all the important motoring and kindred organisations were represented, and agreement was reached on essential points for submission to the Government Committee on Transport. A common ground was found and all associations loyally joined together for the good of the industry as a whole.

POSITION IN AREAS.

The Scottish C.M.U.A. has area councils in Glasgow, Dundee and Aberdeen, and on the question of the development of road transport in the respective areas, Glasgow points to the extension of the bus traffic in Glasgow as being extraordinary. There are to-day some seventeen hundred buses in Glasgow including two hundred Corporation buses, as against 20 or 30 about nine years ago. There is a great increase in road transport of heavy machinery from England including sternposts and rudders from the forges in England, and very often return journeys are made with steel and girders manufactured in Glasgow. Also a large increase in the transport by motor vehicles from the fish ports to Glasgow Fish Market, as well as a large increase of milk traffic by road and cattle are now removed almost entirely by road transport instead of by rail as previously. Even in short journeys road transport is now made use of. In respect of the development of road transport a number of goods and passenger railway stations have been entirely closed down in and about Glasgow. Dundee points out that the passenger service there has increased tremendously, and more and more private firms are introducing motor transport for their works. With a reduction in the freight costs on the Tay Ferries in Dundee there has been a very considerable increase in the motor transport between Dundee and Fifeshire via the ferry, and if the proposed bridge is erected the increase would be very great. From Aberdeen comes the report that the Corporation there owns a large fleet of buses, and only recently at a Town Council Meeting, a suggestion was made and favourably received that the existing tramways in one part of the city should be scrapped and a bus service installed. Road haulage in Aberdeen continues to develop, and there has been a very large increase in the number of motor floats for conveying live stock to the various markets in the city. In Edinburgh the evidence is overwhelming of the increased use of passenger and goods vehicles, particularly in regard to passenger vehicles.

AUTOMATIC TRAFFIC SIGNALS.

Automatic traffic signals are extensively used in Edinburgh and in one or two other cities in Scotland. The view of the Association is that they perform a very useful function but that great care should be taken as to where they are erected. In particular, they should not be used at very busy crossings, nor at the top of steep gradients. It is desirable that they should not be placed where the cross road traffic is not of equal volume and, further, that they should be cut off at quiet times.

ROAD ENQUIRIES.

Under the Roads Act, 1920, the county councils have power to go to the Minister of Transport and ask that certain roads be closed either wholly or partly to all kinds of traffic or to certain specified traffic. The Association has made a point of investigating each application to the Minister of Transport and, where necessary, has made representations or, in conjunction with other associations, has attended the inquiries and led evidence. Quite recently there was an interesting inquiry at Selkirk, where the County Council desired to close three classified roads to heavy traffic. The various associations objected, and the result of the inquiry has not yet been announced. It is interesting to record that generally the Association's views are (1) that roads should be made fit for the traffic and not the traffic for the roads; (2) that classified roads are for National use and only in very exceptional

Digitized by Google

circumstances should any restrictive order be placed upon them, and even then it should only be for a limited period.

ROADS.

Scotland can congratulate itself upon the fact that classified and scheduled roads represent 91.72 per cent. of the roads in the country, leaving only 8.28 per cent. not directly grant earning, and the fact that no burgh roads are scheduled very largely accounts for this 8.28 per cent. so that as far as the county authorities are concerned the percentage of non-grant earning roads is somewhere between 1 and 2 per cent. Thanks to the courtesy of Mr. Curtis Gray, the Ministry representative in Scotland, I learn that of the ten thousand odd classified roads, 25.22 per cent are in Class I and 14.47 per cent. are in Class II, making a total of 39.69 per cent. classified roads as compared with about 25 per cent. in England and Wales.

For the year ending March, 1929, the Grant to the Scottish highway authorities amounted to £2,729,856, whereas the amount collected in Scotland from motor car taxation amounted to £1,818,600, with the result that the Scottish roads have received £911,256 in excess of the direct motor contributions towards the Road Fund. At present special grants are being offered to highway authorities for works of magnitude in reconditioning class I roads, ranging from 75 per cent. to 95 per cent. subject to certain conditions as to labour, etc., and to the acceptance of a percentage of transferred labour. During the past few years the Minister of Transport has been engaged on various trunk road schemes, and it is interesting to record the fact that the Perth—Inverness road is completed. In that case there was a 100 per cent. grant. The distance was over 70 miles and the total payment £652,815. The Edinburgh and Glasgow road is now almost completed. Only a relatively small section from Newhouse to Harphill remains to be done, and there are commitments for the Glasgow—Inverness road via Fort William which involves £866,000, and the road from Tyndrum to Ballachulish is estimated at £472,664. The last figures available, 1926/27, show that the total expenditure on roads and bridges for that year came to £5,924,599 which equals 2/7¼ of the gross valuation as against an average road rate of 3/2.

TAXATION.

The extent of the development of road transport can be appreciated when it is realised that the total sums raised for the whole country on motor taxation were £145,000 in 1906/7 as compared with £10,334,000 in 1920/21 and £38,340,000 in 1928/29.

Latterly a considerable portion of these sums has been diverted to the National Exchequer, much to the annoyance of road transport interests. The Scottish C.M.U.A. has all along objected to any increase in taxation, and in March of this year joined in representations to the Chancellor that the time has now come for (a) a 33⅓ per cent. reduction on all classes of motor vehicle taxation; (b) a more flexible system of short-term licences in order to induce all-the-year-round use of vehicles.

It is felt that heavy taxation on road transport, particularly at the present time, is not practical economics as it is a heavy business on cost which must be passed on. The consumer pays. The passenger pays. The investing public suffer. Export trade is above all affected, so much so that it can be confidently stated that the heavy taxation on road transport to-day vitally affects the unemployment question.

OMNIBUS AND TOURIST TRAFFIC.

While there is practically no co-ordination in connection with goods vehicles, this being to all intents and purposes in the hands of the individual traders, there has been, during the past year, an enormous rationalisation or co-ordination of the big omnibus undertakings and to-day the outstanding factor in the omnibus industry is the practical elimination of the small man with the result that to-day the big companies, in conjunction with the railway companies, have in hand and are working out, a comprehensive scheme of omnibus traffic covering the whole of Scotland. This is all for the good of traffic as the large companies must, of necessity, look to the safety of their omnibuses, the efficiency of their drivers and the comfort of the travellers. "Come to Scotland" is the slogan of to-day, and it seems right that the world should know that to-day in Scotland there are innumerable buses which rival in comfort the best private cars and which can take the visitor to some of the most beautiful scenery in the world and show them the history and romance of Scotland and that, according to time-table and at very cheap fares.

DOUBLE-DECKERS.

In response to a query from the Ministry of Transport, the Association recently considered with its members the question of double-deckers for long distance transport work, and while these are not being used to any great extent at present it was felt that it would be a mistake for the use of these buses to be discouraged. In fact the feeling of the Association is that great care should be taken by the legislation not to kill the motor transport industry by any unnecessary restrictions.

Second International Conference of Benzole Producers.

THE Second International Conference of Benzole Producers met at the Grosvenor House Hotel, Park Lane, London, on May 30th and 31st last. Delegates from the following countries were present:—Belgium, Czecho-Slovakia, France, Germany, Great Britain, Holland, Italy, Poland, Sarre, and Spain, and they were received by the President, Sir David Milne-Watson, LL.D., D.L., President of The National Benzole Association. The Conference was opened by a speech of welcome by Monsieur H. Laurain, President of the International Conference of Benzole Producers.

Sir David Milne-Watson, in his address, outlined the remarkable progress which had been made in the production of benzole during recent years, principally in Great Britain and Germany, and in dealing with the distributing, marketing and propaganda aspects of the position in Great Britain, suggested to the other countries represented that they might form a basis for the exploitation of benzole in their respective countries.

Five important papers were read at the Conference as follows:—"Motor Fuels for High Compression Engines"; "Resin Formation in Motor Spirits"; "Estimation of Gum in Motor Benzoles"; "European Benzole Market Position"; "Sales Organisation."

A Luncheon was held at the Grosvenor House Hotel and was attended by numerous important guests. During the luncheon speeches were made by Sir David Milne-Watson, Monsieur Laurain, Mr. S. Henshaw, F.I.C., Chairman of the National Benzole Company, Limited, and a number of foreign delegates. The Conference was concluded with a visit to the distribution depots, research stations and various transport workshops of the National Benzole Company, Limited.

Road Vehicles.

The Heavy Motor Car (Amendment) Order, 1930.

THE Minister of Transport draws attention to The Heavy Motor Car (Amendment) Order, 1930, dated the 29th April, 1930, which came into force on the 1st June. It had been found by manufacturers of public service vehicles of the double-decked type that it was difficult, without reducing seating capacity, to construct a vehicle of gross laden weight not exceeding nine tons embodying modern improvements desirable from the standpoint of efficiency and comfort. Such improvements include the fitting of pneumatic tyres, the provision of 6-cylinder engines and 4-wheel brakes, improved lighting equipment and heavier and more luxurious upholstery and internal fittings.

The new Order, which applies only to double-decked vehicles fitted with pneumatic tyres, permits a gross laden weight of 9½ tons and a maximum individual axle weight of 6 tons. The corresponding weights for single-decked vehicles, or vehicles not fitted with pneumatic tyres, remains at 9 tons and 5½ tons respectively.

The Order does not alter the existing permissible weights of 6-wheeled vehicles.

Motor Coach Progress in Scotland.

By J. Inglis Ker.

IN common with other countries Scotland has witnessed within recent years many changes and important developments in connection with road transport and to-day the operations of the various motor-bus organisations have reached a scale undreamt of even a short time ago. The growth of motor-bus and coach transport has been extraordinarily rapid. To-day there is scarcely any part of Scotland, however remote and formerly inaccessible, that is not now in touch with the larger centres of population by means of a bus service, while the larger towns and industrial areas have excellent facilities, which in several instances have proved so efficient as to lead to the abandonment of local tramway systems. It is said that prejudices die hard but the motor bus movement has made an early end to the prejudices with which pioneer efforts had to contend and it is clear that this form of transport must continue to play an important part in the life of the community.

There are many factors which have contributed towards the widespread popularity of bus transport, not the least of which is the great improvement which has been made, and is being made, in the roads throughout the length and breadth of Scotland. The Ministry of Transport has given generous grants towards the reconstruction of many of the existing roads, such as the section of the Great North Road from Perth to Inverness, as well as to the making of new roads such as the excellent highways between Edinburgh and Glasgow and Newcastle to Edinburgh. The steady and continuous improvements that have been accomplished by the Ministry in conjunction with the local road authorities made it possible for bus companies to expand in many directions that would otherwise have been impossible.

Another contributory factor has been the great measure of mechanical efficiency which has been attained in the production of motor omnibuses. More immediate effects, however, are to be attributed to the introduction of heavy pneumatic tyres. From the time that these were produced, the bus operators found one of their greatest problems solved and solved in a manner which is to the lasting credit of tyre manufacturers by whose unceasing efforts and enterprise almost incredible results were speedily obtained. While all these aids to success were appreciated by the operators of bus services, a feature which has made a more immediate appeal to the public has been the wonderful and satisfying advances that have been made in the technical design and construction of motor buses and coaches. One has only to recall for a moment the early types of these vehicles and contrast them with those of to-day to see what radical changes have been made. The comfortable seating, the luxurious fittings and the first-class finish of the best type of up-to-date motor coach has undoubtedly done much to gain the public favour.

The conjunction of the factors mentioned have certainly assisted the motor bus companies very materially and that debt is readily acknowledged, but these in themselves would not have led us very far if there had not been men behind the bus movement with energy and foresight ready at all times to take advantage of every opportunity not only to improve existing services, but to enter upon new spheres of activity which seemed to be in the interests of the public whom they served. It is too well known to need insistence that the bus movement sprang up, as it were, in a night. In its very early days there was not a little haste and confusion which, if left to go on unchecked, might have done great damage to a young industry. Fortunately, many of the pioneer companies recognised from the outset that it was essential that they should gain the fullest measure of public confidence. To do this there were certain important considerations which had to be kept in view. Among these were safety, punctuality regularity and efficiency. It will be agreed that to attain and maintain all these is not easy, but it had to be done and was done, and it is largely because of this that there has been such a continuous expansion. In the early days of the movement routes were necessarily short and services were largely experimental, but those concerns which early introduced a dependable time-table of services, and ran strictly in accordance with it; took infinite care to procure first-class men as drivers and conductors and trained them to the highest point of efficiency; established well-equipped repair shops staffed by skilled workmen; and ran their services with a constant regard to the safety of their passengers, at length succeeded in establishing the bus movement on a basis that made the subsequent developments possible. Nor must it be forgotten that among the pioneers themselves were many men who were highly skilled engineers, with experience and knowledge which were of the highest value in solving the many problems that arose.

As I have said the routes which were at first operated by bus companies were all short distance ones, and it was only as experience was steadily acquired that extensions were made, new routes opened, and wider areas brought into communication with one another. The latest development of long distance travel by bus opens up new prospects and contains possibilities which I think are only beginning to be realised. Only a few years ago it would have been regarded as visionary to suggest that one could leave Edinburgh by bus in the morning and be in Inverness on the evening of the same day, yet this is now a commonplace of modern bus service. We also have bus services running between Glasgow and London and Edinburgh and London doing the journey in one day and procuring an increasing measure of public support. It is evident to me that we are but in the initial stages of long distance travel and I foresee great developments in the near future. I am sure that later expansion will be materially assisted by the co-ordination of forces which has taken place between the railway companies and the leading transport organisations in Scotland. This co-ordination will have very far-reaching effects, and have influences on transport services throughout the country which will be to the ultimate benefit of the public. In addition to the extension of ordinary services through Scotland and the institution of long distance traffic, there has also to be considered the growth of tourist traffic. This forms one of the most important parts of bus transport in Scotland, which is renowned as a popular centre for tourists. This traffic has grown enormously within the past few years and the services of buses from all the famous touring centres supplies visitors to Scotland with touring facilities which are equal to any country in Europe.

Scottish Notes.

Removers Busy.—The May term was an exceptionally busy period with furniture removers. Some firms had a record number of orders in hand and the trade benefited by so many people taking up residence elsewhere. To a fair extent horse-drawn vehicles were hired, but for the most part the motor vehicle carried through the deliveries. Furniture storers were also busier than usual.

Tramways Association Conference.—The Eighth Annual Conference of the Scottish Tramways and Transport Association was held at Pitlochry when satisfactory reports for the past year were submitted. The office bearers elected were:—President, Mr. Lachlan Mackinnon (Glasgow); Vice-President, Mr. F. A. Fitzpayne (Edinburgh); Secretary and Treasurer, Mr. Robert Watson (Edinburgh); members of council, Messrs. Jas. L. Gunn (Aberdeen); Mr. William Grant (Ayr); Mr. Duncan P. Morrison (Dundee); Colonel Dalton Henderson (Perth); Mr. J. H. Shepherd (Dunfermline); Mr. H. C. Babb (Musselburgh) and Mr. W. T. Dawson (Wemyss).

Traffic Signals.—The traffic signal, presently in operation at the corner of Hope and Sauchiehall Streets, Glasgow, is giving satisfaction, and it is probable that more installations will be set up at suitable corners. George Square and St. Vincent Street is mentioned as a possible experimental corner for another system.

Falkirk Transport Project.—The Falkirk and District development Association are considering a plan for the development of road transport. Such a regular service, it is stated, would prove very serviceable to the iron-founding industry. Goods would be conveyed to Manchester, Leeds and Bradford, and on the journey back freights would be lifted at Edinburgh and Glasgow.

Glasgow Transport Services.—Glasgow Corporation was successful before the Select Committee of the House of Commons, and it has now obtained the right to control its own transport services. As a result a scheme of co-ordination between bus, trams, and subway will be drawn up.

The Albion Motor Car Co., Ltd.

The Company and its Products.

ONE bright autumn day, about 30 years ago, the main door of a small engineering works in Glasgow was opened, and eagerly watched by the five workmen and the two clerks who comprised the whole staff, while the first Albion was driven out on test by Mr. T. Blackwood Murray and Mr. Norman O. Fulton, the founders of the Albion Motor Car Co. This early machine, an 8 h.p. "dog-cart" with tiller steering, a horizontally opposed 2-cylinder engine and low tension magneto ignition, was the forerunner of the thousands of lorries, vans and buses which bear the name Albion to-day. Although only this one machine was produced in the first year of the Company's life, the production in the second year reached no less than twenty-one, and the model was brought up-to-date by the adoption of a steering wheel in place of the original tiller. The award of a silver medal gained in the 500 mile trial run by the Automobile Club of Great Britain and Ireland, drew the notice of the motoring world to the Albion's reliability, a quality which has been justly attributed, not only to this early model, but to all the later types. It is, in fact, very largely this characteristic of reliability that has gained for Albions recognition as one of the leading vehicles in the industry.

A VERY EARLY ALBION VAN.

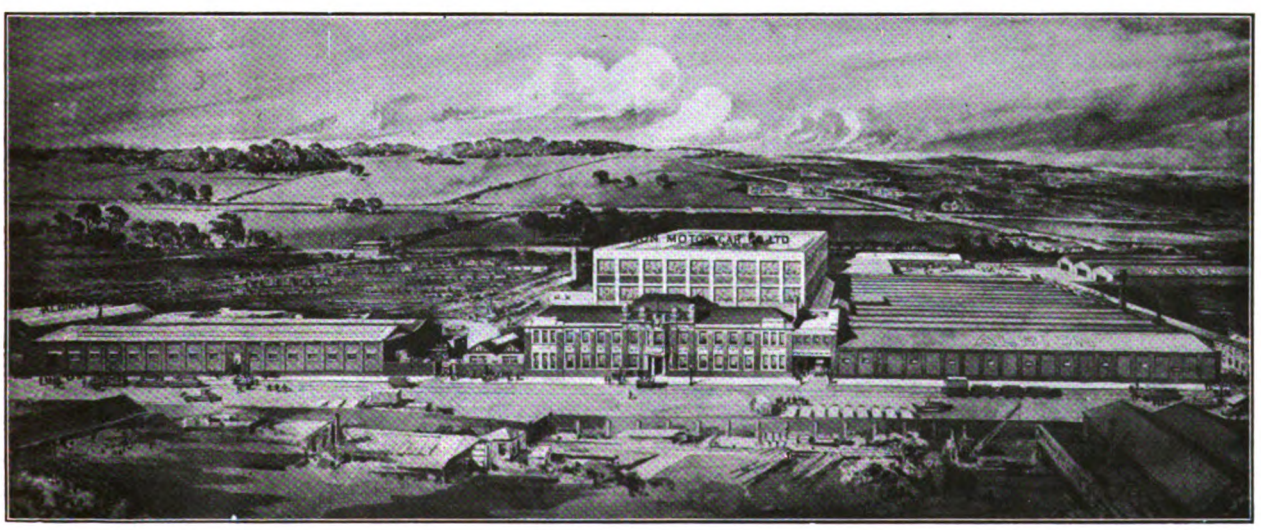
A steadily increasing demand soon made it necessary for the Albion Company to find larger premises and a site was found at Scotstoun about four miles from the centre of Glasgow. Here the beginnings of the present factory were built, and in the summer of 1903 manufacture commenced there. A new model with a 12 h.p. vertical 2-cylinder engine was introduced at this time and so successful did it prove that it remained in production till the outbreak of the War. Apart from an increase in engine size from 12 to 16 h.p. practically no radical departures from the original design were necessary during the 11 years in which this remarkable model, known as the A.3 type was marketed. During the early years of its existence the Albion Company built both pleasure and goods vehicles, but as the industrial market grew in importance more and more attention was given to it, till in 1912 the directors considered the position and decided to drop the private car business and to concentrate entirely on the manufacture of commercial vehicles.

In 1910 another famous model, the 32 h.p. 4-cylinder machine for 3-ton and 4-ton load, was introduced to meet the demand for a vehicle to deal with loads beyond the capabilities of the A.3 model, which was made in several types carrying from 15 cwt. to 2 tons.

About this time the char-a-banc was beginning to attract attention and, naturally, coach models became part of the Albion range.

The works had, of course, extended to cope with the steadily growing demand for Albions, and a considerable overseas business had been developed, particularly in India, Ceylon, New Zealand, Australia and Canada. The outbreak of the War, however, resulted in the factory being concentrated on the 32 h.p. 3-ton model for the War Office; nearly 6,000 vehicles of this type were supplied for use on the various fronts and their extraordinarily reliable performance is still remembered by those who worked with them in Flanders, Gallipoli, etc. During this period the works were further extended, and by 1918 the output was between 45 and 50 vehicles per week.

Immediately after the War the Albion Company set about designing an up-to-date range of models and these came on the market at intervals, till to-day there are Albion goods vehicles for loads of 30 cwt., 2, 2½, 3, 4 and 5 ton loads, and passenger models seating from 16 to 32, both 4-cylinder and 6-cylinder types being produced. The rigid six-wheeler has also been developed, and the success of the Albion Company in this direction is shown by the fact that after careful investigation and trial under working conditions of various 6-wheelers the Government of India have purchased more than 280 Albions of this type—a large repeat order having been placed at the end of May last.



THE ALBION MOTOR CAR COMPANY'S WORKS AT SCOTSTOUN, GLASGOW.

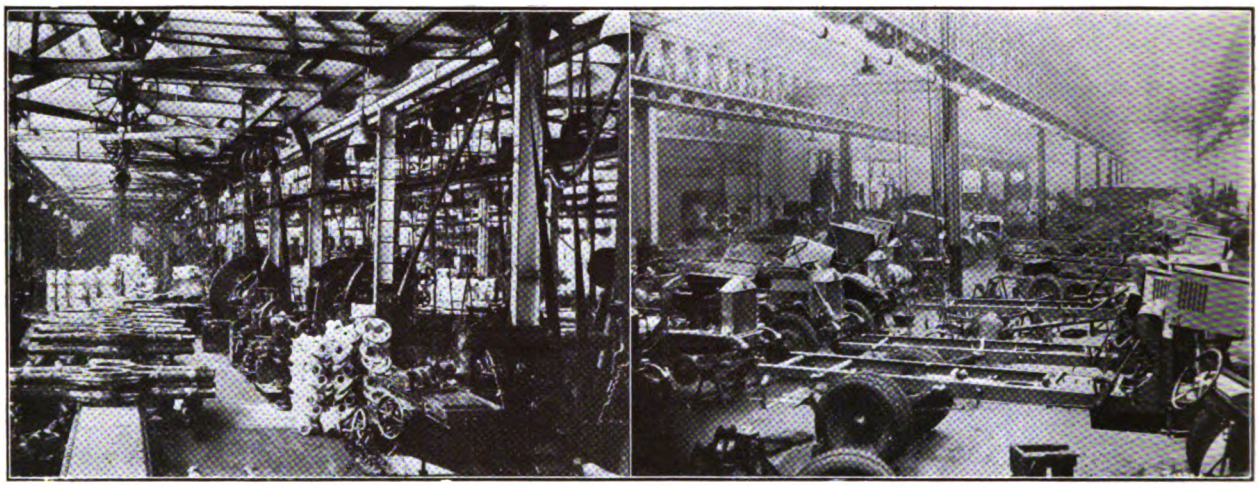
Reliability under arduous conditions has always been a characteristic of Albions, and this is probably the reason why they are so largely used in Government and Municipal transport work in overseas countries. More than

Digitized by Google

30 Governments and scores of Corporations, Councils, etc., have purchased Albions, while among business concerns who run fleets of this make are the London, Midland and Scottish Railway, the London & North Eastern Railway, Carter, Paterson & Co., Ltd., J. Lyons & Co., Ltd., J. S. Fry & Sons, Ltd., to mention only a few. For years every Albion vehicle has had a positively driven mileage recorder as part of its standard specification.

THE WORKS.

The Albion works at Scotstoun occupy a site of about 10 acres while nearly 2,000 employees are on the pay roll.



LEFT: REAR AXLE SECTION MAIN MACHINE SHOP. RIGHT: FINISHING OFF SHOP.

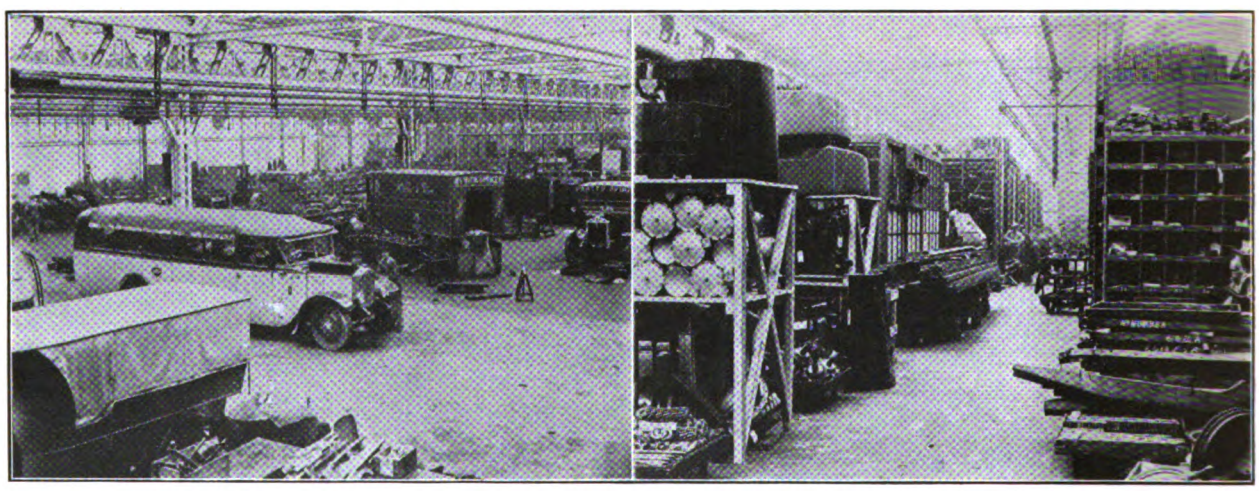
One of our illustrations gives a good idea of the general lay-out. The administrative offices are at the front, while immediately behind is a concrete block containing two machine shops, fitting shops, stores for finished parts, and the toolroom, while on the ground floor is the rough store to which incoming material is delivered. The large single floor section to the right of the offices is the main machine shop; the erecting and finishing shops are at the left and behind the concrete block. A 3-bay extension, seen at the extreme right of the illustration, houses the frame assembly and sheet metal work. The Service Department, entirely separate from the rest of the works is seen on the left and will be dealt with by itself.

Owing to the wide range of models and sub-types produced, the general principle adopted in the works organisation is to manufacture parts, units and intermediate assemblies for stock so that not only standard chassis but also special types can be built with the minimum of delay.

In the main machine shop separate sections are devoted to such heavy parts as rear axle bodies, cylinders, and engine casings, roller tracks being employed to pass the parts along the lines of machines in proper sequence. Machines which are not used exclusively for one particular part are grouped according to type. In another machine shop are automatic and semi-automatic lathes and a separate section dealing entirely with camshafts. Yet another shop contains a battery of gear grinders, all the change speed gear wheels being ground after hardening and then "paired" to ensure quiet running.

Case-hardening and heat treatment of semi-finished parts are carried out in a special department where there are twelve furnaces, all pyrometer controlled—an essential feature when alloys such as nickel chrome steel and case-hardening nickel steel have to be dealt with.

The assembly of engines, gear box and axle units, etc., is carried out in the fitting shops on a system whereby each squad of men carries out its own particular operation and then passes the unit on to the next. A certain amount of hand work is done on the engine bearings to ensure a really good fit. After assembly the engines are run in on the test bed, dismantled for a thorough examination, reassembled and given a full-power test during which records of power and consumption are taken. Their tests completed, the engines join the gear boxes, axles and other assemblies in the unit store to await the demands of the chassis erection department. The work here commences with the arrival of the frame which has been assembled in a separate shop with fitted bolts only, no rivets being used in Albion chassis. The completed chassis are spray painted and then passed to the chassis test beds where they are loaded up and anchored with the rear wheel resting on rollers, which are connected by gearing to dynamos. By means of variable resistances the load imposed by the dynamo can be adjusted to suit the particular type of chassis being tested and the power developed at the road wheels on all gears can be measured at various speeds. From the rollers the chassis is taken



LEFT: REPAIR SHOP. RIGHT: SPARE PARTS STORE.

Digitized by Google

over by a road tester who drives it round a standard course, after which any adjustments found necessary are carried out and the chassis is passed back to the tester for his final O.K.

The quality of any product naturally depends very largely on the thoroughness or otherwise of the inspection system in the factory where it is made, and the high standard attained by Albion vehicles is due in a considerable degree to the great care taken to ensure that all material is of the highest grade, and that every component is correct within extremely narrow limits.

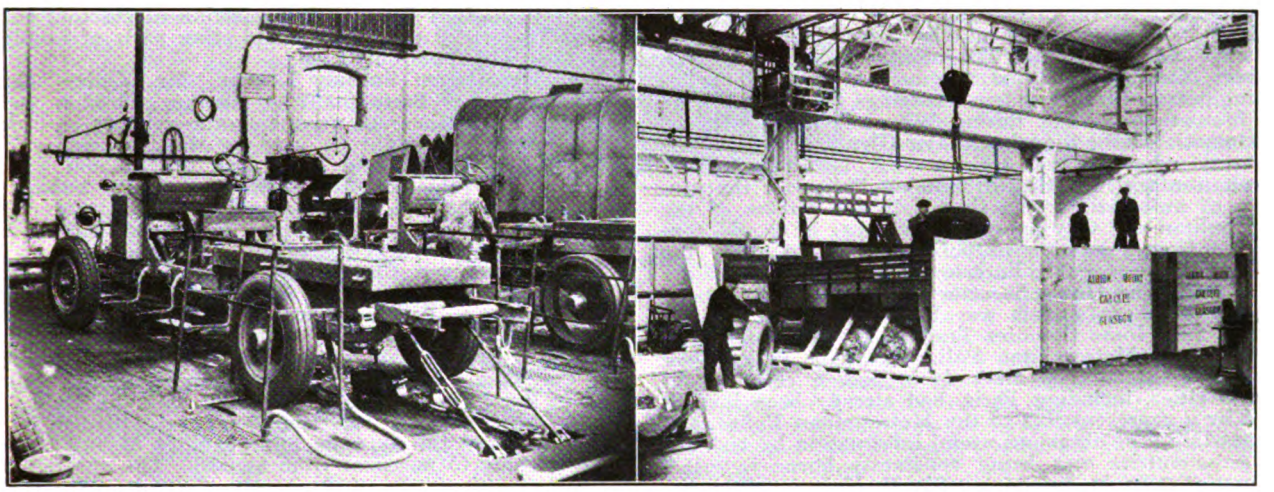
Castings and forgings are brought in from specialist firms but are, except in the case of comparatively minor parts, of definitely specified materials. These parts, together with all raw material and proprietary articles, such as magnetos, lamps, carburetters, etc., are delivered to the works by road. All incoming goods are carefully examined before acceptance, and in the case of material castings and forgings samples are sent to the laboratory for both chemical and physical tests.

In order that an adequate check may be kept on work in hand, and the operations in the various shops properly co-ordinated, control is vested in a Progress Department. This department is responsible for supplying material to machines at the time any job is due to commence, and for the removal of semi-finished to the next operation so that a close watch can be kept on the time taken for each stage.

With the exception of chassis tests all inspection work is under one control. Wherever possible, work is gauged at the machine and no part is allowed to proceed to the next operation unless it conforms to the specified limits. The gauges are returned to the gauge room after the completion of a job and may not be re-issued until they have been minutely inspected by a special staff, and the same system is applied to jigs and fixtures. All jigs and fixtures and the majority of the tools are made in the Tool Room which is equipped with extremely accurate machines specially made for this class of work. This department is also responsible for the repair and maintenance of tools and fixtures.

A section which is always surrounded by a certain glamour owing to the "hush-hush" nature of much of the work, is the Experimental Department. It is here that new types of engines or chassis are first tried out, and the equipment necessarily includes the most modern and accurate testing appliances. A full power run of 100 hours is one of the many tests undergone by new engines, and during this time half-hourly readings of the temperature of cooling water, exhaust gas, lubricating oil, etc., are taken. Experimental chassis first take the road in the hands of this department and undergo full load trials of at least 30,000 miles each, the testers working day and night in three shifts till the required mileage has been run up. Valuable data with regard to tyres, fuels and lubricants are gained from these tests, apart from the exhaustive information with regard to the performance of the chassis itself. The Experimental Department is also responsible for trying out new components and proprietary articles such as electrical equipment, carburetters, etc., so that all possible precautions are taken to prevent inefficient or defective parts being included on an Albion vehicle.

Probably one of the most interesting departments from the point of view of a visitor to the Albion works is the laboratory, which is so completely equipped that it can undertake practically any type of chemical or physical research work. The micro-camera or photo-microscope is in almost constant use for examining samples of heat-treatment and case-hardening, and it is most instructive to see the highly magnified image of a polished section of a case-hardened part thrown on the screen, when the complete contrast in the metallic structure of the hardened and unhardened parts becomes obvious. This useful instrument can be adjusted to magnify a part of anything from 100 to over 1,000 diameters. The strength of materials is examined by two methods. The Izod impact tester measures the work done in snapping a test piece of a given size, while the Olsen 50-ton tensile tester gives readings showing the force which is required to stretch permanently a test piece and also the tension when the piece finally snaps. Hardness tests are continually in progress, the instruments used being the Brinell machine which presses a steel ball on the surface to be tested with a pre-determined force, the diameter of the impression being measured and giving a measure of comparative hardness. A machine on a similar principle is the Firth Hardometer which uses a small diamond instead of a steel ball. In the case of parts liable to be defaced by other methods, the hardness is tested by the Shore Scleroscope in which a steel ball is dropped on to the test piece in a graduated tube, the height to which it bounces giving a reading from which comparative hardness can be easily calculated. A small electric furnace is in constant use in connection with examination of the amount of carbon in various steels. The carbon is burnt out of the steel samples at a temperature of 950 to 1,000 degrees Centigrade (ten times the heat of boiling water), and converted to carbon dioxide gas which is collected and weighed in absorption tubes. Another electric furnace fitted with a direct reading pyrometer is used for experimental research in connection with heat-treatment and case-hardening. Chemical analyses of various materials and examinations of fuels and oils, also form part of the routine work of this department.



LEFT: CHASSIS ON TEST ROLLERS. RIGHT: INDIA OFFICE SIX-WHEELERS BEING PACKED FOR SHIPMENT.

THE SERVICE DEPARTMENT.

To the user of motor vehicles the service organisation of a manufacturer is of quite as much interest as the main factory, as it is to this department he must look for the prompt and accurate supply of spare parts, so that his machine may be quickly on the road again after an accident or an overhaul. In the case of the Albion Company the Service Department is virtually a separate organisation. A feature with an important bearing on the cost of spares is that all parts, with the exception of those for models actually in production in the main factory, are manufactured in the service machine shop using the original jigs, tools and gauges. Thus, not only are the replacement parts exact duplicates of the originals, but they are put through without the trouble and considerable expense of interrupting the work of machines employed on steady work in connection with the output of new vehicles. In the case of current models, of course, a proportion is added to the main output for spares stock. Owing to the durability of Albions it is no uncommon thing for orders to be received for spares for models with 15 to 20 years' road service, and the Albion Company prides

Digitized by Google

itself on being able to meet a good proportion of these from stock. While the question of spares supply is being dealt with, reference should be made to the excellent spares lists issued by the Albion Company for all their models. These lists are divided into sections dealing with the various unit assemblies of the chassis, and it is therefore easy to find the name and official number of any particular part. In addition, to make identification easier, most of the parts are clearly illustrated, the reproduction being numbered to correspond with the parts they represent. The repair section of the Service Depot is fully equipped to deal with all types of reconditioning work. Interesting evidence of the efficient organisation of this section is shown by the fact that owing to the uniform durability of Albion vehicles, the cost of complete overhauls can be estimated within about 5 per cent. from a superficial examination and a knowledge of the mileage covered by the machine. The issue of complete engine and other units on loan while those belonging to customers are undergoing overhauls, and the hire of service vehicles to replace those under repair, also come within the sphere of this Department. The Albion Company take a very broad outlook on the question of maintenance, as is indicated by the fact that they are prepared to supply to customers at practically the bare manufacturing cost any special appliances which have been found to facilitate maintenance operations.

BRANCH DEPOTS.

In order to provide adequate service facilities for all users of Albions, service depots with full repair equipment and large stocks of spares have been established in London, Manchester, Sheffield and Birmingham, and these together with stocks of spares at the Leeds and Bristol branches and service agents in the other principal centres comprise an extremely efficient organisation.

Large stocks of spares are also carried by the Albion Motor Car Co. (Australasia), Ltd., in Melbourne, and by concessionaires in other centres where Albions are extensively used.

This brief account of the works and the vehicles produced in them is sufficient to show that the Albion Company manufactures first-class vehicles, and gives users first-class service.

In Parliament.

Railway Level Crossings. Sir W. Edge asked the Minister of Transport how many grants had been made in the last nine months for the removal of level crossings; and what was their aggregate value? **Mr. Herbert Morrison,** replying, said that within the last nine months, nine grants, amounting to £245,149, had been made towards schemes for the elimination of level crossings. Two of the grants were in respect of the acquisition of land and preliminary expenditure pending the submission of details.

Accidents at Level Crossings. Sir W. Hedge asked the Minister of Transport the number of accidents at level crossings during the last 12 months. In reply, **Mr. Herbert Morrison** said that the number of accidents involving personal injury at level crossings, including private and footpath crossings, during 1929, was 70.

Automatic Traffic Signals. Major Glyn asked the Home Secretary whether any decision had been reached in consultation with the City of London Police for the provision of automatic traffic signals in the streets of the Metropolitan and City areas; and whether he would consider sending a mission of police officers to study the methods in use in Paris, Barcelona and other cities of the Continent? **The Home Secretary,** replying, said that the question of these signals was being dealt with by the London and Home Counties Traffic Advisory Committee, on which the Metropolitan Police and City Police were both represented. The methods in use in certain continental cities, including Paris, had already been investigated by a representative of the Metropolitan Police, and the possibility of obtaining useful information by visits to foreign countries was being constantly borne in mind.

Horse Traffic in London. Sir F. Nelson asked the Minister of Transport if he could hold out any hope of the elimination of horse traffic from some of the busy thoroughfares of London, thus affording relief from traffic congestion? **Mr. Herbert Morrison,** replying, said that the question was recently considered afresh by the London Traffic Advisory Committee, who arrived at the conclusion, with which he concurred, that the time had not yet arrived when it would be practicable to give effect to the suggestion contained in the Hon. Member's question.

Road Traffic Control Signals. Major Salmon asked the Minister of Transport whether the traffic-control signals in operation in the provinces had proved successful; and whether there had been any decrease in the number of accidents since they were installed? **Mr. Herbert Morrison,** replying, said that he was advised that light signals of a proper type and properly placed at suitable junctions had facilitated the flow of traffic and had to some extent reduced the need for control by police officers on point duty. They might thus be said to have successfully fulfilled their main object. He had no information on which to form an opinion as to the effect of their installation on accidents. Asked what steps were being taken for the erection in the streets of London of electric traffic-control signals? **Mr. Morrison** said that it was proposed, subject to the concurrence of the local authorities, to make an experiment with electric traffic-control signals in Oxford Street. The question of erecting such signals at certain road junctions in other parts of London was also under consideration.

War Department Subsidy Lorries. Mr. Kinley asked the Secretary of State for War whether subsidies were still given to owners of private motor vehicles in order that the vehicles might be used by the Government in time of emergency; and what was the amount given annually per vehicle? **Mr. T. Shaw** said that subsidies were paid at the rate of £40 a year to owners of certain types of lorries, in order that they might be available for purchase by the War Department in emergency.

Light Aeroplane Clubs. Mr. Louis Smith asked the Under-Secretary of State for Air whether, in view of the subsidy given to light aeroplane clubs, any condition was made to the effect that the aeroplanes used by members must be of British manufacture? **Mr. Montague,** replying, said that such a condition had not been considered necessary in the agreements hitherto made with the clubs, in view of the obviously outstanding merits of British light aeroplanes and the extreme improbability of any of the clubs wishing to purchase from abroad. The question of including a stipulation of the sort in the new agreements would be considered.

Commercial Air Services. Lieut.-Commander Kenworthy asked the Under-Secretary of State for Air if he would state the number of civil aircraft in regular commercial service on recognised air routes registered in the British Empire, the United States of America, France, Germany, Italy, and the Union of Socialist Soviet Republics, respectively, at the most recent convenient date? Replying, **Mr. Montague** said that according to the information available, the number of civil aircraft owned by companies operating regular air transport services in His Majesty's Dominions was 227, and the corresponding figures for the other countries were: United States of America, 619; France, 411; Germany, 265; Italy, 64. He had no information in regard to the number in the Union of Socialist Soviet Republics.

Road Vehicles—Great Britain.

A RETURN has been issued by the Ministry of Transport giving particulars of the number of motor vehicles registered for the first time under the Roads Act, 1920, during the month of March, 1930. Copies (Price 2/6) can be obtained from His Majesty's Stationery Office, Adastral House, Kingsway, W.C.2.

The return shows the number of each class of vehicle registered for the first time by each licensing and registration authority analysed in detail according to various taxation scales, e.g., motor cars under headings of horse-power, goods vehicles under headings of unladen weight, hackney vehicles under headings of seating capacity, etc.

The number of new motor vehicles registered was 37,565, compared with 42,887 in March, 1929, the figures for the several classes being:—

	March 1930.	March 1929.
Cars taxed on horse power	18,848	21,112
Cycles	11,727	14,649
Hackney Vehicles	1,046	1,411
Goods Vehicles	5,475	5,297
Other Vehicles	469	418
	37,565	42,887

Furniture Warehousemen and Removers' Association.

Annual Conference.

THE Annual General Meeting of the Furniture Warehousemen and Removers' Association was held at the Hotel Victoria, London, on May 21st last.

The President, Mr. A. E. Millard (Robson & Sons, Ltd.), Newcastle-on-Tyne, presided, and extended a hearty welcome to all.

Proposing the adoption of the Annual Report and Balance Sheet for the year ending 31st March, 1930, the President said that the Report showed the vast amount of work done and the thanks of members were due to the various Committees.

The Report and Balance Sheet were adopted.

ELECTION OF PRESIDENT, 1930-31.

Mr. J. R. Harris proposed that Mr. A. C. Osborn (Curtiss & Sons, Ltd.), Portsmouth, be elected President for the ensuing year. He said that Mr. Osborn was a man who understood the trade thoroughly and had the interests of the industry at heart. Any work he undertook he carried out successfully. (Applause.)

The proposition was seconded and carried with enthusiasm.

Mr. A. C. Osborn thanked the members for the honour conferred upon him and upon the firm he represented.

MR. A. C. OSBORN
(CURTISS & SONS, LTD.),
PRESIDENT.

ELECTIONS OF VICE-PRESIDENTS.

Mr. W. L. Barber proposed that Mr. A. E. Knill (Pickfords, Ltd.), London, be elected Senior Vice-President. He said that Mr. Knill, who needed no introduction to members, had never been shy in working for the Association and he represented the biggest firm in the trade.

The proposition was seconded and carried unanimously.

Mr. Knill, returning thanks, said he appreciated the responsibility and would do his best in the interests of the Association.

Mr. W. H. Brothers proposed the election of Mr. F. W. H. Winwood (Frederick Winwood, Ltd.), Worcester, as Junior Vice-President. He said that Mr. Winwood could turn his hand to anything and would be extremely valuable to the Association. (Applause.)

The proposition was carried unanimously.

Mr. F. W. H. Winwood said he appreciated the great compliment paid to him and he hoped he would be able to justify the choice of the members.

MR. A. E. KNILL
(PICKFORDS, LTD.),
SENIOR VICE-PRESIDENT.

Mr. J. Godden proposed that Mr. G. H. Good (J. J. Allen, Ltd.), Bournemouth, be elected Chairman of Standing Sub-Committee. He said that Mr. Good had already shown the tremendous interest he took in the Association and no work was too great for him if it was to help the Association. It had been the custom for some time for the Chairman of Standing Sub-Committee to continue in office year after year and Mr. H. Mayes had held that position for a considerable time, but from a health point of view Mr. Mayes felt that it would be wise for him to be relieved of the rather strenuous duties of the position and in spite of all endeavours to persuade him otherwise he had declined to allow his name to go forward for re-election. It was interesting to note, continued Mr. Godden, that this year marked the twenty-fifth year of Mr. Mayes' close connection with the Association. (Applause.)

The proposition was carried with acclamation.

Mr. G. H. Good said it was very kind of the members to elect him to the chairmanship of the Standing Sub-Committee and he was only too sorry that Mr. Mayes had found himself unable to carry on. He would like to endorse every word Mr. Godden had said regarding Mr. Mayes, as he was entitled to all the praise and gratitude members could accord him. He would do his best to follow in the footsteps of Mr. Mayes.

A proposition that Mr. F. C. Skinner (Arding & Hobbs, Ltd.), London, be elected Vice-Chairman of Standing Sub-Committee was carried with acclamation.

Mr. Skinner said he thought that little work would fall to his lot whilst they had such an admirable skipper as Mr. Good at the head of the Standing Sub-Committee.

Mr. Victor Brown said there was too much undercutting and not enough confidence amongst members. It was up to every member of the Association to do his best to maintain a proper price for work done.

Mr. G. H. Good proposed that Mr. Victor Brown be elected Hon. Treasurer for the ensuing year. He said that from the inception of the Association Mr. Victor Brown had put his whole energy into it, and there was no doubt that if he was again elected he would continue to look after their financial interests and no man could do it better. (Applause.)

Mr. J. R. Harris referred to the valuable work Mr. Victor Brown had done for the Association, and said that their Hon. Treasurer had been their guiding spirit in financial matters.

The proposition was carried with enthusiasm and a very cordial vote of thanks was passed to Mr. Victor Brown for the admirable work he had done.

MR. F. W. H. WINWOOD
(FREDERICK WINWOOD, LTD.),
JUNIOR VICE-PRESIDENT.

Mr. R. J. Armstrong said that the work Mr. Victor Brown had done during the last 30 years had been invaluable to the industry as a whole.

Mr. F. W. H. Winwood said that had it not been for Mr. Victor Brown he doubted whether the Association would have been started; in any case he did not think it could have occupied the position it did to-day.

Digitized by Google

At the conclusion of the ordinary business an Extraordinary General Meeting was held at which the following resolution was passed in substitution for the Extraordinary Resolution confirmed as a Special Resolution on 10th June, 1925, which was rescinded:—

That a second general meeting of the members of the Association be held in the month of November, the first part of the meeting to be for members of the Association only, and that the second part of the meeting be open to non-members by invitation of members. That each Annual General Meeting shall determine the meeting place of the two following general meetings.

* * * *

PROPOSED DESIGN FOR THE ASSOCIATION.

Mr. A. G. Coombe referred to the discussion which took place at Birmingham last November when the question of adopting a design or badge for use of members of the industry was discussed. He said that the Publicity Committee had considered the matter and had been unable to come to a definite decision. Some members of the Committee were somewhat in favour of a badge being available for use on vans of any member who wished to use it. Others were not in favour. Linked up with this question was that of publicity, and his own personal opinion was that the Association could not reach its ultimate objective until they launched some publicity scheme whereby they could tell the public what the Association stood for, and that if they wanted the right firm they must go to a member of the Association. Yet he doubted whether the Association was ready for such a scheme and in any event they had not the funds at present to enable them even to dream about a general publicity campaign.

It was the opinion of the meeting that the question of a new design should not be pursued further at present, Mr. Winwood remarking that members could use the existing badge if they wished to.

SUGGESTED ISSUE OF CERTIFICATES OF MEMBERSHIP AND CONFERMENT OF DEGREES.

Mr. Victor Bishop referred to papers read at the Bi-Annual Meeting, held in Birmingham last November, dealing with the issue of Certificates of Membership and the conferment of degrees, and said that a Committee was formed to consider the questions and its Report would be available shortly.

He said he thought the time had come when the Association should come more into the open and show that it did not exist to countenance anything in the nature of a price ring. The issue of a certificate to a member would really be the Association's confirmation of his capabilities and a certificate could be withdrawn if necessary, thus maintaining a certain amount of discipline amongst members. The conferment of degrees on members was intended to make membership more valuable; as a reward for services rendered and to encourage the gaining of an expert knowledge of the industry.

After discussion it was decided that further consideration of the questions be deferred until the bi-annual meeting in November next.

BI-ANNUAL MEETING, 1930, AND ANNUAL GENERAL MEETING, 1931.

At the invitation of **Mr. A. G. Coombe,** the Chairman of the Metropolitan (London) Centre, it was resolved that the next Bi-Annual meeting should be held in London in November.

Mr. G. H. Good said that as Portsmouth was the home town of their new President, Mr. A. C. Osborn, he moved that the Annual General Meeting in May, 1931, be held at Portsmouth.

The proposition was seconded and carried unanimously.

Mr. F. C. Skinner gave a resumé of the work done by a special committee of the Association of which he is the chairman.

A long discussion took place on a resolution relating to publicity which had been tabled, and in the result it was decided that the Executive Committee, through an appropriate sub-committee, should, if possible, formulate a scheme and endeavour to bring it forward at the bi-annual meeting in November, under which permission could be given to members to issue joint advertisements in the local press, and that a scheme of co-operation between centres or towns, as the Committee might advise, for the benefit of members, be arranged in conjunction.

Mr. G. H. Price moved a hearty vote of thanks to Mr. A. E. Millard for his splendid services as President during the past year.

Mr. Evan Cook supported the proposition, which was carried with enthusiasm.

Mr. A. E. Millard said he could assure the members that his term of office had been a great pleasure to him. Their able secretary, Mr. E. A. Harris had given him excellent assistance and he was very much indebted to him, and all the members were indebted to Mr. Harris. (Applause.)

Mr. G. H. Price addressed the meeting on the subject of Railways and Removal Traffic, and his speech is reported on another page of this issue.

* * * * *

The Banquet.

The Banquet which followed the Annual General Meeting was attended by many distinguished guests.

Mr. A. C. Osborn, the newly-elected President, was in the Chair and submitted the toast of "The King," which was received in the usual loyal manner.

Mr. H. Cooper Day, a Past-President, submitted the toast of the Association. He said that as a young association they had many ideals, and some, but not all, had been attained. What struck him very forcibly was the unfair price cutting tendency that existed to-day. He was not afraid of healthy competition, that was good for the trader and the public; it kept the tradesman up to the mark and he had to adopt up-to-date plant, but there was the man outside the Association who found easy victims in some members of the public who found out, often too late, how the removal work had been done. Such activity by the so-called furniture remover was not fair fighting; it was guerilla warfare, and he was certain that if members put their backs to the wheel something could be done. The furniture removing trade was almost an art; it was certainly a science, so why not broadcast the fact. He thought it would pay them to advertise their service and they could do it much better collectively. They must bring their service to the notice of potential customers, and point out the advantages of coming to members of the Association and not to entrust their work to an outside man.

REPLY BY THE PRESIDENT.

Mr. A. C. Osborn, who was received with great enthusiasm, thanked Mr. Day for the way in which he had proposed the toast of the Association.

He said that was the 30th anniversary dinner of the Association and mentioned that thirty years ago Mr. Victor Brown called together some of the leading firms in the industry and the Furniture Warehousemen and Removers' Association was born. Until then there was no national organisation that carried weight in connection with such questions as hours of labour, wages, liability for damage from moth, and the thousand and one difficulties which faced anyone engaged in the industry. The formation of the Association had largely met those difficulties and, to-day, any member having a problem to solve, could write to the Secretary for help.

The work done by Mr. Victor Brown on behalf of the Association throughout the past thirty years could not be over estimated; might he long be spared to continue. (Loud Applause.)

SOME OF THE ACTIVITIES OF THE ASSOCIATION.

The Association had been instrumental in framing conditions of contract which were universally used by members, and there were a thousand and one ways in which the Association had done invaluable work, not only for their members, but also for the protection of the public, and these members of the public who contemplated a removal should see that the firms they employed were members of the F.W. & R.A.

The Association had its Joint Industrial Council whose work had proved very effective, and questions which had arisen had been adjusted with goodwill and harmony on both sides. They had an Arbitration Committee, a Railways and Removal Traffic Committee, and every assistance was given to members who were in doubt on any question connected with the industry.

They had their own Benevolent Fund which was slowly accumulating funds, and he had hoped during the last year or two that the fund would total £1,000 by the time he reached the Chair. Therefore, it was with much satisfaction that he found that sum exceeded, and he hoped it would be supported by all engaged in the industry.

One of the most encouraging features of the work of the Association was the development of Local Centres. Life in a centre could only be maintained by holding regular meetings.

WHAT OF THE FUTURE?

The future was full of possibilities and contingencies and the outlook made one pause and ponder. The tendency was towards rationalisation. Removing, however,

Digitized by Google

still remained an expert's job and individuality still counted. They were going through a period of severe competition and the trade of the world was in a state of depression, but difficulties only emphasised the importance of keeping their heads, coupled with a determination to give the best service. To-day a very high standard was maintained in the industry; their workmen were trained from boyhood; their equipment was the latest and their vans were specially built and used exclusively for removal work, whilst standard cases were used for china, etc., and, of course, cleanliness was of paramount importance. Depositories were specially built, were fire-resisting and were well ventilated, and they had their strong rooms for valuables with special rooms for pianos, etc. It was up to the members to educate the public to look for the highest efficiency and to employ only those firms who were members of the Association and who could give the best service. Service would come first, and the price for which the work was undertaken would be considered in conjunction with the quality of the service provided.

The transport world was faced with far reaching matters. For instance there was the Road Traffic Bill now passing through Parliament and the Hours of Industrial Employment Bill; there was also the question of establishing what was known as the Unilateral system of dealing with road vehicles in connection with loading and unloading. With regard to their Estimators Examination, he hoped this matter would be taken up by their young men, and that employers would stress the importance of their sitting for this examination.

The future well-being of the Association would be largely governed by the activity of the local centres, and more responsibility would rest, in future, on the chairman and secretary of each centre, and he hoped they would realise to the full the importance of the centres to the Association as a whole, and revive interest locally and nationally.

What did they get out of the Association? They got out of it just in proportion to what they put into it. Union created strength and he appealed to members to be loyal to the Association and to invite others to join.

They should look forward to the future with confidence, clear vision and determination, with optimism and not with a misty optic. (Applause.)

Mr. Victor Brown, J.P., C.C., proposed the toast of the "Past Presidents" whose names, he said, were written large upon the memory of each member, and the good work they had done would never be forgotten.

Two of their Past-Presidents would respond to the toast, Mr. F. Walter Payne who was President in 1911-12, and Mr. Harold Currie who was President in 1920-21. Mr. Walter Payne did wonderful work in the past for the Association, and Mr. Harold Currie was the type of man his father was, he was a good chap and a friend of his. (Applause.)

Mr. F. Walter Payne (Past-President), responding, said it made him feel a very old man when he tried to remember for how many years he had known Mr. Victor Brown, and he wondered whether the members of the Association fully realised what Mr. Victor Brown had done for them since the inception of the Association. He believed that most of the gentlemen on the Committee had been put there at the instigation of Mr. Victor Brown, who was a keen business man and looked round for those men who would be of most use to the Association.

Mr. Harold P. Currie, M.Inst.T., said that we who lived in the twentieth century might think we had reached full knowledge of all things. Some few years ago he had the audacity to talk to them of the future of aerial transport in relation to furniture removing. There had been some marvellous aerial exploits since then and we were living in a great age, and he felt that the future of their great industry, so far as transport was concerned, lay in the air.

Britain led the world so far as light aeroplanes were concerned, but we were behind in the establishment of great air lines such as they had in France, Germany and the United States.

Their new President in taking office hoped to realise certain ideals as did all their Presidents, and he might sum up the attitude in which each President came to the Chair in the words of the poet:—

> I will not cease from mortal fight,
> Nor shall my sword sleep in my hand
> Till we have built Jerusalem
> In England's green and pleasant land.

When they spoke of England they spoke of it broadly; when they spoke of Jerusalem they meant that close brotherhood and united understanding which must and would exist between them, and along such lines the future of their industry lay. (Applause.)

Mr. A. E. Knill (Senior Vice-President) extended a hearty welcome to the guests and said how pleased the members were that so many ladies had graced the gathering with their presence

They had with them Sir Francis Agar—a gentleman who helped to carry on the business of the great city of London. They also welcomed their friends from the Commercial Motor Users' Association, Mr. C. le M. Gosselin the President, and Mr. F. G. Bristow the General Secretary. The F.W. & R.A. valued association with the C.M.U.A.

They welcomed also representatives of the British Railways, the finest railways in the world, providing the finest service in the world. He hoped that the railway companies would treat the furniture removers in the future as in the past, as customers. He would, however, ask the railway companies to have patience as the furniture removers could not change their methods or get the public to change their methods in a short time, and he thought the railway companies were realising that if a man wished to travel by coach he would do so, and if he wished his household effects conveyed by road he would have them so conveyed and, therefore, the furniture remover was not exactly a free agent, but was doing his best to put goods on the rail.

Sir Francis Agar said he was glad to have had the privilege, at the invitation of his friend, Mr. Victor Brown, of being present with them that evening.

Mr. C. le M. Gosselin, M.I.A.E., M.Inst.T., President of the Commercial Motor Users' Association said that if the F.W. & R.A. and the C.M.U.A. had found it beneficial to work together in the past, he was sure that they were going to find it absolutely essential to do so in the future in view of the Road Traffic Bill and the Hours of Industrial Employment Bill now before Parliament, and it would require their united efforts to protect the interests of those for whom they catered.

There never was a time in their history when it was more necessary that they should have universal support from every one of their respective members.

Mr. A. Maynard, Assistant Chief Goods Manager, Great Western Railway, said that the railway companies had every desire to work with the furniture removers, and he hoped that sooner or later they would be able to get closer together than they were at the present moment. After all the railway companies recognised that the furniture removing trade was one of the oldest, but the railways had been established for over one hundred years and had the means for conveying and must press for traffic including furniture removals. They would prefer to get removal traffic and had every desire to get it in co-operation with the furniture removers as that seemed to him to be the best solution for both sides. The F.W. & R.A. wished to avoid price cutting—the railway companies were with them; they wished to advertise—the railways were with them, and on those grounds he wished the F.W. & R.A. every success.

Mrs. F. G. Bristow responded on behalf of the ladies and congratulated the President on being elected to the Chair.

Mr. F. W. H. Winwood (Junior Vice-President) said he intended to obstruct the proceedings in the sacred cause of charity, namely, the Benevolent Fund of the Furniture Warehousemen and Removers' Association.

What did the Fund seek to do? It was initiated with the object of helping any of their members who through circumstances beyond their control had fallen by the wayside; to assist members of their clerical or managerial staff who had met with some unexpected misfortune, and last but by no means least, the Fund was designed to care for the little ones who might be left uncared for. The Fund totalled just over £1,000, but that was not nearly enough. As members of an association they were a family and it was their duty to protect those members of the family who were in need.

Mr. G. H. Good proposed the health of the President, Mr. A. C. Osborn. He said that by his business knowledge, his experience, and the quiet and unassuming manner in which he viewed the problems always confronting the industry, their President had endeared himself to them all, and those were qualities which had enabled him to reach the chairmanship of the large business with which he was connected.

That their President would do himself and the Association justice during his year of office they were confident, but that he himself would be satisfied with what he was able to do was doubtful, but of one thing they could be certain and that was that their President would enjoy every moment of his year of office.

The President, in reply, said he would do his best and would work as hard as he could in the interests of the Association.

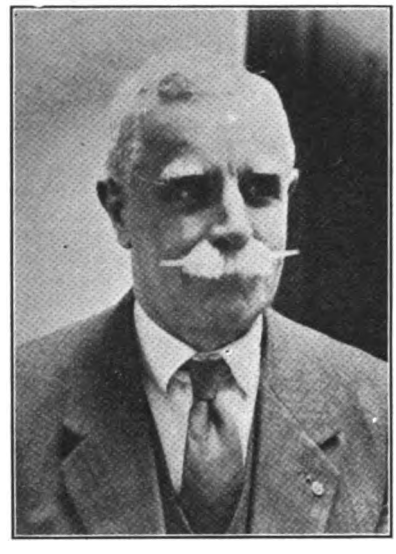
British Association of International Furniture Removers.

THE Eighth Annual General Meeting of members of the British Association of International Furniture Removers was held at the Hotel Victoria, London, on May 21st last.

In the absence, through illness, of the President, **Mr. T. A. Chambers** (Anderson, Stanford & Ridgeway, Ltd.), Dublin, **Mr. J. Riley** (James Riley & Sons), Derby, presided.

The Annual Report and Balance Sheet for the year ending 31st January, 1930, which had been circulated to all members, was adopted.

Before the members proceeded to elect the officers for the ensuing year, Mr. J. Riley said how deeply they all regretted the illness of Mr. T. A. Chambers, and how much they had missed his presence amongst them during the year.



MR. J. RILEY,
(JAMES RILEY & SONS, DERBY),
PRESIDENT.

ELECTION OF OFFICERS.

Mr. J. Riley (James Riley & Sons), Derby, was unanimously elected President for the ensuing year.

Mr. Evan Cook (Evan Cook's Depositories, Ltd.), London, was elected Vice-President, and **Mr. E. Woodbridge** (Woodbridge & Co., Ltd.), London, was re-elected Honorary Treasurer and thanked for his services.

DECLARATION OF RESULT OF BALLOT FOR ELECTION TO COUNCIL.

It was reported that as the number of nominations to the Council received, so far as affected members in the British Isles, did not exceed the number of vacancies, a ballot had not been necessary. As to overseas members of the Council, Mr. H. Menkes (La Continentale Menkes), Brussels, and Mr. M. Rawlinson (M. Rawlinson, Ltd.), Toronto, Canada, had been nominated and were duly elected.

Mr. W. H. Brothers said that as Mr. Evan Cook had been elected a Vice-President one vacancy on the Council was thus created, and he had pleasure in proposing that Mr. G. Evan Cook be elected to the Council. This proposition was seconded and carried unanimously.

The following resolution was passed:—"That when an elected Member of the Council fails to attend four consecutive Council Meetings without apologising for non-attendance, a letter on the matter be addressed to such Member, and in the case of no satisfactory reply being received the Council be empowered to remove such Member and to elect a substitute for the unexpired period of his term of office."

ANNUAL MEETING, 1931.

There was some discussion as to the venue of the 1931 Annual General Meeting. Several members expressed the opinion that the most convenient centre was London.

The President pointed out that it had been the custom to hold their Annual General Meeting in the same city or town where the Annual Meeting of the parent body was held, and eventually it was decided to leave the matter in the hands of the Council to decide, after it was known where the Furniture Warehousemen and Removers' Association would meet next year.*

One of the items on the Agenda proposed that Rule 3 of the Constitution of the Association be amended to provide that the President for the time being of the Furniture Warehousemen and Removers' Association should be, ex Officio, a member of the Executive Committee of the British Association of International Furniture Removers.

The Secretary pointed out that the proposed revision was more in the nature of a reciprocal arrangement, as the Furniture Warehousemen and Removers' Association had already decided that the President of the British Association of International Furniture Removers should be ex officio a member of the Executive Committee of the parent body, provided that he or the firm he represented was a member of the F.W.& R.A.

During the discussion on this question one member pointed out that the proposed revision of the rule meant that they were opening the British Association of International Furniture Removers to a gentleman who might not be a member of the International body, but Mr. W. H. Brothers said that the idea underlying the proposed change of rule was to enable them to have a liaison officer between the two Executives.

The Chairman said that if the President for the time being of the parent body was not already a member of the British Association of International Furniture Removers, the fact that they had altered their rules to enable him to be a member of their Executive could be used as an argument for getting him to join them. (Laughter.)

The proposed revision of Rule 3 was then agreed to.

At the conclusion of the business on the Agenda Mr. J. Riley thanked the members for the honour they had conferred upon him in electing him their President for the ensuing year, and said he would undertake to do his best in the interests of the Association. (Applause.)

The President then proposed that a cordial letter of thanks be sent to **Mr. T. A. Chambers**, the retiring President, for his services during the past year, and expressing the sympathy of all the members with him in his illness and the hope that he would be quickly restored to health. The members expressed their full concurrence with the course proposed by the President.

* As reported elsewhere in this issue the Furniture Warehousemen and Removers' Association have decided to hold the 1931 Conference at Portsmouth.—Editor.

Furniture Warehousemen and Removers' Association.

Benevolent Fund.

THE Annual General Meeting of the members of the Benevolent Fund of the Furniture Warehousemen and Removers' Association, was held at the Hotel Victoria, London, on May 21st last.

Mr. A. C. Osborn presided, and proposed the adoption of the Annual Report and Balance Sheet for the year ending 31st March, 1930. The proposition was seconded and carried unanimously.

The Annual Report states that the subscriptions from both Employers and Employees show an increase as compared with the previous year. The Committee point out that it will be evident, in view of the desire to deal with cases of distress out of current revenue, how important it is that present members should bring the beneficent work to the notice of those not at present members, with a view to inducing them to join and thus strengthen the Fund. It is hoped that much will be done by Centres to augment the Funds and that every Centre will endeavour to raise some sum during the coming year.

Mr. Victor Brown, J.P., C.C., Mr. A. C. Osborn, and Mr. J. R. Harris were re-elected Trustees.

The following proposed resolution, put forward by a member, was on the agenda:—"In order that the Benevolent Fund may raise a sufficient amount to be invested to produce such a sum as shall be necessary to afford adequate assistance to all subscribers, the yearly subscription for employees shall be £2 2s. per annum and for employers £4 4s. per annum, and that the rules be altered accordingly." It was decided that the Benevolent Fund Committee should consider this question and that the matter be brought up at the next Bi-Annual Meeting for discussion.

Railways and Removal Traffic.

AT the Annual conference of the Furniture Warehousemen and Removers' Association, held in London on May 21st last and reported elsewhere in this issue, **Mr. G. H. PRICE** (Mousell Bros., Ltd.), Birmingham, in the course of an address on "Railways and Removal Traffic," recalled the events of the past few years and said all could remember the time when their largest monthly cheque was drawn in favour of the railway companies, and except for little differences of opinion in regard to rebates or claims, it was to their mutual advantage to cultivate a happy relationship. It had always surprised him that the railway companies did not recognise the necessity for organising a body of travellers to look after the interests of the furniture removers, as they did in such branches of industry as the timber and cattle trades, and set up a separate department to deal with the matter. With the coming of the steam wagon and motor vehicle, furniture removers began to lose their close contact with the railway companies, and had there been a special department, with a responsible head, to look after that branch of the railway companies' business, undoubtedly the position would have been noted earlier than it was.

It was not until January, 1926, when the Railway Rates Tribunal had reduced rates on furniture from class 4 to class 3, and after nearly every furniture remover had sunk capital in supplying himself with motor vehicles, that the railway companies realised what a profitable business they had lost.

The railways approached the furniture removers on January 4th, 1926, and, at their request, a conference took place, and the Association made many suggestions which it was thought would be helpful in encouraging removal traffic to the rails, but they were careful to tell the companies that the railways could not look for an immediate return for the concessions the Companies had made. This the Railway Companies appeared to appreciate, and said that as the motor vehicles owned by furniture removers wore out they hoped the traffic would revert to the rails. The railway companies issued special circulars to their Agents which embraced, largely, the views of the furniture removers. This showed that at that time the railway companies were anxious to meet the requirements of the removal industry in order to get back the business of the furniture removers.

MR. G. H. PRICE.

The Railways Act of 1921 formed the railways into four groups, and with the advent of Sir Josiah Stamp into the railway world there was initiated an able press campaign, and at the psychological moment the Railways brought forward their Bills in the House of Commons for Road Transport Powers, which were passed by a large majority for reference to a Select Committee—and ultimately secured their Road Powers.

Up to the present time the railways had confined their efforts mainly to securing as much as they could of the road passenger traffic, but there was now evidence that the companies were endeavouring to obtain a bigger share of the road haulage business.

Meanwhile the severe road competition had driven the Railway Companies to consider other methods, and, to save the cost of packing and extra handling of merchandise, the "Container" was devised. The furniture removers were assured by the Companies that upon its first introduction it was not allowed to be used for furniture, but so numerous did the enquiries for the Container for furniture work become, that eventually the Companies withdrew their ban and to-day they were being used for removals.

After the first conference between the railways and the Association, the Railway Companies suggested periodical meetings to discuss matters of mutual interest and these meetings had been going on ever since, and the Association was thus able to see the trend of the Railway Companies' policy. The railway representatives continually impressed upon them their disappointment at the results from the concessions made to the furniture removing trade, whilst on the other hand they said that their removal traffic with the public direct was steadily increasing. One was therefore driven to expect that they were likely to cultivate the business with the public direct to the detriment of business with the members of the Association. Nevertheless, the companies still said that they preferred to have the business through the trade, but that as the trade did not give them the business, they must, sooner or later, go all out to get it direct. That would mean that the railways would be in open competition with the removal trade.

The railway companies complained that in some cases a furniture remover who had been introduced to a customer by the railways had secured the job and then sent the goods by road. It might be that the customer insisted on road transport and the circumstances in such a case should be explained to the railways to avoid embittering them against the furniture removers. Another complaint was that some removers, even if they found it cheaper to send goods by rail, still persisted in going by road, and yet another cause for complaint was becoming more frequent viz., that Depository owners were refusing to load Containers sent to their warehouses for transit by rail or to afford reasonable facilities to the Companies. It must be borne in mind that the Railways were bound to quote rates when asked and naturally followed up the enquiries to secure the business to their lines.

Dealing with the furniture removers point of view, Mr. Price said that complaints were received from centres and individual members that the railway companies quoted lump sum prices for removals, and it was contended that in some instances the railways were undertaking packing, unfixing, refixing and other work connected with removals, and that whether the railways actually did that work or not they quoted for it, and, of course, prices were brought down, and that if a furniture remover wanted the job he had to reduce his price in order to meet the quotations of the railway companies. In some cases the railway companies were even asking members of the Association to tell them the weights and quantity of goods to be removed, what containers would be required and what packing material would be necessary. It seemed that the railway companies could only want such information in order to give the customer a practically inclusive price, although they said that they did no more than give to the public an approximate idea of the total cost.

The railway companies insisted that they must recover a fair share of the furniture removing business, particularly so far as long distance removals were concerned, and it was obvious that unless the furniture removers could give the railway companies substantially more business and give it without further delay, they would have to meet keen competition from the railways.

The railway companies acted as one unit. As an industry, could the furniture warehousemen and removers say that they were united in the same way? Members seemed to lose sight of the great importance of acting unitedly, and seemed inclined to take an independent line, but it was a vital source of weakness if their representatives could not go into any conference feeling assured that they had the united support of the members behind them.

Was it possible to arrive at some amicable arrangement with the railway companies? He did not know whether by concessions on both sides they could work together.

There were, of course, certain restrictions imposed by Parliament which militated against the railways carrying out removals in the same way as did members of the industry. They could not, for instance, quote a definite lump sum for a removal and whatever charges they proposed to make had to be exhibited at their stations for the public to see, and it really did seem that it would be in the interests of the railway companies to leave furniture removers to carry out their specialised work, and he was inclined to think that the railway companies would prefer to row in the same boat with the furniture removers. The railways said that they were not concerned with the charges made to the public by a furniture remover so long

Digitized by Google

as he did not kill the railway companies business, and they complained that when they introduced a remover to a customer the chance of the goods going by rail was often killed by the remover adding too big a percentage to the price quoted him by the railways and the goods then went by road.

In conclusion, Mr. Price said that he had suggested that it might be possible for a panel to be drawn up for each town or district containing the names of members of the Association who would be prepared to work with the railway companies, i.e., those who would be willing to co-operate with the railways in connection with an enquiry. He was not suggesting for a moment that a furniture remover should surrender his business to the railways, but if the railways had an enquiry for a price for a removal by container it had been suggested to them that they should ring up one of the firms on the panel and get him to quote his lowest price for the removal based on the railway charges.

It followed, of course, that if the member secured the order the goods would be sent on the rails of the company which introduced the business. He knew that the proposal contained many difficulties, but he did feel that they must endeavour to find some means whereby they could help the railway companies and at the same time be free to carry on their legitimate business as furniture removers.

New Pyrene Works.

Opened by Lord Brentford.

It was particularly appropriate that the opening of the magnificent new building erected by the Pyrene Co., Ltd., on the Great West Road, should take place during the week following the National Safety Week, and that the event should be entrusted to Lord Brentford, the President of the National "Safety First" Association, who has taken such a keen and active interest in accident prevention in every branch.

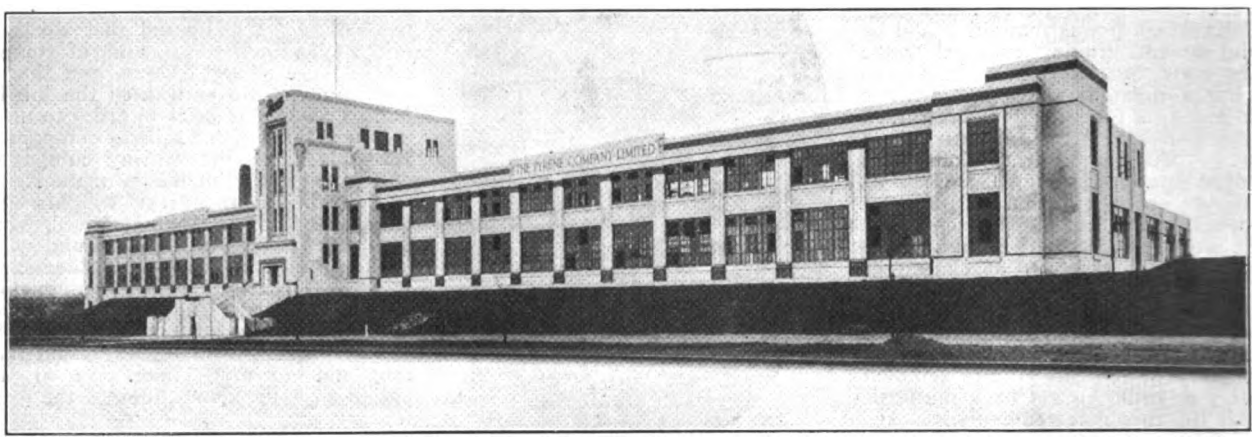
In honour of the occasion a large and distinguished company met at the works on Wednesday, May 28th last, at the invitation of the Directors of the Company, to take part in the opening ceremony, which included a luncheon at which some 380 visitors sat down.

The speeches which followed the luncheon were appropriate to the occasion, describing not only the romantic development of the Pyrene business from the smallest dimensions until the present day, but also emphasising the seriousness of the accidents occurring every year through fire. When one is faced with the fact that the loss in property by fire for Great Britain alone, in 1929, amounted to over £15,000,000, one gets some idea of the vast field to be covered by such a firm as the Pyrene Company, and one also begins to realise that there is a reason why the business has extended so rapidly, until it is housed in the magnificent building shown in our illustration. It has a facade measuring 480 ft. and stands on a site of just over 3 acres, and the building has a floor area of 78,640 sq. ft.

In connection with the opening a magnificent brochure was issued which we consider will form an ideal for publications of this character for a long time to come. The artist's drawings, reproduced so that they look like original pencil drawings, the small sketches to the right and left of the respective pages, and the colour work on the frontispiece, reproducing faithfully the magnificent tower in the centre of the building, all help to give an effect which renders the brochure in a class by itself.

The works are admirably laid out for their purpose, the various shops being on either side of a straight passageway, securing a minimum of waste of time and energy, with a maximum efficiency, one workshop leading into another as the various processes are carried out.

On the first floor are the offices which are splendidly lighted on both sides so that the staff work under ideal conditions, and on this floor is the excellent canteen and special luncheon room. The canteen, by means of dark blinds, can be turned at any time into a spacious cinema and is fitted up with complete cinema apparatus, including the Pyrene automatic film fire extinguisher.



Photo] [Wakefields, Ealing, W.5.

VIEW SHOWING FRONTAGE OF PYRENE BUILDING ON GREAT WEST ROAD.

Following the luncheon a demonstration of fire extinguishing was carried out on a large scale in the spacious demonstration ground, a large oil tank, measuring 30 ft. in diameter, being set on fire and allowed to obtain a thorough hold before steps were taken to deal with it. Two pipe lines for conveying the "Phomene" foam were connected with the tank and within a minute and a half the huge fire was completely subdued and extinguished.

It should be emphasised that while the Pyrene Company specialise in the Pyrene hand fire extinguisher, they also do a very big business in larger fire extinguisher appliances, separate department being devoted to the construction of "Phomene" and "Conquest" fire extinguishers of all sizes.

A recent development of the business is the Bumper Department where bumpers for motor cars are produced in large quantities.

Horse and Motor Transport Costs. — Comparative statistics of the costs of collecting house and shop refuse by horse and by motor vehicle have been put before the Accrington Town Council by the sanitary officer. These show that in a recent period the cost per ton was 5s. 7.1d. by motor and 4s. 6.9d. by horse. Alderman Rawson announced that a further trial between the two systems was to be made, but at present all Corporation horses were fully engaged. No one doubted, he said, that horses were cheaper for central town collection, but whether they were economical for the longer distances had to be proved.

Long Distance Goods Haulage.—On page 394 of our May issue we gave particulars regarding the formation of a National Committee to consider the question of long distance goods haulage. In addition to the firms whose names we printed in our report as being identified with the movement, the Committee state that many more firms in the haulage industry have signified their approval of the objects of the Committee and desire to be affiliated to the movement. Enquiries should be addressed to the Hon. Secretary, Long Distance Road Haulage Committee of Enquiry, 12 Grosvenor Gardens, London, S.W.1.

Road Traffic Bill.

Committee Stage Concluded and Bill ordered to be reported to the House.

THE sittings of Standing Committee C of the House of Commons have concluded, and the Road Traffic Bill, as amended, has been ordered to be reported to the House.

TRAFFIC COMMISSIONERS.

In the course of the discussion on Clause 60 dealing with the appointment of Traffic Commissioners, the Minister of Transport said he wanted the Commissioners, in their work, to conform to a general national policy of traffic co-ordination, but he wanted them, within the bounds of that policy, to feel that they were really free, independent men, acting judicially according to the evidence of each case put before them. That was particularly important when it was remembered that an appeal lay from the Commissioners to the Minister.

Part of sub-section (2) of Clause 60 lays it down that where the Minister of Transport proposes to appoint a person to be a traffic commissioner he shall require that person to declare whether he has any, and if so what, financial interest in any transport undertaking which carries passengers within the traffic area.

Mr. Remer moved that a person should declare whether he was a member of a local authority controlling any transport undertaking.

Mr. Herbert Morrison pointed out that with regard to the local authority, a councillor had no financial interest in the transport undertakings of his council; only the public interest was at stake. He was in an entirely different category from a person who had a very large holding in a private omnibus company, or might be a director of a private omnibus company.

The Amendment was rejected on a division.

An amendment moved by the Minister of Transport to the effect that a person whom it was proposed to appoint to be a traffic commissioner must declare whether he had any, and if so what, financial interest in any transport undertaking which carries passengers wherever those interests might be, was agreed to.

CERTIFICATES OF FITNESS OF VEHICLES.

Colonel Howard-Bury moved, with regard to Clause 65, that no Certificate of Fitness should be given to a public service vehicle unless satisfactory first-aid appliances against fire were provided.

The Minister of Transport said that as the Committee would see the Minister had powers to prescribe the equipment which a public service vehicle should carry, and the fire extinguisher was definitely part of the equipment and could be covered quite readily under the Regulations. He could definitely assure the Committee that among the equipment which he should require public service vehicles to carry was equipment for dealing with fire. They should enforce the carrying of extinguishers, but it was desirable to do it by Regulation rather than by Statute.

Amendment, by leave, withdrawn.

ROAD SERVICE LICENCES.

With regard to Clause 69 dealing with Road Service Licences Colonel Howard-Bury moved that a road service licence should not be required for a public service vehicle when used for the conveyance of passengers at separate fares on an occasional seasonal journey to any destination.

VIEWS OF THE C.M.U.A.

Colonel Ashley said he should like to submit to the Committee some considerations sent him by the Commercial Motor Users' Association. They said:

> "It is further submitted that the road service licence should not be required. This licence requires the submission of time-tables and fare tables and particulars of frequency of the service and the time to be taken on the journey."

He suggested to the Committee that it would be very difficult for the form of service indicated by his hon. and gallant friend to submit time-tables and fare tables. It would be almost impossible for them when they were going to many different places, to have a definite fare laid down to each separate place. They might have zone fares, that was quite true. But they might go to hundreds of different places, and it would be almost impossible to submit a fare table to each individual place. It would be equally difficult for them to submit a time-table, because sometimes firms were rung up to supply chars-a-banc at a few hours notice. The C.M.U.A. said further:

> "None of these conditions are applicable to this branch of the motor coach service. The demand and conditions vary from day to day, and the proposed system of road service licences, which is designed for omnibus businesses, would be quite unsuitable and unworkable."

Mr. Herbert Morrison said that with regard to Derby Day and Cup Day traffic, his impression was that a great many of such vehicles as were used for occasional journeys would be hired as a whole and, therefore, would be contract carriages and would not require road service licences. In the case of the odd man who had got an odd vehicle which, on a Bank Holiday or some other day he might like to bring out, he could not see that he was any less in need of public control for that day than the man who had a regular service of vehicles all the year. Road service licences granted could be in perfectly general terms. They might easily take the form of saying that occasional journeys might be taken during the holiday months to specified places without demanding time-tables at all. On the other hand it might be desirable to insist upon time-tables. He could not say that there were insuperable difficulties in the way of the operators submitting time-tables, so that they could have some measure of co-ordination and do what was necessary to protect the normal service provided by the regular operators.

Amendment, by leave, withdrawn.

FAIR WAGES RESOLUTION.

Mr. Herbert Morrison moved to leave out paragraph (a) of sub-section (3). This paragraph reads: (a) The conditions on which persons are employed in connection with the service shall not be such as to endanger the safety of the public or impair the efficiency of the service.

He said that it was undesirable that transport services involving the safety of the public should be manned by persons who were grossly underpaid, ill nourished, badly clothed and, generally, not of sufficient brightness for the job of looking after the safety of the public and running an important service. Thus, the proposal involved, indirectly, that the Commissioners should have regard to the economic condition of the workers engaged in the services. It had been represented to him, however, that the words of paragraph (a) would be exceedingly difficult to apply. Therefore, it was felt that it would be better, at a later stage, to face the question frankly of imposing the fair wages resolution of the House of Commons, for the time being, on licensees running public service vehicles. He thought that matters, having now reached a stage at which they were going to establish, if not a regulated monopoly, something in that direction, they were entitled to say that the transport undertakers should not compete unfairly with each other as regards wages and hours or seek to gain any advantage one over the other, in those respects. He did not want to be involved in the actual settlement of the wages and hours, and, therefore, all that they proposed to do was to make it a condition of the licence that the fair wages resolution of the House of Commons, in force for the time being, should represent the minimum conditions of service in the undertaking. All that that resolution laid down was that if there was agreement between the employers and the trade unions, that agreement was to be observed in government contracts, but if there was no such agreement it was then required that the rates prevalent among good employers in the district should apply. The next point was who was going to settle the question whether or not the fair wages resolution was being carried into effect in those cases, and the procedure would be that the condition which he had described would be attached to the licence and the operator would be required to observe it. A *locus* would be given to bodies representing either the workpeople or the employers engaged in the industry, if the question was raised that the operator was not observing the fair wages resolution. The case would come before the Commissioner in the normal way—although he (the Minister) would not be final on that point—and the Commissioner would listen

Digitized by Google

to the trade union accusation and would ask the licensee concerned if he agreed that he was not observing the fair wages resolution. If the licensee admitted that he was not, the Commissioner would either stop his licence or give him time to put himself right. On the other hand, if the employer claimed that he was paying the proper wage rates the Commissioner would say that that was an issue which he could not settle, and the case would be referred to the Minister of Labour, who might in turn, refer it to the Industrial Court merely to see whether or not the fair wages resolution was being observed.

The Amendment was agreed to.

FIXING MINIMUM OR MAXIMUM FARES.

Sub-section (5) provides that where an application has been made for a road service licence it is represented to the Commissioners by any person interested in or affected by the application that it is necessary or desirable in the public interest that the Commissioners should fix the minimum or maximum fares, the Commissioners may fix such fares.

Mr. Remer moved to leave out the words "minimum or."

Mr. Herbert Morrison said that the whole of the economic basis of that part of the Bill was that they were going to establish a National, co-ordinated road transport service and, if they were doing that, he thought they had to see that fares were reasonably adequate as well as not excessive. Certainly it would be no desire of his, nor should he allow the Commissioners to fix minimum fares which were unreasonable; but the public must face it—that recklessly cut fares in the end might be disastrous to an industry. He wanted a national, co-ordinated, respectable, and decent road transport system.

The Amendment was negatived.

The Clause, as amended, was ordered to stand part of the Bill.

TOLLS.

The Committee considered a new clause proposed by Mr. Herbert Morrison, Minister of Transport, for the purpose of incorporating in the Bill the Tolls Bill, which was introduced in the House of Commons by a private member and received a unanimous second reading. It provides that local authorities shall be empowered to acquire toll roads and bridges compulsorily in the event of failure to reach voluntary agreement with the owners. There was a widespread feeling, the Minister said, that tolls on roads and bridges should be swept away at the earliest moment, and he contended that the clause was fairly drawn to meet difficulties and varying circumstances, financial and otherwise.

On the portion of the new clause which permits local authorities after acquiring the tolls to continue to impose charges for a period to be determined by the Minister of Transport, Colonel Ashley moved an amendment to limit the period during which a local authority could charge tolls to 10 years. He said that the object of the Bill was not to help the rates but to abolish tolls as soon as possible.

Mr. Morrison said that there might be circumstances in which tolls could be freed or reduced immediately, and in other cases it might be necessary to allow local authorities to continue to charge tolls for a certain period. If, however, the amendment was agreed to, local authorities would insist upon charging during the maximum period.

The amendment was withdrawn and the clause, with minor amendments, was agreed to.

NEW CLAUSE AFFECTING LONDON.

The Minister of Transport moved a new clause for the purpose of adapting the provisions of the Bill to traffic in the Metropolitan traffic area. He pointed out that, though the London omnibuses were already under reasonably effective control, the machinery of control was not adapted to motor coaches. The Government had under consideration the whole problem of London traffic, and it would be unwise to do anything by means of the Bill to complicate the problem now in view of the intentions of the Government, which were very real intentions. It was proposed, therefore, to apply Part IV. of the Bill with modifications. It was proposed to substitute one Traffic Commissioner for a body of three Traffic Commissioners, and to exclude the London omnibus services, leaving them to be controlled as at present. It was also proposed that there should be control of motor coach services by road service licences to be issued by the Traffic Commissioner. All public service vehicles other than omnibuses would be subject in London to the same control as elsewhere, and would require road service licences which would be issued by the Traffic Commissioner. The police would be given means (subject to the control of the Minister of Transport) to secure that public service vehicles did not use streets which were already too congested, and did not stand where they would cause obstruction to other classes of traffic.

After discussion the clause was agreed to.

SPEED LIMITS.

Lieut.-Col. Howard-Bury moved a number of amendments for the purpose of simplifying the system of speed limits and reducing their number. He pointed out that the specified speeds in the Bill were six in number, viz.:—unlimited speed for private motor cars, and for other classes of vehicles speeds of 30 miles, 20 miles, 16 miles, eight miles, and five miles an hour, and he proposed that the respective speeds should be only three in number.

How were the police to differentiate between the different types of vehicles to which different speed limits were to be given? The amendment he proposed was that the speed limit should be removed in the case of commercial goods and passenger vehicles of less than 2½ tons in weight unladen if fitted with pneumatic tyres and not drawing a trailer; that there should be a speed limit of 35 miles an hour for commercial service and passenger service vehicles over 2½ tons if fitted with pneumatic tyres and not drawing trailers; and 20 miles an hour for vehicles drawing trailers and solid-tyred vehicles. This proposal was supported by the Society of Motor Manufacturers and Traders and the Commercial Motor Users' Association. Many light vans, the speed of which the Bill proposed should be 30 miles an hour, had chassis which, if fitted with private car bodies, would be outside the speed limits. Many private motor cars for which no speed limits were fixed weighed up to 2½ tons. The effect of the different speeds proposed in the Bill would be to encourage the overtaking of traffic on the road, whereas, if the limits were simplified, there would be a steady flow of traffic going roughly at the same speed. It would be almost impossible for the police to set a trap when there were six different standards of speed. The ordinary practice was that the modern commercial vehicle travelled at 35 miles an hour, and the proposal that that speed should be specified in the Bill would only be in accordance with the facts of the situation. The penalties laid down for dangerous and careless driving would provide the necessary means of dealing with contraventions.

The Minister of Transport said that if he could see his way to simplifying the schedule relating to speed limits there would be enormous advantages to the users of the highways, and particularly to the police. If members of the Committee who were specially interested in the question would care to co-operate with the officers of the Ministry of Transport with a view to simplifying the schedule of speeds, he would be willing that they should do so, but he thought they would be driven to the conclusion, as he had been, that the schedule should be as it stood. The amendment would permit the driving of a lorry with a trailer, both with steel wheels, and carrying heavy loads, at 20 miles an hour, with the result that great damage would be done to the highways. A 5-ton lorry carrying a heavy load, the whole weighing possibly up to 9 tons, would be able, under the amendment, if fitted with pneumatic tyres, to go at 35 miles an hour.

Dealing with the speed limits for passenger vehicles Mr. Morrison said that vehicles of 2½ tons unladen could be constructed to carry anything up to 20 passengers; they would weigh, laden, 4 tons or over, and he would be very apprehensive of the results of allowing such vehicles to run without any speed limit at all. It was true that the Royal Commission on Transport recommended that these vehicles should be permitted to travel up to 35 miles an hour, and he did not alter that to 30 miles without very careful consideration. They had to bear in mind that in a smash the modern double-decked omnibus would be a very serious thing; they must think not only of the passengers in the vehicles and others on the road, but also of the strain imposed on drivers if the speed were up to 35 miles an hour. Some motor coaches were already travelling at dangerous speeds.

Colonel Ashley said that the real trouble was that the proposed schedule could not be amended by Order, and the Committee were, therefore, being called upon to give a decision as to speed limits which might remain in force for 20 years.

Mr. Remer said that a limit of 30 miles an hour would be a "crawling speed" for the vehicles in question.

After further discussion, general agreement was expressed with a suggestion made by Lord Erskine that a clause should be proposed on the Report stage to empower the Minister, subject to the consent of Parliament, to

Digitized by Google

vary the schedule of speeds. The amendments were then withdrawn, except the proposal that the speed limits for vehicles over 2½ tons should be raised from 30 to 35 miles an hour, and this was defeated by 19 votes to eight.

OMNIBUSES BILL.

The Committee then considered the Omnibuses Bill, the object of which is to give local authorities possessing transport services the power to extend such services without application to Parliament, and agreed, after discussion, to incorporate the provisions of this Bill in the Road Traffic Bill.

Mr. Morrison, who had moved a number of amendments to meet objections taken to these provisions, said that local authorities would now obtain freedom to improve their transport services without costly proceedings in promoting Bills. He believed this would result in valuable co-ordination of transport.

This concluded the Committee stages, and the Bill, as amended was ordered to be reported to the House.

Correspondence.

WHO CAUSES ROAD ACCIDENTS.

To the Editor of THE WORLD'S CARRIERS.

SIR,—It has never been the desire of the R.A.C. to endeavour to attribute the responsibility for road accidents to any particular class of road user, but rather to enjoin caution, patience and consideration for others on motorists, pedestrians, cyclists and every other person who uses the road.

In the interests of the motoring community, however, I feel that the suggestion contained in a letter from Mr. Foley, the Hon. Secretary of the Pedestrians' Association, must be challenged.

Mr. Foley states that "the 'weighed' responsibility for road accidents, as between motor drivers and pedestrians, is in the proportion of 1 to 200." To support this assertion he quotes from the latest report on the Administration of the Road Fund, wherein it is stated that of 394 serious road accidents outside the London Traffic area investigated by the Ministry of Transport, only 20, or approximately 5 per cent., were due to the fault of pedestrians, and that pedestrians in this country being about 20 times as numerous as motor drivers, the responsibility is in the proportion he gives.

The truth is that the 394 accidents reviewed by the Ministry of Transport (and seized upon by Mr. Foley to prove his case) were specially selected for investigation from the standpoint of the Road Engineer, and were not of a type in which pedestrians were likely to be involved. Indeed, as a result of the Minister's enquiries into these accidents the report states that "it has been possible, in many cases, to secure greater safety for road users by suggesting to the local authorities the desirability of effecting improvements to road junctions and road gradients, the use of additional warning signs in the vicinity of cross roads and danger spots, and other like matters."

A fairer apportionment of responsibility for accidents as between motorists and pedestrians than that evolved by Mr. Foley may be obtained from an examination of the particulars of accidents in the Metropolitan Police District. In the return just issued by the Metropolitan Police it is shown that during the first three months of this year there were 223 fatalities to pedestrians in which vehicles of all descriptions were involved. Of this lamentable total, the great majority is attributed to causes which indicate negligence or carelessness on the part of the pedestrian only. For instance, we learn that 111 pedestrians were killed as a result of "crossing without due care," that others lost their lives through "boarding vehicle in motion," "hesitating and/or faltering," "slipping or falling in crossing," "stepping off refuges without due care," "playing on footway and suddenly stepping into roadway," "improper riding on vehicles," and so on. The total fatalities which might reasonably be ascribed as coming beyond the control of the driver of the vehicle involved amounted to 187. There is even a case of suicide included in the Summary of Fatalities "caused" by vehicles.

Again the Second Report on Street Accidents by the London Traffic Advisory Committee, dated July, 1929, it is shown that in 1928 the total number of persons killed by all vehicles in the Metropolitan Police District was 1,237, and that of these 724 were pedestrians who lost their lives through their own negligence.

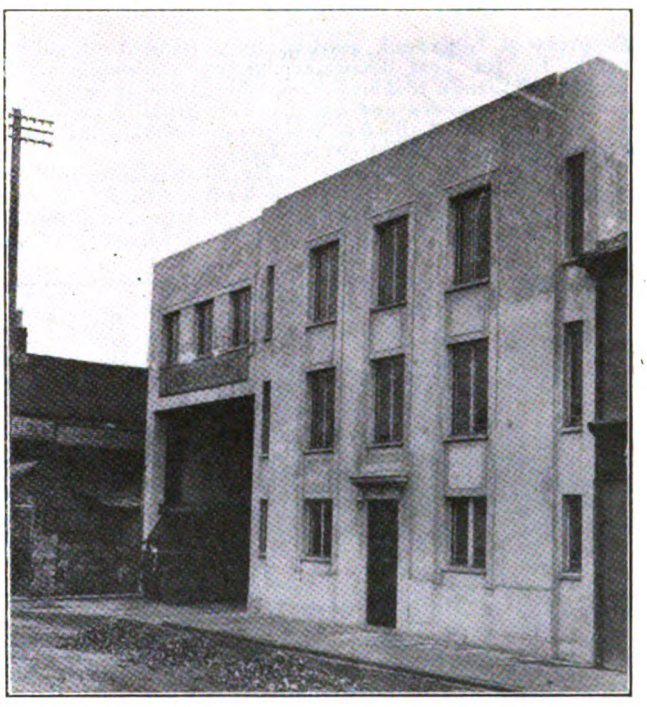
I do not wish to labour the point further, but must protest in the strongest terms against an attempt, unfortunately not isolated, to excuse pedestrians from all responsibility in regard to road accidents, and to fasten the blame almost exclusively on motor vehicles. It is the view of the R.A.C., and one I believe which all fair-minded people will support, that a substantial reduction in the number of accidents can only be secured by the impartial regulation of all road users combined with a more complete realisation by individuals of their respective responsibilities. Unjustified attacks by one section upon another can serve no useful purpose.

I am,
Your obedient servant,
F. P. ARMSTRONG,
Secretary,
Royal Automobile Club.

London, S.W.1.
16th May, 1930.

Thornycroft's New Cardiff Depot.

IN pursuance of their policy of maintaining a chain of service depots in all the principal industrial areas of the country, in order to assist owners of Thornycroft motor vehicles in maintaining them in efficient running condition, John I. Thornycroft & Co., Limited, have established a new depot at Cardiff. It is the latest of their provincial depots, of which they have six already operating in Birmingham, Glasgow, Leeds, London, Manchester and Newcastle, and in view of the fact that there are approximately 600 Thornycroft vehicles in South Wales, the majority of which are in the possession of almost as



JOHN I. THORNYCROFT & CO.'S NEW CARDIFF DEPOT.

many users, it is hoped the depot and the facilities offered, will be widely appreciated and used.

The premises occupy a conveniently central site alongside East Canal Wharf, and in close proximity to the railway station and main thoroughfares of Cardiff. They have a frontage of 60 ft. with an opening into the main garage wide and high enough to accommodate the largest types of vehicles at present, or likely in the future to be, built. The main building is approximately 110 ft. long by 60 ft. wide, and is entirely free from pillars, and well lit by 3 rows of North roof lights. At the rear of this is a workshop of the same width and approximately 75 ft. depth with ample bench space for repair work, and parts of this are partitioned off for spare parts stores and machine shop. Beyond this is a 22 ft. runway of approximately 100 ft. in length, to a rear exit giving a clear run through. The total ground area is approximately 14,500 square feet, including the office buildings which, in addition, have two upper floors.

Liverpool Horse Parade.

THERE is no event more popular in Liverpool than the annual May Parade of Horses.

Started over 60 years ago, this Parade, on 31st May last, attracted an entry of close on 350 animals, the pick of the city stables. Most of them were Shire horses drawn from the municipal services or owned by cartage contractors chiefly engaged in heavy dock traffic.

After the judging there was a procession of the main city streets, and in front of St. George's Hall the Lady Mayoress of Liverpool, assisted by a number of ladies, judged for the best decorated horses. Although many valuable challenge trophies were offered for competition, in which cartowners and carters were equally keen, the principal delight of the day was unquestionably the thrill of the spectacular street procession.

In the heavy horse section twelve silver challenge cups were the main prizes. The winner of the greatest number of points in the eleven classes, Liverpool Corporation, received the Royal Lancashire Champion Challenge Cup.

Photos] THE PICK OF LIVERPOOL'S HORSES. [World's Carriers.

LEFT: ENTERED BY JOSEPH HANSON & SON, LTD., HUDDERSFIELD, WINNER OF THE CUP FOR THE BEST SHIRE GELDING. THIS CLASS WAS OPEN TO THE UNITED KINGDOM. RIGHT: WINNER OF THE ROYAL LANCASHIRE CHALLENGE CUP FOR THE LIVERPOOL CORPORATION. THIS HORSE GAINED THE LARGEST NUMBER OF POINTS IN THE HEAVY HORSE SECTION.

There was also a class open to the United Kingdom for the best gelding four years old and upwards of the Shire type. The first prize went to Joseph Hanson and Son, Ltd., Huddersfield.

The Liverpool Corporation Health Committee entered 122 horses; L.M.S., 40; Liverpool Cartage Company, 10. The number of firms who participated was close on 100.

Mr. T. Eaton Jones, F.R.C.V.S., chief veterinary officer of the city of Liverpool, was the secretary of the committee which was responsible for the excellent organisation of the parade. Councillor W. T. Roberts, President of the Liverpool Cart and Motor Owners' Association, is the Hon. Treasurer of the May Horse Parade Fund. Several members of the cartage trade acted as stewards.

PRIZE LIST.

The winner of any one cup was debarred from further competition in cups other than championships.

HEAVY HORSE SECTION.

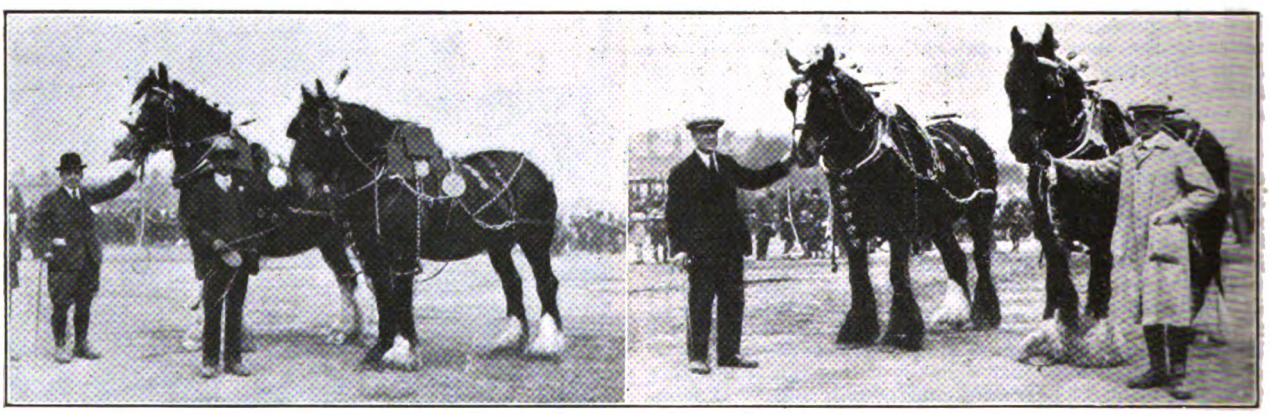
Special Class: Royal Lancashire Championship Cup and a silver replica, Liverpool Corporation.

Open to the United Kingdom (first prize £25 and cup value £35), best gelding 4 years old and upwards, of the Shire type: 1—Joseph Hanson and Son, Ltd., Huddersfield; 2—Mann, Crossman and Paulin, Ltd., London; 3—Geo. Worthington, Alderley Edge; 4—J. W. Warburton, Altrincham.

Grant Cup, value 50 gns., for best group of 20 horses (mares or geldings): 1—Liverpool Corporation; 2—L.M.S. who take the cup.

Lucas Cup, value 20 gns., for best group of ten horses (mares or geldings): 1—Liverpool Corporation; 2—Liverpool Cartage Co.; 3—L.M.S. Liverpool Cartage Co. take the cup.

Smith and Bateson Cup, value 10 gns., for best group of four horses (mares or geldings): 1—Liverpool Corporation; 2—Hobbs and Clark; 3—Liverpool Corporation. Hobbs and Clark take the cup.



Photos] THE PICK OF LIVERPOOL'S HORSES. [World's Carriers.

LEFT: MR. J. METCALFE WITH WINNER OF THE ALD. DOWD CHAMPIONSHIP CUP AND THE LIVERPOOL CORPORATION WINNER OF THE ALD. RICHARD KELLY CHAMPIONSHIP CUP. RIGHT: THE LIVERPOOL CARTAGE CO. PLACED FIRST IN THE CLASS FOR TEAMS OF TWO HORSES OWNED BY CARTOWNERS PLYING FOR HIRE IN LIVERPOOL AND DISTRICT.

Peter Walker and Son Cup, value 15 gns., for best team of two horses (mares or geldings): 1—Liverpool Corporation; 2—Liverpool Corporation; 3—Liverpool Cartage Co. Garlick, Burrell and Edwards, Ltd., take the cup.

Liverpool Cart and Motor Owners' Association, Ltd., Cup, value 25 gns., for best team of two horses (mares or geldings) competed for by cartowners plying for hire within a radius of six miles from Liverpool Town Hall: 1—Liverpool Cartage Co.; 2—Hobbs and Clark; 3—Hobbs and Clark. A Hughes takes the cup.

William Edwards Cup, value 7 gns., for best mare or gelding competed for by cartowners plying for hire within a radius of six miles from Liverpool Town Hall; 1—Hobbs

and Clark; 2—Liverpool Cartage Co.; 3—Hobbs and Clark. W. Roberts and Son take the cup.

Dowd Cup, value 10 gns., for the best gelding exhibited working in Liverpool and Bootle: 1—J. Metcalfe; 2—Hobbs and Clark; 3—Liverpool Corporation. J. Metcalfe takes the cup.

Kelly Cup, for best mare exhibited working in Liverpool and Bootle: 1—Liverpool Corporation: 2—Hobbs and Clark; 3—L.M.S. Liverpool Corporation takes the cup.

Liverpool Cartage Co. Cup, value 10 gns., for the best mare or gelding working regularly in Liverpool and Bootle for five years and upwards in one continuous employ: 1—Liverpool Cartage Co.; 2—Garlick, Burrell and Edwards, Ltd.; 3—Liverpool Corporation. Thomas Orford and Sons take the cup.

Nuera Cup, silver trophy, value 10 gns. (presented by Messrs. F. Alderson, Ltd., Bootle) for the best mare or gelding to be competed for by owners of a stud of not more than 30 horses: 1—J. Metcalfe; 2—C. J. Hinns; 3—W. Roberts and Son. J. Metcalfe takes the cup.

Charles Still Cup, value 7 gns., for the best mare or gelding to be competed for by cartowners entirely dependent upon plying for hire for a livelihood in Liverpool and Bootle, having a stud of not more than ten horses: 1—A. Hughes; 2—Thos. Orford; 3—P'eter Balmer and Son. Peter Balmer and Son take the cup.

LIGHT HORSE SECTION.

W. W. Kelly Cup, value five gns., for best two wheeled turnout (light horse, not exceeding 15 hands) judged as a "turn-out" on a percentage of points: 1—J. Rushton; 2—W. T. Morton; 3—J. E. Low. J. Rushton takes the cup.

W. T. Roberts Cup, value 20 gns., for best two-wheeled turn-out (light horse over 15 hands): 1—J. Hogg; 2 and 3—E. Rushton. J. Hogg takes the cup.

Meade-King Cup, value 10 gns., for best two-wheeled turn-out (vanner) comprising tradesmen's carts, goods floats, etc.: 1—Garston C.W.S.; 2—R. Jones and Son; 3—J. Greig, Ltd. Garston C.W.S. takes the cup.

Bowring Cup, value 10 gns., for best four-wheeled turn-out (light vanner, single horse) judged as a "turn-out" on a percentage of points: 1—Lune Laundry; 2—J. G. Hannigan; 3—C. Griffiths and Son. Lune Laundry take the cup.

Cup, value 10 gns., for best four-wheeled turn-out (heavy vanner, single horse) comprising tradesmen's vans, light lorries, etc.: 1—Smith and Bateson; 2—William Guinan, Ltd.; 3—Thos. Orford and Sons. Smith and Bateson take the cup.

Cowkeepers class, confined to members of the Association for the best two-wheeled turn-out (light horse). No animal to exceed £60 in value: 1—J. Rushton; 2—W. T. Morton; 3—J. Hogg, Junr.

CLEANEST AND BEST APPOINTED HORSE SECTION.

"D. C. Williams" Cup for cleanest and best appointed heavy draught horses and gears: 1—T. Baker (Liverpool Corporation); 2—E. Moss (Liverpool Cartage Company).

Medals and premiums presented by the Shire Horse Society were awarded for Liverpool cartowners' (plying for hire) exhibits and Liverpool Corporation, railway companies' and tradesmen's exhibits. Silver medals presented by the Royal Lancashire Agricultural Society were awarded for the best group of 20 horses (mares or geldings), for the best gelding, and for the best mare exhibited.

Obituary.

Robert Hope Selbie, C.B.E.

WE deeply regret to announce the death of Mr. Robert Hope Selbie, C.B.E., General Manager of the Metropolitan Railway, which occurred with tragic suddenness in St. Paul's Cathedral on the 17th May last. Mr. Selbie had been general manager of the Metropolitan Railway since 1908, having previously been associated with the Lancashire and Yorkshire Railway. When he first came to London the Metropolitan Railway was being electrified and he was responsible for initiating and carrying through important developments since that time. Mr. Selbie was the eighth President of the Institute of Transport, being inducted to that important position at a meeting of the Institute held on October 4th, 1926, and at the time of his death he was a member of the Council. During the war Mr. Selbie was Board of Trade Controller of Horse Transport and he also acted as chairman of the Board of Trade Committee on the Use and Feeding of Horses.

THE LATE MR. ROBERT HOPE SELBIE, C.B.E.

International Motor Exhibition. — The International Motor Exhibition will be held at Olympia, London, from October 16th to 25th next. This year the scope of the Exhibition will be extended to provide for exhibits of motor boats, marine engines, accessories and equipment, service and garage equipment, for which accommodation will be provided in the Empire Hall, the latest addition to the Olympia premises.

In the Honours List.

IN the list of honours conferred by His Majesty The King on the occasion of his birthday are the names of the following gentlemen:—

BARONET.

Basil Mott, C.B., Consulting Engineer, Past President of the Institution of Civil Engineers. (Member of the Institute of Transport.)

Frederick Henry Royce, O.B.E., Founder, Director and Chief Engineer of Rolls-Royce, Limited.

C.B. (CIVIL DIVISION).

Charles Herbert Bressey, C.B.E., Chief Engineer, Roads Department, Ministry of Transport. (Member of the Institute of Transport.)

Society of Motor Manufacturers and Traders.

Election of Officers for the Year 1930/31.

The Annual Election of Officers of the Society of Motor Manufacturers and Traders took place at a Meeting of the Council held on the 15th May last. Mr. E. H. Blake succeeds Mr. J. Maughfling as President. Mr. Blake is Deputy Managing Director of Messrs. Morris Motors, Ltd., and has been a prominent Member of the Council for some years. Mr. Maughfling, as the immediate Past-President, becomes the Deputy President of the Society in succession to Sir George Beharrell. Mr. P. F. Bennett, Deputy Chairman and Joint Managing Director of Joseph Lucas, Ltd., and Mr. A. Perman, M.I.M.E., A.I.N.A., Managing Director of Perman & Co., Ltd., become Vice-Presidents in succession to Mr. W. E. Bullock and Mr. W. M. Iliff. Mr. Leslie Walton, Chairman of Vauxhall Motors, Ltd., is re-appointed Honorary Treasurer of the Society.

London Chamber of Commerce.

AT the meeting of the Council of the London Chamber of Commerce, held on May 13th, Sir Alexander Gibb, C.B.E., C.B., Sir Geoffrey Clarke, C.S.I., O.B.E., and Mr. S. H. Cotton were re-elected Chairman and Deputy-Chairman of the Council, and Treasurer, respectively, for the ensuing year. Sir Alexander Gibb is actively connected with some of the most important transport undertakings. Sir Geoffrey Clarke is Joint Managing Director of the Telegraph Construction and Maintenance Co. and a Director of the P. & O. and British India Steam Navigation Co. Mr. S. H. Cotton is Senior Partner of Messrs. Culverwell, Brooks & Co. (Hide, Skin & Fur Brokers).

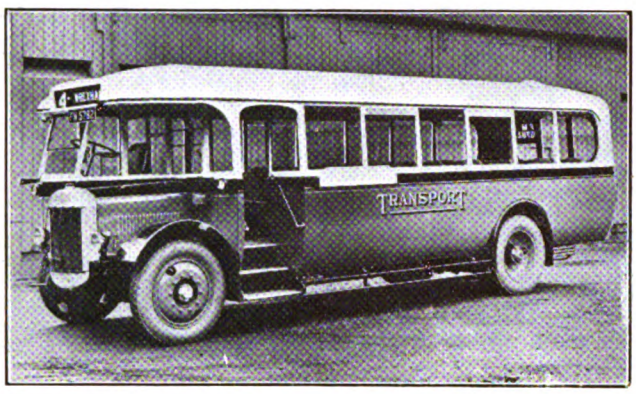
Motor Coach and Bus Notes.

Express Coaches for the Wrexham & District Transport Co.—The Wrexham & District Transport Co., Ltd., operate regular services in and around Wrexham, Chester, Oswestry, Buckley, Bangor and Corwen and other places, and their approximate mileage of routes is 288. They operate a very large fleet of Tilling-Stevens "Express" chassis and our photograph shows one of a number of further vehicles of this type recently delivered by Tilling-Stevens Motors, Ltd., 5, Iddesleigh House, Caxton Street,

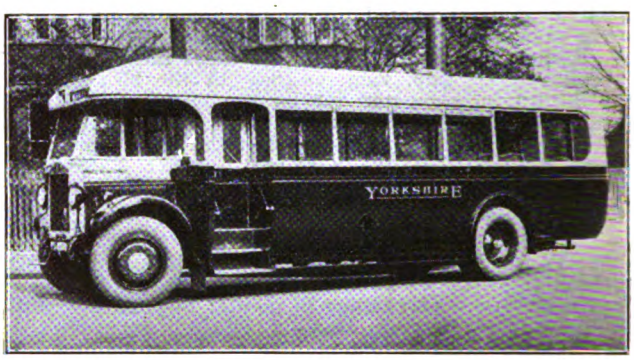


TILLING-STEVENS "EXPRESS" FOR WREXHAM & DISTRICT TRANSPORT CO.

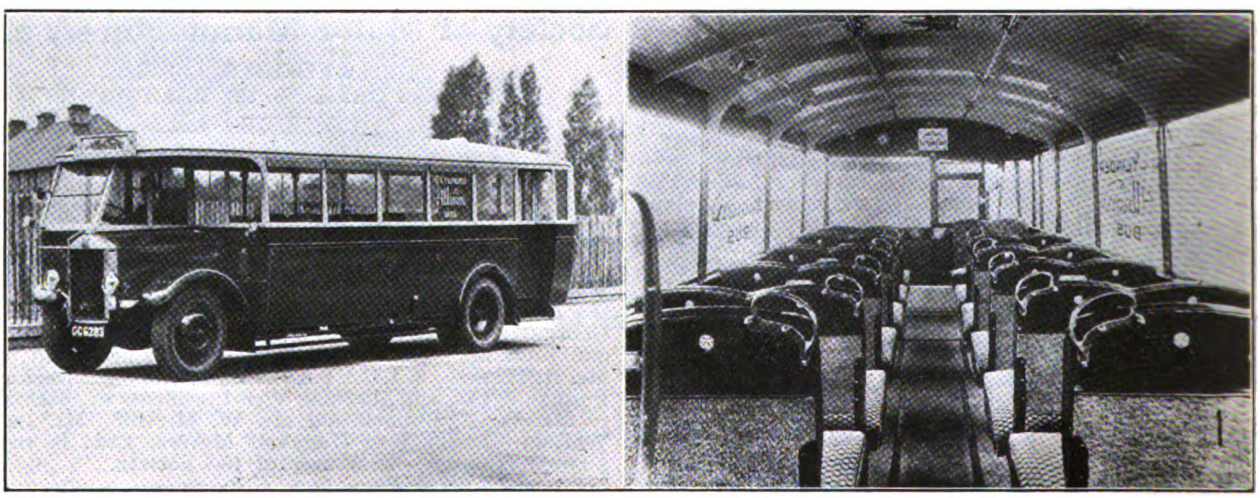
Westminster, London, S.W.1. It is stated that on a schedule omnibus service with frequent stops, the "Express" type of chassis gives a petrol consumption of between 9 and 10 miles per gallon and an oil consumption of between 1,500 and 2,000 m.p.g. The chassis embodied in the omnibus shown in the photograph is known as type B.10. A.2. "Express" gear driven and is the firm's latest 1930 production. It has a low load line frame; the wheelbase is 16 ft. and the engine is of the Ricardo design giving 29/70 h.p. The body in this instance was constructed by the Brush Electrical Engineering Co., Ltd., of Loughborough.

Albions at Hastings.—At the Hastings Tramway Congress the Albion Motor Car Co., Ltd., Scotstoun, Glasgow, exhibited the single-deck bus shown in the accompanying illustrations. It accommodates 32 passengers and the body is upholstered in moquette bound with leather and was built by Plaxton, of Scarborough. The engine is a six-cylinder model of 36/90 h.p. with side by side valves, three detachable heads and all main bearings pressure lubricated. Power is transmitted through a single plate clutch to a four-speed gear box, all shafts of which run in ball bearings. Transmission is through a central supported cardan shaft with Hardy Spicer universal joints to the underslung worm drive rear axle. All road wheels are mounted on Timken roller bearings. Dewandre assisted foot operated brakes act on all four wheels, chassis lubrication is on the group system with pipes leading to a central point on the rear axle and from another point on a cross member to various parts of the chassis.

A Ransome Bus Body.—Ransomes, Sims & Jefferies, Ltd., Orwell Works, Ipswich, have sent us the accompanying photograph which is one of a number of 30-seater single-deck bus bodies built by them to the design of the British Electrical Federation, Ltd. These bodies are both comfortable and of good appearance. The interior seating is arranged to give ample room for every passenger and the upholstery is in moquette, the seat backs being trimmed with repp. The lighting is provided by two specially designed lamps in the centre of the roof, while on every alternate pillar there is a smaller bracket type of lamp under the luggage compartment. Large luggage compartments are fitted the complete length of the body so designed that they do not obstruct the passengers in any way nor detract from the general appearance. Four windows on each side are arranged to drop being controlled by Rawlings special type fittings and are fitted with Eave ventilators. There are two ashanco ventilators in the roof. The frame is of the best selected English ash and oak and the panels are metal faced plywood. The entrance is at the front and there is a rear emergency door. The body illustrated is built for the Yorkshire (W.D.) Company. The firm are also constructing similar bodies for the East Yorkshire Co., and the Ortona Co.



A RANSOME BUS BODY BUILT TO THE DESIGN OF THE BRITISH ELECTRICAL FEDERATION LTD.



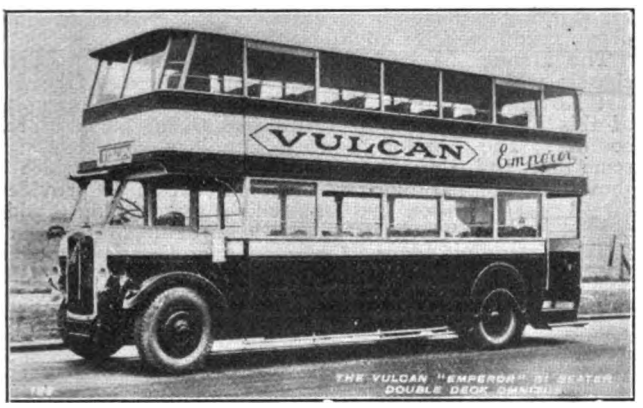
TWO VIEWS OF THE ALBION 36/90 H.P. "VIKING SIX" 32-SEATER BUS.

Pneumatic Tyres for Omnibuses.—At the Watch Committee of the Hull Corporation, the question of the licensing of omnibuses with solid tyres was raised, and it was recommended that all buses licensed in the future should be fitted with pneumatic tyres.

Digitized by Google

More Absorptions.—Three more motor bus companies have been absorbed in the organisation of Ribble Motor Services, Ltd., of Preston. They are:—The Furness Omnibus Company, Ltd., Dalton-in-Furness, which has 36 vehicles; the Barrow Bus Company, Ltd.; and Lonsdale Pullman Company, Ltd. The Ribble Company's services recently have been considerably extended. By these acquisitions, in addition to the many which have been negotiated in the last two years, the policy of co-ordinating services has been considerably facilitated.

Vulcans at Hastings. — The photograph shows an "Emperor" 51-seater double-deck omnibus which was shown at the recent annual Tramways Congress held at



THE VULCAN "EMPEROR" 51-SEATER DOUBLE DECK OMNIBUS.

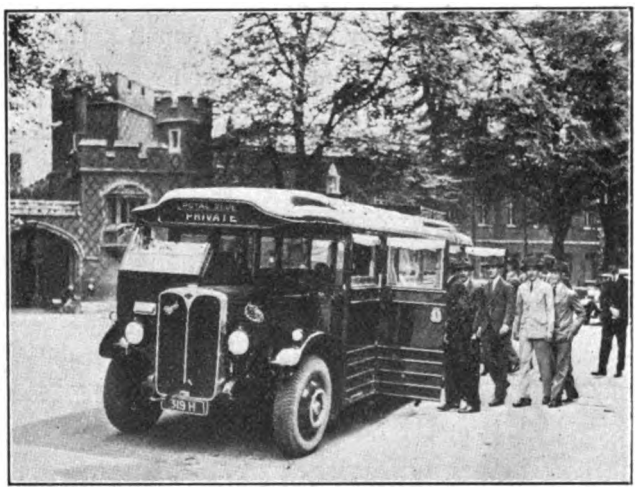
Hastings, by the Vulcan Motor and Engineering Co. (1906), Ltd., of Southport, the firm were also showing a "Prince" 32-seater single entrance bus.

Motor Coach Commissions.—It is most desirable in all motor coach centres, particularly the industrial towns, for vehicle owners to agree upon uniform terms for the remuneration of agents and sub-agents. Although the recognised rate of commission paid by one coachowner to another in respect of bookings is generally 10 per cent., this also is the rate paid by some concerns to their sub-agents, and it would seem that if the coachowner is entitled to 10 per cent. on bookings, a fair figure for the booking agent would be 5 per cent. or 7½ per cent., according to the quality of the service he renders.

Morris-Commercials in India.—Our illustration shows the latest additions to the fleet of vehicles in the service of The Gwalior and Northern India Transport Co., Ltd., of Delhi. They are six Morris-Commercials with 18-seater bodies. The buses are intended for daily service between Shivpuri (the summer capital of Gwalior State) and Jhansi, a large military station on the main G.I.P. Railway, a distance of 61 miles.

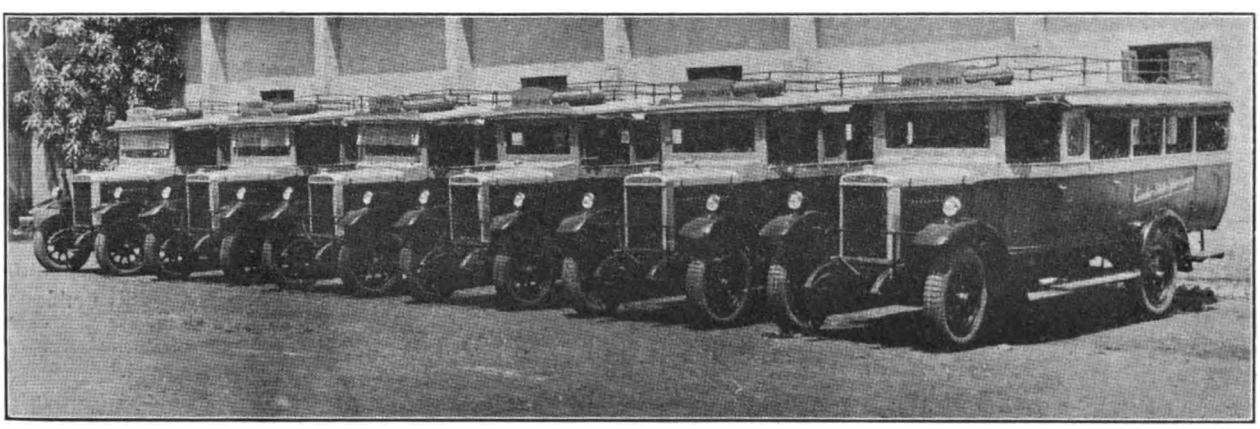
Proposed Liverpool-Scarborough Bus Service.—The Watch Committee of the Warrington Corporation has considered an application from MacShane Motors, Ltd., with regard to a Liverpool to Scarborough motor service, and the town clerk was requested to obtain further information with regard thereto.

Eton Boys Visit the A.E.C. Works.—Recently, the boys of the Eton College Scientific Society took an afternoon off and came to the A.E.C. Works at Southall to witness the birth of the latest type buses and coaches. They travelled from Windsor in a vehicle which early gave them an opportunity of observing in present-day automobile and coach-building practice—an A.E.C. 95 h.p. "Regal" luxury saloon coach destined for the Royal Blue fleet of Elliott Bros. (Bournemouth), Ltd. Arriving at the A.E.C. Works, these enquiring Etonians spent several hours closely viewing the processes connected with the manufacture of A.E.C. buses, coaches and lorries, and watching the working of the marvellous machinery which now plays such an important part in high speed motor vehicle production.



ETON BOYS BOARDING AN A.E.C. "ROYAL BLUE" COACH EN ROUTE FOR THE A.E.C. WORKS AT SOUTHALL.

Medical Tests for Drivers.—That drivers of public service vehicles should be required to pass tests to prove their physical fitness and training is recommended by the Chief Constable of Manchester in a report which has been adopted by the Watch Committee, though not yet approved by the City Council. It is now being examined by the Corporation Transport Committee which, as large operators of motor buses, is particularly concerned. The Chief Constable recommends:—1. Each driver employed by the Manchester Corporation Transport Department to be certified by the general manager to be physically fit and to have undergone a special course of training in driving a motor omnibus for a stipulated period, and to have satisfactorily passed a driving test on an official route specified by the Chief Constable. 2. All drivers employed by the North Western Car Company, Ltd., to be tested and certified individually by the general manager to be physically fit and to have passed a test of driving or undergone a special course of training and passed satisfactorily, or passed an official road test conducted by the Public Carriage Department, Manchester. 3. Applicants for licences employed by other municipal undertakings to be certified by the manager to be physically fit and to

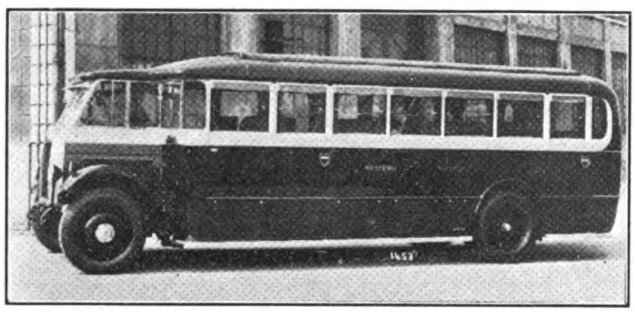


THE MORRIS-COMMERCIAL BUSES IN THE SERVICE OF THE GWALIOR AND NORTHERN INDIA TRANSPORT CO., LTD., DELHI.

Digitized by Google

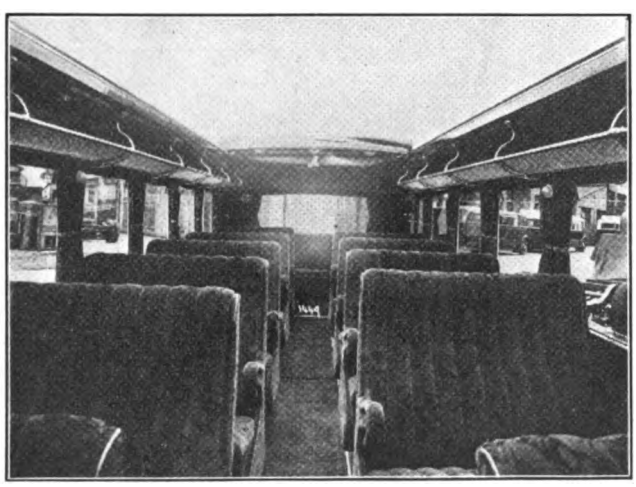
have undergone a special course of training in driving a motor omnibus and passed satisfactorily, or to have passed satisfactorily a road test in Manchester, or to be certified by the local licensing authority to be a fit and proper person to hold such a licence. 4. Drivers employed by private persons or companies should be required to undergo a test in Manchester under the supervision of an officer of the Public Carriage Department. A certificate of physical fitness should accompany each application.

Strachan's Bodies for the Western National Omnibus Co., Ltd.—Our illustrations show interior and exterior views of one of a fleet of 26-seater all-weather saloon coaches just completed by Strachans (Acton), Ltd., Wales Farm Road, North Acton, London, W.3, for the Western National Omnibus Co., Ltd. It can be seen that the coaches provide unusual comfort. The following are brief details:—A Hemmings centre sliding head is fitted to the roof giving a clear inside head-room of 5 ft. 10 in., full width luggage accommodation is provided between the



THE STRACHAN ALL-WEATHER COACH.

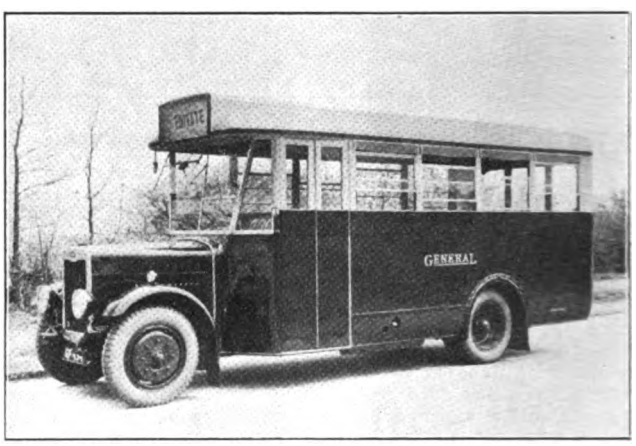
floor and the top of the chassis frame. Entrance and exit is by two coach doors on the nearside fitted with a drop light. All side windows are made to drop and are of the firm's own improved W.M. type. All seats are arranged to face forward and are of the firm's special design .which have been standardised by the Western National Omnibus Co., Ltd., for use on all their long distance coaches. Special attention has been given to the design of the front end of the body, to avoid the "boxey" appearance usually associated with forward control vehicles. A large pivotted windscreen at the front, sliding light nearside and offside and a hinged ventilator in the roof provide ventilation in the driver's cab. The body is designed to pass Scotland Yard regulations. All metal fittings inside and out are chromium plated. Seats, panels, etc., are finished in flowered moquette and all interior woodwork is polished walnut.



INTERIOR OF THE STRACHAN ALL-WEATHER COACH WITH ROOF DRAWN BACK.

Manchester Coachowners' Scheme.—Although the co-ordination scheme of the coachowner members of the Manchester Transport (Owners') Association and C.M.U.A., joint organisation, has been closely and analytically surveyed from almost every operating angle, no inherent defects have become manifest, even when traffic has been at the peak, such as at week-ends. In cases where complaints have been forthcoming, they have been sifted to the bottom, and invariably it has been found that the secretary's instructions have not been complied with. One complaint concerned the use of non-scheduled booking offices and another the hiring by a member of coaches belonging to a non-member. This, it turned out, was due to a misunderstanding. The Manchester coachowners have now gone a step further with their scheme by arranging for each of the four groups of owners to use a separate parking and loading place at Blackpool, which is the heaviest trafficked destination. This will facilitate quick unloading and loading at Blackpool and enable the coaches to leave the town expeditiously. As regards the Salford co-ordination scheme, which will probably be launched in a few weeks time, the joint organisation and the Salford Chief Constable are negotiating the details. Already the areas in the city have been mapped out, and coachowners are working in unison in preparation for the adoption of an organisation plan for coping with coach traffic.

The Dennis "Dart" Coach. — The Dennis "Dart" chassis, which made its first public appearance at Olympia last November, is now well in production, and examples of this model have been despatched to all parts of the country. The London General Omnibus Co. have, for some time, had 6 of these machines in service, one which is shown in the photograph. Accommodation is provided for 18 passengers on two longitudinal seats facing a wide central gangway where ample headroom allows comfortable standing space. One-man operation is arranged for by the entrance at the forward end on the nearside,



THE DENNIS "DART" COACH REFERRED TO IN TEXT.

there being, additionally, an emergency exit at the rear. Power is provided by a 6-cylinder engine (bore and stroke, 85 by 120 mm.) with overhead valves operated by push rods; 30 b.h.p. is produced at 1,000 r.p.m. and over 60 b.h.p. at higher speeds. The power is transmitted through the 4-speed gear box and propeller shaft to the inverted worm-driven rear axle, the entire transmission following a straight line under normal loading. An unusual feature in conjunction with this form of final drive is the use of a torque tube of the conventional type which encloses the propeller shaft and terminates, at its forward end, in a thrust ball. The brakes, assisted by vacuum-servo, operate on all four wheels.

Motor Coaches.

Windscreens, Wipers and Side Lifeguards.

THE Commissioner of Police of the Metropolis notifies that, on and after the 1st July, 1930, motor coaches presented for licensing in the Metropolitan Police District for the first time must conform to the following requirements as to the fittings named:—

Windscreens.—These must be adjustable and fitted with a type of safety glass approved by the Commissioner.

Windscreen Wipers.—A mechanical wiper of a type approved by the Commissioner must be fitted to the windscreen.

Side Lifeguards.—These must be fitted between the front and rear wheels of all coaches not provided with running boards. The guards are to be so arranged that a minimum ground clearance of 4 in. is maintained when the vehicle is fully loaded.

The requirement as to the fitting of an approved type of safety glass to windscreens will not be insisted upon in respect of vehicles already licensed or approved for licensing by the 1st July, 1930, but these vehicles must be fitted with Windscreen Wipers and Side Lifeguards as stated above before any renewal of licence can be granted.

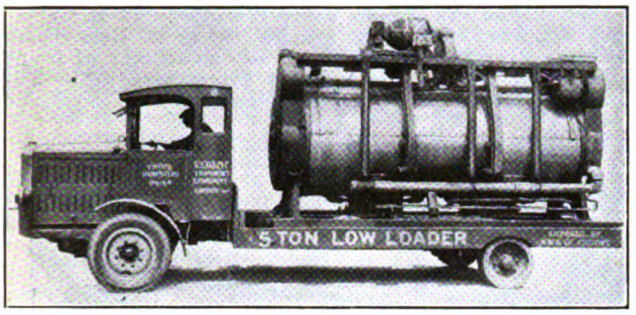
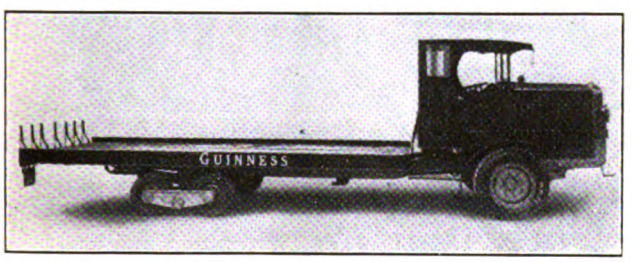
The Latil 5-Ton Low Loader.

As distinct from the majority of low loaders, the Latil 5-ton vehicle obtains its low loading height by substituting front wheel drive for the usual rear axle drive thus there



THE LATIL 5-TON LOW LOADER.

is no transmission mechanism below the carrying platform. Furthermore, additional loading space is obtained by placing the engine forward of the front axle, as shown in the photograph. The rear wheels are the standard 24 in. by 5 in. type with solid rubber tyres. If the vehicle is required to carry heavier loads than 5 tons, a four wheel



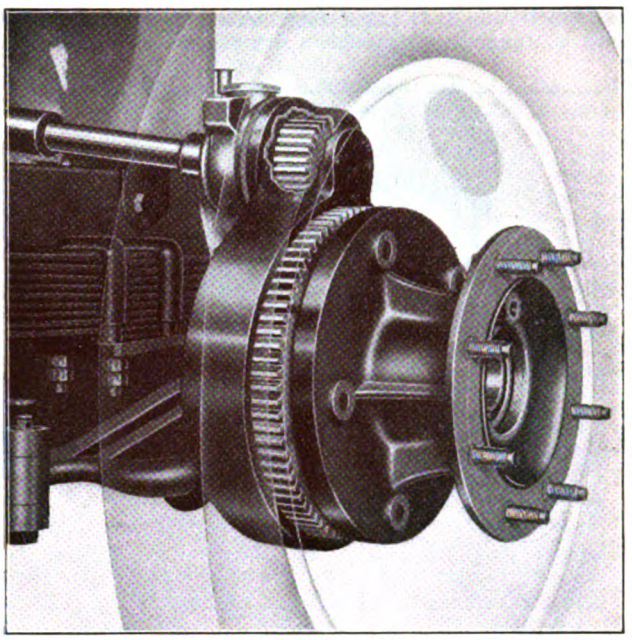
THE LATIL LOW-LOADER WITH BOGEY REAR AXLE.

bogey type rear axle may be substituted for the two wheel axle. The front wheels are the disc type fitted with Dunlop S.S. tyres 34 in. by 7 in. and therefore the engine and transmission are insulated from road shock by the combination of pneumatic tyres and specially long flexible springs.

The engine has four cylinders 105 m.m. bore by 140 m.m. stroke and is governed to 1,200 r.p.m. The R.A.C. rating is 27.3. Lubrication is by submerged gear pump delivering oil through a distributor to constant level troughs from where it is picked up by dippers fitted to the connecting rods, the pistons and other moving parts being lubricated by splash. The timing gears are supplied with oil through the distributors. Chassis lubrication is by Tecalemit gun.

Ignition is by H.T. magneto; the petrol tank is situated on the dash and supplies a Solex vertical type carburetter by gravity.

Power is transmitted through a single dry plate clutch to the four speed gear box which is bolted to the rear of the engine crankcase and the entire unit is supported in



THE FRONT WHEEL DRIVE OF THE LATIL MODEL NP5LL 5-TON LOW-LOADER.

the frame, centrally at the front end in a spherical rubber lined mounting and at the rear on the chassis frame at two points on insulating fabric pads. The fixing bolts are fitted with springs so that vibration is reduced to a minimum.

The power, which is transmitted to the front wheels only, is through the differential gear carried in the forward part of the gear box and which is capable of being locked by means of a lever operated from the driving seat. The drive is taken through universally jointed driving shafts to the external toothed final reduction gears (see illustration) which are mounted in oil tight casings.

Steering is by worm and nut. The foot brake operates an external expanding brake on the transmission and the hand lever operates internal expanding brakes on the rear wheels, thus four wheel braking is obtained.

The wheelbase is 13 ft. 11¾ in. and the body space 12 ft. 11 in.

The address of Latil Industrial Vehicles Ltd., is 11, Albert Embankment, London, S.E.11.

International Horse Show, Olympia.

June 19th to June 28th.

THE 19th International Horse Show will be held at Olympia, London, from June 19th to 28th and will be truly International in character.

It is expected that Their Majesties the King and Queen will attend Olympia on the afternoon of June 23rd when the King George V. Gold Cup will be competed for by officers representing Great Britain, France, Belgium, Germany, Holland, Chile and the Irish Free State.

H.R.H. The Prince of Wales will be present on the afternoon of June 27th when Chilean Cavalry will compete for the Prince of Wales Cup, with a team including Major Perez, Captain Silva and Captain Rodriguez. Five officers from the Cavalry School, Hanover, will represent Germany. The Irish Free State are sending no fewer than twenty horses with a team of six officers. The Prince of Wales will present the trophy to the winning team.

One hundred and three classes will be judged at the Show. There will be coaching events, children's riding classes, costers' turnouts, hacks, harness horses, hunters, military horses, mounted constables, officers' chargers, polo ponies, Shetlands and trade turnouts, and jumping events as usual. Lord Desborough and Miss A. Sylvia Brocklebank will judge the Coaching Marathon. The Earl of Lonsdale and Major Toms will judge the costermongers' barrows with their sturdy little donkeys, always a popular feature of this Show.

The Directors of the International Horse Show have made arrangements with the War Office to house the detachment of the Canadian Mounted Police, who are coming to the Show, at Knightsbridge Barracks until the opening of the Horse Show on June the 19th, after which they will be moved to Olympia. Innumerable requests have been received from promotors of other horse shows, gymkhanas and military displays by the Canadian Government and the International Horse Show authorities, that the detachment might make an appearance at other venues. However, as these policemen can be ill-spared for a longer period than the ten days at Olympia they will not be seen elsewhere but will return to Canada immediately after the finish of the Horse Show.

The value of the trophies, cups and cash exceeds £7,200.

The New Bean Chassis.

BEAN CARS, LTD., Tipton, Staffs, are now placing on the market two new chassis, one being a 40/45 cwt. and the other an 80 cwt., both of the forward-control type. With regard to the 40/45 cwt. model this has a four cylinder engine, bore and stroke 95 and 130 m.m. respectively, R.A.C. rating 22.3 h.p. It has three bearing crankshaft drilled for pressure lubrication. It has a detachable cylinder head. The drive is transmitted through a dry plate clutch to a four speed gear box unit with the engine. The change speed lever is mounted on the crankcase and the position of various gears are indicated on the gate. From the gear box power is transmitted through a divided propeller shaft with Spicer joints self-oiling throughout and centrally supported. The rear axle is of the fully floating worm and wheel type. The brakes are internal expanding there being two pairs of shoes per rear drum. Ignition is by coil and distributor driven by spiral gear from the camshaft. The wheels are steel disc with eight studs twin rear fitted with 32 in. by 6 in. tyres, or 34 in. by 7 in. single at rear. The dimensions are:—Wheelbase 11 ft. 1½ in., track 5 ft. 5 in., frame from ground 2 ft. 4½ in. Rear of cab to centre of axle 8 ft. 5 in., rear of cab to rear of frame 11 ft. 6½ in. The price without extras is £480. The 80 cwt. model also has a four-cylinder engine, bore and stroke 100 and 130 m.m. Treasury rating 24.8 h.p. In other respects the engine is similar to the foregoing as are also the details of construction of the chassis except that ignition is by H.T. magneto, but coil ignition may be supplied if specified. The dimensions are:—Wheelbase 13 ft. 1½ in., track 5 ft. 7⅛ in., frame from ground 2 ft. 6½ in., rear of cab to rear of frame 13 ft. 6½ in., price without extras £740.

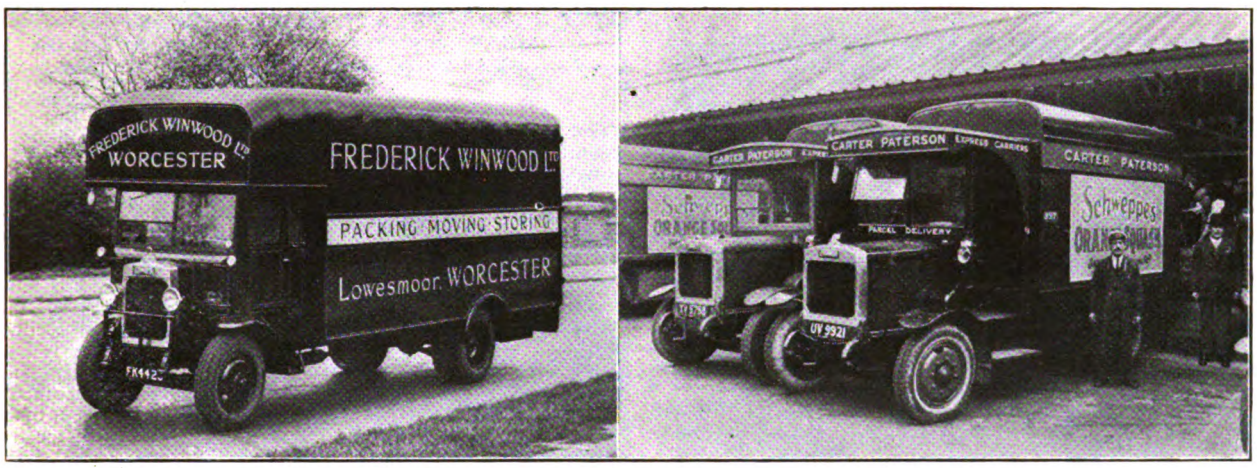
News from all Parts.

A Notable Bi-Centenary.—Extensive preparations are being made to celebrate the bi-centenary of Messrs. W. and T. Avery, Ltd., the famous Birmingham manufacturers of weighing and testing appliances. The full programme of events has not yet been completed, but the Commemoration will extend over several days at the beginning of July, and many people prominent in industrial, commercial, professional and political circles have already promised to attend. The growth of the firm of Avery has been one of the romances of industry, and next month's celebrations will commemorate 200 years of successful progress. Originating in a small steelyard-maker's shop at No. 11 Digbeth, Birmingham, opened in 1730 by a Mr. Ford, the business has grown steadily and surely until to-day, in 1930, the firm is known throughout the world. The present range of output from the historic Soho Foundry, acquired by the firm in 1897, is vast and impressive. Its products are seen all over the world, and cover needs affecting all aspects of our lives. Heavy weighing and testing machines, commercial scales of all descriptions, and delicate balances; liquid measures, testing apparatus for textiles, fabrics, and a hundred other commodities—these are a few examples indicating the comprehensive nature of the firm's activities.

Chairmanship of Lord Chelmsford, to examine the present situation as regards the British Industries Fair, and to consider what means can be adopted to increase still further its utility to British trade.

F.W. & R.A. New Members. — The following firms have been elected to membership of the Furniture Warehousemen and Removers' Association:—Messrs. G. Topliff & Son, 132 High Street, Uxbridge, and Barwell and Sons, 290 Brockley Road, London, S.E.4.

De Dion-Bouton British Concession.—We understand that the negotiations which were pending not being satisfactory to the Establissements De Dion-Bouton, and consequently having been broken off, the concession for the exclusive agency and the assembling rights for Great Britain and the British Colonies are at present open. The intention of these well-known French motor manufacturers is to grant the concession for their French-made commercial vehicles and to assemble in England their 1930 model motor coach chassis which is running so successfully. An extensive business is being done in genuine spare parts, and the British Colonies are at present open. The intention from the French works through their British representative, Mr. H. O. Duncan, 5 rue de l'Isly, Paris, to whom all correspondence (in English) should be addressed.



LEFT: A GARNER 60-65 OVERTYPE VAN FOR FREDERICK WINWOOD, LTD., OF WORCESTER. RIGHT: TWO OF CARTER, PATERSON & CO.'S "GARNER" VEHICLES.

Garner Vehicles for Well-known Transport Contractors.—One of the photographs which we reproduce shows a Garner 60/65 overtype van supplied recently to Frederick Winwood, Ltd., household removal, warehousing and cartage contractors, of Lowesmoor, Worcester. The van body has a capacity of over 1,000 cubic feet and will be used by the firm for removal work. Our other illustration shows two of Carter, Paterson & Company's fleet of "Garner" vehicles.

British Percheron Horse Society.—The Twelfth Annual General Meeting of the British Percheron Horse Society was held at the Society's Offices, 12 Hanover Square, London, W.1, on June 2nd last, Mr. Charles P. Ackers, President-Elect, occupying the Chair. The Chairman, in proposing the adoption of the Council's Report and Statement of Accounts, said that during the past year, despite the depression in almost all breeds, the Percheron horse had more than held its own. In the majority of large towns the use of the horses for short distances had certainly increased, and it was for the horse to carry out short distance urban transport, and it might be taken as an accepted fact that for ordinary trade purposes of towns and cities, namely, in distributive trades, cartage of goods, etc., the horse was much cheaper than the motor on a daily computation of work and working within a radius of from four to six miles.

Markt & Co. (London), Ltd. Change of Address.—We draw attention to the change of address of Markt & Co. (London), Ltd., and all communications should now be sent to Portpool Lane, Gray's Inn Road, London, E.C.1.

British Industries Fair.—The President of the Board of Trade has appointed Alderman E. B. Lewis, J.P., President of the National Chamber of Trade, as an additional member of the Committee recently set up under the

River Severn Development Association. — A new brochure has been issued recently by the River Severn Development Association, 16 Bridge Street, Broad Street, Birmingham. A map, reproduced in this brochure, indicates clearly the most important towns in the Severn valley and shows the waterway and other connections between the Midland industrial area and the River Severn. The objects of the River Severn Development Association are to advertise and develop the River Severn for industrial purposes, and the brochure emphasises the excellent facilities for the transport of goods in the area. Viscount Ednam, M.C., has accepted the Presidency of the Association.

Change of Address. The registered and general offices of R. Cornell, Ltd., Road Transport Contractors, are now at 1 West Smithfield, E.C.1. Telephone number: Central 3466 (3 lines).

Robert W. Coan, Ltd.—Many of our readers will have heard with much regret of the death which took place recently of Mr. Robert W. Coan, head of the well-known firm of Robert W. Coan, Ltd., The Aluminium Foundries, Coan House, Duncan Street, Islington, London, N.1. We are informed that the late Mr. Coan by his will directed that his Executors, who are his daughter, Mrs. M. E. Miller, and Mr. W. H. Pinchbeck, the Managing Director of the Company, should endeavour to carry on the business and this they have decided to do. Mr. Coan, shortly before his death, appointed Mr. W. C. Taylor to assist him in the practical part of the business and Mr. Taylor has now taken up his appointment. With this addition, the old staff who have been associated with the business for so many years, will use their best endeavours to give every satisfaction to customers as did the late Mr. Coan in the past.

A Unique Van Body.—Our illustration shows a specially constructed van body built for Durtnalls, Ltd., the well-known furniture warehousemen and removers, of 125 Queen's Road, Brighton, by Thos. Harrington, Ltd., automobile engineers and motor coach builders, Old Shoreham Road, Hove. This body is fitted to a Leyland "Buffalo" chassis, and there is a large compartment over the driver's cab for stowing away goods, etc.

A UNIQUE VAN BODY BY THOS. HARRINGTON LTD., ON LEYLAND CHASSIS.

SHOWING HOW THE TAILBOARD OF LORRY PAINTED WHITE CONTRASTS WITH THAT OF OTHER LORRY.

A New Dunlop Display.—A striking new window display has been devised by the Dunlop Advertising Department for the use of motor dealers all over the country. It consists of a pictorial centre screen and two side-screens hinged at each side, while coloured crepe paper in streamer form covers the background flanges. The two main side flanges are so constructed that they form a complete packing case for the centre screen. The over-all dimension of the window display is 10 feet. The displays will be installed by the Dunlop advertising representatives, who, from time to time, will re-dress the display with fresh crepe, using different colour schemes.

Chaplins add to their Fleet.—Our illustration shows a Thornycroft "JJ" 6-ton chassis supplied recently through Taskers of Andover, Ltd., to Chaplins Ltd., the well-known Railway Agents and Removal Contractors of 65, Gresham Street, London, E.C.2. Messrs. Taskers constructed the cab and platform lorry body to Messrs. Chaplins own specification. The trailer is by the Eagle Engineering Co., Ltd., of Warwick. Both lift vans were built to Messrs. Chaplins order by Frederick Winwood Ltd., of Worcester.

Hull Docks Appointment.—The L.N.E.R. announce that Mr. H. S. Cole, at present Dock Superintendent, Western Docks, Hull has been appointed Dock Superintendent for the Eastern Docks at Hull. In his new post Mr. Cole will have supervision of the Dock arrangements generally in the important area served by the Victoria Dock, Alexandra Dock and River Jetty, King George Dock and Salt End Jetty.

White for Visibility.—In a previous issue we published a letter from Mr. L. H. Pomeroy, of the Daimler Motor Co., Coventry, advocating painting the backs or tail-boards of vehicles white so that they show up clearly in the lights of overtaking cars and so preventing accidents. The accompanying photograph was taken through the windscreen of a private car at night and shows two lorries, one with the ordinary dark finish and the other with the tailboard painted white. There is a clear indication that the white painted lorry would be seen long before the other came into view at all. Incidentally, the white painted lorry is considerably in front of the other in the photograph.

Railway Statistics Committee.—Mr. W. V. Wood, Vice-President of the London, Midland and Scottish Railway, has been unanimously elected Chairman of the Railway Statistics Committee in the place of Mr. J. Milne, now General Manager of the Great Western Railway Company.

Guildford Carriers.—At the Watch Committee of the Guildford Corporation, the Town Clerk read a letter from the Guildford Chamber of Trade, stating that it was now in a position to put the scheme for the provision of a carriers' depot into operation with the assistance of the Corporation. It had received a definite promise from fifteen carriers to make use of the depot during certain hours of the day. The Chamber of Trade inquired whether the Corporation would arrange for a specific part of the parking place to be set aside for carriers' vans and to arrange for a board to be erected there in order that the names and times of the carriers using the park may be placed thereon. The Committee agreed to set apart a specific part of the Onslow Street parking place for carriers' vans.

THE THORNYCROFT REMOVAL VEHICLE AND EAGLE TRAILER REFERRED TO IN TEXT.

Mr. J. A. Powell.—We announced in our May issue that Mr. J. A. Powell, A.M.Inst.T., had been elected to the Committee of the Manchester and S.E. Lancs. Commercial Motor Users' Association. Mr. Powell is well-known in Manchester and Liverpool traffic circles and has had a wide and varied experience in transport work. He commenced his career with the old L. & N.W. Railway, and three years later joined the Belfast Steam Ship Co., remaining with that Company for thirteen years, and for the next nine years he was with Leopold Walford Transports, Ltd., Manchester, as Traffic Manager. With this experience of traffic handling by rail, road and sea Mr. Powell has turned to the manufacturers side, and is now Shipping and Transport Superintendent of Macinlop, Ltd. (one of the Dunlop group companies). Mr. Powell is a member of the Traders' Traffic Conference, Chairman of the Local Transport Committee of the India Rubber Manufacturers Association and a member of the Main Transport Committee of the India Rubber Manufacturers' Association. He was elected an Associate Member of the Institute of Transport in 1924.

Denmark. Trials of Motor Driven Tractors.—The Commercial Secretary, His Majesty's Legation, Copenhagen, has forwarded to the Department of Overseas Trade copies of a circular received from the Danish State Implement Committee regarding trials of motor tractors which will be held in Denmark in the course of the summer and autumn of this year. Interested British firms can obtain further particulars upon application to the Department of Overseas Trade, 35 Old Queen Street, London, S.W.1. Reference No. A.X. 9584 should be quoted.

Fodens at the Bath and West Agricultural Show, Torquay.—Our illustration shows the Foden Stand at the Bath and West Agricultural Show held at Torquay from May 28th to 31st. Visitors evinced much interest in the Foden "Speed-Six" model which is seen in the foreground, and we understand that a number of orders for this type were placed with Fodens, Ltd., Elworth Works, Sandbach.

FODENS AT THE BATH AND WEST AGRICULTURAL SHOW.

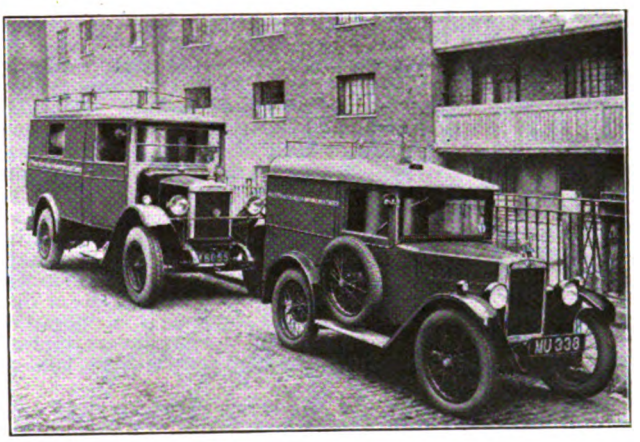
Chairmanship of the Cunard Steamship Company.—At a recent meeting of the Cunard Steamship Company, Sir Thomas Royden announced his resignation from the Chairmanship, owing to the pressure of private affairs, and a warm tribute was paid to his work as Chairman during the last eight years. Subsequently the directors elected Sir Percy Bates, the present Deputy Chairman, to be Chairman.

Automatic Traffic Signals.—There are now over forty towns in Great Britain where automatic traffic signals operated by means of coloured lights are working. The principal difficulty associated with this system of traffic control is that unless previous warning of the existence of automatic signals is received, it is an easy matter to overrun them and so commit a technical breach of the law. At a Conference on automatic signals last year, the Royal Automobile Club drew the attention of the Ministry of Transport to this point, suggesting that the entrances to all towns where such systems are in use, should display a warning sign of prescribed size, wording and colouring indicating that automatic traffic signals are in use in that particular town. The Ministry of Transport has adopted the R.A.C. suggestion and has now issued a recommendation to all local authorities on the subject, specifying the type of warning signs to be used and where they should be placed.

Sleepers Built into Trucks Save Time and Expense.—In a news sheet issued by the National Automobile Chamber of Commerce, New York, it is stated that nightly truck hauling is being used in the U.S. as a conserver of labour time and a relief of expense to drivers who might otherwise be compelled to seek sleeping quarters en route on long distance lanes. To arrange for a more comfortable rest, trucks for nightly hauling have been constructed in America in which a small sleeping box is built without reducing the loading capacity of the vehicle. In this manner the assistant, until the relief of his colleague can enjoy a perfect rest with his body stretched out so that after several hours of sleep he can drive the car with a clear mind.

Ford Motor Company Balance Sheet.—A Boston message says that the balance sheet of the Ford Motor Company, as filed with the Massachusetts Commissioner of Taxation and Corporations, shows a profit in 1929 of 81,797,861 dollars, as compared with a loss of 72,221,498 dollars in 1928. It is assumed in financial circles that the sharp increase in the earnings is to be attributed to the incomings from the new models, the cost of production of which was reflected in the 1928 balance sheet.

Morris Commercials in Campaign for Improvement of Slum Area. — We illustrate two Morris Commercial vehicles supplied by Stewart & Ardern, Ltd., the sole London distributors of Morris Cars, of The Vale, Acton, London, W.3, to the Rev. J. B. L. Jellicoe, M.A., for use in connection with publicity by the St. Pancras House Improvement Society, Ltd., the object of the Society being to improve the slum areas and to build modern dwellings a typical block of which may be seen in the background of the picture.



THE TWO MORRIS COMMERCIALS REFERRED TO IN TEXT.

White Star Line. New Directors. — The White Star Line announce that Mr. P. G. M. Mitchell, General Manager and a Director of the Royal Mail Steam Packet Company, and Mr. John Macmillan, General Manager of the Shaw Savill & Albion Co., Ltd., have been appointed Directors of White Star Line, Limited, and the Oceanic Steam Navigation Co., Ltd.

Automobile Traffic in the Kara-Kuma Desert.—A Moscow message says that the Tass Agency announces the problem of transportation in the Kara-Kuma Desert, which lies between the Aral and the Caspian Seas, may be considered to have been solved. Two "Renault-Sahara" motor trucks with 20 h.p. motors, and of four ton capacity, have crossed from Ashkhabad, Central Asia, into the Kara-Kuma desert and back, a distance of 250 kilometres (150 miles) with a load of over 3 tons, making an average speed of 10 miles an hour. In view of the success of this experiment, it is now proposed to organise regular automobile traffic in the desert.

New A.A. Road Warning Signs.—The Automobile Association, with the approval of the Postmaster General, is fixing nearly 500 Reflex signs on telegraph poles at bends and curves on the London to Holyhead road. These signs are to assist motorists in keeping a safe course on the roadway after dark or in misty weather, and consist of a replica of the A.A. badge, studded with reflectors, which, picked up by the front lights of approaching cars, show red on the nearside and white on the offside.

Bigger Canal Barges.—A new type of bucket dredger, worked by a crude oil engine, is soon to be seen on the Grand Union Canal. One of these bucket dredgers will do the work of three of the kind at present in use. Their introduction is intended to enable larger barges to use the

Digitized by Google

canal. The economies resulting from the dredging of canals were dwelt upon recently by Mr. W. H. Curtis, Chairman of the Grand Union Canal Company, who said that last year 4,813 barges carried 364,560 tons, which would have required 5,467 barges in 1917. "As the capacity of our canals is limited to the number of barges which can be taken through our locks in a working day, dredging yields a large increase in toll-earning capacity. All new barges being built for use on our Regent's section are of 100 tons capacity. This indicates how our waterway provides a cheap mode of transport for, year by year, a greater volume of material. We are dredging our other canals as deep as we are able."

Licences Transferred and Granted.—The Watch Committee of the Leeds Corporation has granted an application from the West Yorkshire Road Car Company, Ltd., for the transfer to them of the bus (service) Licences held by the Universal Motors (Leeds), Ltd., in respect of a service between Leeds and Thorner. The Watch Committee of the Plymouth Corporation has granted the following road service licences:—Traveller Saloon Coaches —Plymouth and Portsmouth service. Shamrock and Rambler—London-Bournemouth-Torquay service to Plymouth.

MERSEYSIDE.

Cart and Motor Owners' Association.—The Liverpool Cart and Motor Owners' Association is about to occupy new offices. It should be noted that the present Dale Street premises will cease to be the headquarters of the Association as from 30th June. The new address of the Liverpool Cart and Motor Owners' Association and the Conference of Liverpool and District Road Transport Employers' will be 20 Chapel Street, Liverpool.

Union Rejects Application.—Disappointment is felt by Liverpool transport employers that their proposal for alterations in working conditions has not been favourably received by the Liverpool and District Carters and Motormen's Union, a general meeting of whose members was held on 24th May. The employers made application about three months ago for an amendment of the existing agreement, by the insertion of an optional clause so that motormen might be employed upon the accumulative week system. This was considered to be a very necessary and desirable innovation, to enable Liverpool motor owners to meet the severe competition arising from outside districts where this system of working is in operation. The members of the union rejected the employers application. No doubt a meeting of employers will be held to discuss the position.

New Traffic Depot.—Mr. J. Blaney, motor haulage contractor, of Newcastle-on-Tyne, has opened a branch traffic depot at 48 Chisenhale Street, Liverpool.

Of Common Concern.—Much attention has been given in transport circles to the draft Hours of Industrial Employment Bill. It is probable that the subject will be considered at an early date by the Conference of Liverpool and District Road Transport Employers, which is representative of all the local transport associations.

Presented to the Duke of York. — When H.R.H. The Duke of York visited Liverpool recently in connection with the "Safety First" Congress, the members of the Merseyside "Safety First" Council were presented to him, including Mr. Allen Walter (Secretary of the Liverpool Cart and Motor Owners' Association) and Mr. H. S. Rosser, Secretary of the Liverpool "Safety First" Organisation.

MANCHESTER.

Coming of Age.—Next year the Amalgamated Horse and Motor Owners' Association, of Manchester, will achieve its coming of age, in connection with which a sub-committee of the Association has been appointed to consider and recommend what form the celebration should take.

Cartage Contract. — Salford Gas Committee recommends the City Council to accept the offer of Messrs. E. Friesner to supply vehicles and drivers for 12 months at the following rates:—A 3-4 ton motor lorry and driver, £3; for a 2 ton motor vehicle and driver, £1 17s. 6d.; and for a 30-cwt. lorry and driver, £1 17s. 6d.

Vehicle Purchases.—Manchester Corporation Cleansing Committee has decided to purchase new motor vehicles from Lacre Lorries, Ltd., Shelvoke & Drewry, Ltd., and Karrier Motors, Ltd.

Horse and Motor Parades.—After a lapse of 19 years Salford Corporation Cleansing Department has revived its horse and motor parade. Over 60 horses were judged for cleanliness, appearance, and decorative appeal. Mr. H. H. Lord, the veterinary surgeon to the Department, Mr. Edward Davies, of Partington, and Mr. Marshall, representing the Manchester Highways Department, were the judges. Fourteen motor vehicles of the department took part in the parade and qualified for prizes. The gas, tramways, health, police, highways, and parks departments of Salford City Council augmented the parade by turning out their vehicles. After the judging the horses, followed by the motor vehicles, paraded the principal streets of Salford. Warrington Horse Parade, which was an annual event up to 1914, has been revived by a committee of which Col. Fairclough, a past chairman of the Liverpool Area Committee of the C.M.U.A., is Chairman. The Parade was supported by over 100 entries. The Warrington Teamowners' Association Cup for the driver of the cleanest and best kept horse was won by W. and J. Richardson (E. Bowden). In the section for carting contractors, J. Newton and Sons (W. Beckett) won the first prize.

Transport Authorities Council. — The Lancashire and Cheshire Transport Authorities Council, which represents the largest of the nine transport areas in the country, with representatives of 33 municipal authorities at their meeting at Manchester last month, discussed the progress of the Road Traffic Bill. Alderman Greenwood was elected as Chairman, and Mr. J. Barnard, General Manager of the Bolton Transport Committee, Secretary.

NORTH-EAST COAST.

South Shields Bus Centre. — The Chief Constable of South Shields, Mr. W. R. Wilkie, suggests that the spacious open air Market Place should be transformed, partially at least, into a central bus station in order to concentrate all the bus services operating in the Borough. The scheme has its opponents, and no definite decision is likely awhile.

Buses for Trams.—Newcastle Corporation has secured the sanction of the Ministry of Transport to substitute buses for trams between Croft Street, Newcastle, and Park Road, Wallsend, and has done so accordingly. According to how the buses are patronised, it is possible that the tram terminus may be established even nearer the city centre.

Sunderland's Transport Returns.—Noticeable increases in the profit returns of the Sunderland Corporation transport undertaking for April are revealed in the official figures. Tram patrons numbered 2,539,803, and paid £10,360 5s. 1d., these representing 238,090 more passengers, and an increase of £985 11s. 7d. in fares over April of 1929. The steady development of the bus service is reflected in an increase of 234,725 passengers and £1,095 5s. 7d. in receipts, the number of people who availed themselves of these services reaching 414,185 and paying £1,894 14s. 6d. during the month.

A Model of a Lighthouse inscribed "Travel United—Safety First is our Motto," formed a striking feature in a carnival at Newcastle in National "Safety Week, the entry being from United Automobile Services, Ltd.

"For Sweet Charity's Sake."—The Northern General Transport Vaudeville Co. has already raised over £2,000 for various charitable causes.

Bus Fusions. — The Northern General Transport Co., Ltd., has absorbed the "A.B.C." service between Newcastle and Consett previously run by Messrs. Atkinson and Browell, of Consett; also the Castle Motor Service (Messrs. Curric and Scobie), which has run for some years between Newcastle and South Shields.

To House Newcastle's Buses.—One end of the Ouseburn Valley, beneath Byker Bridge, at Newcastle, has now been filled up and is ready to be built upon, and it is suggested this would be an excellent site on which to erect a garage for housing the Corporation's now extensive fleet of blue buses.

SOUTH WALES.

Western Welsh Omnibuses, Ltd.—Representatives of the seven divisions of the Western Welsh Omnibuses, Ltd., filled the Assembly Hall of the Grand Hotel, Cardiff, when the Goodyear Football Cup was presented to the Cardiff team, which had won the trophy with eleven victories out of 12 games. Mr. A. Gray, General Manager, presided, and spoke of the value of games in promoting cheerful and loyal service. Mr. W. H. O. Steer presented the Cup, and he was acclaimed as the old Chelsea and England centre forward, though he talked of tyres and rubber. He said Goodyears employed over 40,000 men and women, had a turn-over of nine millions a year, claimed one-sixth of the world's output of rubber, and reached the public through 55,000 retailers. Mr. H. A. Cobbett (W. B. Dick & Co.) presented the medals, which,

Digitized by Google

he said, his firm would be glad to give annually. (Cheers). The runners-up medals were awarded to the Eastern Valleys Depot.

NORTHERN IRELAND.

Northern Ireland Budget. — The Northern Ireland Budget, introduced in the House of Commons recently, contained an unpleasant surprise for the motor and road transport trades in the shape of heavier duties for mechanically propelled vehicles. Taxis seating not more than four are reduced from £12 to £10, and those seating from four to six passengers remain at £12. Small buses seating from six to eight passengers are reduced from £28 to £20, but buses above that seating capacity are charged at a flat rate of £2 10s. per seat. The 32-seater bus, which hitherto paid £64, will now be charged at £80. There are also changes in the commercial vehicle scale, and the new rates are:—Unladen weight exceeding 1 ton, not exceeding 1½ tons, £24; 1½ to 2 tons, £30; 2 tons to 2½ tons, £38; 2½ to 3 tons, £38. Road locomotives and tractors are also increased as follows:—Weight, unladen, not exceeding 2 tons, £21; 2 tons to 6 tons, £30; 6 tons to 8, £45; exceeding 8 tons, £60. The lighter form of motor cycle is raised from 30/- to £2, and the fee for a driving licence is raised from 5/- to 10/-, except for those who wish to drive a public service vehicle alone, when the rate will remain at the present figure, 5/-. By this new taxation the Government hope to raise an additional £43,000, made up of £26,000 from the commercial vehicles, £1,000 from road locomotives and tractors, £7,000 from motor hackneys, £8,000 from driving licences, and £1,000 from motor cycles. It is expected that this will go far towards balancing the Road Fund, which for the past two years has shown a deficit. In order to help still further to balance the figures, it has been decided to reduce the grant on class 3 roads to 12½ per cent. of the expenditure.

Belfast Transport Officials' Club.—At the Annual Meeting of the Belfast Transport Officials' Club, Sir Thomas Wilson was re-elected President. Sir Thomas, who is a well-known figure in shipping circles in Belfast, was recently made the first Freeman of the new Borough of Bangor, Co. Down, where he resides, and of which he was the first Mayor.

IRISH FREE STATE.

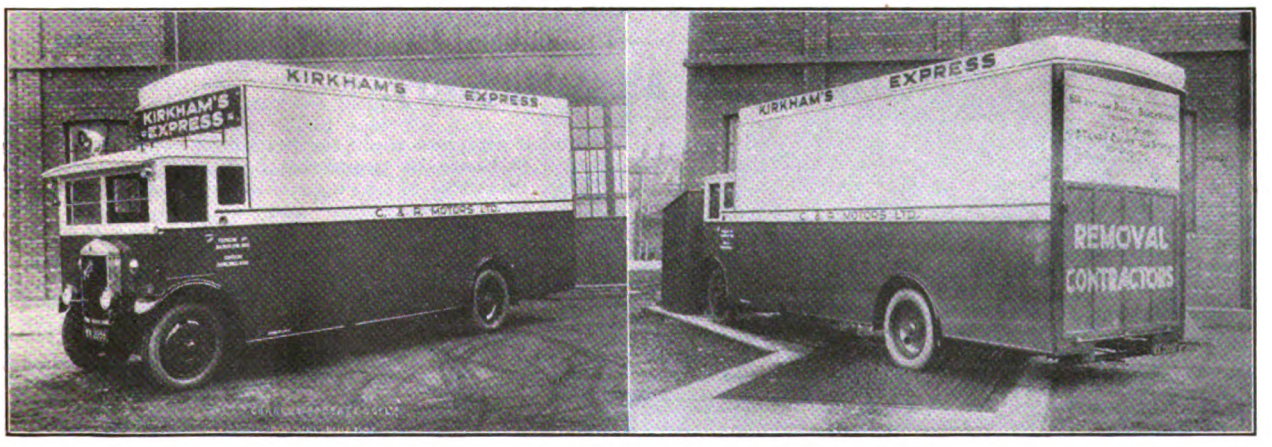
Irish Omnibus Services.—In Dail Eireann, in reply to Mr. Kennedy, Mr. P. McGilligan, Minister for Industry and Commerce, explained that on the application of the Great Southern Railways Co., and in accordance with Section 4 (7) of the Railway (Road Motor Services) Act, of 1927, he had agreed to a revision of the fares on the approved omnibus services operated by the Irish Omnibus Co., as the railways company's agent. Some of the amended fares were reductions, and some were in excess of the maximum fares originally approved by him after he had received the report of the Rates Advisory Committee. The G.S. Railways Co. based its application on the increased cost of working including the addition of 150 per cent. to the road tax, which became operative in July, 1929. He had no control over fares charged by the I.O.C. on services other than those operated by that company for the Great Southern Railways Co.

Horse-Haulage in Dublin.—Horse-haulage for trading purposes and the delivery of goods obtains in Dublin to a pretty considerable extent. This was shown to be the case recently when competition for trade turn-outs were held in connection with the Dublin Show, in which horse-drawn vehicles of many firms made a very fine and effective display. The horse and float exhibited by Messrs. John Wallis and Sons, won the Gilbey Perpetual Challenge Cup for the best exhibit in the Trade Turn-outs and the first prize in the Horse and Float class. Messrs. Heiton and Co., Ltd., got first prize for their horse and drag, and were also successful in the Guinness Perpetual Challenge Cup for horse and heavy delivery vehicle. The Guinness Perpetual Challenge Cup for horse and light delivery vehicle was won by Mr. James McGuirk as well as first prize in the horse and light delivery cart and van class.

Delivery of Parcels by Carrier Companies. — At the seventh annual Conference of the Post Office Workers' Union held in Cork, the question of the delivery of parcels by carrying companies came on for consideration, and on the motion of Mr. Garde, seconded by Mr. Palmer, it was decided that the Executive of the Union should bring to the notice of the Government the necessity for the passing of legislation to protect the Post Office by prohibiting carrier companies and others from undertaking the delivery of parcels or correspondence, which was work proper to the Post Office.

The Crossley "Eagle" Chassis with Pantechnicon Body.

CROSSLEY MOTORS, Ltd., Gorton, Manchester, have supplied a pantechnicon body on their "Eagle" 30/70 h.p. 4-cylinder chassis to a well-known Blackpool concern for use between Blackpool and London. The body is mainly intended for the transport of bulky loads of medium weight. The underframing is of oak. The cross bearers are reinforced with steel flitch plates, and the side and end frames are of ash. The roof sticks are ash, strengthened by steel



TWO VIEWS OF THE CROSSLEY "EAGLE" CHASSIS WITH PANTECHNICON BODY.

car lines. The exterior of the body is panelled in ⅜ in. Sundeala sheets, and the interior is protected by longitudinal slats. There is a deep tailboard at the rear, which is supported by chains from the side pillars. Above are two cupboard-type doors. When the tailboard is lowered, it serves as a ramp, and facilitates loading and unloading. Two flush-fitting electric lights are mounted in the interior, and there is a strong wall plug at the rear near side providing a coupling for a semi-portable or hand lamp. A sliding door is fitted in the back of the driver's cab, providing access to the body. Both cab doors have sliding windows. A light luggage rail is mounted on the roof of the cab, and a flush-fitting mounting step is arranged on each side to give access to this railed-in portion. A large head lamp held by a double-swivel bracket is mounted on the cab canopy.

The main dimensions are:—Overall length, 25 ft. 11¼ in.; length behind driver's cab, 21 ft. 6¾ in.; overall width, 7 ft. 6 in.; overall height (unladen), 11 ft. 0 in.; inside height from floor level of well to roof, 9 ft. 1 in.; Inside height from main floor to roof, 8 ft. 1 in.

The chassis is the 30/70 h.p. Crossley "Eagle," with drop frame at rear.

Chloride Electrical Storage Co., Ltd.

Annual Exide Service Convention.

THE tenth Annual Convention of Exide Service Agents was this year held in Edinburgh from May 27th to 29th inclusive. Battery experts from all over the country, from Europe, Africa, India, Australia and the far East assembled in the Scottish capital to discuss the latest developments in storage battery technique and service.

Practically everybody nowadays is interested in storage batteries, the car owner, the wireless fan and the owners of electrical house lighting plants, all of whom probably have experienced the tribulation resulting from leaving their batteries too long in a discharged state or the evils of under-charging, or too rapid a charge at so called charging stations. Service was obviously needed besides supply.

The Chloride Electrical Storage Co., Ltd., one of the three largest firms in the World engaged in battery manufacture and pioneers of the service movement foresaw this. In 1920 they appointed their first agent, at the end of the year there were fifty-nine, to-day there are no less than five hundred and eighty-nine Exide Service Agents, all of whom have been specially trained at the Clifton Junction works of the company.

It would be safe to assert that practically every owner of a battery in the United Kingdom, can find somewhere within his reach an Exide Service Station, at which he can have his battery charged, repaired or replaced, and where he can get expert advice on all electrical questions.

Annual conferences were inaugurated to discuss technical, trading and service questions. At Edinburgh over 500 service agents attended the conference, speeding up service was one of the main themes discussed. The methods of a year or two ago when battery repairs meant days or longer in the repair shop, will not do to-day. Batteries, like cars and wireless sets, are valued by the time they spend in use, in dock they are a liability. The time occupied in replating a battery is comparatively short, the time taken to charge the battery has made repairing a lengthy process. The Exide factory has now introduced a two-hour repair service. Charged plates to fit all types of batteries are stocked by all Exide Service Agents, and a battery can be opened up, replated, fully charged and ready for service in one hundred and twenty minutes.

The Annual Banquet was held at the North British Hotel, Waverley Station. The managing director of the company, Mr. D. P. Dunne, presided. The principal guests included the Rt. Hon. Thomas B. Whitson, Lord Provost of Edinburgh and the Lady Provost.

One of the most modern applications of storage batteries was demonstrated in use in the Convention proceedings, wherein a complicated installation involving the use of six microphones and eight loud speakers made it possible to hear the speeches and announcements in all parts of the hotel at the disposal of the Convention. This system was installed and operated by Celestion Ltd.

H. Day & Sons, Ltd.

Opening of New Premises.

FROM time to time we have given particulars of the de-developments of this well-known South London firm, and each time it has been to point out the very great strides which have taken place. It was, therefore, with special interest that we attended, at the invitation of the Directors, the official opening of the new furnishing store which has been built at 509/513 Norwood Road, S.E.27. A large gathering of customers and friends met in the spacious showrooms on the ground floor for the opening ceremony, which was performed by Lady Greaves-Lord, who was accompanied by Sir Walter Greaves-Lord, K.C., M.P. The Chairman was an old friend of the family and spoke of the commencement of the business in a very small way some thirty years ago, and paid a warm tribute, not only to Mr. H. Day, the father, but to the two sons, Mr. John Day, the Managing Director, and Mr. William Day, his Co-Director, for their enterprise, their perseverance, and their hard work, to which the success of the business was due.

An interesting event was the presentation of a handsome cushion to Lady Greaves-Lord by Mrs. Day, Senior, to whom a very fine tribute was paid later by Mr. John Day, her elder son. Speeches and expressions of appreciation of the work of the Day brothers were made by the President and Secretary of the West Norwood Chamber of Commerce, and also by Sir Walter Greaves-Lord, the President, from which it was clear that while the brothers have devoted so much of their energy to the business, they have found time to take an active part in municipal affairs. Special reference was made also to Mr. F. P. Hopkins who has joined Mr. John Day and Mr. William Day as a Director, and also to Mr. Atwood, the Secretary of the company, all of whom took part in the opening proceedings.

This further link in the development of the business makes it one of the finest in South London, and a walk through the premises before the opening showed us that everything had been planned for efficiency, as not only are the new showrooms adjacent to the fine furniture depository, illustrated in our journal some years ago, but they are linked up by means of a broad approach running through from one street to the next.

A tribute was paid to the architect, who had given of his best to make the building appropriate, decorative, and useful for the purpose for which it had been erected, and we wish the Directors and the staff success and prosperity in the largely increased sphere of usefulness upon which they are entering.

The British Motor Industry.

AT the Annual General Meeting of the British Manufacturers' Section of the Society of Motor Manufacturers and Traders, Ltd., held in London on May 29th, the Chairman, Sir Herbert Austin, K.B.E., in moving the adoption of the Annual Report, said that it was inevitable, after the War, that the efforts of the Motor Industry should have been concentrated on the Home Market. Certainly no hope existed of any sound extension of our market overseas until the output for home consumption reached a sufficient volume. There could be no question that the operation of the McKenna Duties, combined with the intensive propaganda for which Mr. J. D. Siddeley took the lead and deserved the real gratitude of the Industry, had contributed in a very great measure to a security which, it might be said, the British Motor Manufacturers felt that the menace of foreign invasion of our home markets had disappeared. They could look forward to the future with a growing appreciation that there was nothing fundamentally wrong in British motor design; that a certain measure of stability existed in the home market; that a real start had been made in our Empire markets, and that, if they could reduce export prices sufficiently, a market existed within our Empire alone at least as large as that in our own country. Price, indeed, was to-day the only consideration for a vast expansion of our factories.

In what direction could the British Section of the Society help? At home, he suggested they might try to secure a greater measure of co-operation in technical matters. There was both room and necessity for greater standardisation, and he would propose that they, as a Section, should insist that standardisation, research, exchange of technical information and technical education should be undertaken by the Institution of Automobile Engineers under a constitution of which they might approve. Abroad, their existing organisation in Australia, New Zealand and South Africa had already had beneficial results and must be further improved in association with their distributors, whilst when conditions improved in India, they should be justified in extending their activities there. In South America they proposed to make a start, and co-operative propaganda was one direction, at least, along which those of them who saw a future in that difficult market might pull together. On the Continent, Holland, Sweden and Norway would appear fruitful countries for mutual action, while Japan might also constitute a territory with considerable potentialities.

The success of the Motor Industry at home depended more than any other on an increased spending power of the population. They could not, as a young industry, afford to leave semi-political developments to take their own course.

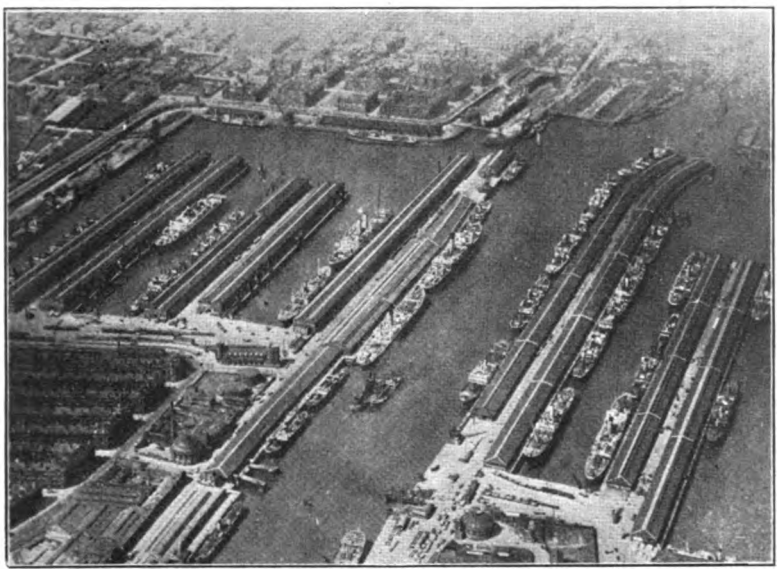
The Port of Glasgow.

The Gateway to Scotland and the North.

By Harold M. Ford.
Commercial Manager, Clyde Navigation.

THE interests of Ports and Transport of every conceivable description are indissolubly allied for the simple reason that one cannot thrive without the other. No matter how well equipped a port may be, without its shipping services linking it with all parts of the world, and its inland rail, road and canal connections, for the expeditious collection and distribution of the commodities it handles, no port undertaking can prosper; whilst, on the other hand, transport systems, whether steamship, rail or road, find in the ports mediums through which directly, and indirectly, they obtain a large bulk of trade.



AERIAL VIEW SHOWING PRINCES DOCK, A PORTION OF THE RIVER BERTHAGE, WITH GRAVING DOCKS IN THE BACKGROUND, AND A PORTION OF QUEEN'S DOCK.

Much of the value attached to a port may be attributed to its geographical position, and among the ports of Britain none are better placed in this respect for the economic serving of their respective populations than the Port of Glasgow. Within its economic area, comprising the whole of Scotland, the North of Ireland, and the North of England as far south as Newcastle, it has a population of some six millions of people, and what is equally important, a vast industrial area engaged in the production and manufacture of all kinds of engineering, shipbuilding, iron and steel manufactures, textiles, rubber goods, chemicals, and a hundred and one other interests, allied with the heavy industries of Scotland, all of which have grown as the River Clyde has developed, the whole going forward together, the progress and development of each being built up on the other.

Much has been written of Glasgow's past history, and the romantic story of its development and growth since 1707; the difficulties of deepening and straightening the water course, filling up channels, and the removal of small islands. In those days the Clyde was a shallow, tortuous stream, capable of floating only the smallest of craft, drawing 2/3 feet of water.

It is a far cry back to 1740, when the first attempts were made towards deepening the river, or even back to the days of 1812 when the pioneer of steam navigation—Henry Bell's "Comet"—was built at Port Glasgow and went aground at Renfrew, five miles from Glasgow, drawing only 4 feet of water.

Could Henry Bell revisit the scenes of his early triumphs, what a comparison there would be to offer! In place of his little "Comet," only 43 feet in length, of 30 tons burden, and 3 h.p., he would see ocean-going leviathans passing up and down what has now become a world renowned waterway, carrying produce and merchandise to and from all parts of the world. Within less than a mile of where the "Comet" grounded, he would view the river, where, in 1913, the "Aquitania," over 900 feet in length, with a gross registered tonnage of 45,647, and propelling machinery of 60,000 h.p., was launched; where also, from the same shipyard, the largest warship in the world—"The Hood"—was launched in 1918; and where, in the near future, will be launched the giant Cunarder, the contract for which has been placed with Messrs. John Brown & Co., which vessel, it is confidently hoped, will regain for Britain the blue riband of the Atlantic, at present held by Germany.

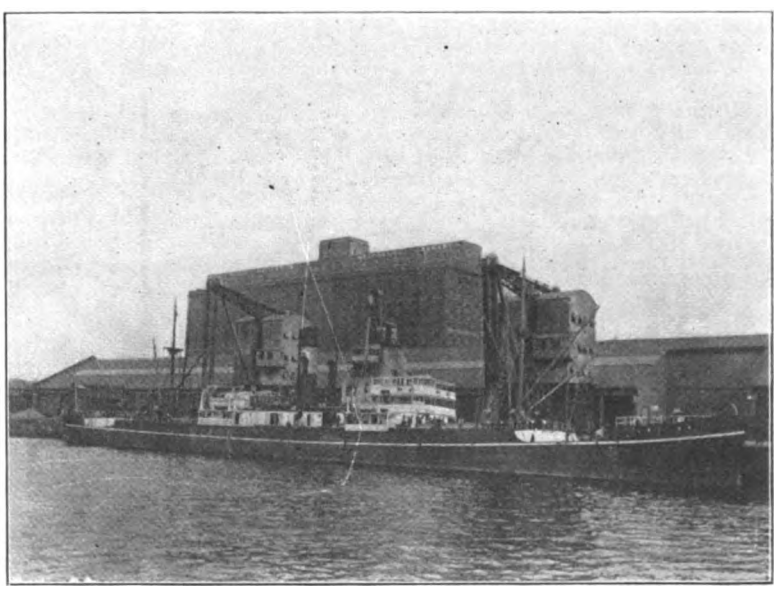
History recalls that the Clyde Trustees granted Henry Bell an annuity of £100 in 1812 to support and encourage him in his development of steam navigation, and in that they were almost alone.

Contrast this with the fact that in the last 3 years one steamship company alone, the Canadian Pacific, has had launched for them new tonnage totalling 216,515 of magnificent liners, ranging from 2,000 to 42,000 tons each, representing with the money expended on repair work of other vessels since the War, a total expenditure on the Clyde of some 20 millions of money.

One can only imagine what the feelings of Henry Bell would be to see to-day the wonderful transformation and progress which has been made in converting a mere stream into a great navigable waterway linking up Glasgow with every quarter of the globe.

All this has been made possible by the dredger. Something like £2,000,000 has been expended by the Trustees of the Port in dredging the River Clyde, and the average annual maintenance dredging to-day totals approximately £58,000.

With the making of this great waterway, bringing trade and commerce some twenty miles inland into the heart of a great industrial population, there has also grown up with it a system of docks and river berthage, equipped with transit sheds, cranes, hoists, tramways, and every form of equipment to meet modern requirements for the rapid handling both in loading and the discharge and despatch of goods. Approximately 14 miles of quayage has been constructed, and over 7 miles of single and double storage transit sheds.



THE GRANARY AT MEADOWSIDE, WITH ITS TWELVE STORIES AND SILOS.

Digitized by Google

For a considerable time quays along the river front proved ample for all requirements, but with the growth of shipping and trade all available frontage gradually became utilised, and tidal docks were found necessary, with the result that in due course Kingston, Queen's, Prince's, and Rothesay Docks were constructed, the latter being purely a coal and mineral dock, the quays and docks being equipped with 110 public cranes and hoists, whilst many shipping firms have installed additional cranage facilities at their respective berths.

No dock gates are necessary to maintain the water at a constant level, as the tide ebbs and flows freely out of and into the docks, with the advantage that vessels up to 23 feet draught are able to navigate the river, and enter or leave the docks at any state of the tide. The river is navigable also at one tide by vessels drawing fully 30 feet.

For the shipment of heavy machinery, cranes, with a lifting capacity of 130 tons, have been installed, and a new electrical cantilever crane, with lifting capacity of 175 tons, is now in course of erection.

Among its many important facilities special mention might be made of Meadowside Granary, which is one of the best equipped, and, for rapidity of working and general administration, one of the most efficient of its kind in the country. It has a storage capacity of 31,000 tons, the building being divided into floors on one side, and silos on the other, discharge being effected by two electrically operated pneumatic elevators, and one travelling bucket elevator, and thence by conveyor belt to the granary.

Up-to-date railway facilities have been provided both alongside and through the centre of the building, delivery being effected in bags, or in bulk, to rail wagons at both sides, and also from silos in the centre of the building, whilst despatch can further be taking place to road vehicles and small vessels or lighters.

Glasgow is an important grain centre, and in 1917 its imports in grain totalled close on 800,000 tons, and a considerably large trade is still being carried on.

To cope with the cattle trade, the most up-to-date lairage has been provided at Merklands Wharf, where as many as nearly a quarter of a million head of cattle have been landed in a year. The trade in Canadian cattle having fallen off, its operations have been restricted largely to the Irish trade, and there was some prospect of the lairage being closed down; the Glasgow Corporation, who own the lairages, deciding to cease their operations in this direction. The Trustees of the Port have, however, made arrangements to take them over, and so preserve to those interested in the cattle trade this most up-to-date and important facility, which will be available in the event of the Canadian trade again being resumed, which, in some quarters, is deemed to be likely in the future.

Visualising the possibility of considerable extensions to the docks being necessary, due to the ever increasing size of ships, the Trustees many years ago purchased some 700 acres of land between Shieldhall and Renfrew, with a continuous river frontage of approximately two miles.

The first dock of a proposed series is now rapidly approaching completion, and will add over a mile of quayage and shipping accommodation to the port. Here vessels of the largest class will be accommodated, and this dock, when completed, will undoubtedly rank as one of the most up-to-date docks of the kingdom.

AN INTERIOR VIEW OF ONE OF THE TRANSIT SHEDS, SHOWING A CARGO OF APPLES.

It is the intention of the Trustees to proceed with the construction of further docks, both wet and dry, when the trade of the Port merits further extensions.

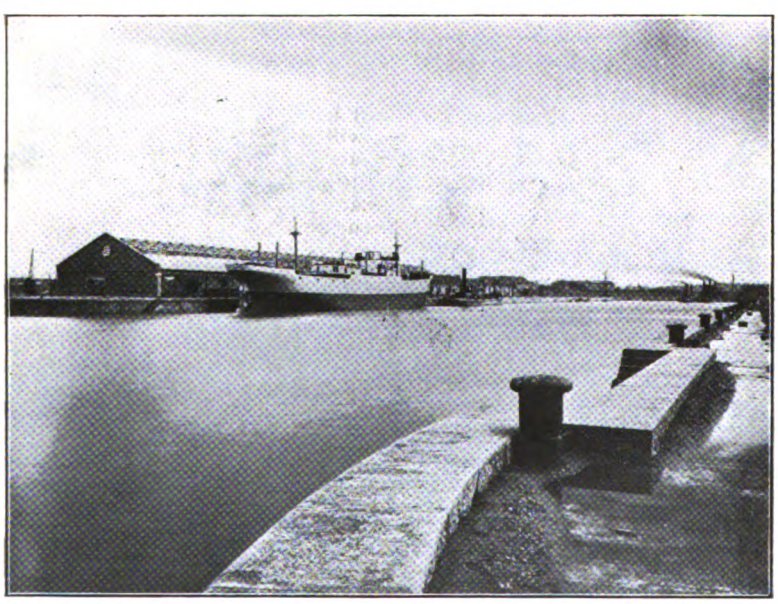
Apart from the construction of new docks, the Trustees are from time to time making continuous improvements, both in regard to the widening and deepening of the navigable channel, and the modernising of sheds, construction of quay walls, and the introduction of more up-to-date equipment, and, at the moment, are about to embark upon expenditure in these connections running into nearly £320,000.

The above constitutes but a brief outline of some of the more outstanding features of the Port's development and equipment.

From a transport point of view it is ideally situated for the import and distribution over a wide area, and many of the docks have direct rail access to all inland rail destinations over the two great railway systems of the London, Midland & Scottish and the London & North Eastern Railways.

Its shipping services extend to every country round the globe, among the lines trading in and out of the Port being:—

Messrs. Anchor Line (Henderson Bros.), Ltd., America, India. Messrs. Anchor Donaldson, Ltd. (J. Black & Co., Ltd), Canada, South America. Messrs. Anchor Donaldson, Ltd. (Brocklebank & Co.), India. Messrs. Canadian Pacific Steamships, Ltd., Canada. Messrs. Clan Line Steamers, Ltd., India, Africa. Messrs. Cayzer, Irvine & Co., Ltd., India, Africa. Messrs. City Line, Ltd. (G. Smith & Sons), India, Red Sea, etc. Messrs. Furness With & Co., Ltd., West Coast of America, North Pacific. Messrs. Blue Funnel Line (A. Holt & Co.), China, Australia, etc. Messrs. Aitken Lilburn & Co. (Blue Funnel Line), China, Australia. Messrs. Roxburgh, Colin Scott & Co., Ltd. (Blue Funnel Line), China. Messrs. P. Henderson & Co., Rangoon, South America, Australia, New Zealand.



VIEW OF THE NEW SHIELDHALL DOCK, SHOWING THE SHEDS ON THE WEST SIDE UNDER CONSTRUCTION.

Digitized by Google

Messrs Lamport & Holt, Rangoon, South America, Australia, New Zealand. Messrs. T. Law & Co., Rangoon, South America, Australia, New Zealand. Messrs. Prentice, Service & Henderson (Harrison Line), West Indies, South Africa. Messrs. Gulf Line (McDougall & Co.), West Coast of South America. Messrs. T. Law & Co., New Zealand, Australia. Messrs. Pacific Line (J. Dunn & Son), West Coast of South America. Messrs. J. Currie & Co., Germany. Messrs. Clyde Shipping Co., Ltd. (British and Continental Shipping), Belgium. Messrs. Glen & Co., Sweden. Messrs. J. & P. Hutchison, Ltd., France, Portugal, Spain. Messrs. D. Alexander & Sons (Spanish Line), Spain. Messrs. H. Hogarth & Sons, Spain, Portugal. Messrs. J. Bruce & Co., Mediterranean. Messrs. Whimster & Co., Mediterranean. Messrs. Maclay & McIntyre, Ltd., New Orleans. Messrs. Crawford Duff & Co. (Moss Line), Mediterranean. Messrs. T. L. Duff & Co. (Cunard's Mediterranean Service). Messrs. J. & J. Denholm, Ltd., West Indies, etc. Messrs. Clyde Commercial Steamships, Ltd., Mediterranean. Messrs G. Nisbet & Co., America, Mediterranean, etc.

Coastal requirements are well catered for by the Clyde Shipping Co., Ltd., with fast and regular services to the Irish Free State, the South Coast, and London, whilst a valuable and efficient link is maintained between Scotland and Ireland through the services rendered by the Burns & Laird Lines, Ltd.

The following constitute the principal Coastal Services operating from Glasgow:—

Messrs. Burns & Laird Lines, Ltd. Messrs. Clyde Shipping Co., Ltd. Messrs. Wm. Sloan & Co. Messrs. R. Gilchrist & Co. Messrs. D. MacBrayne (1928), Ltd. Messrs. McCallum, Orme & Co., Ltd. Messrs. J. Gardiner & Co. Messrs. Campbeltown & Glasgow Steam Packet Co., Ltd. Messrs. Clyde Cargo Steamers, Ltd. Messrs. Rennie & Watson. Messrs. J. Hay & Sons, Ltd. Messrs. Stewart & Landsborough. Messrs. Williamson-Buchanan Steamers, Ltd. Messrs. Jack Bros. Messrs. Wm. Robertson.

The total tonnage of shipping in and out of the Port last year aggregated to close on 14,000,000 tons.

It is the Port's ambition that it should take its rightful place as the entrepot for the North for imports from overseas, particularly from within the Empire, as also it has become the great exporting centre for the bulk of Scottish industries. With this end in view, a trade mission was arranged to New Zealand and Australia in 1928-1929, which has already shown considerable results, and, as a result, the Trustees have now established a Commercial Department, charged with the promotion and development of trade, both import and export, between Scotland and countries overseas, notably our Dominions.

In these days when there is a tendency to centralise trade upon London in the South, especially in connection with the trade of certain of our Dominions, the existence of markets, and the port and transport facilities offered by Glasgow, have often been forgotten, or ignored. With the intensive competition to-day in the marketing of food and other supplies, the question as to the most economic means of supplying by the most direct methods the populations of the various big ports has not received that attention which it merits, with the result that the markets of Scotland, and those of Liverpool and Manchester, supplied by their respective ports, have, in many instances, not been developed with the success they might be.

It is largely towards the development of Empire trade in Scotland that this new Department will turn its attention, and there are already signs that the advantages which Glasgow offer to our Dominions will, before many years elapse, be taken greater advantage of.

Another question which vitally affects the future prosperity, not only of the port, its markets, and the various forms of transport, but also the welfare of the community, is the attraction of new industries to its area. Here again, since the War, there has been an enormous increase in the number of works and factories established round the London area.

With the advantages which are to be found in the Clyde area, there is surely a future awaiting development in the building up of Glasgow as a still greater industrial centre, the fulfilment of which would undoubtedly be to the general prosperity of Scotland.

Glasgow has built up a great tradition, but a great city and port cannot continue to thrive on tradition alone. It is not intended that the efforts made in the past shall be allowed to suffice, or that the changed conditions ruling to-day shall not be met by the energetic action which they demand. The next ten years will undoubtedly see a great progressive change in the fortunes of Clydeside, particularly if those engaged in its development, and all associated with that development, carry out a progressive policy, and introduce that vision which is so necessary in these days of rapid advancement in formulating their future policy. It is the future to which Glasgow and Scotland have to look, and not the achievements of the past. If this is borne continuously in mind, Glasgow and the Clyde will justly lay claim to its boast of "looking ahead."

America's Bid for Atlantic Traffic.

Two New Liners for the United States Lines.

DETAILS of the first two liners of the United States Lines construction programme have reached London. The contract has been awarded to the New York Shipbuilding Company, and it is stated that these two 30,000 ton liners will be the largest and finest vessels ever built in America. Their total cost will run into over £4,200,000 and the contract calls for the completion of the first of them within 26 months, or July, 1932, and the second within 30 months, or November, 1932. It is planned to operate these ships with the "Leviathan" between New York, Cherbourg and Southampton, until such time as the two monster ships which the United States Lines proposes to construct will be ready for service. Subsequently they will be operated between New York and Hamburg. It will be recalled that the United States Postmaster-General recently awarded the United States Lines mail contract for both the New York—Hamburg and New York—Cherbourg—Southampton routes. They will be similar in exterior design to the "Leviathan," except that they will have two funnels, while the "Leviathan" has three. The interior of the new ships will be even more luxurious than the present flagship of the American Merchant Marine. They will have a length of 705 feet, and a beam of 86 feet, and will carry first, tourist and third class passengers, to a capacity of about 1,300. The United States Lines do not plan to carry second class passengers, and it will be recalled that the "Leviathan" was the first monster ship to discontinue accommodations for this class. First consideration in the planning of these new ships has been given to the comfort and safety of the passengers. The regulations adopted at the International Safety at Sea Conference, held in London last year, will be fully complied with. In addition, every possible luxury will be provided. The signing of this contract by Mr. P. W. Chapman constitutes the first tangible step in the inauguration of the United States Lines construction programme, which will involve approximaely £18,000,000.

Liverpool Shipping and Forwarding Agents' Association.

LIVERPOOL Shipping and Forwarding Agents' Association has called the attention of the General Trade Committee of the Liverpool Chamber of Commerce, to the method adopted by members of the North Atlantic Westbound Freight Conference in assessing freight charges on small shipments to U.S.A. as compared with the method adopted by the same steamers when carrying small shipments from the U.S.A. to the United Kingdom, the latter shipments receiving more favourable treatment. The association asked that the matter be taken up with the North Atlantic Westbound Freight Conference. The Committee decided to communicate with the North Atlantic Wetbound Freight Conference with a view to securing more equitable treatment. This decision now awaits the ratification of the Council. Mr. F. Brocklehurst, at the meeting of the Chamber, held at Liverpool on 27th May, said the Liverpool Shipping and Forwarding Agents' Association pointed out that whereas ships belonging to British companies were prepared to carry from North America to United Kingdom ports, any number of small consignments grouped on pro rata freight rates, without any particular assessment of separate minimum charges, the more intricate method of assessing freight charges adopted by the North Atlantic Westbound Freight Conference created a distinct handicap on small shipments, and thereby involved a discrimination against exports from this country to North America in favour of American exporters to this country.

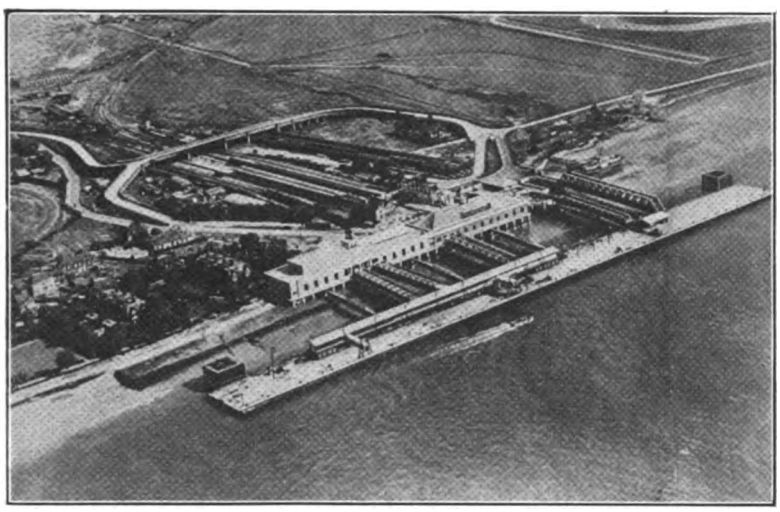
Tilbury Passenger Landing Stage.

Official Opening.

THE new landing stage at Tilbury, constructed by the Port of London Authority in co-operation with the London, Midland and Scottish Railway, was opened on May 16th last by the Prime Minister, Mr. Ramsay Macdonald.

Mr. Macdonald, who was accompanied by Lord Ritchie of Dundee, Chairman of the Port of London Authority,



Photo] [Sport and General.

AERIAL VIEW OF NEW TILBURY PASSENGER LANDING STAGE, SHOWING CIRCULAR ROAD AND RAILWAY TRACK.

Sir Josiah Stamp, President of the London, Midland and Scottish Railway, and a large number of guests, made the journey to Tilbury by river.

Upon arriving at the Landing Stage, Lord Ritchie called upon Mr. Macdonald to declare it open. This Mr. Macdonald did with a few well chosen words, and immediately afterwards completed the ceremony by mooring the P. & O. liner "Mongolia" by attaching a hawser to a bollard. The "Mongolia" was the first ship to be berthed there.

After the opening ceremony a luncheon was held in the large Customs Examination Hall, where Mr. Macdonald was presented with a replica of an inkstand at the Treasury. Sir Josiah Stamp proposed the health of the Prime Minister and said that it was seven years since the L.M.S. and the P.L.A. had agreed to co-operate in the scheme. The scheme would go a long way towards putting London in its proper position as a first class passenger port.

Mr. Macdonald, who was loudly cheered on rising, first thanked Lord Ritchie for the memento which had so kindly been presented to him. Time and again he had admired the original at the Treasury and had wondered whether out of the sumptuous salary of his office he might be able to present himself with something of the kind as a memento of a hard life.

In the course of his remarks, Mr. Macdonald confessed that to him the Custom's House Examination Hall had a most forbidding aspect, where officials in uniform demanded "Have you anything to declare?" He said that this was a particularly trying experience when you had a couple of hundred cigars or something of the kind tucked away in a corner of one of your cases, and wondered with fear and trembling whether the eagle eye of the official would pick out the right case.

In concluding, Mr. Macdonald congratulated the Architect, Sir Edwin Cooper, upon the new landing stage and also the engineer, Mr. Frederick Palmer, who had been in charge of this new development of the P.L.A.

Lord Ritchie returned thanks and said that the credit for whatever the Authority had achieved was due in a large measure to the fact that they had in Mr. Owen a most able General Manager with a genius for organisation

Referring to the Port, he said it was refreshing in times of depression that there had been a gradual increase in imports handled by the Authority during the year ended 31st March and a small increase in exports. The shipping figures for the same year were a record, amounting to 57½ million tons, against 38 million tons when the Authority came into existence 21 years ago.

The Port of London Act placed the Authority in a position to raise the necessary funds, and in the course of 21 years the Authority had spent nearly 20 million pounds in carrying out improvements. Of these 20 millions, 16 had been spent on major capital works on which the Authority received financial assistance from the Government on 5 millions in the shape of one half interest on that sum for a period of 15 years. Four millions had been spent on re-equipment and works of improvement of a minor character. They claimed that the Port was now in a position of high efficiency and would bear most favourable comparison with the other ports of the world.

Concluding, Lord Ritchie said he thought it was Lord Devonport who originated the proposal soon after the Authority came into existence. There were delays, including, of course, the war, before it could be undertaken, and it was only possible to commence the work about three years ago. They had been associated all through the work with the L.M.S. and their predecessors, the Midland Railway, without whose valuable co-operation the construction of the landing stage would not have been possible. The L.M.S. had spent a large sum on providing a new and imposing station and in providing equally good facilities.

DETAILS OF THE IMPROVEMENT.

The provision of the Tilbury Passenger Landing Stage now rendered it possible to discontinue the practice of conveying passengers by tender between the shore and vessels lying in the River and of embarking or disembarking passengers in dock, the depth of water being sufficient to enable any vessel using the Port to lie alongside the Stage at any state of the tide. The length of the platform alongside which the liners will be berthed is 1,142 feet and 80 feet wide.

Photo] [World's Carriers.

MR. RAMSAY MACDONALD DECLARING THE NEW LANDING STAGE OPEN. ON THE RIGHT ARE LORD RITCHIE OF DUNDEE AND SIR JOSIAH STAMP.

Digitized by Google

The Stage carries a two storey building 500 feet long in which are provided waiting rooms, shelters and other accommodation, while on the upper floor is a covered gangway affording direct access to the vessel by elevated travelling gantries.

The erection of the Baggage Hall and the new Railway Station involved the construction of a reinforced concrete platform 600 feet long over the foreshore of the river. The internal dimensions of the hall are 295 feet long, 72 feet wide and 38 feet high. The hall has been designed to give the maximum amount of light and ample space for the sorting of passengers' luggage, benches being arranged down the centre to meet the requirements of the Customs' Officers. Direct communication is afforded between the Baggage Hall and the new station of the L.M.S.

The Railway Station adjacent to the Baggage Hall, together with its approaches, has been completely remodelled by the London, Midland and Scottish Railway Company. A new and spacious circulating area has been constructed, as well as new booking offices, refreshment rooms and usual offices. Additional lines have also been provided and the existing platforms have been extended to accommodate main line trains.

News from the Ports.

Now a J.P.—Mr. A. A. Ashton, J.P., whose name has been added to the Commission of Peace for Southport, commenced his shipping career with Messrs. D. and C. Macines, of Manchester, in the Bombay, Karachi and Persian Gulf trades, and afterwards served with the same Company in the Australian and Canadian trades. He was subsequently transferred to the coasting business of Messrs. F. and H. Powell, and the British and Irish Steamship Company, the Belfast Steamship and other coasting companies operating from Liverpool, London and the East Coast ports. For 18 years Mr. Ashton was hon. secretary of the Manchester Steamship Owners' Association.

THE FORD MOTOR CO.'S MOTOR BOAT "JOSEPHINE."

Travelling on the Thames.—Commuting on the Thames by motor boat is the newest form of travel launched by the Ford Motor Company, Ltd. The boat, the "Josephine," has been put into commission for the express purpose of carrying Ford officials to and from their London offices in Regent Street and the new works of the company, now in the course of construction at Dagenham, Essex. One hour is sufficient to make the trip to Dagenham, whereas by road, the same trip requires double that time. The "Josephine," which was constructed by Mr. William Osborne, of Littlehampton, is 36 ft. 6 in. overall, is fitted with a 200 h.p. Scripps marine engine, and is capable of a speed of 24 m.p.h. The boat will accommodate 12 passengers in comfort. Mahogany and English oak have been employed in the hull. The after part of the boat is given up to a small cock-pit and a roomy cabin, while the control cock-pit and machinery are forward and entirely separated from the after part of the boat.

The Dublin—Liverpool Service.—The British and Irish Steam Packet Co. has improved and accelerated the Liverpool—Dublin service, on which route, since June 2nd, three larger and faster steamers have been placed—an innovation that is calculated to benefit both the port of Dublin and the Company in future. So as to mark, in advance, the inauguration of this enterprise in transport between Dublin and Liverpool, the B. & I. Co., on May 18th, entertained a large and distinguished party of guests to a cruise in Dublin Bay on board the "Lady Leinster," one of the fine and powerful steamers—all of 2,267 tons, with a speed of 18 knots—placed on the service. Sir Alfred Read, the Chairman of the B. & I. Co., in the course of an address said that the Irish Free State was making steady progress year by year, and in his opinion would continue to do so, and would come out of her recent difficulties with flying colours in the end. Those in authority were working—irrespective of everything else—for the success of the country. They in the Irish Free State intended to produce the best in the world, but producing, they must likewise market their supplies under the best possible conditions. They had the prosperity, the financial success, and the increasing transport of the Irish Free State at heart.

Deep Water Quay on the Wear. — Sunderland Town Council, at a special meeting on May 28th, approved the scheme for the construction of a deep water quay at an estimated cost of £310,000. It had previously been passed by the River Wear Commissioners, and will now be submitted to the Government with a request for a satisfactory employment grant. It is understood that the Government have conditionally promised the whole of the interest on the undertaking during the period of its construction. This represents £15,500, and for the next 13 years Government is also to meet 50 per cent. of the loan charges, or about £7,500. Originally mooted 28 years ago, the building of the quay will occupy two years, between 200 and 250 men being regularly employed during that time.

Newcastle's Guests.—Members of the "Association des Grands Ports Français"—consisting of prominent members of the French Parliament, presidents of French Chambers of Commerce, etc.—have been visiting Newcastle and were the guests of the Tyne Improvement Commission when they had a river trip on the Tyne. For the Association's English visit the ports of London and Liverpool were also visited.

Honour for Major Eckes. — Major J. A. Eckes, of Messrs. Langstaff, Erembert and Co., shipping and forwarding agents, of Royal Liver Buildings, Liverpool, whose portrait appeared in our last issue, on 27th May, was elected Chairman of the Liverpool Chamber of Commerce in succession to Col. A. Buckley who has retired owing to pressure of work. At the Eighteenth Annual Meeting of the Liverpool Chamber of Commerce, Lieut.-Col. A. Buckley paid a warm tribute to Major Eckes. As a partner in an old-established shipping firm with wide experience as a forwarding agent, Major Eckes, he said, had been brought into contact with all kinds of trades. He spoke several languages and knew conditions on the Continent and in countries abroad such as South America, intimately, and he would fill the Chair with credit to himself and the Chamber.

Big Order for Clyde.—John Brown & Co., Ltd., Clydebank, are to build the new giant liner for the Cunard Line. Work will commence almost immediately and part of the river will require to be dredged before the steamer is launched. Several thousand men will be engaged in the work of building, and the placing of the order has given great satisfaction to many trades which depend upon the shipbuilding yards.

Digitized by Google

Manchester Ship Canal Receipts Down. — In their monthly "approximate traffic return" the Manchester Ship Canal Co. report that receipts in the month of April were £96,773, or £21,641 less than in the corresponding month of 1929. The receipts for the first four months of this year were £34,264 less than last year. Revenue was adversely affected by the strike of Manchester dock labourers who were absent from duty for eight days. It appears to be quite possible that the loss of receipts from this cause was something between £10,000 and £15,000, if not more.

Manchester's Big Imports.—A feature of recent imports at Manchester is the unusually large cargoes of Indian cotton entering the port. The steamer, "City of Birmingham," created a new record with nearly 20,000 bales. The imports of East Indian cotton for the current season were over 76,000 bales compared with over 34,000 for the corresponding period of the preceding season. Inward fruit cargoes are above the average, and iron ore and timber imports have also improved.

Salving a Wreck and Refitting.—The steel built auxiliary motor vessel, "Oranje," which was swamped in a gale and sunk in the Estuary of the Thames at the end of December last year with the loss of the Captain and his Mate, was purchased by G. J. Palmer & Sons, of 1 Fenchurch Street, London, E.C.3, and has been floated by them and brought up to Millwall for refitting to be used in their trade between the Continent and their wharf at Kingston-on-Thames.

Southampton Docks.—Work on the big dock extension scheme at Southampton is progressing very satisfactorily, and there is every indication that at least 1,000 feet of the new quays will be available for shipping next year. Already fifteen of the giant 7,000 ton monoliths forming the deep water quay wall have been sunk to the required depth thus representing 750 feet of the wall. In addition, approximately 8,000,000 tons of spoil have been dredged from the River Test and part of this is being used in the reclamation work now proceeding in connection with the scheme. Comment has been made previously in these notes of the increasing trade with New Zealand and Australia, and this year more shipments have been dealt with than in the corresponding period of any recent season. The vessels of the New Zealand Shipping Company have made a notable contribution to the new traffic, and five recent freights each included more than 10,000 carcases of meat besides big quantities of fruit and general cargo. Advantage has been taken of the cold storage accommodation at the docks for the reception of big consignments of mutton and lamb. Another prominent traffic that is also dealt with at the cold store ex these ships is fruit, the facilities at the port for handling, storage, etc., being much in favour with New Zealand growers and shippers. The annual new potato season is now being experienced and from the latter part of May until the end of July many thousands of tons of this vegetable will pass through the docks from the Channel Isles and French ports. This season the first shipment was received from Jersey in the middle of May, the earliest French consignments following about a fortnight later. The great bulk of this traffic is handled in June and at this period the Southern Railway Company's cargo fleet is augmented by the charter of several other vessels, the additional tonnage being necessary to deal adequately with the immense proportions of this important perishable traffic.

Spanning the Tyne.—Conferences have been held between officials of the South Shields and Tynemouth (North Shields) Corporations and Mr. D. Anderson, an expert engineer from the firm appointed by the Ministry of Transport (Messrs. Mott, Hay, & Anderson), with a view to linking up those two towns by a crossing over or under the Tyne. The problem has been much debated for years. Mr. E. W. Chalmers Kearney has a scheme for connecting these harbour boroughs by means of a tube at an approximate cost of £400,000.

Why Liverpool Has Lost Traffic.—"Some trades complain, not without reason, of the loss of geographical advantage at one time enjoyed by the port" states the annual report of the Liverpool Chamber of Commerce, "this natural advantage being depreciated by freight rate adjustments to continental and other ports. The demands on Liverpool as an import and marketing centre in relation to the import trade of the United Kingdom, in the severe redistribution of trade which is taking place nationally, are undergoing a considerable change. Liverpool is losing touch with several commodities, the import of which over a long period were of outstanding importance to the trade. Other points of ingress are being used and giving rise to marketing organisation of a competitive kind."

Establishment of Shipping Bureaux in China.—In connection with the establishment of Shipping Bureaux by the Ministry of Communications to promote maritime development, it is learned that five main Bureaux will be opened for the more important ports in the country, with a number of branches attached to each Bureau. The five Bureaux are:—1. Shanghai Shipping Bureau, with branches at Nanking, Chinkiang, Soochow, Haichow, Hangchow, Ningpo and Wenchow. 2. Tientsin Shipping Bureau, with branches in Tsingtao, Chefoo, Chinwangtao, Yingkow and Antung. 3. Canton Shipping Bureau, with branches in Foochow, Amoy, Swatow, Hainan and Wuchow. 4. Hankow Shipping Bureau, with branches at Wuhu, Kiukiang, Changsha, Ichang, and Chungking. 5. Harbin Shipping Bureau, with jurisdiction over the areas served by the Sungari, Amur and Ussuri Rivers.

Improvements at Hull.—The London and North Eastern Railway Company are proceeding with the reconstruction of the buildings on No. 2 Fish Quay at the St. Andrew's Dock Extension, Hull, and are in negotiation with the fish trade regarding the extent of this office accommodation for the fish merchants which is to be replaced on a separate site. As soon as the work on No. 2 Quay is sufficiently advanced to permit of the quay being fully used it is understood that the Company intend to widen No. 1 Quay at the St. Andrew's Dock from 60 ft. to 90 ft. This will involve the removal and replacement on another site of several buildings including the Fish Merchant's Club and the Company's Fish Dock Agent's Offices.

Merklands Wharf.—The Clyde Trust have taken over from the Glasgow Corporation the Merklands Wharf which is used for a livestock landing place for Irish cattle. The Trust will develop their latest acquisition and use it for the purpose of attracting trade to the Clyde.

Imperial Dock, Leith.—A start has been made at the Imperial Dock, Leith, with the foundation work of the new power station which is part of the scheme for supplying hydraulic power for the two new movable railway hoists. The Leith Commission have now five dock improvement schemes in hand.

Centenary of the Liverpool and Manchester Railway.

Liverpool Pageant—September 13th—20th, 1930.

THE Liverpool pageant, to be held in Wavertree Playground, Liverpool, for a week commencing September 13th, in celebration of the centenary of the Liverpool and Manchester Railway, will be the largest of its kind ever produced. More than 5,000 people will take part, including a corps de ballet of 200 members, a children's choir of 1,500, an operatic chorus of 250, and three bands. A huge stage with a proscenium opening 100 yards wide, will be erected on the pageant ground, and the huge curtain fronting the stage will be painted with designs symbolical of the progress of transport from the cave age onwards.

THE EVOLUTION OF TRANSPORT.

The pageant, which has been written by Mr. Matthew Anderson, Secretary of the Liverpool Organization, is in two parts The first part depicts the changes wrought on civilisation by the progress of transport from the days when the cave man dragged his bride to his rockside dwelling to the modern age of whirlwind mechanism.

Ancient and modern methods of transport chosen from every corner of the world will be reproduced in the procession in all their picturesqueness and variety.

Typical incidents and conveyances from every part of the world and every period of human history figure in the first processional part of this stupendous pageant. A Narrator will describe each incident and link up the various scenes. Appropriate musical selections and songs will illustrate the successive items, while ballet work will be one of the outstanding features of the incidental episodes which knit the pageant together in narrative form.

The second part of the pageant will be a series of scenes depicting a century of Lancashire life.

The pageant concludes with a magnificent reconstruction of the scenes at the opening of the railway.

Aeroplanes flying overhead in the afternoon will link up the pageant with the latest stage in human locomotion.

Another splendid feature of the celebrations will be a great exhibition of railway models which will be open daily in St. George's Hall, and which represents the finest and most comprehensive aggregation of models of railways and railway stock ever brought together.

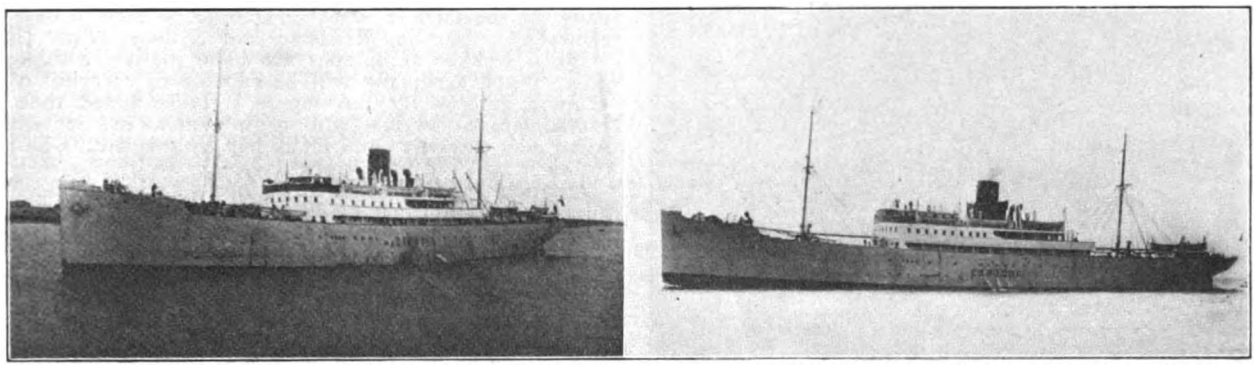
Railway Notes and News.

Station to Close.—The L.N.E.R. announce that Akeman Street Station between Wotton and Calvert will be closed for passenger traffic on and from July 7th.

Railway Engines Required in Egypt.—A Cairo message states that the Egyptian State Railways invite tenders, closing on August 2nd, for the supply of fifteen or twenty engines with tenders for mixed traffic.

New Nightly Service to the Continent.—The L.N.E.R. announce that a new nightly steamship service (Sundays included) is now operating in each direction between Harwich (Parkeston Quay) and Zeebrugge. The new route provides a direct service to the Belgian Coast with electric tram connections to Ostend, Blankenberghe, Knocke, Heyst, etc. At Zeebrugge Quay a special express train awaits the arrival of the steamships and runs direct to Bruges, Ghent and Brussels in connection with trans-Continental expresses for all parts of Europe.

Scandinavia via Harwich-Esbjerg by "The Scandinavian."—The London and North Eastern Railway's contribution to the much improved through service between London and Scandinavia via Harwich-Esbjerg takes the form of an accelerated running (non-stop) of the Boat Train Express—the journey from Liverpool Street to Parkeston Quay taking only 1 hour 36 minutes, and the provision of a beautiful new train which bears the name "The Scandinavian." The train is composed of 9 up-to-date coaches and restaurant cars giving the utmost comfort to both 1st and 3rd class passengers. The joint service of the London and North Eastern Railway's "The Scandinavian," Det Forenede Dampskibs Selskab's excellent vessels, including the three new motor ships between Harwich (Parkeston Quay) and Esbjerg, and The Danish State Railway's accelerated running of the boat train in Denmark, together with the facilities of The International Sleeping Car Co.'s sleeping cars, 1st, 2nd and 3rd class to Copenhagen and 1st and 2nd class through to Helsingborg, makes it possible to connect there with the day express from Copenhagen via Helsingborg and Gothenburg to Oslo, Stockholm, and thence to Finland. Seats in the through cars to Oslo and Stockholm may be reserved in advance on this side. The new through service running every week day from London and Parkeston Quay affords the most direct and most comfortable means of reaching any destination in the Scandinavian countries. In the opposite direction equally excellent facilities are provided.



LEFT: M.S. "PARKESTON" AND RIGHT M.S. "ESBJERG" ON THE ROYAL DANISH MAIL ROUTE BETWEEN HARWICH-ESBJERG FOR DENMARK, NORWAY AND SWEDEN.

New Traffic Scheme on Irish Free State Railways to Operate from 1st July.—In Dail Eireann on 28th May an important announcement, with respect to the transport of goods on Irish Free State railways, was made by Mr. P. McGilligan, Minister for Industry and Commerce. In the course of his remarks he explained that the "Appointed Day," provided for by the Railway Act of 1924, had been fixed by the Railway Tribunal as the 1st July, 1930. On that day a new classification of merchandise would take effect, as would also certain new standard conditions of carriage and standard charges. The new classification of merchandise replaced a system which was an arrangement of goods according to their importance from the British industrial standpoint, which, of course, was quite unsuited to the conditions of the Free State. The new scheme put traffics in what was considered to be their proper position from the point of view of fostering and developing Irish trade. Standard charges were a necessary corollary to the standard revenue laid down by the 1924 Act. In the old unamalgamated railway routes in the Free State there were different rates operating; but the new charges would be applicable to all the sections of the Great Southern Railways Company's system. Exceptional rates would continue to a greater extent than his Department had fought for, owing to a decision of the Court against their contentions, but still they might not be as wide as they used to be. There were a certain number of other alterations in railway law of a minor nature which would also come into force on 1st July, and traders generally would be well advised to make themselves fully acquainted with those changes.

L.N.E.R. Magazine.—The June issue of the London and North Eastern Railway Magazine contains some very interesting articles. First place is given to a departmental article on "Agricultural Transport" with a striking full page illustration of "Stratford Market." Other special features are:—Full page picture of the "hush-hush" engine at Cambridge's Railway Exhibition. Passenger Notes—brief and to the point and dealing with a multitude of subjects ranging from "motor bus business" to "Pigeon Racing." Engineering Notes—short articles of bridge replacements on the G.E. Section and an account of a permanent way renewal with steel sleepers near Aberdeen.

The Railway Barometer.—The railway traffic receipts of the four group railway companies have now been published for the first 21 weeks of 1930 compared with the same period in 1929, and are as under:—

	1930	1929
	£	£
Passengers, parcels, etc. ...	26,265,000	27,337,000
Merchandise, etc.	26,069,000	26,618,000
Coal, coke, etc.	14,724,000	15,158,000
	67,058,000	69,113,000

The Whitsuntide traffic is included in the figures for 1929, whereas the holiday fell on a later date this year.

New Railway Garage for Parkeston Quay. — The L.N.E.R. are to construct a new open garage with lock-up accommodation for thirty cars in place of their existing garages which have proved extremely popular with motorists en route for the continent. The new garages will be attached to the Great Eastern Hotel at Parkeston which is situated on the quayside within a few seconds walk of the steamer gangways to the Hook, Antwerp, Zeebrugge, Flushing and Esbjerg.

Reviving Interest in Thames-side Resorts.—The efforts which are being made to revive the interest of Londoners in the Thames-side resorts are well supported by the Great Western Railway who have just issued a most attractive folder written by Mrs. R. H. Gretton, J.P., B.Litt., Oxon., and are widely circulating it to their station and office organisation in England, Scotland, Ireland and Wales and abroad. The folder contains an excellent map of the Thames Valley from London to Lechlade and is copiously illustrated with excellent photographic views of the chief places of interest along the river. Particulars are given in the folder of a number of most attractive combined rail and river steamer trips which can be made within the compass of a day's sight-seeing.

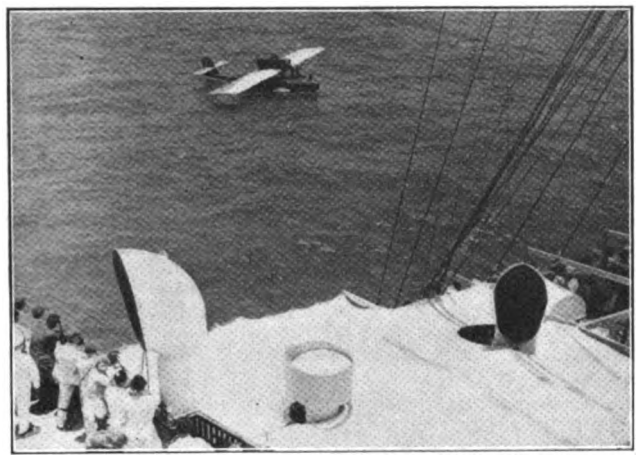
Air Transport Notes.

Putting Liverpool on Air Map.—Liverpool Corporation Finance Committee has provisionally sanctioned a scheme of Imperial Airways, Ltd., for a twice weekly service from Liverpool, Manchester and Birmingham to certain Continental centres during June, July and August to test the demand for quick transport to Holland, France, Germany, and Belgium. It is proposed to operate the service by Handley-Page-Rolls-Royce air liners from Liverpool to Croydon, calling at Manchester and Birmingham, and connecting at Croydon with services of triple-screw Armstrong-Siddeley air liners to all parts of the Continent.

New Ship-to-Shore Air Mail Service.—An arrangement has recently been concluded between the Condor Syndicate, the Deutsche Luft-Hansa and the Hamburg South American Line for the carriage of express mails by the two fastest steamers in the South Atlantic Service, the "Cap Arcona" and "Cap Polonio." The European mail is now being conveyed by air to the Canary Islands and picked up by these liners off Las Palmas on their outward journey. On their homeward journey similar arrangements will be made for picking up the airborne eastbound mail at Fernando Noronha, a little island near the Equator. It is estimated that this new arrangement will speed up the mail between European and Latin American countries by three days.



THE NEW SHIP-TO-SHORE AIR MAIL.

Hull's Air Pride.—Hull's position in regard to the air has been very much to the forefront. Miss Amy Johnson's historic solo flight to Australia has, of course, directed wide and very welcome attention to the city of her birth. For years past commercial and official people have been very busy endeavouring to put Hull "on the map," but nothing they ever dreamt of could have done it half so well as this daring adventure. The day Miss Amy Johnson visited Hull the Lord Mayor's Secretary, Mr. Wright, who also acts as Assistant Secretary to the Development Committee, unfolded to the present writer a scheme he had in mind for a great international air race, with Hull as its chief centre and finishing point. Many experts have pointed to Hull as the natural port for an air service between England and the northern European countries. Mr. Wright's idea was that such a race would demonstrate the truth of what the experts said. His plan was that the machines should start at Belfast, travel via Liverpool to Hull, and then cross the North Sea to Hamburg, afterwards going on to Denmark and Norway, finishing up with a flight back to Hull. Sir Sefton Brancker favoured the scheme, the Development Committee adopted it, and now negotiations are taking place with the leading aeronautical bodies in the country with the view to carrying it into effect next summer. Prizes amounting to £10,000 are spoken of.

"See the World from a Different Angle." Imperial Airways Services.—We have received the time-table of Imperial Airways summer services, European Division. Full details are given of the services between London and Paris, Basle, Zurich, Brussels, Cologne, Amsterdam, Hanover and Berlin, particulars of fares, etc. For England-Egypt-India services a separate time table is issued, and may be had on application to Imperial Airways, Airways House, Charles Street, S.W.1. The air liners used by Imperial Airways are entirely British and are regularly subjected to the tests imposed by the British Air Ministry, tests which set the highest standard of safety in the world. The pilots are picked men with extensive experience in the piloting of large passenger air liners and they too must pass frequent tests for fitness and capability. The "Silver Wing" de Luxe service will, this summer, be operated chiefly by aircraft of the famous "Argosy" class, built by Messrs. Armstrong-Whitworth, Ltd. Seating accommodation is provided for 19 passengers, in addition to a Steward and Buffet. Each of these aeroplanes is powered by three Jaguar motors, developing more than 1,200 total horse power. The England-India air mail and passenger service is now operating through central Europe and on an accelerated time-table. Political difficulties prohibited the continuance of the service via Italy. The new route is by way of Cologne, Nuremberg, Vienna, Budapest, Belgrade to Salonika, thence by flying boat to Athens, where it joins the original route to Alexandria, and continues by way of the Arabian Desert to Baghdad and Basra, and along the coast of Persia to Karachi and Delhi. Athens is now brought within 48 hours of London, Egypt within three days of London, Iraq is only four days distance, and India is reached in seven days.

Dutch East Indies Air Line. Australia Service to be Started.—A Sydney message says that a representative of the Dutch East Indies Air Line states that the Company has decided to start in October a service between Sourabaya, Darwin, Brisbane and Sydney. Two three-engined Fokker aeroplanes are being built for this purpose. Each aeroplane will be capable of carrying a ton of mail and twelve passengers. It is added that the Holland-Java service will begin again in September. Australian travellers and mails will by this means be able to reach Holland in thirteen days.

Aviation Developments in Canada.—Important developments in aviation in Canada are foreshadowed in the programmes of the Federal and Provincial Governments and private companies operating in the Dominion. The Dominion Government, says Reuters' Ottawa correspondent, has made an appropriation of 7,475,700 dollars (nearly £1,500,000) to be spent on improvements in existing airways and extensions in the air mail service. Aeroplanes now fly daily with mail from Halifax and St. John, on the Atlantic coast, to Montreal; from Montreal to Toronto; from Toronto to several cities in Western Ontario and Detroit, U.S.A. In Western Canada there is a daily service from Winnipeg to all the principal cities in the Prairie Provinces. A service will be established this year between Montreal and Winnipeg and between Toronto and Winnipeg. Mail is also carried by air to trading posts in the Far North. Surveys are now being made to establish the safest route for air mails across the Rocky Mountains, and the necessary beacons may be installed next year. On the Pacific Coast there is a daily air mail between Vancouver and Victoria and Seattle, U.S.A. Air mail connections with the United States are planned at several other vantage points along the 3,000-mile frontier. There is also a possibility that a private enterprise, financed by British and Canadian capital, will attempt to establish air communication with Western Canada from Great Britain, via the Faroe Islands, Iceland, Greenland and Baffin Land to Winnipeg.

Canada's Fine Air Port.— Canada will soon have in the Maritime Provinces one of the finest air ports on the American continent which eventually, in the opinion of aeronautical experts, will become the centre for a great volume of the overseas mails when the air mail routes across Canada are more firmly established and which may become a trans-Atlantic airport when overseas flying develops. A report to the Department of Commerce from the United States Consul at St. John, New Brunswick, said the airport at Millidgeville, St. John, is expected to be fully licensed as a result commercial airport within the near future. The airport covers 102 acres, with two completed runways 150 feet in width, one of which is 1,800 feet long, and the other 2,200 feet in length. At present the airport, while not completed, is in good shape for landing, and, the report states, having both seaplane and airplane accommodations, it is reputed that pilots who have used it consider it to be the best in Canada. The mileage from the St. John air port to important air port cities on the American continent is:—Toronto, 690 miles; Ottawa, 475; Montreal, 375; Quebec, 275; Fredericton, 50; Moncton, 85; Charlottetown, 160; Sydney, 290; Halifax, 125; Bermuda, 1,025; Boston, 325, and New York, 500.

REUTERS TRADE SERVICE.—By special arrangement with Reuters Trade Service we are publishing news items from all parts of the world dealing with transport matters.

"Safety First" Congress.

Precis of Points Affecting Vehicle Owners.

THE many sidedness of the "Safety First" movement was clearly shown at the National Safety Congress (of the National "Safety First" Association) held at Liverpool on 20th, 21st, and 22nd May last. The Conference, which was attended by nearly 300 representatives from all parts of the country, was opened by H.R.H. The Duke of York. Of particular interest was the Paper "The Development of Roads and Road Transport," which was read by **Sir Henry P. Maybury, G.B.E., K.C.M.G., C.B.** It gave rise to a discussion which had many points of value. Several delegates voiced the desire that there should be standardisation in the construction and erection of automatic traffic signals, but it was questioned by some authoritative speakers whether the time had yet arrived when the policy of standardisation should be embarked upon.

Mr. Robert Beveridge, of Edinburgh, in his Paper on "Street Lighting and Illuminated Traffic Signals," suggested the Road Fund might be quite legitimately applied for the lighting of roads which qualified for unemployment grants. After all, he said, lighting was only the completion of the otherwise splendid roadways which the Fund had brought into being.

Lord Brentford, as President of the National "Safety First" Association, presided at the delegates dinner which marked the opening of the Congress, and the **Lord Mayor of Liverpool,** speaking at the Banquet, held that we must overhaul our habits and adjust them to modern conditions. Safety of life could only come, in the fullest measure, from the more general understanding and practice of the simple principles of safety first.

Lord Brentford said: "We read too much about what is wrongly described as the removal of all limits of speed when the present Road Traffic Bill becomes law. To my mind this is a fault of perspective. What is proposed to be done is to set up a criterion, the adjustment of speed to the circumstances, and not to the arbitrary rate irrespective of circumstances. Motorists must not take this Bill as giving them a charter for unlimited speed. It is only a charter for safe speed, and no driver need think that under this Bill he is going to have a licence to go at any speed regardless of the safety and convenience of others."

SIR HENRY MAYBURY'S PAPER.

Sir Henry Maybury, in the course of his Paper on "The Development of Roads and Road Transport," said that the owners of mechanical vehicles provide, by means of direct taxation, some £25,000,000 per annum, and they also, as ratepayers, join with other ratepayers in contributing a like amount, but the cost to the community of the want of consideration of some road users could hardly be measured in money seeing that avoidable accidents must be responsible for the expenditure of many millions of pounds a year. It was, however, a subject for much gratification that accidents had begun to show a tendency to decrease in numbers, and this notwithstanding the expansion of the road fleet.

"What are the chief causes of accidents on the highways? The report on the Administration of the Road Fund for the year 1928-1929, in dealing with accidents shows that between the 1st April, 1928, and the 31st March, 1929, 394 accidents were enquired into, and the causes were dealt with in groups under the following headings:—

(a)	Mechanical defects of the vehicle ...	68
(b)	Unsatisfactory road conditions	84
(c)	Error or negligence on the part of the driver	200
(d)	Other causes	42

The vehicles involved in such accidents were:—

(a)	Public service vehicles ...	84 or 21 per cent.
(b)	Private vehicles	269 or 68 per cent.
(c)	Commercial vehicles ...	45 or 11 per cent."

The human element was responsible for the largest proportion of accidents, whilst the second largest contributory cause was 'mechanical defects' in the case of the heavy vehicles, and 'unsatisfactory road conditions' in the case of private or other light vehicles.

Under certain climatic conditions road surfaces, of whatever material they may be composed, will occasionally be slippery, and will, in spite of the exercise of the greatest care, cause some skidding. An experienced user of the road will, however, always be watchful for such conditions. Road surfaces become polished by the traffic, and a certain amount of foreign and vegetable matter is deposited thereon. When the rain comes, this makes a soapy mixture, which renders it difficult to hold a car going at any speed in a straight line.

THE DISCUSSION.

There followed a discussion which covered a wide range. Considerable emphasis, however, was given to the importance of the personal element if road accidents were to be avoided. As one delegate put it, the one great enemy of road safety is apathy.

Mr. R. W. Royle, traffic manager, C.W.S., Manchester, said that the "Safety First" movement would be greatly assisted if motor owners would give encouragement to their drivers to observe the principles of careful driving. Two years ago his firm joined the "Safety First" Council, since when there had been a remarkable drop not only in the number of accidents but in the cost of repairs. The number of vehicles kept on the road had been increased and the number off the road reduced. It would be their pleasure that week in Manchester to distribute 200 certificates to drivers who had earned them and, in addition, each would receive the gift of a guinea. Similar distributions would take place in London and other places. If employers in commercial goods transport would adopt a policy of encouragement, drivers would react and the result would be fewer road dangers. His drivers had become so painstaking that if their vehicles only became scratched by another car, they made a note of it and reported it to the responsible person.

Councillor W. Lyons (Poplar) reported what the Poplar Borough Council had done to encourage safety first amongst its drivers, 90 or 100 of whom had received the "Safety First" Certificate and Badge.

Alderman A. Hankey (Bootle) asked if the use of flood lighting would not contribute to greater road safety owing to the number of vehicles that used glaring headlights.

Mr. J. Robertson, Chief Constable of Renfrewshire, was strongly of the opinion that if roads were banked at the bends, vehicles going round would lean over on their own accord in the right direction.

Lord Brentford said it was no use making fine new 40 ft. roads if elderly wheezy vans drove in the centre of the road and declined to give way to faster traffic. Concerning white lines, unfortunately there was nothing to compel their observance.

Sir Henry Maybury, replying to the various points raised, said the question of putting applicants for drivers licences through an efficiency test had received very careful consideration, but it was impossible to devise tests for nearly 3,000,000 drivers. When the Road Traffic Bill became law it would be necessary for every person applying for a licence to state whether he was suffering from any disability which would render him an improper person to hold a licence. The onus would be on the driver in declaring his fitness.

STREET LIGHTING AND AUTOMATIC SIGNALS.

Mr. Robert Beveridge, Edinburgh, who read a Paper on "Street Lighting and Illuminated Traffic Signals in relation to the Prevention of Accidents," contended that where wide roads were to be constructed, within certain areas, at any rate, the lighting facilities should be one of the first considerations, and the cost should form one of the essential components in the expenditure. The Road Fund could quite legitimately be called upon to subscribe towards the lighting, which was, after all, only the completion of these otherwise splendid roadways which the Fund had brought into being.

Speaking generally of the use of fixed devices or signals for the control of traffic, one of the first essentials was some attempt at uniformity in the construction or application of these devices. Automatic signals had certainly justified their erection in Edinburgh from the "Safety First" standpoint. There were seventeen sets in the city, and others on order, and the chief constable's annual report shows a decided diminution of accidents at these points. From the street lighting point of view it was noticeable that they led to a diversion of traffic to other routes where the lighting had now to be reinforced to meet the altered conditions.

In the case of all other lighted signals, there was, in Edinburgh—as there ought to be elsewhere—the closest co-operation between the police traffic department and the lighting department.

A Huddersfield delegate made reference to the dangers caused by the inadequate lighting of highway obstructions

Digitized by Google

caused by repairs and of level crossings. He was of opinion that road obstructions should be lighted in exactly the same way as vehicles were, with white and red lights in appropriate positions according to the side of the road. He recommended some standardised signs for the guidance of drivers approaching main roads from a secondary road.

Councillor H. J. Savory (Willesden) and **Dr. Wade** (Bradford) both spoke of the difficulty some drivers had in distinguishing colours. The latter said no automatic signal could entirely replace the human element because many people were colour blind and did not know it. Drivers of horse-drawn vehicles did not find it easy to work to the automatically controlled signals.

The **Chief Constable of Bradford** said the standardisation of signals was of the greatest moment to road users, because at the present time the different shapes and sizes and the different heights and positions they occupied were misleading and confusing.

Lord Ponsonby, in winding up the discussion, said the lighting of arterial roads was for the benefit of all users, and it was not fair to expect the cost to come from the fund contributed by vehicle owners. He could sympathise with those speakers who thought that the pioneers of automatic signals should receive a grant from the government. The local authorities had done admirable work and standardisation must come slowly.

Amalgamated Horse & Motor Owners' Association.

Quarterly Conference at Rochdale.

THE Amalgamated Horse and Motor Owners' Association and the Commercial Motor Users' Association (S.E. Lancs. Area), joint organisation, held its quarterly conference at the Rochdale Pioneer Co-operative Society's rooms on 24th May. Mr. T. G. Cousins presided. There were important discussions on the Road Traffic Bill, the Hours of Industrial Employment Bill and proposals for the rationalisation of transport. On this latter subject no decision was reached. The question will be further considered at the next meeting of the joint organisation.

Officers. The following were appointed to serve during the ensuing year:—Amalgamated Horse and Motor Owners' Association: Chairman, Mr. T. G. Cousins (Rochdale); vice-chairmen, Mr. J. Walker (Radcliffe) and Councillor W. Farnorth (Middleton); treasurer, Mr. J. G. Thompson (Shaw). Commercial Motor Users' Association: Chairman, Mr. J. R. Etheridge (Radcliffe); vice-chairman, Mr. J. Grindrod (Rochdale).

Rochdale Corporation Bill. As a result of negotiations which have taken place with the Parliamentary Committee of the Manchester Corporation, Clause 35 of the Bill, wherein powers were sought to run omnibuses without limit, has been deleted.

Rochdale Corporation Tramways. The chairman and secretary of the A.H. & M.O. Association waited upon the general manager of the Rochdale Corporation Tramways in respect to the unloading of passengers from tramcars, at the front end, into the roadway on Broadway, Rochdale, pointing out that this was dangerous both to on-coming traffic and to passengers themselves. Mr. Webster, the general manager, promised to discuss the matter with the surveyor, Mr. Morgan, and see if it was possible to make any alterations in regard to the tram track, with a view to eliminating the danger.

Road Traffic Bill. This was reported upon at length, particularly in respect of the various amendments which had been put forward by the transport organisations. Mr. Howarth reported that Members of Parliament had been written to respecting the various amendments tabled, and in some cases acknowledgments had been received and support promised.

Bury Traffic. The question of tramcars in Bury using the Centre for a terminus has received the consideration of the Committees, and a proposal put forward by one of the members is to be submitted to the tramway manager as soon as an interview can be arranged.

Motor Coaches; Plying for Hire. Negotiations have taken place with the various authorities, respecting the granting of licences to owners of motor coaches, to ply for hire, and satisfactory arrangements have been made in some cases.

Lancashire and Cheshire Road Transport Council. There have been several meetings of this organisation which has been dealing with the question of rates of pay for night work. Inquiries have revealed that very few men employed by local authorities are regularly engaged on night work.

Farriers' Charges. The committee regret they have not been successful in securing a reduction in the charges for shoeing in Bury, Heywood and Radcliffe districts.

Round the Lancashire Associations.

Committee of Road Users.

Negotiations between the Manchester Committee of Road Users and the Manchester Corporation regarding certain clauses in the Manchester Corporation (General Powers) Bill (1930), have had a satisfactory conclusion, all the clauses to which exception was taken by the Committee of Road Users having been withdrawn. These clauses were outlined in our May issue.

Liverpool C.M.U.A.

The Liverpool Area Committee of the Commercial Motor Users' Association is endeavouring to secure the abolition of tolls levied by the Carlisle municipal authority on goods belonging to persons not domiciled within the boundaries, on entering and leaving the town. At the May meeting of the Committee, Mr. A. C. Bloomer presiding, it was reported that representations had been made to the Minister of Transport, who had intimated that he could take no steps to meet the wishes of the Association. The Hours of Industrial Employment Bill was also discussed.

Amalgamated Horse and Motor Owners' Association.

The Amalgamated Horse and Motor Owners' Association has decided to approach the Chadderton U.D.C. with the suggestion that the Council should apply to the Ministry of Transport for a 75 per cent. grant under the unemployment grants scheme, towards the cost of remaking Lee Street, Middleton Junction, so that the work may be proceeded with without delay. This decision was reached at the May meeting of the General Council of the A.H. & M.O.A., held at the office of the Secretary (Mr. J. Howarth), Mr. T. G. Cousins presiding. Half of Lee Street is under the jurisdiction of the Middleton Corporation and the other half under the Chadderton U.D.C. Middleton Corporation are prepared to re-make their part of the road.

The Hours of Industrial Employment Bill was submitted to the meeting, but as the Bill had passed only its first reading in Parliament, the meeting decided to await developments.

A circular letter, distributed by the Cotton and Allied Trades Transport Committee of the Master Cotton Spinners Association to its members, was brought to the notice of the meeting. This dealt with the question of damage to goods in transit, which had been taken up with the railway companies, who pointed out that they accepted no responsibility for damage caused by casualty, including fire and explosion.

Nine new members were admitted to the Association.

Manchester Association of Importers and Exporters.

Mr. Harold A. Baerlein, President of the Manchester Association of Importers and Exporters, speaking at the 22nd annual meeting of members, held at Manchester on 22nd May, said one of the causes of the falling off in exports was the system of tariff barriers that had been erected everywhere. Some slight mitigation had been obtained in reduction of freights to Calcutta, Germany, Holland and Belgium; railway charges had been cut, though primarily in order to recapture traffic from the motors, and in October the Manchester Ship Canal Company gave some assistance by passing on its partial relief from rates under the De-rating Act. Productive capacity should be kept up to a progressive standard, but this could not be continued effectively unless the demand automatically followed. Unfortunately, though not stationary, consumption was not growing as rapidly as goods were being produced, so we came to the question as to whether anything could be done to stimulate demand. It was, however, the great bulk trade from overseas to which we must mainly look. Rationalisation could not succeed without an immense purchasing power to absorb the increased output, and this purchasing power could be supplied best by the employment of a large number of willing, efficient, and well paid, workers. But, after all, the expansion of our export trade depended in no small degree on the prosperity of our customers all over the world.

Law Cases.

SHOULD A LORRY DRIVER'S MATE DRIVE?

AN action of interest to transport contractors came before Judge Thesiger in the Shoreditch County Court recently. The plaintiff in the action was Thomas Sayle Locking, of 142, Stoke Newington Road, N., an auctioneer and estate agent, and he sued Albert Ewer, of 152, Curtain Road, Shoreditch, E., road transport contractor, to recover £35 for damage done to a wall at the side of the plaintiff's premises when the defendant's driver was driving out a 15-ton lorry. The amount of the damages had been agreed, and the only question before the Court was as to liability. The case was tried by a jury.

Mr. Samuel Lincoln appeared as counsel for the plaintiff, and Mr. Engelbach, barrister, for the defendant.

Mr. Lincoln called Mr. Murray, who said he had been employed by the defendants for 15 months, being under one or two drivers, the last of whom was Negus. It was a usual thing for him to drive the lorry now and again, and on the occasion of this accident Negus was at the Apollo Theatre opposite getting a signature for some films, and he drove the lorry out of the yard because they were in a hurry, as they had got a load to go to Manchester. He was a driver's mate, and Negus taught him to drive, and he had assisted to drive a lorry on many occasions, although he had never held a driving licence. When he had an accident some nine months previously, he was never told that he was acting wrongly in driving the lorry, and in his opinion nothing would have been said on this occasion if there had not been an accident. It was quite an accepted thing for drivers' mates to drive lorries, and he had driven a lorry in a garage at Birmingham. When in King George Dock, Mr. Negus, his driver, was standing near the Superintendent's office and told him to go down to the lorry and bring it up. It was 400 yards away, and he did so. He knew of two other drivers' mates that were constantly driving lorries although they had no licence. After the accident he was discharged.

Charles Thomas Stevens, another driver's mate, said he had been in defendant's employ, and although he only had a motor cycle licence he had, when occasion demanded it, driven a 6-ton lorry with a 4-ton trailer, both in London and the Provinces.

Mr. Engelbach then submitted that there was no case to go to the jury. He said that this was of the greatest importance to people who had hundreds of lorries on the road. They employed these boys as mates, and it was not part of their duty to go about tinkering with the driving of them. He submitted that Negus had no authority to tell him to drive, and that he was never told to drive.

On the other hand, Mr. Lincoln submitted that the act of negligence on the part of the driver Negus was that he left the motor lorry, which gave the opportunity for cause or effect, as he incited the boy to drive this lorry, and therefore the defendant was liable.

His Honour decided there was a case to go to the jury, and Mr. Negus gave evidence and said that these boys were never allowed to drive a lorry, nor had he ever asked them to. This was a wilful act on the part of the mate.

Mr. Risden, manager to the defendant, said it was well known throughout the whole of the industry that drivers' mates must not drive a lorry, and although when they were engaged they were not specifically told so, they well knew, and it would be an act of grave misdemeanour if they did so, which would amount to instant dismissal if discovered.

Two points were then put to the jury, and they were "Was Negus negligent in leaving the lorry unattended," and "Was it a natural effect of that negligence that the driver's mate should attempt to drive the lorry."

The jury answered both questions in the affirmative, and judgment was thereupon entered for the plaintiff for the amount claimed, £35, and leave to appeal was granted.

IS WAREHOUSING TRANSPORT?

IN a de-rating appeal case at the Liverpool Quarter Sessions, the Recorder of Liverpool decided in favour of the appellants, the Mersey Docks and Harbour Board, in respect of certain dock premises. The appeal hinged on the interpretation of the words "dock purposes." The Revenue Officer contended that goods could not be in the course of transport months after they arrived in the port. The Dock Board held it was impossible to say that any of the warehouses were primarily occupied and used for warehousing merchandise not in the course of being transported. The function of warehousing was ancillary to the transport of goods. Therefore, the premises should be de-rated. The Recorder accepted this argument and said he was prepared to state a case.

AN INTERESTING CASE.

AN important case to hire furnishers and railway companies came before Judge Snagge in the Marylebone County Court, when the Curtis Furnishing Stores, Ltd., of 15-17, Praed Street, Paddington, W., hire furnishers, sued the Great Western Railway, of Paddington Station, W., to recover £29 7s. 1d. The claim set out that on August 27th the plaintiffs entrusted to the defendants goods to the value of £26 17s. to be delivered to 146, Victoria Road, Paignton, and paid the defendants £2 10s. 1d. for the carriage. The goods had been delivered elsewhere without the permission of the plaintiffs, with the result that such goods had been lost. The defence was that Jervis for whom the goods were entrusted directed that they should be delivered to the defendants' station at Bristol, and Jervis took delivery of them at Bristol on September 11th. They further denied that they were under any obligation to the plaintiffs, as it was impossible to deliver the goods to 146, Victoria Road, as such a place did not exist. They alleged that the plaintiffs were negligent in consigning the goods to Jervis at 146, Victoria Road, without taking reasonable steps to ascertain whether such a place existed.

Mr. S. O. Henn Collins appeared as counsel for the plaintiffs, and Mr. W. S. Morrison, barrister, for the defendants.

In opening the case, Mr. Collins said the case was very important to the plaintiffs on the question of principle, as their business was chiefly concerned with letting furniture under hire purchase agreements, and it was of the utmost importance to them to know the address where the furniture was delivered. On the other hand, it was very important to the Railway Company that they should have the right to accept orders from the consignee to take goods where he ordered. Really the whole question was, what right as between the consignors and the defendants, the carriers, had the consignee to divert the goods. That question had never yet been decided, and in this case the consignee was not the owner of the goods. The agreed facts were that on August 14th last a customer giving the name of Frederick J. Jervis, of 146, Victoria Road, Paignton, signed a hiring agreement agreeing to take on the hire purchase the goods, the value of which were now being sued for. The plaintiffs made no inquiries into the *bona fides* of the man, and assumed that 146, Victoria Road was an existent place. The usual information sheet was signed and it was agreed to deliver the goods to the address as stated, but the goods were always to remain the property of the plaintiffs until paid for. The goods were delivered to the defendants in accordance with the consignment note, to be carried from Paddington to Paignton at a cost of £2 10s. 1d., and no further specifications were given to the defendants. There was, in fact, no such place as 146, Victoria Road, and by reason of that fact the defendants did not attempt to deliver the goods at that address, although the defendants at that time did not know that such a place was non-existent. Before the goods arrived a man giving the name of Jervis telephoned to the goods yard at Paignton and said that they were taking a consignment of furniture for him. He then gave a full description of it, and on August 26th the defendants received from a person signing the name of F. J. Jervis a consignment note consigning the goods to Bristol. The goods were despatched to Bristol, and on September 11th delivery was taken of them by a person who signed the warehouse book in the name of F. J. Jervis.

Continuing, counsel said that neither the plaintiffs nor defendants received a complaint from the real Jervis. At the present moment the plaintiffs were unable to trace the whereabouts of the goods or the man named Jervis. On September 17th, 1929, the plaintiffs did receive a letter postmarked from Newport, Monmouthshire, enclosing £1, being the first monthly instalment on the furniture, but they had never received any further payments. It was the contention of the Railway Company that they were entitled under the circumstances to honour the order of someone who purported to be the consignee. They had presumed that the consignee was in the position to order, and yet he had no control of the goods. *Prima facie*, under the consignment note, if there is a mis-delivery or non-delivery, there was conversion on the part of the Railway Company of the goods. The question was

Digitized by Google

whether the Railway Company were justified in what they had done, but *prima facie* there could be no justification in dealing with his goods otherwise than in accordance with the directions given by the plaintiffs, or by a properly appointed agent. Clearly if the consignee was the actual owner of the goods the consignors could not complain. If the carriers did not obey the mandate of the consignors but obeyed the orders of the consignee, they did so at their own risk. In his, counsel's opinion, it did not assist the defendants if the proper inference be that Jervis, who gave these directions before the goods arrived at Paignton, should be physically the same man who signed the original agreement.

Mr. Collins then dealt very largely on the authorities that pointed to the case.

For the defence, Mr. Morrison said that the whole case for the plaintiffs had been based upon the consideration known only to them and to Jervis. The carriers did not know that there was an agreement between them. Undoubtedly the man Jervis was actually the person to whom they were requested to deliver the goods, and when he communicated with them at Paignton, he was able to give a full description of the goods and of their movements. If the plaintiffs said in their claim that they had delivered the goods to the wrong person, they ought to be able to produce the right Mr. Jervis, although no complaint had been received from Jervis by the plaintiffs or defendants. He was going to submit that the whole action had been misconceived, and that the whole complaint of the plaintiffs was against Jervis because he had not paid for the goods. The contract was to deliver the goods to Jervis, and they had done so, and therefore discharged their duty which they undertook. If so be the plaintiffs said that the goods should be held until they were communicated with, there should have been a corollary agreement to that effect, but there was nothing to that effect, and the Railway Company, who were mere carriers, had undertaken their duty. They were not supposed to be private detectives to inquire into the *bona fides* of the consignee. He would say that the Railway Company had exhausted their liability under the contract.

Continuing, Mr. Morrison said that no negligence on the part of the defendants was complained of by the plaintiffs. There was a duty to deliver to the man, and secondly to deliver to the address. The delivery at Paignton was impossible because there was no such place, and in any case they could not have done so. He would submit that it would greatly enlarge the responsibilities of carriers to be cognisant of the ownership of the goods, and that the carriers were fully entitled to abide by the consignees directions and to deliver the goods where he so required. The contract was at an end at Bristol, as the consignee accepted the goods, and they had no further duty to discharge on behalf of the plaintiffs. Another point was that the goods had not actually been lost yet, as it might be that the hirer was having a hard time and could not pay at present, but when he was all right again he would relieve his mind of his liability.

Judge Snagge: Do you find that in your experience? (Laughter.)

Mr. Morrison further said that the defendants alleged that the plaintiffs were negligent in entering into this contract without making any inquiries into the *bona fides* of the hirer.

Mr. Henn Collins said that it was a matter of inference that the goods were lost, but in trover that fact did not matter. It had been said that the plaintiffs themselves were negligent, but before the defendants could allege that they must prove that they owed the defendants some duty, and that they had neglected to perform that duty. In his submission there was no answer to the claim.

Judge Snagge said he would like some time to go fully into the authorities, and would reserve his judgment.

Delivering his reserved judgment, Judge Snagge said that this was an action in trover for the conversion of the plaintiffs' goods by the railway company, and alternatively there was a claim for damages. The plaintiffs said that the defendants should not have parted with the goods until they had had further instructions, whilst the defendants said were they not justified in acting upon the consignee's instructions, who was not the owner of the goods. In this case Jervis was the master of the contract, as he was the same man who had signed the agreement. It was for the consignors to make a special contract with the carriers in cases of this kind. As to the ownership of the goods under the hire purchase agreement, he was of opinion that it was not part of the business of carriers to know or ascertain the contractual relationship existing between the consignors and the consignee. It would be difficult to imagine how carriers could carry on their business if they were required to know. He thought the claim had failed, and there would be judgment for the defendants, with costs.

ACTION AGAINST TRANSPORT COMPANY.

IN the Shoreditch County Court, before Judge Cluer, Phillip Kay, of 34, Craven Walk, N., a wireless merchant, sued the North British Transport Co., Ltd., of 7, Finsbury Square, E.C., to recover £6 15s., alleged to be due for nine days at 15s. a day the excess payment on a job which the defendants contracted to do at 25s. a day and did not do.

The plaintiff's case was that on April 11th he rang the defendants up on the telephone and asked if they would do a job up country, in Hull and Grimsby, and so on, taking wireless goods to customers. Somebody answered on the telephone agreeing to 25s. a day, and the plaintiff agreed to pay petrol, oil and other incidentals. It was to start on the following Monday morning at 9 o'clock, and the contract for the lorry was to be a five days minimum. It was not to leave off then necessarily, that was only the guarantee, and after that it was pro rata. He sent a letter accepting it, with a cheque for five days, but that letter came back five days afterwards. On the Monday morning, as they did not turn up at Acton, he telephoned and the answer came through that the lorry had started. He waited an hour, and as it did not arrive, he phoned again, and he then heard from the driver who said he could not come as there had been a breakdown. The defendants declined to do anything further and would not agree to any other dates. In consequence of this, he telephoned to many cartage contractors, and he finally found a man named Payne who took £2 a day. All the others wanted £3, and the job took nine days.

Judge Cluer: You will have to limit yourself to five days in your claim, as that was your guarantee, and if you are going to say that you can charge them up as long as you like you might spin it out to 99 days.

The traffic manager to the defendants said that he answered the phone message from the plaintiff, who could not tell him exactly where he had got to go, and so all he did was to quote him an eight-hour day at 25s. and he agreed that the lorry should be there. There are some funny people about London, and he was never told what the business was to be done, so he would not put the cheque through before the driver had seen the defendant and seen what sort of a person he was.

Judge Cluer: To say that I will send a lorry is a contract and does not depend on what the driver thinks of me.

Witness: The lorry broke down and I tried to get another, but while I was doing so he said, "Cancel the order and I will get another and charge you up the extra."

Judge Cluer: You are liable for five days. Judgment for the plaintiff for £3 15s., and costs.

CONSIGN SHIPMENTS FOR NORTHERN

INDIA

TO

THE EASTERN EXPRESS Co. LTD.

Forwarding, Shipping & Clearing Agents,

KARACHI

This Advertisement is inserted to bring before Forwarding Agents and Shippers in Great Britain and abroad the name of a Firm to whom shipments for any part of India should be consigned. Every description of merchandise cleared and forwarded to consignees. C.O.Ds. collected and remitted promptly.

Growth of Road Traffic.

THE Ministry of Transport has issued a Report on the Census of traffic recorded on Class I. roads in Great Britain at the General Census taken in August, 1928, and at the special census taken during 1928-29. The General Census reveals the considerable growth of traffic during the three years 1925-1928, and provides much information with regard to the volume of day traffic during one particular week of the year. The Special Census furnishes information over a wider field as it was taken at 24 selected points in various parts of Great Britain, and the observations at each point were distributed over a complete period of twelve months, "day" traffic being distinguished from "night" traffic.

The Report points out that the highway must be made fit, not only for the traffic it has to bear at the present time, but also for that which it is likely to carry in the future, and information on these points becomes more and more essential in framing a sound and economical programme of road maintenance and development.

The approximate number of motor vehicles licensed has grown from 873,700 in 1921 to 2,036,000 in 1928—an increase of 133 per cent. in seven years—while the gross receipts from licences has increased from £10,000,000 to £25,000,000 in the same period, and the proportion of the population licensed to drive has risen from 1 in 29 to 1 in 18. In 1910, before the general introduction of motor vehicles, the nation's highway expenditure, excluding loan charges, was £14,600,000, whilst in 1926 it had grown to £59,500,000—an increase of over 300 per cent. in 16 years. Although this increase is partly accounted for by the reduced purchasing power of money, the major part of it is obviously due to the needs of modern traffic.

At the time that the records covered by the Report were taken, the total length of Class I. roads in Great Britain was 25,528 miles. The total number of routes on which the General Census was taken was 1,131, while the total number of points at which the traffic was recorded was 4,837. Of these points, 4,686 were within the borders of the 94 administrative counties (excluding London), and 151 within 27 of the 83 county boroughs. The average distance between two consecutive points was about 5¼ miles. At most of the points for the General Census the records were taken on the seven days from Sunday, 12th August, to Saturday, 18th August, inclusive, but at some points different dates were chosen because of race meetings, etc., which would have affected the results. The numbers of every type of vehicle passing each census point between 6 a.m. and 10 p.m. on the seven consecutive days, were recorded.

Although the General Census provides much information with regard to day traffic it had long been realised that any conclusions drawn from the data so obtained were necessarily subject to considerable qualifications owing to the absence of information as to the amount of traffic passing during the night. In order to supplement the information obtained at the General Census, therefore, a Special Census was taken at 24 selected points in various parts of Great Britain, the observations to be distributed over a complete period of 12 months at each point. A separate record of the traffic passing between 10 p.m. and 6 a.m. was taken, in addition to that passing between 6 a.m. and 10 p.m. The observations were taken on 42 occasions evenly spaced throughout the 12 months—Monday one week, Wednesday the next, Friday the next, and so on. Bank holidays were not included in these observations, but a special count was taken on August Bank Holiday at each point, thus making 43 counts in all.

THE GENERAL CENSUS.

A study of the Tables provided in the Report shows that:—

Industrial Areas: The number of passenger-carrying motor vehicles is in all cases but one substantially in excess of the number of goods vehicles. The proportion of motor vehicles to horse-drawn is higher in 1928 than in 1925 at almost every point. At 5 out of 12 points in 1928 the tonnage of motor vehicles represented 99 per cent. of the total weight, and at one point practically 100 per cent. The increase in the number of vehicles between 1925 and 1928 varied between 30 per cent. and 107 per cent., while the increase in total tonnage was from 12 per cent. to 103 per cent. No decreases were recorded. While the percentage increase in total tonnage was higher than the percentage increase in the number of vehicles at 3 of the 12 points, at the other nine points the position is reversed.

Agricultural Areas: The proportion of motor vehicles to horse-drawn is in every case higher in 1928 than in 1925, the increase being as much as 11 per cent. at one point. The number of vehicles in 1928 varied from a decrease of 5 per cent. to an increase of 76 per cent. as compared with 1925, while tonnages varied from a decrease of 15 per cent. to an increase of 70 per cent. An increase of 1 per cent. in the number of vehicles in one case was accompanied by a decrease of 11 per cent. in total tonnage.

THE SPECIAL CENSUS.

The eight types of area into which the country was divided for the purposes of the Special Census were:—Industrial, dock, agricultural, residential, suburban, seaside, inland watering places, tourist, sporting. The 24 points previously mentioned were carefully selected in order that they should be as typical and representative as possible of the various types of area and of the country's Class I. roads as a whole. Among the results emerging from the Special Census is that the highest tonnage at any count was recorded in a dock area at a point on the London—Shoeburyness Road where a total of 73,954 tons passed during 24 hours at the end of March, 1929. This point, however, is exceptionally situated, lying as it does on a most important through route which not only serves the extensive docks in the area, but also acts as a great conduit through which all kinds of traffic between this part of London and the adjoining County of Essex surges across the River Lee at a vital spot close to the confluence of that stream with the Thames.

The highest daily average (excluding August Bank Holiday) was 56,683 tons (52,125 tons between 6 a.m. and 10 p.m., and 4,558 tons between 10 p.m. and 6 a.m.) on Route A.13 (London—Shoeburyness Road) representing a total load of over 21,000,000 tons per annum.

An analysis made with the object of ascertaining what proportion of the total traffic passed during the night hours (10 p.m. to 6 a.m.) shows that on a tonnage basis night traffic formed between 3 per cent. and 9 per cent. of the total at most of the points, while an aggregation of the 42 counts in all areas gives a figure of 6 per cent. The averages for the several bi-monthly periods, however, vary between 0.8 per cent. in a dock area during three periods, to 11.9 per cent. in a seaside area during October-November—the latter figure including abnormal traffic on the Preston-Blackpool Road on the occasion of illuminations at Blackpool. Considerable variations also occur in the proportions at points in the same type of area and the same period. Thus in the industrial areas during February-March the proportion was 2.5 per cent. at one point and 8.2 per cent. at another, and in dock areas during October-November it was 2.7 per cent. at one point and 8.2 per cent. at another.

Taking the 24 points as a whole the tonnage of night traffic was highest in June-July and lowest in February-March. Day traffic was highest in June-July and August-September and lowest in December-January.

The records of traffic on the occasion of one of the heaviest counts taken at an exceptionally busy point on the London-Shoeburyness Road showed that 82 per cent. of the total tonnage passed between 8 a.m. and 8 p.m. The total tonnage also represented only 47 per cent. of the total for 24 hours at the peak-hour rate; and while the traffic between 2 p.m. and 3 p.m. amounted to 5,697 tons, that between 3 a.m. and 4 a.m. was only 190 tons. Such figures as these warrant the conclusion that there is ample scope for the development of a system under which, as in the case of railway transport, an enormous amount of costly delay is avoided by dealing with certain forms of traffic during the night hours, when it causes the least interference with that which must of necessity proceed by day. Broad considerations of national economy suggest that there is much to be said for such a system, which incidentally would introduce another factor into the considerations governing the construction of by-pass roads, namely, that of preventing undue disturbance of the night's rest.

Increase in Queensland Working Week.—A Brisbane message says that the Industrial Court has granted the application of the Crown for an increase of the 44 hour week to 48 hours, which will apply to certain sections of the public service and of the railways.

Licences Granted. — The Watch Committee of the Stalybridge Corporation has granted four additional bus licences to the L.M. & S. Railway Co. for use on the Sheffield-Manchester and Sheffield-Blackpool services.

Quick Loading and Unloading.

IN the past various types of movable platforms for commercial vehicle bodies have been designed, as substitutes or improvement on the usual tipping method. Owing to clogging trouble, however, they have not come into general use though it has been admitted that if this drawback could be overcome the system has many advantages.

Photo] [Western Mail.
A DENNIS LORRY FITTED WITH THE PATENT MOVABLE FLOOR.

The solution is claimed to have been found by Messrs. F. J. Mundy, of Penarth, and Mr. Charles Solomon, of Bath, who have patented their invention which is manufactured and sold by the Principality Wagon Company (Limited), Ferry Road, Cardiff, under licence from the Movable Floor (Vehicles), Ltd., 2 Central Buildings, Westminster, London, S.W.1.

The advantage of the movable floor as compared with the tipping body is that it is not only quicker in operation, but also the device is equally useful for loading purposes. The moving floor is under geared control. The floor of the lorry consists of a series of tube rollers, rotated on ball races and mounted across the chassis frame. At each end of the frame is a wooden roller, slightly larger than the tubes, to which is attached the movable floor which is flexible and is in fact a conveyor belt. The wear is said to be very slight. The two rollers are geared and operated by hand.

The demonstration lorry is a 2-ton Dennis and a full load of such commodities as bricks, coal, sand, wet mortar, tar macadam, gravel, etc., can be discharged in about 15 seconds by one man.

For loading, if the packages are placed on the vehicle at the tail end, a turn of the gear wheel by hand will move them automatically to the desired position without further handling, and so on with successive packages. In loading loose materials such as sand, gravel, roadstone, etc., the system does away with the second throw. We understand the demonstration vehicle has been constantly discharging daily throughout the last twelve months its loads of coal, sand, gravel, etc. It is particularly useful when it is desired to spread the load over an area such as for instance in spreading roadstone.

Then and Now.

Furniture Removing in 1839.

A COPY of a letter written by Mr. Edward B. Pope to his mother and sister on January 5th, 1839, has been sent to us by Mr. Ernest B. Pope, of Pope & Sons, Furniture Removers, Warehousemen, etc., of 19-21 Bridge Road, Hammersmith. This well-known business was established in 1809.

The letter illustrates vividly the great progress made in transport during the course of the past ninety odd years, and we are indebted to Mr. Pope for affording us the opportunity of publishing this most interesting communication. The letter was written from the Cock Tavern, Bristol, and reads as follows:—

Dear Mother and Sister,

I did not think of writing to you until the furniture reached Newport, but as I cannot tell when that will be and having some time on hand I take this opportunity. I might tell you we have had a most terrible journey till we arrived at Cirencester in Gloucestershire, which is nearly 90 miles from London, and I had then spent nearly all my money except a few shillings. I started the two vans from there on Saturday morning for Cheltenham without any money to pay their expenses, and I myself started by coach for Bristol expecting to get over to Newport by to-day, but the vessel does not go on Sundays, therefore I am detained in Bristol till half past seven Monday, when I hope to get to Newport to get some money on account, after which I might go round to Cheltenham to meet the vans, it will take them three long days to get to Newport. I do not think the furniture will be there till Thursday mid-day. All this delay is occasioned by the badness of the roads, which in some parts have ruts 8 inches deep—we were 16 hours on one hill alone—it cost £3 for hire of extra horses. Turnpikes are dreadfully dear—I paid 3 times 3/6 in 12 miles of ground. We have been overweight on 3 weighbridges and have more now to go on. I paid for them, one 7/-, one 6/-, one 4/6. One van weighed 3 tons 19 cwt., and the other 2 tons, 2 cwt., consequently we have quite 4½ tons of furniture, which is 2 tons more than we should have had. It will take the vans quite 5 days to return. If I am wanted I can come home in one day by coach, which will perhaps be best, but I will wait for your answer—direct it to Mr. Pope, P.O., Newport. I feel so forlorn and low spirited I shall be heartily glad to come home and will never have another journey like this in winter.

EDWARD B. POPE.

Thirty years later Mr. Edward B. Pope told the tale of his trip in the Parish Magazine and mentioned that the bigger van, No. 8, had a movable roof which blew off into a field and took a day to replace. It is interesting to record that after several re-incarnations this No. 8—now an ordinary pantechnicon—still travels London's streets, but it can hardly be expected that much of the material with which it was originally constructed remains.

Institute of Transport.

THE following gentlemen have recently been elected to Membership of the Institute of Transport:—

MEMBERS.

Dixon, Reginald Francis ...	General Manager and Engineer, City of Oxford Motor Services, Ltd.
Fenwick, Andrew Charles ...	General Manager and Engineer, Bury Corporation Tramways and Motors.
Goode, Charles Joachim ...	Acting Chief Traffic Manager, New South Wales Government Railways.
McCrea, James	Managing Director, Belfast Omnibus Co., Ltd.
Rose, John Charles	Deputy Chief Commercial Manager (Rates Development and Publicity), East Indian Railway.

ASSOCIATE MEMBERS.

Barter, Llewellyn	Managing Director, City and Suburban Carriers, Ltd.
Bradbury, Stanley	Secretary, Aire and Calder Navigation.
Bright, John Alexander Millar	General Manager, Southern Roadways, Ltd.
Bullock, Sydney Charles ...	Director, Tourist Motor Services, Ltd. (Southampton).
Crow, Herbert Howard ...	Managing Director, Crow Carrying Co., Ltd.
Skyrme, John Beresford ...	Assistant General Manager, Belfast Omnibus Co., Ltd.

Motor Notes.

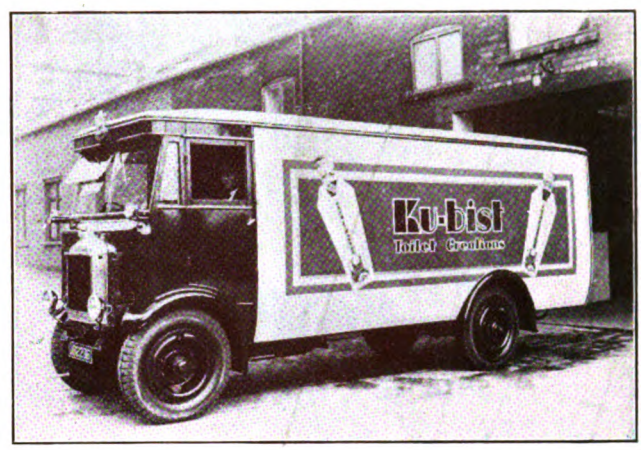
Valve Reconditioning.—"The Principles of Valve Reconditioning" is the title of a pamphlet published by Black and Decker, Ltd., of Slough. It describes the firm's method of reconditioning valves and the firm's apparatus for carrying out the work. Copies may be had on application to the firm.

A Guy "Three-Horse" Van.—The photograph shows a Guy "Three-Horse" van recently supplied by the National Horse Box Company to Capt. Yerrow Hawkes, of Fenny Compton. The box is mounted on the Guy drop frame chassis. It accommodates three horses and complies with the Ministry of Transport regulations.

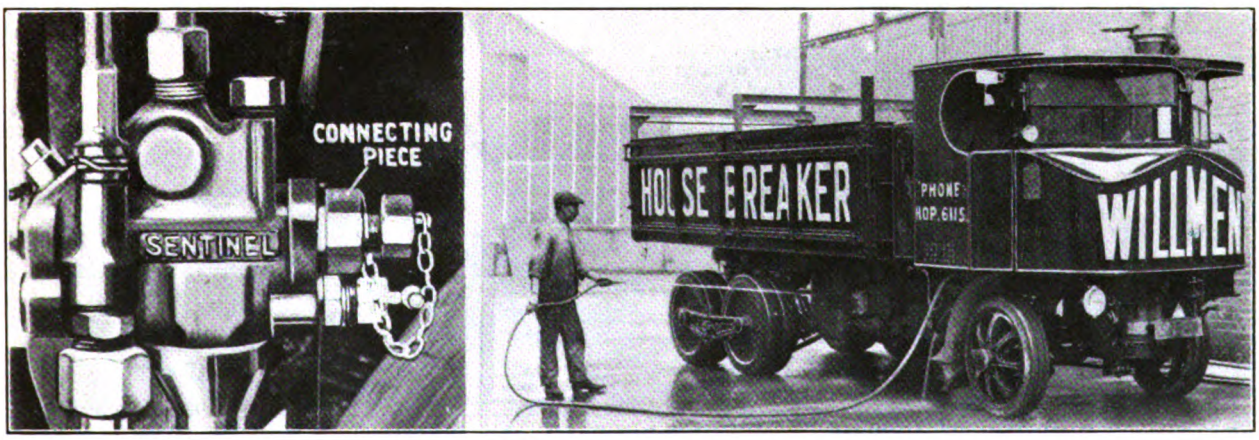
CAPTAIN YERROW HAWKES' GUY HORSE BOX.

Keep Your Wagon Clean.—The "Sentinel" Wagon Works Limited, of Shrewsbury, have introduced a simple and easily fitted device to ensure a really powerful stream of water always being available, whilst a "Sentinel" fitted with the feedwater injector beneath the platform, is under steam. This outfit consists of a screwed connecting piece with cap and chain which replace the delivery end cap on the injector immediately above the overflow valve handle and a 35 ft. length of rubber hose fitted with a brass coupling nut and nozzle. When the wagon is to be washed down, it is only necessary to unscrew the cap on the connecting piece and screw on the hose. The injector is then set to work in exactly the same way as if it were being used for filling the boiler, but the water from the feed tank instead of passing into the boiler escapes through the nozzle of the hose. Where more than one wagon is available the outfit can also be used for washing out the boiler of a second vehicle placed alongside of it and a very much higher pressure of water than is usually available from the ordinary mains can thus be obtained, which of course is an advantage.

An Imposing Karrier Van. — Messrs. Goodall, Backhouse & Co., of Leeds, have recently taken delivery of two 2-ton Karrier goods vehicles, one of which is a tilt van mounted on a standard pneumatic tyred chassis and the other (illustrated) a particularly imposing box van for which a forward drive chassis is employed. The chassis, the standard "CY2" type, can be supplied with either the orthodox driving position or the forward drive. Apart from this variation in drive position, the two chassis are identical and each incorporates a 31-47 h.p. four-cylinder engine and 34 in. by 7 in. single pneumatic tyres. The engine is fitted with lightweight pistons and the cylinder head, being of the detachable type, facilitates easy maintenance. The engine, clutch and four-speed gear box are mounted in a sub-frame. The rear axle gearing is of the worm and wheel type. The tilt van referred to is equipped with a body 11 ft. 6 in. long by 6 ft. 6 in. wide with detachable sides and tailboard. The full width of the cab is fully enclosed, the doors having drop windows. The box van illustrated has side panels 14 ft. 4 in. long by 5 ft. deep, carrying brightly coloured advertisements of the firm's products. Both vehicles are used for what the firm terms local delivery which extends over an area of some 80 miles around Leeds.



ONE OF GOODALL, BACKHOUSE & CO.'S KARRIER VANS.



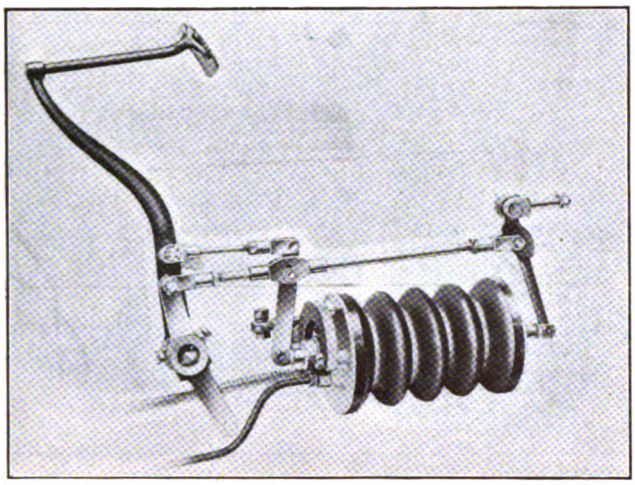
THE ILLUSTRATION ON THE LEFT SHOWS THE INJECTOR, WITH CONNECTING PIECE AND CAP IN POSITION, WHILST ON THE RIGHT A DRIVER IS SEEN USING THE APPARATUS FOR WASHING DOWN A "SENTINEL" D.G.6.

Tools and Cutting Mediums. — This is the title of a booklet issued by Sternol, Ltd., Royal London House, Finsbury Square, London, E.C.2. The introduction states that the information contained in it is based on a long and wide experience in almost every branch of engineering, the author having had actual entire charge of several machine shops, and this coupled with the exceptional opportunities he has had of inspecting and comparing the methods employed in some of the most up-to-date high produce machine shops, has enabled him to give

Digitized by Google

some valuable information on the subject of rapid and economical production. A comparison of the times and cost of production in various works shows plainly that many plants are not producing to their fullest capacity, and the author has endeavoured to call attention to some of the possible causes of bore production. The facts relating to cutting oils and coolants are based upon those manufactured by Sternol, Ltd., being Super Screwol, Sternocut and Elite soluble oils.

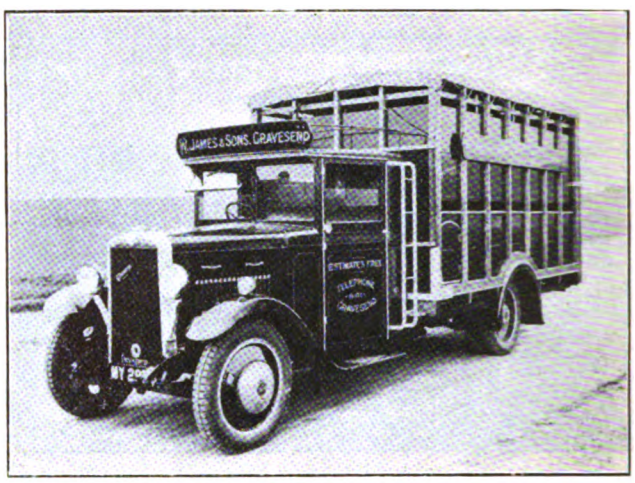
The Marelli Vacuum Servo.—The Marelli vacuum servo has recently been improved in design, the graduation of braking and maximum power having been improved while retaining all the original good points. The equipment is very easily adapted to almost any make of vehicle, we are informed, at a very low cost. Improved deliveries have now been arranged and sets of component parts to adapt the servo to most well-known makes of vehicles are now available. Enquiries should be addressed to Marelli Magnetos (England), Ltd., 71/72 Bolsover Street, London, W.1.



THE MARELLI VACUUM SERVO BRAKE.

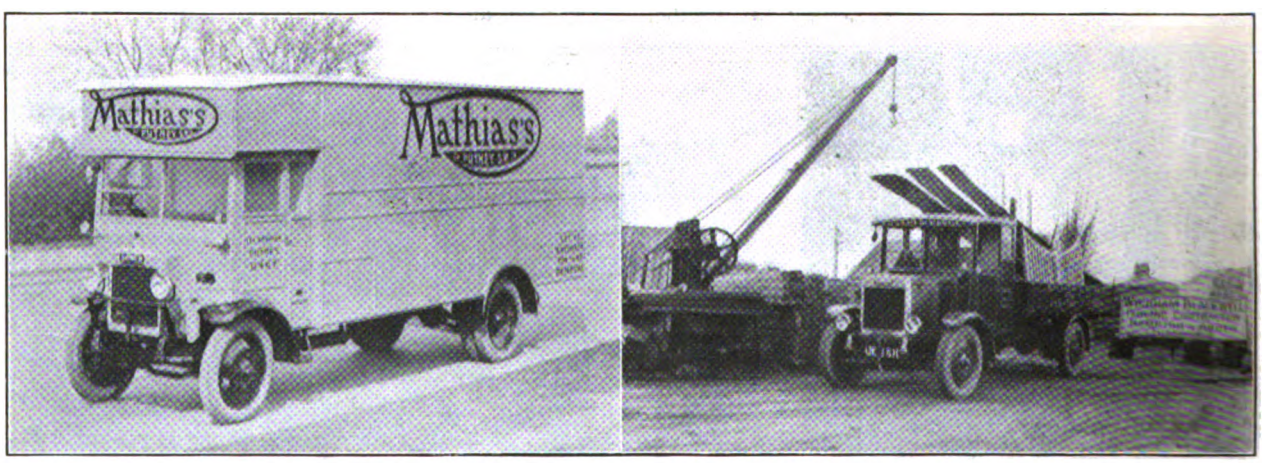
Recent Garner Deliveries.—The left hand photograph shows a Garner model 40/45 cwt. model RO chassis fitted with India cord tyres and a furniture van body. The body dimensions are 16 ft. 5 in. by 6 ft. by 6 ft. 10 in., with additional loading space over the driver's cab, giving a capacity of 700 cubic feet. The vehicle shown on the right is in operation at Mr. Wyckham Blackwell's Saw Mills, Hampton-in-Arden, near Birmingham. The chassis is a standard 12 ft. wheelbase model with a lorry body having timber bolsters at front and rear. The tyres are 32 in. by 6 in. Avons. Mr. Blackwell started his business about 40 years ago. In addition to his extensive business as a fencing contractor he is one of the 37 firms officially listed as a supplier of English Ash.

Live Stock by Road.—The live stock transport vehicle illustrated consists of a Commer "Invader" chassis upon which is mounted a body designed that it can be utilised for the conveyance of cattle, but the distinctive feature is that for sheep carrying it can be converted into two-storeys. When so employed the animals may be loaded into either compartment without interfering with the occupants of the other. The loading door of the lower compartment is at the forward end of the body. Amongst other recent Commer deliveries are eight 4-ton chassis for Shell-Mex Ltd., four 35-cwt. chassis for Messrs. Fussells of Rode, near Bath, and an additional three 4-tonners for the Redline Motor Spirit Company. Amongst export orders received are two "Invader" type chassis with left-hand drive for Poland, also "Invader" and "Avenger" chassis for New South Wales and "Invader" chassis for Hong Kong.



A COMMER FOR LIVESTOCK TRANSPORT.

Fodens at the Bath and West.—The Foden exhibits at the Bath and West Show, Torquay, were as follows:—(1) A "Speed-Six" 6-ton wagon being the twentieth repeat order from Thos. Bantock & Co., Great Western Railway Agents, Wolverhampton. The body is 16 ft. 6 in. long by 6 ft. 7½ in. wide and, in addition to the hinged side-boards and tailboards, there is provided a swivel bolster for the haulage of long steel rails, etc. (2) One of the maker's well-known overtype 6-ton three-way tipping wagons. (3) An undertype rigid six-wheeler with long platform to the order of Messrs. Perry & Purkess, Beaminster, Dorset, and (4) an overtype standard tractor to the order of Thos. Mossop & Co., Ltd., timber merchants, Christchurch, Hants.



THE TWO GARNERS REFERRED TO IN TEXT.

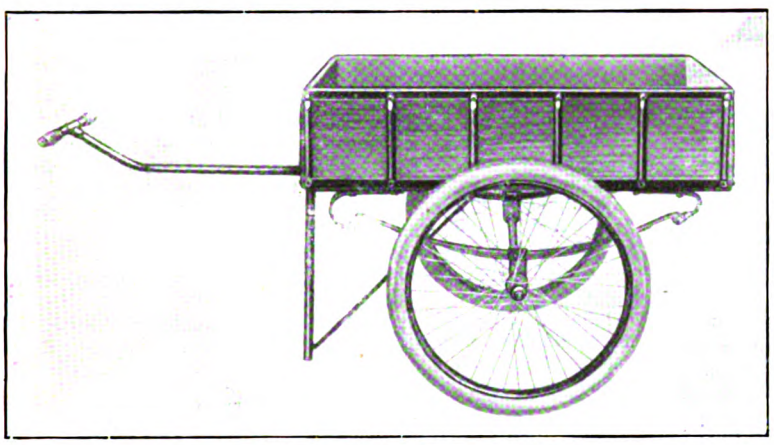
Willys Overland at the Agricultural Shows. — Willys Overland Crossley, Ltd., will be exhibiting an interesting range of commercial models at the most important Agricultural Shows this year as follows:—Leicestershire, Leicester, June 13th—14th. Royal Norfolk, Diss, June 18th—19th. Shropshire & West Midland, Shrewsbury, June 25th—26th. Peterborough, Peterborough, July 1st—3rd. Royal, Manchester, July 8th—12th. Great Yorkshire, Hull, July 16th—18th. Highland, Dumfries, July 22nd—25th. Royal Welsh, Carnarvon, July 23rd—25th.

The following vehicles will be exhibited at each Show:—Willys-Manchester 30/35-cwt. agricultural and cattle wagon. Willys-Commercial 6-cyl. 30-cwt. tipping lorry. Willys-Commerce saloon, the ingenious two-purpose machine. Willys express van. Willys-Manchester 2-ton enclosed van.

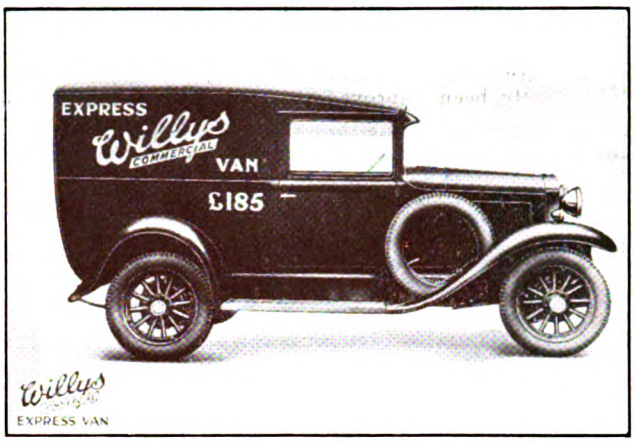
All-Steel Hand Carts.—B.A.T. Motor Spares and Repairs Co., Ltd., Kingswood Road, Penge, London, S.E.20, send us a leaflet showing the various all-steel hand carts made by them. These hand carts are suitable for all trades. They are fitted with wire wheels with pneumatic tyres and are well sprung. They are made in capacities of from 3 cwt. to 4 cwt. and prices are from £7 10s. to £9 5s.



A B.A.T. ALL-STEEL HAND CART.

A Maudslay Transports Triumph Cars. — The photograph shows a Maudslay 7/8 ton lorry, together with trailer, transporting for shipment to New Zealand ten Triumph motor cars, the total useful load being 11 tons 16 cwt. 1 qr. The photograph was taken outside the Triumph Company's works in Coventry.

The Willys Express Van.—Willys Overland Crossley, Ltd., Heaton Chapel, nr. Manchester, announce a satisfactory increasing demand for their Express van as illustrated, and that they have now completed arrangements by which any tradesman with a reasonable credit risk can take delivery of a Willys Express van, licensed and insured and complete with number plates for the payment of a deposit of £25, the figure including delivery charges. The van chassis has a four-cylinder engine of 15/40 h.p., four-wheel brakes, finger-tip control, etc. The list price is £185.



WILLYS EXPRESS VAN.

An Interesting Vulcan.—The Vulcan Motor and Engineering Co. (1906), Ltd., Crossens, Southport, England, have recently supplied the interesting 30 cwt. forward control baker's delivery van to the Yorkshire Co-operative Bakeries, Ltd. The chassis is a standard type and popular amongst tradesmen as it gives 25 per cent. more loading space than the normal control model. The two folding rear doors can be fastened back flat against the sides during loading operations which latter are facilitated by a folding step. The interior has two partitions running parallel to the sides for the whole length of the body, providing forty 24 loaf trays and forty-four confectionery trays. A long hooked stick is provided for drawing out trays which cannot be reached by hand. The inner partitions are detachable so that the vehicle can be used for ordinary transport purposes when desired. The overall dimensions are: 17 ft. 2 in. long; height—8 ft. 11½ in.; width—6 ft. 2½ in. The interior dimensions are: Length—11 ft. 10 in.; width—5 ft. 0½ in.; height—5 ft. 7 in.

THE MAUDSLAY 7/8 TON LORRY TRANSPORTING TRIUMPH CARS.

A VULCAN VAN FOR THE YORKSHIRE CO-OPERATIVE SOCIETY.

County Court Judgments.

THE following returns from the Registry of County Courts' Judgments, Whitehall, have been received relating to judgments entered up in the respective County Courts of England and Wales. Publication does not imply inability to pay. Many judgments may have been settled between the parties or paid. Judgments settled otherwise than through the Court may appear unless "satisfaction" is entered up within twenty-one days from judgment or allocatur. Registered judgments are not necessarily for debts. They may be for damages or otherwise, they may relate to actions *bona fide* contested between the parties, or they may be against defendants, liable in a representative capacity, and not personally; but no distinction is made on the register. Judgments are not returned to registry if satisfied in Court books within twenty-one days.

M. R. S., Ltd. (formerly Marstons Road Services, Ltd.). —In our May issue we recorded the registration of satisfaction to the extent of £1,805 on March 17th, 1930, of debenture dated March 5th, and registered March 7th, 1928, and stated that according to the register of mortgages, the debenture registered March 7th, 1928, originally secured £4,000. We are now informed that the full amount of the debenture securing £4,000 has been paid off and that there is no charge of any kind against the company.

Receiverships (Appointment or Release).

New Brighton Motor Coach Company, Ltd. — J. G. Hurst, of 51 North John Street, Liverpool, ceased to act as Receiver on March 31st, 1930.

Blue Band Bus Services, Ltd.—C. P. Barrowcliff, Incorporated Accountant, of 55 Albert Road, Middlesbrough, was appointed Receiver and Manager on March 31st, 1930, under powers contained in debenture dated November 12th, 1929.

Fishers Saloon Services, Ltd.—C. G. Jolliffe, C.A., of "Belvoir House," 45 Chepstow Road, Newport, Mon., was appointed Receiver on March 31st, 1930, under powers contained in debenture dated November 10th, 1928.

Blue Band Bus Services, Ltd.—C. P. Barrowcliff, of 55 Albert Road, Middlesbrough, was appointed Receiver and Manager on April 4th, under powers contained in debenture dated January 15th, 1930.

Malden Haulage Company, Ltd.—R. A. Somerville, of 69 Moorgate, E.C., was appointed Receiver and Manager on April 4th, 1930, under powers contained in debenture dated December 17th, 1929.

Palanquin Coaches, Ltd.—C. J. Weir, of 54/56 Coleman Street, E.C., was appointed Receiver on April 7th, 1930, under powers contained in debenture dated November 5th, 1929.

NOTICES

The World's Carriers is published monthly, on the 15th of each month. Annual Subscription, including **World's Carriers Year Book and Diary**, £1 1s., post free.

Advertisement tariff sent on request.

The Editor, while promising to give prompt consideration to any articles, notes, drawings, or photographs submitted, disclaims all liability in connection with contributions sent in voluntarily. If a properly addressed and stamped envelope is forwarded, every effort will be made to return rejected contributions.

Books, pamphlets, prospectuses, and newspapers (the latter having any special item conspicuously marked) should be addressed to the Editor.

All remittances should be made payable to "**The Carriers Publishing Company, Ltd.,**" Bangor House, 68 & 69 Shoe Lane, London, E.C.4, and crossed "Midland Bank, Ltd."

Telegrams: KARRIWORL, LUD, LONDON. **Telephone:** CENTRAL 6068 (2 lines).

Our Information Bureau.

FOR THE INFORMATION OF OUR SUBSCRIBERS we have recorded the names of General Carriers, Furniture Removers, Motor Haulage Contractors, and Forwarding Agents in all parts of the world.

Any subscriber requiring the name and address of a carrier, motor transport contractor, furniture remover, or forwarding agent in any particular town can obtain the information by writing us and enclosing a stamped addressed envelope.

FREE INFORMATION COUPON.

Information and advice can be obtained relating to Road Transport matters and concerning Motor Vehicles, such as Buses, Lorries, Steam Wagons, Delivery Vans and Tractors.

Progress of Civil Aviation.

At this time of the year the air is full of aviation in more senses than one, the great Air Pageant at Hendon having demonstrated once more the great advances which have taken place in the conquest of the air and having shown to a vast multitude of men, women and children what can be done by skilled pilots, not only in the direction of expert flying, but in what is now called aerobatics and crazy flying, a form of entertainment requiring the utmost skill and nerve on the part of the performer. It is therefore singularly appropriate that the report of the Progress of Civil Aviation for 1929 should make its appearance at this juncture and this year's volume is even more fascinating than that of previous years. This is largely due to the great advances which have been made, rendering possible a series of maps showing the air routes, present and prospective, not only of this country and the Dominions Overseas, but of the other great countries with their networks of air services in all parts of the world. The year under review is noteworthy for the opening of the great air route from this country to India, carried out by Imperial Airways, Ltd. This service has been very successful, although up to recently a section of the route was carried out by rail transport, the sector from Uskub to Salonica being carried out by night train. We have recently received notice from Imperial Airways, Ltd., that this section is now being undertaken by air, so that with the exception of the short section between Alexandra and Cairo the whole of the England-India service is now operated by air. Another development is that of co-operation with the railway companies whereby goods can be booked through from any railway station in Great Britain to any railway station on the Continent by a combination of rail and air services. Another important event, although outside the strictly commercial side of aviation, was the great Schneider Trophy Contest, which showed once again the great qualities both of British pilots and British machines. A third important development was the formation of National Flying Services, Ltd., with headquarters at Hanworth, Middlesex, and this organisation has already done good service and become firmly established. The main objects of the company are to organise flying clubs and to create a chain of aerodromes throughout the country, including landing grounds and other necessary facilities for civil flying. Already light aeroplane clubs have been formed in various parts of the country and at the end of last year the total membership amounted to 3,648. In addition to encouraging flying in privately owned aeroplanes the company is proposing to operate a public air-taxi service as well as to perform other useful functions, all of which will have the effect of encouraging civil aviation. A useful chapter in the report is devoted to the aircraft industry, with illustrations of well known types of aeroplanes and seaplanes together with brief descriptions of the two famous airships—R 100 and R 101. The latter airship was seen to great advantage at the Air Pageant, first of all hovering in the distance waiting for its turn to take part in the performance and then sailing majestically over the aerodrome so that every one of the great multitude present could obtain a close-up view of the gigantic vessel. After a long period of experimenting, of testing, of strengthening, and of alteration these two airships are now ready for long distance voyages and preparations have been made for the R 100 to cross to Canada during the present month. Another event of great interest was the air race round England for the King's Cup, which took place on Saturday, July 5th, and was won after a thrilling race by Miss Winifred Brown, the first woman to win this great race. There are some who criticise such racing, just as there are some who criticise motor racing and motor boat racing on the grounds that unnecessary danger is incurred without any corresponding advantage, but this is a short-sighted view as it is only by such events that the capabilities of the machines can be thoroughly tried out and new advances made which will render aviation more dependable, more secure and more efficient. An interesting development of a business character is reported in this issue of our journal, two representatives of a group of Leicestershire Quarry Owners having flown from Leicester to Heston Aerodrome to deliver cases containing samples of

Digitized by Google

roadstone to well known highway officials, including Col. C. H. Bressey, the Principal Technical Officer of the Roads Department of the Ministry of Transport, and Mr. A. Dryland, the Engineer to the Middlesex County Council. While this may be looked upon perhaps as a business stunt which was successfully carried out, it is also a lesson in the prospective development of civil aviation which draws public attention to the possibilities of this new form of transport. Some very interesting information was given by Sir Eric Geddes, Chairman of Imperial Airways, Ltd., at a luncheon to delegates of the Imperial Press Conference, when by special invitation they inspected the Air Port at Croydon. He referred to the two great world air services, the one already mentioned from London to India, which when it was inaugurated took 7½ days to accomplish the journey and which is now carried through in a scheduled time of 6½ days, and the London to the Cape Service, which is scheduled to occupy 11 days and which it is hoped will quickly be reduced to 9 days. This latter service it is hoped to start in January next as far as Lake Victoria and to be extended to Cape Town a month or two later. It is interesting to record that in the report for the year 1929, 6,932 flights were carried through, 29,312 passengers were carried, 839.7 tons of cargo were conveyed and 99.2 tons of mails transported, all these figures showing a big increase on any previous year. There is no doubt that with proper Government support civil aviation will continue to make progress at a rapid rate and the time is rapidly drawing near when the whole of the world will be linked up by air services which will bring all parts of the British Empire into ever closer communication with the heart of the Empire.

Comment on Current Topics.

Rationalisation of Industry.

Rationalisation is an ugly word and its definition varies as widely as many another word coined to meet a new development in industry. If, as was suggested at the first meeting of the Institute of Transport Congress, held last week in Glasgow, it can be truthfully described as scientific management, there are few business men who would object to its application to industry in general and incidentally to transport. We have, however, seen too much of another aspect of rationalisation to be contented with this definition. It is not a new thing, but only an old thing with a new name. Big concerns swallow up smaller concerns irrespective of economy, efficiency or science, the public are invited to subscribe huge sums of money and, taken in by the well known names at the head of the huge combine, do so freely. For a time all is well and then comes the slump. Competition has been eliminated, the need for economy removed and as a result dividends disappear and too often the inflated capital has to be reduced very drastically. All this is done under the name of rationalisation. A further serious evil is the displacement of labour and the increase of unemployment. This is going on in almost every industry; it is so in the Transport World. Let us have scientific management by all means, but we are going too far in this craze for combines, gigantic trusts, and quasi-monopolies, eliminating the efficiently conducted, well-organised concern, which is tempted by an offer, often far in excess of its real value, to part with a business, built up by careful work and individual enterprise and strenuous endeavour.

Long Distance Road Haulage.

We listened with a great deal of interest to the evidence given before the Royal Commission on Transport by Sir Maxwell Hicks, as the representative of members of the Road Transport Industry engaged primarily on long distance haulage. He made an admirable witness, clear and concise in his answers and showing a thorough grasp of his subject. It is in no carping spirit that we criticise the committee of which he is chairman. The Royal Commission is open to hear any witness who has useful information to give them to enable them to present a final report which shall complete their arduous work. As we listened, however, we could not help feeling that a great deal of the evidence had already been covered by the National Road Transport Employers' Federation and by the Commercial Motor Users' Association. Granted that those engaged primarily on long distance road haulage have certain urgent problems of their own, yet these problems are all considered and dealt with in the ordinary work of the Associations referred to. The membership of the constituent bodies of the National Federation and of the C.M.U.A. comprises the bulk of those engaged in such haulage work. The important question of licensing is one which is of great importance for good or ill of every member of the trade. The hours of labour; the conditions under which the men work; the urgent problem of the owner-driver, not bound by the conditions which control the larger undertakings, all these and other questions concern all engaged in road transport. In so far as the evidence of Sir Maxwell Hicks tends to strengthen that given earlier by representatives of the trade it is all to the good, but if the impression should be given that road haulage can be split up into distinct sections and work in watertight compartments then we venture to assert that the effect will not be beneficial to the Road Transport Industry as a whole.

Port Facilities.

In our last issue we gave a brief account of the opening of the new landing stage at Tilbury, owned by the Port of London Authority, a ceremony which put the finishing touch to the developments at Tilbury, previously described in our journal. The Port of London has now facilities for handling the largest boats which have been built, and this new landing stage has placed the great Port of London once more in the forefront as a passenger port. In the same issue we had an article which was specially written for us dealing with the Port of Glasgow and the Clyde Navigation, showing what has been done at that great port, not only to deal with present traffic, but to prepare for extensions anticipated in the future. The other great ports of the country have each of them had big schemes in hand on the same lines, and we have just recently had the opportunity of seeing over the Port of Antwerp, where great developments are being carried out and increased facilities provided. It takes an optimist to go ahead when trade is bad, but we are quite sure that those responsible for the development of the ports of the world are on the right lines in spending money and in improving their ports at the present time and that they will be amply repaid for their enterprise in the not distant future.

Railway Traffic.

The continued decline in the traffic receipts of the great railway companies is a disturbing factor, not only because every one wishes to see the railways prosperous, but because their prosperity or depression is a barometer of the trade of the country. Road Transport has been credited in the past with a large share in this railway depression. The railways are now the largest owners of road services in the country, but receipts continue to decrease. Nothing but a real trade revival can bring back prosperity, not only to the railways, but to all forms of transport, which must flourish and develop or be depressed and decline just as trade improves or diminishes. Up to a certain point reductions in traffic can be offset by economies, but the limit of safety is soon reached and this year costs may be higher owing to increased wages, and only a real and continued revival in industry can have the desired result.

Safety of the Railways.

At a time when we are all concerned with "Safety First," it is good to point out that travel by rail is the safest of all means of transport at any rate so far as this country is concerned. The returns of railway accidents issued by the Ministry of Transport show that out of 1,702,000,000 passenger journeys on the railways only three persons lost their lives. It may therefore be stated confidently that the risk of railway travel is a negligible one and the railway companies have good reason to be proud of their record. When we compare these figures with the appalling list of losses on the roads, we begin to wonder whether the freedom of the roads is a practical proposition in these days of fast travelling when everybody drives. It points once more to the need for precautions which will enable road transport to compete on more favourable terms with the railways in this beneficent direction.

The Storage of Petrol.

The regulations with regard to the keeping and use of petroleum are contained in "Statutory Rules and Orders (1907) No. 614" and in the Petroleum Amended Regulations of 1923 (No. 1359) and in the Petroleum-Spirit (Motor Vehicles, etc.) Regulations, 1929, contained in Statutory Rules and Orders 1929, No. 952. It is to the latter regulations that we now wish to draw the attention of our readers. The previous regulations deal for the most part with traders engaged in the sale of petrol, who are required to be licensed for the purpose by their local authorities. The Petroleum-Spirit (Motor Vehicles, etc.) Regulations, 1929, relate to the keeping and use of petroleum spirit for the purposes of motor vehicles, motor boats, aircraft and certain classes of engines provided always that the petrol is not kept wholly or partly for sale. In such cases no licence from the local authority is necessary but certain conditions must be observed which are as follows:—The petrol must be kept in metal vessels which are reasonably secured against breakage and so constructed and maintained as to prevent leakage. Every vessel in which petrol is kept, unless it is in the tank of a motor vehicle, motor boat, aircraft or engine, shall have marked upon it conspicuously "Petroleum Spirit" and "Highly Inflammable." The storage place must be in the open air or, otherwise, it must be effectively ventilated to the open air and there must be an entrance to it direct from the open air. In the storage place or near to it there must be kept fire extinguishing apparatus of a type capable of extinguishing fires occasioned by burning petroleum spirit, or a supply of sand or other effective means for extinguishing such fires. The storage place must not be attached to any building used as a dwelling place unless it is separated from it by a substantial floor or partition, constructed of material not readily inflammable, and has no opening therein, except in the case of a storage place in which not more than two vessels of a capacity not exceeding two gallons each are kept, in addition to that contained in the fuel tank of any motor vehicle, motor boat, aircraft or engine in which case there may be an opening in any such partition. Not more than 60 gallons of petrol may be kept at the same time in any one storage place. In computing the quantity, any petrol contained in the fuel tank of a motor vehicle, etc., must be included. Furthermore any two storage places not more than 20 ft. apart, in the occupation of the same occupier, shall be regarded as only one storage place. Except in the fuel tank of a motor vehicle, etc., the petrol shall not be kept in any vessel of greater capacity than two gallons unless the storage place is more than 20 ft. from any building, highway or public footpath and provision has been made by excavation or by the erection of retaining walls or otherwise to prevent the petrol from flowing out of the storage and notice in writing has been given to the local authority that the petrol is proposed to be so kept. The notice must be given before keeping the petrol in a vessel exceeding two gallons capacity. Except in the fuel tank of a motor vehicle, etc., and in not more than two vessels not exceeding two gallons each, petrol shall not be stored within 20 ft. of any building or of any stack of timber or other inflammable substance, unless notice in writing that petrol is proposed to be kept in the storage place otherwise than as stated, has been given to the local authority and the notice shall be repeated annually in January.

The Container Competition.

We have referred to the need for improvements in containers on railways in our columns. The subject was brought up for discussion at the World Motor Transport Congress, held in Rome in September, 1928, by Senator Silvio Crespi, whose energy and enthusiasm so largely helped to make the Congress such a success. We listened with much interest to Senator Crespi's address on the subject. As a result the International Chamber of Commerce is offering substantial prizes for the best design of container for international work and capable of use by rail, road or water. In this issue we give particulars of the competition which closes in September next. The railway companies have taken up the subject of containers with increasing interest during the past three years and their usefulness might be considerably enlarged if a more suitable type can be evolved.

The Traffic Problem—A Canal Way Out.

AN ingenious suggestion for relieving the traffic congestion on our roads—and particularly in London—is put forward by Sir Frank Baines, F.R.I.B.A. Sir Frank's view is that the canals of this country are really roads—relatively unused—and that they might well contribute materially to the solution of a pressing problem.

"We are now discovering," said Sir Frank in an interview, "that the roads of this country, built for what we might almost call medieval transport, are entirely inadequate. Many of our great centres of industry are connected by canals, but these are not recognised as the important links in the chain of commerce which they undoubtedly are. I wonder why so few people realise that there could be a continuous stream of traffic, day and night, on the waterways of this country, without causing the slightest congestion. Moreover, it would not add one iota to the horror of noise and disturbance which is to-day one of the great plagues on the main traffic routes."

Personal Notes.

Presentation.—After fifty years service with the South Wales Transport Company, Ltd., and the Swansea Improvements and Tramways Co., Ltd., Mr. David James, J.P., was presented recently with an electric clock by members of the two companies of both of which he is now Managing Director. Mr. James entered the service of The Swansea Improvements & Tramways Co. in May, 1880, as office boy—subsequently becoming Chief Clerk—and in 1898 he was appointed General Manager. In 1899 the Swansea Tramways Company acquired the Mumbles Railway and Pier, which also came under Mr. James' control. In 1914 the South Wales Transport Company, Limited, was formed for the purpose of operating services of omnibuses in Swansea and surrounding districts under the same Chairman, Mr. C. G. Tegetmeier, and Board of Directors, as the Swansea Tramways Company, the management being placed in the hands of Mr. James. This Company has a fleet of 170 omnibuses. Some years ago Mr. James was appointed a Justice of the Peace for the County Borough of Swansea. Mr. James is a Member of Council of British Electrical Federation, Ltd.

MR. DAVID JAMES, J.P.

The Royal Mail Steam Packet Company, Ltd. Mr. Walter Runciman Appointed Director and Deputy Chairman.—The Royal Mail Steam Packet Company announces that at a special meeting of the Court of Directors, held recently, the Right Hon. Walter Runciman, M.P., was appointed to be a Director and Deputy-Chairman of the Company.

Mr. F. G. Bristow. — Mr. F. G. Bristow, F.C.I.S., M.Inst.T., the General Secretary of the Commercial Motor Users' Association, has been elected Chairman of the Road Safety Committee, and also re-elected Vice-Chairman of the Public Safety Committee of the National "Safety First" Association, of which Association he was one of the Founders.

MR. F. G. BRISTOW, F.C.I.S., M.INST.T.

South African Railways Publicity.—Mr. A. H. Tatlow, Manager of the South African Railways Publicity Department, has proceeded on leave prior to retirement on reaching the age limit, and various changes in the organisation are about to be effected by the Administration. It has been decided that the Tourist and Travel Bureau and the Publicity Department be amalgamated under one head instead of operating, as hitherto, under separate heads. Mr. N. B. Hewitt, Manager of the Tourist and Travel Branch, has been appointed the chief of this amalgamated department, which is styled the Publicity and Travel Department.

London's New Chief Engineer.—Mr. T. Peirson Frank, M.Inst.C.E., F.S.I., has been appointed Chief Engineer and County Surveyor to the London County Council as from December 1st next, in succession to Sir George Humphreys who has retired after holding the position for the last 28 years.

Mr. W. H. Webbe, the Chairman of the General Purposes Committee, presenting the report making the recommendation, said that at no time had the Council been faced with so many engineering problems as was likely to be the case within the next few years—problems which in their solution would call for the highest degree of technical skill and administrative ability. Mr. Frank had discharged heavy responsibility in many cities, including Plymouth, Cardiff and Liverpool.

MR. T. PEIRSON FRANK, M.INST.C.E., F.S.I.

Mr. Frank, who has been City Engineer of Liverpool for the last four years, has been responsible for large development schemes, new arterial roads and main bridges costing several millions of pounds. He had charge of relief schemes at Cardiff, costing £750,000 and other large building schemes. During the war he served in the engineering unit of the London University and was afterwards a captain in the Royal Engineers. He was wounded in the Ypres Salient. Mr. Frank is an authority upon civil and municipal engineering and surveying and has lectured on these subjects in many parts of the country.

Reward for Outstanding Salesmanship.—Mr. John Hill, of Belfast, has reaped the reward for outstanding salesmanship in the form of a free trip to the United States in August. A novel contest was run recently by Reo Motors (Britain), Ltd., offering to the dealer who sold the greatest number of Reo units between January 15th and May 15th the opportunity of visiting the Reo Factory at Lansing, Michigan, U.S.A., at the cost of the Company. All Reo dealers in Great Britain and the Irish Free State were eligible and competition was keen, but Mr. Hill topped the list with more than a score of sales for the four months period. Mr. Hill's effort is particularly noteworthy in that trade conditions generally have not been brisk in Northern Ireland. So successful has been the result of this competition that Reo Motors (Britain), Ltd., have decided to run another on similar lines, and it is probable that Mr. Hill will be accompanied to an Overseas Convention at the Reo Works, Lansing, by confreres from England and Scotland.

MR JOHN HILL.

Institute of Transport Congress at Glasgow.

July 8th to 12th, 1930.

Impressions by the Editor.

SETTING down these few impressions immediately after the Institute of Transport Congress has finished, it is perhaps difficult to write in a critical spirit. The glamour of Gleneagles is still strong; the feel of the velvetlike turf, the glory of the hills in which the magnificent hotel is situated; the splendid hospitality which we enjoyed as the guests of the London, Midland & Scottish Railway Company, whose President is our President also—all these factors make it easy to say that the present Congress has surpassed its predecessors. If this does not seem gracious to our hosts on previous occasions at any rate we may truthfully say that this Congress has not been surpassed We have only mentioned one item in the programme out of many. Amongst other votes of thanks passed at the final business session on Thursday morning, the one to the Lord Provost of Glasgow for his civic reception and to him and the Corporation of Glasgow for their hospitality at the reception on Tuesday evening at the City Hall, was accorded a special ovation. The glorious building in which we met, the lovely reception rooms, the magnificent banqueting hall where dancing went on from 8 to 11.30; the fine concert which was enjoyed by those who did not dance, and the lavish hospitality will be remembered with appreciation by all who were privileged to take part in the proceedings.

Added to this the business sessions of the Congress were held in the Council Chamber in circumstances of great dignity and comfort, for which the members have again to thank the Corporation.

Again we are indebted to the London, Midland and Scottish Railway for the opportunity of spending a day on the Clyde on the new turbine steamer, "Duchess of Montrose" as their guests. Only those who have taken this trip can realise the glories of the scenery through which we passed. There is only space to mention one or two features. The lovely Isle of Arran with the Goatfell range and Brodick Bay; the Kyles of Bute; Rothesay Bay; Toward, Inellan and Dunoon; Loch Long; Arrochar and Gourock; all these conjure up visions of beauty which made the day a memorable one. The visit to the Forth Bridge on Saturday morning, enabling the members to appreciate the greatness of man's handiwork and the skill of the engineer, was a fitting contrast to the wonders of nature already referred to all too briefly.

The visits on the afternoons following each session were well attended and a hearty vote of thanks was paid to all our hosts on the various visits.

Following the reading of a very able Paper on "Railway amalgamation and its effect on the workshops," by Mr. E. J. H. Lemon, the Carriage and Wagon Superintendent of the L.M.S. Railway, on July 8th, a large party visited the Locomotive and Carriage Works of the London, Midland and Scottish Railway at St. Rollox. Special interest was taken in the progressive system of Carriage repair. The Locomotive repair shop is organised in a very modern way. Some of the latest automatic machines were much admired but the soda washing plant was most popular; no doubt with a view to future personal use.

After tea in one of the canteens the party proceeded to the Locomotive running sheds at Polmadie. Besides providing cover for about seventy locomotives there is a workshop for running and light repairs. One of the most interesting features was the electrically operated loading plant which was seen in operation.

Another large party visited the shipbuilding yard of Messrs. John Brown & Co., Ltd., at Clydebank, and were deeply interested in all they saw. A beautiful model of the new C.P.R. boat, the "Empress of Britain," was first admired and we then proceeded to the slipway from which the actual boat had been launched a few days before. The steamer is 730 feet long and of 42,000 tons gross tonnage, and as a point of interest it may be mentioned that eighteen tons of grease were used as a lubricant in launching her. We then went over the ship, which was being fitted up, and much admired her fine proportions and spaciousness. Two destroyers were also on the stocks and we were interested to hear that preparations were being made for the building of the gigantic Cunarder which is to wrest the blue riband of the Atlantic from the Germans and restore it to this country.

On Wednesday the delegates and their ladies were split up into three parties, one visiting the works of the North British Locomotive Co., Ltd., at Springburn, the second going to the Albion Motor Car Co. Ltd.'s works, at Scotstoun, which were described in our last issue, while a third paid a visit to Milngavie (pronounced "Mulgui") to inspect the George Bennie Railplane System of Transport. Thanks to the help of the London & North Eastern Railway Company, the experimental track is built over a side line of the railway and by this means a real demonstration was possible, and all the visitors who wished to do so were enabled to make a short trip on the railplane. Mr. George Bennie described the invention and showed its possibilities to a selected few and voiced his great indebtedness to the railway officials of the L.N.E.R. and the L.M.S. and to Mr. L. Mackinnon, the General Manager of the Corporation Tramways, for their valuable help and interest. We shall hope to give a description of this ingenious high-speed elevated railway in another issue.

A large number of the delegates took the opportunity of visiting the works of the Albion Motor Car Co., Ltd. After watching the manufacture of the various types of vehicles, the party had an opportunity of seeing a fully loaded 4-ton six-wheeled chassis put through its paces. Its exceptional springing was fully appreciated when it was driven over staggered concrete ramps and its great adhesion was shown by driving it through mud which came above the axles. After tea Sir Joseph Nall thanked Mr. Fulton for the opportunity of visiting such fine works, and for the way in which the party had been entertained.

Thursday afternoon was devoted to visits to the new motor garage at Victoria Road and the Coplawhill Car Works of the Glasgow Corporation Tramways.

The motor garage is exceptionally well provided with means, both for the general upkeep of the vehicles, and for any running repairs which may be necessary. The tyre repair shop and the brake testing apparatus were the two features which excited most interest.

The car works were also of very great interest as they showed very clearly the steps that are being taken to bring the tram car on to the same level as the motor bus as regards speed and comfort.

A visit was also paid to the factories of the Scottish Co-operative Wholesale Society at Shieldhall.

In this issue we give abstracts from the Papers on "The Economics of Port Development and Administration" by Sir George Buchanan, K.C.I.E., and on "Long Distance Omnibus Services—Their Place in the National Scheme of Transport" by Mr. W. J. Thomson, Managing Director, Scottish Motor Traction Co., Ltd. The first Paper, dealing with "Railway Amalgamation and its Effects on the Workshop" by Mr. E. J. H. Lemon, Carriage and Wagon Superintendent, London, Midland and Scottish Railway, could not, we felt, be abstracted in the space at our disposal. It must suffice to say that it dealt with a record of achievement in scientific reorganisation of workshop practice which may well be followed in many another industry with beneficial results. Mr. Lemon was justly congratulated on what has been accomplished and we can only say, if this be rationalisation, then it is a goal to be pursued with the utmost enthusiasm. A pertinent question was put to the author by Mr. W. H. Gaunt in the course of the discussion, viz., as to the effect on the workmen. It is unfortunately true that all improvement in methods, all economy in practice, and every introduction of new machinery tends to throw out of employment men who thereby become superfluous. In the same way the mechanisation of industry has the tendency to make the work of the individual more stereotyped, to narrow him down to a small groove and eliminate the highly skilled man. This too is true of all industry and is not peculiar to railway work, and what is lost in one direction is gained in another. As the President said, the displacement of labour, consequent on the introduction of new machinery, is compensated by the employment of new labour in making the machinery, and all factors must be taken into account in arriving at a right judgment of the subject.

A hearty vote of thanks was accorded to Mr. A. H. Roberts, Chairman of the Scottish Section; to the Joint Hon. Secretaries, Mr. R. Killin, C.B.E., General Superintendent, London, Midland & Scottish Railway, and Mr. L. Mackinnon, General Manager, Glasgow Corporation Tramways, who were indefatigable in their arduous work,

Digitized by Google

and to all who had helped to make the Congress a success.

The vote of thanks accorded to Sir Josiah Stamp, as President, for his work as Chairman at the sessions, moved in well chosen words by Mr. Sidney Garcke, was received with acclamation and voiced the feelings of all the delegates who realised how much the personality of our President had conduced to the great success of the Congress.

The Economics of Port Development and Administration.

SIR GEORGE BUCHANAN, K.C.I.E., the well-known consulting engineer and specialist in harbour, dock and river works and economics of transport, in the course of an able and interesting Paper entitled "The Economics of Port Development and Administration," said that for the purposes of his Paper he proposed to define economics as "the common sense way of doing what is best for the community at large, irrespective of vested interests, expediency and politics," any one of which was frequently the negation of common sense.

A port had been represented as a funnel through which the commerce of a country flowed, and a badly constructed, badly administered port could largely cripple the trade of the country or district it was designed to serve.

What constituted adequate facilities for the prompt despatch of steamers and delivery of goods was a question that must be settled at the port concerned, but, as a rule, it resolved itself into:—

(1). A deep well-buoyed and well-lighted channel extending from the sea to the entrance to the docks or wharves.

(2). Sufficient deep water wharf and quay accommodation, either inside docks or alongside a river or harbour front.

(3). An abundance of cranes or conveyors and ample shed and warehouse room.

(4). Ample railway and road connections to the interior and, where there is inland navigation, facilities for transhipment to river steamers or barges when and where required.

PORT ADMINISTRATION AND FINANCE.

After dealing with Port Construction, Sir George said that the economic success of a port depended on its administration as much as on its construction and trade and he suggested that by observance of the following broad principles, efficiency could best be obtained:—

(1). Whatever form of administration be adopted, the whole of the foreshores within the port area should be in the absolute control of the port authority.

(2). The Government of the port should be free from political influence of any kind.

(3). The administration should include representatives of the various bodies interested in the port's welfare.

(4). The port should be self-contained financially, and revenue should be expended solely on its maintenance and development, any surpluses being used for building up reserve funds, reducing port charges and extinguishing capital debt.

(5). Rates, dues, and charges should be uncomplicated, easily collected, and levied so that there is an even distribution of taxation. No portion of the community should be taxed for the benefit of another portion which pays no rates, the principle being rigidly adhered to that everything using the port must contribute towards its upkeep. At the same time it should be remembered that there is a limit to the capacity for payment by both ship-owners and merchants.

(6). Capital charges should be so adjusted as not to burden unduly either the existing generation or posterity, and adequate arrangements should be made for the ultimate amortisation of debt.

(7). It should not be forgotten that a port is never finished and that development should invariably be kept ahead of actual trade requirements.

(8). Labour must be handled wisely and treated with strict justice and impartiality.

Discussing the forms of port administration generally adopted in the British Empire, the author said that State control and aid, as opposed to State management, had much to be said in its favour, but on the other side of the question it must be borne in mind that with the resources of the State behind an undertaking, there was frequently a tendency to disregard the economic aspect, and, under pressure, to carry out works which might or might not, in the distant future, prove profitable to the State.

Whatever form of port control was adopted, the advantages of a close relationship between the ports and the transporting medium behind the ports, be it railway, river, or road transport, were so great that co-ordination by some common controlling authority was of the first importance. In the United Kingdom, power was given to the Minister of Transport to co-ordinate the working between railways and independent ports, and whilst at some ports which were not railway ports, a railway company operated the traffic within the port estate, under an agreement with the port authority, at most of the large ports there were exchange sidings where control was transferred from the railway company to the port authority, and the locomotives of the latter did the haulage inside the port estate. The Port of London Authority, the Mersey Docks and Harbour Board, the Clyde Trust, and the Tyne Improvement Commission were typical examples of British ports run on the lines indicated. They were free in the conduct of their affairs from any direct control by Government or party. When new schemes requiring additional borrowing powers were proposed, under their constitutions they must submit them to Parliament for criticism, but otherwise they were no more dependent upon Government than was a public company controlling its business under statutory rights.

REQUIREMENTS OF SHIPOWNERS.

Passing on to the subject of what shipowners wanted at a port, Sir George said that there were almost as many classes of ships as there were ports, but the aim of each was to turn the ship round as quickly as possible at the port, and, if possible, with a return cargo. From the shipowners' point of view he suggested that the ideal would be an adequate number of well equipped and well laid out large ports, each port possessing a natural harbour, a natural hinterland and adequate railway facilities. At this ideal port it should be possible to discharge whole cargoes and take in whole cargoes without removing the vessel from her berth. To satisfy the shipowners, the port authority could build docks and quays having ample depth of water to accommodate the largest vessels, the docks could be equipped with every possible labour saving device and warehouses provided of sufficient capacity for taking in an entire ship's cargo on one floor and have ready for shipment a cargo on another floor, but the one outstanding cause of delay was the human equation, viz., dock labour with its strict limitation of working hours per day.

BRITISH PORTS.

In no country in the world was port efficiency more essential than in the United Kingdom. In the first instance many of the ports were managed by the municipal corporations who were apt to regard them as useful contributors to the town revenues and to divert their funds to municipal purposes. Other ports were controlled by private persons or companies. Gradually the autonomous port trust evolved, and it was very many years since ports had been used as a taxing agency for purposes not connected with their own development.

There had been considerable discussion on the advantages to the public, and to shipowners, of trust ports and railway ports respectively. Obviously there was a great deal to be said in favour of a chain of railway owned ports and docks linked up with the general transport system of the country, and, having regard to the amount of capital invested in the railways as compared with that allocated to the ports (4.75 per cent. of dock capital to total capital of the four railway groups), it was perhaps not to be wondered at that railway companies were apt to regard the port more or less on the same lines as a railway station. He suggested that efficiency would be best promoted by the observance of certain essential conditions, viz:—

(1). A railway port should first and foremost pay its way in working expenses, interest on capital, and sinking fund and not be regarded merely as an ancillary undertaking to the railway system shewing, in many cases, an annual deficit on its working.

(2). Subject to the general control of the Directors and General Manager, a railway port or dock, or system of ports, controlled by a railway should be under the control of a port or docks manager with port experience as against railway experience.

(3). The requirements of ship owners and traders must be more considered than is often the case in a port which is the terminus for a railway and is controlled by the railway company.

Generally speaking he was of opinion that the ports of the United Kingdom were well managed but that more capital was required for their further development. Rationalisation of ports had not yet been taken in hand seriously but an enquiry on those lines might be beneficial.

Digitized by Google

The author then dealt very ably with the Ports of India, South Africa, New Zealand and Australia.

THE BEST FORM OF ECONOMIC PORT ADMINISTRATION.

In conclusion Sir George Buchanan gave his personal opinion on the best form of economic port administration.

He said he was not in favour of nationalisation or State management and control. He was in favour of autonomous control by port trusts, as carried out in London and Liverpool and other great ports in the United Kingdom but, in the case of a new port under development, where the State had to advance the capital, he thought that the State should guide rather than control. On the one hand, the port should be allowed a free hand in all matters of detailed working. on the other, the port would consult the State on policy and important matters of development and the latter should exercise a beneficient supervision over port finance, but in no case should port revenues be incorporated with those of the State nor port funds be diverted for general State purposes. The State might well consider that in the public interest there should be some measure of control over the raising of loans for capital work, and such control as was exercised at present over the loan policy of Indian ports would be an advantage.

Generally speaking, however, the ports must be permitted to work out their own salvation.

Regarding railway companies' ports as opposed to State railway ports, he saw many advantages in such a form of control provided that the port was in its working arrangements and finance, kept a separate entity from the railway.

Long Distance Omnibus Services—Their Place in the National Scheme of Transport.

"LONG Distance Omnibus Services—Their Place in the National Scheme of Transport" was the title of a paper presented by **MR. WILLIAM J. THOMSON, J.P.,** Director and General Manager of the Scottish Motor Traction Co. Ltd., in the course of which he said that a century ago we would seem to have lost the road as a potential factor in our lives, but at the beginning of this century, it entered upon an entirely new and more imposing phase of activity and usefulness. Those who had been associated with road transport from its inception would never cease to marvel at the change that those twenty-five years of motor vehicular development had wrought in our road conditions.

The motor omnibus or coach, following as it did upon the development and perfection of the motor car, had similarly to pass through the initial stages. Omnibus traffic had first to develop in immediate relationship to short distance requirements and demands, and the wonderful network of routes operating in this country to-day had only been achieved by an exhaustive and never ceasing study.

Routes on a more extended and more ambitious scale were bound to follow, but the leading operators most closely identified with the movement from its inception, approached the new development with a commendable degree of caution. The operation of a twenty or thirty miles route was inherently different from that of a 200 or 400 miles route. It was apparent to the leading companies that long distance routes presented an entirely new set of operating conditions, and within the last few years these had been carefully and cautiously examined and reviewed. The companies were not to be deflected from what they rightly considered to be their duty to the travelling public, by cheap, irresponsible or indifferent service or fare cutting or unreasoning competition or threats of competition. It had also to be kept in view that the leading companies, where possible, avoided encroaching upon each others sphere of operations, and long distance routes, run on what he considered efficient lines, could only be undertaken by mutual arrangement and harmonious relationship—the one company with the other.

It would be admitted that the leading companies had in recent years established omnibus services throughout the kingdom which compared favourably with the 'bus concerns in any part of the world to-day, and the promotion of new long distance routes would only be entered upon and operated along the most efficient and most careful lines in the light of a vast experience gained on the shorter routes.

By reason of the new development in omnibus service, they had virtually created a new class of traveller or sightseer or passenger—call him what they would—who only awaited the opportunity presented to him now of being comfortably seated in his own car, with his own driver and conductor, and inspired with an extraordinary sense of personal and actual possession which was entirely novel. He could not too strongly emphasise the view that here they had entered upon an entirely new phase in the world of travel.

THE RAILWAYS AND ROAD TRAVEL.

When dealing with the subject of long distance road travel and its place in the national scheme of transport, he thought it would be well to consider what effect other forms of travel, and particularly railway travel, were likely to have upon omnibus passenger traffic. To-day—and he spoke from a fairly intimate association with railway administrators in recent months—he was gratified to find that the railway mind was more closely in harmony with the road mind than he expected in such a short time. This augured well for the future, not only on account of the great financial interests involved but the welfare of the travelling public.

Could the railway companies cater for the class who wanted cheap travel even at the expense of time? In other words, could the railway companies effect a drastic reduction in fares to meet that class, and yet make ends meet?

It was generally admitted that the railways of this country were managed as efficiently as any in the world, and whilst there might be avenues of economy still unexplored, the achievement of economies sufficient to justify a general reduction in fares must necessarily tax the most acute minds in the railway world. The problem, it was admitted, was hedged around with difficulties, and doubtless was receiving the most careful consideration of the railway companies, but two questions, amongst many others, occurred to one's mind, namely:—(1) Can a reduction of fares be made on ordinary trains? (2) Can reduced fares be effected by special trains?

From the railway point of view he should think the first method, if practicable, would be preferable. It seemed to him that the railway companies in approaching the first question would naturally ask themselves—Would a reduction of fares be compensated for by a marked increase in the number of passengers, without adding materially to the costs? In considering that point he might take an instance that could readily be followed. Assuming that the railway companies reduced their Edinburgh-London fare from 99s. to 50s., they would require to carry nearly double the number of passengers they now carry to maintain their present gross revenue. Presumably their trains were carrying more than 50 per cent. of their capacity to-day, and this increase of passengers would therefore demand more rolling stock, more engine power, more collectors, attendants, etc. The costs would rise considerably in consequence, and it remained to be seen whether the companies could afford that.

In regard to the alternative, namely, reduction of fares by special trains, he supposed the railway companies would be justified in saying to themselves,—"We have the permanent way, we have the necessary buildings, plant, etc., and we have the organisation, all of which are now being paid for by the revenue from our ordinary train services. Any extra or special trains we put on will not require additional plant or staff other than the drivers and attendants of these special trains, therefore we can run these special trains at very low fares and still have a good profit." That seemed reasonable, although to his mind it presented a serious drawback, in that such a reduction in fares by special trains might deplete the revenue of the ordinary trains, and the question again arose, could the railway companies afford that?

He had briefly hinted at two of the many aspects of what was admittedly a difficult problem with which railway companies were faced to-day, and their solution would have an important bearing upon the future development of the leading omnibus companies. Should the railway companies find it possible further to reduce their long distance fares and make a profit, he for one—and he was speaking as a long distance road operator—would welcome it, as he was firmly convinced that it would add materially to the great and ever increasing volume of passenger traffic all over the country, both by rail and road. The desire on the part of the public to travel was greater, the urge was more insistent than it ever was, and it would increase with the passing of the years. Any improvements or economies, therefore, on the part of the railway companies were to be welcomed not only by road operators, but by the great travelling public whose interests both rail and road companies sought to conserve.

On the other hand, when considering the future of long distance travel by road, the question arose as to whether the bus and coach companies could afford to continue at their present fares. His own view, based on a long experience of the business, was that he saw no reason why the bus companies should not continue somewhere near their present fares. In saying so he knew that they were likely to be faced with

Digitized by Google

increased costs in certain directions, the tendency being towards vehicles of luxury and refinement, but there was every likelihood of reduced costs in other directions. The steady improvements in the design of the vehicles and in tyres, coachwork and accessories, and economies in the manufacture, were likely to prove important factors in eventually running the services more economically.

THE FUTURE.

In connection with long distance travel, he thought he was justified in taking the view that the immediate future held great possibilities of expansion and development. For the time being the leading companies were wise in establishing on a sound and economical basis, main long distance through or non-stop routes, between certain well defined points, but the natural development from that would doubtless take the form of a certain number of limited stops at important points or junctions along the routes, whereby passengers would be able to break their journey and proceed from those junctions to other centres across country. In other words, he foresaw great highway lines, not only running north and south, but east and west, embracing a large area of our country with great potentialities for public service, convenience and accessibility. Such a development, beneficent and far-reaching in its consequences, could only be evolved out of a long experience on the part of the leading bus operators. The process would necessarily be gradual, as the expansion of main routes such as he had indicated could only be accomplished by the principal bus companies collaborating with one another. It would be seen that that was an essential factor if such a development was to take place on a sound basis and was to be free from unhealthy rivalry and overlapping. He looked forward to the future of long distance travel with no misgivings, but he could not too strongly urge the supreme importance of leading operators entering upon those further extensions with the utmost regard, not only for the public need, but the economic and efficient administration of the services. Unhealthy competition and inexperienced operations were to be deprecated. The bus business to-day called for the highest measure of skill and experience, technical, financial and administrative, and proposed new routes or extended services—however attractive they might seem—should only be promoted after the most careful deliberation and with unrelaxing vigilance.

He welcomed the recent co-ordination of road and railway interests. It was all to the ultimate good of the public, and that was the only true test and sure foundation of successful union. Such an amalgamation or co-relation of interests might seem to be on the face of it of a purely financial order, something arranged in the market place, or on the exchange—but the primary factor was the public weal and the public need—no other! According to the measure of public service so would a real and enduring union be achieved.

Sir Josiah Stamp had stated in no uncertain manner on the platform and in the public press that any fears of monopoly were both misinformed and groundless, that the combined experience of the management of omnibus concerns and railway companies should generally prove beneficial to the public.

He (Mr. Thomson) looked upon the further development of long distance road travel as in no sense competing with railway interests, but as a lively awakening of a new desire to travel.

They were only at the threshold of a great and far-reaching development in motor road transport in this country, and he believed the next twenty-five years would witness as many startling changes as they had seen in our time, in this respect.

Long distance travel by motor coach was but another name for "wider vision," a striking manifestation of the many helpful influences at work to-day, the faint glimmerings, let them hope, of the new dawn of a healthier and happier nation.

* * * *

First Dinner of the Scottish Section of the Institute.

ON Thursday evening, July 10th, a very successful dinner was enjoyed by the delegates, Mr. A. H. Roberts, O.B.E., presiding. He was supported by the President, Sir Josiah Stamp, G.B.E., and amongst those present were the Lord Provost of Glasgow, Mr. Thomas Kelly, J.P., Sir Hugh Arthur Rose, D.S.O., Sir Geo. Buchanan, K.C.I.E., and Lady Buchanan, Sir John Hunter, K.B.E., Sir David Mason, O.B.E., Sir John Reid, K.B.E., D.L., Sir D. M. Stevenson, Bt., LL.D., Sir Robt. Wilson, D.L., LL.D., J.P., Mr. T. Abbott and Mrs. Abbott, Mr. Ashton Davies, O.B.E., Dr. K. G. Fenelon and Mrs. Fenelon, Mr. J. H. Follows, C.B.E, M.V.O., and Mrs. Follows, Mr. S. E. Garcke and Mrs. Garcke, Mr. W. H. Gaunt, O.B.E., Mr. C. le M. Gosselin, Mr. A. Winter Gray, Mr. E. G. Guest and Mrs. Chris. Guest, Lieut.-Col. A. Hacking, D.S.O., M.C., Mr. D. Halliwell, M.B.E., and Mrs. Halliwell, Mr. R. Killin, C.B.E., J.P., and Mrs. Killin, Mr. E. J. H. Lemon and Mrs. Lemon, Major-Gen. S. S. Long, C.B., Mr. L. Mackinnon and Mrs. Mackinnon, Mr. R. M'Leod and Mrs. M'Leod, Mr. A. Newlands and Mrs. Newlands, Mr. J. B. Osler, Mr. J. Paterson, Mr. O. Glynne Roberts and Mrs. O. G. Roberts, Mr. A. H. Roberts, O.B.E., and Mrs. A. H. Roberts, Mr. D. Ross-Johnson, C.B.E., and Mrs. Ross-Johnson, Sir John S. Samuel, K.B.E., L.D., Sir Arch. M'Innes Shaw, C.B., D.L., Mr. C. E. R. Sherrington, M.C., and Mrs. Sherrington, Mr. H. W. Watson, C.B.E., M.V.O., and Mrs. Watson.

To the members, their ladies, and other guests from the South the evening was specially interesting, particularly to those who had never enjoyed a Scottish Banquet before. The menu, kindly explained by fellow guests, and the piping of the Haggis were much enjoyed.

The Royal toasts having been received with enthusiasm the toast of the

INSTITUTE OF TRANSPORT AND THE SCOTTISH SECTION

was proposed by Sir Hugh Arthur Rose, D.S.O. The President, Sir Josiah Stamp, replied in his usual inimitable way, blending gay and serious, light wit and deep thoughts together. In the course of his remarks he said that the Scottish area exhibited to the full all the problems and clashing of interests in modern transport. It had the extremes of dense and of sparse population, of short distance traffic and of very wide areas, of coast, canal and deep sea traffics, of competition by road, coastal and railway services; the tram and bus problems were also acute. The extent of these problems was also the measure of the assistance which the Institute of Transport, with its new atmosphere of co-ordinated study and facility for it, could render. The success of the Congress had been so great that he was led to hope for a great extension of membership in Scotland, and a real impetus to the study of co-operation and economic development.

Sir Josiah Stamp expressed the view that the past year had been one of material progress and re-shaping of policy for the public good, and the true economical use of the resources of the country. If the task were that of obtaining the benefits of competition between alternative resources to be chosen for particular tasks without waste and duplication of capital, then all parties could contribute towards this end without relaxing their energies in their own special fields.

The Papers before the Institute during the year had covered all fields—air, road, rail and sea, and the discussions at the Congress had been on topics so much to the fore in practical life as rationalisation of workshops and economy in use of stock; as the development of port facilities, and as the true place of long distance road services. These discussions had been of a very high order. A new literature on transport was being rapidly built up, and instead of lagging behind actual practice, now bids fair to be in advance of it.

The toast was received with enthusiasm.

The toast of "The City and Corporation of Glasgow" was proposed by Mr. S. R. Beale, Chairman of the Glasgow Chamber of Commerce, and replied to by the Lord Provost who said that Glasgow had good reason to be proud of its transport system and of its financial position. They were also proud of their electricity department which had just issued its accounts and showed a profit of £200,000 for the past year.

The toast of "The Chairman" was briefly proposed by Mr. D. Ross-Johnson, C.B.E., who spoke in high terms of his work as Chairman of the Scottish Section and in connection with the Congress.

Mr. Roberts, in reply, said the Section was only two years old and had only a few members at present, but they hoped as a result of the Congress to secure a large addition to their numbers. They had tried to follow the objects of the Institute as laid down by the President. He paid a tribute to the two honorary secretaries who had done all the work.

A few appropriate words were spoken by Mr. R. Killin and Mr. L. Mackinnon, both modestly giving the major credit to the other.

A very enjoyable Concert brought the evening to a close.

The Royal Agricultural Show.

Since the War the Royal Agricultural Society's Show has varied much in its importance as an exhibition ground for road transport vehicles. In 1919 and 1920 it looked as though it would become of equal importance with the Commercial Vehicle Show, Olympia, but for various reasons, in this respect, sank into insignificance. Last year, at Harrogate, however, it showed signs of recovery, and this year it may be regarded as fairly representative of the industry.

It was opened on 8th July by H.R.H. The Duke of Gloucester in weather which at first appeared to be typical of Manchester, but which subsequently cleared and was all that could be desired. For a 10s. day the Show appeared to be well attended though the attendance was certainly not all that could be desired.

The class of vehicle which dominated the exhibition was, no doubt, the agricultural tractor type, some of which were designed for purely agricultural purposes, whilst others were more universal in their application. Amongst these we noticed the Rushton tractor, by the Rushton Tractor Co. (1929), Ltd., a universal machine for hauling or driving agricultural implements or machinery and for road haulage and generally versatile in its application. Then Agricultural and General Engineers, Ltd., were showing a very comprehensive range of tractors suitable for many purposes. These included the Aveling & Porter crude oil tractor, the Blackstone crude oil tractor, the Peter Brotherhood petrol-paraffin tractor, the Garrett "Suffolk Punch" steam tractor, and Vickers tractor by Vickers (Crayford), Ltd. Marshall, Sons & Co. were showing a crude oil tractor. The Ford Motor Co. showed a Fordson tractor, and J. and H. McLaren, Ltd., showed diesel oil tractors. Latil Industrial Vehicles, Ltd., made their well known 4-wheel drive, 4-wheel steering and 6-speed gear tractor the feature of their stand.

Many of the above tractors were shown on various stands. They appear to us to be intended rather for the overseas market than the home market. It is very noticeable that the at one time familiar 5-ton steam tractor has now become a thing of the past, though Wm. Foster & Co., Ltd., were showing a 5-ton Wellington compound tractor on rubber tyres.

Motor Coaches.

The Royal Show appears to be growing in importance as an exhibition centre for passenger vehicles. The makes included were as follows:—The Albion Motor Car Co., who were showing a 32-seater bus on an overtype "Viking Six" chassis with forward control and 36/90 h.p. 6-cyl. engine; Morris Commercial Cars, Ltd., a 32-seater service bus; Dennis Bros., Ltd., a 20-seater parlour coach and a 32-seater saloon bus, both excellent examples of this famous firm's products; Bean Cars, Ltd., were showing an 18-seater coach; A.E.C. were showing a "Regal" 30-seater long distance coach sold to the Manchester Coachways, Ltd., and also an 80 h.p. A.E.C. English Electric 60-seater double-deck trolley bus; Lookers, Ltd., were showing "Commer" and Chevrolet coaches, 14 and 18-seaters respectively; Maudslay buses and coaches were being shown on the stand of Leach & Seed, of Manchester. The Vulcan Motor & Engineering Co. were showing a "Duchess" 26-seater coach; John I. Thornycroft & Co., Ltd., were showing an exceptionally fine saloon bus on an F.C. "Forward" 6-wheel chassis, the bodywork being carried out by Strachans. The chassis has a 6-cyl. 41/80 h.p. engine, vacuum servo brakes on all wheels, electric lighting and starting. Price, £1,480; Leyland Motors, Ltd., exhibited a single-deck bus on a "Tiger" chassis with 38.4 6-cyl. engine unit construction with gear box. Dewandre operated 4-wheel brakes, 38 in. by 8½ in. balloon tyres, single front, twin rear.

Cattle Trucks.

Various manufacturers had given considerable attention to the design of vehicles intended for the transport of cattle. Amongst these we noticed that of the Eagle Engineering Co. who were showing a three-deck trailer for the transport of lambs, etc., which could be converted into a two-deck vehicle for sheep or a one-deck vehicle for cattle, the various decks being raised or lowered by a winch gear. Lookers, Ltd., were showing both Chevrolet and Commer cattle trucks, and Dodge Bros. a vehicle of the same type. Vulcan Motor & Engineering Co. were showing a 50-cwt. forward control chassis with cattle body. Bean Cars, Ltd., also showed a cattle truck.

Horse Boxes.

Dennis Bros. were showing a very useful 4-horse box, mounted on an E.B. bus chassis, with groom's compartment and lockers for saddlery and fodder. Vincents, who specialise in horse boxes, had on view excellent examples of this type of vehicle, as had also the National Motor Horse Box Co., Ltd., who were showing a two-horse box on a Ford chassis. Willys Overland Crossley also were showing a 2-horse box.

Motor Vans.

Motor vans were shown on many stands including Chrysler Motors, Ltd., who were showing a "Fargo" 15-cwt. delivery van; Morris Commercial Cars Ltd., a 35/40-cwt. van; the Vulcan Motor & Engineering Co. a 30-cwt. van; The Albion Motor Car Co. were showing a 20/36 h.p. chassis with a van body with roller door at the back. The advantage of this type of door is that no space is required for opening and closing as is the case with hinged doors. It is very convenient for backing into bays. This van was built to the order of W. J. Brooks and Sons, Ltd., biscuit manufacturers, Manchester.

Dennis Bros., Ltd., were showing a 30-cwt. van on a standard 30-cwt. goods chassis. It had fully enclosed cab, normal control, 4-cyl. engine of 36 b.h.p., and 4-speed gear box unit with engine and overhead worm driven rear axle.

Lookers, Ltd., exhibited a "Commer" 2½/3-ton chassis fitted with a tilt van body. Bean Cars, Ltd., were showing a 40/45-cwt. van on a forward control chassis with a 51 h.p. 4-cyl. engine, 4-speed gear box, fully floating rear axle, 5-lamp lighting set, etc. Willys Overland Crossley, Ltd., were exhibiting a 2-ton van on a "Manchester" 22.5 h.p. chassis.

Motor Lorries.

The Albion Motor Car Co., Ltd., were showing a 5-ton lorry mounted on pneumatic tyres. It was fitted with a 35/55 h.p. engine, had forward drive and fully enclosed cab.

Saurers, through their agents, J. Blake & Co., Ltd., showed a 6-ton petrol lorry and also a 7/8-ton heavy oil engined lorry.

Leyland Motors, Ltd., were showing a "Badger" 50-cwt. chassis with a 25.6 h.p. engine, 4-cyls., with overhead valves, 4-speed gear box with central change enclosed cab and goods body. A "Beaver" 70-cwt. model with 28.9 h.p. engine, pneumatic tyres and fitted with a tipping body. The tipping gear is the Scania-Vabis, which makes its appearance in this country for the first time. It is of the hydraulic type with two plungers. At the head of each plunger is a sprocket wheel over which passes a chain fixed at one end to a frame cross member, and at the other an arm attached to the body. There was also a "Bison" 90-cwt. lorry with a 33.5 h.p. engine, enclosed cab and pneumatic tyres.

A particularly interesting exhibit on the Dennis stand was their new 12-ton 6-wheel chassis with 6-cyl. engine of 40/100 h.p. The vehicle was built to the order of C. & G. Yeoman, road transport contractors, of Canterbury, for their London & East Kent express service. The vehicle has a body length of 24 ft. and a width of 7 ft. inside measurements.

Vulcan Motor & Engineering Co. (1906), Ltd., showed amongst other exhibits, a farmer's 30-cwt. lorry, a 30-cwt. chassis with tipping body, and a 70-cwt. detachable sided lorry.

Latil Industrial Vehicles, Ltd., showed their N.P.5.L.L. type 5-ton low loader with front wheel drive; a 5-ton tractor with trailer (articulated 6-wheeler), and a 10-ton 4-wheel drive tractor lorry.

John I. Thornycroft & Co., Ltd., were showing a 5/6-ton 36/60 h.p. chassis with 40 in. by 8 in. pneumatic tyres and hinged-sided body, and a 3-ton rigid six-wheeler with 22/40 h.p. engine, being the W.O. subsidy type chassis fitted with hinged-sided body and tailboard.

Morris Commercial Cars, Ltd., were showing a 1-ton chassis with tipping body, a 6-wheel bulk capacity truck, a 50-cwt. "Leader" truck, and a 12-ton 6-wheel truck, also a 30-cwt. chassis with tipping body.

The Associated Equipment Co. had on view a 7/8-ton lorry, for Knowles & Son, of Bolton, mounted on a "Mammoth" chassis which has a 6-cyl. engine with overhead valves. The wheels are shod with 42 in. by 9 in. pneumatic tyres. The platform is 20 ft. long and the

wheelbase 16 ft. 7 in., obtained by adopting the forward drive. It was sold to the Stockport Co-operative Society. There was also a "Monarch" with a flat platform body. This chassis is very similar to the "Mammoth" but has a 4-cyl. engine.

Bean Cars, Ltd., showed a 50-cwt. tipper with a 4-cyl. 51 h.p. engine, 4-speed gear box, wheels shod with 36 in. by 8 in. tyres. A flat platform lorry of 4-ton capacity with 62 h.p. engine and 36 in. by 6 in. pneumatic tyres. Also a 30-cwt. truck with 46 h.p. engine and 4-speed gear box.

Kerr, Stuart & Co. were showing two of their diesel engine lorries. The engine develops 72 h.p. and is capable of running on crude oil at 4d. per gal., and the working costs are stated to be no more than 6d. per vehicle mile. One of these vehicles was fitted with a flat platform body and the other with a 3-way tipping body. The latter was sold to J. Beresford & Sons, Ltd., of Tunstall (haulage contractors). Kerr Stuarts' diesel engined lorries have now covered no less than 100,000 vehicle miles.

"Commer" lorries, exhibited on the stand of Lookers, Ltd., included a 2-ton drop-sided lorry and a 6/7-ton drop-sided lorry priced at £535 and £1,081 10s. respectively. On this stand also were a Chevrolet platform lorry, £224, and a Chevrolet chassis with tipping body, £244.

Maudslay lorries were to be seen on Leach & Seed's stand, one being a 7/8-ton chassis with flat platform body and the other a 10-ton, 6-wheeler also with flat platform body.

Willys Overland Crossley exhibited a 6-cyl., 30-cwt., 25/35 h.p. tipping lorry.

STEAM WAGONS.

Fodens, Ltd., exhibited four of their machines, one being a 6-ton standard type sold to the Northampton County Council, being the 4th repeat order. A second exhibit, consisting of a 10/12-ton rigid 6-wheeler, was sold to Hillhead Quarries, Buxton, and there was also a standard tractor. In addition there were two "Speed Six" lorries, one being sold to Messrs. Griffiths, building contractors, Whitchurch, and the other to W. J. King, quarry owner, Bishops Lydeard, Taunton.

"Sentinel" Waggon Works, Ltd., had four exhibits, as follows:—A model D.G.6 rigid 6-wheeler with 20 ft. by 7 ft. body, sold to A. J. Gupwell, transport contractor, Park Street, B'ham. A similar vehicle but fitted with a 22 ft. by 7 ft. 6 in. platform body sold to the Yorkshire Dyeware & Chemical Co., Ltd., Dewsbury. A model D.G.6 12-ton capacity lorry, rigid 6-wheeler, for the Hillhead Quarries, Buxton, and finally, a double-geared 4-wheeled, 3-way tipping waggon, fitted with a steel lined body sold to J. & J. Dyson, Ltd., Stannington.

Richard Garrett & Sons, Ltd., were showing two rigid 6-wheel vehicles, one being for Harber Bros., haulage contractors, Swanley, Kent, and the other to Thos. Ward, of Sheffield, for the Ketton Cement Co.

The Yorkshire Patent Steam Wagon Co. exhibited a 10/15-ton rigid 6-wheeler with pneumatic tyres, 42 in. by 9 in. This vehicle has a 2-speed gear and double shaft drive to the two bogie axles.

John Fowler & Co., Ltd., were, amongst exhibits including steam and heavy oil road rollers and agricultural machinery, showing for the first time a "roadless" trailer with "Orolo" tracks. The track units are of the girder type which lock themselves to a predetermined radius. The stress due to vertical load is completely removed from the track pins which hold the links together, therefore, the life of the track is considerably increased. The trailer was shown loaded with a 5/6-ton log of timber. Also a 5/6-ton pneumatic tyred trailer was being shown.

Road Traffic Bill.
Considered on Report.

THE Road Traffic Bill, as amended in the Standing Committee, was considered on Report in the House of Commons on July 4th.

Sir H. Samuel suggested that after the Bill had been passed the Home Secretary should issue a circular to the police expressing a desire that summonses issued against motorists should state precisely the charges that were to be made against them.

The Minister of Transport said that the Under-Secretary of the Home Office had told him that a circular of the kind suggested would be issued to the police.

On Clause 3 (Prohibition of motor vehicles not complying with regulations as to construction, etc), the Minister of Transport moved the deletion of the proviso by which it was proposed that a motor vehicle should be exempted from complying with the regulations if the regulations were made during the 12 months immediately preceding the date on which the vehicle was registered, or at any time thereafter. He moved to substitute a proviso by which exemption for not less than five years shall be granted to any vehicle registered before the expiration of one year from the making of the regulations. He said that this was a compromise with the interests concerned.

The amendment was agreed to.

THE SPEED LIMIT.

On Clause 10, which fixes new speed limits for heavy vehicles and abolishes the speed limit for private cars, Dr. Salter moved an amendment to fix the speed limit for private cars at 35 miles an hour.

The Minister of Transport said he recognised that the abolition of the speed limit in the case of light cars was a serious step to take and that he had to justify it. In his opinion the speed limit had broken down. The police had the instinct not to enforce a law which was out of date and against public opinion. If they got it into the head of the average motorist that 35 miles an hour was what Parliament normally contemplated, that motorist would feel that 35 miles was the normal speed to aim at. This problem was to be solved, not so much by compulsion as by education and the inculcation of a social conscience. He was anxious that the motorist's mind should be concentrated on what was careless and reckless driving in the circumstances of the case, and he hoped that, in clear cases, magistrates would not hesitate to be severe in their penalties and disqualify dangerous drivers from driving.

The amendment was negatived.

Further discussion on the Bill took place in the Commons on July 10th when the House completed consideration of all the clauses up to and including Clause 75.

Mansion House Association on Railway and Canal Traffic.

SPEAKING at the forty-ninth annual meeting of the Mansion House Association on Railway and Canal Traffic, held in London, on June 20, Major-General S. S. Long, C.B., M.Inst.T., reviewed the leading events of the past year as they affected transport users, and dealt particularly with the situation respecting the Road Traffic Bill.

Because of the onerous official responsibilities now falling on him, General Long sought to be relieved of the Presidency of the Association. There was a strong desire, however, to retain his leadership in whatever degree he could manage to afford it. Major-General Long and Mr. W. H. Gaunt, O.B.E. (Distribution Manager, J. Lyons & Co. Ltd.), were, therefore, unanimously elected Joint Presidents. Mr. R. E. Morley (Traffic Manager, Bryant & May Ltd.), was appointed Chairman of Committees. Cordial thanks were tendered to Mr. William Oldham (Traffic Manager, Vacuum Oil Co. Ltd.), for his services as honorary secretary, and he was unanimously desired to continue so to act. Mr. E. A. Hilder (Traffic Manager, McDougalls Limited), was again appointed honorary treasurer, and an influential executive council was re-elected.

C.M.U.A. Council in Manchester.

N.W. Division as Hosts.

MEMBERS of the North Western Division of the National Council of the Commercial Motor Users Association were guests of the North Western Division at a luncheon given at the Midland Hotel, Manchester, on 18th June. The meeting of the Council was also held at the hotel and members of the divisional organization were invited to attend.

Mr. R. W. Royle, M.Inst.T., presided at the luncheon, the principal guests including Mr. C. le M. Gosselin, M.I.A.E., M.Inst.T., President of the Commercial Motor Users Association, Major-General S. S. Long, C.B., M.Inst. T., Mr. R. W. G. Barnett, Sir George Etherton, O.B.E. (Clerk of the Lancashire County Council), and Mr. F. G. Bristow, General Secretary of the Commercial Motor Users Association.

The chairman in welcoming the National Council, spoke of the importance of the Lancashire territory in the business and transport of the country. Within 30 or 40 miles of Manchester where there were located many big and important towns and cities, he believed there was a bigger proportion of commercial road transport vehicles than in any other part of the country. He called to mind a decade or two ago when it was thought to be a very great feat for one member of the organization who was a pioneer in road transport, to collect cloth which had been taken off the looms at one of the mills on the Saturday afternoon and convey it to the Manchester docks for shipment the same day. To-day it was quite commonplace for goods to be loaded on to road wagons at the mills and instead of being taken to the Manchester docks for shipment to Glasgow or London, to send them through to destination by road. To-day everybody appreciated the value of motor transport in reducing delivery costs.

Coming to association affairs, Mr. Royle said the North Western Divisional Council very much appreciated the labours of the National Council in their manifold activities, but particularly in regard to weak and restricted bridges and those who were engaged in road transport were now bold enough to hope that better times were in store for them. The Road Traffic Bill would throw more burdens both on operators of transport and on the adminstrative authorities.

Sir George Etherton, O.B.E., who proposed the toast of "The Association" was reminiscent of the circumstances in which he first came into touch with the C.M.U.A. It was in connection with the Mersey Tunnel, and in the promotion of legislation to carry that scheme into effect it was not unnatural, that some interests should not see in it anything likely to add to their profits. It was then that he alighted upon Mr. Gosselin and Mr. Bristow, from both of whom he learned a great deal of the difficult problems which besetted the transport industry aand obtained much valuable statistical information on traffic matters which proved of very great service. In Lancashire at the present moment the County Council was spending, during the current financial year, no less than £3,500,000 on schemes connected with the maintenance and the improvement of roads, the construction of new arterial roads and the like, and also were directing attention to the urgent necessity for reconstructing and rebuilding weak bridges. Then there was a question of almost equal importance, viz., the elimination of level crossings which were a great hindrance to all motor users. In the county they were getting rid of two such bad crossings at the present time.

In his opinion it was an utter fallacy and illusion to imagine that the cure for unemployment was to be found by the provision of public works provided by public money and it was, therefore, necessary to look for the cure in other directions and he would suggest that the direction in which to look for it was the concentration of the efforts of men of goodwill, irrespective of party, on the revival of home and foreign trade so as to put into play, our mills, factories and mines.

Sir George admitted the difficulty of finding practical schemes for the relief of unemployment and thought that some consideration should be given to land drainage and the policy of encouraging small holdings.

"He regarded the Road Traffic Bill as a very bold attempt to solve a very difficult problem." No doubt there were amendments which motor users would consider desirable, but taking the Bill as a whole, he thought it was well worthy of the support of local authorities and those who were engaged in trade and transport.

Mr. C. le M. Gosselin, M.I.A.E., M.Inst.T., President of the C.M.U.A., said everyone would appreciate the hard work and skill that had been put in by the County Council authorities to make the task of road transport lighter than it had been.

The Road Traffic Bill for which vehicle owners had been waiting for many years had been put before them. Road transport was a growing industry. It had stepped into manhood, its energies were greater and it expected to enjoy a larger measure of liberty. One striking thing about the new Bill, both in regard to the new regulations and the old ones which would be re-enacted, was that the penalties were going to be increased fourfold. The whole purpose of the Bill was to try and work road transport into a general scheme of national organization. In order to do that the promoters of the Bill had found it necessary not only to enforce the old regulations with greater stringency than ever before, but they were proposing to introduce new limitations on the road users activities. To carry out the regulations meant increasing the cost of operation. It would be necessary to set up more officials and that meant adding to the costs of trade and industry.

Mr. Gosselin thought it absolute madness in a period of depression such as they were now experiencing, to add to the financial burdens of those who were responsible for carrying on the trade of the country. One thing alone in his humble judgment would help towards a solution of current trade difficulties, i.e., cut down expenses. The time had arrived when we must study economy. Whenever they found legislation being passed which would limit their activities or prevent them giving proper facilities to the public or would add to the cost, it was the duty of all concerned to oppose such legislation, not from any partisan or political point of view, but because they were custodians of a public service. If the opposition to the Road Traffic Bill was to be made effective, they must have the backing of a big proportion of the commercial motor vehicle users of this country. They had in their midst, a large number of people whom he might describe as ancillary users, owners of works, fleets, etc., who were inclined to think they could leave the opposition in the hands of those who were exclusively engaged in the haulage business. Now was the time for every one to put his shoulder to the wheel; now was the time, to-day was the hour.

Major-General S. S. Long, C.B., M.Inst.T., Chairman of the Transport Committee, Federation of British Industries, in proposing "The Trade and Commerce of Lancashire" referred to the Washington Hours Convention. This was a most dangerous piece of legislation which would only push them, as business men, deeper into the mire and make the chances of recovery from the present-day depression, even more remote.

Mr. C. B. Nixon, Deputy Managing Director, Leyland Motors Ltd., who replied said his firm was trying hard to develop their overseas trade, and had established direct branches in several of the overseas dominions, the most recent being in South America and India.

Mr. Rudd (Treasurer of the C.M.U.A.), proposed a vote of thanks to the chairman, Mr. R. W. Royle and paid tribute to his competence and rapid rise in the transport industry.

Mr. Royle briefly replied.

"Unilateral" Traffic Signs.

THE Automobile Association has introduced a new type of road sign for cities and towns where traffic congestion is acute. "Unilateral" traffic provides that vehicles shall take up and set down passengers, or remain for a reasonably short period, on one side of the road only on one day, and on the opposite side on the following day. This, it is contended, has the effect of concentrating standing traffic and preventing obstruction of through traffic. With the assistance and co-operation of the Chief Constable of Derby the Automobile Association is erecting its new signs in Irongate, Sadler Gate, St. James's Street, and East Street (Derby). The sign measures 20 in. by 12½ in., and in the top section appears the word "Unilateral" in large letters; the signs are supplied in pairs, on one of which follows the words—"When the dates are even please pull up this side," while the other bears the words —"When the dates are odd please pull up this side." It is claimed that the principal advantage of the "Unilateral" traffic system is that it enables motorists to remain for short periods near shops or places of business with a minimum of congestion and obstruction to other traffic.

London Cart Horse Parade.

THE Fortieth Annual Parade of Cart Horses, held in the Inner Circle, Regent's Park, London, on Whit Monday, June 9th, under the auspices of the London Cart Horse Parade Society, was probably one of the best in its history. Not only were there 802 entries as against 739 last year, but the quality of the turnouts reached a much higher standard than hitherto—a fine tribute to the excellent work of the Society. It showed also that in spite of the increase in the use of motor vehicles the horse is again coming into its own for local work with twenty-five years continuous service in the same firm were also awarded. The premier prize, the Isabel Constable, of £3 10s. was awarded to Mr. William Grant for 50 years service with John Mowlem & Co., Ltd. Five premiums of 20s., seventeen of 10s. and thirty-two of 5s. each were also awarded.

The veterinary inspectors included Mr. J. W. McIntosh, F.R.C.V.S., Mr. Henry Gray, M.R.C.V.S., and Mr. Stanley Broad, M.R.C.V.S.

Immediately after the judging the usual luncheon was

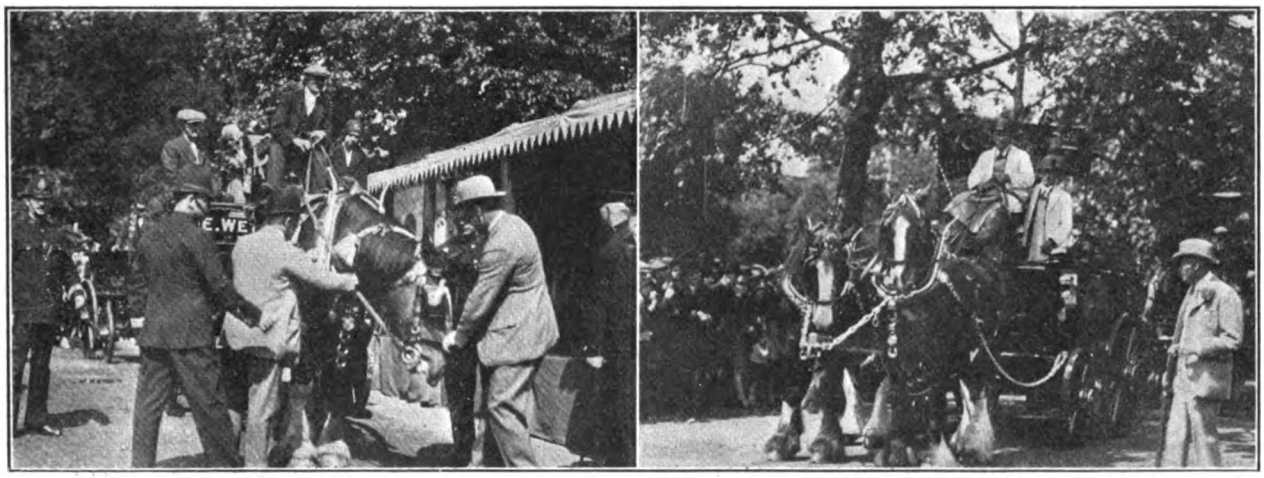
short journeys and frequent stops, for which purpose the horse is still regarded as the cheapest and most economical form of transport. The event attracted a huge crowd of interested spectators who had assembled to witness the judging and subsequent march past of prize winners. The Judges comprised Mr. Cecil G. Argles, Mr. Nigel C. Colman, M.P., Lieut.-Colonel P. Laurie, C.B.E., D.S.O., Major-General Sir John Moore, K.C.M.G., C.B., Mr. F. J. Rawle, Brigadier-General Rome, D.S.O., Major Maurice Tomlin, Major C. B. Toms, C.B., O.B.E., Lieut.-Colonel Sir Hugh S. Turnbull, K.B.E., and Major-General Geoffrey H. A. White, C.B., C.M.G., D.S.O.

held in the pavilion of the Royal Botanical Society, Sir Walter Gilbey, Bart., President of the Society, presiding. The guests included Field-Marshal Sir Claud Jacob, G.C.B., and Lady Jacob.

Lady Jacob distributed the prizes at the subsequent parade of prize winners.

All drivers of cart horses within the Metropolitan Police area are eligible to compete at these parades, and the judges in making their awards, take into consideration each turnout as a whole—horse, van, harness and general appearance—and due regard is paid to the nature of the trade or business of the competitor.



Photos.] LONDON CART HORSE PARADE [World's Carriers.

LEFT: LIEUT.-COL. LAURIE JUDGING A TURNOUT BY E. WELLS & SONS. RIGHT: SIR WALTER GILBEY ADMIRING A CHAMPION PAIR.

The special class for novices, for which 27 turnouts entered, was judged by Mr. George Stewart.

Special premiums and medals were awarded by the Shire Horse Society and the Suffolk Horse Society, Mr. B. J. Dare, Mr. Richard Forshaw, Mr. Arthur Smiles, and Mr. Hirby Ward officiating as judges for the Shire horses and Mr. Sam Woodiwiss for the Suffolks.

Special premiums for long service and good character for drivers appearing in the parade having not less than

The prize fund is furnished solely from the subscriptions, and is awarded without any deduction in respect of the expenses of the parade. At the last parade a sum of £515 was awarded to 740 drivers.

In the course of the past 39 parades 26,884 horses have been examined by the judges and cash prizes amounting to about £12,995, in addition to silver medals, diplomas, brasses, etc., have been awarded to the drivers.

Digitized by Google

The increasing number of entries and the higher quality of the turnouts with its consequent increase in the amount of prize money distributed each year, is a drain upon the Society's resources. The Society is in need of greater financial help. In view, therefore, of the valuable work accomplished by the Society in furthering the welfare of London's cart horses, the financial help of all horse lovers is solicited. The Secretary will be pleased to receive donations. The offices of the Society are at 12 Hanover Square, W.1.

New Haulage Contractors Association.
Details of Lancashire Development.

ANOTHER new motor haulage contractors association which is now being registered under the style of "The National Haulage Owners Association Ltd." is about to be launched.

All the preliminary work has been in the hands of Messrs. E. Turner and Co., of Prudential Chambers, South Parade, Rochdale, who state:—

"It has so far only been possible to approach contractors in the north, but the response has been so great that we are confident that the success of the Association is assured. A conference of haulage contractors in London and the south is being held as quickly as possible and it is hoped that the support given in Lancashire and surrounding districts will be equalled all over the country.

"On examination of the conditions applicable to the present day haulage contractors it is obvious that only an organization on these lines can save them from complete destruction, and it is confidently expected that this Association will ultimately become so strong as to make contracting once again worth while. The Association will consist solely of, and be run solely by, the members, and although difficulties may arise, these have not been overlooked in the formation of the Association.

"The Association's first offices are in course of being opened in Manchester and London, and other offices in other districts will afterwards be opened as quickly as possible."

Here is a brief outline of the proposed scheme for a National Haulage Owners Association:—

Each member to take up one 10s. share for each ton of registered tonnage of each vehicle registered by him with the Association, six shares to be the minimum number of shares for each vehicle. Only owners of haulage vehicles to be eligible for membership.

Members only to enjoy the benefits of the Association in respect to each vehicle registered and in respect to which vehicle, shares have been taken up.

Each vehicle to be registered with the Association according to its registration number, engine number and registered tonnage.

Upon ceasing to own a vehicle registered with the Association the shares owned in respect to such vehicle to be transferred to another vehicle of the same owner, if of larger tonnage, the necessary balance of shares to be taken up.

Should a member become undesirable in the opinion of the Board, he shall transfer his shares as desired by the directors, upon payment of the amount paid up on his shares, less 10 per cent. thereof.

The members being shareholders of the Association will participate in the profits made by the Association.

It is intended that the Association should pay the members the amount charged for work done by them, less 10 per cent.

The Association will invoice all accounts to customers and will pay each month the members for the work done by them, less the 10 per cent. previously mentioned, and members will thus be insured against bad debts.

It is intended to open offices first in Manchester, Birmingham and London and possibly Hull and Liverpool, and to extend to other centres as rapidly as possible.

The drivers of vehicles registered with the Association will book in at each office upon arrival in that centre, and will be allocated work in rotation. It is intended to maintain the same vehicles on the same services or routes.

Rates will, where possible, be fixed by the board and members of the Association will be notified of same.

Each member will be supplied with a badge for each vehicle registered by him.

Arrangements to be made for each vehicle to be inspected periodically on behalf of the Association at a small fee, and if not considered suitable, the Board may cancel the registration in respect to such vehicle.

It is intended that the Association should purchase goods on behalf of the members, a small commission only being charged by the Association. The Association will, where advantageous, enter into contracts with customers for haulage.

As soon as possible the Association will at the lowest possible cost undertake the following:—insurance; members hire-purchase arrangements; legal assistance; audit; accountancy work and income tax services by accountants to the Association; provision of garaging for members vehicles; repairs to members vehicles; installations of petrol pumps; purchasing on behalf of members, including vehicles.

Heavy Industries Fair—Birmingham.

A NUMBER of important developments, we are informed by the Birmingham Chamber of Commerce (Inc.), are being introduced into the organisation and planning of the Heavy and Hardware Section of the British Industries Fair to take place in that city from February 16th to February 27th next. Letting of stand space has proceeded rapidly since the closing days of the heavy display a few months ago. Service to exhibitors in the arrangements for their displays has been considerably increased by a new zone system, introduced within the last few weeks, covering the whole of Britain. From now onwards direct representatives of the Birmingham Chamber of Commerce, which is responsible for the organisation of the Heavy Section of the Fair, will be centrally located in various parts of the country. The Dominion of Canada is arranging an exhibit of increased importance and interest at the 1931 Fair. Next February's display, also, will mark important developments in the method of presentation of goods. The "open-stand," which some of the leading firms in the country introduced this year, is rapidly coming to the fore.

Royal Commission on Transport.

Evidence submitted by the Long Distance Road Haulage Committee of Inquiry.

BEFORE the Royal Commission on Transport, sitting in London, on June 25th, **SIR MAXWELL HICKS, C.B.E.**, the chairman of the Long Distance Road Haulage Committee of Inquiry, gave evidence.

The Memorandum submitted to the Commission by the Long Distance Road Haulage Committee of Inquiry states that the Committee was brought into being as a result of a conference held in April last which consisted of influential members of the transport industry who were engaged in long-distance road haulage work, for the primary purpose of investigating the present position of that branch of the industry, the causes from which that position had arisen, and the remedies whereby the position might be ameliorated. The Committee of Inquiry constituted by the conference, consists of six members each with a full knowledge of the long-distance road haulage branch of the transport industry.

For the purpose of the Memorandum and of the investigations made by the Committee, a long-distance haulier has been taken to be a person, firm or company who is the owner of mechanically propelled vehicles of any weight, who for his own profit utilises those vehicles for the transport of goods by road belonging to other persons for distances in excess of 30 miles from the base from which such vehicles operate.

Experience has shown, the Memorandum points out, that the transport of goods in the country will always go in the long run to the form of haulage most economical to the owner of the goods hauled, usually designated the trade and as road haulage began to receive the support of traders the railway companies had to improve their facilities and subsequently amend their classification. Improvement of facilities has been extending up to the present time, and this form of competition is not in any way objected to, provided that "rate cutting" is not resorted to under the guise of competition.

As an illustration, an example of fair competition would be as follows:—

A commodity may be carried in bulk from "A" to "B" by rail and then from "B" to "C" by road at a through rate of 30s. per ton. A road haulier may then find that on his 5-ton lorry he can take the same commodity economically direct from "A" to "C" at 25s. per ton. There is no question of "rate cutting" here. Again, the railway company may extend their line to "C" which may enable them economically to carry the commodity direct from "A" to "C" without transhipment at 20s. per ton. In this case there is no question of rate cutting. Later on the road haulier may, by the use of a more powerful and efficient unit, be able to carry a load direct from "A" to "C" economically at a rate of 18s. per ton.

All these cases are in submission of the Committee fair competition, as each one reduces the rate but maintains the price at an adequate rate for this particular form of service, and is in the best interests of the community.

PRESENT POSITION.

The development of the long-distance road haulage branch of the transport industry has resulted in well-defined sections which may be summarised as follows:—

(*a*) Well organised companies owning fleets of vehicles.
(*b*) Owner-drivers or individuals operating two or three vehicles.
(*c*) Clearing houses.
(*d*) Trading concerns with fleets for operating their own haulage.

Outside the road transport industry, note must be taken of:—

(*a*) Railway Companies.
(*b*) Canal and coastwise services.

ORGANISED COMPANIES.

The Memorandum then proceeds to refer in detail to each of the sections enumerated above in the course of which it is mentioned that organised companies built up their businesses by establishing their own organisations for securing a regular flow of traffic operated by efficient vehicles at economic rates. They are highly organised, with a proper sense of their responsibilities. It is now found that the competition which they are experiencing from competitors on roads and railways is rendering it increasingly difficult for them to continue operating their services at economic rates owing to their prices being undercut. In the event of these Companies lowering their rates to the level of their competitors, it will be impossible for them to maintain their vehicles in a proper state of mechanical perfection and to continue to work their employees upon fair terms.

OWNER-DRIVERS.

The owner-driver has usually been a newcomer to the trade who has acquired a lorry. He has little business experience, knows little of the cost of running a lorry over a series of years, and has no appreciable organisation for obtaining traffic. As soon as a run is completed, he has to get back to his base, and is almost forced to accept any rate that may be offered, and is certainly tempted to canvass for traffic at a rate which will obtain the traffic irrespective of whether it is a paying proposition. The same thing applies even in his home town if work is slack, and it is accentuated if his vehicles be bought on the hire purchase system. These men could be helped materially by a well-organised clearing house which could supply them with loads at reasonable rates.

CLEARING HOUSES.

The theory of the Clearing House is excellent. Its purpose is to act as a link between the trader who wishes his goods carried and the haulier who carries the goods, and in particular to save the haulier the time and trouble of canvassing for return loads.

The system, however, is open to very many abuses, particularly as it is one which requires no technical knowledge whatever and no capital. It therefore very frequently occurs that unscrupulous persons set themselves up in the Clearing House business (in the City of Liverpool alone there are 27 different Clearing Houses owning no vehicles at all, and similar conditions obtain in most large towns), and obtain their trade by under-quoting the organised hauliers and railways and then beating down the owner-driver to the cut rate less the Clearing House commission.

Another evil of a certain class of Clearing House is quoting a rate to the trader and then giving the work to a road haulier at an uneconomic rate which gives a profit to the Clearing House over and above its normal 10 per cent. commission.

With a system such as this it is not unnatural that many Clearing Houses have failed, and it has frequently been found that there have been no assets available and so the road haulier does not obtain payment for the work which he has done.

TRADING CONCERNS WITH PRIVATE FLEETS.

No objection can be raised to trading concerns owning their own private fleets for their own private haulage work, but in some cases this results in the aggravation of the existing position and the further depression of haulage rates for the following reason:—

A firm which owns a fleet of vehicles carries its goods to their destination. It then becomes necessary for the vehicle to return to its base and naturally the owner of the vehicle wishes to acquire any load which will assist to pay the cost of the return journey.

In this case the private fleet on its return journey works in the open road haulage market and competes with the recognised road hauliers but has no necessity to work for an economic rate.

RAILWAY COMPANIES' CANAL AND COASTWISE SERVICES.

No objection is taken to competing rates quoted by the above services which are permitted by the regulations governing them. Definite objection is, however, taken to the practice of railways and canal companies controlled by railways of posting various bridges. Up to the present time they have been able to block competition by road haulage firms by the means of posting bridges which they own as being prohibited by them from carrying vehicles in excess of a certain weight, when in fact the bridges are capable of standing very considerably greater strain.

While it is not suggested that it would in all cases be wise to remove all restrictions as to weight, in cases where bridges have been posted there is reason to believe that the railway companies are endeavouring to handicap competition by a policy of restricting road transport over their bridges in this manner.

Active steps should also be taken for the abolition of level crossings on railways.

LICENSING OF VEHICLES.

By the Road Traffic Bill, machinery is to be set up in the form of Traffic Commissioners for the licensing of public service vehicles, and it is urged that this machinery should be extended to cover the needs of all mechanically propelled road vehicles which carry goods for profit. If the licensing of all mechanically propelled road vehicles which carry goods for profit cannot be now legislated for, it is urged that at any rate all vehicles used in the industry of long-distance road haulage should be licensed at a nominal fee by the Traffic Commissioners, being the authority concerned for the area in which is situate the base from which such vehicles operate. Vehicles requiring to be licensed for long-distance road haulage should be mechanically propelled vehicles which carry other people's goods for the profit of the owners of the vehicles for distances beyond a radius of 30 miles from the base from which such vehicles operate.

Vehicles to be used for short-distance road haulage (namely, vehicles only to be used for carrying other people's goods at a profit to the owners of the vehicles within a radius of 30 miles from such vehicles' base of operations) should be licensed for such purpose, or pending such licensing in order to facilitate detection of a breach of law such vehicles should have the name of their home town in which their base of operations is situate prominently displayed.

It is considered that:—

(a) No licence should be granted to a vehicle which fails to comply with the Ministry of Transport Regulations or in respect of which excise licences have not been taken out or which are not covered by the necessary insurance.

No licence should be granted to any vehicle which after inspection by or on behalf of the Commissioners shall in their opinion be considered mechanically unfit for the work for which the vehicle is intended.

All licences should be annual.

The Commissioners should not be concerned when considering the grant of a licence for a vehicle as to the desirability of such type of vehicle being used upon the highways of the country, provided it conforms with the Minister's Regulations and is a well-found and maintained vehicle.

LICENSING OF HAULIERS.

All hauliers who carry other people's goods for profit should also be granted a licence to carry out their work. If the licensing of all hauliers who carry other people's goods for profit cannot now be legislated for it is urged that at any rate such licences should be granted to long-distance road hauliers, which it is submitted could also be done by the Traffic Commissioners, supplemented if necessary by technical advisers and by persons engaged in or with a responsible knowledge of the requirements of the industry. The considerations influencing the Commissioners in the granting of such licence being so far as possible to assure the safety of the goods being carried, other road users and the public.

As an illustration of the principle upon which it is considered advisable that such licences should be granted it is suggested that amongst the considerations for which the Traffic Commissioners might refuse to grant a long-distance road haulier's licence would be failure on the part of the applicant to comply with the following:—

Proof to the satisfaction of the Commissioners that the vehicles proposed to be used have been licensed for long-distance road haulage work; that the drivers proposed for the vehicles are of legal capacity to drive a long-distance road haulage vehicle, and the Commissioners should also require a declaration by the applicant that all other (if any) legal requirements have been complied with during the period preceding that for which the licence is to be granted. It is also desirable that licences should only be granted to applicants who are bona-fide hauliers with some knowledge of the business and its responsibilities. It is furthermore suggested that before the granting of any licence the Commissioners shall be entitled to receive any evidence which they may desire to have put before them either orally or in writing concerning any particular applicant and that there shall be a right of people concerned to give evidence before the Commissioners prior to the granting of such licence.

The issue of a haulier's licence, however, cannot in the present state of the industry be made to carry with it the liability of the licencee becoming a common carrier. It is impossible at the present time, owing to difficulties of the present law and to the nature of the vehicles employed, their construction and the business for which they are used, that they should in every case be subject to the legal responsibilities entailed in such description. It is submitted that the higher standard of efficiency which will be maintained in the vehicles themselves and the consequent economy to the road authorities upon whose roads such vehicles travel, and above all the increased safety to the public and other road users, will be an ample consideration for any benefits received.

LICENSING OF CLEARING HOUSES.

It is suggested that all persons who seek to find employment in the industry as a Clearing House shall require to obtain a licence to be granted by the Traffic Commissioners. It is appreciated that Clearing Houses are at present a necessity and in certain cases a benefit not only to traders and to hauliers, but to the industry as a whole, but when the multiplicity of Clearing Houses reaches the state which it has at the present time it is doing untold damage to the industry and some check should be placed upon their activities. The ideal Clearing House would be an organisation controlled by hauliers and traders limited as to profits and debarred from selling lorries on hire purchase agreements.

HIRE PURCHASE AGREEMENTS.

It is suggested that some form of legislation should be enacted whereby a check is put upon the sale by hire purchase of vehicles for long-distance road haulage work. The initial deposit should be as high as possible and subsequent payments should be spread over as long a period as possible.

In the last paragraph the Memorandum refers to the evidence submitted on behalf of the National Road Transport Employers' Federation, and states that, it is felt very strongly that any wages agreements and conditions of working voluntarily entered into between a Joint Industrial Council, or accredited representatives of employers and accredited representatives of employees, should be made binding on all employers and employees in the industry, including owner-drivers.

Views of the Transport and General Workers' Union on the Registration of Carriers and the Regulation of Road (Goods) Services.

At a recent meeting of the Royal Commission on Transport, **MR. ARCHIE HENDERSON**, on behalf of the Transport and General Workers' Union gave evidence.

In the third Memorandum submitted by the Union, the question of the Registration and Licensing of Carriers and others engaged in carrying goods by road, is dealt with.

The Memorandum recalls that since the Union prepared and submitted their evidence, the Government had introduced a Traffic Bill which, should it be passed into Law, will establish complete licensing machinery for operators engaged in the Public Service Road Transport Trade. The Regional Authorities thus set up would exercise control over the public services on the roads of the country. In the evidence submitted by the Union it was suggested that all operators engaged, or seeking to engage, in the carrying trade should have to secure registration and be licensed for the purpose, and the view of the Union is that by the establishment of the licensing machinery for the Passenger Road Services in consequence of the Traffic Bill becoming Law, the scheme for licensing the Road Transport Goods Services could now much more easily be operated, and could be accomplished by an extension of the powers of these new licensing Regional Authorities. In other words, the Union suggested that the control by licence operated by Regional Boards, now proposed for the Road Passenger Services, be extended to include Road Goods Services. The proposals of the Union for the Licensing of Carriers are based upon their original scheme, as placed before the Commission in their first evidence, and the method for licensing the Passenger Road Transport Services proposed in the Traffic Bill.

REGULATION OF THE ROAD (GOODS) SERVICES.

Further, the Memorandum suggests that all vehicles engaged in the carrying of goods shall be licensed for that purpose. A licence shall be granted subject to the vehicle being passed by a Certifying Officer as to fitness for the purpose for which it is to be licensed. Certificate of Fitness may be granted for such period as the Licensing Authority may decide, but for not less than one year and not more than five years. Certificate may be revoked following an adverse report by a qualified inspector. Licences may be suspended or revoked by the Licensing Authority. No person shall engage in the trade of a carrier of goods unless he is licensed for that purpose. A person shall be licensed to carry goods provided the Licensing Authority is satisfied that the offered service is required. A Licensed Carrier shall be restricted in accordance with his licence as to the number and nature of the Vehicles to be used. A person shall not drive a vehicle licensed to carry goods, unless he be licensed for the purpose. The restrictions and regulations for drivers of goods vehicles shall be similar to those laid down for drivers of Public Service Vehicles.

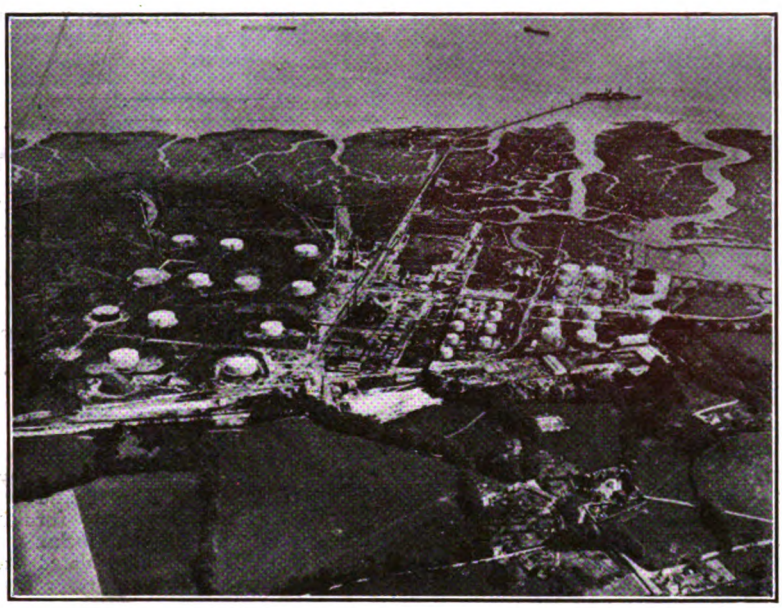
Anglo-American Oil Company's Enterprise at Southampton.

PRESSMEN and representatives of a number of consumer industries have been able to see something of the large expending and costly enterprise of the Anglo-American Oil Co., and associated interests at Fawley, near Southampton. The site covers 650 acres and gives employment to several hundreds, forming part of the sum total of about 9,000 British workpeople employed by the company. It may be apposite at this point of a necessarily brief mention of our recent visit, to summarise the numerical and other data issued by the company, since it furnishes readers with an exact and official epitome of an extensive and constantly changing and developing local business, which in briefest terms embraces a cracking plant and refinery for dealing with every sort of liquid fuel excepting benzole, and deals also with the by-products and residuals. It embraces also a variety of manufacturing and maintenance plant in connection with the packing and distribution of the liquid and solid products, and the upkeep of a corresponding variety of power-generating, cracking and distilling plant, with scores of miles of piping, rail traction and rope telpher plant, metal drum and wood cask-making plant and a variety of mechanical appliances. The maintenance staff numbers nearly 200 persons under the control of a group of specialised engineers. All the staff is British and most of the plant is British. Developments are so continuous that the value of the plant could only be conjectured. It is constantly being replaced and added to in order to anticipate rather than keep in touch with requirements incidental to the extending use of liquid fuels both for external and internal combustion motors, and the demand for road materials. In the latter the Fawley Works find a large outlet for bitumen for home and overseas consumption, largely in connection with speciality asphalt and road dressings and carpetings.



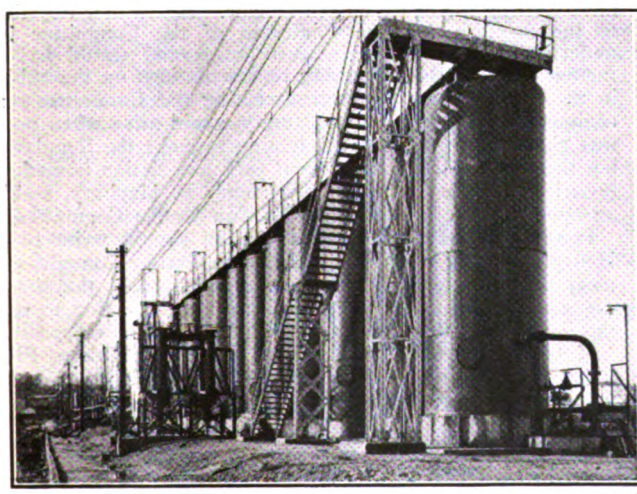
GENERAL VIEW OF THE FAWLEY WORKS.

SOME REMARKABLE FIGURES.—

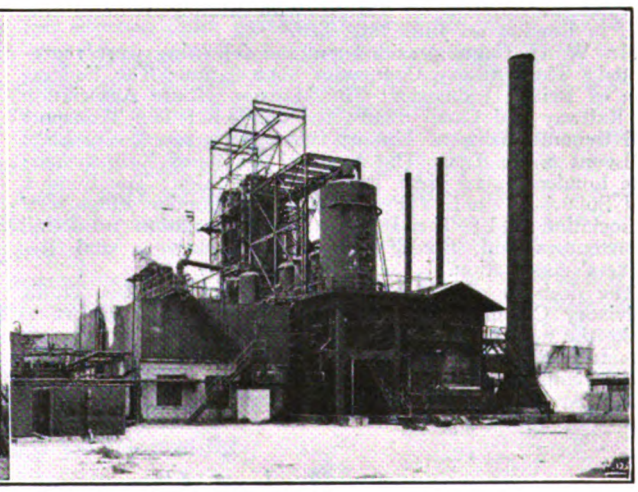
This is but one of a number of plants covering the whole of the British Isles. The territory it serves extends from Weymouth to Chichester and Bristol to Guildford. Last year 800,000 tons of oil products were handled at this Refinery which covers 650 acres and has 1¼ mile of coast line on Southampton Water. The bunkering capacity for fuel oils is equal to 600 tons per hour. The output has multiplied more than 3 times in the past three years, from 2,000 to 7,000 barrels a day. There are 50 miles of piping and 700 workpeople are on the pay roll.

Vessels handled during last year numbered 826, and 250,000 tons of fuel-oil were delivered to the local fleets of "greyhounds" of the Cunard, White Star and Hamburg-American Lines.

The Anglo-American Oil Co. owns 3,000 British built road motor vehicles and 1,650 rail tankers in connection with their 694 installations and depots. Their oil tankers and marine fleet comprises 24 British ocean-going tankers, 18 coasting vessels and 83 barges and tugs. There are two complete drum and cask making plants with a combined output of 2,500 per day supplemented by metal drums supplied from outside. Bitumen mostly is filled into these drums and casks, and by means of a special and novel chemical treatment of the interior of the metal drums, the solidified bitumen is kept from adhering to the metal so that there is no waste of either the contents or the drums. A power-driven continuous rope-way with skips, pick up the filled and sealed drums from a floor conveyor and convey them to the loading jetty, which is about a mile and a half from the despatch point. There are two power houses, with water tube steam plant of some 2,500 h.p., besides steam supplies from the



THE CONTINUOUS TREATING PLANT.



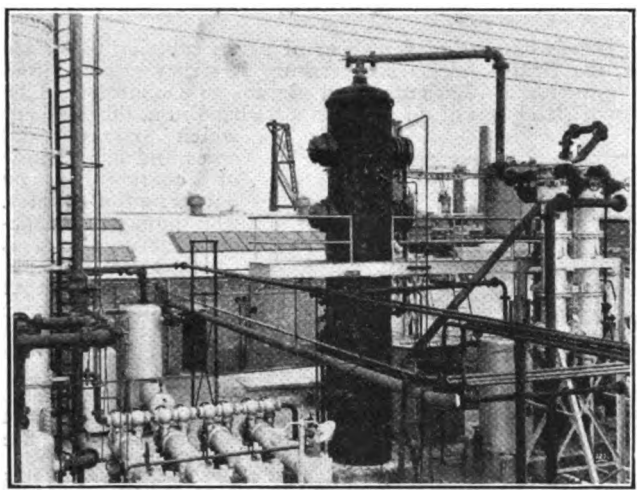
THE CRUDE PLANT.

Digitized by Google

pumps in connection with the refinery plant. A further £80,000 is being spent on this section.

LIGHT AND HEAVY FUELS.

The demands for light fuels are being met by such highly technical specialities as the new Hi-Test petrol, Ethyl treated petrol, of which about 2,000 million gallons (U.S.A.) per annum are being sold in the United States and Canada, and the more normal brands of every day commercial petrols.



THE GASOLINE ABSORPTION PLANT.

About lubricating oils it is too early to write, but a visit to the petrol and light fuels side of the refinery reveals something of the care and efficiency of the process throughout all its stages. Laboratory tests are taken of the output continuously which enable the slightest deviation from standard to be arrested. Atmospheric and weather temperature changes are all important factors in this connection, and point to obvious advantages for home produced petrols and the absence of storage for long periods. Problems of gumming and instability are increasingly important because of the trend towards higher compression and higher engine speeds.

HANDLING CRUDE OIL.

On arrival of the tanker at the Company's jetty the crude oil is pumped into storage tanks, and thence is transferred by pumps through the crude plant, which consists of cylindrical and pipe stills. In this plant distillation takes place which separates continuously the straight run motor spirit, the tractor oil distillate, the cracking stock which is the raw material for the cracking units. The cracking plant consists of two high-pressure Cross units which are capable of treating 300 tons of stock daily.

The cracked spirit is stored in tanks and transferred continuously to 12 vertical tanks, in which it is subjected to a thorough mixing with sulphuric acid. The waste acid liquors are separated by gravity, and the remaining acidity is washed out and the oil is neutralised by caustic soda. It is then re-distilled for further refining and separating into homogeneous products. The treated oil is then continuously fed to three stills—these are the re-run stills, and in this process of distillation No. 1 and 3 specification spirits are distilled.

A part of the production from the crude oil plant forms the raw material for the manufacture of the bitumen. The bitumen is pumped through steam-heated insulated lines to the barreling plant and storage plant before mentioned. By means of steam coils the bitumen can be transported hot and kept ready for immediate use whether by rail transport in special waggons, or in ships.

COSTLY AUXILIARY EQUIPMENT.

Among what may be cited as the auxiliary features of the process is the prevention of odours incidental to certain products. An immense sum has been spent on plant for this purpose. Mention also is due of the costly research in regard to anti-detonating petrols suitable for high compression engines. And, lastly, mention may be made of the company's concern for the health and comfort of the staff. A costly building has been built and furnished with baths, a drying room for garments, and lockups, a first aid hospital and surgery, and beds in an isolated ward, together with an up-to-date equipment for the respective services.

Proposal to introduce in London the "Unilateral" System of dealing with Waiting Vehicles.

A meeting of representatives of Associations and Companies opposing the proposal of the London and Home Counties Traffic Advisory Committee to introduce in London the "Unilateral" system of dealing with waiting vehicles was held in London on June 16th, last.

Mr. W. H. Gaunt presided and the following were represented: The Railway Companies' Association; The Federation of British Industries; The Mansion House Association on Railway and Canal Traffic for the U.K.; The Transport and General Workers' Union; Carter Paterson & Co. Ltd.; J. Lyons & Co. Ltd.; The National Union of Railwaymen; The London Retail Meat Traders' Association; The London and Suburban Traders' Federation; The London Employers' Association Ltd.; The Incorporated Association of Retail Distributors and The Furniture Warehousemen and Removers' Association.

The decision of the London and Home Counties Traffic Advisory Committee to ask the Minister of Transport to make the necessary Order for the institution of this scheme, was fully discussed, and it was decided that the associations should continue to oppose its inauguration.

Mr. Archie Henderson (Transport and General Workers' Union), expressed the opinion that it would now be best for each association to approach the Committee, seeking an opportunity of a meeting for the purpose of further explaining their reasons for opposing the scheme. He further explained to the meeting that the Chairman of the Committee had undertaken that all the interests concerned would have a further opportunity of making representations on the subject in the event of the Minister accepting the Committee's recommendation, and that opportunity would arise when notice was given of the Minister's intention to make the Regulation, but there was nothing to prevent each association immediately writing to the Chairman, Sir Henry P. Maybury, seeking an opportunity of meeting the London Traffic Committee.

It was decided that each association should write to Sir Henry Maybury, asking the London Traffic Committee to meet them on the matter. It was also agreed that in the event of the Minister giving notice of his intention to make the Regulation, the associations should enter their opposition.

A further meeting will be held at The Trocadero, Piccadilly Circus, London, W.1, at 3 o'clock on Friday, the 18th July, next to report progress.

Budget Changes in Motor Taxation.

THE Minister of Transport makes the following announcement:—

> Attention is drawn to the provisions of this year's Finance Bill, which if passed in their present form will reduce the scales of taxation payable in respect of motor bicycles between 200 lbs. and 224 lbs. and goods vehicles between 2 tons and 2½ tons unladen weight as from the 1st July, 1930.
>
> It will not, however, be possible to issue licences at the new rates or to make refunds until the Finance Bill becomes law, which will be at a date subsequent to the 1st July, 1930.
>
> Applicants for licences for the September quarter or for part-year licences commencing at a date subsequent to the 1st July will, therefore, be required to pay duty at the existing rates until the Finance Bill becomes law, after which the necessary refunds will be made.

Co-operation between the Railways and Post Office in Switzerland.

By O. Zipfel.

ACCORDING to law, the Swiss Postal Authorities have alone the right to run regular lines of passenger service. This right they exercise in different ways. Many of the lines they carry on as a state monopoly with their own cars and staff; others at their own account against payment by private contractors, and again others by granting concessions to contracting bodies who undertake responsibility both for the working and administration. In this way the Post Office has become the largest proprietors of motor cars in Switzerland. Their cars run on all the mountain roads, and practically every village, not on the railway, is connected with it by a postal motor service.

Since the Post Office and the Federal Railways, the greatest of the railway companies, are both State services, all competition between them is avoided. The postal motor services merely connect up with the railways, except in the towns where the Post Office maintains a large park of vehicles for the dispatch of postal matter. If any excursions, run by the post, have in certain parts to go parallel with the railway, then part of the proceeds is paid to the railway.

By such mutual relations a basis has been established for close co-operation between the Postal Service and the Railways. In some cases where it had already been decided to build a new railway line, the decision was cancelled, and instead a motor service, worked by the Post Office, was introduced. This means the employment of large coaches with 50 seats, charging the same fares as the railway would have done, issuing workmen's tickets at a very low price and conveying passengers' luggage and express packages. Any loss that may result from it is borne by the railway, which yet gains on the whole, because where there is but little traffic, the losses incurred in running a railway service would be far greater.

What is more, the railway stations everywhere are the starting places of the postal vehicles. Tickets for them are sold at the railway booking offices, and the railway staff attends to the handling of the luggage. The postal cars are drawn up at the stations in some appointed place, and the railway waiting rooms are at the disposal of their passengers. Through tickets, including both rail and car services, are issued to all the more important stations, and these tickets can be got at the railway booking offices to any station on the postal car route, and combined tickets are also issued at the post offices.

Combined tickets for the forwarding of luggage are issued in the same way as for passengers. Hence the passenger has only to hand over his luggage and have it booked through in this way, and he need not trouble to see after its transfer at stations where it is necessary to change. This through dispatch of luggage has in some cases been extended to foreign countries, such as England and Germany. For instance, an Englishman, travelling from Manchester, can book his luggage right through to any of the more important Swiss postal motor service stations, and has no further trouble till he reaches his place of destination.

The postal motor services have also been included in the international agreements for combined tickets, so that tickets for these postal services may be obtained at any tourist office in the world, and can be added to the ticket case. These arrangements make things much simpler and add to the comfort of the trip, and so increase the amount of traffic on the motor services.

Last year, for the first time, motor services were run beyond the frontiers, and in these cases the service is carried on jointly with foreign undertakings. Such a line leads from Garmisch, in Germany, through Austria to Schuls, in Switzerland, a total distance of about 70 miles; on this route cars of all three countries go right through, so that passengers have no need to change. In the through tickets for the whole route the railway lines in connection are also included. Passengers' luggage is carried under the seal of the customs, so that only one inspection is required.

With the trains and the motor service thus working together, similar tickets on the two services have been issued both for passengers and luggage, so that the staffs deal with them without any difficulties arising. The passenger tickets are exactly alike both in size and colour, and so are the luggage tickets. The balancing of the several accounts, which takes place annually, presents no difficulty, for it is carried out on the same principle as with different railways.

Another result of this co-operation is that the advertisements of the two means of transport are closely combined. This is specially important abroad, where the agents of the railways are at the same time representatives of the postal service, use their advertisements, issue their tickets and keep in touch with the tourist offices. The advertisements of the two services are rendered more effective and at less expense, more particularly since the postal services on the Alpine routes afford special attractions, and the beauties on such trips over passes up to 8,000 feet high tempt many a tourist to visit Switzerland.

By this scheme of co-operation and supplementing one another the whole of Switzerland has been combined into a single traffic system, the threads of which stretch out to the smallest and most remote villages. And it follows as a matter of course that this policy has resulted in a pronounced increase of traffic. At all events, as far as passenger traffic is concerned, what might have proved a burning problem in this little country, the competition between Railway and Motors, has been settled in a thoroughly friendly way and on sound economical lines.

A Plea for Reciprocity in Licensing.

THE suggestion that there should be some reciprocity in regard to the issue of licences between towns which are linked up by motor coach services is made in a letter which the Town Clerk of Blackpool has sent to the Bolton Watch Committee. The letter stated:—"Having regard to the very large increase in motor coach travel that has taken place during the past few years, the Watch Committee of Blackpool have felt it in the public interest to grant fairly freely, licences to motor coaches carrying long distance passengers into the town to enable them to ply for hire while in Blackpool. They have recently received complaints from the Motor Coach Proprietors' Association in the town, that towns to which char-a-bancs from Blackpool run do not reciprocate. It is felt by the Association that some unfairness results. I have been instructed to lay before the Committee a suggestion that in such matters as licensing of motor coaches there should be some reciprocation as, unless Blackpool motor coach owners can have the same facilities as are granted to motor coach owners travelling from Bolton, they will be placed at a disadvantage." Bolton Watch Committee felt that they could not see their way to agree to the suggestions put forward.

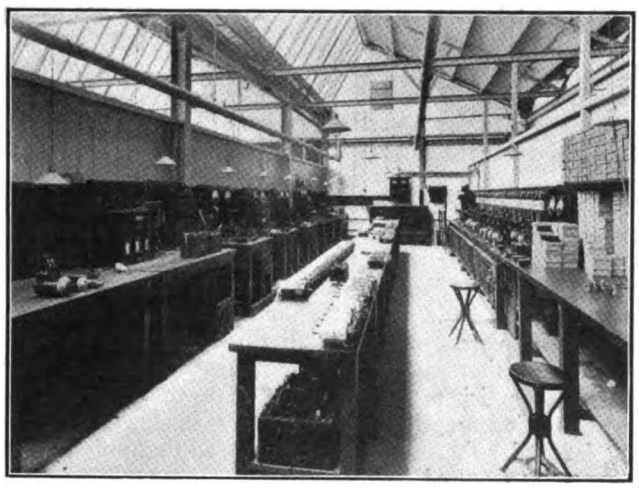
The M.C.L. Lighting and Starting Equipment for Commercial Vehicles.

BEFORE describing the constant current 12-volt dynamo now being produced in large quantities by M.C.L. and Repetition, Ltd., Pool Lane, Langley, Birmingham, a few notes on the factory in which they are manufactured may be of interest.

The factory is built on a four-acre site with a frontage



THE M.C.L. DYNAMO TESTING DEPARTMENT.

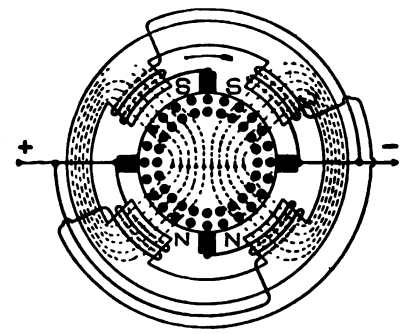
of 160 yards on the new Birmingham-Wolverhampton road. It has a floor space of 23,000 square feet, one floor only, the building being of the north-light type. The firm employs from 250 to 300 operatives and, in addition to the production of the M.C.L. electrical equip-

A BAY IN THE M.C.L. MACHINE SHOP.

ment for vehicles for all descriptions, it specialises in nuts and bolts and similar repetition work. Some idea of the size of the machine shop may be gathered from the accompanying illustration which, however, shows only one of half-a-dozen or so bays.

At one end of the machine shop are the raw material stores, and at the opposite end there is a work-in-progress department and inspection and packing rooms. From the machine shop the parts are passed on to the finished stores room from which they are supplied to the assembly shop and from thence to the coil and armature winding shaft department.

In addition to the most careful inspection in every stage of manufacture the electrical equipment is subjected to severe testing before being passed for distribution. For instance, the controllers are mounted on vibrating platforms which try them out much more severely than will be the case in actual service on the vehicles. The dynamos are run for one hour and their outputs carefully checked, whilst the starter motors are tested for torque. Finally the complete equipment is tested, the set being connected up to a dynamo and group of lamps to make sure it is functioning properly.



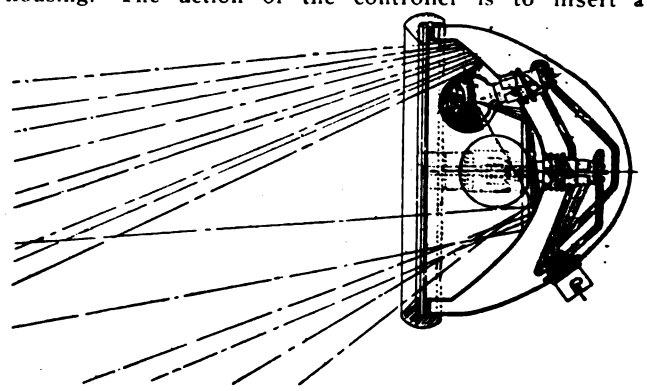
SHOWING THE POLE ARRANGEMENT IN THE M.C.L. DYNAMO.

The M.C.L. equipment is designed by Mr. A. H. Midgeley and is the result of very many years experiment and experience. Mr. Midgeley is, in fact, one of the pioneers of electrical equipment for motor vehicles.

The new constant current 12-volt dynamo has an output of 35 amperes yet it is only 6½ in. in diameter and its weight is only 61 lbs. Its generating speed is 700 r.p.m. and its normal speed 1,600 r.p.m.

The dynamo is cylindrical in design and its principal features are robustness and the pole and brush arrangement. There are four wound poles, two of which are of S polarity and the other two of N polarity, with the result that the effect is the same as a two-pole machine. The main brush position is horizontal to the poles of opposite polarity and the regulating brushes are on the vertical axis between the poles of the same polarity. The strength of the regulating field is dependent upon the voltage generated by the armature conductors under the main poles and this in turn is dependent upon the resultant field produced by the main field coils and the demagnetising action of the current in the armature conductors under the regulating poles. The demagnetising force of the dynamo is along the same axis as the main field and so does not distort it but reduces the voltage and the current in the regulating field coils in proportion.

The controller and cut-out unit are contained in one housing. The action of the controller is to insert a



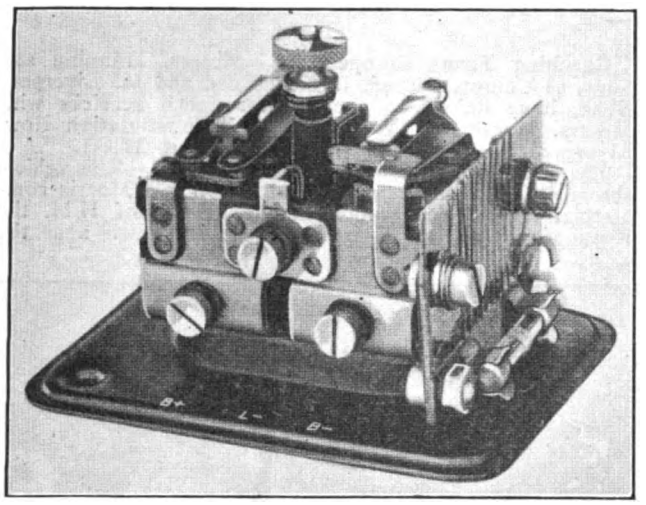
SECTIONAL ARRANGEMENT SHOWING PROJECTION OF AUXILIARY BULB RAYS

field resistance in series at the maximum charging voltage of the battery, so reducing the dynamo output to the minimum. The action is positive "on" or "off" and the controller has no vibrating contacts. The controller does not remain out of action until the battery is fully discharged, but each time the speed of the dynamo falls below its minimum generating speed (usually about seven

Digitized by Google

miles per hour) and is then accelerated, the full output is given for a few seconds until the battery voltage rises, when the output is reduced.

Another important feature is that should the battery cable break or the connection become loose, the con-



THE CUTOUT AND CONTROLLER.

troller immediately comes into action and prevents the lamps being burnt out.

With regard to the starters: these all have the Bendix drive. They are made in four sizes, 3½ in., 4⅛ in., 4½ in., and 5 in., the latter being capable of starting an engine of upwards of 100 h.p. In the M.C.L. system the starter switch is placed as close as possible to the starter thus reducing the voltage drop to a minimum. To energise the starter the control knob on the switch board should be pulled outwards. Attached to this knob is a Bowden wire, the other end of which is connected to the starter switch. The contacts on the switch will then close and complete the starter circuit. By this means more power is available for turning the engine over.

The M.C.L. switch board is particularly neat. It takes up a space of only 3½ in. diameter behind the instrument board. All that appears on the front is a Yale pattern lock and a milled knob. On inserting the key and turning the lock, both magneto and coil ignition circuits are made. On pulling out the knob the starter is put into operation. On turning the knob from left to right, different combinations of head, side and tail lamps are put into circuit. Further, it can be locked with any combination of lamps in circuit, and when locked it is impossible to operate the lamp, starter or ignition.

A neat aluminium junction box is fitted, usually to the side member of the chassis. It has no screws or nuts whatever for electrical combinations. It is provided with 16 metal studs mounted on an insulating base. The ends of the cables are finished off and mechanically held in a circular terminal washer on their respective studs. This plate is held in position by two hexagon nuts and no amount of vibration can loosen any connection. The battery used is the Ironclad Exide, specially manufactured to discharge at high rates for motor starter work, and it will successfully withstand severe circuiting tests without injury.

The latest design of M.C.L. lamps are of handsome appearance and are fitted with a muffled front and patented reverse bulb holder.

The M.C.L. lighting and starting sets are used in large numbers by the India Office (War Department) and the Air Force. In this country they are standardised by many leading passenger service concerns and are used extensively by leading manufacturers of commercial motor vehicles.

BRITISH EMPIRE TRADE EXHIBITION, BUENOS AIRES, 14th MARCH to 27th APRIL, 1931.

To the Editor of THE WORLD'S CARRIERS.

SIR,—As a result of the initiative of the British Chamber of Commerce in Buenos Aires, a British Empire Trade Exhibition is, as you are probably aware, to be held in Buenos Aires from the 14th March to the 27th April, 1931. This Exhibition—the first of its kind to be held in South America, or indeed in any foreign country—is a project of the first importance from the point of view of British trade with the Argentine Republic. It is being officially supported by His Majesty's Government, and the Department of Overseas Trade are organising an exhibit in a building which has been provided by the Exhibition management. Other steps will be taken, in addition, to render the occasion impressive and to bring the prestige of this country prominently to the notice of the Argentine people. The British banks, railways, shipping and cable companies, and other British commercial undertakings in the Argentine are giving their warm approval and financial support, and the Argentine Rural Society have placed their grounds adjoining Palermo Park, in the centre of Buenos Aires, and the buildings which they contain, at the disposal of the organisers. In addition temporary buildings are being erected as the needs of the enterprise dictate.

The Canadian Government are also organising a series of exhibits.

The Exhibition will be organised in a series of industrial sections which will include textiles, wearing apparel, footwear; applied science, chemicals, foodstuffs, beverages, toilet requisites; applied art, furniture and sport; building and decoration, household machinery, etc. The machinery group will consist of sections representing electrical equipment, hardware, small tools, light machinery, etc., heavy machinery of all descriptions, agricultural machinery and implements, factory equipment, heavy chemicals and oils, locomotives, railway and tramway equipment, roadmaking machinery, motor cars, cycles and commercial vehicles, aviation and motor boats.

A large amount of the available space has already been taken by British firms and commercial organisations, who realise the value of the opportunity afforded by the Exhibition as a means of stimulating their trade with Argentina. His Majesty's Government attach importance to the occasion and hope that nothing will be left undone by British firms to secure a larger share of the trade with a market which has great future opportunities and which is exceedingly well disposed to British goods and British methods. If, therefore, you have not already decided to take part in the Exhibition, let me urge you to give the matter your close consideration.

The address of the London Committee of the Exhibition is: The General Manager, British Empire Trade Exhibition, Buenos Aires 1931, 5, Parliament Mansions, Orchard Street, Victoria Street, London, S.W.1, (Victoria 0877), from whom full information as to the scope of the Exhibition, the cost of exhibiting space, details as to stand erection, services and supplies, and the transport of exhibits, etc., can be obtained.

Yours faithfully,
A. R. FRASER,
for the Comptroller General.

Department of Overseas Trade.

5th June, 1930.

Motor Industry Wins Highest Trade Award.

THE highest honour for co-operative trade association work was awarded to the motor industry at the dinner of the American Trade Association Executives, held in Washington recently, when the first prize was given to the National Automobile Chamber of Commerce, New York, for the cross-licensing patents agreement under which automobile manufacturers operate. This is the first offering of a prize by the Trade Executives, membership of which covers 440 associations. The prize is offered for "original and outstanding service to the public," and was awarded to the automobile manufacturers organisation for its patents agreement, under which 1,700 patents owned by the members are made available to all members without cost.

Motor Coach and Bus Notes.

The Manchester-Blackpool Service. — The interesting double-deck bus illustrated has been supplied by Crossley Motors, Ltd., Gorton, Manchester, to the London, Manchester & Scottish Coachways, of Manchester, for operation on their Manchester to Blackpool service. The chassis is the 38/110 h.p. six-cylinder "Condor." The body has been built in the Crossley factory and is painted

A "CROSSLEY" TWO-DECK LUXURY COACH.

black and white with lettering in gold. Upholstery is in moquette, black and white pattern to match the painting.

The Exide Outing.—On the occasion of the Exide Annual Convention this year, held at Glasgow, several motor tours were arranged and run by coaches of the Scottish Motor Traction Co., to Longniddry, Peebles, Forth Bridge, Gleneagles, etc. 12 coaches were utilised, and altogether some 3,000 coach miles were run in the three afternoons. Our illustration shows the coaches at Gleneagles.

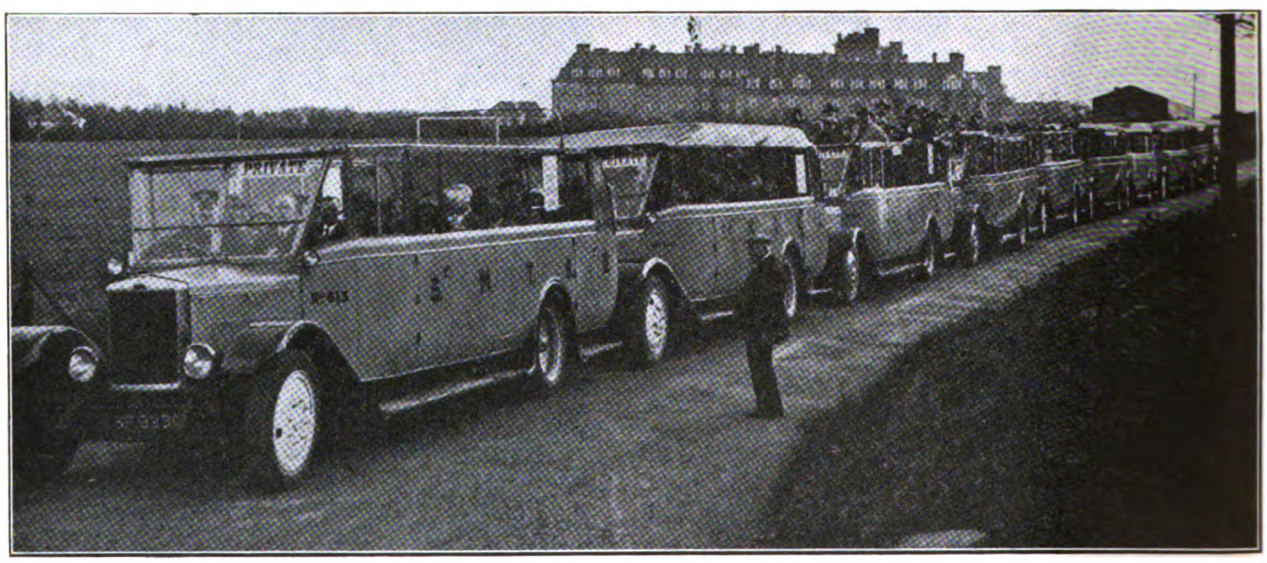
Coaching Firms Co-operation.—Messrs. Manning and Sons, 64 Compton Road, 15 Kew Road and 165 Liverpool Road, have linked up their motor coach services with Messrs. Macshanes' Motors, Ltd., 5 Commutation Row, Liverpool, and 53 Woburn Place, London, W.C.1.

The King of Egypt's Morris Commercial.—The vehicle shown in the accompanying photograph is a Morris commercial six-wheeled saloon in the service of H.M. the King of Egypt for desert trips. It is shown near the

H.M. THE KING OF EGYPT'S MORRIS-COMMERCIAL SIX-WHEELED SALOON.

Giza Pyramids waiting for H.M. the King of Belgium during his visit to Egypt a few weeks ago. The vehicle was supplied through the Morris Commercial agents—the Cairo Motor Company.

Bus Overcrowding in Jersey. — The question of the overcrowding of buses plying for hire on Jersey roads has been under the consideration of the authorities of this "home rule" island for some time; and new regulations governing the passenger-carrying capacity of these vehicles will be enforced in future. Drivers may now only carry one quarter more than the seating capacity.



EXIDE AGENTS AT GLENEAGLES. THE COACHES ARE IN THE SERVICE OF THE SCOTTISH MOTOR TRACTION COMPANY.

Licence Reciprocity.—At the Watch Committee of the Oldham Corporation, the town clerk submitted a letter from the town clerk of Blackpool with reference to complaints that other towns to which chars-a-banc from Blackpool run do not reciprocate in the grant of licences, and suggesting that the matter should receive consideration. It was pointed out that the committee had already granted licences to char-a-banc proprietors in other towns (including Blackpool), and the town clerk was requested to reply accordingly and to point out that there already exists a fair share of reciprocity.

Bus Working Results in Brief.—The North Western Road Car Company made a profit last year of £68,323 on traffic receipts amounting to £542,183. The company has entered into a working agreement with the L.M.S. and L.N.E.R. for the co-ordination of road and rail interests in the area served by the company. Warrington Corporation has increased the profit on its motor bus services to £6,895 in the year just concluded. Total working expenses per bus mile amounted to 14.097d. and receipts 19.432d. Birkenhead Corporation motor omnibuses on the past year's working have earned a gross

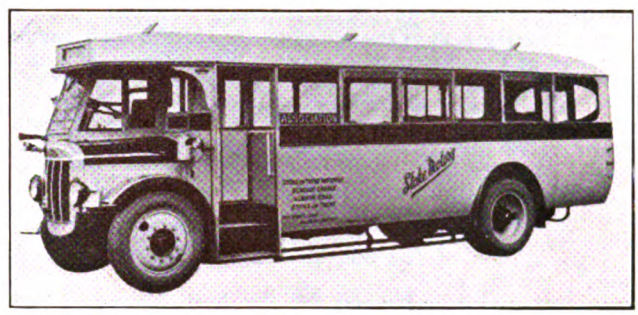
Digitized by Google

working profit of £64,715 as compared with £54,257 in the previous year, and a net profit of £32,710 as against £26,705 in 1929. The sum of £14,000 has been appropriated to rate aid. Leigh Corporation motor omnibus department, which has 29 motor buses, made a net profit of £7,033. The total expenditure for the 12 months worked out at 8.95d. per mile.

Big Order for Daimlers. — The Daimler Co., Ltd., Coventry, inform us that they have received an order from the Lanarkshire Traction Company (formerly the Lanarkshire Tramways Company) for fifty C.F.6. single-deck saloon buses. The coachwork for these vehicles will be carried out by the Hoyal Body Corporation (1928), Ltd. These vehicles will begin to be put in service during this month.

A Commer Bus for Exeter.—The 20-seater pay-as-you enter bus, illustrated, has recently been supplied to the Exeter Corporation. The Willowbrook Body is mounted on the Commer Invader chassis supplied by Commer Cars, Ltd., of Luton.

A COMMER BUS FOR EXETER.



TILLING STEVENS "EXPRESS" BUS FOR STOKE-ON-TRENT MOTORS LTD.

Licensing of Bus Drivers.—With reference to the proposal of the Hackney Coach Sub-Committee of the Manchester Watch Committee that all bus drivers in the city should be in possession of a medical certificate of fitness, it should be explained that this would not involve a periodic examination. The Committee wants to extend to drivers of private buses a regulation which for some time had been enforced in the case of Corporation motor bus drivers.

A "Regal" Trip.—Recently, A. Timpson & Sons, Ltd., the well-known South London coach operators, took 500 employees of Messrs. Kennards, the big drapers of Croydon, to Southsea for a day's outing. For the journey they used 15 of their A.E.C. "Regal" luxury coaches. These can be seen in the accompanying photograph drawn up in the London Road, Croydon, immediately prior to the departure. To some of the people used to making their journeys by train, the luxury, smoothness and speed of these modern A.E.C. motor coaches came as a revelation.

Big Passenger Transport Merger.—Negotiations which have been proceeding for some months, have resulted in Ribble Motor Services, Ltd., acquiring practically the whole of the share capital of Merseyside Touring Co., one of the newest as well as the largest privately owned passenger transport organisations in Liverpool. The Merseyside fleet of 100 vehicles consists of about 70 motor buses and 30 motor coaches most of them 1929 and 1930 Tilling-Stevens and Bristols. In passenger transport circles it is regarded as a remarkable achievement that a new company such as Merseyside should carry over 5,000,000 passengers in their first year of operation, which ended in March last. They have shown considerable enterprise in the Organisation of long distance motor coach services between Liverpool and destinations as remote as Bristol, Weston-super-Mare, Torquay, Scarborough, Newcastle, Great Yarmouth, London, etc.

"Express" Buses for Stoke-on-Trent Motors, Ltd.—Tilling-Stevens Motors, Ltd., 5 Iddesleigh House, Caxton Street, Westminster, London, S.W.1, have sent us the accompanying photograph showing a representative type of "Express" 32-seater gear driven omnibus as operated by the Stoke-on-Trent Motors, Ltd. They inform us that the latest 1930 model has embodied in it improvements making for greater simplicity, accessibility and minimum number of points requiring such attention as lubrication. It has a wheelbase of 16 ft., a 29/70 h.p. engine Ricardo design with four cylinders, forced feed lubrication, magneto ignition, four-speed gear box, single plate clutch, worm drive and detachable pressed steel wheels.

Ribble Co.'s Figures.—Ribble Motor Services, Ltd., the eleventh annual meeting of whose shareholders was held at Preston, now holds practically the whole of the share capitals of the Rishton and Antley Motor Co., Ltd., the Merseyside Touring Co., the Waterloo and Crosby Motor Services, Ltd., and the County Motors (Lancaster), Ltd. It is the policy of the Company, after it has acquired the whole of the share capital in a company working in its area, to gradually absorb the business of the company into that of the Ribble Company, and then for the subsidiary company to cease to function as a separate entity. The fleet consists of 666 vehicles and, in addition, the subsidiary companies own and operate 185 vehicles. They are now working no less than 1,430 route miles, as compared with 962 the previous year. They carried during the year nearly 47,000,000 passengers as compared with 33,500,000 the previous year. The present weekly wages bill is about £7,600 divided amongst 2,500 employees. Over 300 Ribble drivers have received the "Safety First" diploma. As an ordinary service driver covers about 28,000 driving miles in a year and an express driver covers considerably more than this, it is really creditable that almost 50 per cent. of the drivers have carried out this task without fault.

Whitehaven's Bus Station.—Whitehaven Town Council has approved plans for the erection, at a cost of £15,000, of a bus station by the Cumberland Motor Services, Ltd. This will be similar to but larger than that at Workington

KENNARDS EMPLOYEES VISIT SOUTHSEA IN TIMPSON & SONS A.E.C. "REGAL" COACHES.

International Container Traffic.

Competition for the Most Efficient Designs.

The "Container" system for the combined carriage of goods by road, rail and water, was first discussed internationally by the World Motor Congress at its Assembly in Rome in the autumn of 1928. Following a suggestion of the President of the International Chamber of Commerce, an international Committee was formed by it in collaboration with the League of Nations, the International Railway Union and other competent organisations with a view to instituting a competition for the best standardized type of container for international traffic.

Substantial prizes will be awarded to the successful competitors.

At a meeting held at the Headquarters of the International Chamber of Commerce, with Senator Silvio Crespi, President of the Royal Automobile Club of Italy, in the Chair, the Committee drafted the final conditions of the competition to conduct which a Jury was formed with Mr. Edmond Chaix, President of the "Conseil Central du Tourisme International," as President.

All communications should be addressed to the International Container Competition Committee, International Chamber of Commerce, 38, Cours Albert ler, Paris.

A translation of the official French text of the conditions is given below.

A competition is opened for the best system of containers for use in international traffic. This competition is organised by the following:—

International Chamber of Commerce, Advisory and Technical Committee on Communications and Transit of the League of Nations, International Railway Union, Bureau Permanent International des Constructeurs d'Automobiles, International Association of Recognized Automobile Clubs, Conseil Central du Tourisme International, Fédération Internationale des Transports Commerciaux Automobiles, Bureau International de Normalisation de l'Automobile.

The problem is to find the most practical method of through transport of goods by sea, rail and highway, with a view to suppressing, as far as possible, costs of packing, storage and sorting, and to enable goods to be carried from the place of production to the place of consumption in the most rapid and economical manner.

The conditions with which containers must comply and the terms of the competition are set forth below:—

The following are permitted to compete:—

Firms manufacturing railway or motor equipment, Transportation undertakings, Organisations of these industries, Technical Schools and Higher Institutes of Commercial Trading, Public Institutions dealing with goods traffic and transportation matters.

The Competition will take place at the Headquarters of the International Chamber of Commerce in Paris, and will be governed by French law. All communications should be addressed to the International Committee for the Container Competition, International Chamber of Commerce, 38, Cours Albert ler, Paris.

Conditions.

1.—The containers are to be of two models: open and closed. For each model, competitors must submit three containers of different sizes.

The outside dimensions of these three containers are to be as follows:—

	1st class	2nd class	3rd class
Length ...	3 m. 95	At option of the competitor on condition however that, as far as possible, these be submultiples of class 1.	
Width ...	2 m. 15		
Height ...	2 m. 20 for closed containers. 1 m. 10 for open containers.		

All these containers to be so designed as to be able to carry five tons less their own weight.

Competitors will endeavour to reduce the weight of their containers as far as possible, while specifying for their construction materials capable of withstanding the strain involved by the corresponding weight of contents.

All containers must be capable of being carried on motor lorries, railway trucks, of normal gauge or narrow gauge and on board ships.

2.—Open containers are intended to carry raw materials and semi-manufactured goods that do not call for complete protection against weather conditions; on the contrary, the closed containers must be so constructed as to protect the goods carried against direct or indirect damage caused by weather and in particular by damage that may be caused by interior condensation or by dampness of the floors of railway trucks or motor lorries. However, they must provide adequate means of ventilation.

Competitors must describe in detail the devices used for the opening and closing of containers and these devices must be such as to enable the container to be quickly opened or closed for loading and unloading.

Should doors hung on vertical hinges be used, the bottom of these doors must be at least 50 cm. from the bottom of the container, so as to allow the doors to swing over the sides of railway trucks and motor lorries. However, the whole lower part of the same side of the container must be capable of being lowered entirely. (180°).

The containers, both open and closed, must be so designed as to fit one on top of the other or one side by side the other.

The interior of the containers must present no projections but countersunk rings or other devices must be provided to enable goods to be attached at suitable heights inside the containers.

3.—The containers must be very strongly built as they will be subjected to many shocks and various causes of injury in particular the risk of shocks from the tackle of cranes, and also lateral strain when lifted loaded. Competitors must also take into account that especially on board ship these containers will be piled one on top of the other (at least three of the first class) without losing sight of the fact that the weight of the containers must be as low as possible.

4.—The designs presented by competitors must be for rigid containers.

Competitors will also have the right to present separate designs for folding containers presenting the possibility of shipping empties by knocking-down the containers in sections or in parts. In the latter case, competitors must present means of keeping the component parts of the containers together to prevent loss.

5.—In designing their containers, competitors must conform to the customs regulations applying to railway-trucks (see chapter 2 of the Final Protocol of the International Conference of Bern, of May 18th, 1907, annexed).

6.—Containers must be provided with the necessary devices to permit their handling and their raising by means of cranes, tackle, lifting trucks, etc. They must also be provided with the necessary devices to permit their removal by sliding (ramp, inclined plane, etc.). In any case, it is advisable to avoid as far as possible the use of any detached apparatus for the handling of containers by sliding, rolling, etc.

Competitors must indicate in detail what operations are necessary for loading the container from the ground on to the railway-truck or motor lorry, its unloading and its passage from railway-truck to motor-lorry and *vice versa*.

7.—Competitors must indicate the methods of fastening containers to the railway-trucks or motor-lorries. If for such fastening the container includes special apparatus, the inventor must also submit drawings of such apparatus and indicate how it is to be used.

In any case, the devices for fixing the containers must be such as not to injure the railway-truck or motor-lorry, and to be easily and quickly adaptable to existing trucks and lorries.

8.—For each type of container designed, the competitors must indicate the class of matetrial to be used in its manufacture and indicate the weight contemplated, the approximate cost of manufacture of the container, of detachable apparatus and devices that may be suggested to facilitate loading and unloading.

Prices must be stated in dollars.

9.—In order to decide on the relative value of the plans submitted, the Jury will take into account:—

Digitized by Google

(a) The lightest weight;
(b) The lowest cost of manufacture taking into account royalties to be paid;
(b) The lowest maintenance charges and greatest length of life;
(d) The easiest, most rapid and cheapest handling features of the container;
(e) The least trouble in fixing the container to railway trucks or motor lorries;
(f) The best method of closing.

10.—The competition will be in two parts

For the first part, competitors must present their plans to the International Chamber of Commerce before **September 10th, 1930,** accompanied by:—

(a) General plans of the container on a scale of no less than 1/10;
(b) Detailed plans of the principal features and of the devices for attaching the container to the railway truck or motor lorry on a scale not less than 1/5;
(c) Calculation of the parts and devices subjected to heavy stress especially lifting devices;
(d) If necessary, a reference to patents covering the devices submitted in whole or in part, as well as an indication of royalties demanded for the use of each such patent.

The plans and documents submitted therewith must be in French.*

The Jury will then proceed to a selection. The best plans will be retained for the second part of the competition.

For the second part of the competition, competitors must undertake the construction of their models that will be submitted to the tests considered necessary by the Jury.

The Jury may call upon several competitors to agree to present a single model uniting the various features selected as best from their plans.

In case of the refusal of the competitors to conform to the instructions of the Jury provided in the two above paragraphs, the Jury may have the model built and deduct the cost thereof from the prizes to be distributed to non-consenting competitors.

11.—The Jury will be entirely free to award, within the limits of the credits placed at its disposal for this purpose, such prizes as it may consider justified by the importance of the new inventions submitted to it.

The above credit is a maximum which the Jury is not obliged to award in full if it thinks fit.

12.—The prize-winning models will be exhibited.

*They may be accompanied by a text in the competitor's native tongue.

New Development in Commercial Aviation.

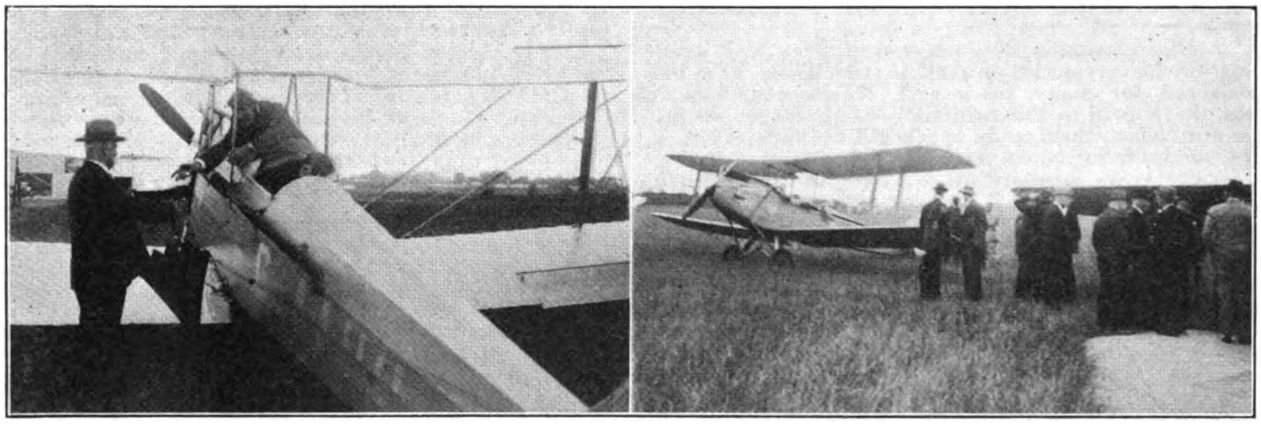
A NEW note was struck in commercial aviation on Friday, June 20th last, when to test the opportunities afforded by this method of increasing sales, the Associated Leicestershire Quarries in co-operation with the Leicestershire Aero Club, the Leicester and County Chamber of Commerce and Mr. L. Everard, M.P., sent two of their representatives by aeroplanes to call upon County and Borough Surveyors in various parts of the country.

Two machines, one a D.H. 80 Puss Moth and the other a D.H. 60 m. Gipsy Moth, left Desford Aerodrome, Leicester, at 10.30 a.m. and arrived at Heston Air Port at 12.30 after making several calls en route.

At the Heston Air Port the machines were met by Lord Ponsonby, the Parliamentary Secretary to the Ministry of Transport, Col C. H. Bressey, C.B., C.B.E., Principal Technical Officer to the Ministry of Transport, Mr. L. Everard, M.P., Sir Sefton Brancker, Director-General of Civil Aviation, Sir Cooper Rawson, M.P., Mr. A. Dryland, the County Surveyor of Middlesex and several other well-known personalities.

On the arrival of the machines at Heston, presentation cases of Leicestershire granite chippings were handed to Col. Bressey, Mr. Dryland and Mr. J. G. Carey, Surveyor to the Heston & Isleworth U.D.C. In all, nine presentation cases of granite chippings were carried by the aeroplanes and delivered at the various stops made en route.

At the luncheon which was held shortly after the arrival of the planes Col. R. E. Martin, C.M.G., the Chairman of the Leicestershire County Council, said that this was the first occasion on which aeroplanes have been used by the roadstone industry. The object, of course, was to try and ascertain the value of aviation to their business.



Photos.] [World's Carriers.
LEFT: MR. DRYLAND RECEIVING SAMPLES OF LEICESTERSHIRE GRANITE. RIGHT: INTERESTED SPECTATORS INSPECTING THE D.H. "PUSS" MOTH.

Lord Ponsonby in the course of his remarks said that he hoped that the enterprise of the Leicester granite people in sending samples of roadstone by air would encourage other counties producing roadstone to do the same in order to meet the competition from Norway.

Mr. Dryland made a humorous reference to the time when he visualised seeing aeroplanes delivering granite in bulk on the Bath Road.

It is interesting to note that both pilots and passengers are members of the Leicestershire Aero Club.

World Agricultural Tractor Trials.

A CHANGE has been made in the venue of the World Agricultural Tractor Trials, organised under the auspices of the Royal Agricultural Society of England in conjunction with the Institute of Agricultural Engineering, University of Oxford, to be held on 16th—19th September between the hours of 10 a.m. and 5 p.m. The site originally selected for the demonstration was near Wallingford. The new place is at Ardington, near Wantage, on land adjoining the Reading-Wantage main road, about two miles from Wantage. The change has been made because it was found that most of the tractors entered and the implements that were proposed for use with them required stronger and deeper land than that originally selected. The new arrangements apply to only the public demonstrations and the extended tests of a scientific and practical nature, which are conducted in private, are now being carried out on the original Wallingford site in exact accordance with the instructions issued to all entrants.

Evan Cook's Depositories, Ltd.

THE announcement that Evan Cook's Depositories, Ltd., had purchased the old-established business of Walter Winning & Co., Ltd., of Lewisham, was the reason for a visit to the Depositories in Queen's Road, Peckham, which are so well known to all connected with the removal and warehousing industry. Alighting from the train at Queen's Road Station the Depositories are immediately opposite and we were very interested to see that great changes had been made since our last visit, which took place a good many years ago. The large asphalted foreground is used as an open showroom for

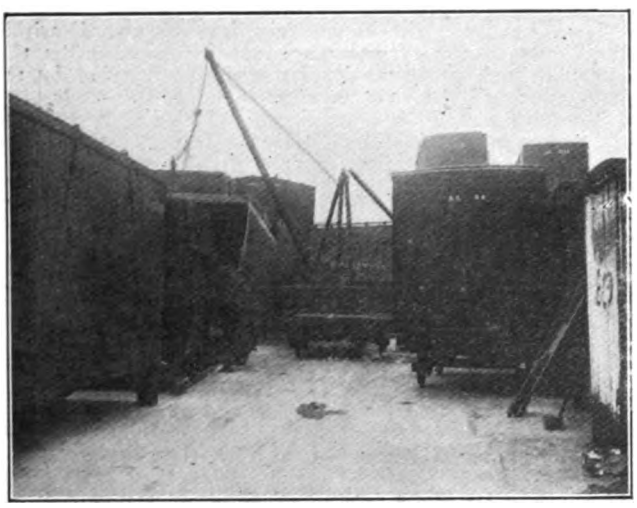

Photo.] [World's Carriers.

SHOWING THE LIFTING TACKLE USED IN EVAN COOK'S YARD.

three or four typical lift vans in which the firm have specialised for many years past, these being built to meet the special requirements of the furniture or merchandise which has to be packed into them. Passing these we came to the entrance to the premises and where, in former years furniture of all kinds was displayed for sale we now found a suite of offices which could be compared favourably to good-class bank premises, have every facility for handling orders, whether brought in by hand, received by letter, or by telephone. Here we met Mr. George Evan Cook, the elder son of the founder, who is in charge of the administrative offices, and in very quick time we were put through to "The Guv'nor," whom it has been our pleasure to know for some quarter of a century. As his home is situated within a stone's throw of the business we were invited to a cup of tea with him while he told us something of the recent developments of the business and the purchase of Walter Winning and Co., Ltd.

Evan Cook's Depositories, Ltd., is a family affair in the real sense of the word, the business being run by Mr. Evan Cook and his two sons, Mr. George Evan Cook and Mr. Jack Evan Cook, the latter being in charge of

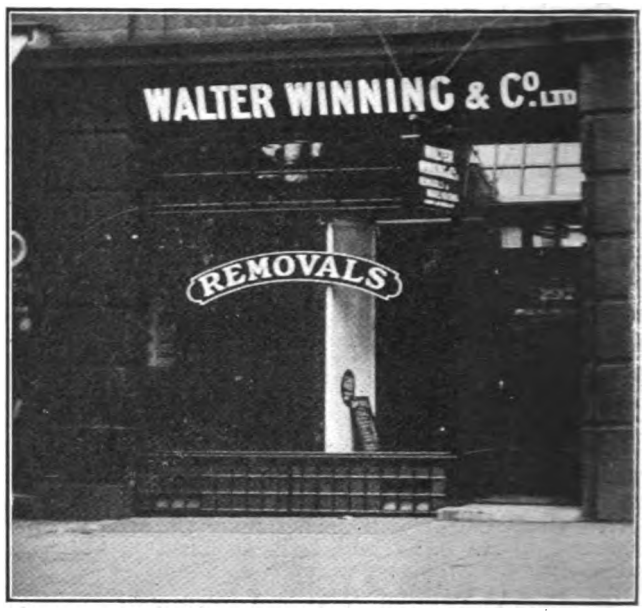

Photo.] [World's Carriers.

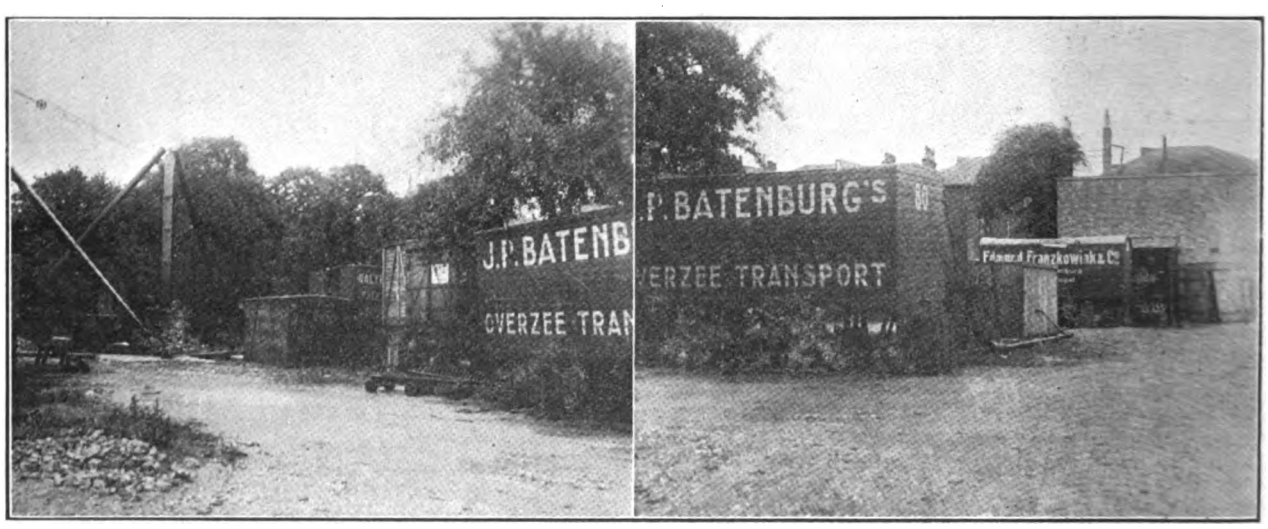
FRONT VIEW OF THE PREMISES OF WALTER WINNING & CO. LTD., OF LEWISHAM. THIS BUSINESS HAS BEEN PURCHASED BY EVAN COOK'S DEPOSITORIES LTD.

the very important Packing Department of the business. Mrs. Evan Cook is a Director of the company and Miss Winifred E. Cook is the Secretary. With two able colleagues in the persons of his sons, Mr. Evan Cook has more time to deal with matters of policy and, in addition, he has always taken an active part in the public life of Camberwell, having filled the high position of Mayor of the Borough in 1918/19. He is also a member of the Worshipful Company of Paviors and is a member of the Court, a position of which he is justly proud.

Passing through the offices we at once reach the first of the warehouses and find everything in apple-pie order, the furniture being stacked away in cubicles, carefully sheeted, with the passages clear and everything neat and tidy. When we say everything neat and tidy this is not



Photos.] [World's Carriers.

LEFT: THE LIFTING TACKLE JUST INSTALLED IN WALTER WINNING'S YARD. RIGHT: SHOWING LIFT VANS ON TRESTLES WHICH ARE USED WHEN MAN-HANDLING LIFT VANS.

Digitized by Google

strictly accurate as every day there are new loads of furniture coming in and going out so that some portions of each warehouse shows clear signs of the activities inseparable from such a business. The latest appliances for labour saving and to promote efficiency have been installed and we were keenly interested in several ingenious devices thought out by members of the firm and utilised with great success and at a comparatively small cost.

The latest lifting tackle has been installed so that motor vans can be run in and the lift vans taken off in the space of a few seconds as opposed to the older method, which took an hour or more to perform the same operation. A very useful piece of machinery is the De Vilbiss spray gun which enables lift vans, which in process of time have become somewhat worn as regards outward appearance, to be re-painted while waiting to be filled, going out again looking "as fresh as paint." Passing on to another of the warehouses we were shown a large amount of antique furniture, some already carefully packed for transit to America, other pieces which had just arrived being stacked temporarily for similar attention. Nothing is too small or, within certain limits, too large for the capacity of this firm, and we learned that recently an escalator had been packed and despatched, while in another part of the warehouse, packing cases, containing children's toys to the value of some £150, were ready to be dispatched to one of the Indian Princes.

Evan Cook's Depositories, Ltd., have always specialised in work for the trade and number on their list of customers many well known shipping and forwarding agents who find it a great convenience to be able to rely on their special facilities for packing and handling furniture and goods of all kinds which require special attention and care for dispatch to any part of the world.

It is the intention of Mr. Evan Cook and his colleagues to modernise the warehousing equipment of Walter Winning & Co., Ltd., with all possible speed, and a crane for moving lift vans has already been purchased to this end. Walter Winnings have a good name in the trade and have specialised for many years in Continental removals, and it only needs the driving force which has been displayed for so many years by Mr. Evan Cook to bring the business into line with the most up-to-date and modern organisation.

Industrial Councils Bill.

IN the House of Commons on June 24th Mr. Mander moved for leave to bring in a Bill to encourage the formation of industrial councils and to legalise voluntary agreements when so desired. He said that the object of the Bill was to encourage co-operation in the development of industry on voluntary lines and in certain specific cases to give councils statutory power to enforce the agreements at which they had arrived. There were about 37 joint industrial councils in operation in this country at the present time, and about 47 bodies of a similar kind. They had not altogether attained the object which they were expected to reach by the Whitley Committee because they were working on voluntary lines, and there was a certain danger of these excellent bodies collapsing, because it had been found in some cases that, when an agreement had been unanimously arrived at by both sides, certain employers outside would not toe the line, but insisted on under-cutting rates to the disadvantage of the worker and of the good employer. The object of the Measure was to prevent that kind of thing, and to raise the standard throughout the industry, wherever it was covered by bodies of that kind.

The object of the Bill was to permit the formation of joint industrial councils on voluntary lines, to arrange for equal representation of employers and employed upon those councils; and it will give a schedule of subjects which could be discussed by the two sides by agreement.

It permitted the Minister of Labour, when a council asked for it and when both sides were agreed, to make an order giving the force of law to questions of wages or other matters on which the Council were agreed. Before that order was made, there was the right of appeal by persons likely to be affected, and either House of Parliament was able to bring to an end the proposed order if they passed a resolution to that effect, so that there was ample provision against any injustice. Then there was a penalty Clause. The Measure was almost wholly permissive. No joint industrial council need make use of its powers if they did not wish to do so, and it was only when the employer and the trade union on a joint industrial council came together to the Minister of Labour and asked for those powers to be put into effect, that the Minister would agree to what they demanded in the joint interest of the industry which they represented.

He very much hoped that the Minister of Labour would be able to present a Bill to the House next year, perhaps a more limited one than that which he was introducing, but one which would be, he hoped, agreed on by the employers and the trade unions. His object in introducing the Bill was to present concrete proposals in the form of legislation, which might be discussed by all those interested in industrial reforms. He thought the Bill would tend to promote peace in industry within our own borders, which was just as important in its way as international peace in the larger world outside.

The Bill was read the first time.

The Bill provides (inter alia) that where any agreement relating to a minimum rate, time rate, or basic piece-work rate of wages, or to hours of labour or other matters within the scope of the constitution of a joint industrial council or analogous thereto, arrived at or ratified by a joint industrial council, has been made effective by an Order of the Minister, any evasion of, or non-compliance by an employer with such an Order shall be deemed to be an offence punishable on summary conviction by a fine not exceeding fifty pounds for a first offence and by imprisonment without the option of a fine for a wilful continuance of such evasion or non-compliance.

Amongst the matters which the Bill proposes it shall be the function of industrial councils to consider are:—

The better utilisation of the practical knowledge and experience of the workpeople.

Means for securing to the workpeople a greater share in and responsibility for the determination and observance of the conditions under which their work is carried on.

The settlement of the general principles governing the conditions of employment, including the methods of fixing, paying and re-adjusting wages, having regard to the need for securing to the workpeople a share in the increased prosperity of the industry.

The establishment of regular methods of negotiation for issues arising between employers and workpeople, with a view both to the prevention of differences, and to their better adjustment when they appear.

Means for ensuring to the workpeople the greatest possible security of earnings and employment, without undue restriction upon change of occupation or employer.

Methods of fixing and adjusting earnings, piecework prices, etc., and of dealing with the many difficulties which arise with regard to the method and amount of payment, apart from the fixing of general standard rates, which are already covered by a preceding paragraph.

Technical education and training.

Proposed legislation affecting the industry.

The advancement of an industry by the co-operation in its government, extension and control, of all engaged in the industry.

Carter, Paterson & Co.'s Continental and Foreign Tariff.—We have received a copy of Carter, Paterson and Co.'s new tariff for Continental and Foreign traffic. Full details are given and carriage rates shown for merchandise and private effects from London and surrounding districts by recognised services—sea, rail and air. The chief office of the Company is at 128 Goswell Road, London, E.C.1.

Glasgow Horse and Motor Contractors' Association.—The annual outing of the Glasgow Horse and Motor Contractors' Association was held last month, and took the form of an all-day sail to Inveraray and back. The company embraced not only Glasgow contractors and their friends, but representatives of the trade from Edinburgh, Kilmarnock, Leith, Dundee, and other districts. Mr. David Murray, the President of the Glasgow Association, extended a cordial welcome to all.

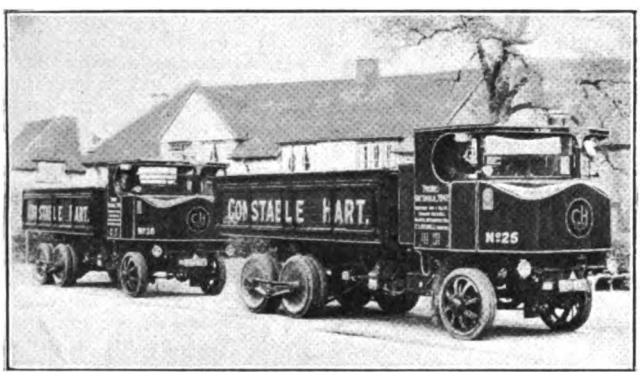
News from all Parts.

Ballast, Sand and Allied Trades Association.—On page 415 of our May issue we gave some particulars of the Ballast, Sand and Allied Trades Association, which was formed recently. The main purposes of the Association are to adopt a system of loading lines for lorries showing cubic carrying capacity and a system of delivery tickets to be used in conjunction with the loading lines, with a view to insuring that the correct amount is collected at the pit and delivered to the consumer. The Association is making good progress, and we are informed by Mr. G. V. Smith, the Secretary, that it is being well supported by the trades interested, both haulage contractors and quarry owners, and there is every reason to believe that it will very shortly prove a strong and influential Association. The loading line and delivery ticket system came into operation on July 1st and a letter has been sent to all the members setting forth the scheme in detail and a special plate has been designed to be affixed to the sides of each lorry. These plates show the cubic yards capacity of the lorry. Those interested in further information should apply to the Secretary, Ballast, Sand and Allied Trades Association, 124 Tottenham Court Road, London, W.1.

"Sentinel" D.G.6 Waggons for Road Surfacing Specialists. — Our illustration shows two "Sentinel" D.G.6 waggons, with 3-way tipping bodies, recently supplied to Constable, Hart & Co., Ltd., road surfacing specialists, whose head office is at Broadway Buildings,



"SENTINEL" D.G.6 WAGGONS FOR CONSTABLE, HART & CO. LTD.

Westminster, London, S.W.1. These waggons are repeat orders received by the makers, The "Sentinel" Waggon Works, Ltd., of Shrewsbury.

Institute of Transport.—The opening meeting of the 1930-31 session of the Institute of Transport will be held in London on Monday, October 13th next, when the Hon. Sir Arthur Stanley, G.B.E., C.B., M.V.O., who has been elected to take office as President of the Institute on October 1st, will deliver his inaugural address. The Annual General Meeting will take place in London on November 10th.

Maidstone and District Motor Services, Ltd. — The nineteenth annual general meeting of the Maidstone and District Motor Services, Ltd., was held at Maidstone on June 27th, Lieut.-Col. H. I. Robinson, A.M.I.C.E., the Chairman of the Company, presiding. The report and balance sheet showed that the company's capital remains unaltered and that the cash position is exceptionally strong. The profit and loss account shows that the gross revenue of the company amounts to £624,580, being an increase of £107,031 or just over a 20 per cent. advance on that of the previous year. The Chairman said that the progress of the company's business had been brought about by the zeal and team work of all the staff and employees from top to bottom, ably led by the General Manager, Mr. Geo. F. French. Mileage had been very much increased and services co-ordinated, or so arranged that it was now possible to travel by road throughout West Kent and East Sussex with the least possible delay. The Chairman moved "that the report of the directors and statement of accounts for the year ended 31st March, 1930, be adopted and that the recommendations contained therein as to dividend and otherwise be adopted and carried out." Mr. Sidney E. Garcke seconded, and the resolution was carried.

Motor Coach Ticket Clearing House. — Motor Coach Ticket Clearing House, Ltd., has been formed primarily to take over the collection of monies on behalf of coach operators and to eliminate the possibility of bad debts, lost tickets, and delay in payment. The offices of the Company are at Milton House, 35 Surrey Street, London, W.C.2. The telephone number is Temple Bar 8667.

Carter, Paterson & Co.'s Sports Meeting.—The Annual Sports Meeting of Carter, Paterson & Co., Ltd., was held at Wheathampstead on Whit Monday. This, the seventh annual gathering was held on Mr. James Paterson's farm, and 2,764 members of the staff and their families availed themselves of the offer of the directors to use the motors to convey them from all parts of London to and from the ground. There were many events, and much interest and keen enthusiasm were displayed by the competitors. Ideal summer weather prevailed, and the day proved most enjoyable.

A Morris House in Tottenham.—A further important development in the motoring industry has been completed by Messrs. Stewart & Ardern, Ltd., the sole London distributors of Morris Cars, who have opened extensive premises at "Morris" House, High Road, S. Tottenham. In these Showrooms will be displayed a range of Morris cars and Morris commercial vehicles. The Service and Repair Works adjoining, will enable clients to obtain adequate and efficient service, and a large stock of Morris spare parts will be available. A daily transport service is in operation between the Central Control Service

STEWART AND ARDERN'S "MORRIS" HOUSE IN TOTTENHAM.

Depot at Acton, which will enable all special orders being completed with the utmost despatch.

The Minister of Transport urges a Vigorous Bridge Policy.—Opening the Pont Gwanas Bridge on June 26th, Mr. Herbert Morrison, the Minister of Transport, said that the Merionethshire County Council was to be congratulated on its courage in completing the bridge which would make transport facilities in the district better and safer. It was true that the bridge had only cost just under £5,000 and that the scheme carried a 50 per cent. grant but, having regard to the resources of the County Council he could only express the wish that all local authorities were as courageous as that County had been in its bridges policy. The population of the County was less than 50,000 and a rate of one penny in the pound produced only £570. Ever since he had held the office of Minister of Transport he had strongly urged a vigorous policy in connection with the reconstruction of weak, narrow and dangerous bridges, and he was hopeful that the appeal which he had made to the recent Conference of local authorities, together with the substantial grants which were offered by the Ministry of Transport, would result in a big forward policy in this direction. Strong roads with weak bridges represented the reverse of economy, for just as the strength of a chain was represented by its weakest link, so the utility of a road was restricted by its weakest bridge.

Duple Bodies on A.E.C. Chassis.—On page 463 of our June issue we reproduced a photograph showing some Eton boys boarding an A.E.C. "Royal Blue" coach en route for the works of the Associated Equipment Co., Ltd., at Southall. The bodywork of this vehicle was built by Duple Bodies and Motors, Ltd., Edgware Road. The Hyde, Hendon, London, N.W.9, and is, we understand, part of an order for 37 bodies of the type shown

Digitized by Google

supplied this season to Messrs. Elliott Bros., the well-known coach operators of Bournemouth.

For Speedier Removals. A.E.C. "Reliance" Chassis for Removal Work.—Messrs. Whitby C. Oliver & Sons, Ltd., the well-known furnishers and removers, of York, have recently adopted a high power passenger chassis as the basis of a pantechnicon. The chassis is an A.E.C. 6-cylinder 95 h.p. "Reliance" model, a type now being widely used for bus and coach work. Messrs. Oliver's new vehicle, which has an overall length of 26 ft. 7½ ins., carries a box body 21 ft. 2½ ins. in length (not including cab), 7 ft. 3¼ ins. in width, and 8 ft. in height. The cubic

A.E.C. "RELIANCE" CHASSIS FOR PASSENGER TRANSPORT AND REMOVAL WORK.

capacity, including the extra storage space over the drivers' cab, is 1,225 cubic feet, and the unladen weight 4 tons 13 cwt. 0 qr. 14 lbs. This last figure is interesting in showing how Messrs. Oliver, who built the body, have succeeded in keeping down the weight while making good allowance for the stress and strain the body is called upon to bear. The panelling is ⅛ in. double steel coated Plymax. The acquisition of an A.E.C. "Reliance" following upon the introduction by Messrs. Oliver of an A.E.C. passenger chassis into their removal fleet last year, testifies to the success of this type of chassis for speedy removal work.

Morris Commercials for London's Parcel Mails.—The well-known "Middle Weight Champion" vehicle, built by Morris Commercial Cars, Ltd., of Birmingham, has been selected to carry London's parcel mails. A large order has been placed for Morris-Commercial 30 cwt. vans by the well-known Royal Mail transport contractors, Messrs. McNamara & Co. (1921), Ltd. Our photograph shows the first convoy of these vehicles to leave Birmingham.

"Tasker" Standard Steel Haulage Trailers.—On page 468 of our June issue we illustrated a Thornycroft "JJ" 6-ton chassis supplied recently to Chaplins, Ltd., through Taskers of Andover, Ltd. The trailer attached to the vehicle is a "Tasker" steel haulage trailer, 4-wheeled type, one of Messrs. Tasker's standard productions and constructed by them for Messrs. Chaplins, Ltd. Through a misunderstanding we described this trailer as being by the Eagle Engineering Co., Ltd., of Warwick. The whole of the cab, lorry platform, with deep removable sides, and the whole of the finished painting of both the lorry and the trailer was carried out by Messrs. Taskers who, we understand, have supplied a number of "JJ" Thornycrofts with this type of cab and body.

Change of Address.—The Liverpool Cart and Motor Owners' Association have changed their address to 20 Chapel Street, Liverpool. The Secretary of the Association is Mr. Allen Walter, and the telephone number Central 1948.

Institution of Automobile Engineers, Summer Outing. — The 1930 Summer Outing of the Institution of Automobile Engineers took place on June 26th and 27th. Leaving Westminster Pier on June 26th on a special launch, some 50 members and their ladies steamed down the river, an official of the Port of London Authority explaining the various places of interest passed on the way. The P.L.A. had kindly arranged that on reaching the King George V. Dock the launch should be permitted to lock in (by means of a lock designed to take the largest steamers using the Port) and steam up and down the Dock which was lined on both sides with big steamers and motor ships trading to all parts of the world; then up the Albert and Victoria Docks, similarly lined with big ships, to a tobacco warehouse containing about 40,000,000 lb. of tobacco in bond after the inspection of which the launch proceeded to Tilbury to allow the members to see over a 20,000 ton P. & O. liner. Next day the party changed over to a motor coach and went to Chatham to inspect a 4,000 h.p. cruiser, and the visit concluded with a return trip up the river and a visit to the Training Ship, "Worcester." The offices of the Institution are at Watergate House, Adelphi, London, W.C.2.

Capable Assistant Required.—We know of an opening for a capable man with experience in the shipping and forwarding business. An old-established firm with extensive business to the Continent and Overseas Dominions is requiring such help owing to the continued development of the business. Anyone interested in this matter can obtain further information by writing to "Shipping," at this office.

Leyland Motors Midland Counties Service Depot. — Leyland Motors, Ltd., head office and works, Leyland, Lancs., have opened a sales office in the Chamber of Commerce Buildings, 95 New Street, Birmingham, in order that operators in the vicinity of Birmingham and in Mid-Wales might have the advantage of direct representation. The telephone number of this office is Midland 6100. In addition to the sales offices, the firm have been able to secure large premises for a repair depot. These premises, which are now open, form part of the old Harper-Bean factory, which is situated in Hall Street, Dudley. It has been staffed by men drawn from Leylands Chorley and Headquarters Repair Works, and is in a position to undertake full repair work, in addition to the usual supply of spare parts, a full range of which, of course, will be stocked. Early steps have been taken for directional sign posts to be placed on the roads leading to this depot, but until such time as these are in position, it may be useful to mention that the best means to approach the depot from Birmingham is to take the road from the Burnt Tree Crossing towards Dudley and turn left up Wolverton road (by The Midland "Red" Bus Garage) or turn up Hall Street from the Market Square in Dudley.

THE MORRIS-COMMERCIAL 30-CWT VANS REFERRED TO IN TEXT.

Order Placed.—The Leeds City Council has placed a £165,000 order with the Brush Electrical Engineering Co., Ltd., Loughborough, for 100 double-deck, top-covered tramcars.

MERSEYSIDE.

Horses at 1/1d. per Hour.—Some interesting data concerning the Liverpool Corporation's stud of horses is contained in the annual report of Mr. T. Eaton Jones, the Chief Veterinary Officer. He explains that for the past 29 years, the horse work of his department has been conducted upon a commercial basis and under this system 1s. 1d. per horse per hour is charged for the animals at work, but in certain cases contracts are made for the cartage to be performed at a price per ton. During the year horses were supplied on 99,654 occasions, quite apart from hirings from outside cartage contractors. In the year 1929, 2,819 horses were thus hired.

Water for Steam Wagons.—Liverpool Area Committee of the Commercial Motor Users' Association had under consideration at its June meeting the question of interference with natural water supplies for steam wagons. Where main roads had been reconstructed, it was often found that the source of supply had been stopped. No decision was reached.

MANCHESTER.

To Discuss Co-ordination.—A conference is to be held in Manchester in the near future in reference to the co-ordination of bus services between local authorities and the London, Midland and Scottish Railway Company.

Cartage Tenders.—The cartage contractors who have been successful in tendering for the Electricity Departments' work during the year ending 31st June, 1931, are:—Mr. T. Lamb; Messrs. J. H. Peck & Sons, Ltd.; Mr. J. Bray; and Mr. J. Wharton, all of Manchester.

Economy of 7d. per Ton per Mile.—Twelve new motor vehicles are to be purchased by the Manchester Corporation Cleansing Department—five Lacre motor sweeping machines, five motor Freighters with dustless loading bodies, one motor Freighter watering tank with dustless loader and one motor tipping wagon. A report to the City Council states that the existing Lacre machines which have to be replaced have been working continuously for an average life of eight years eight months. Concerning the motor Freighters, these show an average economy on horse transport working on similar duties of 2s. per ton. As to the tipping wagon, this will be a five ton Karrier similar to one now in use which has "proved consistently satisfactory in service and shows an economy in working on horse transport of 7d. per ton per mile."

MIDLANDS.

Birmingham Traffic Problem. — No scheme appears to have yet been able to relieve Birmingham of her traffic problem. The one-way traffic scheme for John Bright Street and Suffolk Street does not help matters much, while the construction of a tram termini in Horsefair makes this worse as it will be a quarter of a mile further from the centre of the city.

New Corporation Buses.—Luxury buses are to appear on the streets of Birmingham at the end of the present month, and omnibus services are to be extended as the state of the roads permit. The new buses are of a type different from anything on the Birmingham streets at present. They have a large loading platform and straight staircase while the upholstery and lighting border on the luxurious.

NORTH-EAST COAST.

Messrs. Currie & Co.'s Enterprise. — Newcastle City Council has approved the granting of a lease for 40 years to Messrs. Currie & Co. (Newcastle), Ltd., the well-known contractors for removing and warehousing furniture, etc., of 2,835 square yards of land and buildings thereon and 1,034 square yards of timber quay and foreshore at the Close. This is in lieu of a lease for 21 years ordered to be sealed on Jan. 22nd last, the longer term being desired as it is now proposed to put up buildings of a more substantial nature.

Sunderland's Luxury Buses. — Twelve new Leyland "Lion" luxury buses have been added to the Sunderland and District Omnibus Co.'s fleet.

New Newcastle Garage.—Completely equipped with all the most modern appliances, Messrs. Travers' specially built garage in Newcastle, which has entrances both from New Market Street and Worswick Street, and storage for over 200 cars, is now open. There are no lifts and no ramps—a straight run in and out. The project would have been carried out nine years ago had it not been for legal obstacles involved. It was necessary for Messrs. Travers to find accommodation for no fewer than 123 evicted tenants. At the opening ceremony the ribbon across the main door was cut by Mrs. W. N. Armstrong, wife of the Managing Director.

HULL.

Queen's Dock.—The House of Lords Committee has passed the Bill promoted by the London & North Eastern Railway Company for the sale to the Hull Corporation of the Queen's Dock. There was practically no opposition when the measure was considered by a Committee of the House of Commons, but when it came before the Lords Committee the Hull Chamber of Commerce and the Hull Lighter Owners' Association put up a strong but unsuccessful fight. They claimed that the retention of the dock was necessary, especially for the use of lighters (barges) and similar craft. The railway company were able to show that as the vast majority of the vessels concerned did not pay any dues the dock was a source of continual and heavy loss to them. The Corporation, who are paying £117,000 for the dock, will fill it up and construct a large central square and sweeping boulevards. The freedom of lighters from charges for entering the docks dates back to the early days of dock construction in Hull.

SOUTH WALES.

Western Welsh Omnibuses, Ltd. — The Australian bowlers during their tour of South and Mid Wales, travelled in some of the up-to-date coaches of the Western Welsh Omnibuses which were used to convey them from town to town, and from their Cardiff headquarters to the different bowling greens. The visitors were delighted. "The Bus-Boat" is being arranged by the Western Welsh Omnibuses, Ltd. (in association with the G.W.R.), Cardiff, and P. and A. Campbell's Steamship Co. This will enable tourists to visit Clevedon, Minehead, Ilfracombe, and other parts of Somerset and Devon by means of Channel passenger boats, by rail, and road, going and return by land and water, at the desire and convenience of the tourist, on a combined ticket, on an arranged or indefinite period. Bus tours of South and West Wales are also arranged by the Western Welsh Omnibuses, who also run excursions to Talgaith, Aberystwyth, etc. The Western Welsh Omnibuses, Ltd., are about to put up central offices and a modern garage for about 100 buses at the recently acquired Dusty Forge twelve-acre site, at Ely, Cardiff. The land will provide ample recreational facilities for cricket, football, lawn tennis, etc., and the new buildings will include a Recreation Hall.

SCOTLAND.

Railway Horses.—An interesting parade of about 200 draught horses engaged in transport work at the College Goods Station of the L.M. & S. Railway in Glasgow, was held in the station yard recently. Prizes and awards were given for grooming, decorations, conditions of harness, and other points of merit. The judges included Mrs. Killen, wife of the General Superintendent, and Mrs. Locke, wife of the Station Superintendent, the former presenting the prizes. This is the first parade of its kind to be held in the city and it was very successful.

NORTHERN IRELAND.

Motor Taxation. — The Town Clerk of Belfast has written to the Ministry of Finance of the Northern Ireland Government stating that the new duties imposed on hackney vehicles by the recent local Budget exceed the limits of fair taxation, while their special effect on the Belfast tramway undertaking is likely to lead to such difficulties in the way of financing the undertaking that the public interest will suffer, and that the conversion to the trolley system may become financially impossible.

IRISH FREE STATE.

Tariff on Coach and Motor Bodies Imported into the Irish Free State. — In Dail Eireann, Mr. Morrissey, a Labour Deputy for County Tipperary, asked the Minister for Finance whether the Tariff Commission had yet presented a report on the application made on behalf of the Free State coachbuilding industry for a Customs duty on imported coach and motor bodies, and, if not, was he in a position to indicate when a report on the application might be expected? Mr. E. Blythe, Minister for Finance, said that he was informed by the Tariff Commission that their report on the application was still under consideration. The matter was being dealt with as expeditiously as possible, and he understood that the Tariff Commission hoped to present their report in the near future. Mr. P. S. Doyle, Deputy for South Dublin, asked the Minister if he was aware that the employees of many coachbuilders in the Free State were at present working on short time, and that the whole industry was in a very precarious way? Mr. Blythe replied that he would deal with the Tariff Commission report as quickly as possible.

International Federation of Forwarding Organisations.

Third Biennial Session.

THE International Federation of Forwarding Agents held its Third Plenary Session at Antwerp on the 4th and 5th June last, and was attended by respective forwarding agents of Belgium, Holland, Germany, Denmark, Sweden, Finland, Latvia, Austria, Hungary, Switzerland and Great Britain, the British Association of Shipping and Forwarding Agents being represented by Mr. F. J. Gerson.

The proceedings commenced on the 4th June by a sitting of the Council, composed of one representative from each country at which the agenda for the following day was discussed in detail and a series of resolutions formulated.

The General Meeting took place at the Senate House of the Province of Antwerp on the 5th June and lasted with intervals from 9 a.m. until 8.30 p.m. In addition to the members of the Council many forwarding agents from the different countries concerned were present and took part in a lively discussion of the various points on the agenda.

Under the Chairmanship of Mr. Paul Lehmann, of Copenhagen, the Meeting, after confirming the Minutes of the previous plenary session, adopting the Council's Report of the Federation's activities during the preceding period, adopting the Accounts and Balance Sheet of the Federation and resolving to continue the subscription of

DELEGATES TO THE INTERNATIONAL FEDERATION OF FORWARDING ORGANISATIONS OUTSIDE THE COUNCIL CHAMBER OF THE PROVINCIAL GOVERNMENT AT ANTWERP.

the Federation at its present level, proceeded to the first important matter on its agenda, viz., a discussion as to whether it would be possible to formulate general conditions for carriage of goods which should be applicable to forwarding agents in all countries adhering to the Federation. Dr. C. B. Ingwersen read an interesting paper on this subject and the Meeting resolved that whilst it was impracticable at the present time to hope for the speedy adoption of universal conditions of transport, every country represented on the Federation should be asked to place their national conditions of transport at the disposal of the Federation office, or, alternatively, where national conditions do not exist they should make every attempt to establish such a code. From the study of these various conditions it should be the duty of the Federation to extract therefrom any points which are at the present moment in effect common to all countries concerned, and that such extract should form the kernel of a code of regulations which could be gradually elaborated in order to meet conditions prevailing in all countries. It was realised that this object cannot be achieved in the near future, and that only very slow progress is to be hoped for.

Mr. Loeb, of Vienna, then read a paper dealing with the advisability of classifying the services rendered by forwarding agents in the different countries with the object of facilitating the checking of accounts as between forwarding agents and the establishment of through rates for transport between the various countries. It was resolved that the Federation should ask its members to compile statements of the various services rendered in each country and the most satisfactory form of terminology for such services, so that in due course a form of lexicon can be elaborated for the use of the members.

The question of compiling a Directory and Year Book was then discussed on lines laid down by Mr. de Jong, of Amsterdam, but it was decided that the finances of the Federation are not yet strong enough to start the risk of this experiment however desirable it may be in theory.

The next item to be considered was the action of the International Chamber of Commerce in connection with the League of Nations, having as its object the simplification and approximation of Customs formalities in various countries, and after a very lengthy discussion it was decided to notify the International Chamber of Commerce as follows:—

> "In connection with the activity of the International Chamber of Commerce aiming at the simplification and approximation of Customs Formalities, the International Federation of Forwarding Agents wishes to offer its assistance in this work on the understanding that the position and the interests of forwarding agents be completely safeguarded. The Federation further expresses the hope that States, Governments and Public Bodies should abstain from undertaking the various operations normally accruing to the forwarding agent, and that on the contrary these various public organisations should take all the necessary steps for protecting the free exercise of this important profession."

Mr. O. Forsblad, of Gothenburg, then reported to the Federation that he had been in touch with the interests at present concerned in an atempt to evolve a standard form of Marine Insurance Policy; that progress in achieving this object was not yet very marked, but that he understood that in due course forwarding agents would be asked to give the benefit of their experience in such matters.

One of the most important points dealt with at the Meeting was the question, also in course of debate by the International Chamber of Commerce, of the establishment of negotiable documents for International rail and steamer traffic, and an interesting paper on this subject was read by Dr. W. Kes, of Berlin. This matter naturally provided considerable discussion and the sense of the Meeting as a whole was to the effect that, in accordance with the views expressed at the International Chamber of Commerce by the British railway companies representatives, the necessity for the institution of such documents does not appear to arise in view of the fact that the forwarding agent is already under present conditions in a position to provide merchants with all the necessary

Digitized by Google

facilities. The representative of the Antwerp Association of Forwarding Agents asked that a suggestion should be put forward tending to make it possible to employ the duplicate "Frachtbrief" as a negotiable document, and it was decided that the Council of the Federation shall study this proposal with a view to action if found desirable.

Various other matters of local interest having been discussed the Meeting then terminated as aforesaid at 8.30 p.m.

As regards the social side of the Meeting, we cannot conclude this article without expressing our great appreciation and gratitude to the Federation of Belgian Forwarding Agents for the exceedingly pleasant and hospitable arrangements that were made for the reception of the International delegates. After the Council Meeting on the 4th June the delegates were received in the Pavilion of the City of Antwerp at the International Centenary Exhibition and a film covering all the activities of the Port of Antwerp was especially demonstrated for their benefit. On the 5th June, the day of the General Meeting, the delegates were invited to lunch by the Compagnie Maritime Belge on board their modern steamer, "Albertville," and in addition to a very excellent menu they received the most cordial addresses of welcome. The afternoon session of June 5th was interrupted for a short while and the delegates proceeded to the Hotel de Ville where they were officially welcomed by the Burgomaster of Antwerp, Mons. van Cauwelaert, who addressed them in very complimentary terms in several European languages. On Friday, 6th June, the party was conveyed in luxurious motor omnibuses to the docks and thence taken on a tour of inspection on a tug boat which conveyed them as far as the Kruisschans Lock, recently completed and in fact one of the largest locks in the world. On the evening of the same day the delegates were the guests of the Belgian Federation at a sumptuous banquet which derived considerably increased interest from the presence of the Belgian Minister of Transport who, in addition to addressing the company generally, also found time to exchange a few words with the various delegates in their native language.

Forwarding Agents Meet at Antwerp.

(Specially written by the General Secretary of the International Federation of Forwarding Organisations, Vienna.)

WITH strong representation, especially of forwarding agents in Belgium, Holland and Germany, and with every prospect of a durable success, on June 5th and 6th last there took place at Antwerp this year's Congress of the International Federation of Forwarding Organisations.

The President, Mr. Paul Lehmann, who presided, was in the happy position of being able to welcome officers of forwarding organisations of most European countries, and at the same time to refer to the famous traditions of Antwerp which formed an excellent venue for the meeting. He was energetically assisted in presiding over the Assembly by the Vice-President, Mr. Josef Albert de Ryckere, who earned the gratitude of all for the success of the arrangements he so efficiently undertook, in co-operation with the Committee of the Belgian National Association, to make the stay in Belgium of the foreign delegates so enjoyable.

MR. PAUL LEHMANN, PRESIDENT, INTERNATIONAL FEDERATION OF FORWARDING ORGANISATIONS.

The tour of the large docks, the reception by the Mayor of Antwerp, the visit to the International Maritime and Colonial Exhibition, and a banquet at which a member of the Government was present were the outstanding events of the meeting which was so successful that it will leave with all those who attended the Congress some indelible impressions.

The business discussions proceeded briskly and were especially remarkable for the eager collaboration of colleagues from Belgium.

President Lehmann reviewed the work done during the last two years and referred to some of the very important matters engaging the attention of the trade. From the President's report it was clear that the Federation had every reason to be satisfied with developments which showed a permanently upward tendency, the Federation now numbering amongst its members the "Verein Bulgarischer Spediteure," Sofia, and the "Verein Rigaer Spediteure."

The activities of the Federation, carried out in accordance with the programme drawn up by the board of directors, have been of great value to the affiliated associations by giving information, settling differences, establishing an International Court of Arbitration and in setting up a code of International commercial usages for the intercourse of forwarding agents each with the other. In addition to these considerable steps the Federation has dealt with some smaller matters such as considering divers aspirations and complaints of forwarding agents.

The Minutes of the last General Meeting having been circulated, were taken as read and signed. The Balance Sheet for the year was placed before the meeting by the cashier, Mr. de Jong, Director of the Scheepvaart Vereeniging Noord, Amsterdam, and passed unanimously. The accounts showed a good surplus of income over expenditure.

After the formal business had been concluded the Congress discussed some important matters foremost amongst these was a Paper by Dr. Ingwersen, Chairman of the Dansk Möbeltransport, Copenhagen, on "General International Conditions of Carriage," the question being whether general conditions for the carriage of goods could be drawn up for use between agents and customers, and which should form the basis for future legislation affecting forwarding agents, such conditions to be applicable to forwarding agents in all countries who were members of the Federation.

MR. JOSEF ALBERT DE RYCKERE, VICE-PRESIDENT, INTERNATIONAL FEDERATION OF FORWARDING ORGANISATIONS.

Varying views were expressed on the question of establishing a system of universal nomenclature for services rendered by forwarding agents regarding which Mr. Wilhelm Loeb, of Vienna, read a most interesting Paper. As is known from experience the services rendered by forwarding agents are specialised not only in different countries, but also in different places in the same country, and there is no doubt that the Federation could do a big work by putting this matter in order by adopting a uniform nomenclature. The work of the forwarding agents would then develop more easily, and accountancy would cause less misunderstandings and difficulties, and an opportunity would be presented of reaching a homogeneous tariff-standard, the establishment of which would be extremely advantageous for the intercourse of forwarding agents between each other. The Congress finally approved of a resolution of the Board of Directors that in the single states committees should be formed which would collect the service expressions there prevailing and submit them to the office for collation.

Of great interest was the Paper read by Dr. Paul Dumont, Director of the "Schweizerischer Spediteurenverband" at Berne, on the unification of custom house formalities. Dr. Dumont pointed out that the Convention concluded in the year 1923 at Geneva regarding this unification, had not in the main been realised. The Congress expressed the desire that this agreement should now really come into operation, and this desire will certainly meet with the greatest satisfaction from all quarters of the industry, and in this connection reference might be made to the fact that the forwarding agents' interests

Digitized by Google

urgently demand that the "public hand" should refrain from further interference in the forwarding agents' sphere of activity, but should further as much as possible their interests.

Statements concerning the creation of a uniform transport insurance policy, which were contained in a report presented by the delegate of the Nordisk Speditor Forbund for Sweden, Mr. Olof Forsblad, claimed general attention. It was gleaned from the report that there is a chance of evolving from the English clause, "warehouse to warehouse," a general clause regarding the capacity and the end of a transport insurance. In any case the Federation will do its utmost to protect the interests of the forwarding agents in this matter.

MR. LUDWIG WEISS, GENERAL SECRETARY, INTERNATIONAL FEDERATION OF FORWARDING ORGANISATIONS.

With good reason the Managing Director of the Verein Deutscher Spediteure-Reichsverband des deutschen Speditionsgewerbes, Dr. Walter Kes, has taken up an attitude of refusal against the idea of negotiable bills of lading which was especially supported by the International Chamber of Commerce, by explaining that the establishment of such bills of lading would overburden the railway companies with work, without being of special advantage to the freighters considering the traditional services rendered in this matter by forwarding agents and bankers. The Belgian forwarding agents followed the discussion on this question with great attention and participated in the speeches supplying the assembly with various arguments.

Finally it would be opportune to mention that the Federation, in view of a report on the subject by Mr. de Jong de Amsterdam, is contemplating the publishing of a Year Book in order to enable the members of affiliated corporations to get information as to the names and addresses of their colleagues as well as of providing them with other important information. In view of finances, however, it was decided that the Federation should make inquiries from affiliated associations regarding the matter.

Although the proceedings were conducted almost entirely in French, nearly all the delegates took part in the debates.

The social arrangements met with entire approval. By the exhibition of a new film dealing with the ports and docks of Antwerp, presented by the Town Council at the Town Pavilion in the International Maritime and Colonial Exhibition, the delegates and guests were prepared for the visit to these docks which took place the next day with the aid of a special steam launch placed at the delegates' disposal by the Town, and the forwarding agents had the opportunity of becoming acquainted with the large establishments of that great port.

As regards the next General Meeting the Congress decided to accept the proposal of the "Landesverein Ungarischer Spediteure" that the General Assembly in 1932 should be held at Budapest, the next Committee Meeting in 1931 to take place in Amsterdam.

Immediately after the Congress the direction of the Federation fell to the new Managing Committee, which consists at present of the following delegates:—

President: Mr. Paul Lehmann (Nordisk Speditör-Forbund, Section Denmark), Copenhagen, Amaliegade 32.

Vice-Presidents: Mr. Josef Albert de Ryckere (Fédération Nationale des Entrepreneurs de Transports de Belgique), Antwerp, Rue de l'Olivier 17. Mr. Hans Blum; firm, Adolf Blum & Popper A.-G. (Verein Deutscher Spediteure, Reichsverband des Deutschen Speditionsgewerbes), Hamburg, I., Mönckebergstrasse 17. Dr. Paul Dumont (Schweizerischer Spediteurenverband), Bern, Marktgasse 37. Mr. Stefan Karpeles-Schenker: firm, Schenker & Co. (Zentralverband der Spediteure), Wien, I., Hoher Markt 12.

Board of Directors: Mr. Kammerrat Arthur Brüll; firm, Adolf Brüll & Söhne (Allgemeiner Möbeltransportverband mit dem Sitze in Wien), Bielsko, Brückenstrasse 1 (alternating with the delegate of des Zentralverbandes der Spediteure). Mr. F. J. Gerson; firm, Rosenberg, Loewe & Co., Succrs. Ltd. (British Association of Shipping and Forwarding Agents), London, E.C.3, 14 Bury Street, St. Mary Axe. Dr. C. B. Ingwersen; firm, Adams Transport Co. A.-B. (Dansk Möbeltransport-Forening), Kopenhagen, Danasvej 30. Mr. Hector l'Herbier (Fédération Nationale des Commissionaires de Transports, Transitaires, Agents Maritimes et Assimilés), Paris, 23, Avenue de Messine; Substitute: Mr. Roger Brunet, Bordeaux, 14, Rue Roborel de Climens. Mr. Kommerzialrat Max Erben; firm, Erben & Gerstenberger ("Globus" Internationaler Spediteurverband), Prague, Petersplatz 7 (alternating with the delegate des Svaz ceskoslovenskych zasilatelu). Mr. Samuel Rockenstein; firm, "Express" A. G. (Landesverein Ungarischer Spediteure), Budapest, V., Nador-utca 12. Mr. Konsul Ernst Krogius; firm, A.-B. Lars Krogius & Co. (Nordisk Speditör-Forbund, Section Finland), Helsingfors. Dir. Rolf S. Aas (Nordisk Speditör-Forbund, Section Norway), Oslo, Skippergatan 19. Konsul Olaf Forsblad (Nordisk Speditör-Forbund, Section Sweden), Göteborg, Norra Hamngatan 6. Dr. M. H. de Jong, Kassier (Scheepvaart Vereeniging Noord), Amsterdam, Warmoesstraat 197-199. Dir. Gustav Klauber; firm, "Cechoslavia," Vereinigung cechoslav. Spediteure für intern. Transport A.-G. (Svaz cechoslovenskych zasilatelu), Prague, II., Lützova ul. 36 (alternating with the delegate des "Globus"). Mr. Girolamo Spitzer; firm. Ornstein & Spitzer (Udruzenje Spedîtera Kraljevine SHS.), Zagreb, Gajeva ul. 10. Mr. Julius Hermann (Verband der polnischen Transport- und Speditionsunternehmungen), Warszawa, S-to Krzyska 32; Substitute: Rechtsanwalt Dr. Alexander Tempel, Warszawa, Piekna 11/b. Mr. Paul Kebrle (Vereinigung der Bulgarischen Spediteure), Sofia, 15. November-Strasse 5. Mr. Eugen Schwartz (Verein der Rigaer Spediteure), Riga, Grosse Jakobstrasse 16.

Office of the Federation: Direktor Ludwig Weiss, Wien, VI., Linke Wienzeile 64.

Shipping Agent's Good Word for Liverpool.—Major J. A. Eckes, of Messrs. Langstaff, Erembert and Co., Ltd., who is the Chairman of the Liverpool Chamber of Commerce, in welcoming twelve members of the Virginia (U.S.A.) Chamber of Commerce to Liverpool, said that what the delegation could see would be sufficient to convince them that they in Liverpool could handle anything they could send them. He invited the visitors who were particularly interested in the tobacco trade, to send their products to the natural entrance to the manufacturing districts of the north of England—Liverpool; also when they—as he trusted they would—place orders for manufactured goods in this country, specify shipment via Liverpool. He wanted them to get it firmly fixed in their minds that the great population of the North and Midlands had one point of entry and one of exit worth considering and that was Liverpool. Col. A. B. Carrington, responding on behalf of the Virginia Chamber of Commerce, said Denver had done business with Liverpool ever since he had known the town.

Southampton Docks.—Depression in the cotton industry with resultant decreased exports has caused a slight setback in the cargo traffic at the docks during the past six months, but the shipping tonnage using the Port has recorded a further substantial advance, and incidentally established a new record for the half year. The number of passengers dealt with also reveals an increase upon previous periods and bids fair to set up a new record at the end of the year in this respect. In this connection the carryings by the cross-Channel steamers during the first part of the year have shown a welcome improvement as compared with the corresponding period of last year. The facilities for rapid discharge of perishable produce at the docks and its direct disposal into cold store, or refrigerated rail vans or containers, has had much to do with the Port's increasing trade with the Antipodes. A recent typical instance of such discharge may be cited where a vessel put out 31,000 boxes of New Zealand apples and pears in one day, 24,000 boxes being unshipped from one hatch.

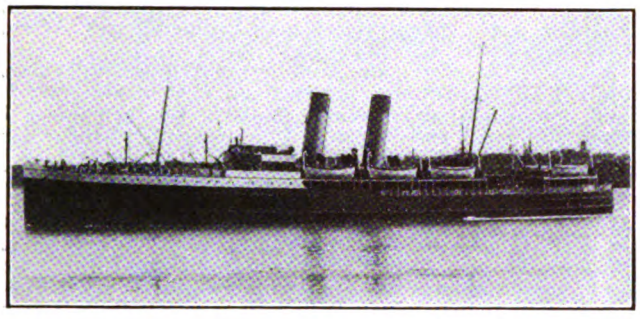
Antwerp and the Exhibition.

We have given in our columns from time to time information about the magnificent Exhibition at present being held in Antwerp, conjointly with a similar Exhibition but covering different territory, which is being held at Liege. It was, therefore, with great interest and pleasurable anticipation that we took the opportunity of another important event, the biennial Congress of the International Federation of Forwarding Organisations being held in Antwerp, to take part in its proceedings and at the same time to see something of the Exhibition.

There are various ways of proceeding from London to Antwerp, each no doubt having its own merits and good points but for the business man, anxious to lose as little time as possible, we give our vote for the service via



THE S.S. "ANTWERP" ON L. & N.E.R. SERVICE HARWICH-ANTWERP.

Harwich (Parkstone Quay) direct to Antwerp. Leaving Liverpool Street Station at 8.30 p.m., after a full day's work, we were on board the very comfortable and well appointed steamer "Malines" before 10 o'clock. This is one of the three boats of the London & North Eastern Railway engaged on this route, the other two being the "Antwerp," shown in our illustration, and the "Bruges," the boat by which we returned to London. It is worth noting that the London & North Eastern Railway have no less than five services to the Continent, namely, Harwich-Hook of Holland, connecting up with the great Continental expresses, served by the three modern and luxurious cross-channel ships—S.S. "-Vienna," "Prague" and "Amsterdam"; Harwich-Flushing; Harwich-Antwerp; Harwich-Zeebrugge, and Harwich-Esbjerg, while the train ferry boats also run from Harwich to the Continent. Parkstone Quay was a busy scene as we moved out into the river preparatory to starting on our voyage. We awoke in the morning to find our boat in smooth water, steaming down the long reaches of the Scheldt, a distance of over 56 miles after leaving open water, before reaching the great port of Antwerp. We had landed by 8 o'clock and the busy man can do a day's work, catch the evening boat and be in his office in London before his staff has arrived the next morning.

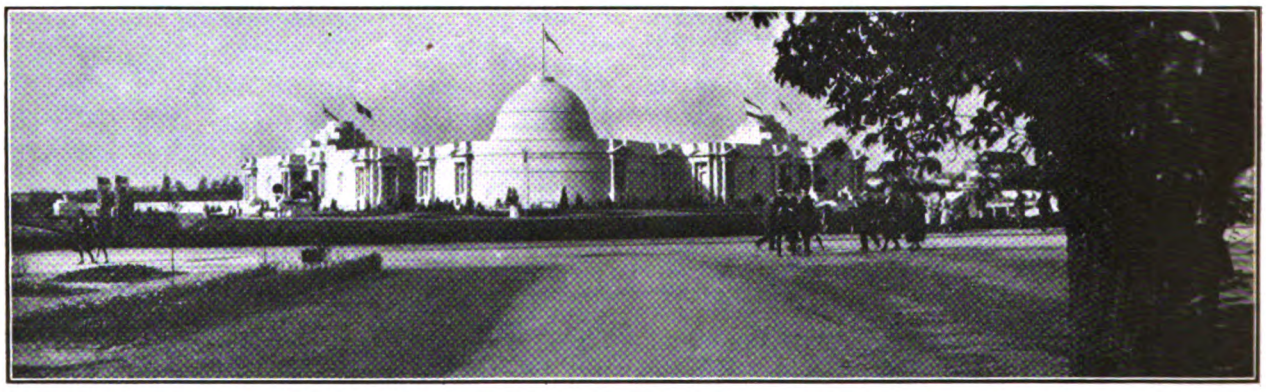
A glance at the map will show that this magnificent port, which is a worthy competitor of our own ports and also of the great ports of the Continent, is situated in the heart of Belgium but with its magnificent waterway it is enabled to accommodate the largest steamers with ease and every facility.

During the Congress of the International Federation of Forwarding Organisations the delegates had the opportunity of seeing the recent developments in the Port by the courtesy of the Port of Antwerp Authority, travelling on a steam launch and afterwards going round the docks to see the new buildings in motor coaches which had been provided. We were particularly interested in the magnificent new lock which is already in use, but is not finished as far as some of the engineering work is concerned and which is claimed to be the largest lock in the world. Our illustration gives a good idea of the Port of Antwerp, showing the docks and the winding Scheldt.

In another article we give a report of the Congress and of some of the visits paid by the delegates who were so hospitably entertained by the Burgomaster—Monsieur Van Cauwelaert; by the Directors of the Compagnie Maritime Belge du Congo, and by the Port Authority, as well as by the Federation Nationale des Entrepreneurs de Transports de Belgique, who were the hosts of the Congress. There was time also to visit a few of the most interesting features of Antwerp, although the great attraction on this occasion was the Exhibition.

This Exhibition, run concurrently with another at Leige, to celebrate the Centenary of Belgium Independence, is an International Exhibition of Colonial, Maritime and Flemish Art and naturally includes a very great deal connected with transport of special interest to anyone engaged in any branch of this industry. The buildings, which are well made and very substantial, are of the most modern type, affording a great contrast to the old buildings of Antwerp and giving a character of its own to the Exhibition.

We were glad to see that the British Government building, designed by Sir Edward Lutyens, was a worthy exponent of the British character: strong and sturdy, made to last, and yet dignified and of architectural beauty, it was essentially British, both externally and internally, surrounded by a lake, crossed by massive bridges, flanked on either side by the British Lion, and with statuary at the various points in the grounds and on one side of it, apart but still part of the whole, the King George



THE BRITISH PAVILION AT THE ANTWERP EXHIBITION.

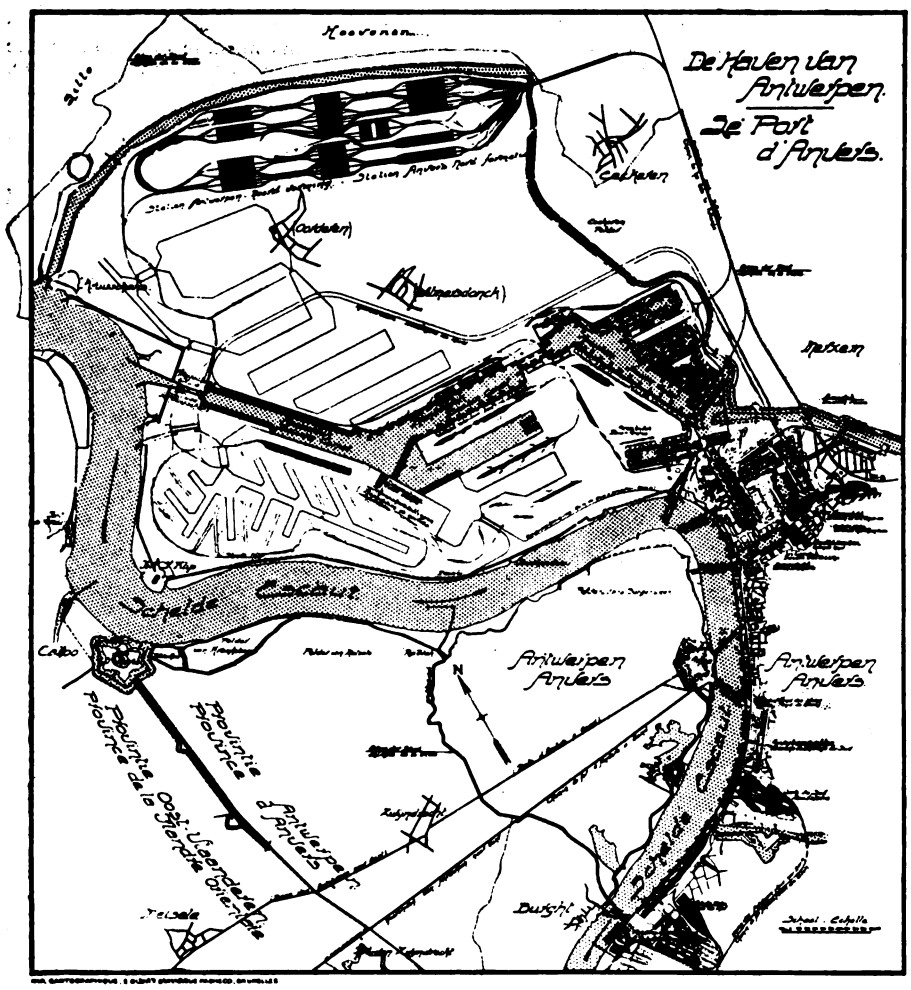
Restaurant, giving a touch of homeliness to those who had come to visit the Exhibition, as well as being interesting to the many visitors from Belgium and other nations who were anxious to sample British food.

Entering the British Pavilion by the main approach the visitor finds a great deal of interest. First to be recorded is the pageant of the Sea, illustrating the great shipping history of this country with models of vessels from the earliest days to the present time. There is also a series of tableaux with lighting effects showing the development of Great Britain from the time of the Roman Conquest.

Another Section gives a history of aviation, one court being devoted to models of aeroplanes and airships from the earliest types down to the modern airship and the most up-to-date air liner. Here we were pleased to see

Digitized by Google

once again the wonderful Schneider Trophy, which had been lent by the Royal Aero Club of the United Kingdom and which combines in its beauty, both what is called our natural element, the sea, and also the newer element, the air and flight, in a most marvellous work of art. The actual Supermarine Rolls-Royce S.6. Seaplane that was piloted to victory by Flight-Lieut. Waghorn last September is shown in the grounds of the British section.



MAP OF THE PORT OF ANTWERP.

The Colonial Section is a comprehensive one, displaying the produce of the various British Colonies. In the Shipping Section well known steamship companies have their exhibits, followed by exhibits of some of the great ports and docks of the country, including the Port of London Authority, the Mersey Docks and Harbour Board, The Aire & Calder Navigation, and the Port of Goole, and the Tyne Improvement Commission. In the Railway Section three of the great railways are represented, those directly interested in Continental traffic—The London, Midland & Scottish Railway, the London & North Eastern Railway, and the Southern Railway. In the Industrial Section a number of well known firms have their exhibits, including W. & T. Avery, Ltd., Birmingham; The Beldam Packing & Rubber Co., Ltd., London; The Steel Scaffolding Co., Ltd., London; and James Walker & Co., Ltd., Woking, Surrey.

Space does not permit of our describing the Exhibition in detail, but splendid buildings have been erected by many of the European countries. In addition to the two magnificent buildings devoted to Belgian industries, the Port of Antwerp has a fine pavilion and France, Italy, Holland, Canada, Brazil, in addition to Great Britain, are amongst those who have built special pavilions.

The whole of Antwerp is decorated and illuminated and the Exhibition is being visited by immense crowds every day, but there is so much room that even on the occasion when the King and Queen of Belgium opened the Exhibition of Flemish Art there was ample space for the vast crowds who were present. A word should be said for the Section of the Exhibition devoted to old Belgium, which is separate from the main Exhibition although part of the whole, and for which an additional charge is made. This consists of a very fine reproduction of Belgium as it was long ago with a natural representation of the canal and old bridge at Bruges which will be remembered by many visitors to the Continent not only recently but in pre-war years.

Finally, we should like to express our thanks to Monsieur De Roy, the genial Secretary in charge of press arrangements, by whose courtesy we received an invitation to be present at the opening of the Exhibition of Flemish Art and were thus enabled to see the magnificent collection of pictures got together by the Exhibition Authorities, which by themselves should form a unique attraction to the Exhibition.

To finish up as we began, we were delighted with the ease with which we got back to London, boarding our boat at 7.15, we left Antwerp at 7.30, had our dinner in comfort, followed by a walk on the deck, went to sleep and woke up to find ourselves entering the mouth of the river at Harwich at 5.30 a.m. Breakfast on the train occupies most of the time and Liverpool Street Station was reached at 8 o'clock, in readiness for a full day's work.

Must End in a Conference.—Major J. A. Eckes at the Liverpool Rotary Club luncheon on 26th June, said the world seemed to have gone mad on tariffs. Every country desired to sell and yet not to buy. In the end this matter would have to be dealt with by the business men and the chambers of commerce, and if the race for putting up tariffs went on to the same extent, it would surely end in the same way as the race for naval supremacy. When the thing became too ridiculous for words, it must end in a conference.

Manchester Ship Canal Traffic.—The Manchester Ship Canal Company on 15th June issued their monthly approximate traffic return covering traffic receipts for the month of May. They amounted to £100,902 compared with £116,821 for May of last year, a decrease of £15,919. The total receipts for the first five months of this year were £521,379 as against £571,562 for the same period of last year. It should be noted that in addition to the normal decrease in receipts arising from reduced charges consequent upon the De-Rating Act, the returns for the months of April and May were affected by the strike at the Manchester docks from 9th April to 16th April inclusive.

Old-Established Firms Amalgamate. — Messrs. N. P. Nathans' Sons, of Lower Mosley Street, Manchester, and Messrs. Sydney Hudson, Ltd., of Chepstow Street, Manchester, firms of shipping merchants who have been established over a hundred years, and have been very largely engaged in trade in the Near and Far East, have amalgamated. Messrs. Oswald Simpson, Edgar Simpson and Wilfred Stubbings have been appointed managing directors.

More Motor Ships than Steamers being Built.—When the first motor ship ever constructed, the Danish "Selandia," 18 years ago sailed up the River Thames, few dreamed that in less than 20 years the whole world would be building motor ships, and still fewer realised that the day would come when Great Britain, the coal country par excellence, was building more motor ships than steamers—that day has come! According to Lloyd's Register, there are not only at present being built more motor ships than steamers, all over the world—1,931,362 tons as against 1,334,567 tons—but for the first time the tonnage of motor ships under construction in Great Britain and Ireland (876,960 tons) exceeds the tonnage of steamers building (736,033 tons).

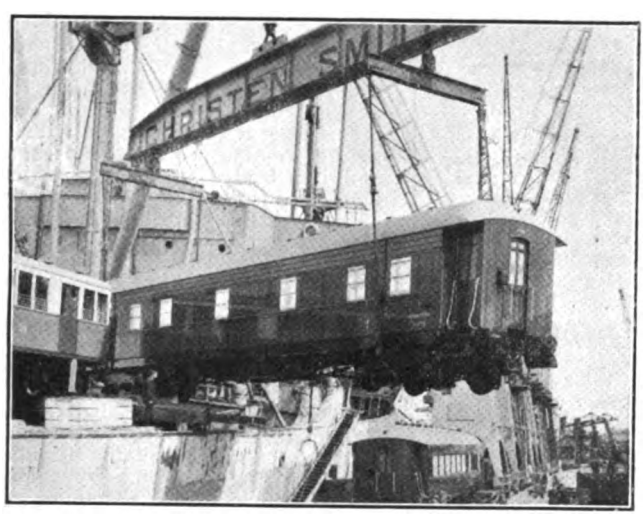
News from the Ports.

Liverpool Shipping and Forwarding Agents' Association.—Most of the business at the last meeting of the Liverpool Shipping and Forwarding Agents' Association was of a routine or private character. The only public matters were those arising from certain advices from the Mersey Docks and Harbour Board and the Liverpool Chamber of Commerce.

New Docks Manager.—Mr. Alfred Kewney, the former international Rugby player, and Rockcliffe forward, has been appointed manager of Jarrow and Hebburn dry docks department of Palmers Shipbuilding Company in succession to Mr. J. McGregor, who has gone to Palmers yard at Swansea.

Shipment of Railway Coaches and Material at the Port of Bristol.—Our illustration shows the shipment of railway coaches from the Avonmouth Docks recently for South America. The shipment included 1st and 2nd Class Coaches, Dining Car and Sleeping Car, for the Entre Rios Railway Co., Ltd., and a large quantity of steel railway material for the same company and for the Argentine North Eastern Railway Co. The coaches travelled from the Gloucester Wagon & Carriage Company's Works at Gloucester on temporary bogeys which on arrival at the docks were lifted by the Port Authority's cranes on to their permanent bogeys ready for shipment. The whole



SHIPPING RAILWAY COACHES AND MATERIAL AT BRISTOL

of the consignment is being carried to Ibicuy in the steamer "Bellejeanne." The shipment of railway stock and material is becoming a regular feature of the business at the Avonmouth Docks, where facilities are available for the handling of all classes of traffic.

Parry, Leon & Hayhoe (South Africa), Limited. London Office.—Parry, Leon & Hayhoe (South Africa), Limited, the well known shipping, insurance and travel agents, have for some time past felt that in order to keep in closer touch with Merchants and Shippers who are interested in South Africa, they should have an office of their own in London. This office has been opened at Fenchurch House, 5, Fenchurch Street, London, E.C.3—next to Union Castle Line—and will be under the direction of Mr. W. H. Kirby, who has recently arrived from South Africa, and who will be only too pleased to place the services of the firm's organisation in South Africa at the disposal of clients. The Company emphasise the fact that it is not their intention to compete in any way in merchanting and shipping business from this side, and that their object in establishing this London Office is to enable them to afford a means by which Merchants and Shippers and/or their Forwarding Agents can readily obtain full information concerning all South African tariffs, landing charges, etc., and railway rates to destinations. At the same time, they are anxious to ensure that the present volume of business consigned to their South and East African offices is not only maintained, but increased by propaganda work on this side.

Port of London Authority.—The June issue of the P.L.A. monthly is an extremely interesting number. It contains a special supplement dealing with the opening of the Tilbury Passenger Landing Stage by the Prime Minister on May 16th last. This notable occasion in the history of the port was reported by us in our June issue. All the articles in the June issue of the P.L.A. monthly are excellent and profusely illustrated. As a further supplement there is a colour plate of the R.M.S. "Calgaric," 16,063 tons, belonging to the White Star Line and engaged on the London-Southampton-Canada service.

Liverpool's Pride.—Mr. A. B. Cauty (director and general manager of the White Star Line), who presided at a dinner on the new White Star Liner "Britannic," before her maiden voyage, said the White Star Line had consistently maintained in its Liverpool fleet the largest vessels sailing out of the port of Liverpool. That distinction had been held by the "Adriatic" and it now passed to this vessel of 27,000 tons.

Italian Service to Australia.—The service from Genoa to Australia, which for some years has been conducted jointly by the N.G.I. and Lloyd Sabaudo Lines, is, it is stated, being much improved by the introduction of modern cabin-class motor-vessels of about 10,000 tons gross. The first sailing is to be from Genoa on July 31st.

Railway Dock Charges.—A Select Committee of the House of Lords, presided over by Lord Loch, approved the Bill promoted by the London and North Eastern Railway Company for the stabilization of railway dock charges now in operation, subject to the right of interested parties to apply to the Ministry of Transport for revision. Similar Bills are promoted by the London, Midland and Scottish Railway Company and the Southern Railway Company, and it was agreed that the case should be argued on the London and North Eastern Railway Bill.

Dock Charges in Wales.—An application is being made to the Minister of Transport by the G.W.R. Company, as the owners of the South Wales dock, for permission to increase the present charges for the tipping and weighing of coal and coke to the old level of 7¼d. a ton. Shipowners, brokers, coal shippers, and colliery owners are combining to oppose the application, contending that a decrease, not an increase, is desirable under present conditions.

New Italian Shipping Services.—An important agreement has been made between the Italian Government and the Lloyd Triestino Company with a view to the improvement as from July 1st of the freight service between Trieste and the Far East and the establishment of a new monthly freight service between Trieste and Bombay. In future there will be 24 sailings annually from Trieste to Indian ports and 36 to Far Eastern ports.

Antwerp Port Traffic.—The statistics of the traffic of the Port of Antwerp for the past year have recently been published. The number of ships which visited the port in 1929 was 103 sailing ships of 40,546 tons and 11,477 steamships of 24,284,557 tons. The total entry was 11,582 vessels, with a total tonnage of 24,325,705. In 1928 the entries were 11,333 vessels of a total tonnage of 23,604,559 tons. For 1929 the tonnage of entries was distributed among the various flags as follows:—British, 39.1 per cent.; German, 22.8 per cent.; Dutch, 8.2 per cent.; French, 7.3 per cent.; Belgian, 5.9 per cent.; Norwegian, 5 per cent.; American, 2.9 per cent.; Swedish, 2.8 per cent.; Danish, 2.3 per cent.; Japanese, 2.2 per cent., etc.

Invoices for Goods to South Africa.—Attention is being given by commercial men who have business relations with the Union of South Africa, to the regulations which require the value to be declared in invoices for goods shipped. The suggestion comes from shippers that representations should be made to the Government for the Union of South Africa to amend the regulations to give the exporter the opportunity of declaring the value of goods in the same manner as that acceptable in any other colony, namely, to declare the value on the basis of either equal or like quantities in the home market.

Walter Gammons, Ltd. Change of Address.—The address of Walter Gammons, Ltd., the well-known road transport contractors and export shippers, is now 85 Chiswell Street, London, E.C.1. There is no change in telephone numbers.

REUTERS TRADE SERVICE.—By special arrangement with Reuters Trade Service we are publishing news items from all parts of the world dealing with transport matters.

Railway Notes and News.

Safety in Railway Travel.—The Ministry of Transport Returns of Railway Accidents recently published show that only 3 passengers lost their lives in accidents to trains on the British Railways during last year. When it is considered that the number of passenger journeys made on the railways in 1929 was 1,702,000,000, it will be seen that a passenger's risk of death in a train accident was so infinitesimal as to be negligible, a one in five-hundred-millionth chance. This remarkable result has not been attained without continuous care and supervision, and the provision, at huge cost, of every electrical and mechanical device that can aid the human element in railway operation. Every engine driver is a skilled man of many years' experience and subject to the strictest tests of eyesight and general fitness; the signalman who controls the passage of every train is an equally skilled man of long service, who is safeguarded from error by an intricate system of interlocking and other devices; and both men, as well as other railway servants, are governed by the strictest rules and regulations.

Co-ordinating Rail and Road Travel.—The progress made in the co-ordination and development of rail and road passenger traffic since the railway companies were granted powers to operate on the roads has been considerable, and the policy of co-operating with existing omnibus and coach undertakings has been followed in preference to indulging in unlimited competition. Immediately on obtaining their road powers the railway companies entered into negotiations with the larger road transport concerns of the country, and as a result working agreements were made with the most important omnibus companies. Under these agreements machinery has been set up for the co-ordination of rail and road passenger traffic. The railway companies also acquired a financial interest in these omnibus companies, but this interest is in no case a controlling one. In many instances the railway companies hold the same number of shares as the original proprietors, the result being that there is an equality of interest between the two parties so that the new form of transport is free to follow its normal development. The co-ordination policy being actively pursued between the railways and associated bus undertakings is taking a number of definite forms including:—Inter-availablity of return tickets by bus or rail; service arrangements to facilitate exchange of passengers between railway and road services; combination of railway and omnibus timetable matter, and adjustment of services where possible to improve connections; Employment of omnibus transport as extension of railway journeys for pleasure and other purposes; amplification of travel facilities by use of both arms of transport in combined tours. *Railway Newsletter.* July issue.

The Railway Barometer.—The Railway Traffic Receipts of the four Group Railway Companies have now been published for the first 25 weeks of 1930, compared with the same period in 1929, and are as under:—

	1930 £	1929 £
Passengers, Parcels, etc.	32,597,000	33,285,000
Merchandise, etc.	30,645,000	31,904,000
Coal, Coke, etc.	16,930,000	17,737,000
	80,172,000	82,926,000

The comparison for Weeks 22-25 (inclusive) is disturbed by the alteration in the date of the Whitsuntide Holidays this year as compared with the previous year. The increase in Passengers, etc., Receipts is due to the inclusion this year of the Holiday Bookings, while the receipts of Merchandise, Coal and Coke, etc., Traffics are short of one day, viz.: Whit-Monday. *Railway Newsletter.* July issue.

Motor Vans for the L.N.E.R.—The L.N.E.R. report that orders have been placed for fifty-five motor vans for use in the L.N.E.R. goods and parcels services in London and Southern England. The horse teams at present engaged in parcels delivery work at Norwich Thorpe Station are to be replaced by six one-ton motor vans to speed up the work in the Norwich district. Two new motor vans are to be sent to Grimsby to convey Cleethorpes traffic, thereby avoiding transhipment.

New Canadian National Railways Appointment.—Mr. D. C. Grant, Vice-President in Charge of the Finance Department of the Canadian National Railways, announces the retirement on June 1st of Mr. J. M. Rosevear, General Comptroller, and Mr. C. E. Friend, Assistant General Comptroller, under the Company's superannuation scheme. Effective the same date, Mr. J. B. McLaren is appointed Comptroller with Head Office in Montreal.

G.W. Railway Door-to-Door Facilities.—The G.W.R. is further extending its door-to-door facilities for traders by the provision of 150 containers for use in conveying all types of traffic. During the first five months of this year, compared with 1929, there was an increase of 82 per cent. in the tonnage carried by this method of transport. The Company already have hundreds of containers of various types in daily use. These reduce the handling and packing costs and loss by damage or theft.

L.N.E.R. Appointment.—The L.N.E. Railway announces that Mr. G. S. Pegg, assistant to the general manager for Scotland, has been appointed passenger manager (Southern Scottish area) in succession to the late Mr. M. S. Strang.

Faster Holiday Trains. Summer Speeding Up.—With the commencement of the Railways' Summer Services on July 7th, passenger trains will have been accelerated, and strengthened, duplicated and even triplicated as required, providing improved communication with all inland and seaside holiday resorts. There are more fast expresses, better coaches and better services. Tracks have been strengthened and improved and hundreds of new express locomotives and corridor coaches built. Signalling is constantly being overhauled in order to allow greater frequency of service and to ensure greater safety. Numerous seaside stations have been rebuilt or enlarged to give better facilities for the volume of traffic anticipated. 24,000 locomotives, 72,000 passenger carriages (capable of seating 3,500,000 people) and hundred of Pullman and restaurant cars are available for the millions of holiday makers on their annual quest of health and pleasure. New and capacious steamers have been introduced on the Continental and Channel Islands services, and over 200 passenger vessels will be engaged on those routes and to Ireland, the Isle of Man, Isle of Wight and the Western Isles of Scotland. To the Channel Isles alone more than 200,000 passengers were carried in 1929, mostly during the summer, and to the Isle of Wight nearly 2,500,000. To transport millions of holiday makers to and from the seaside each year comfortably and without mishap is an achievement demanding wonderful organisation as well as many months of careful and sustained preparation.

Southern Railway Scheme for Door-to-Door Service for Farmers.—In order to help agriculture, the Southern Railway Company are bringing into operation a railhead distribution scheme to give farmers a door-to-door service. This is part of the company's plan to increase the efficiency of rail transport. The scheme not only provides for the conveyance of bulk loads at reduced rates over the railway to a given centre but the facility of a country lorry service at reasonable charges to anywhere and everywhere within a radius of ten miles thereof. The company propose to undertake as well the cartage of smaller consignments up to one ton in weight. For instance, a package of 56 lb. would be carried four miles for 6d.; up to six miles, 8d.; up to eight miles, 10d.; and up to ten miles, 1s.

L.M.S. Motor Ambassador. Year's Tour of 30,000 Miles.—On June 28th, a motor vehicle, which is virtually a mobile Ambassador to the L.M.S. Railway, set out on a year's tour of Great Britain. By next year the car will have travelled some 30,000 miles. It will have visited all the important centres of population in England, Scotland and Wales and will have penetrated into hundreds of villages and hamlets well off the beaten track. The scheme is an effort on the part of the L.M.S. Company to get on to the road to beat the road. Wherever the car goes it will preach the gospel of rail travel. It is equipped with supplies of literature which will be replenished from pre-arranged centres from time to time. A qualified attendant will be able to answer enquiries on any questions affecting rail transportation. The sides and back of the car display slogans which, by a mechanical device, are changed every ten seconds.

Royal National Eisteddfod of Wales.—The G.W.R. are arranging for the running of a large number of excursion trains, in connection with the Royal National Eisteddfod of Wales at Llanelly from August 4th to 9th. The Company have also arranged for Llanelly Station to be specially decorated with flags, bunting and shields.

Automatic Stamp-Selling Machines at Railway Stations.—It has been arranged between the Post Office authorities and the railway companies for automatic stamp-selling machines to be installed at railway stations in cities and large towns for the convenience of passengers.

Law Cases.

PLYING FOR HIRE WITHOUT LICENCE. REMEDY BY INJUNCTION.

ATTORNEY-GENERAL v. SHARP.

MR. JOHN SHARP, motor char-a-banc and bus proprietor, of Stockport Road, Manchester, appealed on June 26th and 27th, to the Master of the Rolls and Lords Justices Laurence and Romer in the Court of Appeal against a decision of Mr. Justice Farwell in the Chancery Division. The Judge had found in favour of the Attorney General who, on behalf of the Corporation of Manchester, asked for an injunction to restrain Mr. Sharp from plying for hire with his vehicles on the Corporation's highways without a licence and for trespassing on the highways or obstructing them by allowing the vehicles to stand on the roads for an unreasonable time. The latter part of the injunction with regard to excessive use and obstruction was not persisted in by the Corporation. The injunction was granted by Mr. Justice Farwell with regard to the plying for hire without a licence.

It appeared from the evidence given in the action that Mr. Sharp has a licence to ply for hire in the direction of Hazel Grove and Bramhall in the Borough of Eccles, but he was refused a licence for the City of Manchester. In spite of this refusal he plied for hire when in the City, it was alleged. His case was that there had been no plying for hire because there was no solicitation or invitation to attract passengers, and seeing that there was nothing antecedent to the carrying of passengers in the way of solicitation there could be no plying for hire. There was no advertisement on the vehicles or garages to indicate that he was prepared to accept passengers and nothing that could be said to be solicitation of the public to travel by the buses or anything of the nature that constituted plying for hire.

Mr. Justice Farwell held that on the facts of the case Mr. Sharp had been plying for hire in the City of Manchester. He said that if a person ran buses regularly through the streets on a fixed route at fixed times and regularly stopped at particular places to allow passengers to alight, and had offices where people could buy tickets and get on the buses, in his opinion that person was certainly plying for hire. He did not think it necessary for there to be solicitation in the way of advertisements or by persons calling out or attracting attention by means of that kind. He, accordingly, granted the Corporation an injunction restraining Mr. Sharp from plying for hire within the City with costs excepting the costs occasioned by the claim they had abandoned. Mr. Sharp now appealed.

Mr. Manning, K.C., for the appellant, contended that when the legislature had created a new offence and imposed a penalty that was the only remedy, the Court would not interfere by injunction unless there was also involved the protection of property rights. There was no property involved in this case and, therefore, the only remedy was a fine, no alternative of imprisonment being provided. The result of Mr. Justice Farwell's decision was that Mr Sharp might find himself committed to prison after the granting of the injunction and that would be imposing a penalty the legislature had not thought fit to impose. That, contended counsel, was contrary to a number of legal decisions.

The Master of the Rolls: I understand that Mr. Sharp has been fined several times for this offence.

Mr. Alexander Grant, K.C. (for the Corporation), Yes, 47 times.

The Master of the Rolls: He may find it cheaper to go on without a licence and pay the fines. In that case there is no method of enforcing the law and the only thing to do is to invoke the intervention of the Attorney General.

Lord Justice Laurence: What remedy does Mr. Manning suggest. Mr. Sharp has been fined for the offence all these times and how long is it to go on?

Mr. Manning: It may be that if it goes on the Corporation may have to seek wider powers. But, the fact that they may have to do that does not give them jurisdiction which, at present, I suggest they do not possess.

Mr. Grant, K.C., supported the decision of Mr. Justice Farwell and argued that the proceedings were perfectly in order, because there had been an infringement of public rights. Mr. Sharp, in addition to being fined 47 times at Manchester had been prosecuted 98 times at Stockport.

Mr. Manning, K.C.: We have nothing to do with Stockport, I rather think they welcome our buses there now. (Laughter.)

Their Lordships dismissed the appeal with costs.

The Master of the Rolls, in his judgment, said the question for decision was whether or not it was possible to grant an injunction on the facts which were not in dispute, or whether Mr. Sharp was right when he argued that the sole remedy for the enforcement of the law was the penalty of a fine as imposed by the provisions of Parliament. They had been told that Mr. Sharp had been fined 47 or 48 times and there had been twelve convictions of his employees. Therefore, on about 60 occasions attempts had been made to enforce compliance with the terms of the Act without effective result. Mr. Sharp continued to go on as previously and he (his Lordship), understood that the position was that the fines being so much and the business done by Mr. Sharp's vehicles so much, it was quite possible that Mr. Sharp could bear the burdens of the fines and yet make a profit while neglecting to obey the provisions of the law.

In the circumstances the Attorney General had acted on behalf of the Corporation on the assumption that it was necessary in the public interest that the law should be enforced and the legal authorities, as already decided, supported that course seeing that the Attorney General held the view that the attempts made hitherto to enforce the law had not been efficacious. Therefore, on the point, which was of considerable interest, raised by Mr. Sharp the Court would hold that there was remedy by injunction and the mere fact that a penalty by fine was available under the statute, did not exclude the remedy sought by the Corporation through the Attorney General.

Lords Justices Laurence and Romer concurred.

SMOKE FROM STEAM VEHICLE.

IN the Dublin District Court, before District Justice Cussen, Thomas McDonald was summoned for using on the public road at Fairview, Dublin, a locomotive not constructed on the principle of consuming its own smoke, and not fitted with an apparatus to prevent the escape of sparks.

Expert evidence was given to the effect that there was no apparatus in existence which could prevent a coal-driven vehicle from smoking either when standing still, or just starting up.

District Justice Cussen decided to dismiss the case on the merits, and remarked that there was no point in issuing these summonses unless the Civil Guards were in a position to produce expert evidence, and had legal assistance. The Civic Guard in this case had discharged his duty, and it was not fair that he should have been asked to conduct such a summons without the assistance of the State Solicitor, and the support of skilled witnesses.

Mr. E. H. Burne, Solicitor, appeared for the defence.

Air Transport Notes.

Imperial Airways. England-Egypt-India Air Route.—On page 480 of our June issue we referred to Imperial Airways summer services. We are informed that arrangements have now been made for the operation of the section between Skopje and Salonica by air, in place of night train, so that with the exception of the short section between Alexandria and Cairo the whole of the England-India service is now operated by air, but the fares, freight and insurance rates remain unchanged.

Table Top Flying Lessons. Latest Shell-Mex Enterprise.—A unique machine to teach the elements of flying has just reached this country and was shown by Shell-Mex, Ltd., to a gathering of aeroplane experts in London recently. It is the first of its kind in this country and has aroused the keenest interest amongst those who have seen it. The idea is to reproduce as far as possible the conditions in a pilot's seat, to teach the feel of the controls and to show how they actually operate and how they cause the craft to execute certain manœuvres. The "pilot," therefore, is provided with a real joy-stick, a rudder bar and throttle, etc., exactly as in the cockpit of a modern aeroplane. These are fitted under a table at which he sits. On the table at his eye level is a large glass case with, at the forward end, a motor and propeller to project a wind of up to 70 m.p.h. through it, this being controlled by the opening of the throttle. In the centre of the case is a captive aeroplane in model form, and the rear end of the case is open so that the pilot will feel the wind in his face exactly as in real aircraft. The model, which is a miniature monoplane of about 18 ins. span, is free to rise and fall on a vertical shaft, through which the controls pass to the aeroplane, and is so pivoted that it can assume the positions of banking, climbing, or diving. It has all the control surfaces of a full-sized aeroplane, and these are all operated by the pilot's controls referred to above. When the throttle is opened and the gale starts the machine can be taken off, banked, stalled, dived, etc., and finally landed. The Curtiss Wind Tunnel, as it is called, is an American invention, the European rights of which have been acquired for some time to come by Shell-Mex, Ltd., who intend to demonstrate it extensively as part of their campaign to popularise flying in this country.

Stores Officers—Royal Air Force. Permanent Careers for Young Business Men.—The Air Ministry announces that about 5 vacancies for permanent commissions in the Stores Branch of the Royal Air Force will be offered for competition among young men of between 23 and 25 years of age on 1st January, 1931, who have had not less than five years' business experience in a firm of standing. From among those who apply a limited number of candidates will be selected to proceed to the examination, which will be held in London in the latter part of October, 1930, and will consist of two parts, an interview before a board and a written examination. The written examination will be of such a character that men of good general education can take it without special study. Accepted candidates will be gazetted to commissions as Pilot Officers on probation and will receive six months' training in their future duties. After a year's satisfactory service they will be eligible for confirmation in their appointments and for promotion to the rank of Flying Officer. Promotion above the rank of Flying Officer will be by selection, subject to passing a qualifying examination. The emoluments of Officers in the Stores Branch, including the value of quarters, rations, and services in kind, or cash allowances in lieu range from approximately £345 a year for an unmarried Pilot Officer, and £379 a year for a Flying Officer on promotion, to £1,159 a year for a married Group Captain (the higest rank for which provision is made). The expenses in Royal Air Force messes are strictly regulated so that Officers, even of the most junior rank, can live upon their pay. Application should be made to the Secretary, Air Ministry (S.7), Kingsway, London, W.C.2, for the regulations and for application forms. Completed application forms should reach the Air Ministry by the 15th August next, or at the latest by the 1st of September.

Royal Air Force—Aircraft Apprentices. 500 Vacancies for Educated Boys.—The Air Ministry announces that five hundred aircraft apprentices, between the ages of 15 and 17, are required by the Royal Air Force for entry into the Schools of Technical Training at Halton, Bucks., and at Cranwell, near Sleaford, Lincs. They will be enlisted as the result of an Open Competition and of a Limited Competition, which will be held in the near future by the Civil Service Commissioners and the Air Ministry respectively. Boys in possession of an approved first school certificate may be admitted without other educational examinations. Successful candidates will be required to complete a period of twelve years' regular Air Force service from the age of 18, in addition to the training period. At the age of 30 they may return to civil life or may be permitted to re-engage to complete time for pension. Full information regarding the dates of the respective examinations, the methods of entry and the aircraft apprentice scheme generally, can be obtained upon application to the Royal Air Force (Aircraft Apprentices' Dept.), Gwydyr House, Whitehall, London, S.W.1.

Royal Aeronautical Society.—The Council of the Royal Aeronautical Society, at their meeting on June 24th, unanimously elected Mr. C. R. Fairey, M.B.E., F.R.Ae.S., as President designate. Mr. Fairey will assume office at the end of September, 1930, when the Presidency is vacated by The Master of Sempill. The Master of Sempill was elected Chairman of The Royal Aeronautical Society in June, 1926, and took office in October, 1926. In June, 1927, he was re-elected for the year 1927-8. Towards the end of 1927 arrangements were made whereby The Institution of Aeronautical Engineers became incorporated with the Royal Aeronautical Society, and in January, 1928, The Master of Sempill was elected to serve as the first President of the Society under the new rules that had been brought into force to deal with the various questions arising out of the amalgamation. The new rules, amongst other things, abolished the office of Chairman, and considerably altered the duties of the President, bringing them into line with those of other scientific and technical institutions. The Master of Sempill filled the office of President until the Presidential elections took place in June, 1928, when he was re-elected President for the period 1928-9, and in June, 1929, he was again elected for the period 1929-30. The Master of Sempill, having served for the maximum period of time that is allowed by the rules, is not eligible for re-election. At the same meeting the three existing Vice-Presidents were re-elected for 1930-31:—Air Vice-Marshal Sir Vyell Vyvyan, K.C.B., D.S.O., Lt.-Col. J. T. C. Moore-Brabazon, M.C., F.R.Ae.S., M.I.Ae.E., and Mr. H. E. Wimperis, C.B.E., F.R.Ae.S. (Director of Scientific Research), Professor L. Bairstow, C.B.E., F.R.S., F.R.Ae.S. (Zaharoff Professor of Aviation, University of London, and Director of School of Aviation, Imperial College of Science and Technology) was elected an additional Vice-President for the same period.

Go by Imperial Airways.—The popular Tea Flights over London, run by Imperial Airways, commenced on June 14th, and will be run every Friday, Saturday and Sunday afternoon until the end of September. This will be the first year that Sunday Tea Flights have been possible, and this should enable many more people to take advantage of these delightful aerial excursions. The inclusive fare is £2 2s. per passenger. The cities of Liverpool, Manchester and Birmingham are now provided with an air service giving a direct link with most of the important cities in Western Europe. This service, which is the outcome of negotiations between the Corporations of the three cities concerned and Imperial Airways, will operate three times per week in each direction. The timetable has been arranged to give the maximum number of useful connections with the regular daily London-Continental service of both Imperial Airways and foreign companies. Countries as far distant as Sweden and Switzerland will be brought within a day's journey of the Provinces, and in practically each instance the service shows more than a 50 per cent. saving in time over the corresponding journey by land transport. The service is also available for all classes of goods, but for the present, at any rate, mail will not be carried. Full timetables, descriptive matter and posters will be sent to anyone interested on application to Imperial Airways, at Airways House, London, or to their representatives at the Adelphi Hotel, Liverpool, Queen's Hotel, Birmingham, and the Midland Hotel, Manchester.

England-Australia Air Service. Mr. Scullin to Discuss Extension with British Air Minister.—Mr. Scullin, the Australian Prime Minister, stated recently that during his forthcoming visit to England for the Imperial Conference he would discuss with Lord Thomson, the British Secretary of State for Air, the development of the air service between Britain and Australia. The Australian Government was naturally sympathetic towards the project, but many important considerations would have to be taken into account, including finance. Australia's share of the subsidy for the Singapore-Australia link would, he said, amount to £600,000 spread over five years.

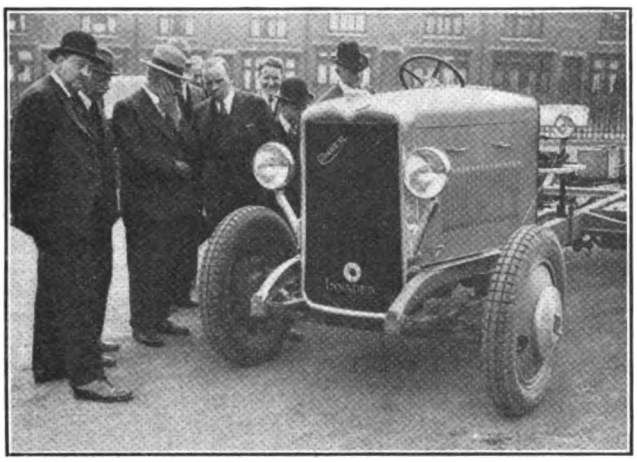
Mr. J. H. Thomas and the Australian Ex-Premier visit Humber's.

THE Right Hon. J. H. Thomas, Minister of State for the Dominions, and the Right Hon. S. M. Bruce, Ex-Premier of Australia, on June 12th, paid a visit of inspection to the Humber and Hillman works at Coventry.

After seeing the vast work of re-organisation which is now approaching completion, and after inspecting the various models, particularly the Humber "Snipe" and the Hillman Straight Eight, Mr. Thomas addressed a great assembly of workers during their dinner hour.



THE RT. HON. J. H. THOMAS INSPECTING THE COMMER "INVADER" CHASSIS (FOR 20 PASSENGERS) DURING HIS VISIT TO THE HUMBER & HILLMAN FACTORIES AT COVENTRY.

In the course of an extremely witty and forceful speech, he said that there was no solution to the problems of unemployment except by getting more customers for our products. "Road work," he continued, "for which I sanctioned an expenditure of one hundred million pounds, can be but a temporary relief. The real problem is to find permanent employment for the technical craftsman whose skill has contributed so much to the traditional excellence of British workmanship. We are not handicapped for brains, skill, energy or willingness to work, but merely because we have not applied ourselves to the changed conditions of to-day.

"Last year the world production of cars was 6,000,000, of which Great Britain only contributed 211,000. The Dominions and Colonies took 600,000; 85 per cent. of these were American, and of the remaining 15 per cent. not all were British. During the last fifteen years the average return on capital in the American motor industry was 17 per cent.; in our industry over the same period there were only two concerns who paid any dividends at all.

"That is why I am so impressed with what I have seen at the Humber works, both in the cars and the shops themselves. There is no industry that offers such great opportunities for employment. I congratulate this firm on its foresight and on the progress made towards reduced costs and increased production which alone are the foundations of permanent prosperity."

Mr. Thomas was followed by Mr. S. M. Bruce who remarked that as a private individual he was able to say what he could not in his former position as Premier, namely, that he strongly objected to the Americans getting away with the greater proportion of the Dominions trade. In motor cars alone he calculated that in the three Southern Dominions, Australia, South Africa and New Zealand, there was a market worth no less than £18,000,000 a year. He had had some hard things to say of British manufacturers when he attended Imperial Conferences some years ago, but what he had seen at Humbers to-day showed him that there was now no cause for criticism.

"I have a Humber 'Snipe' myself" he said, "and I am satisfied that this is definitely the car the overseas motorist wants. I have had wonderful service from it including an arduous tour in France of 2,500 miles and another in Scotland of 1,500 miles and not a moment's trouble yet. Go on producing a car like this and you have the world markets at your feet."

Amongst the guests was Sir George May, head of the Prudential Assurance Co., who, in a speech after the luncheon, referred to Messrs. Rootes's million-pound scheme for establishing service stations throughout the world.

Messrs. Thomas and Bruce also spoke again after the luncheon, the former paying a striking tribute to the achievements of the Rootes brothers, whose spirit of enterprise and high endeavour he cited as an example to all ranks in British industry.

Horses and Present-Day Roads.

THE horse still plays an important part in transport operations especially for short hauls, and one important factor militating against a greater return to the horse is the hard and slippery condition of many of our roads to-day.

Nearly 10 years ago the Ministry of Transport carried out extensive experiments with numerous road-surfacings in different parts of the country, and it was found that, owing to varying climatic conditions, all road-surfacings were affected at different periods of the year.

Attention was then given to experimenting with special shoeing to solve the problem, and it was found that Gray's Patent Flexible Bridge Fittings were most likely to overcome the difficulties referred to, and these, we understand, were sent out to 22 different counties for testing purposes, and the results were published in a White Paper which recommended the adoption of this method of shoeing where difficulties were encountered.

The Gragrip method of shoeing is really the naturalising of the horseshoe for the reason that the flexible steel bridge (when riveted to a shoe) supplies that shoe with an ever-clean, resilient road or ground-bearing surface (the equivalent of turf) against which the natural frog itself is enabled to correctly and healthily function, just as though the horse were unshod.

Undoubtedly, whenever there is an initial outlay, one's first consideration is justification for same, but the recordings of practical trials appear to prove that Gragrip Shoeing pays for itself by reduced number of shoeings necessary, when applied, which is accounted for by the reason that cutting out frictional wear on shoes slipping creates, brings this about.

Modern veterinary standard works have given special attention, to correct and practical shoeing, to overcome the difficulties on slippery roads, and, perhaps, in the hope of helping horse owners we might quote from one of these in the words written by Mr. F. Caulton Reeks, F.R.C.V.S., in his work, "Diseases of the Horse's Foot," published 1925 (Bailliere, Tindall & Cox, London, 21/-), as follows:—"Rather, we think, the horse owner and the public generally should be educated, so that in this matter they will appreciate at its true value, the fact that this method of shoeing gives to the frog, as nearly as possible, that amount of work nature intended it should perform, and so maintains a proper preservation of the foot. . . . It follows as a corollary that, apart from its anti-slipping qualities, it may be recommended as a preventive of many diseases to which the foot is subject and any predisposition to disease given a decided check."

Professor Wooldridge, F.R.C.V.S. (Royal Veterinary College, London), in his "Encyclopædia of Veterinary Medicine, Surgery and Obstetrics," says: "By its use one gets all the advantages of a bar shoe, and it has the further advantage of being lighter, prevents slipping and reduces concussion."

With this method of shoeing a horse can pull heavier loads over smooth, hard roads than it could over the rough pot-hole roads of days gone by; further, a shock-absorbing road grip is assured the horse during full life of shoes, and feet and legs are greatly benefitted which must increase the working life of the animal, thus reducing horse depreciation to a minimum and expediting horse transport to the maximum.

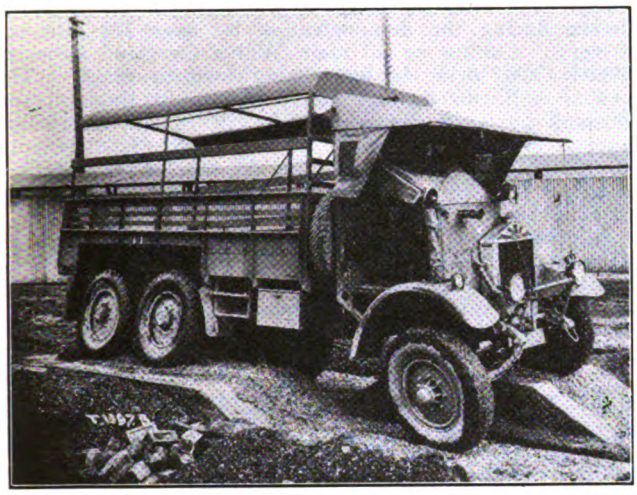
Motor Notes.

Albion Six-Wheelers for India.—The six-wheeled vehicle is being largely adopted by various governments for military purposes owing to its ability to travel over broken ground and to climb unusually severe gradients. The Albion six-wheeler illustrated is one of a large contract for the Government of India, running over a special test track at the Albion Motor Company's Works, Scotstoun, Glasgow.



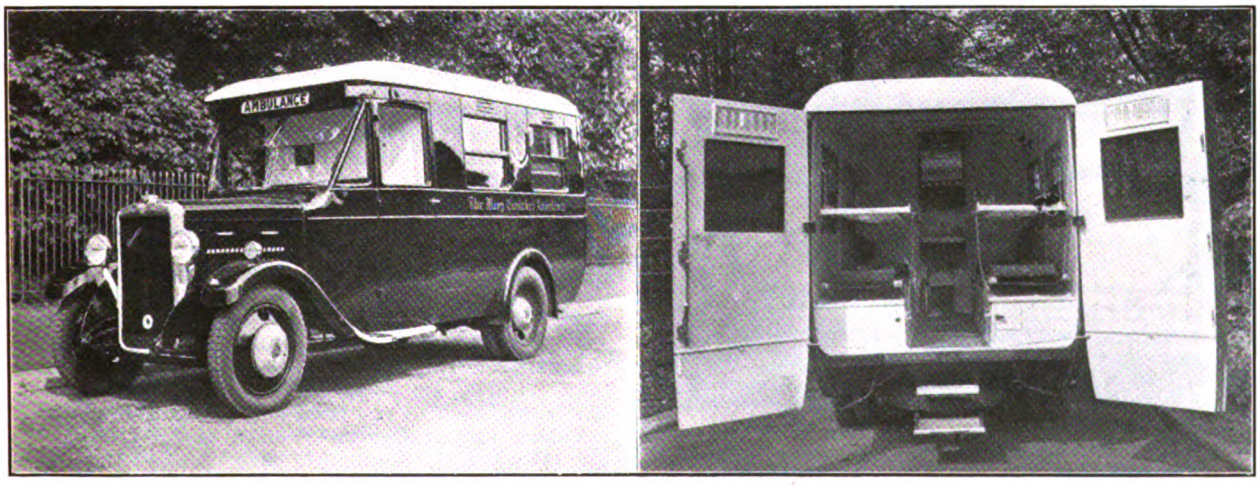
SHOWING TYPE OF ALBION SIX-WHEELER BEING SUPPLIED TO THE INDIAN GOVERNMENT.

A Smart Brewer's Van.—The van shown in the accompanying photograph was lately built and mounted on a Thornycroft A.2. chassis by Wadham Bros., Waterlooville, Hants., for Brickwood & Co., Ltd., the well known brewers

A VAN BY WADHAM BROS., MOUNTED ON A THORNYCROFT A.2. CHASSIS.

A Commer Ambulance.—The first aid van shown in the photograph is known as the Mary Coulcher Ambulance and has recently been delivered to the St. John's Ambulance Association, Ipswich branch. The chassis was supplied by Commer Cars, Ltd., Luton, and is that firm's six-cylinder type. The body was constructed by Messrs. Newnes, of Thames Ditton, and is complete in every respect for dealing expeditiously and thoroughly with any accident. Five stretchers are provided together with lockers for carrying supplies of blankets, bandages, etc., of Portsmouth. It is one of a fleet of 8 Thornycroft vehicles which the firm uses.

Scammell Lorries in Glasgow.—We are advised that Scammell Lorries, Ltd., 52-54, High Holborn, London, W.C.1, have opened a new depot at 68/70, Paterson Street, Glasgow, which will be in charge of the firm's Scottish representative, Mr. J. D. Allan. An adequate stock of Scammell spares for all models will be available and ample accommodation is provided for garaging and the execution of repairs. In addition to service, the premises



EXTERIOR AND INTERIOR VIEWS OF THE COMMER "MARY COULCHER" AMBULANCE.

Purda glass is fitted in the windows, sorbo mattresses to the stretchers, and the interior of the ambulance is heated by means of the exhaust. There are seats for two nurses fitted at the end of each locker, level with the stretchers and between these there is a folding wash basin with a water tank.

Hawkes Safety Glass.—We have received from Hawkes Safety Glass Co., Globe Works, Bromsgrove Street, Birmingham, a firm which has been engaged in the glass industry for the past 70 years, a new price list catalogue and area calculator. The area calculator consists of a table from which the areas of the glass required are easily calculated and the prices can be obtained by reference to the price list. The firm states that the reason for compiling this publication is that they have long realised the difficulty existing in the minds of prospective purchasers as to the cost of refitting a car with safety glass.

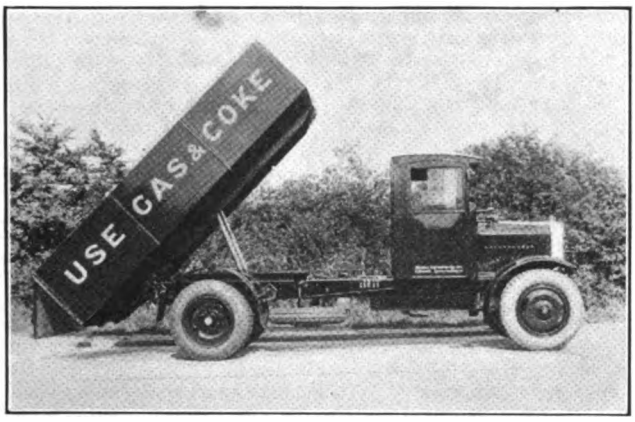
will be the firm's headquarters for sales in Scotland and all information concerning their products can be obtained from there.

Guy Birmingham Agents.—Messrs. Burton & Cole, 269a, Moseley Street, Birmingham, have been appointed sole distributors for Guy vehicles in the Birmingham area. Mr. R. P. Burton, the proprietor of this business, who was for a long time associated with the firm's previous distributors, namely, Caves Motor Agency, as general and sales manager, is familiar with all Guy products and the

Digitized by Google

firm is equipped to carry out complete overhauls, etc. Messrs. Caves agency was discontinued and the present Guy agency is being operated in the same premises as the previous agency.

Dennis Vehicles in Rochdale.—The Borough of Rochdale own a fleet of over 40 Dennis vehicles which are used in many different capacities and they have just added the machine shown in the photograph. Attractive lines are afforded by the all-enclosed cab and the capacious steel lined body, the sides of which are made somewhat

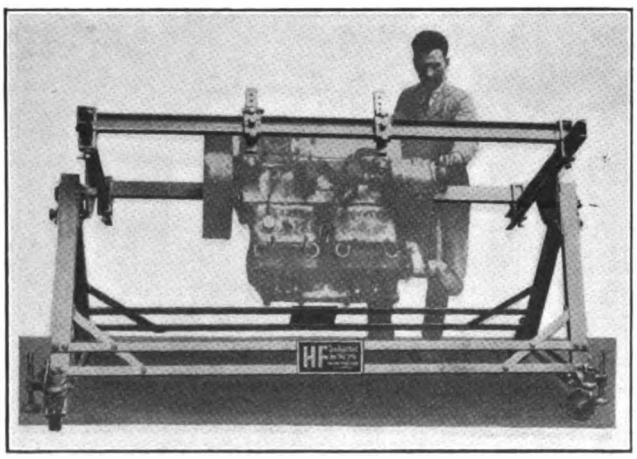


THE DENNIS 6-TON TIPPER REFERRED TO IN TEXT. NOTE THE HIGH TIPPING ANGLE.

higher than standard. The carrying capacity is 6 tons. A hinged tail-board is fitted and hydraulic end tipping gear. Pneumatic tyres are fitted 40 in. by 8 in. single front, twin rear.

SKF Bearings.—The Skefko Ball Bearing Co., Ltd., Luton, have issued their new general catalogue of SKF ball and roller bearings. It is the most comprehensive catalogue of types and sizes of radial and thrust bearings which so far has been published, for it includes five distinct types of SKF ball and roller radial bearings as well as single and double thrust bearings. An innovation in this new catalogue is a diagramatic index by which quick reference can be made to the type and to each series in that type.

H.F. Improved Universal Engine Stand.—The H.F. engine stand has been built as the outcome of careful study of garage requirements. It gives the greatest possible accessibility to every part of the engine and is operated without effort, enabling the mechanic to con-



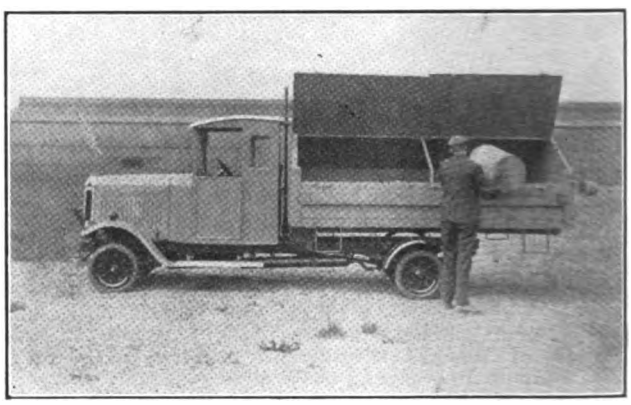
THE H.F. IMPROVED UNIVERSAL ENGINE STAND.

centrate his full attention upon the work in hand. Particular attention has been paid to securing as close coincidence as possible between the centre of gravity of the mounted engine and the pivots of the stand, this being of special importance when the ungeared model is used. A multiplicity of operating positions is available simply by turning the engine over to the required angle, either by hand, or, in the geared model, by worm and worm wheel mechanism. The stand is made for 4-point suspension, a special strap being supplied for 3-point suspension if required. It is supplied by Harvey Frost & Co., Ltd., 148-150, Great Portland Street, W.1.

Float-on-Air Cushions.—"Float-on-Air" cushions are now used for a very great variety of purposes in addition to fittings for motor cars. David Moseley & Sons, Ltd., Ardwick, Manchester, have issued a catalogue showing their various popular uses such as beds for yachting, boating and camping.

A Strenuous Test.—Willys Overland Crossley, Ltd., the Stockport Motor Manufacturers, have organised a 10,000 miles test of a Willys-Manchester 30/35-cwt. lorry with full load. This run will take approximately 2 months to complete and will be confined entirely to this country. The start was made during the third week in June. The lorry has an entirely standard chassis and a special publicity body. One of the most ingenious features is a special board on top of the body on which are mounted pennants showing the dealers covering the territory over which the vehicle passes. The Manchester is being driven during the demonstration by over 300 different drivers. Calling on all main Willys Overland Crossley dealers who drive in turn from town to town. The vehicle will run through every county in England and through parts of Scotland, and will call at every important town in the country, giving all interested persons an opportunity of seeing it. On the rear of the body is a specially constructed design in the shape of the map of England on which the route is carved out.

A New Bean Refuse Collector.—Bean Cars, Ltd., of Tipton, have recently placed on the market a new 30-cwt. low loader refuse collector as shown in the accompanying photograph. The price is £360. The tyre equipment is 22 in. by 3½ in. solids, twin rear. The body has special spring loaded lids and a capacity of six cubic yards.



THE BEAN 30-CWT. LOW-LOADING REFUSE COLLECTOR.

R. Cadisch & Sons' New Catalogue.—The new edition is in similar style to previous issues, but is larger, more comprehensive and a great improvement in every way. The printing is clear and easily legible, and the contents are arranged in such a way as to be very easy of reference. The book contains 654 pages, divided into six sections, each of which is thumb marked. These sections are as follows:—1. Motor accessories. 2. Austin. 3. Morris. 4. Motor cycle. 5. Garage equipment and tools. 6. Side lines. The Austin and Morris sections are unusually comprehensive, and contain details of a wide range of replacement parts at highly competitive prices. The Garage equipment section covers every branch of the service field, and is absolutely up-to-date in every respect. The catalogue is well bound in stiff covers, and is the most complete reference work of its kind available at the present time. Copies are being distributed to all customers, and one will be sent to any bona-fide trader on application.

Vulcan Export Orders.—Vulcan Motor & Engineering Co. (1906), Ltd., Southport, have received the following export orders:—A 30-cwt. normal and forward control chassis for Australia, 50-cwt. normal control chassis for Hong Kong and 30-cwt. normal control chassis for Buenos Aires.

High-grade Chamois Leathers for Coachwork.—Andrew Page & Son, Ltd., motor accessories factors, of 99 Albion Street, Leeds, market special "Seal Brand" high-grade, hand-dressed chamois leathers, which are guaranteed not to scratch the finest coachwork. All the skins are consistently sized and neatly and separately packed in transparent cartons, thus preventing the leathers from becoming soiled before use. Prices range from 4/- and the firm can deliver any quantity from stock.

County Court Judgments.

THE following returns from the Registry of County Courts' Judgments, Whitehall, have been received relating to judgments entered up in the respective County Courts of England and Wales. Publication does not imply inability to pay. Many judgments may have been settled between the parties or paid. Judgments settled otherwise than through the Court may appear unless "satisfaction" is entered up within twenty-one days from judgment or allocatur. Registered judgments are not necessarily for debts. They may be for damages or otherwise, they may relate to actions *bona fide* contested between the parties, or they may be against defendants, liable in a representative capacity, and not personally; but no distinction is made on the register. Judgments are not returned to registry if satisfied in Court books within twenty-one days.

J. S. Wright, Parkfield Road, Wolverhampton, haulage contractor. £44/0/5. May 7th.
Herbert Archer, 92, Upper Richmond Road, London, S.W., haulage contractor. £27/0/3. May 18th.
Clarke's Garage, Ltd., 251a, Tooley Street, London, S.E., cartage contractors. £47/2/1. April 24th.
Wm. Share, 16, Himley Road, Dudley, Worcs., haulage contractor. £43/19/5. May 14th.
L. J. Taylor, 22, Prescott Road, Stourbridge, Worcs., haulage contractor. £33/0/7. May 14th.
Sam Silverwood, Bungalow next Miners' Arms, Doncaster Road, Mexbro', Yorks., haulage contractor. £25/5/9. April 30th.
Derwent Haulage Co., Dene Cot., Busty Bank, Burnopfield, Durham, haulage contractors. £28/18/0. May 17th.
Sidney Beaver, 63, Junction Street, Ancoats, Manchester, carrier. £31/3/11. May 20th.
Kirkhams Express, 614, Lytham Road, Blackpool, transport contractors. £36/1/2. May 14th.
Clintonian (Road Transport), Ltd., 164-170, Mare Street, Hackney, London, E., transport factors. £30/3/9. May 23rd.
Bert Whiting, 2a, Landfield Street, Clapton, London, E., meat carrier. £15/3/2. May 14th.
Alf. E. Mower, Ivy Cott., Whatfield, Nr. Ipswich, Suffolk, carrier. £54/7/10. May 8th.
A. J. Pullin, London Road, Ipswich, Suffolk, haulage contractor. £31/11/0. May 14th.
J. G. Woollam, 26, Gt. Guildford Street, Southwark, London, S.E. £33/10/1. May 12th.
Fred Head, 68, Norbury Road, Eccleshill, Bradford, Yorks., carter. £32/4/4. May 23rd.
C. Heath, 11, Prescott Street, Halifax, haulage contractor. £29/9/9. May 21st.

The Gazette.

Dissolutions of Partnerships.

ALFRED CORK, the elder, ALFRED CORK, the younger, and WILLIAM HENRY CORK, trading as A. Cork & Sons, haulage contractors, 378, Stockport Road, Levenshulme, Manchester. 31st May, 1930. All debts by Alfred Cork the younger and William Henry Cork who will continue.

GEORGE WALTER SARGEANT and FRED WHEATLEY, trading as Sargeant & Co., 148, Bucknall New Road, Hanley, Stoke-on-Trent, haulage contractor. 18th June, 1930.

The Bankruptcy Acts, 1914 and 1926. Bankruptcy Proceedings.

HAROLD WATCHORN, 24, Cinder Bank, Netherton, Dudley, Worcestershire, late The Market Place, Blackheath, Staffordshire, haulage contractor, etc. Receiving order and order of adjudication, May 22. Public examination June 25, at Dudley.

WALTER JOHN DIXON, 20, Ryde Avenue, Ryde Street, Kingston-upon-Hull, haulage contractor. Receiving order and order of adjudication, May 19. Public examination June 23, at Hull.

HERBERT WILLIAM CORNFOOT, The Star Garage, Dover Street, Canterbury, Kent, haulage contractor, etc. Receiving order and order of adjudication, May 28.

HERBERT WILLIAM LANE, Red House Farm, Kingerby, near Market Rasen, Lincolnshire, late Dereham Road, Watton, Norfolk, haulage contractor. Receiving order and order of adjudication, May 26.

THOMAS HENRY DENNIS, 176, 178 and 195, Denman Street, Nottingham, haulage contractor, etc. Receiving order and order of adjudication, May 26. Public examination July 3, at Nottingham.

Notices of Intended Dividends.

GEORGE WILLIAM HAYES, haulage contractor, Cheam House, Park Lane, Macclesfield, Cheshire. No. 6 of 1929. Claims to Cyril John Pyke, 12, Lonsdale Street, Stoke-on-Trent. Official Receiver.

GEORGE JORDAN, Allbrighton, near Wolverhampton, and Station Yard, Allbrighton, near Wolverhampton, Shropshire, general haulier, etc. No. 4 of 1930. Claims to Cyril John Pyke, 22, Swan Hill, Shrewsbury. Official Receiver.

FREDERICK JOHN GOODENOUGH, trading as F. & A. Goodenough, 67, Parchment Street, Winchester, Hants, haulage contractor, etc. No. 4 of 1929. Claims to Harold John Ernest Batchelor, 44, Above Bar, Southampton.

WALTER HENRY PRATLEY, Hill Crest, Westfield, Wyke, near Bradford, formerly 60, New Road, Halifax, haulage contractor. No. 17 of 1929. Claims to John Osborne Morris, 12, Duke Street, Bradford. Official Receiver.

SYDNEY EDWARD TEMPLE, 75, Sheep Street, Northampton, haulage contractor, late Rothersthorpe Road, Far Cotton, Northampton. No. 19 of 1929. Claims to Henry Claude Palmer, Kingham Chambers, Abingdon Street, Northampton.

JOHN WOOLLAM, Marsh Lane Garage, Preston, Lancashire, haulage contractor. No. 5 of 1930. Claims to Harold Parker, 9, Cannon Street, Preston. Official Receiver.

ALBERT ROYAL SINGLETON, 67, Severn Street, Kingston-upon-Hull, general carrier. No. 4 of 1927. Claims to Joseph Edward Danthorpe Stickney, 37, Scale Lane, Hull. Official Receiver.

Notices of Dividends.

THOMAS JEPSON, Radley Common, Houghton Green, near Warrington, Lancashire, haulage contractor. No. 4 of 1930. First and final of 3s. 1½d. in the £ payable at the Office of the Official Receiver, Government Buildings, Victoria Street, Liverpool.

GEORGE BEND, 16, Hawthorn Road, Hale, Cheshire, general carrier. No. 93 of 1929. First and final of 9½d. in the £ payable at the Official Receiver's Offices, Byrom Street, Manchester.

JOHN DUERDEN, 34, Hollingreave Road, Burnley, Lancashire, haulage contractor. No. 33 of 1929. First and final of 1s. 3½d. in the £ payable at the Official Receiver's Office, District Bank Chambers, Blackburn.

ALFRED HOLMES, 63, Bridgeman Street, Bolton, Lancashire, haulage contractor. No. 54 of 1929. First and final of 1s. 8½d. in the £ payable at the Official Receiver's Offices, Byrom Street, Manchester.

JOHN STEPHEN HAWKER (separate estate), 88, Maple Road, Longmead Avenue, Bristol, late trading in co-partnership with another. 9, Sydenham Road, Cotham, Bristol, haulage contractor. No. 36 of 1929. First and final of 10s. 9d. in the £ payable at the Official Receiver's Offices, 26, Baldwin Street, Bristol.

New Companies.

Lorry Transport, Limited. (248,225). — Private company. Registered May 20th. Capital £900 in 400 10 per cent. participating preferred shares of £1 and 10,000 ordinary shares of 1/- each. Objects: To acquire the business of the Lorry Transport Co. now carried on at 40 Borough High Street, S.E.1, haulage contractors, and all the rights, titles and interests of A. Davis in various agreements. The directors are: A. Davis (permanent managing director), L. Thompson. Secretary: A. Davis. Registered office: 40 Borough High Street, S.E.1.

Haythornthwaites, Ltd. (248,222).—Private company. Registered May 20th. Capital £1,000 in 10/- shares. Objects: To carry on the business of haulage and transport contractors, motor and mechanical engineers, hauliers and general carriers of passengers and goods, garage proprietors, etc. The first directors (to number not less than 2 nor more than 5) are: H. Haythornthwaite (permanent managing director), Mrs. N. Haythornthwaite.

Cadman's Services, Ltd. (248,237).—Private company. Registered May 21st. Capital £500 in £1 shares. Objects: To establish and carry on public motor services, and to carry on the business of proprietors and users of motor omnibuses, char-a-bancs, touring carriages, etc. The directors are: M. Cadman, H. Barton (both permanent, subject to each holding 50 shares).

W. Body, Ltd. (248,286).—Private company. Registered May 22nd. Capital £500 in £1 shares. Objects: To carry on the business of cartage, haulage and transport contractors, garage proprietors, motor vehicle owners, etc. The first directors are to be appointed by the subscribers.

Alfred Bell (Newcastle), Ltd. (248,320).—Private company. Registered May 24th. Capital £2,000 in £1 shares. Objects: To acquire the business of a furniture remover and haulage contractor carried on by G. W. Weir at Newcastle-on-Tyne as "Alfred Bell," and to carry on the business of shipping and forwarding agents, rail, road and ship agents, etc. G. W. Weir is the first director. Secretary: Edna Weir. Registered office: Higham Place, Newcastle-on-Tyne.

Barker Manufacturing & Transport Company, Ltd. (248,332). — Private company. Registered May 24th. Capital £1,500 in £1 shares. Objects: To adopt an agreement with W. H. Barker; to acquire patents and inventions; to manufacture and deal in machinery and plant, and to carry on the business of general carriers, haulage contractors, carmen, motor contractors, motor lorry, omnibus, coach, van and general and steam trolly proprietors, etc. The first directors (to number not less than 2 nor more than 5) are: W. H. Barker (permanent director and chairman), W. Barker.

O'Sullivan Brothers, Limited. (8,001).—Private company. Registered in Dublin on May 26th. Capital £1,000 in £1 shares. Objects: To acquire the business of haulage contractors carried on by the O'Sullivan Brothers at 5 St. Muras Terrace, Church Road, Dublin. The directors are: John O'Sullivan, Eugene O'Sullivan. Registered office: 5 St. Muras Terrace, Dublin.

Smiths Transport, Limited. (248,365).—Private company. Registered May 26th. Capital £1,000 in £1 shares. Objects: To acquire the business of a transport and haulage contractor carried on by H. Sheldon at 52 Suffolk Street, Birmingham. The first directors (to number not less than 2 nor more than 5) are to be appointed by the subscribers.

Wickford Omnibus Services, Ltd. (248,384).—Private company. Registered May 27th. Capital £2,000 in £1 shares. Objects: To carry on the business of a passenger, carrying, and general transport service, and that of omnibus and garage proprietors, etc., formerly carried on by G. W. Spurling, of Runwell Road, Wickford. The directors are: G. W. Spurling (managing director), C. E. G. Hallett. Secretary: C. E. G. Hallett. Registered office: Runwell Road, Wickford.

General Travel Bookings, Ltd. (248,395).—Private company. Registered May 28th. Capital £100 in 5/- shares. Objects: To acquire the business of tourist agents heretofore carried on by R. Holt, trading as "General Travel Bookings" at St. Peter's Square, Manchester, and to carry on the business of proprietors of motor coaches, motor cars, ships and boats, aeroplanes, etc. R. Holt is permanent managing director.

Crimson Rambler Coaching Service, Ltd. (248,448).—Private company. Registered May 30th. Capital £100 in £1 shares. Objects: To acquire the business of the motor coaching service heretofore carried on by A. E. Cartlidge at Brooklands, Waldegrave Road, Teddington. A. E. Cartlidge is permanent managing director.

Mortgages and Charges.

Lacey's (East Ham), Ltd. — Charge on 220 Barking Road and 1 Gillett Avenue, East Ham, and debenture charged on the company's undertaking and property, present and future, including uncalled capital, both dated March 31st, 1930, each securing £2,500. Holder: G. W. R. R. Stewart, 93 High Street, North, East Ham.

H. S. King & Son (Motor Transport), Ltd.—Debenture dated April 1st, 1930, to secure £200, charged on the company's property, present and future, including uncalled capital. Holder: Mrs. F. A. Overton, 76 Courtland Avenue, Ilford.

Richards & Hills, Ltd.—Particulars filed of £575 debentures authorised April 2nd, 1930, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

Furlongs, Ltd. — Land Registration Charge on Tudor House, High Street, Eltham, dated April 3rd, 1930, to secure all moneys due or to become due from the company to the Westminster Bank, Ltd., not exceeding £8,000.

Satisfactions.

Note: Where the amount "originally secured" is stated, that is not necessarily the amount outstanding at the date of the satisfaction recorded below. There may have been previous partial satisfactions, registered or unregistered. The registration of Satisfactions is not compulsory.

R. A. Dagnall (Haulage Contractor), Ltd.—Satisfaction on March 25th, 1930, of mortgage dated April 12th, 1928, and registered April 16th, 1928. (According to the register of mortgages, the mortgage registered April 16th, 1928, originally secured £1,500).

R. A. Dagnall (Haulage Contractor), Ltd.—Satisfaction (1) to the extent of £2,200 on March 25th, 1930, of mortgage dated December 29th, 1927, and registered January 17th, 1928, securing £4,750, and (2) on April 25th, 1930, of mortgage dated December 29th, 1927, and registered January 16th, 1928, securing £4,200.

Improving London Traffic.

THE Fourth Annual Report of the London and Home Counties Traffic Advisory Committee, covering the year 1928/9, may be called a humdrum report, but it does not follow, therefore, that a large amount of useful work has not been accomplished. As a matter of fact the reverse is the case, and although the subjects outlined in the report are not such as to call for big headlines in the daily press they nevertheless represent a tremendous amount of good work done by this important Committee. It is well to emphasise that the majority of the members of the Committee are men conducting their own business or occupying very important positions in large commercial undertakings and who give their services to the community without fee or reward. In the introduction it is mentioned that sixteen meetings of the Main Committee were held during the period under review and that Sub-Committees Nos. 1 and 2 held nine and twenty-two meetings respectively, while, in addition, a large number of road and traffic inspections were carried out. This will give an idea of the large amount of time given up by those who are members of the Committee, and all of us engaged in business or living in the wide area covered by their activities owe them a debt of gratitude which it is not easy to overestimate. The Committee published earlier in the year under review a Report on Street Accidents in Greater London, this being the second which they had drawn up, and they also issued a Report on Street Accidents to Children in the same area. These are matters which are exercising the thought and which give anxiety to every member of the community and which fall with special responsibility on the users of road vehicles. The Committee report that the result of the investigations which they made have convinced them that the most effective way of preventing accidents is to lay before all concerned the fullest information as to how they happen. With this end in view they recommended the formation of a Committee to be composed of officers of the Home Office and the Ministry of Transport, together with representatives of the Police, to report on the extent to which this investigation should be made and the procedure which should be adopted. This step was approved by the Minister of Transport, and the Committee has been formed and is now considering these questions. The investigation of the Committee into street fatalities of children led them to make a number of recommendations, including the protection of children to and from school, the provision of playgrounds, and a detailed investigation of all accidents. Such recommendations as to provision of plaques bearing the words "one-way," "look left" or "look right," are amongst the minor experiments carried out by the Committee.

Travelling facilities in north and north-east London; improvements in the dock area; traffic in Bond Street; road improvement schemes in all parts of the London and Home Counties traffic area form other branches of the year's work.

Another section of the Report deals with the closing of streets for works, and a number of cases have been investigated where extensive traffic delays have taken place on important thoroughfares. Those who are in London during August may not consider that any great improvement has taken place in this respect, but the Committee has worked consistently to minimise hindrances to traffic through unavoidable delays and congestion resulting from streets and roads being up for repair work.

The Committee deals in its report with the restriction of the number of omnibuses plying in certain streets within the City of London and the Metropolitan Police District, pointing out that as a result of their advice regulations have been made in this connection. The Minister of Transport has power to make regulations for relieving congestion and facilitating traffic in the London traffic area, but before making such regulations

Digitized by Google

the matter in question has to be referred to the Committee for their advice and report. A number of proposed regulations were considered by the Committee during the year under review. This is a very important part of the work of the Committee and one which required not only expert knowledge but impartial judgment to prevent injustice being done to one section or another of the trading community. From time to time alterations have been made in the stopping places for omnibuses and tramcars on the recommendation of the Committee. These alterations may not appear at first sight to be a very important matter, but they are always made after careful consideration, and a personal inspection of the present and prospective stopping places in company with representatives of local authorities and the transport interests concerned. During the year under review omnibuses and tramcar stopping places in 110 different areas were inspected, and recommendations were made affecting 232 stopping places for omnibuses and 156 for tramcars. In this connection the Committee mention that there are about 360 route miles of tramways in the area which they cover, and over 1,000 miles of streets over which omnibuses operate. Traffic signs and notices are amongst the items which have come under the consideration of the Committee as well as the important subject of traffic control signals. Road traffic noises and priority of traffic at cross roads is another subject which has been under the consideration of the Committee in consequence of numerous complaints which had been received relating to excessive noise caused by certain forms of motor vehicles. A valuable report on this subject was drawn up and published by H.M. Stationery Office and issued to all the highway authorities in Great Britain.

This brief review gives some idea of the work of the London and Home Counties Traffic Advisory Committee and is sufficient to show that, while nothing of a spectacular character has taken place, yet the work done has been exceedingly comprehensive and useful to the traffic of the great area covered by the Committee.

Comment on Current Topics.

The Road Traffic Act.

The Road Traffic Bill, which has occupied a considerable amount of space in this journal for many months past, is now an Act, having received the Royal Assent before the Prorogation of Parliament. In this issue we give some further information, and we also have an article specially written for us by Mr. C. le M. Gosselin, Managing Director of H. Viney & Co., Ltd., Preston, who, incidentally, is the President of the Commercial Motor Users' Association, but who, in writing for us, is careful to mention that he is acting in his private capacity. He is a pioneer in road transport and takes a broad view of the industry, which he has served wholeheartedly for many years. The views which he sets forth, while they only deal in a general way with the Road Traffic legislation, will be endorsed by many members of the road transport industry, who look with alarm at the steadily increasing pressure of legislation and Government interference with their business. In our next issue we hope to have two articles dealing with the new Act as it affects both passenger and goods transport by road, so that we do not propose to deal with the subject further until then. It will be noticed in our report that Mr. Morrison, the Minister of Transport, has given approximate dates when he proposes that the different parts of the Act should come into operation, the first of these being on November 1st next, while the part of the Act relating to speed limits is postponed until January 1st, 1931. The portion dealing with road service licences for omnibuses and motor coaches, it is proposed, shall come into operation on March 1st, 1931. At the same time the Minister of Transport states that it might be found necessary to postpone the operation of any section of the Act.

Civil Aviation.

Since our editorial in the July issue of this journal, dealing with the progress of civil aviation, was published, what may be described as a further landmark in the development of aviation took place in the voyage of the Airship R100 from Cardington to St. Hubert, Montreal, where the vessel was safely attached to the mooring mast after a successful, though somewhat adventurous, flight. It is necessary, whenever one is writing about our national airships R100 and R101, to qualify one's remarks with the statement that both these vessels are of an experimental character, so that while we may legitimately offer congratulations after a successful flight we may make considerable allowances should anything go wrong or weakness in the fabric, in the engines, or in the structure of the airships become apparent. This only goes to show that we have not yet got very far with the problem of airship navigation on an economic basis, and it has been pointed out, rather facetiously, that the R100 arrived in Canada with a cargo consisting of the reserve supply of petrol which she was carrying. It does not follow, as has been frequently asserted, that airships are a failure, but it does go to prove that any advance in this branch of aviation is bound to be exceedingly costly. It is interesting to record that the Committee on Co-operation between Civil Aviation Undertakings, formed by the League of Nations, has just recently been considering a programme for the development of this subject. Amongst the points which obtained strong support are those for the extension and systemisation of combined transport, particularly as regards travel by night; the preparation of an international guide book giving clearly the combinations of aerial, rail and sea transport now available; an international study of aerial postal routes including the standardisation of the additional payments on letters and parcels carried by air post, and the establishment of an international chart of the most urgently needed air routes and of an international programme for day and night flying. This programme shows that the League of Nations, through its appointed Committee, is taking the development of civil aviation very seriously with a view to co-ordination and combining the systems of the different countries and forming an international system.

Dazzle from Headlamps.

We publish in this issue the memorandum on the subject of dazzle, resulting from high powered headlamps, issued by the Royal Automobile Club. The Club has taken a leading part in work to find a remedy for this frequent source of accidents and it has organised competitions and trials of anti-dazzle appliances. So far the results have not been successful. Powerful lamps within certain limits are essential to driving at night with safety, and so far the most efficient remedy for dazzle is the apparatus which enables lamps to be dipped on the approach of another vehicle. The R.A.C. recommends a limitation of candle-power combined with dipping devices on all cars. The fast motor car, necessarily fitted with powerful lights, is the chief offender in dazzling, and the danger is one which is shared by every user of the road from the pedestrian to the horse-drawn vehicle or heavy motor lorry.

London Dock Charges Reduced.

The Port of London Authority is to be congratulated upon its decision to reduce certain of the charges made for traffic using the Port of London. It is estimated that the reduction will reach a total of £120,000 per annum and will mainly consist of a lowering of rates in the dock tonnage dues on vessels and on the port rates on goods. On all hands the complaint is made of the high cost of transport and of charges at the ports of this country, and we are glad, therefore, that the premier port of the British Empire has taken a lead in making reductions which should be of material assistance to our trade and industry.

The Storage of Petrol.

In our last issue we dealt in our editorial columns with the new position resulting from the recent regulations dealing with the storage of petrol, pointing out that every garage, where a motor vehicle was stored containing petrol, came within the scope of the regulations and was bound, under penalties, to provide either a fire extinguisher or a bucket of sand for use in case of emergency.

We have since had the opportunity of discussing this important question with an expert on the subject of fire extinguishers and we are able to give further information on a subject which is becoming of increasing importance to our readers.

It has been suggested that every motor owner was compelled by the regulations to carry a fire extinguisher on his car. This is not the case, although, under regulations to be made by the Minister of Transport under the Road Traffic Act, public service vehicles will shortly be compelled to carry some type of fire extinguisher which has been passed by the authorities. It does not follow, however, that in his own interest the owner of a motor vehicle will not be well advised to carry a fire extinguisher, because just as there is a risk of fire in the garage, so there is on a journey should anything go wrong with the engine of his vehicle.

There is no doubt, however, that the new regulations make it compulsory for every owner of a garage, where a vehicle is kept containing petrol in the tank, to have a fire extinguisher or a bucket of sand installed. The interpretation of the regulations was taken up with the Home Office for a definite ruling and the following are extracts from a letter written to the Home Office and a letter received in reply:—

Question:—"Would you kindly let us know whether a private motorist with a garage for his own car attached to his house comes under Regulation No. 5."

Answer:—"I am directed by the Secretary of State to say that the Petroleum (Motor Vehicles, etc.) Regulations, 1929, apply in the case of petroleum spirit kept only in the tank of a motor vehicle and in the case of petroleum spirit kept for the purposes of any of the engines specified in the Schedule to the Regulations."

This seems a reasonable and obvious ruling because there is not so much danger in keeping a few gallons of petrol in the sealed tins in which it is supplied as there is of a fire occurring when starting up a motor car or due to the leakage of petrol from the petrol tank or pipes and connections conveying the petrol from the petrol tank to the carburetter. It would obviously have been foolish to have made the regulation apply to a motor owner who stored two gallons of petrol in a can while allowing another owner to store say twelve or more gallons of petrol in the tank of his car or commercial vehicle with the attendant risks of leakage and without being compelled to take any protection against fire.

Personal Notes.

Retirement of Well-known Port of London Official.—After 46 years in the service of London's Port, Mr. G. S. Maskall, O.B.E., has retired from the position of Dock and Warehouse Manager to the Port of London Authority. He entered the service of the East and West India Dock Company in 1884, and upon the formation of the Port of London Authority was appointed, in 1909, their Shipping Superintendent, becoming Assistant Dock and Warehouse Manager in 1916 and four years later taking control of the Department. Probably no man in the Port of London has a greater knowledge or a closer acquaintance with the progress of shipping and transport facilities connected therewith than has Mr. Maskall. Naturally, one with so prolonged and so intimate an experience has gained a host of friends in shipping and commercial circles, and Mr. Maskall enters upon a well-earned retirement with the sincerest good wishes for his happiness, in token of which his brother officers last month presented him, at a Dinner in his honour at the Metropole Hotel, with an extremely handsome silver cigar box.

Long Service.—After over sixty years' service, beginning with the old Bridgewater Navigation, Mr. A. Reynolds has recently retired from the Manchester Ship Canal Company after acting for many years as Chief Canvasser on the staff of the Chief Superintendent, Mr. Herbert M. Gibson, O.B.E. Mr. Reynold's work brought him into close touch with most of the important firms of importers and exporters, principally in Lancashire and Yorkshire, and he has done a great deal of good work in bringing traffic to the waterway during the past thirty years. Mr. Reynolds enters upon a well-earned retirement with the sincerest good wishes of his colleagues at Ship Canal House, who have, as a token of their regard, presented him with a handsome clock and a wallet.

Mr. A. L. Lunn's New Post with the London Underground.—Mr. A. L. Lunn, M.I.E.E., M.I.Mech.E., Deputy-Chief Engineer of the Manchester Corporation Electricity Department, has accepted an important appointment with the London Underground, and takes up his new duties in September. Mr. Lunn will assist with the generation and distribution of power for the underground railways included in the undertaking. Mr. Lunn has been associated with the Manchester Corporation for 19 years and was appointed to his present post in 1927. He is a Yorkshireman, and is Chairman-elect of the north-western centre of the Institution of Electrical Engineers.

P.L.A. Appointment.—The Port of London Authority have appointed Mr. M. G. Matthews, O.B.E., to be their Dock and Warehouse Manager in succession to Mr. G. S. Maskall who retired last month after 46 years' service in the Port. Mr. Matthews has for some years served in the capacity of Assistant Dock and Warehouse Manager.

MR. M. G. MATTHEWS, O.B.E.

New Passenger Traffic Manager for the United States Lines.—Mr. Tarleton Winchester, European Passenger Director of the United States Lines has left this country for New York to take up his new appointment as Passenger Traffic Manager of the Company, with headquarters at 45 Broadway, New York City.

Mr. Frost's A.E.C. Position. — Mr. J. Frost who, as announced in our June issue, has joined the Associated Equipment Co., Ltd., will occupy the position of Manager, Freight Vehicle Department.

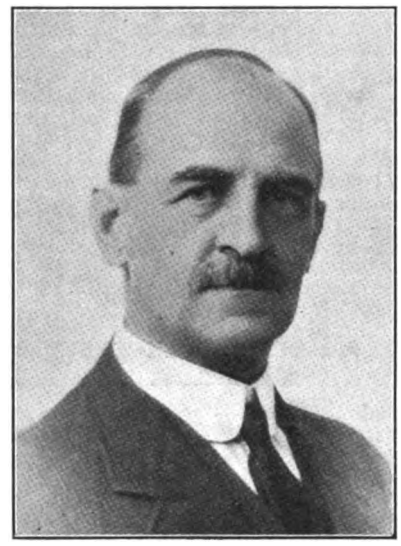
The Prospects of Road Transport.

By C. le M. Gosselin.
(Managing Director, H. Viney & Co., Ltd., Preston.)

So much legislation has been passed in connection with the operation of road transport within the last few years that it is difficult for the public to follow the underlying principles with which it has been inspired. Cicero in his letters to Mark Antony was very fond of applying the test to any policy, summed up in the two words "*Cui Bono,*" which so far as I can recollect might be freely translated "to whose advantage is it that this policy should be pursued," and it might be as well to adopt the same method in examining the policy which has been pursued by Parliament in regard to road transport operation.

The railways have made it quite clear on various occasions that in their own interests they consider first of all that road transport should be made to pay for the use of the roads which they traverse, and more recently it has been suggested that in addition they are to be debited with the social loss such as vibration to buildings, lack of safety in villages, and all kinds of disamenities to the public.

Further, the railways when applying for road transport powers frankly stated that when they got them they would press for a further regulation of road transport, in which they would be pleased to share, and lastly it has been stated on their behalf that they consider it a fundamental truth that duplication of capital by transport undertakings to carry substantially the same quantity of traffic was against the national interests. No one can blame the railways for these expressions of opinion, as put to Cicero's test, namely, *Cui Bono,* they are so clearly arguments which Railway Companies should put up in their own interests, and it will be interesting to see how these views have been reflected in recent legislation.



MR. C. LE M. GOSSELIN.

In 1921 a vehicle tax was imposed upon all motor vehicles. This was increased, more particularly, in regard to commercial vehicles in 1927, and again in his budget speech of 1928 the Chancellor of the Exchequer declared that he would put on a petrol tax, because he felt it was the duty of the Government to level up the flow of traffic as between road and rail transport—in other words, to reduce the competitive powers of the former with regard to the latter. Still the pendulum seemed to swing in the favour of road transport and so the same Chancellor had to look for other means of checking the progress of road traffic. He therefore enunciated the principle that the country could not afford to spend this money on the development of roads, and as he had other urgent needs for it, he took the whole of the petrol tax and a certain proportion of the vehicle tax raised from the lighter motor cars, and applied them for national purposes. One of these purposes was to give a grant to the Railway Companies to subsidize certain classes of traffic passing over their system, and another purpose was for the de-rating of industries in which the railways, but not the roads, were to participate. This indeed was meeting the railways desire that road transport should be made to pay its way and the fact that they were receiving some of the proceeds must have almost been beyond their original expectations, but the further question remained of how the duplication of capital by transport undertakings could be dealt with, and here the question of the further regulation of road transport was introduced. This has been embodied by Parliament in the Road Traffic Act. Some such Act the road transport industry itself has been pleading with Parliament to pass since a period before the War, but it was never anticipated that the occasion would be taken advantage of for imposing limitations upon the industry, such as are contained in the present Act. It is quite evident, for instance, that road transport operators, whether they be private users or commercial users, never intended to ask Parliament to quadruple the penalties for breaches of the regulations which already existed, or to pass special obligations upon them as users of the roads in case of accident, which the common law of the land has not thought necessary to impose upon other users of the road. The most severe limitations, curiously enough, apply to only those classes of vehicles which happen to be in competition with the railways. These latter will undoubtedly bear the burden as road transport operators with perfect equanimity. There is an old adage that where your treasure is there shall your heart be also, and one can bear with tolerance a certain amount of loss of opportunity in a business in which only a few million pounds are invested, if there is a possibility of bringing in an advantage on any branch of the business in which the investment runs to something like thirteen hundred millions. For the present it is in regard to the future regulation of the passenger carrying side of the road transport industry that the full effect of regulation is to be applied, and such is the position under the Road Traffic Act that it is true to say that the promoters of omnibus services will have very little left to do on their own initiative but purchase vehicles of a type which will be indicated to them by traffic commissioners and hope for the best.

Indeed, it will not be wise for the promoter of a public passenger service to invest very much capital until he is perfectly certain regarding the views of the commissioners, and even so he will be dependent on the goodwill of the said commissioners entirely for the length of time during which he will be permitted to operate, and still further will have to rely on the reasonable treatment of the inspectors employed by the said commissioners for permission to run a vehicle in a reasonable state of repair. Further, any local or public authority obtaining power to purchase the operators' service and vehicles, can do so without any contribution to goodwill, which may have been built up through the efficiency with which that service has been performed under license of the road commissioners. So much then for regulation, but we are then left with the question of the duplication of capital by transport undertakings, and this is effectively dealt with under the Act by a provision that in the public interests the fare shall be so fixed as to prevent wasteful competition with alternative forms of transport, if any, along the route of any part thereof or in proximity thereto. We have, therefore, reached the point where railway interests have on three substantial points been satisfied by legislation. This has been brought about by transferring the operation of public service vehicles into the hands of traffic commissioners, who will dictate the most minute circumstances under which the service may be operated, whilst them-

Digitized by Google

selves having no direct connection with the industry. A worse form of control it would be difficult to imagine and it may safely be said that the recent discussion on long distance motor services and their place in the national scheme of transport, was a delightful waste of time, seeing that the matter will be effectively settled in a short time by gentlemen whose views, if they have any, are so far undisclosed.

It is, of course, not surprising that considerable attention is being given to the possibility of harnessing the goods carrying side of the transport industry under similar regulations. The eventual effect must be to gradually recreate the position when the railways controlled the whole of the inland transport of the country, and were able to dictate the conditions and charges under which the same were operated. It is often stated that such a position cannot arise in view of the number of small operators, but these will be effectively squeezed out or confined to limited powers of operation in the same way that the smaller bus companies of the country are beginning to realize that they will never be allowed to extend to any great extent in competition with their more powerful brethren.

The railways certainly must be congratulated on having moulded a policy and having succeeded, either directly or indirectly, in obtaining the support of Parliament. No one can quarrel with them for this, but the regret is that the public are so short sighted as to relinquish a weapon for bargaining with the railways, which has been placed in their hands by the development of an independent form of road transport. Even ancillary users may before long find that the conditions under which they are permitted to regulate their fleets make the liberty they enjoy a commercially unsound proposition.

It will be interesting to see how far aerial transport in the country will eventually become affected by the policy at present being applied to the road transport industry.

London and Home Counties Traffic Advisory Committee.

Annual Report.

THE Fourth Annual Report of the London and Home Counties Traffic Advisory Committee to the Minister of Transport for the year 1928/29 is now on sale. Copies (price 2/6d.) may be purchased from H.M. Stationery Office or from any bookseller.

The Report covers the period from the 1st October, 1928, to the 30th September, 1929, and deals with the various matters considered by the Committee during this period, amongst which are the following:—

Measures for the prevention of street accidents.
Road and bridge improvement schemes.
The co-ordination of street works affecting important thoroughfares.
The control of omnibus services under the provisions of Section 7 of the London Traffic Act.
Regulations in regard to the loading and unloading of vehicles.
Parking places and prescribed routes for traffic where "roundabout" and "one-way" traffic systems have been put into operation. In addition certain "one-way" and "roundabout" traffic systems which have been put into experimental operation are described.
The fixing of stopping places for omnibuses and tramcars.
The erection of traffic signs and notices and traffic control signals.
The display of street names.

Included in the same volume are:—

The Minister's Report to Parliament under Section 8 of the London Traffic Act, and statistics relating to the operation of omnibuses in London.
A statement from the Annual Tramway Returns showing the results of the operation of tramways in the London Traffic area during the period.
A statement showing the number of passengers originating on the London Underground Railways during the years 1925/28.
A statement respecting street accidents in regard to which certain powers of inquiry are conferred upon the Minister by the Act.

Broken Down Vehicles—London Traffic Area.

THE Minister of Transport, acting upon the advice of the London and Home Counties Traffic Advisory Committee, has made revised regulations under Section 10 of the London Traffic Act, 1924, in respect of Broken Down Vehicles to have effect in the London Traffic Area.

These Regulations which supersede the London Traffic (Broken Down Vehicles) Regulations, 1925, provide:—

1. That no owner, or driver or other person in control or in charge of any vehicle shall cause or permit it to be in any street within the London Traffic Area in such a condition or with such a load that it breaks down; provided that it shall be a sufficient defence to any proceedings if the person charged satisfies the Court that he has taken all reasonable steps to put and maintain the vehicle in proper condition, or to prevent its being overloaded, or that the offence was committed on the express instructions of some person with whose orders he was bound to comply in the course of his employment.
2. That it shall be the duty of the owner, driver or other person in control or in charge of a broken down vehicle in any street in the London Traffic Area to remove or to take all reasonable steps to secure the removal of a broken down vehicle as soon as practicable.

A Police Constable in uniform, if he is of opinion that the owner, driver or other person in charge of a broken down vehicle has failed to take all necessary steps to remove the vehicle, or that the vehicle constitutes a danger to traffic, is empowered to remove it himself or use the services or any other person or persons to remove it and the expenses incurred by the police in connection with such removal are recoverable from the owner.

Any person acting in contravention of, or failing to carry out his duty under, any of the provisions of the Regulations will be liable to a penalty not exceeding £5.

Copies of the Regulations are obtainable from H.M. Stationery Office, Adastral House, Kingsway, W.C.2, either directly or through any bookseller at a cost of 1d. a copy.

British Empire Trade Exhibition, Buenos Aires, 1931.

OWING to the greatly increased importance now assumed by the British Empire Exhibition, to be held at Buenos Aires in March and April, 1931, His Majesty's Government have decided to treble the sum to be expended on their official participation in the Exhibition. This large increase will allow a considerable part of the impressive British Government Exhibits, now being shown in the Antwerp Exhibition, to be sent out and adequately displayed at Buenos Aires. The Management of the Buenos Aires Exhibition have placed one of the finest buildings in their grounds at the disposal of the British Government, and the decorations of this hall and the arrangement of the Exhibits will be in the hands of the Department of Overseas Trade. The desire of British manufacturers to exhibit in the Trade Sections of the Exhibition has been so great that it has been found necessary to provide more than double the covered space originally designed—and although the grounds and buildings cover more than twenty-five acres it will be difficult to fit in all who wish to participate. The London offices of the Exhibition are at 5 Parliament Mansions, Orchard Street, Victoria Street, S.W.1.

Road Traffic Act, 1930.

THE Road Traffic Bill is now an Act of Parliament. On August 1st the Royal Assent was given to the Bill and it became the Road Traffic Act, 1930.

Widespread interest has been manifested in the Bill throughout its stages in Parliament. This is quite natural because its provisions affect every section of the community. It was far the longest Bill of the Parliamentary Session, containing 123 clauses and 5 schedules. No less than 2,546 amendments were put down during the passage of the Bill through the two Houses of Parliament. Its various provisions will not, however, come into operation until the Minister of Transport has fixed the appointed days, so that the 20 miles an hour speed limit for private cars is still law.

Part IV of the Act, dealing with the regulation of public service vehicles, and Part V, dealing with omnibuses operated by Local Authorities, are important. In place of some hundreds of licensing authorities for public service vehicles there will be substituted twelve traffic Commissioners covering Great Britain, and through the new instrument of the road service licence omnibuses and motor coaches will be made to fit into the requirements of a nationally co-ordinated system of road transport, whether the owners are private persons or municipalities, and the Traffic Commissioners will be able to see to it that necessary, even if unremunerative, routes are catered for as well as the heavy and profitable traffic.

The Commissioners will control time tables and will endeavour to eliminate cut-throat competition, and will steadily raise the standard of vehicles in respect to both comfort and safety, and a condition of licensing will be that labour conditions shall not be less favourable than those required by the Fair Wages Resolution of the House of Commons.

Municipalities which formerly could only run omnibuses by promoting Bills in Parliament will, if they possess passenger transport powers of some sort, be able to apply to the Traffic Commissioners for necessary powers.

Those engaged in the industry and the local authorities can appeal to the Minister of Transport against decisions of the Traffic Commissioners.

The provisions for inspection of vehicles together with regulations as to construction and equipment puts the Minister of Transport in a much stronger position in securing the safety of the travelling public.

The abolition of the speed limit for private cars merely gives statutory recognition to a fact, but this is coupled with severe penalties for dangerous or careless driving, the dangerous and reckless driver being liable to imprisonment and the loss of his driving licence, and the Minister of Transport has expressed the hope that the authorities will inflict severe penalties in clear cases.

The new licensing system for public service vehicles will enable the authorities to keep a much firmer hold on the speeds of motor coaches and omnibuses.

An important factor of safety will be the publication in due course of a highway code which the Minister of Transport will frame for submission to Parliament after consultation with local authorities, organisations representing road traffic, trades unions and pedestrians. It will not be a criminal offence to infringe the highway code, but the observance or non-observance of its provisions can be pleaded in the Courts by either party in an action.

The provisions of the Road Traffic Act constitute the widest and most comprehensive system of highway law we have ever known. The Act enforces compulsory cover against third-party risks.

The new Act is a great legislative milestone consolidating and bringing up to date our traffic law.

OPERATIVE DATES.

On July 30th, in the House of Commons, the Minister of Transport was asked when he proposed to fix a date for the Road Traffic Act to come into force; whether Part I, dealing with the speed limit, and the dangerous driving clauses were to come into force at once; when it was proposed to enforce the regulations regarding compulsory insurance and the control of public service vehicles; and when the road code was to be drawn up?

Mr. Herbert Morrison said that a number of regulations had to be made and machinery had to be set up before the Road Traffic Act could be brought fully into operation. A statutory obligation was also placed on him to consult with representative bodies before any regulations were made. He could not, therefore, at the moment, give a definite undertaking as to the dates on which the various provisions of the Act would become operative. The dates which he had in mind and to which he should work, were approximately as follows:—

Part I.—He had given anxious consideration to the question of the date at which the change in the law as to speed limits could most conveniently operate and had come to the conclusion that this should be 1st January next. By that date he hoped that it might be possible to issue the Highway Code and local authorities would have had reasonable time to consider and arrange for the organisation of mobile police units as contemplated by the provisions of the Act. As regards the remainder of Part I, he had in mind the first of November. It would hardly be practicable to make the necessary Regulations with regard to the form of the driving licence and applications for licences and declarations as to physical fitness, and also to make arrangements for these documents to be printed in large numbers and made available for licensing authorities before that date.

Part II, which dealt with cover against third party risks, should come into operation on 1st January, 1931, the date which was the beginning of the licensing year for motor vehicles.

Part III (amendment of the law relating to highways) on 1st November, 1930.—He attached great importance to the highway code and should lose no time in bringing it into force, but as it would affect all classes of road users whose views he should have to take into account, and as in addition it required an affirmative resolution by both Houses before coming into force, it was impossible for him to indicate precisely the date on which the code would itself become operative.

Part IV (Regulation of Public Service Vehicles).—He proposed that the sections of this part of the Act, which provide the necessary machinery for the appointment of the Traffic Commissioners, etc., should come into force on 1st November; as also the sections giving the Traffic Commissioners when appointed the necessary powers to execute their duties, consider applications for licences, etc. The requirement, however, that omnibus and motor coach services could not be operated except under a road service licence, granted by the Commissioners, would not become operative before 1st March, 1931, at the earliest. The bringing into force of this part of the Act would necessitate the employment of his powers to make transitory provisions.

Part V of the Act, which deals with the operation of municipal omnibus services, he proposed should come into force on 1st January next.

He should point out that it might be necessary to postpone the operation of individual sections of the Act.

London Traffic.

THE Public Control Committee reports that the growing demand for mechanical transport, both for commercial and private purposes is shown by the fact that about 51,000 new vehicles were registered in London last year. Large numbers of these vehicles, although registered in London, are for use elsewhere, and much work is involved in the transfer of the papers to other authorities. Last year 254,776 drivers licences were issued compared with 243,910 the previous year, whilst the vehicle licences numbered 472,690 as compared with 439,955. In connection with local taxation work last year the Committee mentions that early in March, 1929, 64,708 persons had failed to renew their licences as against 60,835 the previous year.

In addition to inquiries into these cases, 12,480 house to house calls were made, many of which resulted in further revenue being obtained. The reports made by the officers disclosed 9,024 offences. The total number of inquiries made by the police during the year in respect of offences committed by motorists was 46,883. During the year 716 persons, as compared with 757 the previous year, to whom the Council issued licences to drive, had convictions for road offences endorsed on their licences, and of these 142, as compared with 168 the previous year, were in respect of drunkenness whilst in charge of motor vehicles.

Merchandise Transport by Rail.

By H. W. Payne.

THE problems of modern transport from the railway aspect are, other considerations apart, concerned chiefly with time occupied in transit. The organisation of railway merchandise movement is devoted primarily to a system of non-stop trains as comparable as well may be with the speedy passenger trains, one supremely vital difference being that the latter convey human beings who provide their own mobility at starting, intermediate, and destination stations.

Long experience of quantity and channels of direction into which goods traffic falls has enabled a standardised system of forwardings both in the matter of wagon loading and train time-tables to be built up so that there is an exactitude in railway function which provides, within the machine as a whole, transport for every variety of traffic to every destination in the British Isles with port connections for Overseas.

The advantage of door to door contact which has formed the basis of a claim to superiority on the part of competitive transport is not novel except in the measure of ability to dispense, in given favourable conditions, with intermediate handling, but it will be the aim of these notes to show that contact between seller and buyer, where their business is dependent upon movement between two points, has been developed to the highest possible degree by railway method.

Every town of importance served by a railway company has a system of road deliveries and collections based upon the station, which during the business day is in turn the destination and the sending point, and the circulation of traffic through that town is directed to satisfy the needs of the traders.

The morning's arrivals are dispersed by horse or motor lorry to the appropriate addresses and the normal dispatches from warehouse or factory are collected and concentrated at the station by a daily routine which is, however, subject to interruption to accommodate emergency requirements of the business community.

The subsequent processes are technical in their detail and belong to railway activity, but it will be appreciated that within the scope of the industries of one manufacturing town there may be a demand for distribution of commodities as diverse as the number of stations in the country and that, therefore, there must be a directional purpose actuating the forwarding point which shall accurately set consignments going in the right direction so as to ensure a minimum of time in transit.

The manner of achieving this desideratum could be demonstrated at some length, but in simple terms it will be appreciated that at any given station there will be traffic in small quantities for a large number of destinations, but every station does not load direct to every other, first, because the incidence of the traffic does not demand this and, secondly, because the small quantities involved do not allow of railway truck user on such an uneconomic basis.

The general movement of traffic over the areas served by the Great Western line and to and from that line from other lines can be roughly visualised as between industrial and agricultural. The manufactured commodities to the countryside; the land products, foodstuffs, dairy produce, meat, to the denser populations in consuming regions. The flow is greater from the towns to the country than in the opposite direction, which incidentally provides a problem of wagon arrangement and distribution to equate the disparity between supply and demand at one end of the line or the other.

The industrial areas on the Great Western Railway are centralised by Birmingham and adjacent stations in South Staffordshire and the South Wales littoral, together with the mining areas producing coal for shipment at the chain of ports, Newport, Cardiff, Penarth, Port Talbot, Swansea and Llanelly.

In addition, the line is directly connected with London and Bristol, where the two largest goods shed establishments are located, and form distributing media for the huge volume of merchandise originating or passing through the ports in each city.

West and south of these routes there are a number of fair-sized towns which are the centres of supply to the agricultural regions which surround them and which in turn have numerous small stations whose traffic is in the nature of being subsidiary to the bigger and in degree to the biggest stations for the reason that the ramifications of commercial interests cause business to be done and goods to circulate between the principal sources of supply and the numerous points of demand.

The volume of transport is, therefore, in diminishing degree from large station to medium, medium to small, with numerous qualifications on the score of size, locality and commodity dictating disposal of a variety of traffics in variable directions.

The constancy of the main streams, already touched upon, remain.

Each goods station is a distributing medium within a category designed to dispose of the traffic in the following way:—

First, the quantity for one town may be given a separate truck which travels direct to destination.

Secondly, the concentration of a quantity of traffic for several destinations forwarded in one truck in a given direction common to the journey part-way for each and every consignment in that truck. This involves interception at an appropriate concentration station en route where traffic from other directions enables through or direct truck loading to be arranged by amalgamation.

Thirdly, the small consignment which presents itself at other than the large stations and receives a forward movement by a system of omnibus wagons which serve given itineraries on stopping trains.

The railway companies are under obligation to receive and forward traffic of every description, with one or two specially scheduled exceptions, and in this respect the question of quantity is vital in that the scheme of despatch is qualified, in point of time, by the element of transhipment already touched upon.

At a large number of Great Western Goods Stations there is a scope of forwarding which is of so diverse and direct a character* that a next day's arrival can be claimed as an accomplished fact of day by day experience, the bulk of the commodities with the consequent full truck loading and the speed of the freight trains making possible a minimum transit time for the longest distance between large stations; those actually being as far apart as London and Penzance and London and Birkenhead.

The inherent limitations of a fixed track have, by comparison with Road Transport, become conspicuous to the detriment of railways as direct distributors of traffic, but the advantages of cross-country work are increasingly understood and appreciated mutually as between the railway company and the customer.

For longer journeys the economics of Road Transport v. Rail Transport have a number of governing factors which are not common to both and in no respect is this more generally noticeable than in the selective nature of long distance Road Transport in the matter of commodities and quantities conveyed.

There is an element of commercial discrimination, unfairly it seems to the railway man, in that lorry loads of merchandise made up of component elements of uniform size and shape convenient to good stowage and quick handling are preferred to the exclusion of a more miscellaneous form of traffic in smaller quantities and for several destinations which, by process of elimination, fall perforce to the railway company.

In the final analysis of method, therefore, the railway company has to make provision for area distribution along its lines serving the various localities within the scope of rail influence and does so by concentration of loading at strategical points geographically suitable to distribution and re-distribution within circumstances which are to-day coming to be regarded as old fashioned by comparison with the greater mobility of the road vehicle.

It has been said already that the fast freight train is the first pre-occupation of railway management and in this connection speed is still with the railways as is, of course, the ability to move large quantities altogether at express speed by train loads.

What is indispensable both from the track and the goods station aspect of transport is the unloading from truck, sorting into street order for delivery, and re-loading again upon the cartage vehicle for door to door disposal.

Indispensable also is the number of handlings of traffic en route which is in small quantities for one destination and must proceed at interrupted stages along the course of its journey before one final loading can take it to destination.

* A chart illustrative of goods wagon loading and directions to and from a given centre—Bristol—accompanies this article.

Digitized by Google

The station procedure in the nature of things must involve arrested movement wherever transhipment takes place. The cycle of the day's work begins in the arrangement of berthing of loaded wagons for discharge and that portion of the goods destined for loading again must await resorting and association with incoming traffic from the local town collected during the afternoon and assembled for dispatch during the same evening.

This method of onward loading, it should be noted, has particular reference to what is known in railway parlance as "transhipment" traffic and is of necessity in quantities less than truck loads.

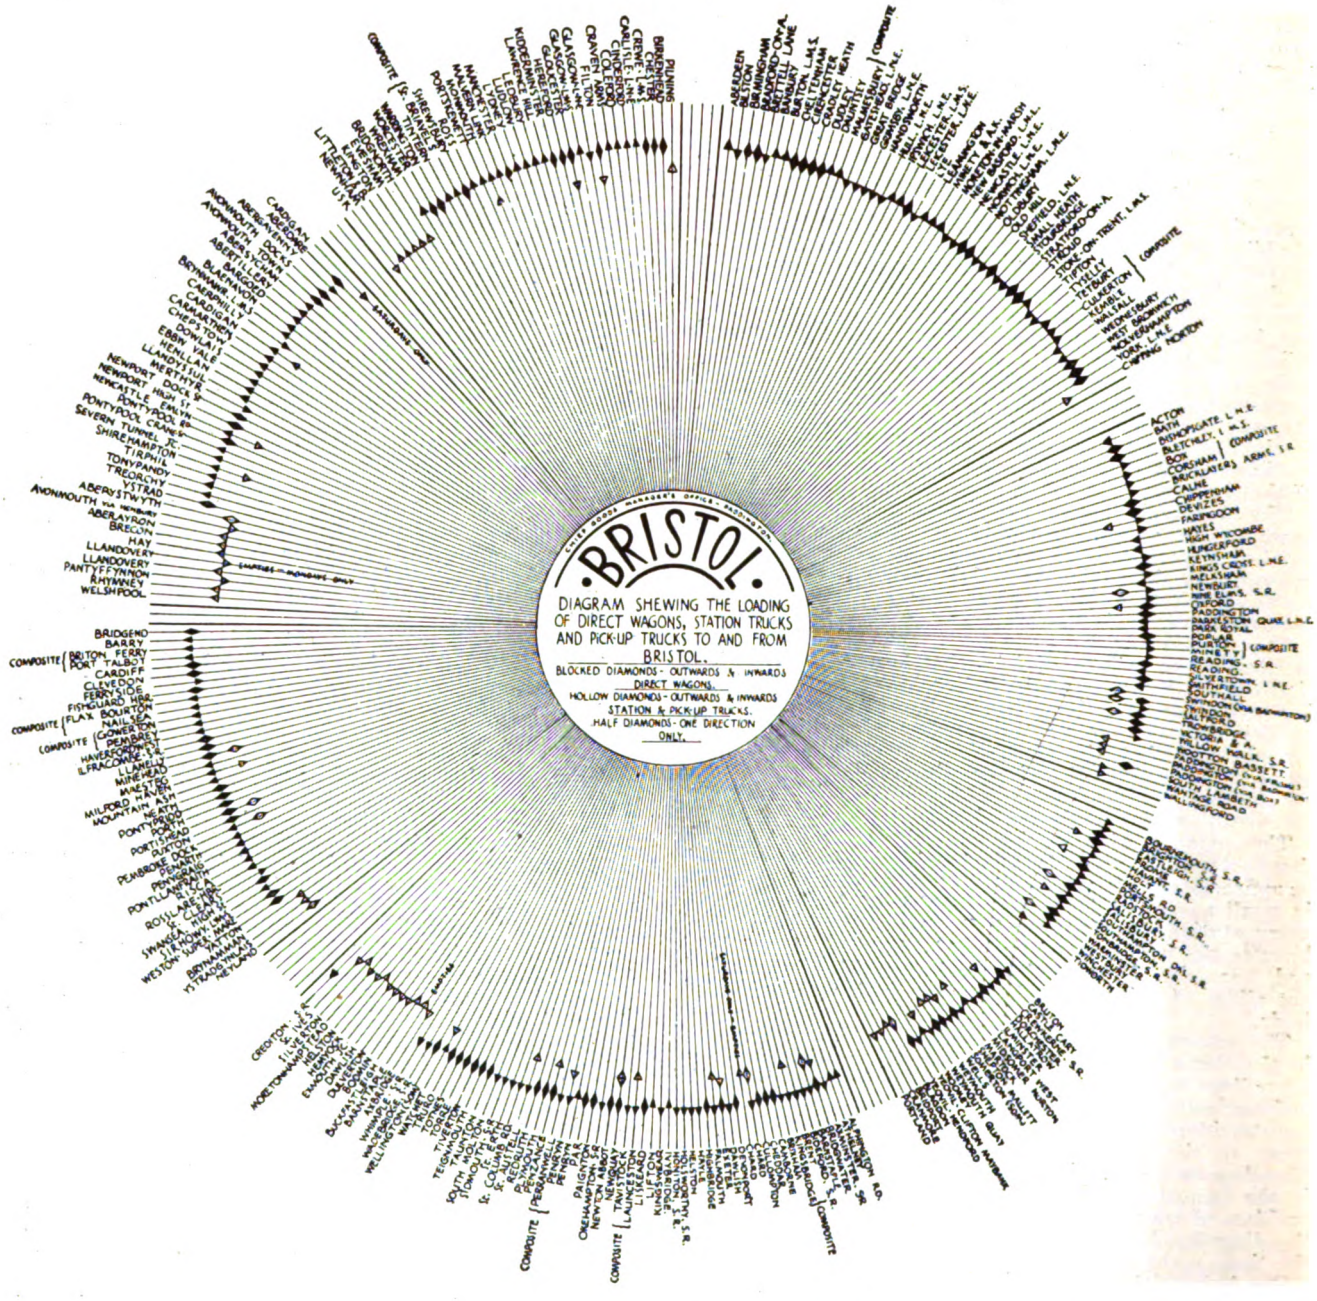
Within the economics of truck loading it has been a standard practice to consider one ton as the minimum weight which produces a remunerative result for the user of such vehicle and this figure determines also the composite loading of mixed consignments to a transhipment station.

The standard weight capacity of a railway goods wagon is of 10 or 12 tons, but normal loading of general goods gives an average of somewhere in the neighbourhood of 3 tons only, the loading to capacity being sacrificed by the incidence of bulk disproportionate to weight with a minimum of 1 ton which permits of a large number of wagons being given a through run to destination.

The Great Western Company have been paying particular attention to the time in transit taken by the small consignment and have in progress a scheme whereby a large number of the intermediate points of transhipment are abolished and greater concentration at fewer and larger goods stations is brought about.

In this connection what is known as the station truck or wayside wagon system is essential to ultimate disposal of a large number of consignments for a large number of places which is accomplished by an arrangement of journeys for wagons which stop and deliver or pick up and forward the miscellaneous collection of country stations traffic, such wagons being based upon conveniently situated points.

The whole series of operations of these wagons is necessarily deliberate and is, it is thought, susceptible to



the auxiliary of the road, more especially where road facilities are already established.

Some 800 station trucks perform their peddling journeys up and down the branch lines of the company daily but they serve within prescribed limits, and modern requirements call for wider facilities which road alone can give.

This is to presuppose enlarged concentration or transhipment points conveniently situated upon the field of operations giving and receiving truck loading of so comprehensive a nature as to ensure full advantage being taken of the express train services and an overall improvement in transit time.

The auxiliary of road transport proper within limits which commend themselves to railway management have

Digitized by Google

received due attention, especially since the acquisition of Road Powers.

The town distribution by motor lorry has already been mentioned and a simple illustration of road development is to conceive these vehicles extending their operations further afield along extensions of existing routes. This is done where business can be obtained but is not so fruitful in traffic-getting effort as the installation of what is known as the Country Lorry.

The name accurately describes the service.

A lorry with an itinerary from a country station, with that station's traffic as a basis, has a free lance authority to fetch and carry over an area of the countryside independently of rail-borne traffic as may be required, but at the same time establishing the identity of the railway company at a distance from the station.

Over one hundred and twenty country lorries are operating on the Great Western System to-day and the number is growing. It is the experience that business follows the service, especially a reliable service—one of the principal characteristics of good organisation and equipment.

It will be seen, therefore, that there is on the Great Western Railway no acceptance of present limitations as inevitable but with such great resources as have been built up during nearly a century of experience the Transport ability is elastic, is susceptible of adjustment to new requirements, and is able to hold its own in the field of competition.

Dazzle.

R.A.C. Memorandum.

AT the request of the Ministry of Transport the R.A.C. has prepared a memorandum on the question of dazzle from the lamps of motor vehicles, setting out the Club's views as to the best method or methods of prevention. In view of the great importance of this matter and the possibility of regulations dealing with it, the R.A.C. has obtained the permission of the Ministry of Transport to publish the memorandum, which is in the following terms:—

As the Minister of Transport is aware, the Royal Automobile Club has for many years past been interested actively in the possibilities of combatting automobile lamps dazzle. The Club held an organized trial of headlamps as early as 1909, and a standardized form of measuring the effect of dazzle, as a means of carrying out tests of devices claiming to remedy the evil, was introduced in 1921. Since that date some 50 different devices have been submitted for test, and the results published. Still further to encourage development, the Club has been awarding, annually, a Gold Medal for the most meritorious performance obtained each year. The Club has further pursued this investigatory and educative work by incorporating in its Annual Demonstration of road transport matters, in Richmond Park, a section for antidazzle devices. This latter opportunity of showing their devices was found particularly useful to the "unknown" inventor, as anyone could present a device for demonstration without incurring any expense.

R.A.C. EXPERIENCE.

In spite of this encouragement and these opportunities, it is clear that the results obtained by recent antidazzle devices shows little or no improvement over those submitted in earlier days. A noticeable feature is that inventions are repeating themselves and very little real novelty is now being submitted.

The results of the trials carried out by the Club go to show that the compromise between the provision of a proper driving light and the elimination of dazzle, has still to be found. It seems therefore, that a proper driving light must necessarily cause dazzle, at any rate, as far as development has proceeded at present. If this is accepted, the only alternative remaining is the method of removing temporarily from the oncoming driver's eyes, the offending beam, which at other times it is necessary to have for safe driving.

DIPPING.

This temporary removal can be effected, either by cutting off the rays which are above a certain height, or by "dipping," either the lamp, or its reflector, so that the axis of the main beam is depressed below the level of, or turned away from, the eyes of the oncoming driver.

In the First Report of the Royal Commission on Transport, para. 51, it is recommended that the dipping of headlamps is "the best method of meeting the difficulty." It is assumed by the Club that the Royal Commission had in mind both dipping and side-swinging (or a combination of both) when it used the word "dipping," and the word is used throughout this memorandum, to include side-swinging.

The Technical Committee of the Club agrees that the dipping or side-swinging of headlights, in view of the facts set out above, is the best legislative proposal which can be made at the moment.

In this connection the Club would emphasise the point, that being "dazzled" is a specific condition. It is equivalent to being blinded, and there is little, or no degree of blindness. If the main beam of any lamp, giving a proper driving light, is received by an observer's eye, he is blinded, and gradual depression, or swinging of the beam does not lead to a corresponding gradual cessation of the blinding effect of dazzle. A point is reached where the blinding effect quickly and definitely ceases. As the nature of a driving light demands a main beam, it follows that the compulsory movement of the beam, to a predetermined point, is a legislative possibility.

Although results in the past have been disappointing, experience in similar branches of research goes to show that it is not safe to abandon hope of new developments. For this reason, the Club desires to refer to the penultimate sentence in para. 51 of the clause in the Report:

> "The exact nature of the device should be left to the Minister's Regulations, so as to provide for inventions or improvements which may be made in the future."

The view that provision should be made for inventions and improvements is emphatically endorsed by the Club, and should be kept in the forefront of the Minister's considerations when Regulations are being drafted. On the other hand, the Club does not consider that "the exact nature of the device" should be the subject of regulation. If this be done, the effect would be the opposite of providing for development. The Regulations should deal with the effect to be achieved, i.e., the alteration of direction of the main beam, and not with the nature of the device used for the purpose, and they should make provision (with safeguards against frivolous claims) for invention and improvement.

TOO POWERFUL LAMPS.

It is clear that any Regulations will have to define, either specifically, or by implication the nature of a headlight.

The question of dazzle has been considered by the Royal Commission, apparently only in connection with headlights. The matter, however, cannot be divorced from side, or "navigation" lamps and "spot" lights. There has been a growing tendency in recent years for navigation lamps fitted to certain types of cars to become more and more brilliant. One of the offenders in this direction, is the large car with sidelights at a high level and of unnecessarily large size. The Club suggests therefore, that any Regulations should avoid the use of the word "headlight." It is suggested that the dazzle regulations are made applicable to all lamps using a bulb exceeding a maximum limit of candlepower, or taking a maximum number of watts. It is considered that the power of the bulbs used in all lamps which are *not* capable of being "dipped" should not exceed that of the British Automobile Standard bulbs Nos. 9 and 10, taking approximately 6 watts.

The question of the limitation of candlepower is rendered easier as the Society of Motor Manufacturers and Traders has standardized the wattage of bulbs for automobile purposes, and such bulbs are stamped.

The Committee further thinks that the limitation of candlepower can usefully be carried further. There is a certain, very small, class of driver who uses very powerful bulbs in his headlights and thus constitutes himself a supreme offender. Lamps fitted with these bulbs can effectively dazzle the oncoming driver at a very long distance, and, therefore, means have to be considered to prevent the necessity of unduly arduous regulations, in order to cope with these extreme cases.

Whereas the diversion of the main beams of reasonably-powered headlights at, say 50 yards from the oncoming driver, would be reasonable, it would be necessary to dip considerably further away in the case of these ultra high-powered headlamps. The Club suggests therefore, that the use of any bulb having a power greater than that of bulb No. 4 B.A.S. should be prohibited in any automobile light.

The Report refers to the possibility of headlights, swivelling with the steering, being permitted under Regulations. The Club is of the opinion that in many cases, headlights swivelling with the steering are of decided advantage, and, provided that a maximum limit is placed upon the angle of displacement of beam, there are no drawbacks or dangers.

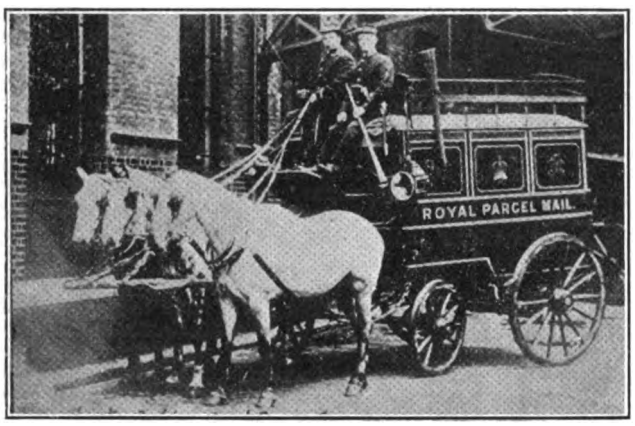
Beginnings of the Liverpool Cartage Trade.

Long History of Cart and Motor Owners' Association.

The Old Company of Carters.

IT is not commonly known that the Liverpool Cart and Motor Owners' Association has an unbroken history, which dates back to 1750, when the cartowners of the port formed themselves into a Company, not with the idea of dealing with rates or other associated problems, so much as countering the various heavy losses they sustained by the frequent damage occurring to casks of wine, oil, rum, etc.

This organisation stood the test of time for 120 years, until 1870, when its functions were superseded by the Liverpool Cartowners' Association. The most outstanding change which accompanied this development was that instead of the Association rendering accounts on behalf of its 300 lorry owners, that duty devolved upon the individual owners. It must be remembered that the educational standards of the day were in a very embryonic state; consequently clerical work was, as far as possible, centralised at the office of the Old Company of Carters, which was governed by a series of rules, remarkable for their severity and downrightness. Those were the days



FROM 1890 TO 1902 THE LIVERPOOL-MANCHESTER PARCEL POST WAS TRANSPORTED IN THIS STYLE.

when clerical work was viewed askance, and the only effort that seemed worth while, was that which would bring in revenue, yet, be it noted, cartage rates were so low as to almost stagger belief.

The writer has been given the opportunity of inspecting a cartage book covering the years 1850, 1851, 1852 and 1853, belonging to Mr. Thomas Roberts, of 4 Pothouse Lane, who in the year 1860, was elected President of the Old Company of Carters, and whose grandson is now the President of the Liverpool Cart and Motor Owners' Association. The majority of the entries indicate that a day's earnings worked out at only a few shillings per cart, and some transactions were charged up at as low as 6d. per package. In fact, an average figure per parcel or per consignment would seem to have been about 3/-. Only on very rare occasions did the debit per item amount to more than 20/-. Of course it has to be remembered that up to about 1865, the four-wheeled wagon was unknown, and cartowners generally operated large two-wheeled spring carts, drawn by a single horse. It was not until about 1870 that the four-wheeled lorry came on the scene, nor until 1880 that vehicles with lorry platforms with an area of 18 ft. 6 ins. length by 7 ft. wide were used. Carter's wages were 22/- per week in the summer months of the year, and 24/- per week in the winter months, the hours of duty being from 5 a.m. until 6 or 7 p.m., and no overtime. What a contrast with 1929. Current working conditions ensure permanently employed teamsmen receiving 63/- per week, one horseman 57/-, and casually employed men 11/10d. and 10/10d. respectively per day, and overtime, time and-a-quarter to double-time, according to conditions. The working week is 48 hours.

In 1750 the Old Company of Carters consisted of 30 members, controlling 100 carts. The initial object of the Company was to engage and bind themselves to cart for any "merchant, broker or others of the town, and in case of loss or damage to contribute among themselves such sum or sums of money from time to time as might be required, for and on account of such loss or damage that might arise; the said Fund to be called the Cart Owners' Protective Fund, for the purpose of aiding and supporting each other, in cases of accident, loss or damage done to any of the aforesaid goods or produce; and as a guarantee to merchants or other employers who held a contract with the Company, to make good to them by paying for such loss or damage that might occur to their property while in their possession, through inattention, carelessness, or neglect on the part of themselves or their carters; and further, to guard against any attempt of imposition of overcharge by any of their body."

There were no uniform printed books of Cartage Rates in existence between the years 1750 and 1780, when the first written copy of the Cartage Rates and Bye-laws of the borough were issued by the magistrates to the Com-

THE OLD COMPANY OF CARTERS WAS STARTED WHEN THIS WAS THE ONLY SYSTEM OF PASSENGER TRANSPORT.

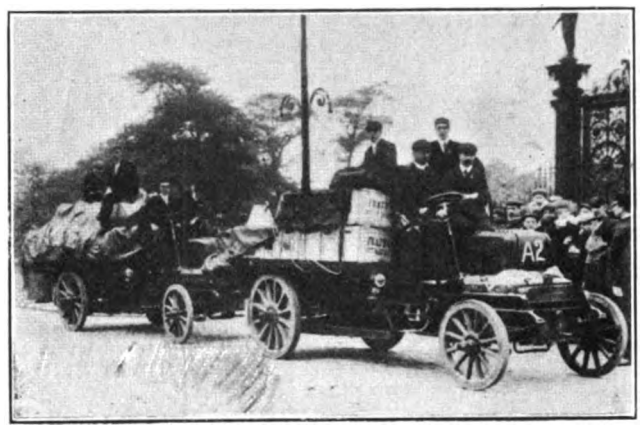
pany, as the principal Cart Owners' Company in town. After the opening of the Salthouse and George's Docks, previous to 1780, and afterwards the opening of the King's and Queen's Docks, about the year 1790, together with the extension of the town and increase of the trade of the port, it was deemed necessary during the year—owing to the continued success and prosperity of the Company—to issue fifty additional numbers to the Cart Owners, amounting in all to 150 carts. Mr. John Eaton, by a deed of agreement, bound himself to act as agent to the owners of the carts, with power to contract and engage work for them, to collect their accounts, and transact all the business and correspondence of the Company. During the year 1794, a new set of Rules was drawn out and sanctioned by the Cart Owners for "the guidance and better management" of all connected with the Company. The agency afterwards passed into the hands of Mr. Ellison, during whose agency and the continued prosperity of the Company, fifty further numbers were issued; afterwards into the hands of Mr. Pownall, and latterly under the superintendence of Mr. J. P. Miller, who was agent for fifty years. Owing to the large increase of docks and warehouses, and the increasing trade of the port, the number employed connected with the Company reached 300 lorries, floats, etc., extending from the south end to the extreme north end of the town and docks, for the accommodation of those merchants and others whose work was charged in the Company.

On June 17th, 1815, there emerged an organisation known as the Mersey Company of Carters, whose constitution, together with the original signatories, is framed, and finds a place at the present time in the Board room of the Liverpool Cart and Motor Owners' Association.

Digitized by Google

From an examination of records, it is not clear whether this organisation had a separate existence to the Old Company of Carters—the writer suspects that it had—for the reason that the rule books of the Old Liverpool Company of Carters take one forward to the year 1860. The Mersey Company of Carters controlled 100 carts, and it was laid down in their rules and regulations that membership shall be confined to those who carry on business within the borough of Liverpool or within one mile of the boundary. Members had to furnish to the agent, who received a salary "of not less than £250 per annum," the names and addresses of all drivers employed by the Company. No person could be a member if, either as an owner or as a driver of any cart, he had been convicted of embezzlement. The Company undertook that when any offence was committed against the Company or any individual connected with it, a prosecution would be duly initiated. The agent of the Company, whose name is not mentioned on this 112-years'-old document, had to give a bond or security to the Company for not less than £5,000. If any carter in the employ of the Company created a disturbance on the quays or any other place, he could be called upon to forfeit 5/-, beyond such penalties or punishment as might be imposed by law. Disobedience of the order of the Company, or any of its agents, also rendered the carter liable to a fine of 5/-. Another interesting rule was that carters in cases of necessity must lend their horses to another carter, whether the latter was a member of the Company or not. If a carter took goods at less than the established rates he could be fined 5/- for the first offence and 15/- for the second offence, half the amount of the fine to go to the informer, and the other half to the agent of the Company. The Company gave authority to its agent to pay 1/- to such persons as shall be detained from their work to attend at the office to give information of the breach of any of the Company's rules and regulations.

THE BEGINNINGS OF THE MOTOR BUS IN LIVERPOOL. 1904 VEHICLE.



TWO OLD TYPE PETROL LORRIES.

It is worthy of note that considerations of mutual insurance as a measure of protection was the risk against which Liverpool cartage contractors were most anxious to safeguard themselves. In the office of the Cart and Motor Owners' Association at the present time are records of the Liverpool Cartowners' Accident Insurance Society. Insurance business has become an integral part of the work of the Association, but with the growth of risks, it became necessary in subsequent years, to make arrangements for covers to be provided by an insurance company. The Liverpool Cart and Motor Owners' Association to this day, handles a considerable amount of insurance and thus maintains an unbroken tradition which dates back to 1750.

Some time before 1872 there was in existence at Liverpool, at the north end of the city, in close proximity to the timber yards, an organisation known as the Timber Team Owners' Association. Old minute books suggest that this Association worked in harmony and co-operation with the Liverpool Cartowners' Association. Eventually, members of the Timber Team Owners decided to merge into the bigger organisation—the Liverpool Cartowners' Association. The Secretary of the Timber Team Owners was Mr. Thomas Fleetwood. During its history the Liverpool Cartowners' Association was involved in many stirring and vigorously conducted campaigns, notably those for the abolition of the Van and Wheel Tax, and the abolition of the Horse Tax. The legislation in those days, whether viewed in its local or national aspect, had a decidedly vicious taint.

One of the interesting asides of the development of the Liverpool cartage trade was the issue of bye-laws by the Liverpool Corporation, in 1843, relating to the governing of the cartage industry, and the conduct of owners and drivers. In these bye-laws are printed over 20 pages of rates governing probably 600 or 700 items of traffic, which is quoted on the basis of the rate per ton, or the rate per package, per length or distance of 600 yards, or any shorter length or distance. For every subsequent length of 600 yards or part thereof, cartowners were entitled to charge an extra one-fifth of the cost for the first length. Distance was calculated from the place of loading to the place of discharge.

It was an offence, subject to a penalty of 40/-, for a person to drive a horse, a wagon, cart, or such carriage at any faster rate than a common walk; to leave a cart standing in any street at night time; not to stand near the lorry during loading or unloading; to use "threatening, abusive or insulting words or behaviour whereby a breach of the peace may be occasioned." On this point it is worthy of note that in the rules or regulations of the Old Company of Cartowners, revised in 1860, there are several references as to the choice of language. Perhaps one cannot do better than to quote extracts:—

"That if any member shall, during the hours of business in the office, conduct himself disorderly, or use abusive language, swear or assault any member, he shall for each offence be fined the sum of two shillings and sixpence, or for interrupting any member addressing the chair after having been called to order, will be fined one shilling for each offence."

"That if any member, his driver, or any servant in the Company, be found guilty of using any insulting or abusive language in the office or elsewhere, to the agent, or any warehouseman, porters, or others, whose cartage work may be charged, or having any other transactions with this Company, or threaten them in any way whatever, shall forfeit the sum of 5/-."

"That should any member, driver or servant in the Company insult or use any violence or any abusive language in the office or elsewhere, to the agent or any warehousemen, or others who have any business with the Company, curse, or threaten them in any way whatever, if proved before the Committee, will be fined two shilling and sixpence for first offence, and for second offence proved, five shillings; these fines to be liquidated by the member while he retains the services of such offender, and for third offence will be suspended for one month from driving any of the Company's teams, and should any member employ or retain the services of such offenders during suspension, will be liable to a penalty not exceeding forty shillings."

That it should have been necessary to have three rules, each imposing graduated fines for picturesque phraseology, stimulates the imagination as to the necessity for deterrents of such severity, especially when a fine of 5/- in those days would be roughly equivalent to about 12/6d. to-day. The Liverpool Corporation considered it their duty, from time to time, to licence such number of carts of any kind and description to ply for hire in the

Digitized by Google

city, as they thought fit. The licence fee was 10/- per vehicle, and owners permitting an unlicensed vehicle to ply for hire, were subject to a penalty up to 40/-. Even drivers had to be licensed, the fee being 1/6d. The fine for employing unlicensed drivers was up to 20/-. The employer was required to hold the driver's licence while the driver remained in his employ, and in cases of complaint, where the proprietor of a cart was summoned to appear before the Justices to produce the driver, the proprietor had also to show the driver's licence which, if the driver were an offending party, could be endorsed in much the same way that the motor driver's licence is to-day. When the driver of a horse-cart left the employ of a cart owner the latter had to return the licence to the employee, but if the driver had been guilty of any misconduct, notice had to be given of the complaint and a summons issued, for the driver to appear before a magistrate, who would enquire into, and determine the matter of complaint and whether or not the licence should be delivered. The magistrate was also empowered in the event of a licence being improperly withheld to award such sum of money as he thought proper to be paid by the employer to the driver by way of compensation.

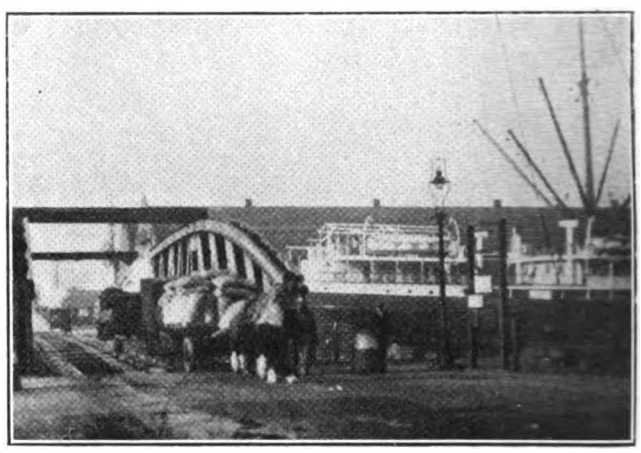
It was a breach of the peace for the carter to cause damage to be done "to the person of anyone, his goods and chattels," and a warrant could be issued for the apprehension of such an offender. Material possessions were apparently regarded sacrosanct. Charges were

A TYPICAL LIVERPOOL TEAM LORRY—IN THIS CASE CARRYING FOUR CHEVROLET CARS.

regulated by the bye-laws, and to receive any excess rendered the cartowner liable to prosecution and to the restitution of the overcharge. There was no neglect of detail in the drawing up of these bye-laws. Every cart, whether public or private, had to have painted on the right, or offside, in one or more straight line or lines, the title of the owner, the town, place and residence, in letters in white upon a black ground, or black upon a white ground, not less than one inch in height and of proportionate breadth. The carts could be required by the buyer or seller of any goods in transit to be weighed at one of the weighing machines. If a journey of more than half-a-mile was necessary the cartowner was entitled to charge 2d. for every horse used, and a further charge of 2d. for every half-mile, together with any tolls that had to be paid. It was not lawful by the Act of 1846, and observed beyond 1864, to drive in any Liverpool street, a carriage, cart, wagon, or float, more than 7 ft. 6 ins. in breadth. No penalties for breach of this bye-law became enforceable until 1859, so as to give cartowners the opportunity of making whatever alterations were necessary. Special exemptions, of course, could be obtained for the use of oversize carts for the conveyance of boilers or other machinery, or for any special purpose or occasion.

Conditions in the port had so changed consequent upon the development of the dock estate, that in 1860 the Corporation made new bye-laws governing the conduct of the cartage industry. One of the outstanding concessions, and one for which we imagine a strenuous fight was made by the cartowners, was the modification of the licensing fees, to 1/- for carts not exceeding ten cwts., 1/6d. for carts not exceeding 20 cwt., and 2/6d. for carts exceeding one ton. Vehicles which had been registered under the bye-laws of 1837 could be licensed for the sum of 1/- only. Within 24 hours of the issue of the licence, the cartowner had to register at the Town Clerk's department. In the event of owners ceasing to carry on the business, licences had to be delivered to the Town Clerk and surrendered. Any auctioneer or person to whom a cart was delivered for sale by the owner, or by any cartwright or wheelwright who purchased a cart with a view to re-sale, was required, within 24 hours after delivery, to furnish the names of both the new and the old owners. Under the amended bye-laws, drivers continued to be licensed, and it was laid down that the driver "shall constantly assist to the utmost of his power in loading and unloading carts when he can be spared from his horse or horses, for which assistance no driver shall take or demand any sum whatever. Every driver who shall make default shall forfeit and pay for such offence a fine, or sum of 5/-, and for second offence alleged, the fine of 10/-." The third offence risked the loss of 20/-, roughly equivalent to a week's wages. A series of stands and stations for carts were provided, and they had to be placed in the direction indicated. Stands accommodation at that time was sufficient for 460 carts.

Carters collecting goods were required to use all practicable expedition in loading, and in any case not to be standing longer than 15 minutes prior to the commencement of loading. If the detention exceeded 15 minutes



HORSE TRANSPORT IS GENEROUSLY EMPLOYED FOR LIVERPOOL DOCK TRANSPORT.

the person engaging the vehicles was required to pay to the driver 1/- for the detention.

The amended cartage rates were based on lengths of 600 yards, or any shorter distance. The schedule is remarkable for its comprehensiveness and is believed by those with long association with the cartage industry to be one of the very few officially recognised lists, even at that period. When owners or drivers were asked to tare their carts they were required to comply, and were entitled to a fee of 6d. For the purpose of ascertaining the quantity of any load any Justice of the Peace, or Constable, could demand the right of inspection, even if the cart was in motion, and could call upon the driver to supply the names and addresses of the person or persons for whom the load was carried. It was an offence, subject to a fine of from 5/- to 20/-, for a driver to refuse, or to delay to take any load when called upon to do so.

Whenever more than two carts were driven in succession the driver following any second vehicle had to leave at least five feet space between his horse and the preceding vehicle, so as to admit of foot passengers passing between them. Every driver whilst following his employment, had to have in his possession a copy of the bye-laws and his licence. Apparently the Watch Committee of 1864 had the right of inspecting carts, tackle and horses, for if any were in an unfit condition for use, the Watch Committee could give notice to the registered owner requiring its disuse, whilst in such a condition, and if the order were not complied with, impose a penalty of 40/- per day. These, then, were conditions that prevailed at the time when the Old Com-

Digitized by Google

pany of Carters entered upon its last decade. On January 2nd, 1860, Mr. Thomas Roberts was Chairman of the Company, and Mr. John P. Miller, agent. A subsequent Chairman was Mr. William Edwards, uncle of Mr. William Edwards, President of the National Road Transport Employers' Federation, and for many years President of the Liverpool Cart and Motor Owners' Association.

In 1876 Mr. Miller was succeeded by Mr. Thos. Rogers as agent or, perhaps, Secretary, of the Liverpool Cartowners' Association, and afterwards his place was taken by Mr. Charles A. Still, who held office for 37 years and retired in 1925, being succeeded by Mr. Allen Walter.

One of the remarkable things about the rules of the Old Company of Carters was the rigour with which members guilty of traffic poaching were penalised. It was regarded as improper for a member of the Company to appropriate to himself any work which was charged through the Company, even if the work was offered to the member. To accept it without the sanction of the Committee would subject him to a fine of £200, as liquidated damages, for each house of work so taken from the Company. In the event of an offending member giving to his son or any other person to evade the penalty, the whole or any part of his stock of horses and carts, and such person agreed to do the cartage work in dispute, that person would be held liable to the Company for a penalty of £200 if proved to infringe upon the rights and privileges of the Company. Each member withdrawing from the Company was required to give six months' notice in writing to the agent under a penalty of £50.

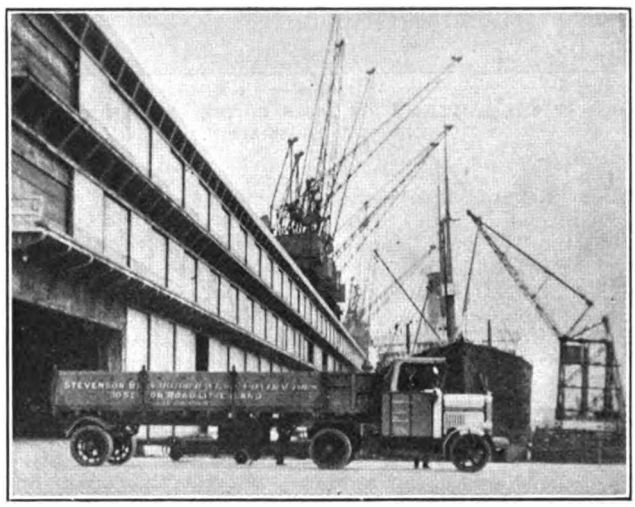
Admission to the Old Company of Carters was at a charge of £5, but in the event of the death of a member, his numbers were transferable to the widow or children free of charge. The rent for each number, in other words, each cart, was £3 per annum, payable to the Company, which, of course, rendered all accounts and kept records of all work done by the member. The number rent was deducted at the rate of 5/- per month from the payments made every two months to members. Monthly meetings of the Company were held, and members coming in later than the ordered time of the meeting suffered a fine of 1/-. Non-attendance involved a fine of 2/6d., unless through the cause of sickness, absence from town or other satisfactory reason, in which case notice had to be sent to the office of the Company not later than one hour before the time of meeting. On the other hand, members who did attend meetings not later than the time stated were rewarded with a fee of 1/-. Those were the days when the system of rewards and punishments held unquestionable sway. If a member, for instance, were elected to serve on the Committee and afterwards declined to act, he forfeited 2/6d., which was also the amount which had to be paid by a resigning member.

The Old Company of Carters was a close corporation, and applications for admittance and the issue of cartage numbers were only granted after full enquiry of the character and position of the applicant. There was co-operation between the firms constituting the Company, and this extended to common understandings as to drivers' duties. If an employee refused, when requested and was disengaged, to take any load, large or small, for any of the Company's firms, he could be fined 2/6d., which was handed over to the driver willing to fill the breach. His employer benefitted by getting the load. Before the seventh day of each month members had to deliver to the Company's offices, their cartage books for the preceding month, in order that copies could be made of the records of work done. Non-compliance with these requirements rendered the delinquents liable to a fine of 1/- per day.

The profit and loss account of the Old Company of Carters was debited with £5 per annum until the sum of £25 was accumulated for the Carters' Accident Fund, from which grants not exceeding £5 could be made to the widows or orphans of any carter killed while in the service of any proprietor of the Company.

In 1870 the Old Company of Carters surrendered its charter, and this meant a vital step in the re-organisation of the Liverpool cartage trade. Individual cartage contractors then began to exercise a full measure of individual autonomy and had to accept responsibility, not only for the due execution of work, but for the rendering of their accounts and the collection of their rightful dues. One gathers the impression that with the increasing trade of the port and the keen quest for work, created by the licensing of a greater number of vehicles, competition in cartage rates began to manifest itself, and the need became evident for a more pliable organisation, such as could exercise a useful influence in stabilising and standardising equitable charges for work done.

When we come to the year 1901 the cartage industry of Liverpool was in the full bloom of development and prosperity, and the Cartowners' Association thoroughly alive to its responsibilities in maintaining on behalf of its members, its claim on traffic, took the initiative in installing an extensive telephone system, linking up with head office all the important points from which traffic was obtainable. For instance, the fruit exchanges, the timber yards, cotton quays, etc. In 1901 the Association had



WHAT IT LED TO—A SCAMMELL SIX-WHEELER. IN THE BACKGROUND IS THE GLADSTONE DOCK, LIVERPOOL.

20 telephone stations along the line of docks near the principal markets, etc., so that advices of required transport could be promptly communicated to the cartage stands. The Liverpool Cartowners' Association was the first of the city associations to fully recognise the tremendous possibilities of the telephone for speeding up business, and thus giving the maximum measure of satisfaction to members.

Throughout its history the organisation has demonstrated its ready adaptability to changing circumstances, yet it has moved cautiously and conservatively, but that does not mean that it is not alert and progressive. It is, very much so, but the layman, the man in the street, has very little idea of the enormous volume of useful work that is undertaken by the Association in the interests of the cartage trade. There are several other transport organisations on the Merseyside, but none, even in the northern counties, has such a clear-cut identity as the one whose history we have reviewed.

Government and Prices.—The Federation of British Industries has appointed a committee which will furnish to the Government views upon the general principles of price maintenance. Its members are Sir Roland Nugent, Director of the Federation; Mr. S. E. Cash, its Solicitor; and Mr. H. L. Kenward, Sales Manager of the Dunlop Rubber Co., Ltd. The latter has prepared evidence, more particularly applicable to the tyre industry, which has been forwarded through the India Rubber Manufacturers' Association to the Board of Trade.

"Sentinel" Service for London and the South.—"Still Better 'Sentinel' Service for London and the South" is the title of one of the very interesting articles in the July issue of "The Sentinel Transport News," published by the "Sentinel" Waggon Works, Ltd., of Shrewsbury. The article describes fully the new "Sentinel" depot built on the Chase Estate, Acton, N.W.10, for providing the owner with the means whereby the efficiency of his "Sentinels" can be maintained at the highest point. The article is well illustrated.

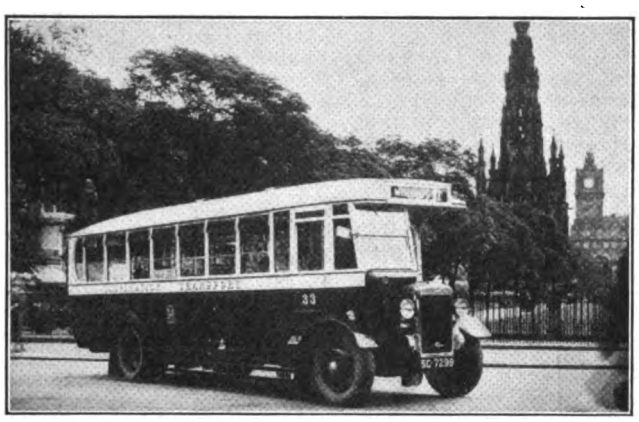
Motor Coach and Bus Notes.

Daimler Buses in Edinburgh.—We reproduce a photograph showing a Daimler C.F.6. single-deck bus in use in Edinburgh. Edinburgh Corporation Transport now have 36 Daimler C.F.6. buses in operation and we understand that they are giving extraordinary efficient and reliable service.



ONE OF THE DAIMLER C.F.6. BUSES IN THE SERVICE OF THE EDINBURGH CORPORATION.

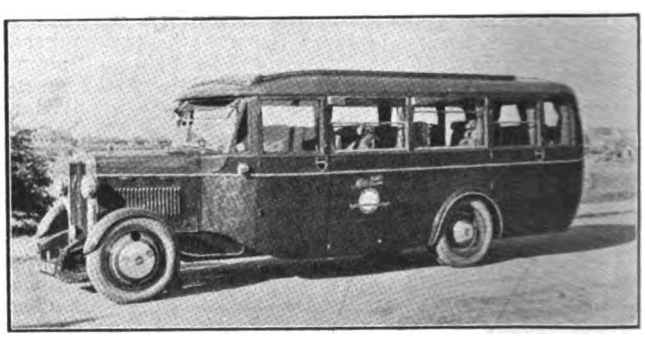
The "Regent" in Glasgow.—Among important Corporations operating buses, Glasgow was one of the first to adopt the "Regent" double decker for municipal service. A product of the Associated Equipment Company, Ltd., of Southall, Middlesex, these Glasgow "Regents" are of exceptionally smart appearance. They also incorporate several distinctive features. One of these is an ingenious emergency exit—patented by the bodybuilders, F. D. Cowieson & Co., of Glasgow—which takes the form of half the front bulkhead being made to swing outwards. This is controlled by mechanism which can be operated either by passengers inside the vehicle, or by any person in the street. It has the advantage of being placed in a position, which even in the event of a head on collision, is likely to receive little damage in the Glasgow type of body. A wide emergency exit is also provided in the lower deck immediately behind the driver, and this again can be easily opened from either the interior or exterior of the vehicle. The staircase has been designed to afford

A.E.C. "REGENT" BUSES IN GLASGOW.

very easy ascent and descent and allows two people to pass in the centre at the same time. It is of the enclosed type, and the rear panelling includes a third emergency exit in the form of a large metal framed window. Three drop windows are included on each side of the upper deck and two on each side of the lower. The fittings throughout are of polished stainless steel. The seats on the upper deck are upholstered in real leather, and those on the lower in a combination of moquette and leather.

East Yorkshire Motor Services.—We have received a copy of the official handbook of the East Yorkshire Motor Services, Ltd., whose main depot is at 252, Anlaby Road, Hull. The company provide road transport services over an extensive area, stretching northwards from Hull to Scarborough and westwards to York and Leeds. For those who wish to spend a portion of their holidays in exploring the interesting and beautiful spots which abound in the East Riding special tickets are sold enabling the holders to travel over all routes for varying periods at exceedingly low prices. Apart from the frequent local services over routes varying from 4 to 65 miles in length, there are several daily long-distance runs from different places in the East Riding to towns in other parts of the country. Six-cylinder omnibuses with luxurious armchair seats and tables are used for this purpose and enable the traveller to make a trip which is even more enjoyable than it would be in the majority of private cars. The guide, which is published by The British Publishing Company, Ltd., Crypt House Press, Gloucester, describes hamlets, villages and towns on or near the Company's routes and contains some excellent illustrations.

Cheap Express Travel.—Ribble Motor Services, Ltd., now operate services of express buses from Manchester and Liverpool to as far north as Glasgow and Paisley and have already built up a highly efficient organisation on many of the main traffic routes. Travel by express bus is remarkably cheap and on journeys of 40 to 50 miles the return fare is only slightly more than the single railway fare. Furthermore journeys are made in remarkably good time.



THE 15-SEATER COACH ON A COMMER "INVADER" CHASSIS, CHRISTENED BY ITS OWNER "MISS 1940."

Commer Bus for Scotland.—The unusually luxurious vehicle illustrated is a 15-seater coach on a Commer "Invader" chassis, which has just been supplied to Mr. M. Antonelli, of Dunoon, Scotland, for service in the Trossachs. "Feather-bed comfort" does in literal truth describe the luxury of the seating arrangements; for, in addition to the usual upholstery, each seat has on top of the head roll another roll in the form of a pad stuffed with feathers which may be folded down the back of the seat to give additional support should the passenger desire to sit upright.

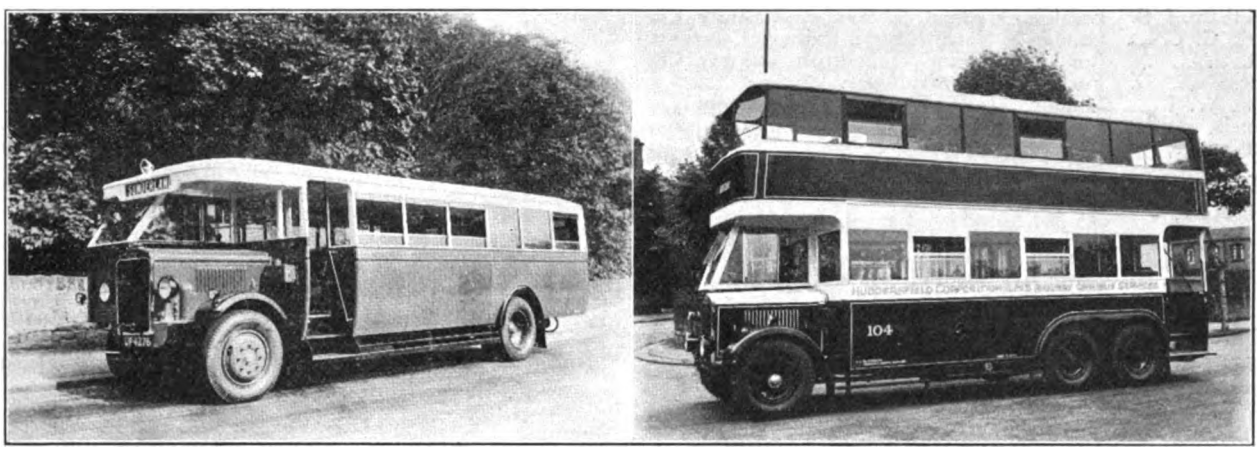
Manchester Buses: Statistical Summary.—We have received from the Manchester Corporation, a copy of the annual report of the Transport Department for the year ended 31st March in which it is stated that the revenue from motor buses for the year was £271,189 as compared with £225,388 in the previous year, and the passengers carried being 24,430,042 as compared with 20,212,221, an increase of 4,217,821. The following figures regarding the operation of motor buses per bus mile are given:—Receipts, 13.675d.; working expenses, 11.166d.; capital charges, 1.519d.; provision for renewals, .759d.; total expenses, 13.444d. The number of buses in stock at 31st March, 1930, was 190, as follows:—Double-deck, 67; single-deck, 123. There are on order, but not yet delivered, 19 single-deck buses and 6 double-deck buses. Here is an analysis of expenses per bus mile:—**Traffic.** Superintendence, .011d.; wages of traffic and cash clerks, .072d.; wages of drivers and guards, 3.465d.; wages of other traffic employees, .193d.; cleaning vehicles, .367d.; garage expenses, .254d.; ticket check, .179d.; uniforms and personal equipment, .065d.; lubricating oils and greases, .406d.; miscellaneous, .035d.—5.047d. **General.** Salaries and wages.

Digitized by Google

.241d.; proportion of expenses of Town Clerk's and Treasurer's departments, .014d.; rents, .025d.; rates on garages, .087d.; printing and stationery, .041d.; cleaning, heating and lighting offices, .031d.; compensation, .108d.; health, pensions and unemployment insurance, .108d.; fire and other insurances, .005d.; telephones, postages, etc., .018d.; miscellaneous, .061d.—.739d.; licences, .371d. Repairs and Maintenance. Bodies, .480d.; chassis, 1.580d.; tyres, .333d.; buildings and fixtures, .054d.; machinery and plant, .061d.—2.508d.; petrol, 2.217d.; superannuation fund, .284d.; total working expenses, 11.166d. The bus route length operated is 210 miles; bus miles travelled, 4,759,602; average distance travelled for one penny, .898 miles; average fare per mile, 1.113d.; percentage of working expenses to receipts, 82; average fare paid per passenger, 2.66d.; average number of passengers per bus mile (tickets issued), 5.13.

Karriers for Huddersfield and Sunderland.—Our photographs show attractive types of passenger vehicles which have recently been delivered to the Huddersfield Corporation—whose fleet of vehicles are now operated jointly by the L.M.S. Railway Co.—and to the Sunderland District Omnibus Co. The Huddersfield delivery comprises three of Karrier "Consort" six-wheel double-deckers, whilst four Karrier "Chaser-Six" single deckers are the choice of Sunderland. The Huddersfield double-decker is a 56-seater; 24 passengers being carried on the lower deck and 32 on the upper. Bodywork is by Park Royal Coachworks, Ltd., of London, and the vehicle, which is finished in the Corporation's standard colour scheme of maroon and cream, is mounted on a "Consort" six-wheel chassis which, in this case, has a shortened wheelbase of 15 ft. 11 in.—necessitated by the fact that the vehicle has not to exceed 26 ft. overall—and incorporates the new six-cylinder Karrier side-valve engine which, developing up to 110 h.p. (R.A.C. rating 37.2) is smooth and silent in operation. The tyres are 36 in. by 8 in. singles throughout. Lubrication of the chassis is by the "Alcyl" centralised system. The brakes of the "Consort" act on the four rear driving wheels and being servo-assisted (Westinghouse). Autovac feed is fitted in conjunction with a 43 gallon tank mounted on the near-side chassis frame member amidships, and a twelve volt lighting set of the constant voltage type is installed, the generator having a maximum rating of 54 amperes and supplying current to a 200 amp. hour N.I.F.E. battery. The driver's canopy is of the fully-floating type, and it is built so that the near-side section can be removed to give access to the engine. Of the seats in the lower saloon—all of the semi-bucket type upholstered in moquette and leather—eight pairs face forward, whilst four seats are positioned each side facing centre over the wheel arches. Two windows each side of both the lower and upper saloons are of the half-drop type with aluminium louvres above, whilst the rear windows of the upper saloon are framed in the form of a door hinged at its lower edge and this forms an emergency exit. Seats on the upper deck—all of which face forward—are upholstered in leather and are well-sprung. The stairway—2 ft. wide—is fully enclosed, loading platform is only 18 in. from the ground (unloaded), and entrance to the lower saloon is 2 ft. 8 in. wide with ample room for standing between the wheel-arch seats. Destination indicators are positioned fore and aft. With regard to the "Chaser-Six" buses, these are 32-seaters (bodywork by Park Royal Coachworks, Ltd.) with forward entrance and rear emergency door. Driver is positioned alongside engine in a fully-floating cab with sloping windscreen. All seats—covered in Brown Antique Leather—face forward with the exception of one seat each side over wheel arches. Windows are of the fully-drop type with glass louvres above. Colour scheme is in blue and white, whilst the roof interior is covered with white glazed and washable rexine. Floor is covered with cork lino. The chassis is a standard production with the exception that a 45 gallon petrol tank is fitted on the off-side and 38 in. by 8½ in. low pressure tyres are mounted. The power unit is the same as fitted to the Huddersfield double-deckers, with petrol and oil consumption of 8 and 1,200 m.p.g. respectively.

Privately Hired Municipal Buses.—On behalf of Bury motorcoach owners, the Amalgamated Horse and Motor Owners' Association of Manchester has been discussing and negotiating with the Bury Corporation Tramways Department the matter of Corporation motor buses being hired out for private party work. It would appear that Corporation buses have been hired for journeys to Blackpool at rates which are competitive with those charged by local vehicle owners. Circular tours have also been arranged and advertised by the tramways department. Mr. J. S. Howarth, on 29th July, received from the Bury Corporation a letter stating that it had been decided to discontinue the running of motor buses to Blackpool from the end of July, and he was invited to put before the Tramways Committee suggestions with a view to removing the causes of grievance. At the time of writing Mr. Howarth is arranging an interview with the authorities in order that a free discussion may take place and a solution found satisfactory to both sides.



LEFT: THE KARRIER "CHASER-SIX" FOR THE SUNDERLAND DISTRICT OMNIBUS CO. RIGHT: THE KARRIER "CONSORT" 6-WHEEL BUS FOR HUDDERSFIELD CORPORATION.

Manchester and Salford Coachowners.—Manchester Motor Transport (Owners') Association and the Commercial Motor Users' Association (Joint Organisation) which this season introduced a scheme for the rationalisation of motor coach traffic throughout the Manchester area, have had one disappointment. It had been hoped that the arrangements which had been made in the interests of Manchester motor coach owners would be extended in their entirety to Salford, but owing to licensing difficulties, full adoption of the scheme has been held in check. In Manchester satisfactory results have accrued from the plan, and particularly in the elimination of light running, but recently the old evil of price cutting has reared its head. It has become more manifest since the change in the weather caused bookings to fall off.

Manchester Licences.—The following firms of motor bus owners have obtained licences to operate services from Manchester:—Messrs. W. E. Curtis, Harry H. Dobson, Harry Evans, Holt and Sons, Ingham and Stott, A. E. Lingley, Majestic Saloon Coaches, E. Prince, T. Mootry and Son, Robert Scott, George Scully, Stephen Timperley, Henry Shaw, T. Dean, Joseph Roscoe, all of Manchester; Bury Corporation Tramways Committee, and Manchester Corporation Transport Department.

Long Distance Services to Blackpool.—Motor coach owners at Sunderland and London have been given permission by the Blackpool Licensing Authority to run motor coach services to Blackpool. The Committee agreed that they wanted as many people to come to Blackpool as possible, and they gave their sanction to the applications subject to their conforming to local by-laws. There must be no plying for hire while in Blackpool.

Institute of Transport.

Results of Examinations, 1930.

The Institute of Transport examinations were held in London, Birmingham, Bombay, Bristol, Edinburgh, Hull, Leeds, Manchester and South Africa in April, 1930. Of the 104 candidates who entered for the Associate Membership Examination, 52 passed, and of the 42 who entered for the Graduateship Examination, 18 succeeded in satisfying the examiners.

The names of the successful candidates are :—

The Automobile Association.

Annual Meeting.

The twenty-fifth Annual Meeting of the Automobile Association was held at the Savoy Hotel, on July 16th last, Mr. Charles McWhirter, Chairman of the Committee of the Association, presiding.

In presenting the Annual Report and Accounts, the Chairman stated that the outstanding event of the present year had been the introduction of the Road Traffic Bill. The Association was not satisfied with the Bill, for motorists were liable to excessive fines for merely nominal offences, and were even liable to be imprisoned for offences when they were unable to define exactly what those offences were. Fortunately, there was a proviso in the Bill that the motoring organisations must be consulted. Therefore, the work of the Automobile Association, instead of being ended by the passing of the Bill, would necessitate very careful examination of the proposed regulations.

Concerning the work done on behalf of members by the Association, the number of miles covered by A.A. patrols during the year was twenty-six millions. Quite apart from the work on the road, the total inward correspondence for the twelve months was over one and three-quarter millions, and outward correspondence exceeded two and a half millions. Such correspondence naturally necessitated a large staff, but another reason which justified a large office staff was due to the calls on the A.A. Touring Department, which was issuing 2,000 tours per day for every working day of the year. Those 2,000 applications for routes meant 2,000 intricate problems which had to be replied to within twenty-four hours.

The Accounts showed that £628,000 was spent directly for services to members on the road.

The Report and Accounts were carried unanimously.

Presentation to Mr. Stenson Cooke.

At a Luncheon following the Meeting, a presentation was made to Mr. Stenson Cooke, to mark the occasion of his completing twenty-five years as Secretary of the Association.

The memento took the form of a portrait of Mrs. Stenson Cooke, with an address signed by nearly fifty representatives of the motoring press, recording their appreciation of many courteous and helpful services received, and extending to Mr. Stenson Cooke sincere congratulations on completing a quarter of a century of useful work, and of successful endeavour resulting in the establishment of the greatest motoring organisation in the World.

Mr. Stenson Cooke, in returning thanks, said that he valued the presentation as an outward and visible sign of intense personal friendship. The presentation had made him a very grateful and happy man, and he felt that it could have taken no more graceful form than that of the picture of the woman who had meant far more to the Automobile Association than they could know.

Long Distance Road Haulage.

Evidence given before the Royal Commission on Transport.

ON page 507 of our July issue we dealt with the Memorandum submitted to the Royal Commission on Transport by the Long Distance Road Haulage Committee of Inquiry and mentioned that Sir Maxwell Hicks, C.B.E., the Chairman of the Committee, gave evidence before the Commission on June 25th.

Answering questions put to him by Sir Arthur Griffith-Boscawen, P.C., the Chairman of the Royal Commission, Sir Maxwell Hicks said that if the Commissioners could see their way to recommend the licensing of all hauliers, including the local man, his Committee should be for it rather than against it, but they saw difficulties in doing it quickly. They thought the Commissioners might meet that section of the trade by recommending that all long-distance hauliers should be licensed even if they could not go the whole way and recommend the licensing of all hauliers. They would like to see all the hauliers licensed.

Continuing his oral evidence, Sir Maxwell said that his Committee suggested that any long-distance haulier applying for a licence must satisfy the Traffic Commissioners to be appointed under the Road Traffic Act that the vehicles proposed to be used had been licensed for long-distance road haulage work. Technically there was a difference between a vehicle's fitness for long-distance work and a vehicle's fitness for London or town work. The Chief Engineer would say a vehicle was apparently all right for a radius of 20 miles, but he would not send it 200 miles away from its base because of a possible breakdown. Further, with reference to the licensing of hauliers, a haulier, beyond proving he had got his vehicle licensed should have also to prove that he was not going to break the law with regard to his drivers. His Committee suggested that the Traffic Commissioners should require a declaration by the applicant that all legal requirements had been complied with during the period preceding that for which the licence was to be granted. In starting a new thing like the licensing of hauliers it was very difficult to know what could be insisted upon to blot out the man who was not a satisfactory person. His Committee submitted for the time being, for the first few years, a declaration should be obtained that in the twelve months before a haulier applied even for his first licence he had complied with the law, and he would like to see it go further, that the haulier was complying with the standard practice in regard to working conditions. When he referred to complying with the law, he meant any law that might be in force applying to long-distance haulage.

Sir Maxwell said that in regard to the particular trade in which his Committee was interested, they favoured a Joint Industrial Council of representatives of employers and employees and that their decisions should be made binding on both sides as in that particular trade, whatever might be one's view in other trades, men were turned loose on the public roads with ill-found vehicles, and, therefore, his Committee felt justified in submitting that any agreed system of wages should be enforced on the whole trade.

Answering a question put to him by Mr. William Leach, M.P., who said that in paragraph 33 of the Memorandum submitted by the Long-Distance Road Haulage Committee of Inquiry, recommendations were made which were more or less in the nature of imposing by law the Fair Wages Clause and that that was the principle underlying it, which principle was embodied in the Road Traffic Bill in so far as public service vehicles were concerned, and did he want to extend it to hauliers' vehicles in the same way, Sir Maxwell Hicks said he wanted to extend it to the long-distance haulage vehicles, and, personally, he certainly should not object to its extension to the short-distance haulage vehicles.

Later on in his evidence, Sir Maxwell said that his Committee had made suggestions to the Commission in their memorandum submitted which they believed, if carried out, would enable the industry to be in a better position for what the Commissioners might recommend with regard to co-ordination.

Mr. Leach put a number of questions to Sir Maxwell Hicks dealing with the question of co-operation. Sir Maxwell pointed out that under present circumstances in the long-distance section of road transport his Committee submitted that there was no possibility of co-operation because the conditions of working were not in any sense identical and they were asking the Commission to make them identical which was usually, in rough lines, a condition precedent to any effective co-operation.

Asked who, in his judgment, ought to be co-operating, Sir Maxwell Hicks said that if co-operation was desirable, and he had not admitted it was, they would take it for granted that co-operation was desirable if they were going to carry through anything successfully for co-ordination. In his view, to-day in the industry there was no possibility of effective co-operation. When they asked who ought to co-operate, if co-operation was desirable everybody ought to co-operate. He was talking purely of the long-distance section of road transport and had been giving evidence purely upon that section. There was no co-operation in the long-distance section. He should like to see a measure of co-operation under which all members in that industry would be working on lines of safety to the public and road users so that they could ultimately be in a better position to discuss collectively with trade unions and other important bodies matters affecting their industry.

Mr. Leach: Co-operation, I suppose, we must take to mean the opposite of competition?

Sir Maxwell Hicks: I do not agree. Surely competitors can co-operate.

Later in his evidence Sir Maxwell Hicks said he thought the railway figures clearly showed that, of their road transport commitments, their terminal services alone showed a loss of just under £1,500,000 per annum.

In the course of his replies to questions put by Lord Northampton and Major Crawfurd, Sir Maxwell Hicks said he admitted that the whole question of Clearing Houses was very difficult to define, and one did not like to embark in any way on a diatribe against them generally because in theory, if they could have a co-operative Clearing House properly run, everyone would like it. He thought the ideal Clearing House was one controlled by the hauliers and by the traders, if they liked by the local Chamber of Commerce with a vote and not working for profit, so that there was no incentive to sweat the haulier or to cut unduly. He was advocating that the ideal Clearing House should be controlled by hauliers plus traders—the two sides; the man who provided the transport and the man who used it. He thought a joint organisation, controlled jointly, should be limited as to profits. He would like to see the two sides together in co-operation; almost co-ordination between these two sections.

Asked by the Chairman whether he thought the long-distance haulage business was likely to grow, Sir Maxwell Hicks said his own personal opinion was that if they got things brought into law and got the business put on a proper basis the railway business was likely to grow and the long-distance haulage was likely to be slightly reduced; because they would undoubtedly lose a certain amount of traffic which went by road now and which never ought to go by road because it was not economic traffic; it was simply slaughtering the people who carried it, and some of that would probably go back to the railway or to coastwise. But they should have an established section of the industry working on sound lines from every point of view, and they should be much more liable to remain in existence as a check on the railways in the interests of the traders. They were not aiming at all at a large further diversion of traffic from the railways to the roads.

British Industries Fair.

FOUR-FIFTHS of the space in the British Industries Fair, to be held at Olympia, London, and Castle Bromwich, Birmingham, from February 16th to 27th next year, has already been let, the total area booked in the two sections up to August 1st amounting to more than 400,000 square feet. In the London Section, where the area available is 300,000 square feet, bookings up to August 4th amounted to 236,000 square feet, which is more than the amount booked at this time of year for any previous Fair. "Taking into account the general trade depression and the holidays, the eagerness of manufacturers to exhibit is regarded as very satisfactory," an official said.

In Parliament.

London Traffic. In reply to questions regarding progress with the proposed scheme for the reorganisation of London traffic, Mr. Herbert Morrison, the Minister of Transport, said he could not say when the scheme would be published. He was, however, hoping to receive the report and advice of Sir William McLintock quite soon, but the House would appreciate that that must be regarded as a confidential document of the Government, which could not be published. The House might be assured that he was very anxious to take the earliest possible opportunity of effectively dealing with this urgent problem.

Asked what were the main reasons responsible for delay, Mr. Morrison said he thought the reasons might be taken to be the complication of the financial considerations involved in the various undertakings.

Restrictions on Road Bridges. Mr. Vaughan asked the Minister of Transport the number of bridges in England and Wales in Class I, Class II, and unclassified roads, respectively, whose user is restricted to vehicles of lesser weight that may legally use the roads; in how many cases is such restriction by by-laws of railway and canal companies and similar bodies; and in how many by order of the Ministry of Transport under Section 7 (4) of the Roads Act, 1920? Mr. Herbert Morrison, replying, said that four orders made under Section 7 (4) of the Roads Act, 1920, are in force prohibiting the driving of various classes of mechanically-propelled vehicles on five bridges, three of which are on Class I roads, one on a Class II road, and one on an unclassified road. The other restrictions on the use of bridges to which reference had been made were, in the main, restrictions under the provisions either of the Locomotive Act, 1861, or of the Heavy Motor Car (Amendment) Order, 1907. These restrictions could be imposed without reference to him and he had no information as to the number of bridges affected.

Proposed Tyne Bridge. Mr. West Russell asked the Minister of Transport whether he had received the engineer's report with regard to the proposed bridge or tunnel across the Tyne between Tynemouth and South Shields; and whether he was in a position to make a statement on the matter? Mr. Herbert Morrison (Minister of Transport) said he had received the engineer's report upon the proposed bridge. It was necessary that borings should be made before further action could be taken, and a tender had recently been accepted for making the borings.

Motor Coaches in London. Asked how many motor omnibuses belonging to the long-distance services, other than those hired for private purposes, entered the centre of London daily; and whether any Regulations existed limiting their size and numbers and the streets in which they were permitted to circulate? Mr. Herbert Morrison, the Minister of Transport said he assumed that the question related to motor coaches as distinct from motor omnibuses plying for hire within the Metropolitan Police district. There was no information available as to the number of motor coaches which entered the centre of London daily. As regards size, motor coaches were subject to the statutory restrictions applicable to all heavy motor cars, but there was no direct control of these vehicles when in the Metropolitan Police district as regarded either their number or the streets which they might traverse. They would, however, be controlled in these respects when the provisions of the Road Traffic Act relating to public service vehicles in the metropolitan area came into force.

Traffic Control Systems. Sir C. Rawson asked the Minister of Transport whether he was aware that the automatic coloured-light system of traffic control in Piccadilly had proved inefficient; and why it was being repeated in Ludgate Circus, supplemented by manual control exercised by a policeman on point duty? Mr. Herbert Morrison said that the two systems of signalling were intended to serve different purposes. In the one case the light signals conveyed information to the police as to what was happening at the various points at which they were installed; in the other case the light signals directly controlled the traffic; in neither case were the signals automatic. He was informed that both signals were regarded as efficient and satisfactory for their respective purposes.

In reply to further questions the Minister of Transport said that no automatic traffic signals had so far been erected in the Metropolitan area, but there were manually controlled installations in Piccadilly and Ludgate Circus. It was proposed, subject to the concurrence of the local authorities, to make an experiment with an automatic installation in Oxford Street. The question of erecting such signals in other parts of London was under consideration. Within their limits and for their purpose, they had been successful, but neither of the experiments so far came up to the modern standard of the Ministry of Transport.

The House was prorogued on Friday, 1st August, until Tuesday, 28th October, 1930.

Road Vehicles—Great Britain.

A return has been issued by the Ministry of Transport giving particulars of the gross receipts from the taxation of Road Vehicles for the period from 1st December, 1929, to 31st May, 1930, and of the number of motor vehicles registered for the first time during the month of May, 1930. Copies (price 2/6d.) can be obtained from H.M. Stationery Office, Adastral House, Kingsway, W.C.2.

The gross amount received in payment for licences issued during the six months ended 31st May, 1930, was £21,340,238, compared with £20,312,028 in the corresponding period of the previous year. The gross amount is subject to deductions in respect of rebates, refunds, statutory deductions, including costs of collection and administration and the proportion due to the Exchequer, under the Finance Act, 1926, from the net receipts of the taxation of motor cycles and vehicles taxed on horse-power.

Particulars are given of the total numbers of licences issued and surrendered during the six months to the 31st May, 1930, and of the aproximate numbers of licences current on that date. The total number of motor vehicles, excluding tramcars and trade licences, was approximately 2,130,000, compared with 2,027,000 in the corresponding period of the previous year.

The total number of mechanically propelled road vehicles registered for the first time in May, 1930, was 34,641, compared with 39,172 in May, 1929, the figures for the several classes being:—

	May, 1930.	May, 1929.
Cars taxed on horse power ...	17,665	19,964
Cycles	10,993	12,028
Hackney Vehicles	1,057	1,853
Goods Vehicles	4,458	4,998
Other Vehicles	468	329
	34,641	39,172

Leeds and District Horse and Motor Owners' Association.

The Annual Outing of the Leeds and District Horse and Motor Owners' Association was held on July 10th last.

Leaving City Square by motor coaches at 1.30 p.m., an enjoyable drive was taken to Thorp Arch, where tea was served.

After tea there were sports, and the first prize for the egg and spoon race was won by Mrs. Pease. The first and second prizes for the blindfold race were won by Miss Whitehead and Miss Stonehouse respectively.

The Cup for the quoits handicap was won by the President of the Association, Mr. J. I. Stonehouse, after an exciting game, the runner up being Mr. Sam Stone. This is known as the "Hargreaves" Cup and is competed for by members of the Association only, and was presented last year by Mrs. Thos. Hargreaves.

There were various comic races the most amusing being one in which each competitor had to run a hundred yards, eat a piece of cake and drink a bottle of lemonade without touching either with the hand, the cake being held by a lady who poured lemonade into the competitor's mouth.

After a short speech by the President, who said it gave him great pleasure to be amongst such a jolly crowd, Mrs. Thos. Hargreaves presented the prizes.

The Vice-President, Mr. A. H. Butterwick, proposed a hearty vote of thanks to Mr. and Mrs. Thos. Hargreaves for their attendance, and to Mrs. Hargreaves for again presenting the prizes, and the votes were supported by the Secretary, Mr. A. Harrison, and carried with great enthusiasm. After a game of cricket a tired but happy crowd returned to town.

Round the Lancashire Associations.

Liverpool Conference of Employers.

The Liverpool transport employers proposals with regard to the inclusion of an optional arrangement in the existing agreement with the Liverpool Carters and Motormen's Union by which motormen engaged in up country work may be employed on the accumulative system of working, are still the subject of negotiations between the Conference of Liverpool and District Road Transport Employers and the Union. The Conference had a meeting on Monday, 28th July, at which full consideration was given to the various aspects of the present position.

Amalgamated Horse and Motor Owners' Association.

In accordance with the resolution passed by the General Council of the Amalgamated Horse and Motor Owners' Association, Manchester, and the resolutions passed by a general meeting of members, who were Oldham and district employers, notice was given last month to carters and motormen, that failing an agreement being arrived at by the negotiating committee with the United Road Transport Workers' Association of England, a reduction in the standard rate of wages to commercial road transport workers would take place on the first pay day in August. This question of wages has been under the consideration of the Lancashire and Cheshire Transport Council for several weeks mainly on the representations of vehicle owners in Oldham, Saddleworth, Ashton, Middleton, Hyde and Littleborough. In consequence of the decision of the Amalgamated Horse and Motor Owners' Association to enforce a reduction of 4s. per week, the men held a meeting on 1st August, when it was decided to remain at work because only a small percentage of the men had had their wages reduced. These, it was stated, were in the employ of cotton-waste merchants which have recently suffered bad trade. The coalowners and Corporation decided not to make any cuts. At a conference between the employers and workers, on 31st July, the employers refused to adopt the suggestion that they should withdraw the notices. The carters and motormen have deputed their general secretary to continue negotiations with the employers.

Liverpool C.M.U.A.

Liverpool Area Committee of the Commercial Motor Users' Association again had under consideration, at its July meeting, the question of interference with natural water supplies (for steam wagons) caused by road construction work. After discussion it was decided to put the matter on the agenda for the August meeting, by which time it was expected that further evidence would be available.

Manchester Transport (Owners') Association.

Negotiations have been proceeding between the Manchester Transport Owners' Association and the United Road Transport Workers' Association on an application put forward by the employers for alterations in the wages of road transport workers. When the terms were submitted to a mass meeting of the men they unanimously decided not to agree to any alteration of their present rates. The meeting, however, authorised its representatives to continue negotiations. The union view is that there are large establishments in the city with wagons licensed and insured for the year, standing by, in addition to overhead charges which obtain in the busy period, which do not seem to have been reduced in proportion to the amount of work the men are doing. They hold that a reduction would not help employment or make transport any cheaper.

In an interview with our representative, Mr. H. Howard Robinson stated that ever since the inception of the Lancashire & Cheshire Joint Council, efforts had been made to obtain the participation of the United Road Transport Workers' Association but that organisation had not seen its way to join with the whole of the employers and the remaining two thirds of the transport workers organised in another union, in dealing with conditions in the transport industry. There was no agreement whatever between the United Road Transport Workers' Association and any road transport employers organisation in Lancashire and Cheshire, and the position that now obtains is that in certain districts notice has been given by the employers to enforce a reduction in the present wage rates. Several meetings have already taken place, as the result of which it is hoped that means will be found to avoid a rupture. The state of trade in the county justifies the employers application, also the modification of the cost of living figures. Unfortunately, there were two unions catering for the road transport workers. The employers application is for a reduction of 2s. per week in the wages of juniors and 4s. per week in the wages of seniors.

The situation took a serious turn in consequence of failure of the joint conference of employers and employees (Lancs. & Cheshire Joint Road Council), held on 1st August, when the Transport and General Workers' Union refused to entertain the proposal of the Manchester Transport Owners' Association to reduce wages. According to a statement issued after the meeting the dates of the reduction in the different centres will be the subject of special conferences. The union states that it has been prepared at all times to meet any reasonable demand of the employers in the endeavour to assist the trade, but it cannot agree to any further wages reduction. It hopes the Joint Council will continue its work because it was never more necessary than it is to-day.

Institute of Transport.

Examinations, 1931.

Examinations for Graduateship and Associate Membership of the Institute of Transport will be held in London and at other Centres on Thursday, Friday and Saturday, April 30th, May 1st and 2nd, 1931.

The Main Line Railways, the Metropolitan Railway, and the London Underground Railways and L.G.O.C. Group, subject to the exigencies of each Company's business, have agreed to grant leave of absence (without loss of pay) to members of their staffs taking these Examinations.

The subjects are as follows:—

GRADUATESHIP EXAMINATION.

1. General Economics.
2. (a) A modern foreign language, *or* (b) Mathematics.
3. The elements of traffic working by Railway, Road, Water (including Docks), and Air.
4. Principles of Statistics, with special reference to Transport.
5. (a) The transport arrangements of Spain, *or* (b) Economic Geography.

ASSOCIATE MEMBERSHIP EXAMINATION.

(i) Traffic; (ii) Engineering; (iii) Audit; (iv) Legal;

Sections.

1. One of the following:— The Economics of	2. One of the following:— The Modern operation of
(a) Railway Transport.	(a) Railway Transport.
(b) Port Administration and Inland Water Transport.	(b) Ports, and Inland Water Transport.
(c) Road Transport.	(c) Road Transport.
(d) Air Transport.	(d) Air Transport.

3. The Rights and Duties of Transport Undertakings.
4. The fourth subject in each Section is:—

Traffic:	The economic development of the Great Powers, with special reference to the problems of Transport.
Engineering:	A thesis on a Railway, Port and Waterway, Highway, or Air Transport subject.
Audit:	(a) General Principles of Accounting, (b) Accounting and Audit of a Railway, Port and Inland Waterway, *or* Road Transport Undertaking.
Legal:	The Law relating to Transport.

The latest dates for the deposit by candidates of forms of application are:—*For exemption,* November 30th, 1930; *for examination,* February 1st, 1931.

Fuller particulars, forms of application, and copies of the complete Syllabuses and of the papers set at previous Examinations (price 1s. 0d. per set, post free) can be obtained from the Secretary, The Institute of Transport, 15, Savoy Street, London, W.C.2.

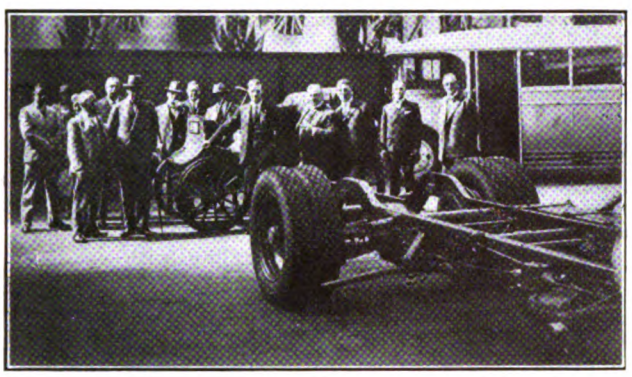
News from all Parts.

The Parliamentary Secretary, Ministry of Transport, on the Road Question.—Lord Ponsonby in opening the Exhibition illustrating the disfigurement of town and countryside at Haslemere on August 1st, said it was a mistake to suppose that there was any desire to drive unnecessary roads through the countryside. No road construction was undertaken without the full consent of the local authorities concerned, who had intimate knowledge of the needs of their locality, and there was never any intention of interfering with secluded country lanes. A road was not an ugly thing, on the contrary it could be beautiful. It was unfair to judge roads just as they had been recently constructed. As time passed, trees grew and banks became overgrown with shrubs and undergrowth—what now seemed bare tracks would become fine highways. The Ministry of Transport was taking the greatest pains to preserve, wherever possible, all natural features which might contribute to the beautifying of new roads and the assistance of experts in town-planning and arboriculture was enlisted in these new works. Roads were not going to disfigure the country. He wished he could say the same of houses. Fortunately many of the monstrosities which were being constructed were not built to last and many of these dwellings in fifty years time would have disappeared.



AT THE ALBION MOTOR CAR CO.'S WORKS AT SCOTSTOUN DURING THE INSTITUTE OF TRANSPORT CONGRESS AT GLASGOW. IN FRONT A REAR VIEW OF THE NEW ALBION CHASSIS. IN THE BACKGROUND ONE OF THE ORIGINAL MOTOR CARS BUILT BY ALBIONS IN 1900. AMONGST THOSE PRESENT ARE MR. N. O. FULTON, CHAIRMAN, AND MR. GEORGE YOUNG, B.SC., JOINT MANAGING DIRECTORS OF THE COMPANY, SIR JOSEPH NALL, MR. THOMAS ABBOTT, MR. FRANK CHURCHILL, MR. R. MCLEOD AND MR. J. L. GUNN.

Bus Service Yields 5s. 3d. Per Mile.—From the Liverpool Corporation Tramways Dept. we have received a copy of Mr. P. Priestly's annual report covering the year ended 31st March. Brief particulars are given of the Corporation motor bus services which have been extended and several new routes opened in the period under review. Travel facilities are provided for new housing areas and for more sparsely populated districts. "It will be appreciated," states Mr. Priestly, "that until these districts are more fully developed it is unlikely that the receipts from the motor bus services will even cover operating costs." The express bus services at fares higher than tramway fares have been introduced from the centre of the city to districts already served by tramcars. These services are well-supported during the peak loading periods, but during the other portions of the day passengers use the tramcars and pay the lower fares. The average revenue from the motor buses was 1/2.2d. per mile, but one service, that connecting the various railway stations with the landing stage, yielded 5/3.62d. per mile.

INSTITUTE OF TRANSPORT CONGRESS AT GLASGOW.
TWO WELL-KNOWN L.M.S. OFFICERS, MR. ASHTON DAVIES, GENERAL PASSENGER SUPERINTENDENT AND MR. W. CROZIER, PASSENGER SUPERINTENDENT, SCOTTISH DISTRICT, SNAPPED ON BOARD THE "DUCHESS OF MONTROSE."

"On Guard." Monthly "Safety First" Magazine for Workers.—"On Guard" is the title of a special little pocket magazine issued by the National "Safety First" Association as part of a specialised accident prevention service, which consists of an intensive campaign each month against one of the principal dangers of industry. This month the particular hazard covered is "Blood Poisoning" which causes many deaths and the loss of thousands of working days a year. The magazine deals with various aspects of health, as well as safety, at work, in the street and in the home. Copies of "On Guard" can be obtained, price 2d., each post free, from, or quotation for quantities will be given by, the National "Safety First" Association, 119 Victoria Street, London, S.W.1.

Centre of British Engineering and Transport Institutions, Buenos Aires.—The address of this centre is now "Sarmiento 1230, 4th floor (Prince George's Hall Building), Buenos Aires.

Road Traffic Act.—A handy booklet summarising and explaining the new motoring laws has been issued by the Automobile Association, and is now available to every motorist on a postcard application to The Secretary, The Automobile Association, Fanum House, New Coventry Street, London, W.1, or to any of the A.A. branch offices.

Furniture Warehousemen and Removers' Association. Bi-Annual Meeting. — The Bi-Annual Meeting of the Furniture Warehousemen and Removers' Association will be held in London on Wednesday, November 5th next.

Agriculture Tractor Trials. — The agricultural tractor trials organised by the Oxford School of Engineering and the Royal Agricultural Society will be held on Mr. A. T. Loyd's farms at Lockinge, Wantage, Berks, on September 16-19, and farmers interested will be afforded a good opportunity of seeing tractors of the latest patterns and fullest capacity at work.

Manchester's "Morris House." — A large range of

MANCHESTER'S "MORRIS HOUSE."
THE SHOWROOMS OF GORDON STEWART MOTORS LTD.

Morris Commercial vehicles may always be seen at the showrooms of Gordon Stewart Motors, Ltd., Distributors for Morris Cars, "Morris House," Sale, Manchester. We reproduce a photograph of the showrooms which are becoming widely known and arousing considerable interest in Manchester and districts.

The "Garrett" Gazette.—The July number of "The Garrett Gazette" contains some excellent illustrations of Richard Garrett & Sons works at Leiston, Suffolk, the birth-place of Garrett steam wagons. There is a double-page photograph of a fleet of "Garrett" rigid six-wheeled three-way tipping wagons supplied to The Builders' Materials Transport Co., Ltd.

John Fowler & Co. (Leeds), Ltd., at the Royal Agricultural Show.—Our illustration shows the display of

JOHN FOWLER & CO.'S DISPLAY OF AGRICULTURAL AND ROAD-MAKING MACHINERY AT THE ROYAL AGRICULTURAL SHOW, MANCHESTER.

agricultural and roadmaking machinery staged by John Fowler & Co. (Leeds), Ltd., at the recent Show of the Royal Agricultural Society at Manchester.

M.C.L. Lighting and Starting Equipment.—We are informed that M.C.L. Lighting and Starting Equipment has again been specified by the India Office on the majority of this year's tenders for commercial vehicles. M.C.L. and Repetition, Ltd., of Pool Lane, Langley, Birmingham, have also recently received orders for equipment from the manufacturers of well-known omnibus chassis.

Burnley "Chevrolet" Parade.—Organised by Mr. W. H. Harrison, of Burnley, a parade of Chevrolet vehicles was held at Burnley recently, the competing motors being judged for mechanical efficiency and general condition, for the Harrison Cup which is awarded annually. The prize went to Messrs. W. H. Dean and Sons; the second prize to Messrs. Holland, Ltd., Haslingden; and the third prize to Mr. Arthur Spencer, of Nelson.

"Thornycroft Activities."—John I. Thornycroft & Co., Ltd., the well-known engineers and shipbuilders, have sent us a copy of their latest publication entitled "Thornycroft Activities." This book, which is an art production, covers the range of the firm's manufactures including shipbuilding and marine engineering, commercial motor transport, motor boats, and marine motors, and concludes with details of the service arrangements which the Company have built up for the use of all interested in Thornycroft productions. It is a most interesting publication.

Golden Tours.—We are informed that Hernu, Péron and Co., Ltd., the well-known Continental forwarding and shipping agents and warehousekeepers, head office, 98/100 Queen Victoria Street, London, E.C.4, are now closely associated with Golden Tours, Limited, of 8 Bennet Street, St. James's, London, S.W.1, and 17 Broad Street Place, London, E.C.2, whose activities include ocean voyages, tickets, hotel reservations, all kinds of tours (independent or conducted), motor trips through Britain or abroad, motor coach tickets to all parts. The Directorate and Staff of Golden Tours are all men who have had wide experience of every side of travel business, and they can supply all particulars and help to solve travel problems with useful information.

Newhams and Scarborough's "Home Week." — Our illustration shows some of the vehicles in the service of W. P. Newhams, Ltd., General Transport Contractors, 46 Victoria Road, Scarborough. The photograph was taken

NEWHAMS LTD., OF SCARBOROUGH, DETAIL PART OF THEIR FLEET OF VEHICLES TO TAKE PART IN LOCAL FESTIVITIES.

during the recent "Home Week" festivities at Scarborough.

Ford 30-cwt. Truck.—Important new improvements in their 30-cwt. truck are announced by Ford Motor Company, Ltd. These include a new 4-speed transmission, provision for a power take-off, twin rear wheels, new front and rear axles, and other new features. Among these improvements, the provision for a power take-off in the side of the gear box, useful in operating power pumps, hydraulic tipping equipment, winches, etc., is one of the features. The new 4-speed transmission is adapted for a wide range of power and speed, while the new front axle and spring are designed to give robust front construction in conjunction with the new rear axle. Larger front wheel brakes, giving greater safety, and new spiral bevelled gear of special design, are additional features of importance. Twin rear wheels with low pressure tyres, interchangeable all round, are to be had at a slight additional cost. The price of the truck remains unchanged.

The Motor Ball and Carnival.—H.R.H. Prince George has given his patronage to the Motor Ball and Carnival which, for the fourth year in succession, will open the Charity Ball Season at Covent Garden this autumn. The date is the 22nd October, the Wednesday in Motor Show Week, and it is held in aid of the motor trade charity—The Motor and Cycle Trades Benevolent Fund. Full particulars can be obtained from the Secretary and Organiser, Mr. A. H. Dawson, 42 Bedford Row, W.C.1. The Motor and Cycle Trades Benevolent Fund is celebrating its Silver Jubilee this year. It was founded in 1905, and though one might not suppose there was much call for relief in the motor trade it has distributed in

Digitized by Google

relief over £140,000 and maintains its own Children's Home. Past Patrons of the Motor Ball include the Prince of Wales, the Duke and Duchess of York and the Duke of Gloucester.

Edinburgh Transport.—We have received a copy of the Report for the year ended 15th May last made by Mr. F. A. Fitzpayne, Edinburgh Transport Manager, to the Transport Committee of the City of Edinburgh. The Report shows that the combined revenue for the year from the electric car and motor bus services was £927,114, compared with £876,955 last year, an increase of £50,159. The total number of passengers carried was 164,401,991, compared with 156,230,890 last year, an increase of 8,171,101, and the total mileage run was 14,825,332 compared with 13,789,303 last year, an increase of 1,036,029. On 18th December, 1929, the purchase of 24 saloon motor omnibuses and 3 motor coaches was authorised. These buses were required partly to replace old buses purchased in 1920 and also in order to deal with increased traffic. It was later decided to increase the fleet by the purchase of 12 additional saloon motor buses in order to cope with the greatly improved traffic on regular services and to meet the extra demands created for special hires. A number of the new buses, which are all Daimler C/F6 saloon type seating 31 passengers each, are now on service, and 12 obsolete buses will be sold. The motor coaches will have sun saloon bodies with seating accommodation for 24 persons. The Department owns a fleet of 21 motor lorries for hiring purposes. This fleet comprises:—12 A.E.C., 4 tons; 3 Leyland, 4 tons; 4 Vulcan, 30 cwts.; 1 Morris Cowley, 1 Stevens Petrol Electric, 4 tons.

Landing the Boiler.—Our illustration shows a large Lancashire boiler being landed at Malta. This boiler

HANDLING A MARSHALL LANCASHIRE BOILER AT MALTA.

is intended for steam supply and power purposes at a brewery on the island, and the view is typical of many transport jobs of this nature involved by the large number of Marshall Lancashire and similar boilers which are continually being shipped to different parts of the world by Marshall, Sons & Co., Ltd., Britannia Iron Works, Gainsborough.

Overhead Travelling Cranes for South Africa. — His Majesty's Senior Trade Commissioner in South Africa reports that the South African Railways and Harbours are calling for tenders, to be presented in Johannesburg by the 15th September, 1930, for the supply of three 5-ton motor-driven overhead travelling cranes for Salt River Workshops. (Tender No. 3/2/SR). Firms desirous of offering cranes of British manufacture can obtain further particulars of this call for tenders upon application to the Department of Overseas Trade, 35 Old Queen Street, London, S.W.1. Reference number A.X. 10,008 should be quoted.

More Scottish Motors for the War Office.—The continued mechanisation of the transport of the British Army has led to a further repeat order being placed with the Albion Motor Car Company, Ltd., of Glasgow, for 39 of their six-wheeled vehicles, which are capable of operating over rough country. When these machines are handed over to the War Office, the total six-wheeled deliveries from the Albion factory for 1930 alone will be just over 300 machines. Recently the Government of India placed orders for over 250 Albions of this type.

Roads and Bridges. Deputation to Ministry. — The Chancellor of the Exchequer and the Minister of Transport received at the House of Commons on July 30th a Deputation from the All-Parties Roads and Bridges Committee who submitted proposals for supplementing the Government's Trunk Road Programme which is now being carried out by local authorities. These proposals were discussed at considerable length and are to be further examined. The Deputation were informed that the Government were taking all possible steps to accelerate the carrying out of the programme of road work already authorised. The Deputation consisted of Major Walter Elliott (U); Major Lloyd George and Mr. F. Llewellyn Jones (Lib.); Ald. J. H. Palin; Mr. H. T. Muggeridge and Mr. D. J. Vaughan (Lab.); and Mr. W. Rees Jeffreys (Chairman, Roads Improvement Association).

Diesel Engine Users' Association.—The Diesel Engine Users' Association was founded in 1913. The object of the Association is to further the interests of users of heavy-oil engines by collecting and circulating information on various points that may arise from time to time in connection with the working of these engines, by fully discussing any such points at meetings, and generally by adopting any course of action that the members may consider will be beneficial to them in connection with the use of the engines. The Committee have decided that for the year 1931 an award of £25 shall be made and a medal presented for a paper read before the Association which, in the opinion of a sub-committee, shall be considered to be of the greatest value to the diesel engine user. The award will not be restricted to members of the Diesel Engine Users' Association. All communications should be addressed to the Joint Hon. Secretaries, Diesel Engine Users' Association, 307 Abbey House, Westminster, London, S.W.1.

Hercules Engines and Power Units.—Hercules Motors Corporation, Canton, Ohio, U.S.A., announces the appointment of the Automotive Products Company, 3 Berners Street, London, W.1, with Branch Offices as follows:—Berlin. Automotive Products Company, G.m.b.h., Zollernhof, 56 Unter den Linden. Vienna, Automotive Products Company, 1-Lobkowitzplatz, Vienna 1, as sole distributors of Hercules engines and power units for Great Britain and Continental Europe, exclusive of U.S.S.R. Hercules engines are built in a complete line of four and six-cylinder models, ranging in size from 9 to 175 h.p. They are specially designed for use in commercial vehicles, general industrial machinery, contractor's equipment, road building apparatus, cotton and cotton-seed oil equipment, agricultural implements, oil producing machinery—and for other heavy-duty purposes.

Electric Overhead Travelling Cranes for South Africa.—His Majesty's Senior Trade Commissioner in South Africa reports that the South African Railways and Harbours are calling for tenders, to be presented in Johannesburg by the 22nd September, 1930, for the supply of one 10-ton electric overhead travelling crane for Uitenhage workshops, and one 6-ton electric overhead travelling crane for Salt River Workshops. (Tender No. 1,731). Firms desirous of offering cranes of British manufacture can obtain further particulars of this call for tenders upon application to the Department of Overseas Trade, 35 Old Queen Street, London, S.W.1. Reference number A.X. 10,009 should be quoted.

MERSEYSIDE.

Cart and Motor Owners' Luncheon.—On the occasion of the first meeting of the Committee of the Liverpool Cart and Motor Owners' Association in the board room of the new offices of the Association, 20 Chapel Street, Liverpool, the President, Mr. T. Taylor, invited the members of the Committee and officials to a luncheon at the Exchange Station Hotel. It was quite an informal, withal very happy gathering. Mr. W. J. Harper, who proposed the toast of the Association, reviewed its growth and wide range of influence in the transport politics of Merseyside. The Association, he said, had kept pace with changing conditions, and had a history of progress and achievement extending over a great many years. Mr. W. Edwards, trustee, briefly replied. Mr. J. Irving, on behalf of the guests, thanked the President for his hospitality and was seconded by Mr. Frank Jones, the Hon. Treasurer.

New Depot.—A depot for repairs and maintenance of Thornycroft motor vehicles has been opened at Liverpool by Messrs. G. H. Forkings and Sons, 31-33 Little Woolton Street.

Personal.—Mr. C. F. Rymer, the well-known Merseyside motor coach owner, has been adopted by a Chester political party as a candidate at the next General Election.

Warning.—Owners of motor vehicles using the bridges leading to the Mersey ferries, weighing more than the maximum allowed by the regulations, have recently been the subject of prosecutions by the Mersey Docks and

Digitized by Google

Harbour Board. A warning was voiced a few days ago by a Liverpool magistrate, that firms would have to see that their vehicles are the correct weight before using the bridges, otherwise there would be serious consequences.

New Rolling Stock for Liverpool. — Liverpool City Council, on 30th July, confirmed the acceptance of the tenders of the following firms for the supply of carts and motor vehicles:—The Yorkshire Patent Steam Wagon Co., Leeds, one steam gully emptier for £1,329; Messrs. Shelvoke and Drewry, Ltd., Letchworth, one S.D. freighter with a specially constructed body, to take 42 street orderly bins, for £595; T. Ockleshaw and Sons, Liverpool, 12 horse-drawn refuse cars for £85 each; Messrs. Shelvoke and Drewry, Ltd., Letchworth, six low-loading motor wagons, for £591 10s. each.

MANCHESTER.

Holiday Agendas.—What meetings of the Manchester Committee of Road Users, The Warehouse Keepers' Conference and the Commercial Motor Users' Association have taken place during the past month have dealt with matters that were mainly routine. As a matter of fact, agendas have had a typically holiday aspect.

Keen Quoting.—Goods haulage rates continue to be cut very finely but not even, that is, having the effect of creating extra traffic. Rates are largely a matter of negotiation between those who have the dispensation of loads and wagon owners, and as they are determined by the factors of supply and demand, are in an easy state. Haulage conditions in Manchester and District have been quieter than for a considerable time, due entirely to the depressed state of industry.

Record Coach Traffic.—During the seven days of the Bolton holiday it is estimated that nearly 13,000 passengers booked journeys with local motor bus and motor coach owners. The details are:—**Day Trips.** Blackpool, 4,000; Morecambe, 1,500; Southport, 2,000; Gretna Green, 200; Stratford-on-Avon, 100; Barmouth, 26; Scarborough, 28; and Circular Tour, 2,000. **Period Tickets.** Blackpool, 2,000; Morecambe, 250; London, 400; Wales, 200; Glasgow, 100; Torquay and Scarborough, 70 each; Bournemouth, 40; and a week's tour, 25.

NORTH-EAST COAST.

Safety First.—Not satisfied with the "Caution" board which swings into position when the exit door at the front of the tram opens, Mr. W. F. Endean, the General Manager of the Gateshead and District Tramways, is now adopting a further device to protect the tram passenger. This consists of a red light and the word "Stop" on the rear of the tram, which automatically come into view when the front-exit door is opened.

The Tyne Crossing at Shields.—A definite move in the matter of the Tyne crossing between North and South Shields, either by bridge or tunnel, is the decision to make 8 borings. It now seems likely, at long last, that something will be done to redress this age-long grievance.

"From Door to Shore." — Newcastle Transport Committee have re-introduced their tram-cum-bus excursions to Seaton Sluice. No charge is made for tramway transport to the bus terminus in the Haymarket, Newcastle. The return fares of 1s. 6d. for adults and 9d. for children cover the cost of transport from any other point on the Corporation tramway system to the seaside.

New Viaduct. — The new L.N.E.R. viaduct over the Blyth, between Bebside and Bedlington, was opened on July 20th. The old structure was the last remaining wooden trestle bridge of its size in the North of England.

MIDLAND.

New Birmingham Bus Routes. — A third circle to be known as the City Circle is to be added to Birmingham's bus routes. The city already has an Outer and an Inner Circle route and the new city route will be a kind of inner-inner circle. Before it can be inaugurated, however, several of the streets to be traversed need to be re-conditioned and put in order for carrying motor buses. This will cost over £35,000.

HULL.

Proposed Humber Bridge Near Hull. — Frankly, the response received to the proposal for constructing a bridge over the River Humber, near Hull, is disappointing to the Hull Corporation who are the prime movers in the scheme. The various local authorities on both sides of the river, with one or two exceptions, show little enthusiasm in the matter. The Minister of Transport has officially announced that he is prepared to make a grant of 75 per cent. towards the cost which is estimated to be about 1¼ million pounds. Hull Corporation has passed a resolution to contribute £200,000, but this will not be adequate if the other authorities do not come along with their anticipated contributions. There are members of the City Council who will advocate Hull increasing its proportion and making up the whole of the balance if necessary, but they will have to reckon with the general body of ratepayers. The sanction of the ratepayers will be required to the promotion of the enabling Act of Parliament, and judging by the fate of the scheme for the abolition of the level crossings, that is hardly likely to be given.

SOUTH WALES.

Western Welsh Omnibuses, Ltd. — Mr. T. E. Rees, Traffic Supt. at the Cardiff headquarters of the Western Welsh Omnibuses, Ltd., has been promoted to take charge of the Port Talbot Branch, a change that has been made desirable by the success of the new Cardiff-Port Talbot limited stop service. Messrs. Knot & Wells, Ltd., the contractors, have commenced work on the construction of the new Cardiff headquarters offices and garage of the Western Welsh Omnibuses, Ltd., at Ely Garden City, near Cardiff.

SCOTLAND.

Transporting a Heavy Gun.—Messrs. Raines and Co., of Stirling, carried through recently the transport of a 7½-ton gun from Stirling to Dunoon. Use was made of a 30 h.p. Latil tractor and the gross weight pulled was over 10 tons, the load being over 40 feet long. The road taken included some stiff inclines, and at one part, that leading to the fort where the gun was taken, the gradient is one in seven. The job was completed satisfactorily.

Heavy Electrical Equipment Goes by Road.—Messrs. Coulson & Co., Ltd., heavy haulage contractors, Park Royal, London, N.W., carried through the transport by road to Loch Rannoch of a 67-ton transformer from Rannoch Railway Station in connection with the Grampian electricity scheme. The outfit, in all, weighed over 100 tons.

Holiday Bus Traffic. — During July the holiday bus traffic from Glasgow was much heavier than last year. Nearly all routes were better patronised and the services to England had to be greatly augmented. Thomson's Bus Bureau were compelled to send over the Border for about 100 vehicles to cope with the demand on Fair Saturday. The work of controlling the passengers called for no little skill in organisation.

Leyland "Tiger" Coaches.—The Midland Bus Services, Ltd., Dundas Street, Glasgow, took delivery recently of four Leyland "Tiger" coaches. Upholstered in moquette and with complete long-distance travelling comforts the coaches will be on the Glasgow-London run.

IRISH FREE STATE.

Speed Regulations for Heavy Motors in the Irish Free State. — Recently the Ministry for Local Government issued the Heavy Motor Car (Speed) Order, 1930, relating to the speed of motor vehicles in the Irish Free State. By this Order the speeds for motor vehicles have been regulated as follows:—All single-deck cars, all the wheels of which are fitted with pneumatic tyres, 20 miles per hour, or if drawing a trailer all the wheels of which are fitted with pneumatic tyres, 15 miles per hour, or if drawing a trailer any of the wheels of which are not so fitted, 10 miles per hour. A double-deck car all the wheels of which are fitted with pneumatic tyres, 15 miles per hour, or if drawing a trailer all the wheels of which are fitted with pneumatic tyres, 10 miles per hour, or if drawing a trailer any of the wheels of which are not so fitted, 5 miles per hour. A single-deck car all the wheels of which are fitted with tyres of a soft or elastic material, 15 miles per hour, or if drawing a trailer, 10 miles per hour. A double-deck car all the wheels of which are fitted with tyres of a soft or elastic material, 10 miles per hour, or if drawing a trailer, 5 miles per hour. A car of any description other than of a description specified in the foregoing, 5 miles per hour.

NORTHERN IRELAND.

Buses in Belfast.—Belfast buses having shown a loss of £20,714 during the last financial year, the Tramways Committee have asked the Northern Ireland Road Transport Fares Tribunal to make certain alterations in the fares. Hitherto, on routes where a 3d. ticket is the maximum single fare, 5d. return tickets were issued, but the Committee wish to abolish these. They also wish to increase the maximum single fares on some routes. Councillor M'Clure, in his evidence before the Tribunal, said the Corporation had hope of establishing a universal penny tram fare. The Tribunal will give a decision in due course.

Railway Bus Services. — The Great Northern Railway Co. (Ireland) have purchased the buses of Messrs. Roberts & Co., Londonderry, operating the services between Strabane, Castlederg, and Newtownstewart, and are now running them.

Publications Received.

BACON'S "FOUR INCH" ATLAS OF LONDON.—Published by G. W. Bacon & Co., Ltd., London, E.C.4. Price 52/6 net, strongly bound in cloth, gilt lettered. 70/-net, in half morocco, gilt top, gilt lettered.

We have received a copy of an entirely new and revised atlas entitled "Bacon's 'Four Inch' Atlas of London." Everyone interested in maps will find this atlas of very great interest, giving as it does information which in the ordinary way is considered to be outside the scope of such a production. To the business man as well as to the householder anxious to have the fullest information about the part of London in which he resides, and to every motorist, the book is packed full of useful information. All recent new estates, by-pass and arterial roads, street alterations, etc., have been included.

The work is divided up into sections:—

1. Maps of the Home Counties.—Clear, useful road maps of the seven "Home Counties" showing Parliamentary Boroughs and Divisions.

2. Special Maps of London.—A series of seventeen maps showing clearly the various and very different areas administered by one or other of the numerous authorities having power of control in some form or other over the city, County, and Neighbourhood of London. These include the City of London, showing Wards, Postal Districts, Police Divisions, Railways, Water Supply, Electric Supply, Gas Supply, Underground and Electrified Railway Systems, Sports Grounds, Police Courts, Petty Sessions, Parliamentary Divisions, Metropolitan and Parliamentary Boroughs, Urban and Rural Areas, The Port of London and River Thames showing Wharves, Fire Brigades, Registration Districts, Coroners' Districts.

3. Index Map to Four Inch Scale sheets.

4. Four Inch Scale Maps.—35 Double-page Maps, each measuring 21 by 14 inches, covering an area of 440 square miles, and including Harrow, Finchley, Woodford, Chadwell Heath, Barking, Plumstead, Orpington, Farnborough, Purley, Epsom, Esher, Hampton Court, and Hounslow. Main roads are coloured, railways black, water blue, sub-postal districts red, public parks and open spaces green, private grounds lighter green.

5. A New Alphabetical Index of over 20,000 Street Names, which includes every street shown in the Atlas.

ROAD TRANSPORT OPERATION. PASSENGER.—By R. Stuart Pilcher, F.R.S.E., M.Inst.T. Sir Isaac Pitman & Sons, Ltd., Parker Street, Kingsway, W.C.2. Price 10/6 net.

This book is a new addition to Pitman's Transport Library and it gives a very comprehensive survey of the problems to be met with in modern passenger road transport operation and how they may be overcome.

The motor bus of to-day has reached a higher stage of development than the tram car so the author devotes himself only to the case of the motor bus, but he has much to say about the reconstruction of tram cars in order to bring them to the level of the motor bus for speed and comfort.

The latter half of the book is devoted to the financial and industrial aspects of the running, repair and overhauling departments of the transport undertaking.

The author has not contented himself with one particular undertaking as an example, but has brought to his readers' knowledge many of the good points of Continental and American practice.

HISTORY OF THE CANTERBURY AND WHITSTABLE RAILWAY.—By Rev. R. B. Fellows, M.A., LL.M. J. A. Jennings, Ltd., City Printing Works, Canterbury.

This book has been published to coincide with the centenary of this railway, which took place on May 3rd, 1930. Besides giving a complete history of the railway to the time when it was bought up by the old South Eastern Railway in 1853, there is a chapter devoted to the earlier proposed forms of transport between Canterbury and the coast.

The railway was the first in England which used steam power for hauling passenger trains. Season tickets were also issued for the first time on this railway and soon after the opening of Whitstable harbour, "carriages of a new description" or containers were introduced. The book is filled with many other interesting points and contains many fine illustrations and plans.

THE ADVERTISER'S A.B.C., 1930.—(Compiled and published by T. B. Browne, Ltd., 163, Queen Victoria Street, London, E.C.4. Price 21/- net). The forty-fourth annual issue of this very useful work has been published and contains all the usual features, which, in the past, have earned for it its right to be regarded as a standard work of reference concerning the Press of the world. The Directory Section, which occupies roughly six hundred pages, has been revised and brought up-to-date and articles dealing with the various phases of advertising are included. The creation and production of modern advertising are described, and the short epitome on the Law and Practice affecting Trade Marks should be found both instructive and informative.

THE MOTOR TRANSPORT YEAR BOOK AND DIRECTORY.—Vol. 14, 1929-30. (Electrical Press, Ltd., 13-16, Fisher Street, Southampton Row, London, W.C.1. Price 27/6 net.) This publication continues to grow in value and importance. It is the only comprehensive annual record of the motor transport industry. It is specially compiled to meet the requirements of the various business interests involved and provides a vast amount of commercial, financial and technical particulars of great value. It is, in fact, indispensable to all concerned in the progress of mechanical road transport. The new edition provides specially compiled information relating to 5,882 undertakings, of which 3,962 are Motor Transport concerns, Motor and Accessory Manufacturing and allied companies; details (including addresses) of 6,500 Directors and Officials engaged in the Industry, and much other valuable information, including the "General Survey," which contains comprehensive statistics of the Industry as a whole. This section also deals with the law governing road motor services, plying for hire, extraordinary traffic, Road Fund administration, Parliamentary Acts and Bills (including Local Bills), and kindred subjects.

ALL A MOTORIST NEED KNOW.—A fourth and enlarged edition of the Dunlop Guide has just been published by Messrs. Ed. J. Burrow & Co., Ltd., of Cheltenham and London, at the price of 5/-. It contains 31 section maps of Great Britain; street plans of every large town; and the parking places, hotels, car repairers, and general points of interest for over 2,000 cities, towns and villages. An extensive list of roadside inns is another feature of practical value, and all the steep hills and the ferries of England, Scotland and Wales are detailed. There is a mass of carefully indexed information regarding car and tyre care, driving signals, police control signals, service depots, road classification, rules of the road, driving licences, and, in short, all a motorist need know.

THE HAGUE RULES EXPLAINED, by Sanford D. Cole, Barrister-at-law. (Effingham Wilson, 16 Copthall Avenue, London, E.C.2. Price 6/-). A third edition has now been published of Mr. Sanford D. Cole's work, "The Hague Rules Explained, being the Carriage of Goods by Sea Act, 1924, with Introduction, Notes and Appendices." The steady sale of previous editions shows that the book has commended itself to all who are concerned with bills of lading transactions—that is, cargo owners, shipowners, underwriters, bankers and commercial lawyers—and in the new edition the work has been revised and in all respects brought up to date, all cases of importance decided since the Act was passed having been included. The Introduction traces the history of the Hague Rules until they were made statutory, and the body of the book gives the text of the Act and Statutory Rules with full explanatory notes. American, Canadian, and Australian Acts are also dealt with, and the text of these is included in the Appendices.

Forthcoming Events.

Sept. 16th to 19th.	Ardington nr. Wantage.	World Agricultural Tractor Trials.
Sept. 24th to 26th.	Harrogate.	Conference of the Municipal Tramways and Transport Association.

British Association of Shipping and Forwarding Agents.

Council Meeting.

A MEETING of the Council of the British Association of Shipping and Forwarding Agents was held in the London Chamber of Commerce on 9th July last.

Mr. A. W. Heard (Jones, Heard & Co., Ltd., Newport, Mon.), the Chairman of the Association, presided, and there were present:—Vice-Chairmen: Mr. M. E. Duffett (J. D. Hewett & Co., Ltd., London), Mr. Norman N. Bird (Herbert Watson & Co., Ltd., Manchester), and Mr. W. H. Elder (W. H. Elder (Shipping), Ltd., Hull); Members of Council:—Mr. F. H. S. Rouse (The American Express Co., Inc.), Hon. Treasurer; Mr. J. B. Ballantyne (J. B. Ballantyne & Co., London); Mr. J. B. Bower (F. Bower & Co., Liverpool); Mr. Frank J. Gerson (Rosenberg, Loewe & Co. (Succrs.), Ltd., London); Mr. W. O'Brien (G. W. Sheldon & Co., Ltd., London); Mr. J. B. Taylor (Immediate Transportation Co., Ltd., London), and Mr. E. W. Turvey (Nunzi & Co., Ltd., London).

Apologies for inability to attend were received from:—Mr. K. F. Harker (Harker, Shield & Co., Ltd., Hull), Mr. A. MacCulloch (MacCulloch, McLellan & Pollok, Glasgow), Mr. G. W. Robertson (Robertson, Buckley & Co., Ltd., Liverpool), Mr. A. Faulkner (Crowe & Co. (London), Ltd., Manchester), Mr. W. H. James (James & Hodder, Bristol), Mr. T. Heyman (Morison, Pollexfen & Blair, Ltd., London), and Mr. C. E. Sanderson (Sanderson's Express, Ltd.).

Incorporation.—The Chairman said that the question of incorporation was expected to reach finality in the very near future and revised copies of the Memorandum and Articles of Association had been signed by the Officers of the Council.*

Humber Steamship Owners' Conference.—The Secretary read a letter which had been received from the Humber Steamship Owners' Conference stating that they could not grant the concession desired by the Association in the letter to them of the 5th March, 1930, for the reason that any deviation from the existing arrangements was likely to cause unsurmountable complications in the trades conducted by the Humber Steamship Owners.

Freight Rates from U.K. to U.S.A.—A member drew attention to the following paragraph appearing in *The Journal of Commerce*:—"The question of minimum freight rates from the United Kingdom to the United States has been under discussion by the general trade committee of the Liverpool Chamber of Commerce, and at yesterday's meeting of the Chamber a minute in the proceedings of the committee stated that: It was unanimously agreed that particulars of this and other freight grievances be collected and that the shipping conferences concerned should be asked to receive a deputation from the chamber; also that the Mersey Docks and Harbour Board be asked to co-operate by appointing a member to attend this deputation."

Finance.—The meeting received and unanimously adopted the statement of accounts as drawn up by the Hon. Treasurer, which showed a satisfactory financial position.

International Federation of Forwarding Organisations.—Mr. F. J. Gerson, who represented the Association at the Congress of the International Federation of Forwarding Organisations held in Antwerp recently, gave an account of the proceedings.†

Mr. Gerson made special reference to the generous hospitality which all delegates received from the Belgian Association on this occasion.

The Chairman moved a hearty vote of thanks to Mr. Gerson for representing the Association at the Congress, and for the excellent report he had made. This motion was carried unanimously.

International Congress in London.—When at Antwerp Mr. Gerson learned that the Hungarian Agents were anxious to hold the 1932 International Congress in Budapest, which would mean that the British Association of Shipping and Forwarding Agents would have to defer its invitation for the London meeting until 1933. From the point of view of the British Association of Shipping and Forwarding Agents, this was considered to be a satisfactory arrangement.

The meeting terminated with a hearty vote of thanks to the Chairman for presiding.

*As announced below, the Association was registered on July 14th.—Editor.

†A full report of this Congress was printed in our July issue.—Editor.

* * * *

Registration of the National Body.

THE British Association of Shipping and Forwarding Agents (Incorporated) was registered on July 14th, as a company limited by guarantee, without share capital, with an unlimited number of members, each liable for £1 in the event of winding up. The income and property of the Association, whencesoever derived, shall be applied solely towards the promotion of its objects. The word "Limited" is omitted from the title by licence of the Board of Trade. The objects are to promote, watch over and protect the interests and welfare of shipping and forwarding agents in Great Britain and Northern Ireland, and the shipping and forwarding business in general; to act as a united and representative body for purposes of communication and negotiation with other similar bodies and conferences, etc.

It was towards the end of 1927 that the first move was made with a view to forming a national association of shipping and forwarding agents when it became apparent that the need for such an association was becoming acute.

It was considered that the time had arrived when great efforts should be made to develop and extend the activities of local associations by the formation of a National Association of British Forwarding Agents.

At a meeting held at Nottingham in January, 1928, the British Association of Shipping and Forwarding Agents was formed, Mr. A. W. Heard, of Jones, Heard & Co., Ltd., Newport, being appointed Chairman. Then followed a meeting held at Birmingham in March, 1928, when the Memorandum and Articles of Association were approved and adopted.

Whilst recording the registration of the Association we would remind our readers, even though we feel that such a reminder is unnecessary, that the Association has already to its credit a record of over two years extremely useful work.

The policy of the Association is developing upon broad lines in keeping with its objects, and membership of the British Association of Shipping and Forwarding Agents will tend not only to raise the status and prestige of those who belong to it, but shippers and shipowners are regarding membership of the Association as the hall-mark of a firm's commercial standing and respectability.

The Association is now fully launched on its voyage of achievement. No limit can be set to what it can do. What it will accomplish in the course of time will be governed to a considerable extent by the measure of support accorded by all shipping and forwarding agents to the management which is vested in a Council the first members of which are:—Mr. A. W. Heard, first Chairman (Jones, Heard & Co., Ltd.); Mr. M. E. Duffett (J. D. Hewett & Co., Ltd.), Vice-Chairman; Mr. W. H. Elder (A. H. Elder [Shipping], Ltd.), Vice-Chairman; Mr. N. N. Bird (Herbert Watson & Co., Ltd.), Vice-Chairman); Mr. F. H. S. Rouse (American Express Co., Inc.), Honorary Secretary and Treasurer; Mr. J. B. Ballantyne (J. B. Ballantyne & Co.); Mr. J. B. Bower (F. Bower and Co.); Mr. A. Faulkner (Crowe & Co. [London], Ltd.); Mr. F. J. Gerson (Rosenberg, Loewe & Co., Succrs., Ltd.); Mr. K. F. Harker (Harker, Shield & Co.); Mr. H. Harrison (Oughtred & Harrison, Ltd.); Mr. T. Heyman (Morison, Pollexfen & Blair, Ltd.); Mr. W. H. James (James & Hodder); Mr. A. MacCulloch (MacCulloch, McLellan & Pollock); Mr. W. O'Brien (G. W. Sheldon & Co., Ltd.); Mr. G. W. Robertson (Robertson, Buckley & Co., Ltd.); Mr. C. E. Sanderson (Sanderson's Express, Ltd.); Mr. J. B. Taylor (Immediate Transportation Co., Ltd.); Mr. E. W. Turvey (Nunzi & Co., Ltd.) and Mr. J. O. Wood (T. F. Wood & Co., Ltd);

The office of the Association is at 97 Cannon Street, London, E.C.4.

London Shipping and Forwarding Agents' Conference.

A GENERAL MEETING of the Members of the London Shipping and Forwarding Agents' Conference was held at the London Chamber of Commerce on July 21st last.

The President of the Conference, **Mr. M. E. Duffett** (J. D. Hewett & Co., Ltd.), presided, and the following gentlemen were present:—Mr. J. B. Ballantyne (J. B. Ballantyne & Co.), Mr. W. Beckmann (The World Transport Agency, Ltd.), Mr. Frank J. Gerson (Rosenberg Loewe & Co. Succrs., Ltd.), Mr. A. Goddard (Carter, Paterson & Co., Ltd.), Mr. R. Hangarton (Compton's, Ltd.), Mr. W. O'Brien (G. W. Sheldon & Co., Ltd.), Mr. E. Palmer (The Northern Transport Agency, Ltd.), Mr. G. Perry (The British Commercial Transport Co., Ltd.), Mr. F. H. S. Rouse (The American Express Co., Inc.), Mr. W. Schneider (The European & General Express Co., Ltd.), Mr. G. Smith (The United Express Co., Ltd.), Mr. R. J. Smith (Sutton & Co., Ltd.), Mr. S. F. R. Smith (E. W. Taylor & Co. (Fordg.), Ltd.), Mr. J. B. Taylor (The Immediate Transportation Co., Ltd.), and Mr. E. A. Aves, Hon. Treasurer (J. D. Hewett & Co., Ltd.).

Apologies for inability to attend were received from:—Mr. H. Gilbert (G. W. Sheldon & Co., Ltd.), Mr. E. N. Westfield (Chas. Atkins & Nisbet, Ltd.), and Mr. L. G. Stockwell (Stockwell & Co., Ltd.).

The President, in his report to the meeting, briefly touched upon the following important matters, *inter alia*, which have been dealt with by the Conference:—

Export Rates on India Rubber.—It had been brought to the notice of the Conference by a member that the Port of London Authority and the Association of Public Wharfingers were considering an arrangement among the wharves appointed for Rubber warehousing. This combination, it was understood, would quote f.o.b. delivery rates which were less than actual cost of the services necessary, having regard to the fixed wharfage and delivery to van rates prescribed by the P.L.A. The Conference had most strenuously opposed this scheme, and, although the latest official information from the P.L.A. is to the effect that the arrangement would be continued for an experimental period of twelve months, it is hoped that later it will be modified to meet the needs of shipping and forwarding agents generally.

Forwarding Insurance.—This matter had been under consideration by the Conference for a considerable time. The Committee formed for the purpose of investigating a scheme of insurance along the lines of that in force in Germany, whilst generally agreeing to the proposal, were in some doubt as to the fixing and recovery of the premium. An opinion had been obtained from a Lloyds firm of underwriters which was to the effect that they did not consider it possible to formulate a scheme which could be considered to be commercially attractive from the point of view of the Conference. It had, therefore, been reluctantly agreed to let the matter drop.

Competition experienced by a member from a certain Railway Company in respect of transport of goods to Switzerland.—Following upon a complaint received from a member to the effect that a certain Railway Company was endeavouring to secure traffic (which was being shipped by the member to the Continent in accordance with the consignees instructions) for their Tilbury/Dunkirk routes—the traffic having been conveyed from a provincial town to London by the Railway Company in question—interviews had been obtained with the Chief Goods Manager of the Railway Company. The latest information in regard to this matter is that the firm in question is now in direct touch with the Railway Company, and is quite satisfied that such measures will now be taken as will prevent a recurrence of the trouble.

Export Rates on Traffic to be delivered intermediately in London.—Since August last transactions have been in progress with the Railway Clearing House with a view to getting the Railway Companies to agree to a re-institution of the arrangement which existed prior to 1921, whereby Agents were conceded special rates on export traffic when delivered to Agents' premises intermediately. A deputation, consisting of the President, Mr. Turvey, and Mr. Hernu, attended a meeting with the Railway Officials on the 7th May last, when it was decided that the concession would be granted (under conditions embodied in a Bond, which would have to be entered into) to certain firms who could be regarded strictly as Shipping and Forwarding Agents. This concession will be put into operation so soon as all members interested had completed and returned their Bonds.

Duties.—In regard to this all-important matter, intersectional meetings were held early in the year to consider the fixing of a scale of charges for entry and clearance of free goods, which could be applied on the withdrawal of the duties in the Spring Budget. After lengthy consideration, a scale of charges had been agreed, which came into force in the spring of the year, and had been well and consistently adhered to.

Traffic to Ireland.—A member had recently raised a query in regard to traffic to Ireland. The Railway Companies had been charging each parcel as a separate consignment when sent by passenger train, but were allowing the parcels to be grouped in one consignment when sent by goods train. The matter was taken up by the Conference with the Railway Clearing House, and it had been agreed that, provided parcels are delivered to the Railway Company at one time and are entered on one form of declaration and consignment note, the total weight will be charged at the appropriate scale of Customs Clearing Charges.

In concluding his report to the meeting, the President drew special attention to the good work accomplished by the Conference. He urged members to bring any queries they may have to the notice of the Conference, so that they may be thoroughly investigated and settled amicably for all concerned.

The Chairmen of the various Sections reported as follows:—

Air Section.—As a result of negotiations with Imperial Airways, early in the year a circular had been sent to all members of the Section confirming the agreement which had been arrived at with Imperial Airways in regard to the groupage of parcels under their D/D Rates. The Air Company had previously contended that if an Agent entered his own goods they could not permit him to group them, but would expect him to pay the schedule rates. It was finally agreed that Shipping and Forwarding Agents who maintain their own offices at Croydon Aerodrome and pass their own Customs Entries will be entitled to group together the consignments which they collect from their clients provided that the goods are sent from one consignor Agent to one consignee Agent, to be delivered to the address of the latter only.

American Section.—This Section continues to hold meetings regularly, the minutes of which are circulated to all members of the Section. The following are some of the matters under consideration at the present time:—British Railway Competition in New York; Minimum Ocean Freight Rates Westbound; Amalgamation of Forwarding Interests; Insurance Scheme; and Customs Entry.

The membership of the Section is open to all members of the Conference and is well representative of the Trade and, therefore, no apprehension need be felt that matters of importance to those engaged in business between U.S.A. and Canada are not being well and closely watched.

French Section.—This Section has held its usual monthly meetings, which have been very well attended and matters have been dealt with satisfactorily. Altogether a very friendly and active spirit permeates the membership of this Section.

German Section.—This Section has been rather inactive of late. It held one or two meetings early in the year to consider the effect the removal of the duties would have on business, and to make recommendations in regard to fixing a scale of charges for Customs entry and clearance of free goods.

The President drew the attention of the meeting to the fact that no Chairman had yet been elected for the German Section, and asked the meeting whether they had any nominations to put forward.

After lengthy discussion, Mr. F. J. Gerson agreed to be re-elected to the Chair, and an appropriate resolution was passed to that effect.

Annual Dinner.—The question of the fixing of the date of the Annual Dinner was brought forward. A suggestion was put forward that it would perhaps be a good idea to fix the date of the Annual Dinner of the Conference to synchronise with the Annual General Meeting of the British Association of Shipping and Forwarding Agents, which meeting was arranged to be held in London next year. This proposal met with general approval.

Negotiations with German Associations.—The President mentioned that the Conference is in constant touch with the Verein Deutscher Spediteure and with the International Federation of Forwarding Organisations. In conjunction with these Associations, the Conference has been successful in settling small accounts outstanding both for members of the Conference, and on behalf of members of the European Associations.

Port of London Authority.

Reductions in London Port Charges.

At their meeting on July 17th the Port of London Authority decided to lower certain of their charges.

These consist mainly of reductions in the dock tonnage dues on vessels and in the port rates on goods. The extent of the reductions is estimated in round figures at £120,000 per annum.

This will represent a considerable relief to the traffic of the Port of London and will doubtless be appreciated at a time when the trade of the country is not in the most flourishing condition.

It will be of interest to note that since the 1st January, 1925, the reductions made by the Authority on various occasions during that short period of five and a half years amount in the aggregate to an annual sum of £942,000, which figure includes the reductions now decided upon. Of that amount of £942,000, £150,000 was passed on in reduction of charges last year consequent upon the relief obtained by the Authority under the Government De-rating Scheme.

The large amount of reductions made in charges apart from the de-rating benefit, has been found possible by the Authority owing to increased tonnage in certain directions and on account of more economical and efficient working arrangements.

Details of some of the reductions are now available. Although amended Schedules of Charges have not yet been published, it is announced that the main reductions will be as follows:—

PORT RATES ON GOODS.

A reduction of 5 per cent. off the Foreign Inward and Outward Rates.

DOCK RATES ON VESSELS.

The reductions consist principally of:—

Class 1 vessels—Dues reduced by 1d. from 1s. 10d. to 1s. 9d. per n.r.t.

Class 2 vessels—Dues reduced by 1d. from 7d.-10d. scale to 6d.-9d. scale per n.r.t.

Rent on vessels reduced from 7/16d. to 3/8d. per n.r.t. per day, or in the case of vessels trading coastwise or to and from Home Trade Ports, 2/7d.

These reductions come into operation on the 1st September next.

For charging purposes vessels in Class 1 are those laden from ports or places outside Europe, the Mediterranean and the Black Seas, and vessels with transhipment goods from such ports or places. It also includes vessels loading for these ports or places.

Class 2 is in respect of vessels from or for all ports in Europe (excepting ports in Great Britain and Ireland) and ports in the Mediterranean and the Black Seas.

The total tonnage of vessels that used the Port of London during the 12 months ended 31st March was over 58,500,000 net registered tons.

London Imports.

Preliminary figures obtained from the Board of Trade show that the total value of the overseas trade of the United Kingdom, imports and exports, during 1929, was £2,059,816,450, an increase of £20,355,704 over 1928. The Port of London's share of this trade was £705,237,524, or over 34 per cent. of the whole. London's proportion of the increased traffic over 1928 was equal to £12,500,000, or 61 per cent. of the national increase in trade.

Imports were responsible for the increase and amounted to £1,220,765,300 for the whole country. London's share was £480,155,455. This total is £14,107,773 greater than in 1928 and is considerably greater than the combined import traffic handled by the next five largest ports in the Kingdom, viz., Liverpool, Hull, Manchester, Southampton and Glasgow, the grand total for these ports being £445,835,051. Thus the import trade of London was more than double that of Liverpool, six times that of Hull, seven times that of Manchester, eleven times that of Southampton and sixteen times that of Glasgow.

Mr. L. C. Harris, presiding at the Annual Meeting of the General Shipowners' Society, referred to the Port of London as "the most efficient port in the world."

P.L.A. Official Visit to Antwerp.

British Week at the Antwerp International, Colonial and Maritime Exhibition commenced on July 17th, and the Chairman of the Port Authority, Lord Ritchie of Dundee, a number of the members of the Board and some of the principal officers of the Authority crossed to Antwerp and made a tour of the Port of Antwerp at the invitation of the Municipality and also made a tour of the Exhibition. The Port Authority have a stand at the Exhibition, the principal feature of which is a large scale diorama of the Royal Victoria and Albert and King George V. Docks System, the largest single sheet of artificial dock water in the world.

Examples of Modern Shipbuilding.

M/V. "Cement Karrier" at Newport Docks.

A VESSEL which probably exemplifies the trend of future developments in marine propulsion loaded a cargo of steel sheets for Canada at the Great Western Railway Newport Docks between the 21st and 23rd July.

This vessel—the "Cement Karrier," recently built at Middlesbrough for the Canada Cement Company of Montreal—is designed solely for the conveyance of cement in bulk on the Canadian lakes and her construction incorporates the most modern ideas and inventions for dealing with this class of traffic.

In appearance the vessel is somewhat similar to an oil-tanker with a suggestion of the submarine. The engines, which are diesel-electric, are situated aft, and the bridge is forward.

The vessel's holds, as is of course very necessary in a craft destined to carry bulk cement, are perfectly water tight, the hatch-covers on a normal type of cargo steamer being substituted on this ship by steel plates which are screwed down after the cargo has been loaded.

Two tunnels run practically the whole length of the ship, into which the bulk cement is allowed to fall. These tunnels are fitted with "scrapers" which push the cement forward into containers from which it is discharged through pipes by compressed air. Thus the cost of packing the cement in bags, casks or drums, as is usual in this country, is entirely eliminated, as also is the cost of provision of labour, etc., to discharge the cargo.

The ship is actually driven by the Master from the bridge, where an appliance similar in appearance to an ordinary ship's telegraph provides the connecting link between the electrical plant and the movements of the vessel. Everything aboard is driven by electricity and is directly controlled from the bridge.

The electrical equipment of the ship was entirely installed by the General Electric Company, which firm it is interesting to note are at present equipping a new passenger liner of 22,000 tons with somewhat similar engines. Instead of being diesel-electric, however, as in the "Cement Karrier," these will be turbine-electric.

The cargo of steel sheets loaded at Newport under the agency of Messrs. George Stevenson & Company, totalled approximately 1,200 tons.

M/V. "CEMENT KARRIER" AT NEWPORT DOCKS.

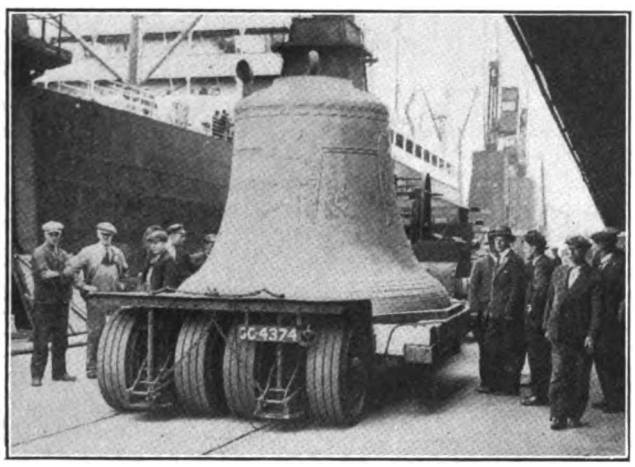
News from the Ports.

Inspection of the Wear.—Thirty members of the Newcastle and district section of the Institute of Transport paid their first official visit to the Wear at Sunderland recently, viewing the shipyards and coal staiths at work. The party then returned to the South Docks, around which they were conducted by Mr. F. Humble, General Manager of the River Wear Commissioners.

"The River Tyne: Its Trade and Facilities." — The official handbook issued under the auspices of the Tyne Improvement Commission, the L.N.E.R. and Tyneside Corporations, has now reached its second edition and incorporates many new and interesting features. Ably edited by Mr. R. W. Johnson (author of "The Making of the Tyne") and Mr. Richard Aughton (General Manager of the Tyne Improvement Commission), it contains numerous illustrations, maps, etc., and should prove of incalculable value to all interested in the North East Coast, one of Britain's oldest and busiest industrial centres.

A Ringing Cargo.—The bell shown in the picture is one of a Carillon of 72 bells given to the Park Avenue Baptist Church, Riverside Drive, New York, by the Rockefeller family. It was made by Gillett & Johnston, the famous bell



THIS BELL IS ONE OF A CARILLON OF 72 BELLS, SHIPPED BY THE AMERICAN MERCHANT LINES TO NEW YORK.

founders of Croydon, the weight of the bell being just about 20 tons. For the first time in history, a Carillon compass of five octaves has been achieved, and, in fact, exceeded. The whole Carillon, totalling 72 bells, has been handled by the American Merchant Lines, the bell in the picture having been shipped, together with five others of varying weights, and over 100 tons of bells and girder work have been handled, apart from the machinery and many other packages of miscellaneous parts and fittings.

Port of Bristol Authority.—We have received a copy of the Annual Report of Mr. Thomas A. Peace, the General Manager of the Port of Bristol Docks, made to the Chairman and members of the Bristol Docks Committee. The Report is for the financial year ended 31st March last upon the working of the Docks Estate, and it is pointed out that during the period under review the hopes of a revival in the trade of the country were not realised. Generally speaking, however, despite the severe competition amongst the ports for overseas traffic, Bristol maintained its relative position. The net financial result for the year was, all things considered, satisfactory. In consequence of the appeal from the Government to local authorities and public bodies to undertake works for the relief of unemployment, the Authority has put in hand several schemes of minor works involving an estimated capital expenditure of £25,200. The number and register tonnage of vessels entering from foreign ports showed an increase over preceding years. The register tonnage was the highest so far recorded, being 2,318,890 tons compared with 2,144,522 tons in 1929 and 2,119,592 tons in 1928. The weight of cargo discharged, however, did not increase in the same proportion as the register tonnage and was only 90.2 per cent. of the register tonnage compared with 97.4 per cent. in 1929 and 101.1 per cent. in 1928. The total weight of foreign imports was slightly more than that for the previous year. A gratifying feature has been the development of trade with West Africa. The officers of the Authority have been making special efforts for many years to extend trade in direct imports from New Zealand and there are now better prospects of improved steamship services, and increased shipments of New Zealand produce to the Port are indicated. Arrangements have been made for Mr. A. C. Whitlam, of Melbourne, to act as honorary representative of the Port in Australia.

To inspect Port facilities.—Members of the Tyne Improvement Commission, headed by its Chairman, Lord Kirkley, have been visiting Antwerp and Rotterdam to inspect port facilities. Lord Kirkley stated subsequently that they had been greatly impressed by the foresight manifest in those great ports and had enjoyed the experience thoroughly.

White Star Line's New Motor Vessel, "Britannic."—The White Star Line's new motor vessel, "Britannic," completed last month her first round trip voyage. The Company received very gratifying reports on the behaviour of the ship at sea, the engines working with extraordinary smoothness.

Liverpool Shipping and Forwarding Agents' Association. Handbook, 1930. — A useful handbook has been issued by the Liverpool Shipping and Forwarding Agents' Association. It is edited by Mr. S. L. Jude, the Secretary of the Association, who, in the foreword, points out that the chief object of the handbook is the provision of a clear and concise reference for shippers through the Port of Liverpool to the members of the Association. An article on the Port of Liverpool by Mr. L. A. P. Warner, C.B.E., the General Manager and Secretary, Mersey Docks and Harbour Board, and an article entitled "Shipping and Forwarding in Liverpool," by Mr. S. L. Jude, are two of the very interesting features in the book. There is a complete list of members of the Association with their telephone numbers and telegraphic addresses. The registered office of the Association is at Lloyds Bank Building, Victoria Street, Liverpool.

Liverpool Trade.—According to the annual statement of the Mersey Docks and Harbour Board the approximate weight of goods which passed over the dock quays in the year ending 1st July, 1930, was 14,282,000 tons on which dues were paid. The approximate total tonnage of shipping inwards and outwards for the year just ended was 42,629,640 tons. The grand total of receipts (which include the Conservancy accounts) was £2,789,950 which is a decrease of £65,892 on the previous year.

Manchester Traffic Returns. — The Manchester Ship Canal Company has furnished us with their traffic return for the half year to 30th June. Traffic receipts amounted to £683,809, as compared with £745,169 for the corresponding period of last year—a decrease of £61,360. The net revenue of the whole undertaking for the half year (after providing for interest and fixed charges) was £36,498 less than for the corresponding period of 1929 The result reflects the reductions in charges made largely in consequence of the de-rating scheme which operated during the whole of the half year and was also adversely affected by the strike at the Manchester docks in April last.

Southampton Docks.—An imposing spectacle was presented at the Southampton Docks last month when the three largest liners in the world, the "Majestic," "Leviathan" and the "Berengaria" were berthed together in the Ocean Dock. Although the volume of ocean passenger traffic this year has not equalled the proportions attained last year, at Southampton there appears to be very little diminution in the number of voyagers passing through. Partly due, no doubt, to the new cross-Channel ships placed on the Southern Railway Company's service between Southampton and the Channel Islands, and also to the increasing popularity of Continental holidays, a substantial advance has been made this season in the cross-Channel passenger traffic so that when considered in conjunction with the ocean traffic the total number of passengers dealt with this year has exceeded that of any previous period. The new liner, "Winchester Castle," of 20,000 gross tons, built for the Union-Castle Mail Company's express service between Southampton and South African ports is scheduled to make her maiden voyage from these Docks on October 24th, whilst another fine addition to the shipping using the Port will be made when the new Canadian Pacific liner, "Empress of Britain," 40,000 tons gross, joins the Company's Canadian service to Quebec early next season.

Air Transport Notes.

B.T.H. Magnetos and the King's Cup Air Race.—In this year's King's Cup Air Race, the machines gaining 1st, 2nd and 3rd places and 85 per cent. of the machines completing the course were fitted with B.T.H. Magnetos. Miss Winifred Brown, in an Avro Avian (Cirrus III. engine), was first, Mr. A. S. Butler, in a D.H. Moth (Gipsy II. engine), was second, and Flt.-Lieut. H. R. D. Waghorn, in a Blackburn Bluebird mark IV. (Gipsy I. engine), was third. Miss Winifred Brown also gained the Siddeley Trophy, and Mr. A. S. Butler made the fastest time for the course, his average speed being 129 m.p.h. In all previous King's Cup Races, machines with magnetos manufactured by the British Thomson-Houston Co., Ltd., Coventry, obtained 1st and 2nd places, and in addition to many other notable achievements in the air, B.T.H. magnetos have gained a large number of conspicuous records on land and water.

Flying in the Dutch East Indies.—The K.N.I.L.M. service of Lynx engined Fokkers recently completed 18 months running in the Dutch East Indies. During this period the machines flew 4,849 hours, covering a distance of 484,900 miles, which is equivalent to nearly 20 times round the world. Altogether they conveyed 21,703 passengers, i.e., nearly 4,000 more than the entire European population of Bandoeng. The cargo transport amounted to 203,983 lbs. and the postal transport to 9,784 lbs., this being equivalent to about 311,290 letters or 700 letters daily.

Royal Air Force. Vacancies for Apprentice Clerks.—The Air Ministry announces that vacancies exist in the Royal Air Force for well-educated boys, between the ages of 15½ and 17, to enter as apprentice clerks in October, and in January next. The appointments will be made partly by the direct entry of boys who have obtained an approved school certificate, and partly by means of an open competition which will be held by the Civil Service Commission in October at various centres. Detailed information regarding the apprentice clerk scheme can be obtained from the Royal Air Force (Apprentice Clerks' Department), Gwydyr House, Whitehall, S.W.1. Successful candidates will be required to complete, in addition to the training period, 12 years' Regular Air Force service after reaching the age of 18. At the age of 30 they may return to civil life or may be permitted to re-engage to complete time for pension. Boys entered under this scheme undergo a two years' course of training in clerical duties, typewriting, shorthand, bookkeeping and practical office routine, during which time their general education is continued under a staff of graduate teachers. The apprentice clerks are paid 1/- a day for the first year and 1/6 a day afterwards. The subsequent commencing rates of pay, varying from 3/- to 4/6d. a day (21/- to 31/6d. a week), depend upon the degree of success they achieve at their final examination. In addition, they receive free board and lodging and a uniform allowance.

A Flying Club for Blackpool.—The Blackpool Corporation having provided a municipal aerodrome at Stanley Park, is now fostering a Blackpool Flying Club. An influential Committee has been set up and the enrolment of members is making rapid progress. A clubhouse is being built at a cost of £9,000 and it will be one of the finest in the country. The management of the aerodrome and the flying organisation of the club will be undertaken by National Flying Services, Ltd., who have been granted a seven years' lease of the aerodrome by the Corporation. The Blackpool Flying Club will be the sixth to enter the National Flying Services group, and its members will be able to fly at the sister clubs at Hanworth (London), Leeds, Hull, Reading and Nottingham. Members of these associated clubs will likewise have flying rights at Blackpool. Captain F. C. Crossley has been appointed Chief Instructor and Pilot-in-Charge of the aerodrome.

"Bluebird" Light Aeroplane.—We are informed by Auto-Auctions, Ltd., of Horseferry Road, Westminster, London, S.W.1, that owing to the great success and popularity of the Blackburn "Bluebird" both the manufacturers and Auto-Auctions, Ltd., have decided to go out on a very much extended production programme. Excellent as is the "Bluebird" light aeroplane, at the same time no expense will be spared in keeping the design right up-to-date, turning it out in the best possible manner. By the installation of the latest type of labour-saving machinery and the greatly increased production programme it is possible to effect a saving of £200 per machine and it has been decided to pass this on at once to the public. The price of the "Bluebird" with Gipsy engine is, therefore, reduced from £795 to £595. The "Bluebird" flown by Flight-Lieut. Waghorn in the King's Cup secured third place and the one flown by Mr. T. Rose secured sixth place. The regularity of the running of all the "Bluebirds" entered was a very gratifying feature.

Opening of Radlett Aerodrome.—The July issue of the *Handley Page Bulletin* contains a full report of the opening of the new Handley Page aerodrome at Radlett by Prince George last month. The opening ceremony included a flying display and an exhibition of Handley Page aeroplanes representing twenty-one years' development. Prince George was received by Lord Thomson (Secretary of State for Air), Mr. Worley and Mr. Handley Page. Radlett aerodrome measures 1,400 yards by 700 yards and is situated between Watling Street and the L.M.S. Railway. The article contains some excellent photographs taken on the occasion of the opening of the aerodrome.

Tractor for Airport.—The increasing use of the landing ground at the Manchester airport has caused the Airport Special Committee to decide to purchase a petrol tractor, roller, tail trolley, and lifting jack. The tractor is required not only in connection with ground maintenance but also for hauling the heavy type of aircraft into and out of the hangar. The tail trolley and lifting jack are also required for facilitating the movement of heavy aircraft.

Air-Railway Co-operation in Canada. Great New Organisation.—A Montreal message says that important developments in the evolution of commercial air services in Canada through the co-operation of the Canadian Pacific and the Canadian National Railways, with an influential group of financiers, are foreshadowed in a joint statement by Mr. Beatty, the President of the Canadian Pacific, and Sir Henry Thornton, President of the Canadian National. Comprehensive trunk lines of air services throughout Canada are contemplated under this organisation. It will be under private control but Government sanction is being sought. Generally the main principle underlying the proposed organisation is to establish commercial aviation in Canada on non-competitive lines with ample capital to ensure development along the most economical and national lines. Mr. James A. Richardson, who now controls the Western Canada Airways and other large subsidiary companies in Eastern Canada, is associated with the new scheme.

Bigger Airships Needed for Trans-Atlantic Traffic. But R100 as Comfortable as Ocean Liner.—Wing-Commander Colmore, addressing the Canadian Club, described the construction of the R100 as an experiment which had ended successfully, but said that larger airships, approximating 7,500,000 cubic feet capacity, and ensuring a uniform speed of 70 knots, would be necessary if trans-oceanic flights were to be commercially successful. Wing-Commander Colmore considered that dirigibles would be unable to compete with other methods of transportation over short distances, but came into their own when oceans were to be traversed. Major G. H. Scott, the official observer, described the crossing as uneventful and smooth, except when the airship was forced up temporarily over Quebec by air currents. R100 afforded all the safety and all the comforts of an ocean liner.

Imperial Airways. Liverpool-Manchester-Birmingham and the Continent.—Imperial Airways announce that in deference to numerous requests it has been decided to retard the Southbound Provincial service by two hours. Better and closer connections will be made with the more important Continental Cities, but the change will involve the discontinuance of certain other minor connections. The Northbound Service will run as usual. The revised timings, which came into force as from August 12th last are as follows:—

SOUTHBOUND Read down Tuesdays, Thursdays and Saturdays.			NORTHBOUND Read up Mondays, Wednesdays and Fridays.	
09.00	dep.	LIVERPOOL (Speke Aerodrome)	arr.	19.55
09.20	arr.	MANCHESTER (Barton Aerodrome	dep.	19.35
09.25	dep.	,, ,,	arr.	19.30
10.15	arr.	BIRMINGHAM (Castle Bromwich	dep.	18.40
10.20	dep.	,, Aerodrome)	arr.	18.35
11.40	arr.	LONDON (Croydon) ,,	dep.	17.15

Connecting cars for Southbound Service will leave Liverpool (Adelphi Hotel) at 08.15, Manchester (Midland Hotel) at 08.40 Birmingham (Queen's Hotel) at 09.20. Further particulars obtainable at any of the above hotels, from Northern Air Lines, Ltd., Barton Aerodrome, Manchester, and at all the usual Agencies.

Railway Notes and News.

The Railway Barometer.—The railway traffic receipts of the four group railway companies have now been published for the first 30 weeks of 1930 compared with the same period in 1929 and are as under:—

	1930	1929
	£	£
Passengers, parcels, etc.	41,411,000	42,663,000
Merchandise, etc. ...	36,444,000	38,320,000
Coal, coke, etc.	19,743,000	20,945,000
	97,598,000	101,928,000

Leipzig Autumn Fair.—The L.N.E.R. announce that cheap tickets will be issued from London (Liverpool Street) to Leipzig via Hook of Holland or Flushing in connection with the Leipzig Autumn Fair. These tickets will be issued to passengers holding Fair Membership tickets and will be available outward between August 25th and September 4th, and for return between August 31st and September 13th.

Great Western Railway Appointments.—The Directors of the Great Western Railway have approved the following appointments:—Mr. A. G. Pollard to be Assistant to Chief Accountant; Mr. H. T. Forth to be Assistant to Chief Accountant; Mr. W. Powell, Chief Clerk, D.G.M.O., Cardiff, to be Assistant District Goods Manager, Cardiff.

The G.W.R. at Honiton.—We illustrate a Thornycroft in the service of the Great Western Railway Company

for their Express Cartage Services. It is standing outside a Honiton lace shop and has just delivered confectionery to a café next door, an example of the enterprise of the railways in developing motor transport as an auxiliary to their rail services.

Earl of Cromer Becomes a Railway Director. — The Board of the Metropolitan Railway Company has elected the Earl of Cromer to the seat on the Board rendered vacant by the death of Mr. R. H. Selbie.

L.N.E.R. Appointments. — Mr. A. Tulip, M.Inst.C.E., M.I.M.E., Assistant Docks Engineer, L.N.E.R., has been appointed Chief Engineer for Docks in succession to the late Mr. J. A. Wickham. He will be responsible for the dock engineering work in the North-Eastern Area and at Grimsby and Immingham. The following appointments have also been made:—Mr. F. W. Lamb, General Manager's Office (Scotland) to be Assistant to General Manager (Scotland), in succession to Mr. J. S. Begg, who was recently appointed Passenger Manager for the Company's Southern Scottish Area; and Mr. W. G. Sprague, Goods Agent, Farringdon Street, to be Goods Agent, Bishopsgate, in succession to the late Mr. T. R. Hamilton.

Railway Motor Coaches, Latvia.—His Majesty's Consul at Riga, Latvia, reports that the Latvian State Railway Administration is calling for tenders, to be presented in Riga by the 25th August, for the supply of two 750 m.m. gauge railway motor coaches. Firms desirous of offering such coaches of British manufacture can obtain further particulars of this call for tenders upon application to the Department of Overseas Trade, 35 Old Queen Street, London, S.W.1. Reference number A.X. 10,025 should be quoted.

Railway Education. — The L.N.E.R. announce that a comprehensive scheme of education for their salaried staff during the forthcoming Winter months has now been arranged. The scheme includes courses in technical subjects such as train signalling, passenger and goods accounting, which are conducted by qualified members of the L.N.E.R. staff, as well as courses in the more advanced subjects of Railway Law, Railway Economics, Railway Operating and Railway and Commercial Geography, which have been instituted in co-operation with the Universities of London, Nottingham, Sheffield, Manchester, Leeds, Durham, Edinburgh, Glasgow, St. Andrew's and Aberdeen. The lecture courses, which are optional, will be provided at most of the important centres throughout the L.N.E.R. system, and every facility will be given to encourage the staff to attend in order to improve their knowledge of railway matters.

Novel Publicity Van.—Intended to tour the country to advertise the travel service of the London, Midland and Scottish Railway Co., a new publicity van built on a Rolls-Royce chassis, made its appearance in the industrial section of the Blackpool Pageant a short time ago. Each side of the van is fitted with an electrically-driven revolving screen upon which advertisements, measuring 50 inches by 40 inches, can be displayed. Each advertisement can be so timed as to remain exposed for a period of time, and fourteen different advertisements can be displayed on each side, making twenty-eight in all. At night the screens are fitted with electrically-lighted polished aluminium troughs.

London & North Eastern Railway Magazine.—The current issue of the L. & N.E. Railway Magazine contains a number of solidly instructive articles, others are of a more entertaining, and nearly all are accompanied by interesting illustrations. The principal article is "The Flower Traffic" by Mr. C. J. Selway. Among other interesting items are:—A full page photograph of the King's Cross Literary Society's fine rooms; a visit to the International Railway Congress at Madrid; Hints on Accident Prevention, etc. Ambitious young men will be specially interested in the Traffic Apprentice Examination papers, but every reader may find a little entertainment in going through the questions and mentally answering them —especially the General Paper.

Liverpool Railway Pageant.—Good progress is being made in the arrangements for the great Railway Pageant to be held at Wavertree Playground, Liverpool, in September. We have received from the Chief Librarian, Reference Library, Liverpool, a list of selected and illustrated material on the Liverpool and Manchester Railway in the Liverpool Reference Library. The book which is very interesting has been compiled under the direction of the Chief Librarian by Mr. W. Phillips, F.L.A., and the following is the preface written by Mr. Henry A. Cole, Chairman, Libraries, Museums and Arts Committee:— "The collection of correspondence, views, plans, and other papers, relating to the opening and early history of the Liverpool and Manchester Railway, preserved in the Liverpool Public Library, has been described by Mr. Dendy Marshall—a leading authority on English Railways— as 'one of the most important in the country.' This collection is contained partly in the Reference Library, including material in the Binns Collection of Lancashire Prints and Documents, and to a lesser degree in the Hugh Frederick Hornby Library of Fine Arts. In view of the Centenary celebrations of the opening of the Liverpool and Manchester Railway, to be held in Liverpool in September, 1930, it has been thought desirable to place in the hands of the research worker and general reader a bibliography of the collection referred to above, in order to provide a medium for easy access to the early surveys, maps, Acts of Parliament, views, illustrations of rolling stock, and general literature bearing on the subject."

More Unemployment Schemes. G.W.R. Plans. — The fourth big list of schemes being undertaken in conjunction with the Government for the relief of unemployment, is announced by the Great Western Railway Company. They include various widenings of the line and reconstruction of stations between Didcot and Swindon; Norton Fitzwarren, Somerset, and Exminster, Devon, Filton and Bristol. In addition, substantial enlargement of goods depots are to be carried out at Soho and Lye, in Birmingham area; Swindon and Trowbridge, Wilts. Notwithstanding trade depression elsewhere trade in these districts calls for additional facilities and the extended yards, enlarged warehouses and goods yards, and modernised mechanical appliances will ensure all-round increased facilities to traders.

Law Cases.

GARAGE TO BE DERATED.

A DECISION of importance to garage proprietors was given by Justices Avory, Talbot and Finlay, in the King's Bench division, London, in an appeal by the revenue officer of Middlesbrough against an order of the Recorder of Middlesbrough that the garage premises of Mr. W. H. Bailey, at Ormesby Road, Middlesbrough, should be derated under the Rating and Valuation (Apportionment) Act of 1928.

By a majority, the court held that the premises should be derated.

The premises consist of a garage with repair shop, petrol pumps and a window, where accessories for motor-cars are displayed.

It was contended that most of the time, Mr. Bailey and his employees are engaged on repair work, and the Recorder held that the use of the premises was primarily for repairs to cars, which was a factory purpose that entitled the property to be derated.

The revenue officer, however, argued that the primary use of the place was that of a retail shop, repair work in the garage being ancillary to it.

Mr. Justice Tal[illegible] and Mr. Justice Finlay were of opinion [illegible]sengers, i.e., no[illegible]ll to be derated, and that the Recorder [illegible] population of B[illegible]was right. to 203,983 lbs. a[illegible]y, dissenting, said there were features in being equivalent [illegible]ved that the premises came within the daily. shop.

Royal Air Force [illegible]e court dismissed the revenue officer's The Air Ministry [illegible]d held that the premises should be Royal Air Force fo[illegible]eal was given. of 15½ and 17, to and in January ne[illegible]

TRAILER BRAKES.

partly by the dir[illegible]hed to a case heard at the Frodsham approved schoo[illegible]y when a Bootle motor haulage contractor was summon[illegible] for using a heavy steam wagon with trailer attached, without the trailer being fitted with two brakes in good working order.

It seems that the driver was returning from Chester when he was stopped by a constable. On the constable's instructions the driver applied the trailer brakes and then put the wagon into motion. The trailer brakes did not prevent the trailer wheels from [illegible]volving.

The constable, cr[illegible]s-examined by Mr. E. Steel for defendant, agreed tha[illegible]the trailer brakes were not used for the purpose of pull[illegible]up the vehicle, but were applied when descending hi[illegible]g, duri[illegible]k the motion of the trailer and prevent it overtaki[illegible]steamer by which it was drawn. He agreed that the [illegible]band appeared to be tight up against the brake drum.

Mr. Steel state[illegible]hat, in the event of the magistrates recording a convictio[illegible], such decision would have a far-reaching effect, for the brakes fitted to this particular trailer were of a type fitted to [illegible]most every trailer on the road. The foot and hand brakes on a motor car were designed for the purpose of pulling up the car in the shortest possible distance, in case of emergency, and for this purpose it was necessary that the brakes should lock the wheel. It was an obviously unfair test to expect the trailer brakes to hold back a steam wagon powerful enough to draw a load of several tons. Had the officer tested the brakes under their usual working condition he would have found them efficient and effective for the purpose for which they were designed. Further than that, if the brake gripped the drum as tightly as the of[illegible]er expected it to do and caused the wheel to lock, it would render the trailer unmanageable and a danger to the driver and other users of the road. If the wheels were locked when descending a hill the trailer would skid from side to side and would also tear a rut in the surface of the road. The summons was dismissed.

A FURNITURE REMOVAL TO WESTCLIFF.

IN the Shoreditch County Court, before Mr. Registrar Wickham, Messrs. George Ewer & Co., of 78, Leonard Street, Finsbury, E.C., removal contractors, sued Mrs. E. C. Matthews, of 39, Westbourne Grove, Westcliff-on-Sea, to recover £3, the balance alleged to be due for the hire of vans to remove her furniture from 4, Duncan Street, Islington, to Westcliff. The defence filed was that an estimate to cover the removal had been received, for £3 15s., which had been paid, and nothing was therefore due, and the second van which was used was never ordered.

Mr. Strong appeared on behalf of the plaintiffs.

Alfred Ernest Smith, a carman in the employ of the plaintiffs, said he went to the defendant's premises on a Friday, and was shown all the furniture which she alleged she was going to send to Westcliff, and he estimated it to be £3 15s. On the Monday he was there with the lorry with two men, and he loaded it up, but owing to the fact that other things had been put in to be removed, which were not there before, he could not get them all in. As the defendant had gone off to Westcliff, he referred the matter to a Mr. Martin, who was there in charge of the removal on behalf of the defendant, who told him to get another van, which he did, and the extra charge was £3, which he did not dispute at the time, paying him £3 15s. and saying Mrs. Matthews would call on the Wednesday and pay the balance.

The defendant denied that she did not dispute it. She agreed that she put on the receipt for the £3 15s. that she would call on Wednesday, but that only meant that she was going there to protest as to the overcharge. There were a number of things missing, a sports coat, dresses, a strip of carpet supposed to be put between three mirrors, and so on, and she did not feel inclined to entertain any further charge, so did not go on the Wednesday. She was persuaded to sign by the carman as she did, as he said he would get the sack if she did not, and he also told her to go there and offer to pay £2, and they would be bound to accept it as it was all the extra was worth. She further said that when they started to load up on the lorry, she looked through the window and pointed out that hers was a big lot and they were not likely to get it in, but one of the men assured her that they would, saying it was surprising what they could get into these lorries. All that was put in the second van was a three-piece suite and the top of a sideboard.

Mr. David Martin, a lodger of the defendant, said he was there when the removal took place to help, but he had no authority to order any second van. Mrs. Matthews went off to Westcliff, the loading was finished, and they started off in the one lorry, but they had not gone many yards before Smith said it was top-heavy and they would have to have another van. He had no authority to order one, but Smith sent down to the plaintiffs who sent the second van.

The Registrar said that it was clear the estimate was wrong, and that the defendant could not be liable for more than £3 15s.

Mr. Strong: You will see, Sir, that the contract is for the hire of one van.

The Registrar: The plaintiffs are bound by their contract. They were told what was to go. Judgment for the defendant, with costs.

STORING CHEMICALS.

IN the Southwark County Court, before Judge Moore, Messrs. Burrins Express Services, of 13, Duke Street, London Bridge, S.E., general carriers, sued the Dearborn Chemical Co., Ltd., of Criterion Buildings, 24-36, Regent Street, S.W., engineers and chemists, to recover £58 10s. for alleged breach of contract.

Mr. White, counsel for the plaintiffs, said that the defendants were a company, incorporated in America and Canada, where they manufactured chemicals. The defendants were represented in England by the Lewis Exhaust Governor Co., Ltd., and the plaintiffs had an agreement with that company to store chemicals at their warehouse at London bridge. In 1926, the Lewis Exhaust Governor Co., Ltd., went into liquidation, and the defendants then approached the plaintiffs direct, with a view to continuing the agreement as to storage. The plaintiffs agreed to store between 30 and 40 tons at £4 10s. a week, payable monthly, but on the same terms as with the Lewis Exhaust Co., under which three months notice was to be given on either side. In February of this year, the defendants inquired about storing an additional 30 tons of a special chemical made up under a secret formula, and the plaintiffs said they would do so for an extra £2 a week, but they received a letter from the defendants giving a week's notice, and saying the defendants were going to take a warehouse of their own.

Matthew Burrin, trading as the plaintiff company, said that Mr. Buchanan was engineer to the Lewis Exhaust Co., and when they went into liquidation, he became the manager of the London branch of the defendants. The goods stored mainly consisted of chemicals to prevent the incrustation of boilers. They were of a dangerous nature, and consisted of glass carboys and drums. Sulphuric acid was one of the ingredients of the secret formula. If he had given the defendants a week's notice, it would have been impossible for

Digitized by Google

them to have found other storage space in the time. Mr. Buchanan told him that the directors in Chicago and Toronto were contemplating starting a chemical factory in this country, but he had advised them that the present time was unsuitable to commence operations. The defendants then found that one of their preparations was suitable for certain purposes and required him to carry an additional 30 tons and he said he would make arrangements for £2 a week extra, but this offer was turned down, and he was later given a week's notice of their intention to remove their whole stock of chemicals.

In cross-examination, he agreed that his contract in the first place was with the Lewis Exhaust Co. He did not know that Dr. Crouch was the manager and Mr. Buchanan was the assistant manager. According to their letter paper, Dr. Crouch was a vice-president of the American Co. He denied that his evidence was false with regard to the three months notice, but said that Mr. Buchanan specifically agreed to carry on at the same terms as with the Lewis Exhaust Co.

Evidence was given for the defence that the arrangement was a weekly one which was terminable by a week's notice. It was denied that there was any attempt to adhere to the former agreement which had been with the Lewis Exhaust Co.

Judge Moore, in giving his judgment, said he had examined the case from all angles, and considered the plaintiff's story to be the right one, and that the agreement was that there should be three months notice on either side, which he considered was borne out in the correspondence. Under the circumstances, he would give judgment for the plaintiffs for the amount claimed, and costs.

SHEFFIELD CORPORATION AND ALLEGED SPEEDING OF BUSES.

THE question whether the Sheffield Corporation had properly been convicted and fined £5 by the Eckington justices for aiding and abetting one of their omnibus drivers to exceed the speed limit on a journey between Sheffield and Beighton, on June 14th, 1928, was debated in a King's Bench Divisional Court composed of the Lord Chief Justice and Justices Avory and Wright, on July 22nd. The Corporation were the appellants.

Mr. Willoughby Jardine, K.C. (for the Corporation), said the allegation by the police was that the driver, Robert Radford, was speeding his bus along the Beighton road at 40 miles an hour. He said, when challenged, "I have only half-an-hour in which to do the journey from Sheffield to Beighton. The time allowed is not sufficient and I have to speed to do it; otherwise I should get the sack." The distance between Pond Street, Sheffield, and Beighton, said Counsel, was 8½ miles, and the time allowed to the bus drivers to cover that distance was 28 minutes. In the course of the journey the bus had to stop at 10 regular places as well as when requested. The allegation was that such a speed was contrary to the provisions of the Heavy Motor Car (Amendment) Order of 1928, and that the Corporation had aided and abetted the driver when he covered the distance at such a speed.

The vehicle was a heavy double-decker bus weighing over 5 tons and part of the route was along busy streets and winding roads.

The Corporation had provided a time-table and, allowing for stops, the time for the journey was 25½ minutes. Other delays were not taken into consideration to any great extent.

However, the contention put forward by the Corporation was that there was no evidence before the justices from which they could draw the inference that the time allowed was insufficient to enable the vehicle to proceed at 20 miles an hour. Also, that any statement made by the driver was not evidence against the Corporation on a charge of aiding and abetting.

The justices, however, found the Corporation guilty of an offence announcing that, in doing that, they put out of their minds the statement made by the driver, Radford.

The Lord Chief Justice asked Mr. Jardine whether the Corporation supposed that there never would be any delays or prolonged stops to pick up and put down passengers and that, if necessary, the vehicles would jump over any obstructions in their way.

Mr. Jardine replied that he did not know what the Corporation thought or what they considered would be the ordinary incidents on the journey, but he knew the time table was marked out after two experimental journeys had been made.

Mr. Justice Avory: It seems obvious that this driver could not do the journey all the time at an average of 20 miles an hour.

Mr. Jardine: The Corporation must be taken to have worked out the thing carefully and mathematically allowing reasonable margins for delays. They could not be expected to anticipate that, to keep to the time-table, their drivers would have to exceed the speed limit to the extent they had.

Without calling on Sir Henry Maddocks, K.C. (for the police), the Court dismissed the Corporation's appeal with costs. The Lord Chief Justice said there was abundant evidence of aiding and abetting by the Corporation. It seemed that the Corporation must have thought that, by some miraculous means, their buses would get rid of all other traffic and negotiate, without any delay or difficulty, all hills and bends in the roads.

The River Severn Development Association.

AT the Annual General Meeting of the River Severn Development Association, held last month at Cheltenham, the Annual Report upon the work of the Association during the last twelve months was presented and unanimously adopted.

The whole of the Officers and Committee were re-elected for the year ending June 30th, 1931, and considerable satisfaction was expressed by those present at the progress which had been made by this new Association during the past twelve months.

Among other matters which were discussed was one dealing with the possibility of improving the facilities for navigating the River beyond Gloucester. Whilst it is possible for vessels of 200 tons burthen to navigate the waterway itself with considerable ease up to Worcester, nevertheless this traffic is hampered, and delays have on many occasions occurred due to the low clearance between water level and the under side of Westgate Bridge, Gloucester.

The River Severn Development Association, having among its objects the development of the River Severn, and understanding that the Gloucester City Council are considering alterations to the Westgate Bridge, has taken steps to urge upon that Corporation and the Ministry of Transport that the interests of navigation should also be considered when this Bridge is reconstructed.

The Association feels that whilst the question of road improvement over the Severn is being considered by the Gloucester Corporation in conjunction with the Ministry of Transport, that both bodies should at the same time not lose sight of the fact that the Country's interests lie equally in the successful navigation of our inland waterways as it does in the development of the roads.

The Association has appointed a deputation to wait upon the Gloucester Corporation, and is also making representation to the Ministry of Transport in this connection.

The offices of The River Severn Development Association are at 16, Bridge Street, Broad Street, Birmingham, and the Secretary is Mr. E. W. Bayliss.

CONSIGN SHIPMENTS FOR NORTHERN

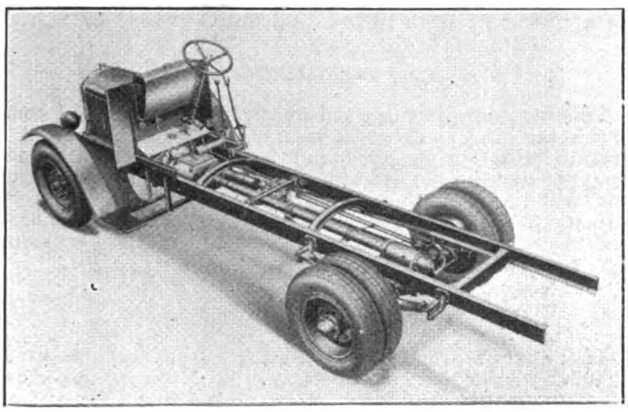
The Dennis Two-Ton Commercial Model.

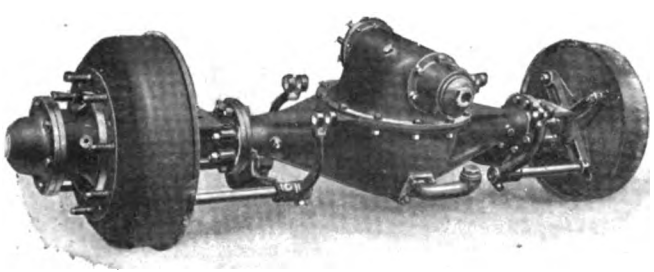
The new two-ton model by Dennis Bros., Ltd., Guildford, is limited to industrial purposes, and is not competitive with the coach and bus models. A recent "rough and tumble" test run on a sample which had not been "run in" gave our representative a good impression of its accelerative



GENERAL VIEW OF THE DENNIS 2-TON CHASSIS.

and braking qualities and most comfortable handling. It is air tyred, has a deep section and generally well stiffened chassis, a simple and dirt-proof layout of the transmission, is well braked, including the advantages of a servo on the pedal brake; has a remarkably silent overhead valve engine, a shockless clutch drive and a good range of gear ratios. A note on a short test run follows the general survey of the model.

First it may be noted that the fittings of engine and chassis not made by the Dennis Co. are as follows:—Simms h.t. magneto with hand control and vernier adjustment; Solex carburetter with hot spot induction, and fuel feed by gravity from a drum tank behind the straight dash; C.A.V. lighting and flywheel starting set (latter a supplementary equipment); Dewandre servo brake; Smith speedometer and mileage meter on the dash driven by a Smith reduction gear off the constant mesh gear shaft; Dunlop or Avon 32 in. by 6 in. air tyres, singles (front)

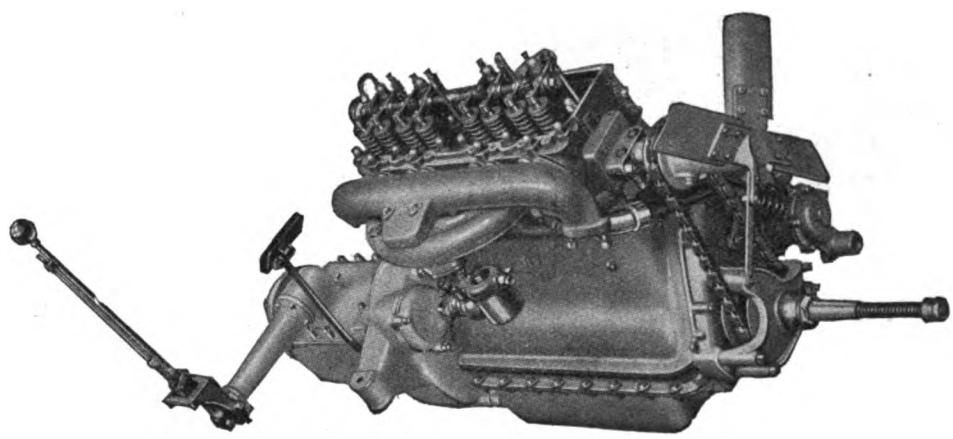


REAR AXLE AND BRAKE UNIT.

and twins (rear). A spare tyre and wheel is included and is housed at the back of the chassis. Pivotal points are fitted with Tecalemit gun oilers.

The Power Unit.

This is a built-up unit of (1) a four cylinder engine with a bore and stroke of 85 by 120 m.m. (3.34 in. by 4.72 in.) with overhead valves worked by a cam-shaft within the crank case through push-rods and adjustable rockers—the whole being enclosed and lubricated in step with the rest of the engine by means of a gear type pump; (2) a male cone fabric faced clutch in an oil bath, and (3) a four speed gear box with the maker's gate change, the gear ratios being as 1-1 (top), 1.63-1 (3rd), 2.82-1 (2nd), 4.6-1 (1st), and 3.94-1 (reverse). This unit is neat both as regards girth and appearance. Excepting the cylinders block and the overhead valve casing, which being enamelled did not disclose its material, the whole unit is of aluminium evidently of a good grade judging from the smooth, almost polished surface of the upper portion. Accessibility is featured unmistakably. For example, the valve cover gives plenty of access to the valve and push-rod mechanism; the cover at the front of the casing provides access to the timing gear; the water pump, which is of the impeller type, has a packing gland nut for a pin-and-hole spanner and adequate space for re-packing without removing more than the gland; the magneto is in tandem with the water pump and both are driven from the timing gear shaft on the near-side of the unit; there is a large cover plate across the cylinders block giving access to the jacket for cleaning (a most important provision for users in many districts and abroad), and below are two hand covers each with central lock bolt which give access to the lower part of the valve mechanism; the cylinder head with valves-layout is removable, and the belt-driven fan spindle with its ball bearing housing has an eccentric adjustment on the supporting bracket. A second pulley behind the fan pulley on the engine shaft drives the dynamo which is bracketed on the off-side fore corner. There is corresponding provision for a motor-starter at the rear off corner. On the offside, also,



ENGINE AND GEAR BOX UNIT OF THE DENNIS 2-TON CHASSIS.

bracketed well up for getting at, is the carburetter fed from an 11½ gallon drum tank at the back of the dash. The sump is an aluminium casting with an ample oil space for external cooling and internal filtration. The oil consumption, it may be noted, is given as a gallon per 1,000 miles. The radiator is of the built-up gilled tube type, easily demountable for cleaning and repair. Provision for completely emptying the water from the circulation system is one of the notable features of the layout and no doubt will be appreciated by users with experience of mischief in frosty weather from water pockets in the system. The fuel consumption is at the rate of a gallon per 16-17 miles, which is reasonable for the big output of the engine and the load capacity and weight of the chassis. This it is stated is 42 b.h.p. There is a hot spot from the exhaust in the throat of the induction manifold which together with the exhaust manifold and carburetter are on the off-side of the engine.

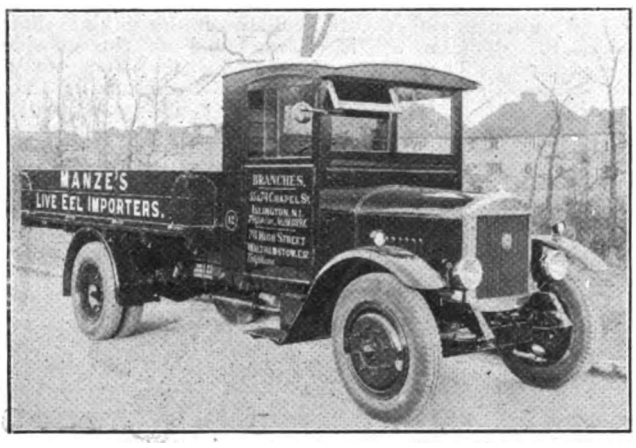
The clutch has a spider arm adjustment which can be made by removing the gear box lid, and the timing can be set or verified by removing a cover over a hole provided for the purpose in the inclined foot-rest below the dash. The flywheel rim is marked for the purpose and the marking is visible through the special cavity referred to. A clutch stop is provided and is of assistance in gear changing. The latter is facilitated also for the new driver by the gear gate being marked for the gear lever's respective positions. Ball and roller bearings and chrome-nickel gears with large tooth areas are features of the

Digitized by Google

change gear unit. A three-point anchorage is used; the front bearing being a particularly neat and substantial form of built-up trunnion. The comparative stoutness of the power unit and its being wholly self-contained suggest a corresponding reduction of cost for removal and replacing, especially where a group of the same model is concerned.

The Rear Drive.

The drive to the road wheels is taken through an all enclosed unit of propeller shaft in a torque tube, double shackled rear springs and a built-up over-type worm axle gear with brakes and wheel-hub drive. This may be regarded for purposes of maintenance as the second group unit of the chassis. The propeller shaft and tube may be removed independently which enables the gear box to be detached from the clutch housing; but for examining the gear and the usual running shop purposes the necessary access is available through the top of the box. The double shackling of the back springs facilitates the free functioning of both halves of the springs length, and from an experience of the smooth running of this vehicle beyond its prescribed limit, this method is worth the extra cost involved by the provision of a pair of special vee-splayed hollow radius rods, a detail which may escape notice in the illustration of the chassis. The chassis being somewhat long and the shortness of the power unit has suggested the provision of a roller bearing for the propeller shaft in the centre of the torque tube. The front end of both is enclosed in a spherical housing which encloses a universal coupling. The rear end of the propeller shaft and torque tube assembly with a substantial ball



THE NEW DENNIS 2-TON TRUCK.

thrust-bearing and worm is housed in the cover over the worm and differential gear of the axle, and is held by a ring of stud bolts. There is, therefore, independent access for the examination and removal of all the rear drive mechanism without disturbing the axle casing and road wheels after withdrawing the axle shafts from engagement in the differential housing. The axle gear has a ratio of 7½-1 and the gearing and layout are the Dennis standard unit which, if we mistake not, was the pioneer worm drive for road vehicles.

A section view would be necessary to show the details of this well thought out unit; in its absence the reader will note the exterior from the special illustration of it. Here it may be noted that the arrangements for oiling the components combine provision for speed without waste. This is obtained by providing ample fillers and a preventive device for over-filling. The filler for the engine sump is through a cavity in the front wall of the crank case and is covered by an oblong swivel flange; the gear box filler is an elbow on the near-side, and the axle case filler is a spout-elbow at the front. This casing is a steel casting well ribbed inside and out and has circular flanged ends to which are attached reinforced extremities which provide the spring anchorages and the axle bearings and housings for the brake carriers.

The brake drums are steel pressings with thick walls and rim stiffening flanges. They are 17 in. internal diameter and the shoes are faced with ⅛ in. thick die-pressed fabric-asbestos linings. Both foot and hand brakes are within these drums; the foot brake being supplanted by a Dewandre vacuum servo from the induction manifold of the engine. There is a localised independent adjustment for the brakes by self-holding (shoulder) nuts behind the respective brake-cranks in front of and behind the axle. The gun form of "Point" oil injection system is featured for these and other of the main pivots of the entire chassis. The brake drums can be withdrawn for inspection and removal of the shoes without disturbing the hub and the hub bearings. These and other details which would require space and section views to elaborate, are among the evidence of the care and foresight and experience of the makers referred to at the outset. The road wheels are of the recessed pressed steel disc type which combine strength with stiffness and afford protection to the hub caps. They run on adjustable taper-roller bearings and are secured to the driving hubs by a cluster of eight self-seating nuts.

Front Axle and Steering Gear Unit.

This assembly is the third unit of the chassis and comprises an alloy steel heat-treated beam of the usual I section with spring pads and ball bearing swivels; adjustable steering connections, with a rear placed cross-bar, and fitted throughout with oil injection points, and an adjustable worm and wheel steering gear. The ignition and throttle levers are attached to the steering column. The turning circle is about 51 ft.

The Chassis Frame and Suspension.

The chassis frame is a stout pressing of the usual channel section and is a rectangle with some four cross bracings and has a depth of 6½ in. with a thickness of ¼ in. The springs are of chrome vanadium alloy and of special design. The rear leaves are 3 in. wide and the front ones 2½ in. The feature of the layout of the rear suspension has been mentioned, the front suspension is normal, and apparently in combination with the steering layout assists the steering effort, for on test the fact was demonstrated. The wheel-base and track measure 12 ft. by 5 ft. ⅛ in.; the overall length and width are 18 ft. 3½ in. by 6 ft. 7 in., and the length aft of the dash 14 ft. 4½ in. (deduction of this dimension from the overall length shows the already noted feature of the compactness of the engine). The chassis weighs about 37¾ cwt. and the gross weight allowed for is 96 cwt., of which 40 cwt. is allotted to live load, 15 cwt. for a lorry or other industrial type of body and 3½ cwt. for the driver, spare wheel and tools. The height of the frame when loaded is 26½ in., and the ground clearance below the axle is 9⅛ in. with the tyres at the prescribed inflation rate.

Excepting a starter and autovac, the standard of equipment of this chassis is very much that of an average car for variety and utility. A power-driven tyre inflator is provided for attaching to the gear box on the near-side for driving off the constant mesh gear sleeve. Being thus provided for, the cost of starter and inflator is low. The chassis fully equipped, inclusive of a fifth wheel and tyre, costs £420 at the works.

The Two-Tonner on the Road.

On the occasion of the test run of the new model the gross load with two up and test body was 4 tons 17½ cwt. The start was after a long wait and the chassis was one in course of test for delivery. The weather was damp and cold. The route was over the Hogs Back and back with a detour at Puttenham Hill in order to test the brakes. The timings were by an ordinary seconds-hand watch. Almost all the hill climbing was done on third and fourth with an occasional drop to second. In an acceleration test from 1st to 4th from standing start 38 m.p.h. were attained in 59 secs., and from 10 m.p.h. on top to 30 m.p.h. in 20 secs. Two stop and re-start tests on a gradient stated to be 1 in 6 demonstrated the smooth pick-up of the clutch. Brake tests were made on Puttenham Hill with a gradient stated to be 1 in 6.3 and the reverse was used at a favourable but steep point for turning to return by the same route. There was ample proof that either brake could hold the load and could pull up the vehicle with the usual evidence of piling forward which accompanies an emergency stop. It was not considered necessary to test the maximum speed on the level, being satisfied that it is more than sufficient for any permissible use.

Incidentally it may be noted that the air tyres were found of considerable help on the wet roads. The tyre inflation pressure was about 50 to 55 lb. per square inch.

The good report of users of this model is being shown by one large oil company's recent repeat order for 75 after a first purchase of 100. A still more recent purchase is by the Southern Railway Co.

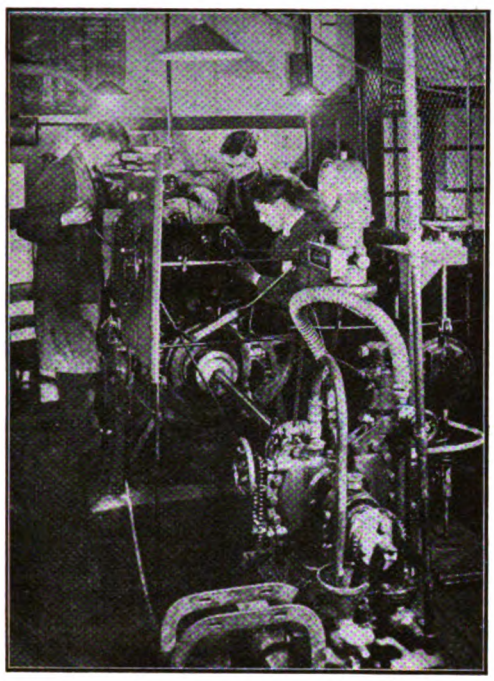
Automobile Engineering Training College.

Fifth Anniversary.

On the occasion of the fifth anniversary of the opening of the Automobile Engineering Training College, members of the press were invited to a private view of the college and a luncheon held at the College House. The college is situated in Sidney Street, Chelsea, and together with



ENGINE TESTING ON HYDRAULIC DYNAMOMETER.

the lecture rooms covers an area of thirty-five thousand square feet.

After our tour of the college which was conducted by Mr. Wardell, one of the chief technical engineers, who explained the method of teaching, the whole party motored over for luncheon to the College House, Wimbledon Park, where the students reside. The college residence, which stands in about 3½ acres of ground, is particularly well equipped for the housing of a large number of young men.

The college was founded specially to meet the requirements of the Automobile Industry for young men of good education who combine a wide experience of practical automobile engineering and a sound knowledge of the commercial side, with the character, ability and training to rise to administrative positions.

At the time of our visit there were over 130 full time students or over two hundred including those attending for short periods.

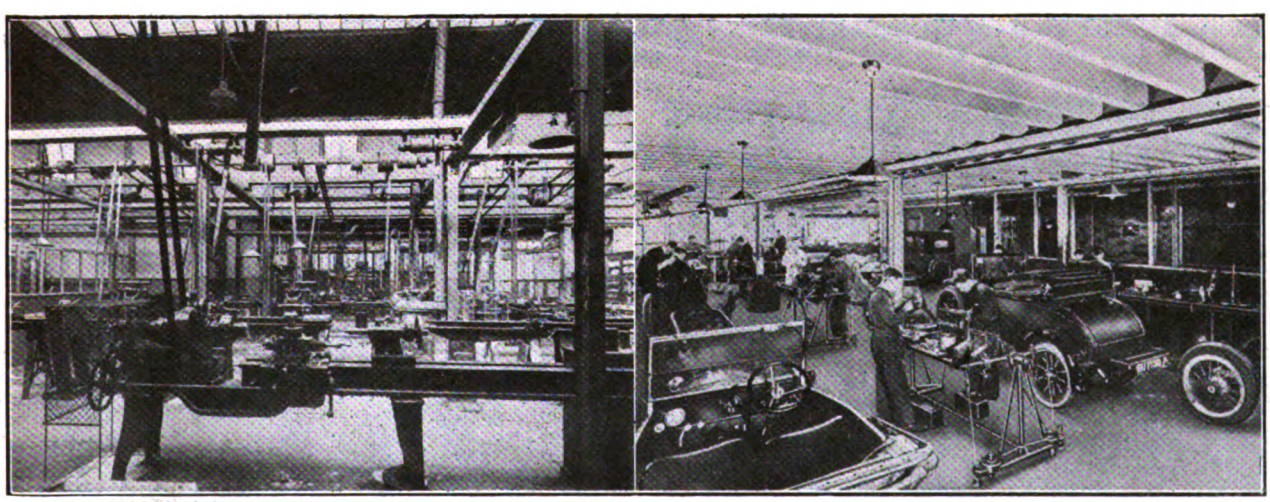
The majority of the students are drawn from the largest public schools and train for the college diploma (minimum period two years). It must be noted that this diploma is not automatically granted upon completion of a period of training, but can only be obtained by satisfactorily passing every terminal examination both theoretical and practical work and by a consistently good record of behaviour and attendance during the course.

There is no entrance examination, but students are required to enrol on a probationary term, and this term must be completed before the student can be accepted for the remainder of the course.

During this period the work of the student is carefully observed and at the end of the term his report is sent to his parents advising as to his suitability for the career. Should it be considered that the student is unlikely to be successful as an engineer the parents are advised quite frankly to this effect.

The first consideration of the college training is thoroughness and width of practical experience. It has been evolved by practical engineers to meet the needs of the industry and a staff of instructors has been recruited from the ranks of works superintendents and foremen who have held charge positions specialising in work similar to that which they are now teaching. In addition to the practical instruction staff there are highly qualified lecturers in the technical subjects, and authorities on special branches of the industry give weekly lectures on their particular subjects. During his stay at the college the student passes through every phase of workshop practice from filing metal to advance work on engines and actual repairs to chassis, after which he spends several months in the service shops where repairs of every description are carried out for leading firms in the industry.

Each student obtains practical experience with various types of cars and components on the market, including the diagnosis of faults, costing and estimating, repair and final testing, and this range of actual commercial work is unique as an integral part of College training. Every facility is given to the student with technical ability for design and research. Engines and other components are actually designed and entirely produced at the College for the purpose of teaching design and the solution of problems inevitably encountered in the introduction of a new production.



LEFT: GENERAL VIEW OF MACHINE SHOP. RIGHT: REPAIR AND SERVICE DEPARTMENT.

During our tour of the college it was interesting to note the enthusiasm which was shown by the students in the various shops we passed through, which included Oxy-Acetylene Welding, Foundry, Engine Assembly, Engine Fitting, Vulcanising, Electro-Plating, Electrical Equipment Repairs, Engine Testing, Coach Painting and others.

Before the student receives his diploma he has to pass the tests set out in the "Passing-Out Tests" which are very comprehensive.

In addition to students from all parts of this country, the College receives students from all parts of the world, including India, China, Japan and South America.

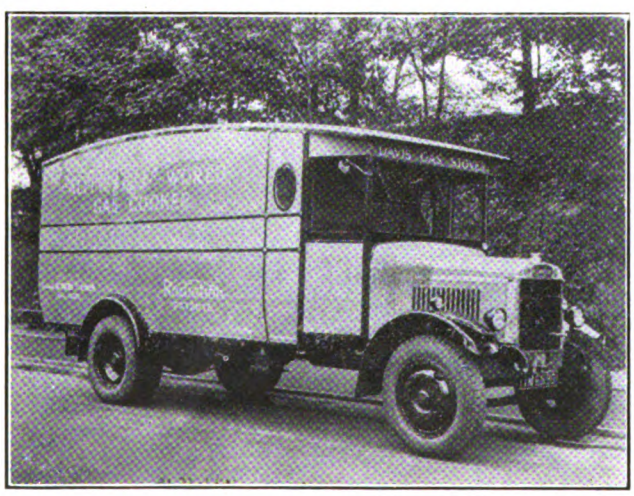
Motor Notes.

Leyland Bradford Service.—Arrangements have been made by Leyland Motors, Limited, for the extension of the service organisation of Brighouse Motor Agency, Ltd., Bradford Road, Brighouse, to operate in future as the Leyland West Riding Service Depot, which will include the area hitherto supervised in the Leyland interests by Oswald Tillotson, Limited.

Thornycroft Forward Drive Lorry.—The photograph is of one of the first freight vehicles to leave the Thornycroft Basingstoke works mounted on a type "A2 forward" chassis. This is identical with the firm's standard "A2" 2-ton chassis, but with forward control, allowing extra body space, a modification recently introduced into the Thornycroft programme of freight chassis.

THE "THORNYCROFT" FORWARD DRIVE "A2" LORRY.

An Interesting Commer Delivery.—The Davis Gas Stove Company, of Luton and London, have recently taken delivery of the 4 GN Commer chassis mounted with a box van body as shown in the photograph. This was a repeat order given to the local dealers. It is painted blue and varnished with gold lettering. The vehicle was built throughout at the Commer Luton works.



THE DAVIS GAS STOVE CO.'S 4GN "COMMER."

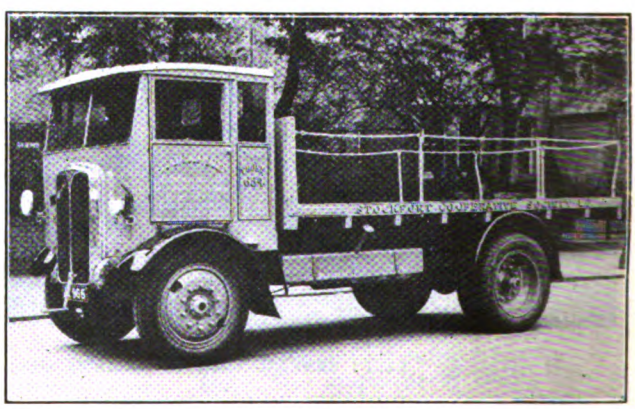
Airvac Orders.—Airvac Ventilators, Honeypot Works, Darlington, inform us that they have just received the sixth repeat order for 108 Airvacs type R from the Bombay, Baroda and Central India Railway, and during the past month orders have been received for 60 Airvacs and 40 interior fittings for the Iraq Railways, 28 type RM Airvacs for locomotive cab roofs for the Benguela Railway, and type R Airvacs for the North Western Railway of India, Sudan Government Railways, and the Entre Rios Railway for equipping an articulated steam rail car.

The Guy "Conquest" Bus.—We have received from Guy Motors, Ltd., Fallings Park, Wolverhampton, a copy of their latest catalogue describing the Guy "Conquest" chassis, and giving details of long distance coach and service bus bodies. The "Conquest" chassis is fitted with the Guy patented six-cylinder engine. Also, in connection with the foregoing catalogue, Guy Motors have included a new spare part list which undoubtedly gives the operator all the details he requires. Every component part is illustrated and a description and price are given on the opposite page. Copies of the catalogue and price list may be obtained from the firm on application.

Vulcans for Fish Transport.—Our illustration shows a 30-cwt. forward control detachable sided lorry, recently delivered by the Vulcan Motor & Engineering Co. (1906), Ltd., of Southport, to the Boston Deep Sea Fishing & Ice Co., Ltd., of Fleetwood.

A 30-CWT. FORWARD CONTROL "VULCAN" LORRY.

The A.E.C. "Monarch." — The Associated Equipment Co., Ltd., Southall, Middlesex, announce that their new 65 h.p. 4-ton "Monarch" is now being delivered to operators. The photograph shows one of two purchased by the Stockport Co-operative Society, Ltd., and is fitted with a flat platform body specially adapted for milk churn carrying. A special feature is the roomy comfortable cab which is completely enclosed.

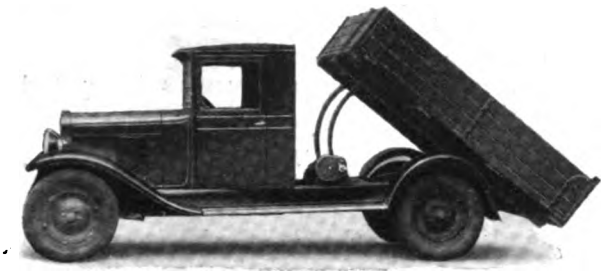


THE A.E.C. 65 H.P. 4-TON "MONARCH."

Marelli Vacuum Brakes.—Marelli Magnetos (England), Ltd., 71/72 Bolsover Street, London, W.1, announce that Shefflex Motors, Ltd., of Sheffield, are the latest firm to adopt the Marelli Vacuum Servo as a standard equipment on their new high-speed 2½-Tonner, and that the Flexion Products Company, of Hendon and Nottingham, have adopted the Marelli Vacuum Servo on their well known 3-Ton conversion set to 30-cwt. Chevrolet chassis.

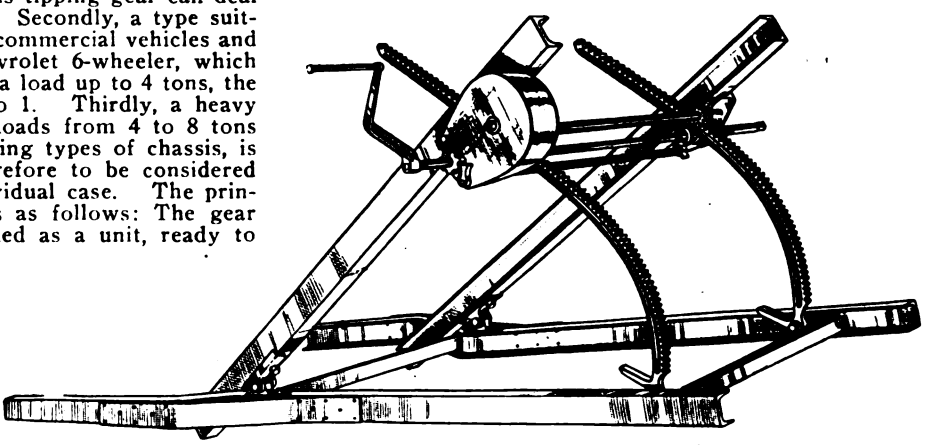
Digitized by Google

Crawford Tipping Gears.—The Crawford Tipping Gear Co., 128, Much Park Street, Coventry, are manufacturing at present tipping gears to suit all kinds of existing lorries



A LORRY FITTED WITH THE CRAWFORD TIPPING GEAR.

carrying loads from 1 to 8 tons. These tipping gears are sub-divided into 3 definite series or models, the first being the light type standardised for Ford, Chevrolet and Morris Commercial trucks, retailing at £15, with a power reduction ratio of 93.75 to 1. This tipping gear can deal with loads up to and over 2 tons. Secondly, a type suitable for Bean, Dennis and Vulcan commercial vehicles and also for the short wheelbase Chevrolet 6-wheeler, which is retailing at £16, and will carry a load up to 4 tons, the power ratio on this being 177.7 to 1. Thirdly, a heavy type which is designed to carry loads from 4 to 8 tons but which, owing to largely differing types of chassis, is not yet standardised and has therefore to be considered specially accordingly to each individual case. The principle on which the gear works is as follows: The gear complete is mounted and assembled as a unit, ready to be applied to any chassis and body. It is shown in the accompanying illustration, and consists, as will be seen, of a sub frame mounted on the chassis frame and the tipping frame upon which the body rests. The tipping frame is pivotted by a transverse hinge at the rear, and at the forward end is provided with two curved racks, which engage with toothed gearing on a transverse shaft mounted on the sub frame. This shaft is turned by reduction gearing in a gear box on the nearside subframe member, and a pawl is provided to ensure safety when raising or lowering. The curved racks are so shaped, hinged and disposed relatively to the driving pinions that when the tipping body is lowered, the racks are raised clear of the ground to an extent greater than the axle clearance of the vehicle. When the body is in the running position a minimum amount of space is wasted between the front end of the body and the rear of the cab and the racks are tucked well up under the chassis out of the way of any obstacles which might be on the road, the racks actually folding up above the lowest point of the back axle.



SHOWING DETAILS OF THE CRAWFORD TIPPING GEAR.

Battery Vehicles in Carnival.—At Buxton Carnival recently the first prize was taken by an electric lorry belonging to the D.P. Battery Co., of Bakewell, and was constructed as the steam yacht "Kathanode"—since it was driven by Kathanode batteries. It was headed by the Kathanode Jazz Band—35 strong. Another electric vehicle belonging to the Buxton Corporation also took part in this procession.

Garner Repeat Orders.—Garner Motors, Tyseley, Birmingham, are doing very well with repeat orders lately. His Majesty's Office of Works have ordered two 50-cwt. overtypes; Finsbury Borough Council, tipping lorries. Two overtypes have been delivered to Messrs. Brown & Son, of Chelmsford, and F. & H. F. Higgs, Builders. Carter, Paterson's also have placed repeat orders, so have the Metropolitan Borough of Stepney.

Collection of Refuse in London.

THE Minister of Transport makes the following announcement:—

In February, 1927, the Minister, on the advice of the London and Home Counties Traffic Advisory Committee, made the London Traffic (Collection of Refuse) Regulations, 1927, restricting collection of refuse in certain of the more important traffic streets in London, which were divided into two categories:—

(i) Those in which refuse may not be collected between the hours of 9 a.m. and 7 p.m., and

(ii) Those in which refuse may not be collected between the hours of 10 a.m. and 7 p.m.

The working of these Regulations has been reviewed by the Committee in the light of the experience gained and after considering their advice the Minister proposes to make fresh Regulations under Section 10 of, and the Third Schedule to, the London Traffic Act, 1924, which would provide for the continuance of the restriction on the collection of refuse in the existing list of thoroughfares and an extension of such restriction to a number of additional streets in the central area, as well as to certain streets in outer London where traffic congestion is tending to increase.

The Regulations are intended to apply to the collection of trade refuse collected in vehicles by private agencies as well as to house refuse collected by vehicles belonging to Municipal authorities, but not to any vehicle used solely for collecting street refuse arising from the cleansing of any scheduled street.

Any person acting in contravention of the provisions of the Regulations will be liable to a penalty not exceeding 40 shillings.

Copies of the draft Regulations are obtainable from H.M. Stationery Office, Adastral House, Kingsway, W.C.2, either directly or through any bookseller at a cost of 3d. a copy.

Any person who desires to make representations in regard to the draft Regulations should make them in writing to the Secretary, Ministry of Transport, 7, Whitehall Gardens, London, S.W.1, not later than the 4th September, 1930.

Master Carriers' Association of Victoria, Australia.

THE twenty-eighth annual meeting of the Master Carriers' Association of Victoria, was held at the Association Offices, Commerce House, on June 26th last. The annual report showed that there were 154 members. Reference was made in the report to the new log of the Carters' and Drivers' Union now before the Federal Arbitration Court; the completion of the long overdue Spencer Street Bridge; and a large number of matters affecting the carrying trade which had been taken up with Federal and State Government Departments, Harbor Trust, the City Council, Suburban Councils and other public bodies, with generally satisfactory results. It was reported that the next Federal Conference would be held at Adelaide in May next. The Executive Committee for 1930/31 was elected as follows:—Messrs. L. Arthur, J. Caddy, E. W. Coulson, W. Creaton, J. Johnson, H. M. Kidgell, M. C. Peppard, F. J. Skinner, M. Smith, T. J. Smith, J. Sullivan Senr., G. W. Vaughan, H. W. Wansley and P. A. Wallbridge.

County Court Judgments.

The following returns from the Registry of County Courts' Judgments, Whitehall, have been received relating to judgments entered up in the respective County Courts of England and Wales. Publication does not imply inability to pay. Many judgments may have been settled between the parties or paid. Judgments settled otherwise than through the Court may appear unless "satisfaction" is entered up within twenty-one days from judgment or allocatur. Registered judgments are not necessarily for debts. They may be for damages or otherwise, they may relate to actions *bona fide* contested between the parties, or they may be against defendants, liable in a representative capacity, and not personally; but no distinction is made on the register. Judgments are not returned to registry if satisfied in Court books within twenty-one days.

London Traffic Regulations.

The Minister of Transport, after consulting the London and Home Counties Traffic Advisory Committee, has made the London Traffic (Prescribed Routes) Provisional Regulations, 1930, providing for the institution, as from August 11th last, of "one-way" and "roundabout" traffic schemes at the following points:—

"One-way" Schemes. 1. In Church Street and part of Green Street, Sunbury-on-Thames; 2. In parts of White Hart Road and Broom Hill, Orpington; 3. In part of Simpson's Road, Bromley; 4. Along the duplicate carriageway of Gunnersbury Lane, Chiswick.

"Roundabout" Schemes. 1. Around the islands at the junction of Watford Way, Lawrence Street, Goodwyn Avenue, The Broadway, and Daws Lane, Mill Hill; 2. Around the island at the junction of High Street, Rectory Road, Beckenham Road and Croydon Road, Beckenham.

In order to facilitate the movement of traffic in the above areas, traffic direction signs have been erected and "white lines" laid down.

The Minister has also had under consideration the "one-way" traffic working in Dean Street and Wardour Street and at Red Lion Street, Richmond, and after consulting the London and Home Counties Traffic Advisory Committee in the matter, he has made the London Traffic (Prescribed Routes) Amendment Provisional Regulations, 1930, providing for alterations in these two traffic schemes as follows:—

Dean Street and Wardour Street, Westminster. As from August 11th last, the "one-way' traffic working in these streets will be in force between 7 a.m. and 7 p.m. only, instead of throughout the 24 hours as at present. During the remainder of the day, "two-way" working will operate.

Red Lion Street, Richmond. The existing arrangement under which Red Lion Street is used as a "one-way" street for west-bound traffic at week-ends and public holidays is to be abolished, but commencing at 12 noon on 16th August, 1930, traffic will be prohibited on these days from making a right-hand turn from Hill Street into Red Lion Street.

NOTICES

The World's Carriers is published monthly, on the 15th of each month. Annual Subscription, including World's Carriers Year Book and Diary, £1 1s., post free.

International Road Congress, Washington.

The Permanent International Association of Road Congresses is to hold its Sixth Congress at Washington, D.C., U.S.A., October 6th to 11th, on the invitation of the United States Government. The American Organising Committee has been appointed by President Hoover. Previous Congresses have been held in Paris 1908, Brussels 1910, London 1913, Seville 1923, Milan and Rome 1926. There existed at the beginning of the century two other International Congress Organisations connected with transport—one for railways and one for navigation. The French people considered that a Congress of roads was necessary to make the International study of transport complete, so at the end of 1907 on the proposal of M. Barthou, Minister of Public Works, the French Government took the initiative in organising the First International Road Congress to study "The improvement of roads in view of their use by new forms of locomotion." The burden of the organisation fell upon an officer in the Ministry of Public Works, M. Albert Mahieu, one of the Inspector-Generals of the Department of Bridges and Roads. After holding the secretaryship for a number of years he became President of the Congress and a member of the French Senate. He is still President of the Association and takes an active interest in its work, but the secretaryship is now held by Inspector-General M. Paul Le Gavrian, whose energy and unfailing tact has contributed to the growth and success of the Congress. The Congress was a success from its inception and its meetings are without doubt the most important in the road transport world. The Congress has educated and stimulated many individuals, many authorities and many governments in the importance of the motor vehicle and the changes it is effecting in the means of transport. Though the Latins were the first to realise the magnitude of the revolution it is the United States which have made the greater progress, they having left the rest of the world behind in the energy with which they have adopted the motor vehicle and constructed roads, bridges and parkways to support it. A most important condition of affairs holds in the United States which is lamentably lacking in this country, namely, the whole-hearted co-operation between the roadmaker and the road user. In the United States there is no sentimental concern for the welfare of the railways such as exists in this country but notwithstanding this the American railways, though at first nervous of the rapid development of road transport, have now begun to find that they are reaping direct benefit owing to the industrial development of districts due to road transport facilities. The United States are now spending annually on road construction and maintenance approximately £300,000,000, therefore it is small wonder that the government of the International Road Congress decided on the United States as most suitable to hold their Congress meeting. The American Organising Committee announces that more than 60 Governments are expected to take part in the Congress, which means that practically all civilised Governments will be represented. Great Britain is sending upwards of 40 official delegates including those representing its Dominions and Colonies. It is interesting to note that the head of the American Organising Commission, Mr. Roy D. Chapin, is a motor manufacturer, being Chairman of the Hudson Motor Company since January, 1923, and several other members of the Committee are also leaders in the American motor industry, whilst, as far as our own representatives are concerned, the motor industry is scarcely represented at all even though British manufacturers must be fully aware that the market for their goods depends mainly upon road development in our Dominions and Colonies. The subjects to be discussed at the forthcoming Congress are (1) (a) Results obtained by use of cement in road construction. (b) Results obtained by the use of bricks or other artificial

Digitized by Google

paving. (2) The most recent methods adopted for the use of tar, bitumen and asphalt in road construction. (3) The construction of roads in new countries such as Colonies and undeveloped regions. (4) Ways and means of financing highways. (5) Highway transport: correlation and co-ordination with other methods of transport. (6) (a) Traffic regulations in large cities and their suburbs; traffic signals; design and layout of roads and adaption of traffic requirements in built up areas. (b) Parking and garaging of road vehicles. Our Technical Editor is attending the Congress and his report will appear in these pages in due course.

Comment on Current Topics.

Road Traffic Act.

In this issue we give a full abstract of the Road Traffic Act and we believe our readers will find this of very great value to them in obtaining a clear and concise understanding of the provisions of this very important piece of legislation. As is already known, the Minister of Transport has the power to decide when different sections of the Act shall come into operation and it is understood that Part I. of the Act will be put in force on November 1st next, with the exception of the new speed limits, which it is proposed shall operate from January 1st, 1931. In this issue also we have a valuable contribution, specially written by Mr. R. P. Bailey, who is well known through his position as Secretary of the National Road Transport Employers' Federation, the London Cartage & Haulage Contractors' Association, and other important associations connected with the transport industry. He deals specifically with Clause 19 of the Act, which is undoubtedly of vital importance to all connected with the goods side of road transport as well as those engaged in passenger transport for long distances. The difficulties with which the road transport contractor will have to contend under this clause are so clearly set out in the article that we do not propose to spend time elaborating the position still further, but we draw the attention of all our readers to this article, asking them to give it their very earnest consideration so that they may know exactly how it will affect their business and what reorganisation will be necessary to bring them into line with the requirements of the Act in good time before the date on which the provisions come into operation.

Rail Traffic for Roads.

The announcement made by the railway companies that a considerable number of branch lines will be closed to passenger traffic at the end of the present summer season shows how far we have got in the direction of co-ordination of road and rail services and the result of this new development will be watched with very great interest by all those who have followed the fight for traffic between rail and road and who have known for a long time past that a great many of these branch lines have been worked at a loss by the railway companies. It may be considered a hardship by passengers who have been accustomed to travel on these small country lines, when they find that they are compelled to change over from the railway train to a motor coach to complete their journey, but we believe that when the scheme has got into full working order any feeling of this kind will rapidly disappear.

The British Motor Industry.

A very interesting report on the position of the British Motor Industry was recently issued by the British Manufacturers Section of the Society of Motor Manufacturers & Traders, and the conclusion which must be reached by anyone who has studied this report is that the system of import duties on foreign motor vehicles has been of very great value to the industry in this country and has enabled it to develop in a way which would have been impossible otherwise. The propaganda carried on by the British Manufacturers Section and the advice to "Buy British" which has been constantly kept before the public has undoubtedly had a very big influence in the same direction and it is interesting to see from the figures given that the import of cars, commercial vehicles and chassis for the first seven months of the present year have totalled 8,118, as against 27,579 for the same period last year, the value of the imports being £1,315,340, as compared with £3,302,767, thus showing a decrease of 19,461 vehicles of the value of £1,987,421. Further statistics show that while the total imports of all motor products for the seven months of 1930 were reduced from £6,274,910 to £3,946,072, the exports show a slight increase, the figures being £8,527,959 for last year, as compared with £8,696,005 for the first seven months of this year: in other words the excess of imports for the first seven months of the present year show a total of £4,749,933, as compared with the same period for last year. In a general review of the position it is pointed out that, while the British motor industry has not suffered seriously in the prevailing world-wide trade depression, it must be realised that the future is full of difficulties as the motor industry is dependent for its continued progress upon the general improvement in the standard of living and the stabilisation of prices upon an economic level.

American Railways Economising Through Motor Transport.

IMPRESSIVE savings resulting from the substitution of motor trucks for material trains in handling bridge and building materials for railway constructional work are described in a report presented at the recent convention of the American Railway Bridge and Building Association in Boston. Such substitution brings about direct and indirect benefits to the railways, according to the report of the committee investigating the use of motor trucks for handling bridge and building materials.

The indirect benefits resulting from such substitution are the saving of freight cars for revenue service, it is stated. The Chicago, Milwaukee, St. Paul and Pacific, with 12 trucks in service, saves the use of 50 wagons daily; the Southern Pacific saves one-half of the use of a wagon per day for each motor truck in service; the Elgin, Joliet and Eastern, with one motor truck, saves from one to two wagons per week.

It is difficult to estimate the direct saving, as there are factors entering into the situation about which no details are available. The Southern Pacific estimates that trucks will save 50 per cent. of moving materials with a train motor or push car, and 75 per cent. of the expense of handling with a material train. The Akron, Canton and Youngstown, with one truck, saves $1,200 annually.

The Missouri Pacific shows a saving of 32 man-hours per day per truck as compared with the delivery of the same material with a train motor or push car. This time, computed at 60 cents per hour, makes a daily saving of $19.20. The first truck purchased by the New York, New Haven and Hartford saved enough in two months to pay for the original investment and leave a surplus to pay for petrol and oil. It is estimated that each truck saves $1,000 annually. The 15 trucks in service on the Delaware, Lackawanna and Western save $5,000 per year.

Road Traffic Act.

Some Observations on Clause 19.

By R. P. Bailey.

Secretary, Road Transport Employers' Federation; London Cartage and Haulage Contractors' Association.

OF the five parts into which the Road Traffic Act is divided Part 1 practically covers the operation of goods transport by road, Part 2 deals with compulsory third party insurance in its relation both to goods and passenger transport, whilst Parts 3, 4 and 5 relate to highways and the regulation of public service vehicles.

It is, therefore with Parts 1 and 2 that the Haulage Contractor is mainly concerned and particularly with those sections dealing with speeds, the limitation of the driving hours and compulsory insurance.

The speeds of the various types of vehicles are fully set out herein but the employer's attention is especially directed to the clause "Aiding and abetting or inciting a driver to exceed the limits," where severe penalties are imposed.

In conjunction with the restriction on speeds, the limitation which is placed upon the driver's hours, particularly the 10 hour rest period, will materially affect and restrict the operations of goods transport by road, for it is specifically laid down in the Act that in every continuous period of twenty-four hours a driver shall have 10 hours rest. This limits the working day to a maximum spread-over of 14 hours, during which the driver cannot be employed upon the vehicle for more than 11 hours.

This clause (19) requires careful consideration, its purpose being to limit the time that a driver may remain on duty.

Three distinct offences are provided for:—

(i) to drive for any continuous period of more than five and a half hours;

(ii) to drive for continuous periods amounting in the aggregate to more than eleven hours in any period of twenty-four hours commencing two hours after midnight;

(iii) to drive for such periods that the driver is not allowed an interval of at least ten hours for rest in every consecutive twenty-four hours.

There is a proviso to (iii) that if the driver is only able to obtain a period of nine hours rest between two consecutive twenty-four hour periods he *must* be allowed twelve hours for rest before commencing the next (third) period.

The following example will show how the clause can be operated:—

A man may be employed driving for two days as follows:—

FIRST DAY.	REST HOURS.	DRIVING HOURS.
Starting at 8 a.m. to 1.30 p.m.		5½
Rests from 1.30 to 2 p.m. ...	½	
Starts again at 2 p.m. and continues to 7.30 p.m. ...		5½

The driver must then take a rest period of ten hours.

SECOND DAY.		
Driver can commence at 5.30 a.m. and drive continuously until 11 a.m. ...		5½
Rest from 11 a.m. to 11.30 ...	½	
Start again at 11.30 and continue until 5 p.m. ...		5½

The rest period of ten hours again intervenes before commencing next day.

The above illustrates more particularly how a driver could be employed on long distance haulage.

The driver engaged on town cartage, however, would rarely, if ever, be employed for a continuous driving period of 5½ hours as his journeys are comparatively short and he is also subjected to stoppages and delays at both loading and unloading points. For the guidance of the employer engaged in town cartage the position could be better explained by dividing the day of 24 hours into two periods—14 hours during which the driver can fulfil his aggregate driving period of eleven hours and 10 hours for the driver to take rest.

It must not be assumed that the driver can be "driving" for the whole of the 14 hours as the Act provides that his maximum driving time shall be 11 hours only, and it further stipulates that "any time spent by the driver on other work in connection with a vehicle or the load carried thereby shall be reckoned as time spent in driving."

The Act does not define what is meant by "other work in connection with the vehicle or the load carried thereby." It is presumably intended to include all time spent on the vehicle including "waiting time" and it must, therefore, be assumed that as long as the driver is "on pay" he is "at work." Meal times would not, of course, count as driving time.

The Clause is somewhat misleading and misunderstandings may arise as to:—

(1). The maximum "employment period" of 14 hours.

(2). The maximum "driving period" of 11 hours, and the question may readily arise as to what is to be done with the remaining 3 hours.

If the driver's "employment" is limited to 11 hours it will follow that he will get 13 hours rest period instead of 10 as required by the Act, but assuming that the driver fulfils his two driving periods of 5½ hours each and takes a full ½ hour period for refreshment, making a total of 11½ hours, it would be no infringement of the Act if, either before or after the driving period, the driver was employed for 2½ hours on some other occupation "not in connection with a vehicle or its load"; or further, providing that the driver is not driving in any one continuous period for more than 5½ hours or in the aggregate more than 11 hours, his driving period can be spread over the 14 hours by allowing him one or more intermediate periods for refreshment amounting in all to 3 hours.

The following will serve to illustrate the two points:—

(1)	Driving for	5½ hours.
	Meal time	½ hour.
	Driving time	5½ hours.
	Other occupation ...	2½ hours. (either before or after the driving period.)
(2)	Driving for	4 hours.
	Meal time	1½ hours.
	Driving for	4 hours.
	Meal time	1½ hours.
	Driving	3 hours.

The maximum driving time in each case being 11 hours.

There is a providing clause which permits of joint application being made by properly constituted organisations representative of employers and work people for a variation of the periods of time prescribed in the clause. The machinery for getting any alteration is somewhat cumbersome. It is first required that the respective organisations must be certified by the Minister of Labour as being the proper bodies. Secondly, a case must be made out to the Industrial Court and if approved, the Minister of Transport is so advised and then if he is of the opinion that the variation is not likely to be detrimental to the public safety he may issue an order.

ON PAGES 580 TO 585 READERS WILL FIND A FULL SUMMARY OF THE ROAD TRAFFIC ACT.—EDITOR.

Digitized by Google

Road Traffic Act, 1930.

For the convenience of our readers we have summarised below the main provisions of the Road Traffic Act, 1930, affecting the transporting by road of passengers and goods.

We have not set out the penalties that may be imposed upon those who infringe the various regulations but in some cases these penalties are severe, particularly those inflicted for dangerous or careless driving.

The various provisions of the Act will not come into operation until the Minister of Transport has fixed the appointed days. A number of regulations have to be made and machinery set up before the Act can be brought fully into operation.

The Minister has, however, mentioned dates upon which he hopes the various provisions will become operative, and these dates we print at the commencement of our summary of the parts of the Act with which we have dealt.

The Minister of Transport has pointed out that it might be necessary to postpone the operation of individual sections of the Act.

As and when the various Regulations are made under the Act by the Minister of Transport they will be published in our columns.

Part I. of the Act.

Regulation of Motor Vehicles.

Probable operative dates:—New speed limits, 1st January, 1931; remainder of Part I. 1st November, 1930.

Part I. of the Act applies to motor vehicles and trailers.

Classification of Motor Vehicles:

(a) Heavy locomotives; i.e., mechanically propelled vehicles, not constructed themselves to carry any load (other than equipment for the purpose of propulsion, tools, etc.), and the weight of which unladen exceeds 11½ tons.

(b) Light locomotives; i.e., not constructed to carry any load, except as above, and the weight of which unladen does not exceed 11½ tons but does exceed 7¼ tons.

(c) Motor tractors; i.e., not constructed to carry a load except as above, and the weight of which unladen does not exceed 7¼ tons.

(d) Heavy motor cars; i.e., vehicles constructed to carry a load or passengers, the weight of which unladen exceeds 2½ tons.

(e) Motor cars; i.e., vehicles constructed to carry a load or passengers and the weight of which unladen:—

(i) In the case of vehicles which are:—

(1) Constructed solely for the carriage of passengers and their effects; and

(2) adapted to carry not more than seven passengers, exclusive of the driver; and

(3) fitted with tyres of the prescribed type, does not exceed 3 tons.

(ii) In any other case, does not exceed 2½ tons.

A motor vehicle so constructed that a trailer may by partial super-imposition be attached to the vehicle in such manner as to cause a substantial part of the weight of the trailer to be borne by the vehicle shall be deemed to be constructed to carry a load.

Where any regulations made after the passing of the Act vary, requirements as to construction or weight of any class or description of vehicles, provision shall be made exempting for not less than five years any vehicle of that class or description registered under the Roads Act, 1920, before the expiration of one year from the making of such regulations.

The Minister may authorise the use of special motor vehicles or trailers constructed for special purposes, tests or trials and of new or improved types of motor vehicles and trailers.

Licensing of Drivers.

The driver of a motor vehicle on a road must hold a licence and the licensing authority, i.e., the council of the County or County Borough in which the applicant for the licence resides, shall on payment of 5/- grant a licence upon the applicant making a declaration that he is not disqualified by reason of age or otherwise for obtaining a licence and as to his physical fitness. A licence shall, except with regard to provisional licences, unless previously revoked, remain in force for twelve months. A driver shall produce his licence on being required to do so by a police constable.

A person may appeal to a court of summary jurisdiction acting for the petty sessional division in which he resides against the refusal of a licensing authority to grant a licence and any order made shall be binding on the licensing authority.

A person under seventeen years of age shall not drive a motor vehicle other than a motor cycle, or an invalid carriage.

A person under twenty-one years of age, shall not drive a heavy locomotive, light locomotive, motor tractor or heavy motor car unless on first applying for a licence after the commencement of the Act he satisfies the licensing authority that he was, during the six months immediately preceding the 1st January, 1930, regularly engaged in driving a motor vehicle of that class.

Speed Limits.

Class of Vehicle.	Maximum Speed—Miles per Hour.
1. *Passenger Vehicles*, that is to say vehicles constructed solely for the carriage of passengers and their effects:—	
(1) If all the wheels are fitted with pneumatic tyres and the vehicle is not drawing a trailer—	
(a) if the vehicle is adapted to carry not more than seven passengers, exclusive of the driver and is not a heavy motor car or an invalid carriage	No limit.
(b) if the vehicle is a heavy motor car or is adapted to carry more than seven passengers, exclusive of the driver	30
(2) In any other case, including invalid carriages	20
2. *Goods Vehicles*, that is to say vehicles constructed or adapted for use for the conveyance of goods or burden of any description:—	
(1) When not drawing a trailer—	
(a) Motor cars, if all the wheels are fitted with pneumatic tyres; and	
(b) Heavy motor cars, constructed or adapted for the conveyance of horses and their attendants and used solely for that purpose, if all the wheels are fitted with pneumatic tyres	30
(c) (i) Motor cars, if all the wheels are not fitted with pneumatic tyres but are fitted with soft or elastic tyres; and (ii) Heavy motor cars, if all the wheels are fitted with pneumatic tyres	20
(d) Heavy motor cars, if all the wheels are not fitted with pneumatic tyres but are fitted with soft or elastic tyres	16
(2) When drawing a trailer—	
(a) if all the wheels both of the drawing vehicle and of the trailer are fitted with pneumatic tyres, or if the trailer is attached to the drawing vehicle by partial superimposition in such manner as to cause a substantial part of the weight to be borne by the vehicle and all the wheels both of the drawing vehicle and of the trailer are fitted with soft or elastic tyres	16
(b) if all the wheels both of the drawing vehicle and of the trailer are not fitted with pneumatic tyres but are fitted with soft or elastic tyres	8
(3) In any other case	5
3. *Locomotives and Motor Tractors*:—	
(1) Heavy locomotives—	
(a) Within any city, town or village	3
(b) Elsewhere	5
(2) Light locomotives—	
(a) When not drawing a trailer or not drawing more than two trailers, if all the wheels both of the locomotive and of any trailer	

Digitized by Google

Class of Vehicle.	Maximum Speed—Miles per Hour.
drawn by it are fitted with soft or elastic tyres	8
(b) In any other case	5
(3) Motor tractors—	
(a) When not drawing a trailer, if all the wheels of the tractor are fitted with soft or elastic tyres	16
(b) When drawing a trailer, if all the wheels both of the tractor and of any trailer drawn by it are fitted with soft or elastic tyres	8
(c) In any other case	5

If a person who employs other persons to drive motor vehicles, publishes or issues a time table or schedule, or gives directions under which any journey or part of a journey is to be completed within some specified time and it is not practicable for the journey to be completed in the specified time without an infringement of the speeds laid down by the Act, the publication or issue of such time table or schedule, or the giving of directions may be produced as *prima facie* evidence that the employer, as the case may be, procured or incited the persons employed by him to drive the vehicles to commit an offence.

Requirements as to Employment of Drivers and Attendants.

In the case of heavy locomotives and light locomotives two persons shall be employed in driving or attending the locomotive and if the locomotive is drawing a trailer or trailers one or more persons in addition to the persons employed as aforesaid, shall be employed to attend to the trailer or trailers at the rate of one additional person for each trailer in excess of one.

Where a motor vehicle other than a heavy locomotive or a light locomotive is drawing a trailer or trailers, one person, in addition to the driver of the vehicle, shall be carried either on the vehicle or on a trailer for the purpose of attending to the trailer or trailers.

The number of trailers which may be drawn by a motor vehicle shall not exceed:—

(a) in the case of a heavy locomotive or light locomotive, three;
(b) in the case of a motor tractor, one, if laden, or two, if unladen;
(c) in the case of a motor car or a heavy motor car, one;

or such less number as may be prescribed.

Limitation of Time for which Drivers of Certain Vehicles may remain Continuously on Duty.

It shall not be lawful in the case of:—

(a) any public service vehicle;
(b) any heavy locomotive, light locomotive or motor tractor; or
(c) any motor vehicle constructed to carry goods other than the effects of passengers;

for any person to drive or cause or permit any person employed by him or subject to his orders to drive:—

(i) for any continuous period of more than five hours and one half; or
(ii) for continuous periods amounting in the aggregate to more than eleven hours in any period of twenty-four hours commencing two hours after midnight; or
(iii) so that the driver has not at least ten consecutive hours for rest in any period of twenty-four hours calculated from the commencement of any period of driving.

It shall be a sufficient compliance with the provisions of paragraph (iii) if the driver has at least nine consecutive hours for rest in any such period of twenty-four hours provided that he has an interval of at least twelve consecutive hours for rest in the next following period of twenty-four hours.

For the purposes of this section:—

(a) any two or more periods of time shall be deemed to be a continuous period unless separated by an interval of not less than half-an-hour in which the driver is able to obtain rest and refreshment;
(b) any time spent by a driver on other work in connection with a vehicle or the load carried thereby, including in the case of a public service vehicle any time spent on a vehicle while on a journey in any other capacity than as a passenger shall be reckoned as time spent in driving;
(c) in the case of a vehicle which is being used in the course of operations of agriculture or forestry a person shall not be deemed to be driving the vehicle or to be spending time on work in connection with the vehicle or the load carried thereby so long as the vehicle is elsewhere than on a road.

The Minister may, on the application of a joint industrial council, conciliaton board, or other similar body, or on a joint application by such organisations, representative of employers and workpeople in the industry, as the Minister of Labour may certify to be proper bodies to make such an application, and after referring the matter to the Industrial Court for advice, by order, vary the periods of time prescribed in this section, provided that he is of opinion that such variation is not likely to be detrimental to the public safety.

A person shall not be liable to be convicted under this section if he proves to the court that the contravention was due to unavoidable delay in the completion of any journey arising out of circumstances which he could not reasonably have foreseen.

Power of Highway and Bridge Authorities.

A highway authority and a bridge authority may subject to such conditions as they think fit grant a permit in respect of a trailer drawn by a heavy or light locomotive on the road or bridge or carry weights specified in the permit notwithstanding that when conveying such weights the trailer does not comply with any regulations as to the weight laden of trailers or as to the maximum weight which may be transmitted to the road by trailers.

Power to Prohibit the use of Bridges by Motor Vehicles.

Where a bridge authority are satisfied that the bridge is insufficient either:—

(a) to carry a motor vehicle of which the weight exceeds a certain maximum weight; or
(b) to carry a motor vehicle of which the weight exceeds a certain maximum weight when travelling at more than a certain maximum speed,

the authority may, by notice placed at each end of the bridge, prohibit the use of the bridge, either by a vehicle weighing more than a weight specified in the notice or by a vehicle weighing more than a weight specified in the notice when travelling at more than a speed specified in the notice.

Provided that the weight specified in any such notice shall not be less than five tons and shall not exceed the aggregate of the maximum weights permitted for the time being for a heavy locomotive and the trailers drawn thereby when crossing a bridge.

For the purposes of this section, weight means weight laden, and the weight of a vehicle means, in relation to a vehicle drawing a trailer, the aggregate of the weights of the vehicle and the trailer.

Where a notice has been so placed, any person who causes or permits any motor vehicle, being either a heavy locomotive, light locomotive, motor tractor or heavy motor car to stop on the bridge or to be driven on the bridge while another vehicle of any such class as aforesaid or a tramcar or trolley vehicle is on the bridge shall be guilty of an offence.

Any person aggrieved by any restriction placed on the use of a bridge may appeal to the Minister.

Method of Calculating Weight.

For the purposes of this Part of the Act, the weight unladen of any vehicle shall be taken to be the weight of the vehicle inclusive of the body and all parts (the heavier being taken where alternative bodies or parts are used) which are necessary to or ordinarily used with the vehicle when working on a road, but exclusive of the weight of water, fuel or accumulators used for the purpose of the supply of power for the propulsion of the vehicle, and of loose tools and loose equipment.

Weighing of Motor Vehicles, etc.

It shall be lawful for any person authorised by a highway authority, or for any police constable so authorised on production of his authority, to require the person in charge of any motor vehicle to allow the vehicle or any trailer drawn thereby to be weighed, either laden or unladen and for that purpose to proceed to a weighbridge or other machine for weighing vehicles. It shall not be lawful to require the person in charge of the motor vehicle to unload the vehicle or trailer, or to cause or allow it to be unloaded, for the purpose of being weighed unladen.

If the vehicle is more than one mile from the weighing machine and the weight is found to be correct the highway authority on whose behalf the requirement is made shall pay in respect of loss occasioned, such amount as in default of agreement may be determined by a single arbitrator agreed upon by the parties, or in default of agreement appointed by the Minister.

Where a motor vehicle or trailer is so weighed a certificate shall be given to the person in charge of the vehicle which shall exempt the motor vehicle and the trailer, if any, from being weighed so long as it is during the continuance of the same journey carrying the same load.

Digitized by Google

Part II. of the Act.

Third-Party Insurance.

Probable operative date, 1st January, 1931.

Under Part II. of the Act it shall not be lawful for any person to use, or to cause or permit any other person to use, a motor vehicle on a road unless there is in force in relation to the user of the vehicle, a policy of insurance or such a security in respect of third-party risks as complies with this part of the Act.

This section shall not apply to a vehicle owned by a person who has deposited and keeps deposited with the Accountant General of the Supreme Court the sum of £15,000 at any time when the vehicle is being driven by the owner or by a servant of the owner in the course of his employment or is otherwise subject to the control of the owner.

Requirements in respect of Policies.

The policy of insurance must:—

(a) be issued by an authorised insurer.

(b) insure in respect of any liability in respect of the death or bodily injury to any person caused by or arising out of the use of the vehicle on a road.

The provision does not require an owner to cover an employee against death or bodily injury arising out of and in the course of his employment as this liability is covered by other enactments.

A policy shall be of no effect for the purposes of the Act unless and until there is delivered by the insurer to the person by whom the policy is effected a certificate (referred to as a "certificate of insurance") in the prescribed form. The expression "policy of insurance" includes a covering note.

Production of Certificate of Insurance or Certificate of Security.

Provision may be made by regulations for requiring a person applying for a licence to produce evidence:—either

(a) on the date when the licence comes into operation there will be in force the necessary policy of insurance or the necessary security or;

(b) the vehicle is a vehicle to which the section does not apply.

The driver of a motor vehicle shall when requested by a police constable, give his name and address and the name and address of the owner of the vehicle and produce his insurance certificate. If he cannot produce it immediately, he must produce it in person within 5 days at any Police Station he may specify.

Should the driver of a motor vehicle be involved in an accident causing personal injury to another person and the driver does not at the time produce his certificate, he shall as soon as possible and in any case within 24 hours of the accident report the accident at a police station or to a police constable and then produce his certificate. If the certificate is not available for immediate production the driver may produce it in person within five days after the accident at any Police Station he may specify.

The expression "produce his certificate" means produce for examination the relevant certificate of insurance or certificate of security.

Part III. of the Act.

Amendment of Law Relating to Highways.

Probable operative date, 1st November, 1930.

Highway Code.

The Minister shall prepare a highway code comprising directions for the guidance of persons using roads. This code will not be issued until it has been approved by both Houses of Parliament. The code will be issued to the public at a price not exceeding one penny for each copy. Failure to observe any provision of the highway code shall not of itself render a person liable to criminal proceedings but any such failure may in any proceedings whether civil or criminal be relied upon by any party to the proceedings as tending to establish or to negative any liability which is in question in those proceedings.

Provisions with respect to Stretching of Ropes, etc., across Highways.

Any person who places any rope, wire or other apparatus across a road in such a manner as to be likely to cause danger to persons using the road shall, unless he proves that he had taken all necessary means to give adequate warning of the danger, be guilty of an offence.

Provisions as to Extraordinary Traffic.

Where it appears to a highway authority by a certificate of their surveyor that extraordinary expenses have been incurred in repairing a road by reason of the damage caused by excessive weight passing along the road, or other extraordinary traffic thereon, the highway authority may recover from any person by or in consequence of whose order the traffic has been conducted the amount of such expenses as may be proved to the satisfaction of the court to have been incurred by the authority by reason of the damage arising from the extraordinary traffic. Proceedings for the recovery of any such sums shall be commenced within twelve months of the time at which the damage has been done, or where the damage is the consequence of any particular contract extending over a long period, shall be commenced not later than six months after completion of the contract.

This section shall not apply to the administrative county of London.

Part IV. of the Act.

Regulation of Public Service Vehicles.

Probable operative date, 1st November, 1930. Requirement that omnibus and motor coach services cannot be operated except under a road service licence not to become operative before 1st March, 1931, at the earliest.

Classification:

Public Service Vehicles are divided into the following classes:—

(a) Stage carriages; i.e., motor vehicles carrying passengers for hire or reward at separate fares (any or all of which are less than one shilling for a single journey or such greater sum as may be prescribed), stage by stage, and stopping to pick up or set down passengers along the line of route, and any other motor vehicles carrying passengers for hire or reward at separate fares and not being express carriages.

(b) Express carriages; i.e., motor vehicles carrying passengers for hire or reward at separate fares (none of which is less than one shilling for a single journey or such greater sum as may be prescribed) and for a journey or journeys from one or more points specified in advance to one or more common destinations so specified, and not stopping to take up or set down passengers other than those paying the appropriate fares for the journey or journeys in question.

(c) Contract carriages; i.e., motor vehicles carrying passengers for hire or reward under a contract expressed or implied for the use of the vehicle as a whole at or for a fixed or agreed rate or sum.

A motor vehicle adapted to carry less than 8 passengers shall not be deemed to be a stage carriage or an express carriage by reason only that for race meetings, public gatherings and other like special occasions it is used to carry passengers at separate fares.

Where persons are carried in a motor vehicle for any journey in consideration of separate payments made by them, whether to the owner of the vehicle or to any other person, such vehicle shall be deemed to be a vehicle carrying passengers for hire or reward at separate fares, whether the payments are solely in respect of the journey or not.

A vehicle used on a special occasion for conveying a private party shall not be deemed to be a vehicle carrying passengers for hire or reward at separate fares by reason only that the members of the party have made separate payments which cover their conveyance by that vehicle on that occasion.

Constitution of Traffic Areas.

For the purposes of Part IV. of the Act dealing with the regulation of Public Service Vehicles, England and Scotland is divided into the following traffic areas:—England: Northern, Yorkshire, North Western, West Midland, East Midland, Eastern, South Wales, Western, Southern, South Eastern, Metropolitan; — Scotland: Northern, Southern.

For each traffic area, there shall be a body of three commissioners whose duty it will be to issue licences under Part IV. of the Act and shall exercise such other powers and perform such other duties as are conferred or imposed on them by the Act, and subject as aforesaid shall act under the general directions of the Minister.

The Traffic Commissioners shall be appointed by the Minister of Transport. Where the Minister proposes to appoint a person to be traffic commissioner he shall, before making the appointment require such person to declare whether he has any, and if so what, financial interest in any transport undertaking which carries passengers.

One of the commissioners shall be appointed by the

Digitized by Google

Minister from a panel of persons nominated by the councils of the counties whose area, or any part of whose area, is situated in the traffic area, another of the commissioners shall be appointed by the Minister from a panel of persons nominated by the councils of the county boroughs and urban districts whose area, or any part of whose area is situated in the traffic area, and the other commissioner shall be such person as the Minister thinks fit to appoint to be chairman of the commissioners.

If a Traffic Commissioner acquires any financial interest in any passenger transport undertaking he shall give notice thereof to the Minister who may, if he thinks fit, declare that the Commissioner has vacated his office.

Procedure of Traffic Commissioners.

The commissioners shall, for the purpose of hearing applications for the grant and backing of road service licences and may for any other purpose hold public sittings in any part of their area as appears to them convenient.

Not less than two commissioners shall be present at the hearing of any application, and if where an application is heard by two commissioners only there is a difference of opinion between them, the matter shall be reheard and determined by all the commissioners.

Public Service Vehicle Licences.

No person shall cause or permit a motor vehicle to be used as a stage carriage, an express carriage or a contract carriage unless he is the holder of a public service vehicle licence to use it as a vehicle of that class.

Provided that:—

(a) a person who is the holder of a licence to use a vehicle as a stage carriage may use it as a contract carriage or, subject to any condition attached to his road service licence, as an express carriage, and a person who is the holder of a licence to use a vehicle as an express carriage may use it as a contract carriage; and

(b) in the case of a service of stage carriages, a vehicle licensed as an express carriage may be used on the service if the commissioners of each of the traffic areas in which the vehicle is to be so used think that it may in any special circumstances, including the character of the service, properly be so used and consent in writing thereto.

Certificates of Fitness of Vehicles.

68.—(1) Subject to the provisions of this section of the Act relating to vehicles in respect of which a licence to ply for hire has been granted before the commencement of the Act, a licence to use a vehicle adapted to carry eight or more passengers as a stage carriage, express carriage or contract carriage shall not be granted unless a certificate (referred to as a certificate of fitness) has been issued by a certifying officer.

A certificate of fitness shall, unless previously revoked or cancelled, continue in force for five years, or, if the certifying officer thinks fit, for such shorter period, not being less than one year, as may be specified in the certificate.

The Minister may at any time revoke a certificate of fitness, and if on the inspection of a public service vehicle it appears to the certifying officer that the vehicle does not comply with the prescribed conditions as to fitness, that officer may revoke the certificate of fitness and any licence granted in respect of that vehicle shall cease to have effect unless or until a new certificate of fitness is obtained.

Where the Minister is satisfied in respect of one vehicle of a particular type that the prescribed conditions as to fitness are fulfilled he may, on payment of the prescribed fee, approve the vehicle as a type vehicle, and where a type vehicle has been so approved and a declaration in the prescribed form has been made by a person authorised by the Minister that any other vehicle conforms with the type vehicle, the certifying officer may after examining such other vehicle, issue a certificate that the vehicle conforms to the type vehicle and such a certificate shall be deemed to be a certificate of fitness.

With a view to spreading the certification of vehicles over a term of years the commissioners may during the first four years after the commencement of the Act grant public service vehicle licences in respect of such vehicles being vehicles in respect of which licences to ply for hire were granted before the commencement of the Act, as they think fit. Notwithstanding that the provisions of subsection 1 of Section 68 of the Act relating to a certificate of fitness have not been complied with and the Minister may by order provide that as and when the subsection becomes applicable to any such vehicle the regulations as to fitness shall be relaxed in relation to that vehicle to such extent as may be specified.

Certifying Officers and Public Service Vehicle Examiners.

With respect to the certification of fitness of Public Service Vehicles the Minister may appoint certifying officers who shall perform such duties in relation to the examination of vehicles, the issue of certificates of fitness and otherwise, as the Minister may require.

The Minister shall appoint as public service vehicle examiners, such persons as he considers necessary for the purpose of the inspection of public service vehicles and for the discharge of such other duties as the Minister considers can conveniently be discharged by persons acting as such examiners.

Any certifying officer or public service vehicle examiner shall on production, if so required, of his authority, be entitled to enter and inspect any public service vehicle and for that purpose may require any public service vehicle to be stopped, and may at any reasonable time enter any premises on which he has reason to believe that a public service vehicle is kept.

The holder of a public service vehicle licence, on the happening to the vehicle in respect of which the licence was granted of any failure or damage of a nature calculated to affect the safety of passengers or users of the road must as soon as may be report the matter to the commissioners for the traffic area in which the failure or damage happened; also he must forthwith give notice to the commissioners for the traffic area in which the licence was issued, on any alteration otherwise than by way of replacement of parts being made in the structure or fixed equipment of the vehicle.

Suspension of Vehicle Licences for Defects.

If on the inspection of a public service vehicle it appears to a certifying officer or public service vehicle examiner that the vehicle is or is likely to become unfit for service until defects have been remedied, he may suspend the public service vehicle licence in respect of the vehicle, but where in the opinion of the officer or examiner the defects can be remedied within forty-eight hours, and are not defects which involve danger to the public; the suspension shall not operate before the expiration of forty-eight hours, nor shall it operate after the experation of that time if the licensee before the expiration of that time furnishes evidence to the satisfaction of the officer or examiner that the defects have been or are in the course of being remedied. Where a licence has been suspended, the suspension may be removed by any certifying officer or public service vehicle examiner and where a public service vehicle examiner for any traffic area refuses to remove the suspension of a public service vehicle licence, the holder of the licence may make an application to the commissioners of that area to have the vehicle inspected by the certifying officer for that area, and where any such application is made, a certifying officer, on the matter being referred to him, shall, if he considers that the prescribed conditions as to fitness are fulfilled in respect of the vehicle, remove the suspension.

Road Service Licences.

The Traffic Commissioners may grant to any person applying therefor a road service licence to provide such a road service as may be specified therein, and a vehicle shall not be used as a stage carriage or an express carriage except under such a licence. For the purpose of this section a vehicle used as a stage carriage, or as an express carriage, shall not be deemed to be so used under a road service licence unless it is so used by the holder of the licence and in accordance with the provisions thereof.

The commissioners shall not grant a road service licence in respect of any route if it appears to them from the particulars furnished, as mentioned below, that the provisions of the Act relating to the speed of motor vehicles are likely to be contravened, and in exercising their discretion to grant or to refuse a road service licence in respect of any routes and their discretion to attach conditions to any such licence shall have regard to the following matters:—

(a) the suitability of the routes on which a service may be provided under the licence;

(b) the extent, if any, to which the needs of the proposed routes or any of them are already adequately served;

(c) the extent to which the proposed service is necessary or desirable in the public interest;

(d) the needs of the area as a whole in relation to traffic (including the provision of adequate, suitable and efficient services, the elimination of unnecessary services and the provision of unremunerative services), and the co-ordination of all

Digitized by Google

forms of passenger transport, including transport by rail;

and take into consideration any representations which may be made by persons who are already providing transport facilities along or near to the routes or any part thereof or by any local authority in whose area any of the routes or any part of any of the routes is situate.

Subject to the provisions of this section and to any regulations made by the Minister, the commissioners may attach to a road service licence such conditions as they may think fit with respect to the matters to which they are required to have regard and in particular for securing that:—

(a) the fares shall not be unreasonable;
(b) where desirable in the public interest the fares shall be so fixed as to prevent wasteful competition with alternative forms of transport, if any, along the route or any part thereof, or in proximity thereto;
(c) copies of the time-table and fare-table shall be carried and be available for inspection in vehicles used on the service;
(d) passengers shall not be taken up or shall not be set down except at specified points or shall not be taken up or shall not be set down between specified points;

and generally for securing the safety and convenience of the public.

Every person applying for a road service licence shall submit to the commissioners:—

(a) particulars of the type or types of vehicle to be used; and
(b) in the case of regular services, the time-tables and fare-tables of the services which it is proposed to provide under the licence; and
(c) in any other case, such particulars as to the frequency of the services and the times to be taken on the journeys included in those services as the commissioners may require.

If where an application has been made for a road service licence it is represented to the commissioners by any person interested in or affected by the application that it is necessary or desirable in the public interest that the commissioners should fix the minimum or maximum fares for any service which the applicant proposes to provide under the licence, the commissioners may, subject to the provisions of this section fix such fares and make it a condition of the licence that fares shall not be charged under or in excess of the minimum or maximum.

Validity of Licences in Other Areas and Backing of Licences.

A road service licence granted by the commissioners of any traffic area shall not be valid in any other traffic area through which the route to be followed runs, but a road service licence granted by the commissioners of one traffic area may be backed by the commissioners of another traffic area, and if so backed, shall in the area of the commissioners by whom the licence is backed have effect as if it were a road service licence granted by them.

The commissioners of any traffic area, on backing a road service licence, may as respects their area impose any condition which they might have imposed on granting the licence, or vary any condition attached to the licence by the commissioners by whom the licence was granted, and all the provisions of this part of the Act as to applications for road service licences and the granting, refusal, suspension or revocation of such licences and matters connected therewith shall apply to the backing of road service licences, subject to the modification that references in the said provisions to the commissioners by whom the licence was granted shall be construed as references to the commissioners by whom the licence was backed. Save as aforesaid, any licence issued under this Part of the Act by the commissioners of any traffic area shall be valid in every other traffic area.

Power to Revoke or Suspend Licences for Non-Compliance with Conditions.

A road service licence may be revoked or suspended by the commissioners who granted the licence on the ground that any condition subject to which the licence was granted has not been complied with. The commissioners shall not revoke such a licence unless, owing to the frequency of the breach of conditions on the part of the licensee, or to the breach having been committed wilfully, or to the danger to the public involved in the breach, the commissioners are satisfied that the licence should be revoked or suspended.

Returns to be made by Persons Operating Public Service Vehicles.

It shall be the duty of any person carrying on the business of operating public service vehicles to keep such accounts and records in relation thereto and to make to the Minister such financial and statistical returns, and in such manner and at such times, as the Minister may from time to time require.

It shall be the duty of every person who applies for or holds any road service licence to supply to the commissioners within the prescribed time particulars in the prescribed form:—

(a) of any agreement or arrangement, affecting in any material respect the provision within the area of the commissioners of passenger transport facilities entered into by him with any other person by whom such facilities are provided, whether within or without the area;
(b) of any financial interest (whether as a partner or shareholder or as a result of any loan, guarantee, or other financial transaction) which any other person providing passenger transport facilities or controlling (either wholly or in conjunction with any other person) the business of any person who provides such facilities has in the business of the applicant or holder of the licence, and in the case of the applicant or holder who is a company of any right which any such person as aforesaid has to nominate any director of the company;
(c) of any such interest or right as aforesaid which the applicant or holder has in the business of any other person who provides passenger transport facilities within the area of the commissioners.

Drivers' and Conductors' Licences.

Drivers and conductors of public service vehicles must be licensed. A licence to drive a public service vehicle will not be granted unless the applicant is over 21 years of age; and a conductor must be over the age of 18. These age limits are, however, dispensed with if the applicant shows to the satisfaction of the Traffic Commissioners that for six months immediately preceding January 1st, 1930, he had been regularly employed as a driver or conductor.

A licence to drive a public service vehicle may be limited to such type or types of vehicles as may be specified in the licence.

General Provisions as to Licences.

Application for a public service vehicle licence shall be made to the Commissioners for the traffic area within or from which the vehicle is intended to be ordinarily operated.

An application for a road service licence shall be made to any commissioners within whose area the proposed route or any part thereof is situate.

An application for a licence to act as driver or conductor of a public service vehicle shall be made to the commissioners for the traffic area in which the applicant resides.

Duration of Licences.

A licence, not being a road service licence shall unless previously revoked, continue in force for one year from the date on which it is expressed to take effect.

The Minister may prescribe to the dates in the year on which road service licences shall expire and a road service licence shall, unless previously revoked, continue in force up till and including that one of the prescribed dates which occurs next before the expiration of one year from the date on which the licence is expressed to take effect or by till and including such earlier date, being one of the prescribed dates, as the commissioners may at the time of the granting of the licence for special reasons determine.

A Road Service Licence may contain a condition that the service shall be limited to one or more particular periods or occasions.

Appeals.

Any person who:—

(a) being an applicant for the grant of a public service vehicle licence or road service licence, is aggrieved by the refusal or failure of the commissioners to grant the licence, or with any condition imposed by the commissioners; or
(b) being a local authority which, or a person providing transport facilities who, has opposed the grant of a road service licence, is aggrieved by the grant thereof or by any condition or by any variation of the conditions attached thereto; or

Digitized by Google

(c) being the holder of a public service vehicle licence or road service licence, is aggrieved at the revocation or suspension thereof, by the commissioners or by any variation of the conditions attached thereto; or

(d) being the holder of a public service vehicle licence, is aggrieved by the refusal of a certifying officer to remove the suspension thereof; or

(e) being an applicant for or the holder of a certificate of fitness, is aggrieved by the refusal of a certifying officer to issue such a certificate or by the limitation of its duration proposed by the certifying officer or by the revocation of a certificate;

may within the prescribed time and in the prescribed manner appeal to the Minister.

On any such appeal, the Minister shall have power to make such order as he thinks fit (including an order revoking a licence), and any such order shall be binding upon the commissioners or certifying officer.

Such fees as the Minister may prescribe shall be charged by the Commissioners in respect of the grant or backing of licences and in respect of the issue of certificates of fitness.

WAGES AND CONDITIONS OF EMPLOYMENT.

The wages paid by the holder of any road service licence to persons employed by him in connection with the operation of a public service vehicle and the conditions of their employment shall not be less favourable to them than the wages which would be payable and the conditions which would have to be observed under a contract which complied with the requirement of any resolution of the House of Commons for the time being in force applicable to contracts with Government departments.

SPECIAL PROVISIONS WITH RESPECT TO THE CITY OF LONDON AND THE METROPOLITAN POLICE DISTRICT.

For the Metropolitan Traffic area there shall be one traffic commissioner only.

The area consisting of the City of London and the Metropolitan Police District is referred to in the Act as "the special area." The Metropolitan Public Carriage Act, 1869, sections 8 and 14 of the Metropolitan Streets Act, 1867, the London Cab and Stage Carriage Act, 1907, and section 6 of the London Traffic Act, 1924, shall not apply to any public service vehicle, or to the driver or conductor thereof, unless the vehicle plies for hire as a stage carriage by short stages within the special area in maintaining a regular service on an approved route within the meaning of section 6 of the London Traffic Act, 1924.

For the purposes of this section a vehicle shall be deemed to ply for hire by short stages within the special area if its route, so far as it lies within that area, is divided into stages, and if from any point on its route within the area a passenger may travel for a fare not exceeding twopence to the next point at which a stage ends.

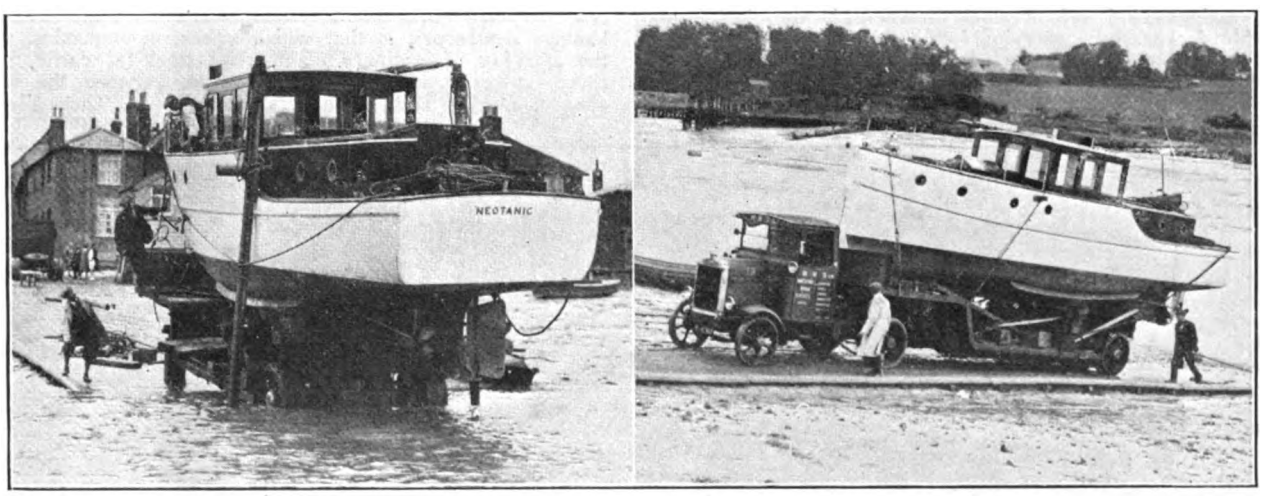
Where a public service vehicle is licensed under section 6 of the Act of 1869, there shall be deemed to have been attached to the licence a condition that the vehicle shall not, without the consent of the licensing authority, be used within the special area otherwise than in plying for hire in the manner specified above and that, while being so used, it shall ply for hire throughout its route, so far as that route lies within the special area.

A road service licence shall not be required in respect of the use within the special area of a public service vehicle plying for hire by short stages within that area in accordance with the terms of a licence granted under section 6 of the Act of 1869.

Submerging a Scammell.

A transport contract of a unique character has just been carried through by Messrs. M.R.S., Ltd. (formerly Marstons Road Services, Ltd.).

The job consisted of transporting a 35 ft. cabin cruiser, built by Messrs. Husk & Sons, of Wivenhoe, near Colchester, from the River Colne, on which the shipyard is situated, to their customer, Mr. H. N. Fisher, of Wolverhampton, on the river Severn. Mr. Stockdale, of Messrs. M.R.S., Ltd., personally supervised the operations, and mentioned in conversation that the railway company had refused to undertake the job. The load was conveyed on a Scammell eight wheeler used by Messrs. M.R.S., Ltd., for transporting boilers and other heavy goods, and proved admirable for the purpose.



LEFT: MR. STOCKDALE (ON FERRY HARD) DIRECTING OPERATIONS; IN THE BACKGROUND CAN BE SEEN THE POWER UNIT. RIGHT: THE LORRY STARTING ON ITS JOURNEY.

No cranes were available for lifting the load so the following method was adopted. Taking advantage of the existence of a hard roadway down to the river bed, used for ferry purposes, and the enormous rise and fall of the tide, the lorry was backed down to a point at which it would be completely submerged at high water, at this point the carriage was jacked up, brakes firmly applied, the back wheels adequately blocked, and the power unit removed to above high water mark. The weight of the carriage, being 8 tons, was amply sufficient to prevent the tide, which it may be mentioned flows very swiftly at this point, moving it even a fraction of an inch. Stocks were now laid on the base of the carriage, to receive the boat, in the same manner as slips are built in a shipyard before building is commenced. Following this the position of the carriage was marked by three tall unright pieces of wood, and the whole left to await high tide. Just before the tide began to ebb, shipyard employees went aboard, and having previously placed three cage anchors in different parts of the river, and connected ropes thereto, attached these ropes to the boat, and with the aid of the ebb tide manoeuvred her into position between the marks, allowing the falling tide to gently deposit her on the carriage.

The boat having been built by Messrs. Husk & Sons the exact measurements were known, so it was a comparatively easy matter to place the stocks in such a way that the keel and bilge keels came to rest firmly in the correct position as the water left her high and dry. It may be mentioned here that an inch or two out of place would have rendered the load unfit for travelling; this would have caused at least 12 hours delay, and it speaks well for the skill of the shipyard employees that the boat was so satisfactorily placed that it was driven away immediately the water had subsided.

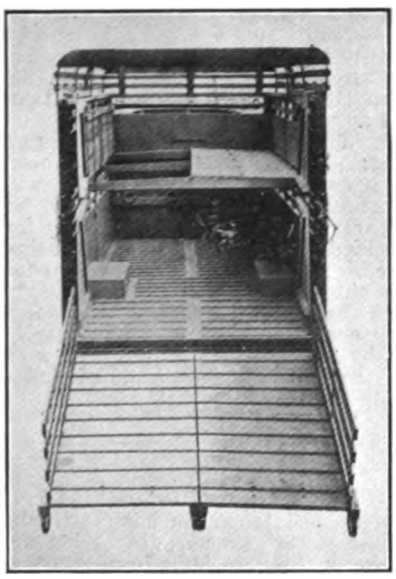
Livestock Carrying by Road.

THE motor has revolutionised agricultural methods, not only in regard to the cultivation of land by the motor tractor, but in transporting produce from place to place by means of the motor lorry. Motor lorries are very widely used by farmers nowadays, and generally speaking, it is found more profitable to own a vehicle than to hire one. This is perfectly sound, for the all-important reason that in agriculture, fruit growing and market gardening, neither loadings nor loading times can be standardised. A grower really never knows what quantity of crops there will be to come off at a certain time or even whether the weather will permit him to load at a given time. The owner's individual lorry must be there in readiness for loading up at any moment, and without delay. This is why goods carrying in agriculture, and particularly in fruit and vegetable growing, has not made more headway, and it is just as well to know that at present goods carrying by road, in some branches of agriculture, does not offer considerable prospects. Consignments of farm produce are either carried by rail, or delivered direct in the owner's vehicle.



THE "BEAN" 40-45 CWT. CATTLE TRUCK ILLUSTRATING DOUBLE RAMP. BEAN CARS, LTD., TIPTON, STAFFS.

There is one exception to this fairly general rule, and that is cattle carrying. Very great developments have taken place in the construction of motor vehicles suitable for the carrying of various kinds of livestock. There is the double and treble decker sheep carrying lorry, the luxurious horse box so widely used by race-horse owners and trainers and by exhibitors and competitors in the ring, bull floats used by pedigree stock breeders, and the ordinary rack-sided and drop-tailed lorry employed in the usual weekly marketing of pigs, sheep and cattle.

Farmers mostly use their own lorries when bringing livestock to market. In some cases, however, where the farmer's lorry is of insufficient capacity, the motor cattle carrying contractor finds opportunities for undertaking the work, but the contractor proper, really does little of this. What happens, is that one farmer, or the local village carrier, undertakes a certain amount of livestock hauling for a number of neighbours. After livestock is hauled to the local market and sold, it must be taken away, and this is the point at which the haulage contractor proper comes in. Much of the livestock sold in the weekly market of a country town is disposed of to buyers from the surrounding industrial areas, and it is the stock brought by them that falls to the contractors for haulage. Their work, in other words, lies in conveying purchased stock from the country market to the butchers and curers in the industrial areas. Livestock carrying is different from that of any other kind of agricultural transport. It is more definite, and for this reason, the carrier finds more scope. This is why, in certain areas, contractors definitely set out to cater for the business. There are cattle carriers, many so designating themselves on their lorries. "Bull & Co., Cattle Carriers," is a sample designation to be found on lorries of contractors specialising in livestock carrying. This in itself is sufficient proof of the existing scope. Information as to the conditions under which the work is carried out, and rates charged, is very meagre, so scant in fact, as to render any detailed remarks impossible. As we have already said, pedigree stock-breeders, race-horse owners, and similar people use their own somewhat elaborately constructed vehicles. The work falling into the hands of haulage contracors, is that which arises in connection with the carrying of ordinary commercial stock-fat cattle, pigs, sheep, calves, poultry and dairy cattle, between the large country market and the buyers' destination. The railways still do a lot of livestock carrying, especially in the store trade, conveying stock to country stations, and from the various smaller country markets. The road cattle carrier finds most of his work in transporting fat stock over distances up to twenty-five or thirty miles. In some cases a buyer will hire a lorry outright at so much per day or so much for the journey. Or the contractor undertakes regular journeys at so much per head per animal, perhaps conveying things for different owners in one load. Loading

Digitized by Google

stages exist in almost every fair-sized cattle market, and provision of such stages is now made on buyers' establishments, and on most modern farms. This facilitates loading and it must be remembered that livestock carrying does not involve great labours in loading and unloading. There is not the amount of handling to be done with a load of cattle or even pigs as there is, say, in a load of bricks.

There is little doubt that the cattle carrying business will grow. It holds certain consistent advantages, which, when they become more fully recognised, will bring the business more into favour. Butchers stock, i.e., cattle, sheep and pigs, like all other foodstuffs, deteriorate in quality as the result of excessive handlings. One of the troubles of the past, in dealing with this type of farm produce, was the amount of bandying about and fatigue to which the animals were always subjected in being taken (usually driven) to market, thence to their destination. Actually, this method is very wasteful. It causes great deterioration in quality. The farmer who conveys his stock in a motor lorry, does so in a fraction of the time that was formerly the case. The animals do not have to walk. They arrive fresh, and not tired. Just the same thing happens when the buyer deals with his purchases, and the saving in quality and weight nearly pays for the cost of road transport.

It remains to make a few points on the type of vehicle used. Big carriers use the two-ton or fifty hundredweight lorry. The double or treble-deck vehicle is used in the sheep districts, but two cows can be carried on a 25-cwt. or 30-cwt. lorry. This or the 40-50-cwt. vehicle is used for general purposes, rack sides and a drop-tail platform being all that is necessary beyond what is required in an ordinary lorry, with one important exception, namely, that the floor of the lorry must be ribbed, or provision otherwise made, that will prevent the animals slipping when they are loaded-up. This is a precaution too often neglected by hauliers who do not regularly engage in cattle transport. It does not matter so much in the case of store pigs or sheep, but with cattle or fat pigs, it is imperative that provision be made against slipping. When this is not done, there is always danger of a broken leg. If the floor could be kept dry, all would be well, but this cannot be had under cattle or pigs. A good thickness of straw is a good substitute for a properly constructed floor, but a permanent arrangement is best. I mention this point regarding the construction of floors, because there have been many serious accidents of this kind, which not only means loss to those who may be responsible, but brings a certain amount of discredit upon a progressive and useful business.

Packing for Transport.

Materials and Methods.

(Specially Contributed.)

AT the first glance, one is apt to dismiss packing as a matter which concerns solely the manufacturer and not the carrier. This, however, is far from being so since the protection afforded by cases must influence the gross weight carried, even where it does not increase the amount of freight. The presence or absence of packing, too, is often the final or deciding factor in determining the form of transport to be used, a consignment sometimes being sent by road simply to avoid the necessity for employing heavy and costly protective materials. Naturally, goods which have to be served by several different means of conveyance in the course of one journey, as for instance, export lots, must be packed up to the standard of the highest requirements, which in most instances is that of ocean shipping. This and other causes have led to the establishment of a more or less universally accepted standard of protection for the great bulk of packed goods, a standard which in effect is laid down by the railways. The influence of this practice is felt even in consignments which do not touch the rail at any point. The origin is really legal, since it arose in the days of the old common carriers by road in the time before railways existed. At common law, these carriers had the privilege of refusing to accept all packages of a damageable nature unless they were properly protected by packing. As the law did not attempt to define satisfactory packing, it meant the carriers themselves had to make this decision, so that in course of time some measure of agreement came to be accepted by force of habit. This was taken up and elaborated by the railways with their usual facilities for standardisation, and as their experience grew, it was collated in the Railway Clearing House, which body at length became the recognised governing association in connection with all matters concerning the protection of goods.

So long as timber and metal were the chief materials in use, little difficulty was experienced in drawing up and enforcing specifications and designs for all containers, cases, boxes, and so on, but when the pressure of the war brought forward the claims of fibreboard, new developments had to be taken in hand. A leading industrial firm found after making enquiries in America that the railways over there were allowing the use of fibre containers up to a limit of several cwts. This being so, it was desirable that British traders should have similar opportunities of reducing their transport costs, consequently specifications were drawn up by the Railway Clearing House to enable individual packages up to 150 lbs. to be carried in fibre containers.

It will be advisable to point out at this stage that the term "fibreboard" is a general description which covers cardboard, leatherboard, millboard, pasteboard, pulpboard, strawboard or other material of a similar character. Containers which satisfy the requirements of the Clearing House can be readily distinguished by the certificate stamped on the outside which bears the inscription: "Certificate.—This case complies with the requirements of the General Railway Classification. The capacity of the case is . . . lbs." The railways do not refuse to carry unapproved cases but they do refuse to take them at carrier's risk. All such containers therefore are conveyed either at owner's risk or under the terms of the railways' "damageable" note. It may pay a firm to send goods in this manner as the amount of damage may be less than the cost of the cheaper containers. With certain low grade or highly competitive goods there is no doubt an economy to be made by relying on inferior packing, but for the majority of goods, the certified variety really yields better results. A fairly comprehensive list of requirements has to be observed with "certified" cases, most of which are of common sense application. It is, for instance, reasonable to expect that the contents should completely fill the case and that articles liable to sifting and leaking should be packed separately and not sent loose in the container.

Brittle or fragile goods or those packed in glass are not normally accepted in fibre at carrier's risk, although there are one or two exceptions used principally in connection with the preserves trade, where small packages are accepted. It is important to remember that when a claim is made, on a fibre-packed consignment, the actual container should be kept for inspection, otherwise the railway company will be within its rights in declining to compensate.

Some half dozen different varieties of construction are recognised, such as the case lid, the one-piece, three-piece, three-piece with metal fastenings, the wood frame end, and the all wood end types. The case lid is of rigid build throughout with a lid which wholly encases the sides and ends. It has to be fastened securely at least three ways with cord. The one-piece comprises a complete envelope with two openings, each of which is covered with four flaps. The existence of these flaps makes for a very compact and strong package which can be sealed with glue or adhesive tape. For contents up to 30 lbs., this type is very popular as it can be made up rapidly and with a minimum of trouble. It is, therefore, often used as a substitute for parcelling, especially where speed is of the utmost value. The three-piece is much the same in construction, except that it has a lid both top and bottom. It has also narrow flaps which serve only as flanges to stiffen the edges of the body. The three-piece with metal fastenings has not secured any very extensive use in this country although it makes a definite appeal for certain specialised goods. All the types described so far are available for weights up to 90 lbs., but beyond this limit the stronger ends of the wood frame or all wood class are necessary. For these two, the load may be extended up to 150 lbs. If the frame variety be used, the corners are to be made with a mortised and tenoned joint or with mitre corners, secured by wire staples or stitches. With the all wood end, the fibre body must be in one piece unless the lids are interlocking.

On general grounds, fibreboard has replaced lumber in the home trade owing to its lower first cost, its reduced tare weight and greater protection against pilferage. Where a timber case weighs 10 lbs. a fibre container of corresponding capacity weighs only 4 lbs. 7 ozs. The ordinary wooden case can easily be rifled by removing a board, taking out part of the contents, making up the weight and replacing the board in such a way as to leave no one the wiser until it reaches the consignee, but the only way of pilfering a fibre case is to cut it and once this has been done concealment is impossible. It is therefore much too dangerous to interfere with this type of packing hence the experienced thief soon learns to leave them alone. In the export and import trade, fibreboard has not made the same progress owing to the difficulty of stowing in the ship's hold, for as may be expected cases of this material will not stand continuous stacking and piling nearly so well as timber, whilst if rope slings are used for discharging and loading to and from the hold, it is desirable to employ trays to prevent the ropes cutting through the edges. It may, however, be noticed that consignments of goods so difficult to transport as condensed milk in tins have been successfully carried across the Atlantic in fibre whilst the same material for cereal foods packed according to the requirements of the Canadian railroad classification stands up very well not only to the Atlantic crossing, but to several transhipments.

For those weights where wood must be used, some improvement is still possible by careful attention to the design and construction of the case. There is a mistaken notion in existence to the effect that thickness of timber alone makes for strength whereas just as good results can be obtained by thinner pieces reinforced with suitable cleats. Moderate sized cases require two cleats at the end whilst bigger sizes necessitate four, placed in the form of a square with interlocked edges. The best results are secured with interior cleats of triangular section so fixed as to allow nails to be driven in to both the sides and the ends. Where round objects such as bottles, cans, jars, etc., are sent, no loss of interior loading space is incurred by adopting this method. A further advantage of inside cleats is that this construction renders pilferage exceedingly difficult, especially if used in conjunction with metal strapping at the corners. The spacing of the nails should not be haphazard, a good plan being to halve the interval at the ends, as that is where most of the strain is likely to arise. Likewise the gauge of nails is important; whilst thin nails are easily driven home, they have not nearly the same holding capacity as the stout variety whilst their liability to bending and shearing makes them less dependable.

In many instances, crates are superior to cases, especially for machinery and for the largest sizes or awkwardly handled goods. The secret of effective crate con-

Digitized by Google

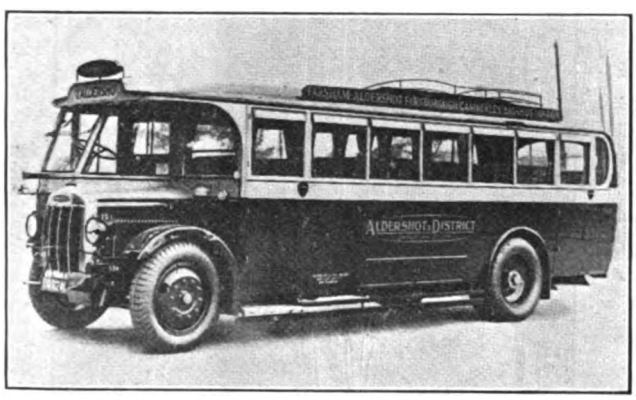
struction lies in the design of the corners; either the box corner or the three-way kind may be employed, the latter being by far the stronger. Its advantage is due to the fact that all nails engage the timber in at least two ways, thereby making for increased strength. For heavy contents, it is generally necessary to strengthen the erection by means of bracing pieces placed as nearly as possible to an angle of 45 degrees to the main members. Where diagonal braces are employed, the whole may be still further strengthened by nailing together both pieces where they cross. Irregular shaped objects are best dealt with by building the crate around the piece as by so doing the points of greatest stress can be guarded against and interior pieces so placed as to prevent the shearing and weaving action which otherwise is always likely to take place.

A combination of extreme strength and lightness can be obtained by the use of plywood, a material which is having an increasingly wide use in container construction. The trouble with natural timber is that a certain amount of weakness is always evident in the grain but this is overcome in plywood by fastening successive layers with the grain running at right angles thereby neutralising the difficulties ordinarily associated with lumber. The greatest trouble found with plywood is the tendency towards puncturing experienced when the sides are exposed to the sharp edges of a heavy case. With the largest size of container, a difficulty may also be found owing to the undue resiliency of the sides which may become so pronounced as to allow the contents to roll and be damaged. As a rule, however, this can be guarded against by the use of suitable cross pieces and internal packing. The constantly increasing use of plywood will, it is expected, in time tend to a reduction in costs which will enable this material to compete on level terms with the most common packing in use to-day.

So far as packing is concerned, the attitude of the carrier should not be confined to a negative insistence upon the correct standard. There are numerous instances in which the information at the disposal of the transport authority and his experience with other goods can be usefully and tactfully passed on to the trader, who naturally is not likely to know all the latest developments as they affect packing requirements and practice. By so doing a mutual gain results which can be used to advantage on later occasions.

Motor Coach and Bus Notes.

T.S. Motors "Express" chassis for Aldershot and District Traction Co., Ltd.—T.S. Motors Limited (formerly Tilling-Stevens Motors Ltd.) of Maidstone, have recently



T.S. MOTORS "EXPRESS" CHASSIS FOR WELL-KNOWN OPERATORS.

secured from the well-known Operating Company The Aldershot and District Traction Company, Limited, an order for a number of the firm's well-known "Express" gear drive chassis. We illustrate one of the vehicles which is

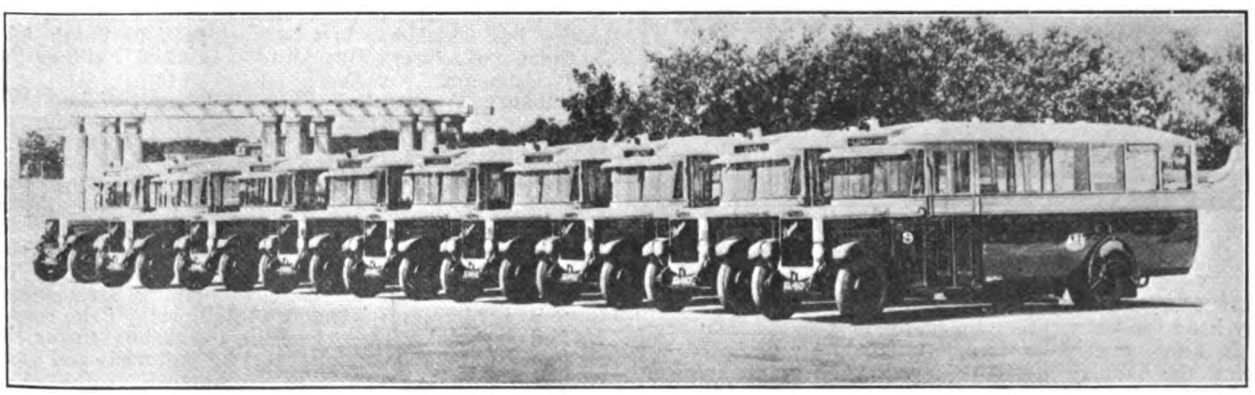
The engine is of the 4-cylinder type, 29/7P h.p., of Ricardo design; bore 4¼ in., stroke 5½ in., (Treasury Rating 29 h.p.). The bodywork in this instance was carried out by the well-known Coachbuilders, Messrs. Strachans (Acton) Ltd., and the vehicle is very finely appointed and of first-class design in every detail.

Bus Station for Newcastle.—Newcastle City Council has adopted a report submitted by the Watch Committee concerning the Marlborough Crescent omnibus station. Estimates have been obtained for the work of roofing-in, etc., at a cost of £4,394, and the Committee has come to a satisfactory agreement with the omnibus companies using the station, who will jointly pay £2,050 per annum, plus £300 by the Corporation itself for its own buses. It is estimated that the total income from the station will be £3,549, and the annual cost is estimated at £3,475.

Double-Deckers for Newcastle.—The Transport Committee of Newcastle Corporation, satisfied with the running of the double-decker buses in its fleet, has decided to put them on all the city or internal routes. Fourteen are being, or have been, delivered recently and will replace the present single-deckers.

A New Route.—A new route to Tynemouth, Whitley Bay, Seaton Sluice, and Blyth is now being run by the "Tynemouth" red omnibuses from Newcastle and Gateshead via Bykes Bank. There is a half-hourly service; but every quarter of an hour on Saturdays and Sundays.

Vulcan Chassis for Gloucester and Glasgow.—The Vulcan Motor and Engineering Co. (1906), Ltd., Crossens, Southport, advise us that the Gloucester Corporation have



FLEET OF VULCAN BUSES SUPPLIED TO THE GLOUCESTER CORPORATION IN 1929 AND SIMILAR TO THE BUSES RECENTLY ORDERED.

T.S. Motors very latest type B.10.A.2. equipped with servo operated four wheel brakes, Marles steering, Dunlop pneumatic tyres, size, 38 in. by 7 in. and C.A.V. "M" type electric lighting equipment. For all-round economical performance the "Express" is an outstanding vehicle of its class. Petrol consumption is between 9/11 m.p.g., whilst oil consumption comes out at 1,500 to 2,000 m.p.g.

favoured them with a repeat order for a further three Vulcan "Duchess" 26-seater Buses, the second repeat order. Their original order placed March 27th, 1929, was for 9 Vulcan "Duchess" 26-seater Buses, followed by a repeat order in November, 1929, for three more Buses of a similar type. The firm have also received an order from the Glasgow Corporation for 25 "Emperor" 50-seater

Digitized by Google

double deck chassis. The "Emperor" bus chassis is fitted with the Monarch six cylinder engine, Ricardo type, rated at 45 h.p. and developing 137 b.h.p.

Bury Coachowners.—Coachowners in the Bury district recently took exception to the action of the Corporation in running coach tours in competition with private owners. The matter was taken up by the Amalgamated Horse and Motor Owners' Association, whose secretary (Mr. J. S. Howarth) had an interview with a sub-committee of the Tramways Committee. The outcome of the meeting was that the sub-committee gave an undertaking not to extend the tours without first consulting the A.H.M.O.A. At present the Corporation is operating two circular tours on Sunday evenings.

STAR "FLYERS" IN SOUTH AFRICA.

Star "Flyers" in South Africa.—Our photograph shows two Star "Flyer" Buses operated by the Rose Bus Service of Johannesburg and running between Johannesburg and Germiston. The Star Motor Co., Ltd., Star Motor Works, Bushbury, Wolverhampton, inform us that the order for these vehicles was placed as a result of the previous successful experience with Star "Flyers" in the Union.

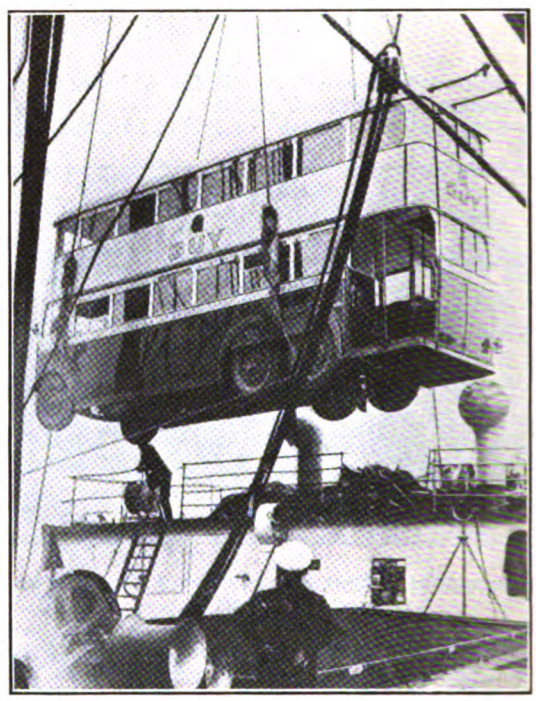
A.E.C. "Regal" coaches for touring the border country.—Two well-known Scottish Operators have recently added to their fleets two "Regal" coaches manufactured by The Associated Equipment Company, Ltd., Southall, Middlesex. One is being used by Messrs. Cockburn and Sons, of Eskbank, near Edinburgh, and the other, by Messrs. Andrew Harper, of Peebles. Messrs. Cockburn's

AN A.E.C. "REGAL" COACH OUTSIDE THE PEEBLES HYDRO.

coach seats thirty passengers, and is provided with a Sun-Ray head for hot weather touring. The seats are of arm-chair type covered in moquette, and are designed for seeing the countryside in the most comfortable manner. Dark walnut finished woodwork and chromium plated brackets with Doverite fittings combine to produce an interior of taste and dignity, and there is also a system of interior heating to meet the modern wish when travelling in the autumn and for winter services in other districts. Messrs. Andrew Harper's coach is designed to carry thirty-two passengers, and also has an all-weather roof, in this case of the Walman type. The seats, finished in antique leather, are deeply cushioned allowing full relaxation on long journeys. Mahogany has been chosen for the interior, and this coupled with nickel plated fittings gives the coach an air of pleasing refinement. For passengers' luggage there is a railed space on the roof at the rear, easily reached by a fixed ladder.

End of Season Follies.—Now that we are nearing the tail end of another motor coaching season, the usual trouble of maintaining the prices of tours has been experienced in many districts of Lancashire, even including Manchester, where there is in operation a scheme which it was hoped, would put an end to these follies. When trade is bad and not much money is circulating, coach-owners are amongst the first to suffer, because the public selects short inexpensive trips in preference to day outings. At Southport where motorcoach owners have had a fairly good season, it has been the common experience that whole day trips have not been at all well supported, but the number of bookings for outings costing less than 5s. have been well up to the average. There have been several incidents this season at Blackpool owing to the cutting of fares. One batch of trouble was started when a number of private owners departed from the list prices for evening and local drives. A meeting of the local motorcoach owners' association followed and eventually some of the big firms entered the fray by running tours at ridiculously low prices.

Guy six-wheel trolley bus for South Africa.—Our illustration shows a Guy six-wheel double deck covered top



GUY SIX-WHEEL TROLLEY BUS FOR SOUTH AFRICA.

trolley bus which has just been shipped to South Africa by the manufacturers, Guy Motors, Limited, Fallings Park, Wolverhampton.

Oldham's Augmented Fleet.—Oldham Wakes Week proved a strong attraction for motorcoach owners and during that period some 500 vehicles were operating from the town. Many of these were brought in from other towns and their owners made application to the Watch Committee for permission to run tours from Oldham. Two hundred such special applications were received. The Watch Committee stipulated that outside vehicles must be run in conjunction with local firms. Whilst day tours constituted the bulk of owners' running arrangements, there were also long date tours to all parts of the country. Nowadays holiday makers in the Lancashire towns show a remarkable partiality for travel by motorbus and motor-coach.

Making Way for Buses.—Some interesting facts and figures are contained in the abstract of the accounts and traffic returns of the Wallasey Corporation motorbuses and tramways department. Owing to the gradual superseding of trams by motorbuses, the tramway receipts decreased from £103,400 in the previous year to £66,927, while the motorbus receipts increased from £53,393 to £109,067. The trams are being gradually superseded by motor buses. The net profit on the tramways during the year was £955 and on the motor buses £24,047, figures which speak for themselves.

Scottish Motor Exhibition.

November 7th to 15th, 1930.

The 29th annual Scottish Motor Exhibition will be held at Kelvin Hall, Glasgow, from November 7th to 15th next. We print below a list of the Exhibitors in the Commercial Vehicle Section, Garage Equipment Section and Accessories and Components Section. So far as information was available at the time of going to press regarding the makes of vehicles to be exhibited in the Commercial Vehicle Section, we mention in parenthesis, after the names of some of the exhibitors, some of the machines to be staged.

Stand No. **Commercial Vehicle Section.**

102. A. & D. Fraser, Ltd., Glasgow (Morris-Commercial vehicles).
103. Alexander Motors, Edinburgh.
104. Armour & Melvin, Ltd., Glasgow (Singer vehicles).
105. Chas. Roberts & Co., Ltd., Wakefield.
106. Bryson Brothers (Motors), Ltd., Glasgow (Dodge and Commer vehicles).
107. Peebles Motor Co., Ltd., Edinburgh.
108. Town and County Motor Garage, Aberdeen (Willys-Overland-Crossley vehicles).
109. T.S. Motors, Ltd., London.
110. Geo. M. Gladstone (Motors), Ltd., Glasgow.
111. Maudslay Motors, Ltd., Coventry.
112. R. Gibson & Sons (Motors), Ltd., Glasgow (Renault vehicles).
113. Commer Cars, Ltd., Luton.
114. Jack & Renwick, Edinburgh.
115. Wm. Arnold, Manchester (Albions and A.E.C. vehicles. Arnold's coachwork).
116. A. Mather & Son, Edinburgh.
117. D. Carlaw & Sons, Ltd., Glasgow.
118. Alec Robertson (Motors), Ltd., Glasgow (Citroen vehicles).
119. Beardmore Motors, Ltd., London.

Municipal Tramways and Transport Association.

Twenty-Ninth Annual Conference at Harrogate.

THE Twenty-ninth Annual Conference of the Municipal Tramways and Transport Association will be held in the Majestic Hotel, Harrogate, on September 24th, 25th and 26th next. On September 23rd at 8.30 p.m. there will be an informal reception of Members and Ladies at the Spa Rooms, Harrogate, by His Worship the Mayor of Harrogate and the Mayoress, and the President of the Association (Mr. Alderman Thomas Canby, J.P.) and the President's daughter (Mrs. J. Hirst). On September 24th there will be a Civic Welcome of the Association after which Mr. Alderman Thomas Canby, J.P., will deliver his Presidential Address. At the afternoon session, Mr. Councillor A. H. Gledhill, J.P., Chairman of the Halifax Corporation Tramways Committee, will read a Paper on "The Transition of Transport Between 1928 and 1930." In the evening the Annual Dinner of the Association will be held in the Majestic Hotel. During the course of the proceedings, on September 25th, Mr. W. Vane Moreland, General Manager of Tramways and Motors, Wallsall, will speak on "The Progress made with the Development of Heavy Oil Engines." An interesting motor coach tour has been arranged for September 26th.

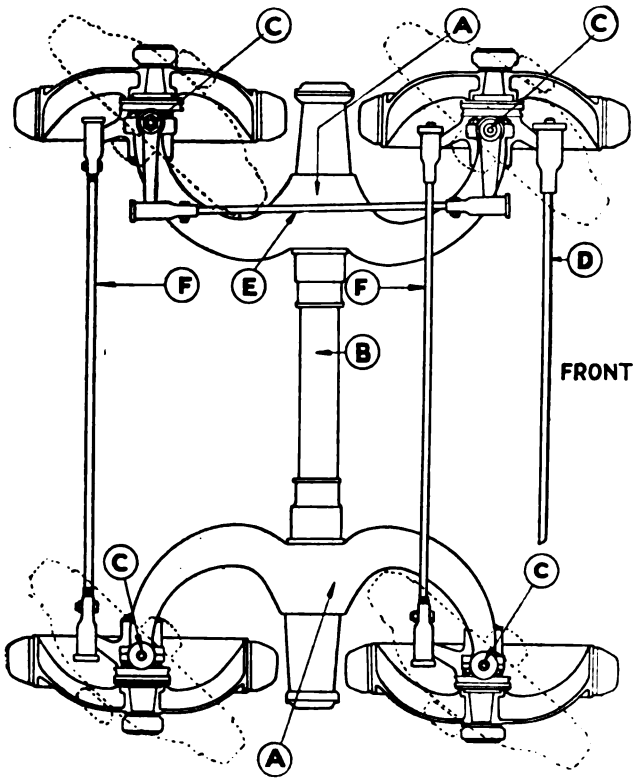
The Sentinel Eight-Wheel Steam Wagon.

THE WORLD'S CARRIERS was, we believe, the first journal to approve the construction of the rigid six-wheeled vehicle and to herald it as an important factor in the economy of road transport, both in respect to road construction and maintenance and in cost per ton mile of goods transported (vide Editorial Notes "The Road and the Vehicle," *The World's Carriers*, April, 1924, page 210. May, 1925, page 240, "The Development of the Multi-Wheel Vehicle." June, 1926, page 314, "The Rigid Six-Wheeler," and August, 1927, page 354, "The Cult of the Six-Wheeler"). The following is an extract from the last editorial note mentioned:—"The next step is, of course, a four wheel bogie for the front axle for certain types of heavier carrying capacity vehicles." Needless to say we are gratified to find our forecast of this development realised in the new Sentinel D.G.8 (rigid eight-wheeler) which we saw demonstrated on the 5th inst. at Sentinel Waggon Works, Ltd., Shrewsbury.



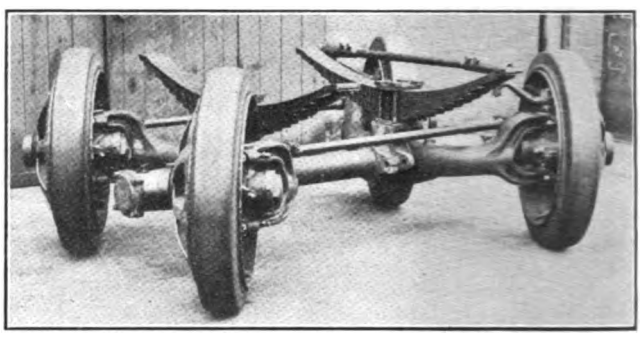
PLAN OF THE "SENTINEL" D.G.8 PATENT FRONT AXLE BOGIE.

A.—Oscillating bogie arms on front axle. B.—Fixed front axle. C.—Steering pivots with levers to which coupling links are connected. D.—Coupling link from steering spindle weigh-shaft to near-side leading wheel. E.—Draglink connecting front and rear steering pivots on near-side wheels. F.—Coupling links connecting opposite pairs of steering pivots on near and offside wheels.

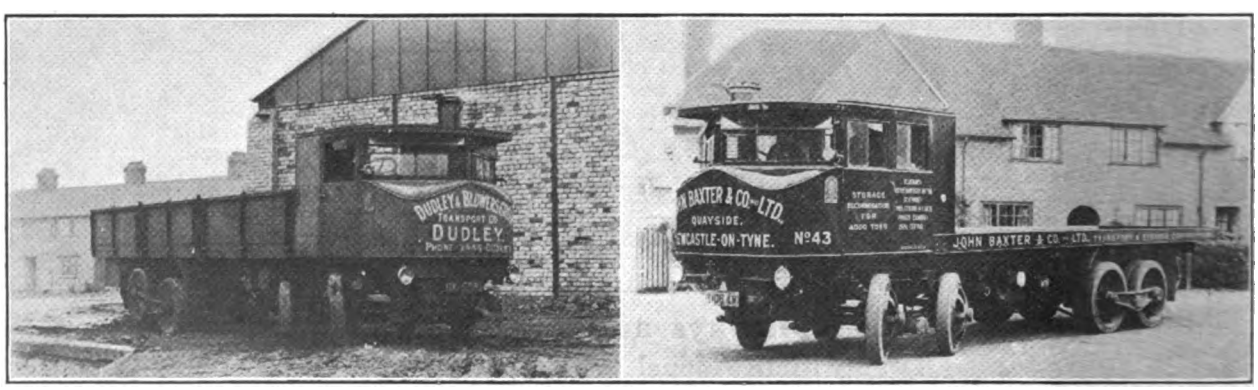
The first Sentinel rigid six-wheeler, the D.G.6. made its appearance on the road some two years ago and was a marked success at once. We understand that, with this encouragement, the Sentinel Company decided then and there to produce a vehicle with a front steering bogie; this they have now succeeded in doing and in our opinion it will be just as great a success as the rigid six-wheeler.

The D.G.8 is built to carry loads of from 12-15 tons at considerable speed. The vehicle we saw demonstrated was loaded with 12 tons and with this load it was driven over railway sleepers, over rough ground and up a slope the gradient of which was 1 in 6. On the latter gradient the vehicle was stopped and held by the steam operated brakes acting on the four rear bogie wheels. Over the rough ground and over the sleepers the wheels of both bogies accommodated themselves to the exaggerated ground profile without materially disturbing the frame horizontal.

A very important advantage of the bogie carriage is that it more than halves the lift of the chassis and its load when passing over any obstacle and, moreover, there is no sudden drop and consequent shock when the bogie wheels are returning to the normal road level. These are very important matters as the reduced lift means a saving in power and the smooth rolling motion over obstacles largely eliminates shock and there is correspondingly less damage to the vehicle, its load and the road surface. The distribution of load over four axles instead of two is a very practical advantage as it enables loads to be carried of such a weight that would be considered extraordinary on other transport vehicles, and yet without increasing the normal axle weight, namely, 8 tons per axle; in fact, taking the 8-ton axle load as the extreme then if it were permissible, it would be quite practicable to carry a gross load of 32 tons, representing a useful load of approximately 20 tons, at a speed of 12 miles per hour, representing exceedingly low transport cost, as we understand on trial runs the average fuel consumption works out at approximately 14 miles per hundredweight.



PATENT FRONT AXLE BOGIE OF THE "SENTINEL" D.G.8.



TWO VIEWS OF THE NEW SENTINEL EIGHT-WHEELED STEAM WAGON.

The Chassis. The chassis of the D.G.8 is practically identical with that of the D.G.6 with the exception of the front axle.

The patented front axle bogie consists of a fixed hollow

Digitized by Google

forging of special steel sprung below the forward end of the nickel steel side members of the chassis frame and is located by means of radius rods and shock absorbers to allow a free vertical movement.

On each end of the axle a forged steel double armed bogie frame is pivotted, the outer ends of which carry steering pivots in which the front wheel journals rotate. Each of the pivots is connected by a track rod to its "opposite number" through levers set to the correct angle whilst the front and rear pairs of wheels are coupled together by means of a secondary drag link. (See diagram.) The primary drag link itself is connected to a transversely mounted lever at the base of the steering column, thus all four front wheels are under steering control on the true "Ackermann" principle. The manner in which they move when the D.G.8 is turning is shown in the diagram. Owing to the additional adhesion provided by the four wheels the leading pair can be given a greater lock than usual without any tendency to skid forward when turning.

All the front wheels move together to the correct angles and roll along arcs of circles having their centre at the point about which the vehicle is turning; this accounts for the remarkable ease with which the D.G.8 can be manoeuvred and the fact that the radius of the circle in which it will turn is less than that of a vehicle of the same length and wheelbase, having only two front wheels.

The principal dimensions of the D.G.8 are as follows:—

Overall length 29 ft. 5 in.; width 7 ft. 6 in.; body length 23 ft.; inside dimensions 22 ft. 9 in. and 6 ft. 9 in.; wheelbase—centre to centre of bogies—14 ft. 7⅜ in., leading wheels to rear wheels on front bogie (centres) 3 ft. 8½ in. Leading wheels to rear wheels on rear bogie 3 ft. 10 in., wheeltrack: front bogie 5 ft. 10 in., rear bogie 5 ft. 9⅛ in.; height of platform laden 4 ft. 0½ in.; front bogie tyres 8 in. by 720 m.m., the rear bogie tyres 160 m.m. by 771 m.m. (fitting diameters in each case). Boiler pressure 275 lbs., capacity of coal bunker 10 cwt., average fuel consumption 14 miles per cwt., tank capacity 230 gallons or sufficient for about 25 miles, turning radius 33 ft. The brakes will bring the vehicle to a dead stop in 22 ft. on a wet road from 12 miles per hour.

Correspondence.

The Editor is not responsible for the views expressed in letters appearing under this heading. No letter will be inserted unless accompanied by the name and address of the writer, not necessarily for publication, but as evidence of good faith.

CHANGE OF TITLE.

To the Editor of THE WORLD'S CARRIERS.

SIR,—May I beg the use of a short space in your valued publication to inform your readers that the name of Tilling-Stevens Motors Limited has been changed to T.S. Motors Limited?

In order to forestall possible criticism I would like to be permitted to state briefly the reasons for this somewhat unusual step.

1. To remove the lingering impression that our products are confined to the manufacture of petrol-electric vehicles.
2. To emphasize again that the Operating Company bearing an almost similar name has no financial or other interest in our company and such support as we receive has depended and is dependent on the merits of the "Express" gear-driven chassis.
3. To assure Government, Railway Companies and Municipal bodies that when purchasing our passenger carrying vehicles they do not support in any way their competitors, since we have no financial or other interest in any operating company or group of operating companies, nor are we ever likely to adopt such a policy.
4. To enable the representatives of our manufacturing competitors to refrain from supporting tacitly or otherwise any contrary statement which may be made.

For the information of your readers who are transacting business with us, may I say finally that beyond the change of name the affairs of the Company will be conducted as heretofore.

Yours faithfully,
W. R. SHEPHARD.
Managing Director
T.S. Motors Limited.
(formerly Tilling-Stevens Motors Ltd.)
Victoria Works, Maidstone.
19th August, 1930.

CANALS FOR HEAVY TRAFFIC.

To the Editor of THE WORLD'S CARRIERS.

SIR,—The plea that to ease the congestion of our roads some of the heavy traffic should be diverted to the canals will receive, I hope, the consideration and support of all commercial undertakings. Not only are our roadways entirely inadequate to bear the strain of the continually increasing stream of traffic, but, as Sir Frank Baines and others have recently pointed out, the buildings which line the highways will be unable soon to withstand the constant vibration caused by such traffic. Especially is this the case in our University cities, where centuries-old colleges are subject to this great menace.

Unfortunately, it is far too generally believed that canal transport is obsolete and too slow for modern conditions. Yet it is a fact that delivery by this form of transport in many cases is quicker than by train. The craving for speed is a twentieth century obsession; it is rarely an essential factor in the transport of heavy goods. The building trade, in particular, might study this problem with advantage, for the canal boat is ideally constructed for the conveyance of steel girders and bricks. Non-perishable agricultural produce also might be conveyed conveniently by this means.

It is not too much to say that a volume of traffic greater than that now sent by road between London and Birmingham could be carried by water when the recently authorised development of the Grand Union Canal system is completed. Even now there could be a continuous stream of day and night traffic on our inland waterways without causing congestion.

Yours faithfully.
P. J. HANNON,
Chairman, National Council of Inland Waterways.
18, Abingdon Street,
London, S.W.1.
August 30th, 1930.

Road Vehicles—Great Britain.

A RETURN has been issued by the Ministry of Transport giving particulars of the number of motor vehicles registered for the first time under the Roads Act, 1920, during the month of June, 1930. Copies (Price, 2/6d.) can be obtained from His Majesty's Stationery Office, Adastral House, Kingsway, W.C.2.

The return shows the number of each class of vehicle registered for the first time by each licensing and registration authority analysed in detail according to various taxation scales, e.g., motor cars under headings of horse power, goods vehicles under headings of unladen weight, hackney vehicles under headings of seating capacity, etc.

The number of new motor vehicles registered was 27,233 compared with 31,968 in June, 1929, the figures for the several classes being:—

	June, 1930.	June, 1929.
Cars taxed on horse power ...	13,594	16,723
Cycles	7,857	9,030
Hackney vehicles	1,255	1,272
Goods vehicles	4,131	4,594
Other vehicles	396	349
	27,233	31,968

R.A.C. Tourist Trophy Race.—The three Alfa Romeo cars which finished first, second and third in the R.A.C. Tourist Trophy Race at Belfast, and also won the Team Prize, were equipped with Jaeger instruments, as well as with Exide batteries for lighting, starting and ignition.

Bus Experiment.—To let the public decide for themselves which they prefer, trams or buses, a new single deck car, holding 54 passengers, will be put shortly on the Tatham Street route of Sunderland Corporation tramways, where buses are being experimentally run.

Round the Lancashire Associations.

Blackpool Motor Coach Owners' Association.

Blackpool and District motor coach owners, who control over 200 vehicles, have just adopted a new schedule of rates which show substantial reductions over those which have been ruling up to recently. Details are as follows, the figures in parenthesis being the old prices:—Morecambe, 2s. 6d. (4s.); Windermere, 6s. (7s.); Keswick, 8s. (9s.); Southport 2s. 6d. (4s.); Gretna Green, 10s. (12s. 6d.). According to Mr. H. Hardman, the secretary of the Association, all the motor coach owners in the town have felt it necessary to take cognisance of the fact that holiday makers have not much money to spend and, futhermore, bad weather had adversely affected bookings. Vehicle owners believed it was better to have full coaches at low rates than half empty coaches at a more substantial price. Much anxious thought has been given by members of the Association to the price situation during the season.

Joint Council and Amalgamated Horse Owners.

Lancashire and Cheshire Joint Road Transport Council has had before it an application by the employers associations for a revision of working conditions. The employers associations that are parties to the agreement which is now operating are:—Amalgamated Horse and Motor Owners' Association, Ltd.; Ashton, Stalybridge, Mossley and District Master Carriers' and Horse and Motor Owners' Association; Bolton and District Horse and Motor Carriers' Association; Burnley and District Road Transport Association; East Lancashire Road Transport Association; Conference of Manchester Carriers; Manchester Transport (Owners') Association, Ltd.; Stockport and District Team Owners' Association; Warrington Horse Owners' and Motor Owners' Association. These effectively cover the Manchester and District area East and South East Lancashire. In accordance with the agreement made through the Joint Road Transport Council and dated February 20th, 1929, governing the regulation of wages for Road Transport, a reduction in wages of 2s. per week should have taken place on the first pay day in August, in accordance with the reduced cost of living figures, as declared by the Labour Gazette for June. The representatives of the employees took exception to the proposal and said they could not allow the 2s. to be taken off. A series of other meetings followed but no tangible result was reached. In view of the position, a special meeting of the General Committee of the Amalgamated Horse and Motor Owners' Association was held and it was decided unanimously that:— "Notices be sent out to the members to post in their stables and garages giving one week's notice to put into operation the reduction which had automatically become due in accordance with the agreement."

The new rates proposed are:—

	Present Rate.	Rate after Reduction.
One Horse Drivers	51s.	49s.
Two Horse Drivers	56s.	54s.
Stable or Garage Hands ...	51s.	49s.
Mechanical Vehicle Drivers—		
Up to 1 ton, Youths ... ... (Not to load more than 15 cwts.)	41s.	39s
Up to 1 ton, Adults	51s.	49s.
1 ton and under 2 tons ...	55s.	53s.
2 tons and over	61s.	59s.
Wagon Assistants and Loaders	51s.	49s.
Steam Wagon Drivers	64s.	62s.
Steam Wagon second man ...	53s.	51s.

The Union representatives stated that they did not agree to the reduction. "This is incorrect," states Mr. J. S. Howarth, "as they agreed to the reductions when they signed the agreement on 20th February, 1929."

Liverpool C.M.U.A.

Interference with natural water supplies for steam wagons on the Northwich and Chester road, was again discussed at the meeting of the Liverpool Area Committee of the Commercial Motor Users' Association on 14th August, when it was decided to submit the matter to C.M.U.A. headquarters. The interference with supplies, it is understood, is on sections of the road where reconstruction work is being, or has been, carried out.

East Lancs. Transport Association.

Following a meeting of the Executive of the East Lancashire Road Transport Association (Blackburn) on 25th August, Mr. T. Fletcher issued a statement dealing with the local strike situation. The statement declares that the employers are insisting on the operation of an agreement on principle. The agreement entered into provides a method of regulation of wages based upon the fluctuation of the cost of living figures and also provides that on the happening of certain events (which it is admitted have happened) the schedule of wages shall be adjusted at certain dates. "To say that the reduction should be the subject of an application and for further agreement as had been stated by one of the chief union officials, is nothing but a quibble" runs the statement.

Manchester Transport Owners' Questionnaire.

The Wages and Labour Executive Committee of the Manchester Transport (Owners') Association has issued a circular to members on the position which has arisen regarding wages of Road Transport Workers in the Manchester District. In February of last year the Transport and General Workers' Union signed an agreement providing for reduced rates of wages operating from the commencement of March, 1929, but the United Road Transport Workers' Association of England refused to attend all meetings or accept any reduction. At that time the majority of the members of the Manchester Transport Owners' Association applied the reduction of 2s. per week, but eight firms declined to do this. From March, 1929, the Lancashire & Cheshire Joint Road Transport Council dealt with all questions of wages and working conditions representing the whole of the employers in Lancashire and Cheshire and the Transport & General Workers' Union, but despite every effort to secure the co-operation of the United Road Transport Workers' Association, persistent refusals were received from the latter Union. In accordance with the agreement adopted by the Lancashire and Cheshire Joint Road Transport Council the employers asked the Transport and General Workers' Union to agree to the 2s. reduction but this they declined to do. Subsequently the eight firms who did not apply the reduction last year brought it into operation from last month and the United Road Transport Workers' Association agreed to these firms doing so, subject to an endeavour being made to minimise short time.

"The position therefore is that the Agreement authorises a further 2/- reduction but the Trades Union will not agree to observe it. The Wages and Labour Executive Committee desire to be guided by the views of every member, particularly as they feel that a settlement might be reached by minuting the reduction as due from the beginning of August but held in abeyance as against any subsequent increase which is likely to arise in the Autumn."

Meanwhile, the following questionnaire has been sent to every member of the Manchester Transport Owners' Association:—

1. Did you apply the reduction of 2/- in March, 1929?
2. If not, have you applied the reduction subsequently?
3. Do you consider that the Agreement for a further reduction of 2/- should be enforced?
4. Do you consider that the amount due should be held in abeyance as a contra against any possible increase later?

This information will be used by the employers representatives at the Lancashire and Cheshire Joint Road Transport Council.

A.H. & M.O.A.—Radcliffe.

At the meeting of the Radcliffe and district members of the Amalgamated Horse and Motor Owners' Association on 27th August, it was decided in response to certain representations, to defer making the wage reduction of 2s (which was due to operate from the following week-end) subject to the matter going to arbitration, the arbiters' decision to be retrospective. The result of the meeting has been communicated to the men's union. There is a desire on the part of the employers to have uniform rates of wages, but to accomplish this it would be necessary to reduce wages in some districts by 4s. per week and in others by 2s. per week. A few transport employers who have introduced the new scale of wages have not experienced any trouble.

Digitized by Google

World Agricultural Tractor Trials.

The Public Demonstration in connection with the World Agricultural Tractor Trials, organised by the Royal Agricultural Society of England and the Institute for Research in Agricultural Engineering (University of Oxford), will be held on the estate of Mr. A. T. Loyd at Ardington, near Wantage, Berks., on September 16th-19th inclusive. Thirty-two machines representing seven countries will be taking part.

Operations will be mainly confined to ploughing and all machines will be at work from 10.30 a.m. to 4.30 p.m. on each of the 4 days.

All the machines have undergone scientific tests, a full report on which will appear in a Report and Catalogue which will be on sale, price 1/-.

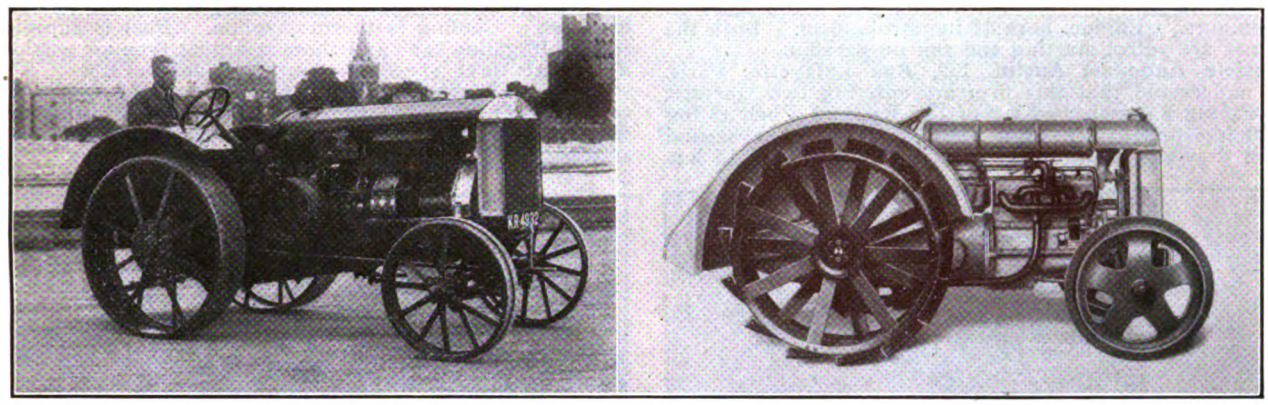
Stations:—Didcot, Steventon, and Wantage Road, G.W.R. Bus Services:—The following pass the Trials ground: Regular Motor Coach Services from London to Stroud and Gloucester, G.W.R. Bus Service from Didcot Station to Wantage, and Oxford Motor Bus Company's Service from Oxford to Wantage via Abingdon.

Agricultural & General Engineers, Ltd., Aldwych House, Aldwych, London, W.C.2. There are entered two tractors the chassis of which are practically identical and manufactured by Richard Garrett & Sons. The difference between the tractors lies in the engines which are manufactured one by Blackstone & Co., Ltd., Stamford, being a spring injection compression ignition engine using heavy oil fuel and the other by Aveling & Porter, Ltd., Rochester, which is a solid injection compression ignition engine using heavy oil fuel. The main frame of the chassis is formed as a rigid body casting mounted on the front axle at the fore-end and carries the back axle in its housing at the rear end. This frame forms a firm foundation for the engine which is mounted at the fore-end with the axis of the crankshaft running fore and aft and at the same time contains the whole of the change speed gear and other working parts of the tractor. As the frame is a self-contained rigid unit any risk of relative movement of the various transmission units is eliminated. Three forward speeds and one reverse are provided. A third shaft is provided in the gear box from which power can be taken off either to the rear or to the side when required. This shaft is clutch controlled. From the gear box the drive is taken through a pair of bevel wheels to the spur pinion shaft which lies across the frame. The pinion on this shaft drives the final spur wheel which is mounted on the differential gear connecting the two halves of the rear axle. A band brake is fitted to an extension of the spur pinion shaft outside the frame. The differential is of the usual bevel type with four pinions. The main driving wheels have cast steel hubs with flanges to which the mild steel spokes are rivetted and the latter in turn are rivetted to the wheel tread which is a solid rolled flange ring; any required type of spud or strake can be attached. The front wheels are of similar construction to the rear. Both pairs are adapted to receive extension rims. The steerage is of the Ackermann type. The drawbar is anchored to lugs on each of the main axle housings and is adjustable. Lubrication is entirely by grease gun with the exception of these internal parts which run in a permanent oil bath.

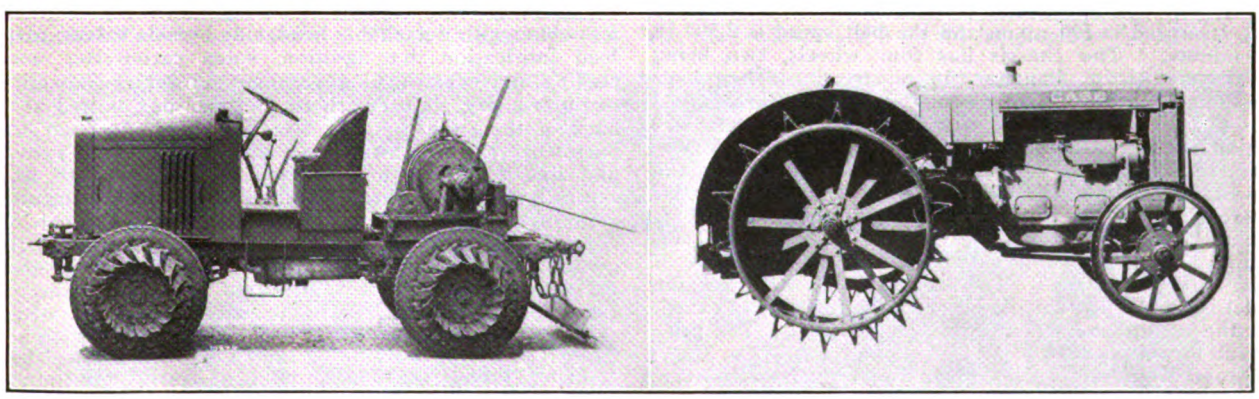
With regard to the engines: the Blackstone high speed spring injection compression engine has four vertical cylinders and is designed for heavy duty. It is robust in every detail and simple in construction and incorporates the well known Blackstone "Spring Injection" device which has met with great success in some 4,000 Blackstone horizontal heavy fuel engines in all parts of the world.

The Aveling and Porter engine is built under "Accro" licence and is fitted with Bosch fuel pumps and injectors. The starting is effected by means of a 6 h.p. starting motor geared to the flywheel.

Associated Manufacturers' Company (London), Ltd., 46-48, Wharfdale Road, King's Cross, London, N.1. Two "Case" tractors are entered, one being model "C" at £248 and the other model "L" at £348. Except in the matter of size and power the specifications are identical. The engine has 4-cylinders and is of the valve-in-head type. It has renewable cylinder sleeves and three bearing crankshaft. It is pressure lubricated through drilled



LEFT: THE AVELING TRACTOR WITH "INVICTA" HEAVY OIL ENGINE. RIGHT: THE NEW FORDSON TRACTOR.



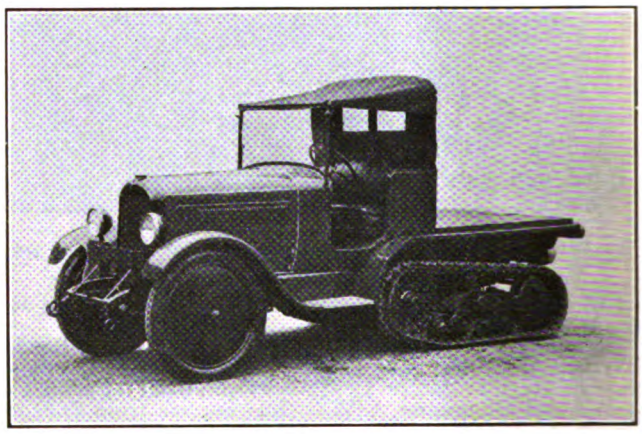
LEFT: THE LATIL KTL TYPE TRACTOR. RIGHT: CASE MODEL "L" 26-40 TRACTOR.

Digitized by Google

holes in the crankshaft. The fuel is gravity fed from large fuel tanks to the carburetter and there is a combination petrol or paraffin manifold. There is an air cleaner, H.T. magneto with impulse coupling and a centrifugal governor. It has water cooling. The final transmission is by two roller chains driven by sprockets on the differential shaft. All parts are automatically lubricated and entirely enclosed and there is a clutch lever belt pulley brake and a foot operated transmission brake. The clutch is of the twin disc type operated by hand. The drawbar is of the swinging type but can be fixed in position. The speeds of model "C" are 2⅛, 3⅛ and 4⅛ m.p.h. The dimensions are as follows:—Model "C": wheelbase 66 in., width 60 in., front wheels 28 in. by 5 in., rear wheels 42 in. by 12 in. Belt pulley 10¼ in., face 6¼ in., speed 973 r.p.m., belt speed 2,600 ft. per minute. Engine 3⅜ in. bore by 5½ in. stroke. Model "L": speed 2½, 3¼ and 4 m.p.h. Wheelbase 79 in., width 67 in., front wheels 30 in. by 6 in., rear wheels 48 in. by 12 in. The belt pulley diameter 13 in., face 8½ in., speed 780 r.p.m., belt speed 2,650 ft. per minute. Engine, bore 4⅜ in., stroke 6 in. Both the engines are petrol starting and run on paraffin.

Societe Anonyme Austin, 139, Rue Lafayette, Paris. We understand that this firm are entering two tractors, one having a drawbar rating of 12.5 h.p. and a belt rating of 20 h.p. and driven by a petrol engine. The second has a drawbar rating of 11 h.p., a belt rating of 15 h.p.

THE AUSTIN TRACTOR.



THE CITROEN-KEGRESSE TRACTOR.

and is driven by a paraffin engine. The petrol tractor has a 4-cylinder engine, bore 3.75 in., stroke 5 in. with a compression ratio of 4 to 1, a nominal crankshaft speed of 1,200 r.p.m. It has Voltex magneto, a Zenith 36 F type carburetter, forced lubrication, a Tecalemit oil cleaner, a centrifugal governor, an air cleaner, is water cooled and has a 10 gallon fuel tank. The pulley is on the off side and has a diameter of 16 in. and a width of 5 in., its speed is 590 r.p.m. and the belt speed is 2,500 ft. per minute. The chassis has four wheels, two being the drivers 42 in. diameter, 10 in. tread. They have demountable rims with spade lugs. It has a three speed gear box to which power is transmitted through a dry friction cone clutch. Speeds are 1⅝, 2 and 3 m.p.h. forward and 1⅛ m.p.h. reverse. Two independent hand brakes are fitted and the weight is approximately 4,060 lbs. The rear track width is 48 in., front 52 in., wheelbase 70 in., turning circle 8 ft. 1½ in., the drawbar has a vertical adjustment of 7 in. to 14½ in. and a lateral adjustment of 8½ in. with three holes. The specification for the paraffin model is similar to that of the petrol engine model except that the engine compression ratio is 3.5 to 1. The price of each model is £210.

Citroen Kegresse, Ltd., Citroen Building, Brook Green, Hammersmith, London, W.6. The firm has entered one tractor, as illustrated, known as type P.10. The feature of this tractor is the Kegresse-Hinstin endless band attachment which takes the place of the normal rear driving wheels. The weight carrying axle extending the full width of the vehicle is connected to the chassis frame by long semi-elliptic springs. On each end of the axle is pivotted a main compensating beam, at the ends of which are mounted compensating levers which in turn carry at each extremity a spindle on which is mounted a twin weight carrying roller. These rollers run along the path formed by the inner surface of the endless band. The drive is transmitted to the endless band by driving pulleys at the forward end of the attachment. Lugs on the periphery of the pulleys engage with driving teeth spaced along the inner surface of the band. The drive is transmitted from the engine through a normal gear box, cardan shaft and bevel back axle with differential but a two speed gear is provided between the outer ends of the half axle shafts and the driving pulleys thereby duplicating the gear ratios available in the normal gear box. The bands themselves consist of an endless belt of rubber and canvas which is the main member of the band. To the inner surface of this belt are bolted driving teeth and the tongues which act as guides to hold the band in tension. To the outer surface are bolted light metal shoes which protect the belt. The engine is 12.8 h.p. Citroen 4-cylinder, 72 m.m. bore by 100 m.m. stroke developing 27 b.h.p. at 2,500 r.p.m. The maximum drawbar pull is 3,000 lbs.

Ford Motor Company, Ltd., Trafford Park, Manchester. The new Fordson tractor, as illustrated, has a 4-cylinder engine cast en bloc, bore 4⅛ in., stroke 5 in. It is splash lubricated, the circulation being maintained by oil thrown off the flywheel by centrifugal action, with ducts to main bearings. Cooling is thermo-syphon. Fuel is supplied from a 16 gallon tank and there is a float type air washer. There are three speeds forward and one reverse. The speeds are 1.53, 2.81 and 6.93 m.p.h. forward and 2.69 m.p.h. reverse. The foregoing are the standard gear ratios and reduced gear ratios are supplied for special purposes such as ploughing.

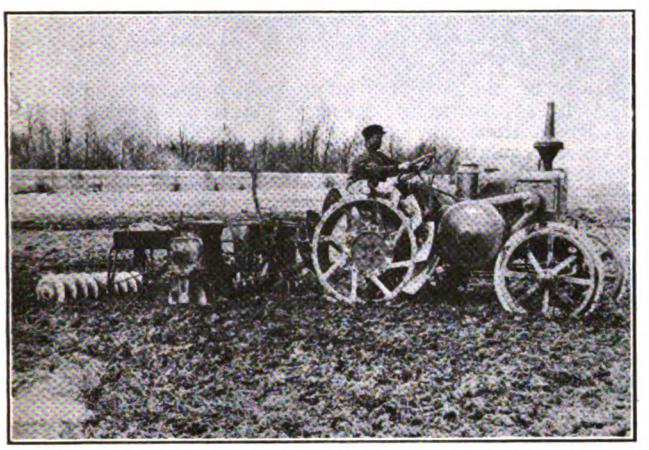
Latil Industrial Vehicles, Ltd., 11, Albert Embankment, London, S.E.11. The tractor to be entered for this trial is the type "KTL" as shown in the photograph. It is described as the agricultural and forestry type. The photograph shows a powerful winch fitted for forestry work but the machine entered for the trials will not be so fitted. It has a 4-cylinder engine 90 m.m. bore by 130 m.m. stroke. Rated at 20 h.p. The cylinders are monobloc with detachable head, side by side valves, forced feed lubrication, h.t. ignition, solex carburetter, pump cooling and centrifugal governor. Power is transmitted through a dry plate clutch to the gear box bolted at the back of the engine. The box is divided into two compartments the forward of which contains three forward and one reverse gears operated by a ball gate lever, centrally placed on the gear box. The rear compartment contains a high and low ratio set of gears operated by a second lever also mounted on the gear box cover thus giving a range of six forward speeds and 2 reverse. From the gear box power is transmitted from the main gear shaft through cardan shafts to differentials mounted in cases which are bolted to the chassis cross members. From the differentials universally mounted driving shafts transmit the drive to all four wheels through internal toothed gears forming the final reduction. These gears are enclosed in oil tight casings. Steering is on all four wheels. Special attention has been given to the springing and there are both foot and hand brakes. The wheels can be supplied as follows:—(1) Forestry wheels with fixed adhesion plates. (2) Disc wheels fitted with Dunlop S.S. 36 in. by 6 in. pneumatic tyres for roadwork. (3) Special wheels provided with folding adhesion blades to work in conjunction with pneumatic equipment for mixed service on hard or soft ground.

Linke-Hofmann-Busch-Werke, Breslau, Germany. In this machine the gear casing is connected with the engine by a flange and together with the engine forms the body of the tractor which is rigidly braced and protected against deformation of the frame. It is fitted with tracks in lieu

Digitized by Google

of wheels and the track roller frames can, on the rear end, move both up and down independently of each other by means of two cranked swinging axles which are separated and mounted on either side of the gear casing consequently they can adapt themselves to uneven ground. The two frames are connected by a transverse bearing spring supporting the weight of the engine. The bearing pin spring also swings round a cross pin of the engine. The power of the engine is 50 h.p. and is designed for either petrol or paraffin. It has four cylinders and a removable cylinder head. The bore and stroke of the petrol engine are 110 m.m. and 160 m.m. respectively and those of the paraffin engine 120 m.m. and 176 m.m. respectively. Lubrication is by pump through an oil filter and there is a special oil cooler. Cooling is by pump. There are a centrifugal governor, Bosch magneto and a dynamo lighting installation supplying three searchlights. The carburetter is a Pallas. The dimensions are:—overall length 10½ ft., width 5¼ ft.

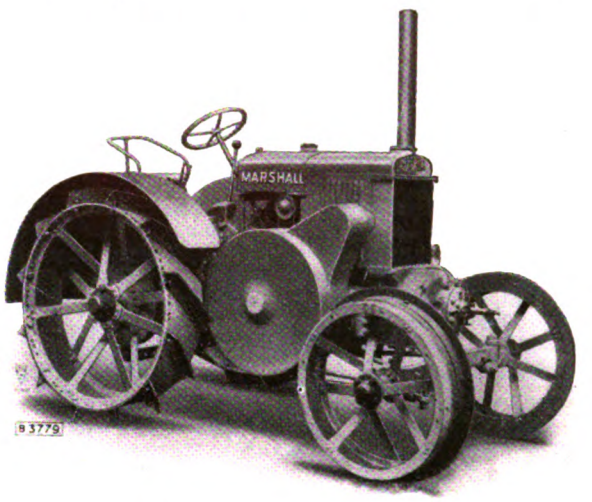
Locomobile Engineering Co., Ltd., 68, Victoria Street, London, S.W.1. The Lanz Bulldog tractor is fitted with a two stroke horizontal crude oil engine 8⅞ in. bore by 10¼ in. stroke. It is a slow speed engine, the normal revolutions being 500 r.p.m. Ignition is by hot bulb heated by blow lamp or started by an electric device. Cooling is



THE LANZ AGRICULTURAL TRACTOR.

thermo-syphon assisted by radiator and fan. The air cleaning arrangement is a combination of centrifugal force and an oily fibre padding. Lubrication is forced. Power is transmitted through a Ferodo lined clutch to a gate change gear box with three forward speeds and one reverse. The final drive is through differential gear. Steering is by worm and sector. The fuel used is crude oil or residual oils, gas oil, or paraffin. The consumption of fuel is about ½ lb. per b.h.p. hour. The fuel tank holds 13½ gallons. There are hand, foot and clutch brakes. On the near side there is fitted a pulley to the crankshaft, 27 in. by 6¾ in. The total length of the tractor is 10 ft. 5 in. for the farm type and 10 ft. 1 in. for the road type. The dimensions of the wheels are:—front 3 ft. 5 in. with centre ring, front wheel rim diameter 3 ft., rear wheel diameter with road bands 4 ft. 6¾ in., rear wheel rim diameter 3 ft. 9 in. For the road tractor, wheel dimensions are as follows:—Front wheels with single tyres 2 ft. 6¼ in., the rear wheel diameter with twin tyres 3 ft. 5¾ in.

Marshall, Sons & Co., Ltd., Britannia Iron Works, Gainsborough. The Marshall diesel oil tractor taking part in the trials is rated at 15/30 h.p. and is primarily designed for ploughing and cultivating operations as well as for the general haulage services incidental to farm work. It is fitted with a single cylinder, horizontal two stroke cold starting engine built into the frame of the tractor. It is a simple engine having few working parts, low operating costs, no magneto, no sparking plugs, no starting lamp, no hot bulb. The normal power of engine for belt work is 27 b.h.p. The cylinder has an 8 in. bore and a 10½ in. stroke. The engine speed is 550 r.p.m. The cylinder is fitted with a liner easily removable. Fuel consumption is about .48 lb. per b.h.p. per hour. A driving pulley 26¾ in. diameter by 7 in. wide is fitted. Cooling is by radiator, pump and fan. There is a three speed gear



THE MARSHALL DIESEL OIL TRACTOR.

giving 2, 3.25 and 5 m.p.h. forward and 2.5 m.p.h. reverse. The drawbar pull is approximately 3,000 lbs. when ploughing in low gear. The vertical adjustment of the drawbar is approximately 14 in. and the horizontal adjustment 27 in. The weight of the tractor is 2 tons 17 cwts. approximately. The front wheels are 2 ft. 9 in. diameter by 7 in. wide. The hind wheels are 3 ft. 10½ in. diameter by 12 in. wide. The total length is 10 ft. 3 in., width about 5 ft. 9 in. Power is transmitted through a cone clutch. The gearing is completely enclosed and runs in an oil bath. There are two brakes, one on the transmission and the other on the rear axle.

THE MUNKTELLS CRUDE OIL TRACTOR.

30 b.h.p. tractor is £500, and of the Mercedes Benz single cylinder 26 b.h.p. tractor £360.

Munktells Mek. Verkstads Aktiebolag, Eskilstuna, Sweden. The Munktell tractor is built in two models, one of 22/26 b.h.p. and the other 30/36 b.h.p. The frame is composed of the engine crankcase and the gear box which are bolted together and form one body. The power unit consists of a twin cylinder two stroke vertical crude oil engine. The hot bulbs are heated in two to three minutes by quick heating burners. There is a container for the compressed air required for the burners which is charged up automatically from the rear cylinder. Starting is effected by compressed air by simply opening the starting valve on the front cylinder. No turning of the flywheel by hand is required to start the engine. The engine fittings include the air purifier, governor and fuel pumps. The fuel is injected into the combustion chamber automatically by the two fuel pumps which are fitted on and driven by a centrifugal governor placed on the gear box and driven from the crankshaft by bevel gearing. The governor regulates the stroke of the pump plungers thus regulating the supply of fuel in relation to the load on the engine and maintains revolutions at 700 per minute for the 22 h.p. tractor and 650 per minute for the 30 h.p. tractor. Power is transmitted through a disc clutch working in oil. The gear box provides three forward speeds and one reverse. The transmission is entirely by spur gear. The belt pulley is fitted on the clutch shaft. Steering is by worm and segment.

Personal Notes.

Worshipful Company of Carmen.—Mr. George Henry Lloyd, of the firm of A. C. Lloyd, Bonded Carmen and Cartage Contractors and Customs House Agents, 3, Tower Hill, London, E.C.3, has been elected Master of the Worshipful Company of Carmen for the current year. Mr. Ernest Edward Coxhead has been elected Senior Warden and Mr. William Austin Balls, Junior Warden. Mr. G. H. Lloyd was elected to the Court of Assistants in the early part of 1919, being elected Master in July, 1922, so that he now occupies the Master's chair for a second time. The business of A. C. Lloyd, which is carried on by Mr. G. H. Lloyd and Mr. C. J. Lloyd, was established as long ago as 1810 and is one of the oldest and most respected firms in the trade.

MR. G. H. LLOYD.

Worshipful Company of Coachmakers.—At a meeting of the Court of the Worshipful Company of Coachmakers on September 1st, the following gentlemen were elected Master and Wardens for the ensuing year:—Master, Mr. William Lawton Goodman, F.I.B.C.M.; Senior Warden, Mr. Sydney Norris, F.I.B.C.M.; Renter Warden, Mr. A. F. Farish; Junior Warden, Mr. S. F. Connolly.

Falkirk Transport Appointment.—Mr. James J. Marshall has been appointed general manager of the Falkirk and District Traction Company. Mr. Marshall was formerly advertising and touring manager of the Scottish General Omnibus Company, Limited, and for four years prior to that filled the position of assistant manager to the Dunfermline Traction Company.

Tramways, Light Railways and Transport Association.—Col. Sir Joseph Nall, D.S.O., and Mr. H. England have been elected vice-presidents of the Tramways, Light Railways and Transport Association.

Rhodesian Railway Commission.—Mr. Roger Gibb has been appointed chairman of the Rhodesian Railway Commission and will leave for Rhodesia shortly.

L.M.S. Appointment.—The London, Midland and Scottish Railway announces the appointment of Mr. A. W. Hamer, assistant divisional controller of passenger services, office of the divisional superintendent of operation, Crewe, to be assistant district traffic superintendent, Swansea.

Stockport Transport Appointment.—Mr. C. F. Wolsey, one of the chief assistants in the Traffic Department of the Sheffield Corporation has been chosen for the post of traffic superintendent of the Stockport Corporation Tramways Motor Services.

For Hong Kong.—Mr. Eric Mitford, who has been assistant engineer of Gateshead Tramways for several years, leaves this month for Hong Kong, where he is taking up an appointment as assistant engineer with the Hong Kong Tramways.

Shipping and Forwarding in Australia.—We have received with pleasure a visit from Mr. F. J. Winn, the proprietor of the business of Morris, Middleton & Co., Customs, Insurance, Shipping & Forwarding Agents, of Sydney, New South Wales, and have had the opportunity of discussing with him the position of transport in the Australian Commonwealth. Mr. Winn, who has been travelling on the Continent, will have left for Australia by the time this issue of our journal is published and he will be pleased to hear from any firm of Shipping & Forwarding Agents in this country who wish to appoint agents in Australia.

Better Transport Leads to Bigger Trade.

Most people would regard a transport department as the tail end of a business however necessary and efficient it may be, and to assert that bigger and better transport can increase the business it serves would be tantamount to claiming that the tail can wag the dog. Yet however paradoxical this may seem it has undoubtedly proved to be true in the experience of many business firms, especially those manufacturers or distributors of foodstuffs to whom efficient transport is of the greatest importance.

SOME OF ALLMEY & LAYFIELD'S "THORNYCROFTS."

The experience of Allmey & Layfield Ltd., of Liverpool, is a typical example of the value of a virile transport "tail." This firm is very well known in the confectionery and allied trades as manufacturers on a very large scale of almond products, marzipan, icing and castor sugars, fondant, and all classes of confectioners' materials. They are also one of the oldest firms in this branch of the trade, dating from 1857, but it is evident they are also progressively-minded and utilize up-to-date methods by a study of their transport activities.

It was about fifteen years ago when they first employed motor transport to supplement their horse drawn vehicles and very quickly discovered the value of the quicker deliveries this afforded, enabling their goods to be distributed in fresher condition, coupled with better facilities for the collection of empty packages. These benefits were also very quickly appreciated by the firm's customers and the then new venture proving so mutually satisfactory it was not long before more motor vehicles were put into service. In recent years, in spite of the difficult period it has been to many firms in the confectionery and allied trades, Allmey & Layfield Ltd. have steadily increased their turnover and their motor transport fleet now includes six modern types of Thornycroft lorries, four being of the very latest six-wheeler type shown in our photograph outside the firm's premises.

From Liverpool they already run these vehicles regularly to all their customers within a radius of approximately 100 miles, which includes practically the whole of the Northern Counties and extends into the Midlands as far as Nottingham and to Leicester and Kidderminster in the South. We understand they have every intention of extending their transport operations even farther afield in the confident belief that by keeping in close and regular touch with a wider circle of users of their products and assuring them of the inestimable advantages of regular supplies of first quality materials in absolutely fresh condition, they will cultivate an increased demand leading to a commensurately larger manufacturing output. It is by no means exceptional for an efficient transport fleet to stimulate a business in this way and while Allmey & Layfield Ltd.'s vehicles have done this so successfully it goes without saying that the quality of their products has all along been of an equally high standard by which reputation they are so widely esteemed in the confectionery and allied trades.

The fact that they are now standardizing on Thornycroft motor vehicles for their motor transport fleet is a tribute to this well-known British make produced by the well-known firm of John I. Thornycroft & Co., Limited, who were the pioneer manufacturerers of commercial motor vehicles in 1895, and have since been responsible for most of the developments which have resulted in the many efficient types in general use to-day, particularly the six-wheeled type of motor vehicle which possesses almost as many distinct advantages over four-wheeled lorries as do pneumatic tyres, now fitted to all Thornycroft vehicles, compared with the old-time solids.

The American Railroads and Road Transport.

In the United States there has been a forty-four per cent. gain in motor bus transport during the past five years, notwithstanding an increase of eighty-two per cent. in motor vehicle taxation during that time. This high taxation is said to be a danger to the shipper over both highways and the rail. The railroad companies are so heavily interested in bus and motor truck routes to-day that punitive taxation on highway transport becomes, in effect, a general levy on the cost of transport. Steam railroad lines are now operating 2,265 buses, and more than 70 railway companies are using between them 5,861 motor trucks.

The bulk of passenger competition with the railways comes from the private motor car. The Interstate Commerce Commission recently estimated railway passenger losses to be chargeable to the motor car to the extent of fifty to ninety per cent. of the loss. On the other hand those railways that serve suburban districts have gained enormously through the private motor car because of the increases in population radiating out from most suburban stations.

The attitude of the American railway companies toward the question of road transport, was recently outlined by Mr. George Hannauer, President of the Boston and Maine Railroad, who said that the railroad is the logical agency to operate motors on the highways between places within the area it serves. It can use the highway or the rail, whichever best fits the job, service and cost considered. It can co-ordinate the two so that passenger, mail and parcel traffic will receive through rail-highway transport, with undivided responsibility. Railway operation of highway motors for hire will also facilitate a desirable public regulation.

The paramount use of the highway being by the passenger motor car, it must be determined if it is economically sound to build highways stronger and wider, at great expense, in order that commercial vehicles may not delay and endanger the passenger car, or whether it is better to reduce the size and accelerate the speed of the commercial vehicle so that it will approximate to the dimensions, the weights and the speed of the larger private cars.

Many of the services now operated on the highways in the United States are at present working at a loss. This is a factor that is receiving increasing consideration. The business is still far from being stabilised, except in the hands of a relatively few concerns.

Mr. Hannauer is convinced that the railroads should commence experimenting extensively with passengers and freight motors on the highway as a part of their service in order that rail and highway transport may each find its proper sphere.

Practical traffic men, railroad officials, and students of transport are all agreed that the railroad is, and will remain, the principal transport medium for inland movement in the United States. The task now is to co-ordinate effectively the functions of rail and highway transport and to endeavour to steer the development of highway motor vehicles along sound lines.

Motor Lorries for the Conveyance of Livestock.— Steps were taken recently by the Irish Livestock Exporters and Traders' Association, of Dublin, to arrange for the conveyance in future of cattle, sheep and pigs by motor lorry from fairs and markets held in the Irish Free State to the ports of Dublin, Cork, and Waterford, for export to Great Britain.

"Safety First" Wins. — Since "Safety First" Week there has been a marked decrease in accidents, fatal and otherwise, in the Merseyside area. This is attributed to the efficacy of the concentrated propaganda in that week. Liverpool Health Committee has decided to renew its annual subscription to the National "Safety First" Association in respect of 252 drivers in the veterinary department.

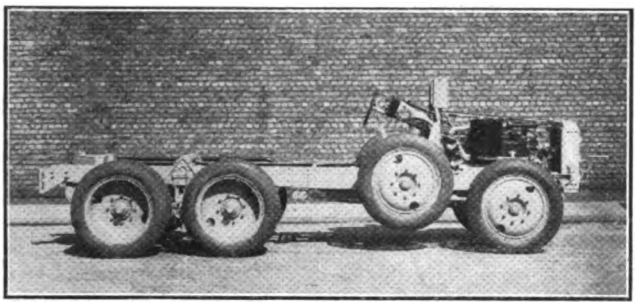
News from all Parts.

Fordson Roadless Tractor on Peat.—The September issue of "The Roadless News," published by Roadless Traction, Ltd., Gunnersbury House, Hounslow, Middlesex, contains an interesting article describing how a Fordson Roadless tractor operated very successfully over some peat areas in Scotland. The area in question was covered by peat about 25 feet in depth over which ordinary wheeled vehicles or tractors were unable to operate. The softness of the surface may be gauged by the fact that the peat under average conditions consists of about 93 per cent. of moisture. A wooden swamp shoe was devised for attachment to the track of a Fordson Roadless tractor. A tractor chassis was supplied to Roadless Traction, Ltd., by R. Pratt, Limited, of Sutton, the well-known Fordson dealers, and the tractor was then fitted with the Roadless equipment and sent to Scotland where the swamp shoes were fitted to a design produced in the drawing office of Roadless Traction, Ltd. The Fordson Roadless tractor having a large clearance between the track and the tractor chassis permitted the employment with certain minor modifications of a swamp shoe, 30 inches wide, which reduced the pressure per square inch to the required figure. The tractor not only performed all that was asked of it, but proved to be capable of doing many things which were not expected or anticipated in the least.

New Crossley Armoured Car.—Crossley Motors, Ltd., Gorton, Manchester, are producing for the Government

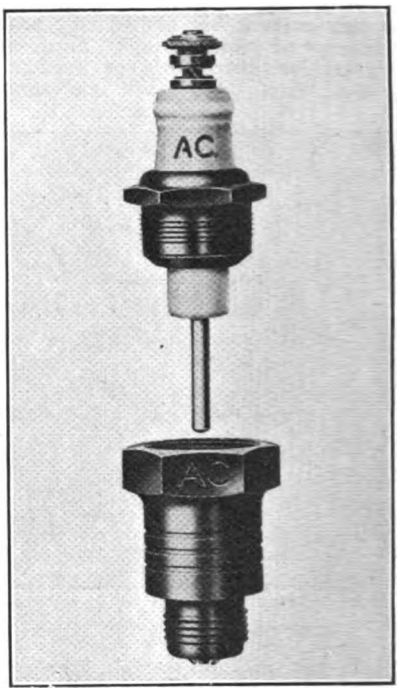


THE NEW SIX-WHEEL SIX-CYLINDER CROSSLEY ARMOURED CAR CHASSIS.

a new armoured car in which are incorporated a number of new and important features. These can only be described briefly for obvious reasons. This vehicle has a six-wheeler chassis with a six-cylinder engine rated at 38.4 h.p., bore and stroke being 4 in. by 5½ in. It has a seven bearing crankshaft, dry sump lubrication. In addition to the normal 4-speed gear box there is an auxiliary box for giving an extra low range for use under extreme conditions. The rear axles are of the fully floating type. Marles type steering is used. The clutch is a single plate type with Ferodo driving discs. There are two petrol tanks—one on dash and one at the rear, each having a capacity of 25 gallons. Springs are semi-elliptic. Twin wheels are fitted at rear. The body has been constructed specially to carry two machine guns, one of which is fitted into a revolving tower on the roof. Wireless equipment is carried. The walls of the car are fitted with special panels through which rifles can be fired. Another model of interest which Crossleys are producing is a troop carrier capable of travelling at high speeds over rough country. These vehicles are lightly armoured and are designed to carry a machine gun which can be used either against air or ground attack. The 20/60 h.p. chassis is used for these vehicles.

St. Helens Corporation Tramways.—The Accounts for the year ended 31st March last of the St. Helens Corporation Tramways shows that the nett profit for the year amounted to £7,708 2s. 11d. The whole of this has been carried to the renewals fund to meet the heavy expense to be incurred in the conversion of the St. Helens to Haydock tramway route to trolley vehicle operation, such cost being estimated as £23,898. Total revenue for the year was £104,775. This is only the second occasion since the undertaking was founded in 1881 on which the revenue during any financial year has exceeded £100,000. The previous occasion was during the boom year of 1921, when the revenue was £109,825. Passengers carried during the year numbered 12,363,600. Operating cost per mile during the year was:—Trams, 17.97d.; buses, 10.76d.; trolley vehicles, 10.10d. Both revenue account and nett revenue account charges are included herein.

AC Commercial Plugs.—The AC-Sphinx Sparking Plug Co., Ltd., Bradford Street, Birmingham, announce a series of four AC long life commercial plugs, developed expressly to give long efficient service in present day high speed, high compression engines. The sectional photograph shows the construction of this new range of plugs, the insulator being particularly massive, while the centre electrode is 5/32 in. diameter. In accordance with the patented AC process, the insulator is sealed into the gland nut while the latter is at a bright red heat, thus the two are permanently shrunk together and, as in subsequent service, nothing like such a temperature is reached; it is claimed that there is no possibility of gas leakage. The firing points are of "Isovolt" metal which has the characteristic of reducing the voltage required to give a spark at the points. This facilitates starting and also gives greater resistance towards sooting and oiling up.



SHOWING THE CONSTRUCTION OF THE NEW RANGE OF AC-SPHINX SPARKING PLUG.

Southdown Motor Services.—An extraordinary general meeting of Southdown Motor Services, Limited, will be held on September 18th next to consider resolutions that: (1) the articles be amended; (2) the capital be increased to £276,250 by the creation of 75,000 new Ordinary £1 shares; and (3) £75,000, part of the reserve fund, be capitalised and applied in distributing to Ordinary shareholders registered on September 18th, 75,000 new Ordinary £1 shares in the proportion of one new Ordinary share for every three existing Ordinary shares (whether of £1 or 1s.), fractions to be sold.

"A Flying Start."—Mr. Mangan's Pucka Shakhari won the Maynooth Plate at the Phoenix Park Meeting, whilst the same owner Mr. Mangan's Pucka Ranee won the Galway Plate with Pucka Shakhari third in the same race. This represented an excellent start for the new horse-box which Mr. Mangan has just put into service and in which these horses were conveyed to the meeting. The chassis is a Willys-Commercial 6-cylinder 30-cwt., the horse-box is detachable leaving a special low-loading lorry which is supplied with drop sides for general haulage and farm work. The complete vehicle was supplied by Messrs. R. Callow & Sons, Westland Row, Dublin, the Willys Overland Crossley Distributors for the Irish Free State.

P.L.A. Canadian Tour.—In the interests of the trade of the Port of London and in pursuance of their policy of maintaining personal contact with overseas traders, particularly those in the British Empire, the Port of London Authority have decided to send Mr. A. E. Wildey, their Public Relations Officer, on a tour of Canada. Mr. Wildey, who sailed on Saturday last, will deal with the subject either by the way of address, lantern lecture or cinematograph film. He will attend meetings, which have been arranged by various Canadian Boards of Trade and Chambers of Commerce in the principal cities and towns from Quebec to Vancouver as well as in Newfoundland. A feature which is materially affecting the activities of the Port and will be specially emphasised, is the steady expansion of the London Market, consequent upon the greater industrialisation during recent years of the South of England and the environs of London; in short, there are increased opportunities for the sale of Dominion produce in the great London Market by reason of its larger and more prosperous population. It will be recalled that last year one of the Authority's Principal Officers undertook a tour of Australia and New Zealand.

Unification of Custom House Formalities.

At the third Biennial Session of the International Federation of Forwarding Organisations, held at Antwerp in June last, and reported in our July issue, **MR. PAUL DUMONT,** Vice-President of the International Federation of Forwarding Agents and Managing Director of the "Schweizerischer Spediteurenverband" at Berne, read a very interesting Paper on the unification of custom house formalities.

He said that they all knew that the international exchange of commodities was extremely hampered, not only by protective duties to be found in existence all over the world, but also by exaggerated formalities in regard to Customs clearance operative in various countries. Many such formalities were unnecessary, unprofitable, excessive and arbitrary.*

The International Chamber of Commerce had successfully and energetically taken the initiative in the movement to obtain simplification and approximation of Customs formalities in the various countries and had taken note of the Customs House formalities to be complied with. At the suggestion of the International Chamber of Commerce the League of Nations had convened a Conference for the purpose of considering the simplification of Custom House and similar formalities which met at Geneva under the Chairmanship of Lord Buxton in 1923, and as the result of those proceedings an International Convention relating to the simplification of Customs formalities was drawn up.

This Convention contains thirty articles of which the first sixteen provide arrangements regarding the simplification and unification of Customs House formalities. This Agreement was accepted by the following 33 States: Union of South Africa, Germany, Austria, Belgium, Brazil, Chile, Egypt, The British Empire, Spain, Finland, France, Greece, Italy, the Kingdom of the Serbs, Croats and Slovenes, Lithuania, the Protectorate of the French Republic in Morocco, Portugal, Luxemburg, Siam, Switzerland, Czechoslovakia, the Regency of Tunis, Hungary, and Uruguay. All these States had ratified the Convention. Curiously enough the plenipotentiaires of Denmark, Norway, Sweden and the Netherlands were absent on the signing of the Agreement. Probably the apparently uninterested attitude adopted by the Netherlands may be due to the custom house system of that country being somewhat primitive, under which high duties are paid only upon alcohol, tobacco and sugar, their whole Customs Tariff containing but 150 paragraphs, whereas the French Tariff comprises more than three thousand.

The chief aim of the Convention is explained in Article 1 which purports:—"The Contracting States, with a view to applying between themselves the principle and the stipulations of Article 23 of the Covenant of the League of Nations with regard to the equitable treatment of commerce, undertake that their commercial relations shall not be hindered by excessive, unnecessary or arbitrary Customs or other similar formalities. The Contracting States, therefore, undertake to revise, by all appropriate legislative or administrative measures, the provisions affecting Customs or other similar formalities which are prescribed by their laws or by rules, regulations or instructions issued by their administrative authorities, with a view to their simplification and adaptation, from time to time, to the needs of foreign trade and to the avoidance of all hindrance to such trade, except that which is absolutely necessary in order to safeguard the essential interests of the State."

Although that International Convention had been valid for many years and it was generally agreed that it was designed to fill a very real need, its effects had not proved to date to be easily perceivable. There were hardly any indications of the suggested improvement and revision of existing Customs regulations. Some countries, for instance Switzerland, had before the Conference already adopted the various points on the programme, and held the opinion that it was out of the question to contend that excessive, complicated or arbitrary formalities are in operation in their case. On the other hand elsewhere there was necessity for revising the Custom House regulations in many respects.

Although the Convention had been ratified by most of the European States, again and again complaints were made that international commerce was seriously damaged owing to Customs formalities in many countries.

Mr. Dumont said he had studied thoroughly the records of the Geneva Conference on the subject. The records filled two handsome volumes and showed that many clever and prudent phrases were exchanged which were worthy of being put into practice.

From a general view of the present situation regarding Customs formalities it appeared that not much progress had so far been made.

Turning to the less important points a number of facts emerged which tended to cause complications and difficulties in regard to the international traffic, for instance, the variation in the time allowed for the entry for the clearance, the different days being free of charges for warehousing; the varied times goods were kept in public bond; the discrepancies in the orders concerning "unclaimed merchandise."

Complaints were also made, by no means groundless, as to the exorbitant extra charges made being out of proportion to the services rendered. He would only enumerate the charges made for certifying invoices and certificates of origin, for the declaration of imported and exported goods, for setting up commercial statistics, and in that connection he would like to say that, as had already been pointed out by the International Chamber of Commerce, the demand to produce certificates of origin and legalised invoices was often more strict than was necessary and was occasioning loss of time and unjustifiable difficulties.

(To be continued.)

* This criticism is opportune. In the International Convention relating to the simplification of Customs formalities it is stated ". . . desiring to give effect to the principle of the equitable treatment of commerce laid down in Article 23 of the Covenant of the League of Nations, convinced that the freeing of international commerce from the burden of unnecessary, excessive or arbitrary Customs or other similar formalities would constitute an important step towards the attainment of this aim. . ."

Southampton Docks.

THE "peak" of the passenger season this year at Southampton Docks, which has just been passed, witnessed the establishment of several new records in this sphere of the Port's shipping activities. The handling of the world's four largest liners, all homeward bound from New York, within the space of 25 hours constituted but one of the record feats accomplished in connection with ocean passenger traffic. Recent shipments of timber from Baltic and North Pacific ports have been very heavy and the end of the year should see much of the additional storage accommodation at the Docks utilised by this traffic. One of the North Pacific arrivals of a particularly interesting nature was the East Asiatic Company's new ship "Amerika," which called at the Docks on her maiden trip to land passengers and discharge a large quantity of lumber and general cargo. The construction of four great trunk roads in Britain to facilitate the transport of heavy merchandise has been advocated. A report issued by the promoters of the scheme states that of the four roads proposed one linking Southampton and London is considered to be most important in view of the large and rapidly growing trade with the United States. This statement calls attention to the ever-increasing importance of Southampton in respect of freight traffic and developments in connection with the scheme will be awaited with interest.

More Quay Room.—Newcastle Corporation is stated to have under consideration a scheme for a further quay extension of about 700 ft., forming part of an ultimate extension of 2,000 ft. It is proposed to provide a depth of 30 ft. at low tide, and to equip the quay with electric cranes, railway lines, and transit sheds.

American Shipping Contract for Germany.—The Standard Shipping Company of New York (Standard Oil Company) has placed with three German ship building firms orders for six motor tank vessels, each of 16,200 tons, says Reuter's Cologne correspondent. The vessels are to be engined with Diesel motors.

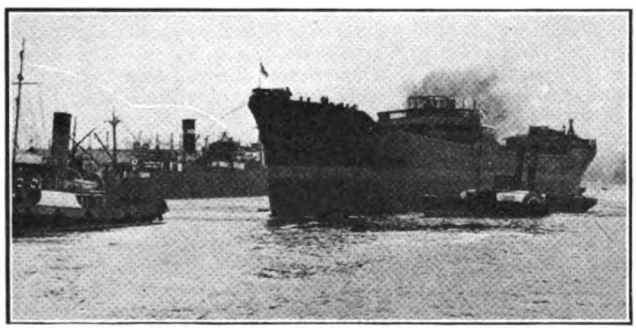
News from the Ports.

Mexico. Tariff Changes.—Reuter's Trade Service learns from Mexico City that a Presidential Decree (effective August 11th) amends the import duties on a number of articles including certain railway rolling-stock (passenger coaches and locomotives, railroad cars and platforms), which, for the present, have been placed on the free list. Considerable reductions are also notified in the duties on floss silk, silver in sheets and carbonate of potassium and soda, while increased rates are imposed on cod-fish, edible vegetable fats, and certain other foodstuffs.

Nicaragua. Increase in Import Duties.—According to a Reuter's Trade Service message from Managua, the Executive has approved increases in import duties made by the Nicaraguan Congress, to become effective on September 8th, on a number of articles, including muslins, silks, liquors, wines, tobacco, gasoline, naphtha, perfumery, and passenger motor cars valued at 1,500 dollars (£300) or more.

Blyth's Claims.—Among claims made for Blyth in a development handbook issued by the Corporation are that it has the lowest harbour dues on the N.E. Coast; rates among the lowest in that area; cheap land, water, gas, and electricity, with first-class transport facilities by road, rail, and sea. Within a radius of seven miles from Blyth port office there are 40 coal mines; and during last year over 5,500,000 tons of coal were shipped from the port.

Launch of Up-to-Date Tanker. Features of Latest Anglo-American Vessel.—An entirely new vapour system, developed and patented by the owners, is a feature of the



Photo] [Newcastle Evening Chronicle.

THE ANGLO-AMERICAN OIL COMPANY'S MOTOR TANKER "CHEYENNE," AFTER BEING LAUNCHED AT PALMERS, JARROW-ON-TYNE.

motor tanker, "Cheyenne," 12,400 tons deadweight, launched recently at Palmers' yard, Jarrow-on-Tyne, for the proprietors of Pratts spirit. The vessel is one of the largest single-screw motor tankers afloat and embodies the latest ideas in tanker design. Summer tanks are dispensed with, there being two fore-and-aft bulkheads. A sprinkler system will keep the decks wet in hot weather so as to cool the cargo and thus supplement the new vapour system in reducing losses by vaporisation. The crew will be accommodated in cabins aft, no cabin housing more than two men. The "Cheyenne" will be capable of carrying 11,500 tons of motor spirit and oils of 30 different grades and she will be able to discharge her own cargo automatically in less than 24 hours. Messrs. Doxford, Sunderland, are the makers of the patent opposed-piston motors which develop 3,600 brake horse-power at 90 revolutions a minute.

White Star Line's Winter Cruises.—The White Star Line's Winter Cruise programme from Great Britain for the coming season has been greatly extended to meet the growing demand for holidays at sea, and includes three interesting and attractive tours to the Atlantic Isles, Spain, Portugal, North Africa, the Riviera and Italy. The "Laurentic," a triple screw steamer of 19,000 tons will make a special Christmas Cruise from Liverpool, December 18th, and from Southampton, December 20th, to Las Palmas, Teneriffe, Madeira, Cadiz and Lisbon. Christmas Day will be spent in the lovely harbour of Las Palmas. Shore excursions to places of interest will be arranged at all ports of call, and from Cadiz a special train will convey the party to Seville, one of the most fascinating of Spain's historic cities. The "Laurentic" is due back at Southampton on January 6th and at Liverpool, January 8th. The triple screw s.s. "Calgaric" begins her first cruise from Southampton to Spanish, Portugese and Mediterranean ports on January 31st, and calls at Lisbon, Barcelona, Monaco, Naples, Algiers, Gibraltar, returning to her home port on February 17th. Her second cruise to Atlantic Isles, North African and Spanish ports begins at Southampton on February 21st, and her calls will include Ponta Delgada, Madeira, Teneriffe, Las Palmas, Casablanca, Tangiers and Arosa Bay, returning to Southampton on March 10th.

Tyne Trip.—Members of Newcastle and District branch of the Institute of Chartered Shipbrokers took a party of 70 young men engaged in Quayside shipbrokers' offices for an excursion down the Tyne to see its industrial developments at close quarters. The Tyne Improvement Commission lent its steamer "Sir William Stephenson" for the trip.

Agents' New Agency.—Messrs. E. H. Mundy and Co., Ltd. shipping and forwarding agents, of Royal Liver Building, Liverpool, with which firm Mr G. C. Horton, president of the Liverpool Shipping and Forwarding Agents' Association is connected, have been appointed agents to the Grace Line, which is operating fast regular services of steamers between New York and a number of South American ports. The rates of freight from U.K. will be the same as those of the direct lines, but shippers will have the advantage of shipping by regular lines from U.K. ports to New York, where the goods are transhipped to the Grace Line steamers.

"A Serious Matter."—Mr. R. V. Edwards, chairman of the Transport Committee of the Liverpool Chamber of Commerce, states it is a very serious matter that the port of Liverpool should lose trade by the differential rates ruling, not only from the Continent to our own big exporting countries, but from our big exporting countries to the Continent, greatly in favour of Continental countries. He hoped that any member who knew of any low rates ruling in connection with trade would communicate with the Transport Committee.

Obituary.—Mr. James M'Gregor, manager of the Ellerman and Papayanni Steamship Lines, who died at Liverpool recently at the age of 60 years, had been associated with the Mediterranean trade practically the whole of his business career. He served with Messrs. Frederick Leyland and Co. up to the year 1901, when the Mediterranean portion of that business was acquired by the Ellerman Line, with whom he was appointed assistant manager and then manager.

U.K.-U.S.A. Freights.—Liverpool shipping and forwarding agents have been manifesting interest in the discussions which have been taking place on the question of minimum rates of freight from U.K. to U.S.A. Data is being collected by shippers with a view to representations being made to the Shipping Conference Lines for reductions.

Ship Canal Traffic.—The Manchester Ship Canal Company reports that the traffic receipts for the half year ended 30th June, 1930, amounted to £683,809, as compared with £745,169 for the corresponding period of last year, a decrease of £61,360. The net revenue of the whole of the undertaking for the half year (after providing for interest and fixed charges) was £36,498 less than the corresponding half year in 1929. The result reflects the reductions in charges (made largely in consequence of the de-rating scheme embodied in the Local Government Act, 1929) which operated during the whole of the half year.

Dock Charges at Swansea.—In connection with the Order issued by the Minister of Transport on September 4th directing that for twelve months from October 2nd, 1930, the charge for tipping and weighing coal at the South Wales ports, other than Swansea, is to be reduced from 6d. to 5½d. per ton, the Great Western Railway Company announce that, in accordance with an undertaking given to the Swansea Chamber of Commerce in 1923, arrangements will be made to extend this reduction to Swansea for the same period. The charge for tipping and weighing coal shipped from fully-loaded 20-ton wagons at the South Wales ports will also be reduced from 5½d. to 4½d. per ton for the twelve months in question.

High Capacity Wagons.—In connection with the Order made by the Minister of Transport reducing the coal tipping and weighing charge at the South Wales docks from 6d. to 5½d. per ton for the twelve months commencing October 2nd next, the Great Western Railway Company announce that during this period the tipping and weighing charge for coal shipped from fully-loaded 20-ton wagons will also be reduced from 5½d. to 4½d. per ton.

Digitized by Google

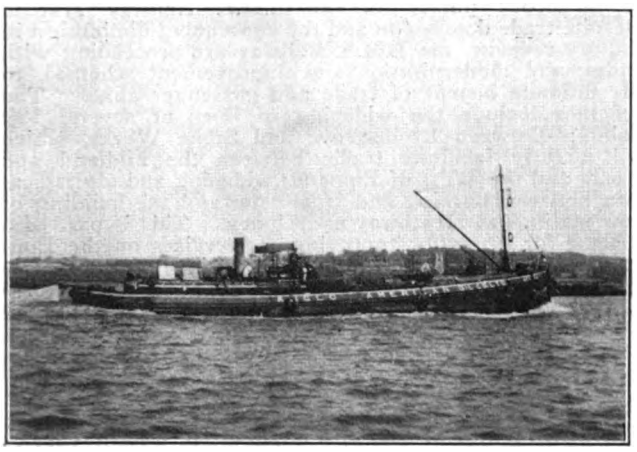
Middlesbrough's £500,000 Bridge.—It is probable that a start with the construction of the new bridge across the River Tees at Newport, Middlesbrough, will be made at the beginning of February. The bridge, which is to be of the vertical lift type, with a central span of 250 ft., is estimated to cost half a million pounds, and will provide employment for a large number of men over two years.

Institute of Marine Engineers. Arrangements for September.—On September 23rd (Tues.) at 6.0 p.m., at the premises of the Institute of Marine Engineers, Lieut.-Comr. Sir August B. T. Cayzer, Bart., R.N. (ret.), the President, will deliver his Presidential Address. Chairman: Mr. H. J. Vose, Chairman of Council. Tea will be served in the Library from 5.0 p.m. **Junior Section.**—On September 27th at 3.0 p.m. there will be a visit to Brimsdown Power Station, North Metropolitan Electric Power Supply Co. The Secretary of the Institute is Mr. B. C. Curling, and the address 85-88, The Minories, London, E.C.3.

Shipping Service to Indian Ports.—A Stockholm message says that Svenska Ostasiatiska Kompaniet is about to reorganise its service to Indian ports. The company maintains its steamer service to India in co-operation with Wilh. Wilhelmsens Rederi, of Oslo, Norway, and has hitherto despatched a steamer every three weeks from Scandinavian ports to ports on the west and east coasts of India. The two companies will now extend the service by introducing fortnightly voyages. An express route will be established to the two chief ports in India and a second route to all important ports in that country. This means that five steamers will be employed on the service to British India instead of the present three.

Small British Motor Tankers.

THE principal British Oil Companies employ a number of small motor tank vessels capable of carrying up to 500 tons D.W., in the distribution of petrol and heavier grades of oil in bulk. These craft operate from the principal storage centres in different parts of the country, to numerous outlying



THE COASTAL TANKER "WESTGATE."

depots from whence their cargoes are conveyed by road transport, direct to the filling station or consumer.

Construction is of steel, and is usually to Lloyds highest class, whilst where the sphere of operation entails an open sea passage, such as from the Thames to East Coast ports, special attention is given to the design, in order to ensure absolute seaworthiness. In other cases, the dimensions are restricted in order to navigate certain inland waterways, where locks, bridges and tunnels have to be negotiated. Provision is also occasionally made for towing one or two dumb lighters.

In the London Area, petrol is brought from the storage tanks below Gravesend by means of special classes of barge, which are not, however, equipped with propelling machinery, being towed by powerful tugs, and discharged by pumps ashore. They are generally of the swim ended type and are heavily built to withstand a considerable amount of rough usage and the strains experienced whilst lying aground. Separate tanks are fitted in order to comply with the Port of London Authority requirements, but which vary considerably as to shape and method of construction amongst the differently owned craft.

Several small motor barges up to about 200 tons D.W., are in service on the Thames for conveying paraffin and crude oil, the majority of which belong to the British Tanker Co., Ltd., a subsidiary of the B.P.

One of the most representative fleets of these small tankers is owned by the Anglo American Oil Co., and all the units of which are distinguishable by their names ending in "Gate." The first of these vessels to be commissioned was the "Bargate," an 80 feet craft, built in 1916, for use in the Southampton neighbourhood. A slightly larger vessel, the "Stourgate," was completed in 1924, for service between the Thames, Medway, and Kent coastal districts, and a number of other craft of from 50 to about 150 tons D.W., have been built during the past few years. A recent example, the "Westgate," is shown in the accompanying illustration, and in general appearance is typical of the majority of these useful little vessels. The propelling machinery is invariably placed aft, and generally consists of semi-diesel engines, although in a few instances heavy duty paraffin motors are employed in order to comply with the requirements of local authorities, who are averse to hot bulb ignition. Sufficient power is installed to ensure a service speed of about 8 knots, and powerful motor driven pumps are carried for working the cargo. Every precaution is taken to minimise the risk of fire, special attention being given to the engine silencing arrangements, whilst electricity is used wherever possible. It is perhaps gratifying to note that the majority of these craft have been built in this country, and equipped with machinery of British Manufacture.

Port of London Authority.

Twenty-First Annual Report.

THE Twenty-First Annual Report of the Port of London Authority for the year ended 31st March last shows that the total net register tonnage of vessels that arrived and departed with cargoes and in ballast from and to foreign countries and British possessions and coastwise during the year ended 31st December, 1929, was 57,578,355 tons.

The values of the total imports and exports (excluding coastwise goods) of the United Kingdom and six principal ports for the year ended 31st December, 1929, were as follows:—

	1929. £
United Kingdom	2,059,816,450
London (including Queenborough)	705,237,524
Liverpool	477,077,169
Hull	109,274,207
Manchester (including Runcorn) ...	99,886,967
Southampton	96,207,794
Glasgow	81,695,332

Working Results.—The following is a summary of the working for the year ended 31st March, 1930:—

	£
Total Revenue	6,103,295
Total Expenditure	4,520,238
Balance of Revenue	£1,583,057

Less—	£
Interest on Port Stock and Temporary Loans, Sinking Fund Charges, etc., less Interest, etc., receivable ...	1,459,009
Surplus Revenue for the year	124,048
Balance brought forward from 31st March, 1929	396,584
Balance carried forward	£520,632

The policy of bringing the Authority's Undertaking and its equipment into an adequate state of repair and efficiency has been continued, and further authorisations for this purpose have been made for the ensuing year.

In connection with the consideration by H.M. Government of schemes for the relief of unemployment, proposals have been submitted to the Minister of Transport for works of improvement in the road transport facilities to and from the docks, and a definite programme of improvement works at the docks has been submitted to the Unemployment Grants Committee.

Railway Notes and News.

The Railway Barometer.—The Railway Traffic Receipts of the four Group Railway Companies have now been published for the first 34 weeks of 1930 compared with the same period in 1929, and are as under:—

	1930	1929
Passengers, Parcels, etc. ...	£49,617,000	£51,476,000
Merchandise, etc.	£40,750,000	£43,250,000
Coal, Coke, etc.	£22,143,000	£23,544,000
	£112,510,000	£118,270,000

Liverpool Railway Pageant.—In connection with the celebration of the centenary of the Liverpool and Manchester Railway, from September 13th to 20th, the railways of Great Britain are combining to exhibit some of their earliest engines, together with the latest types of express locomotives. There will be replicas of Stephenson's famous "Rocket" and the broad gauge "North Star," the Liverpool and Manchester engine "Lion," L. & N.W. "Cornwall" and models of famous old engines like "Puffing Billy," "Novelty," and "Planet," all of original and peculiar construction. Side by side with these will be some of the latest types of locomotive design. Among them are the L.M.S. "Royal Scot," a Beyer-Garratt and a standard freight engine; the L.N.E. high-pressure compound No. 10,000; the Great Western "King Stephen" and the Southern Company's "Lord Nelson." In addition, the railway groups will contribute specimens of their latest types of rolling stock, consisting of dining and other saloon vehicles, sleeping cars, corridor coaches with vita-glass windows, and other examples of the most modern passenger and freight vehicles.

Big Load for the L.N.E.R.—Arrangements had been completed at the time of writing for conveying 1,000 tons of electrical equipment from Newcastle to Ymuiden, in Holland, via the Harwich-Zeebrugge train ferry. The equipment consists of two 33,000 k.w. turbo-alternators, complete with condensing plant, which Messrs. C. A. Parsons & Co., Ltd., are manufacturing at Heaton, Newcastle. The machinery will be conveyed in three special trains direct from Heaton Junction to Harwich, where the trucks are to be shunted on to the train ferry and so conveyed to Zeebrugge, where they will proceed over the Belgian and Dutch railways to their destination, no re-loading or transhipment being necessary. The first train, of about 40 wagons, is expected to leave Newcastle about September 21st, and will be followed by two 24-wagon trains in October and November. Two wagons will carry loads weighing 65 tons each, making 104 tons with the weight of the wagons.

The Bulgarian State Railways.—The profit of the Bulgarian State Railways for the year 1929 amounted to 379,200,000 le vas (£565,970), says Reuter's Sofia correspondent.

New Egyptian Railway Opened.—The new railway from Mitbera to Zifta, in the Delta, was officially opened on August 14th by Sidky Pasha, the Prime Minister, representing King Fuad. The line, although only fifteen miles long, is of great economic importance as it passes through the most fertile part of the country of which Zifta is the chief centre while it shortens the journey from Cairo to Zifta by nearly half.

Victorian and N.S.W. Railways. Last Year's Losses.—A Melbourne message says that the Railway Commissioners of New South Wales and Victoria have applied to the Commonwealth Arbitration Court seeking a revision of the basic wage which is now £4 13s. 6d. weekly. They are also seeking a revision of the wage basis, the abolition of special wage margins and rationing. A reduction in railway costs was decided upon at the last Premiers' Conference. The losses last year on the New South Wales Railways were £2,756,374, and on the Victorian Railways, £1,000,000.

Cars to the Continent.—The L.N.E.R. announce that new reduced rates for the conveyance of motor cars between Harwich and the Continent have been introduced. Cars may be shipped to Antwerp, Zeebrugge or Flushing, the return journey being made from any of these ports within 30 days. The rates vary according to the weight of the car, but for a car weighing not more than 15 cwt. the return trip costs £4 5s. 0d. Special cheap fares are also available for motorists accompanying their cars.

Evolution of Euston's Great Hall. Enquire Within on Everything.—To the Great Hall, Euston, the central feature of the L.M.S. Railway's big terminus, has been added a modern Information Bureau. Since its completion by Phillip Hardwicke in 1847 the Great Hall has been the meeting place of many millions of travellers and the resting place of many a weary Tommy, and during its 83 years of life alterations have been going on apace. Between 1912 and 1916 refreshment rooms, dining rooms, waiting rooms, and hairdressing saloons were added and the opening of the new Bureau marks a further step forward in its modernisation. Designed by the L.M.S. Railway Company's Architect, R. Wynn Owen, F.R.I.B.A., and executed by Messrs. Pollard & Co., the new Bureau harmonises with the architecture of its surroundings whilst its external facades amply display several of the most famous L.M.S. posters. It is flanked by glass counters, internally illuminated and surmounted by direction pylons. At these counters attractive booklets can be obtained and the reservation of seats and sleeping berths made. Inside this London nerve-centre the prospective traveller will be able to secure information, assistance and advice upon all knotty problems relating to rail-travel ensuring a comfortable journey to any of the 32 counties penetrated by the L.M.S.

Work for the Winter. L.M.S. Schemes in Progress.—Schemes costing over £2,600,000 and giving employment to thousands of workers, will be in progress this winter at numerous points on the L.M.S. Railway system. Despite trade depression and the consequent diminution in railway revenue, the L.M.S. Railway are proceeding with widespread modernisation and improvement schemes, to the ultimate benefit of trade and passenger alike. The schemes include the widening of lines at several key points:—Between Bromsgrove and Stoke Works, which will greatly facilitate traffic between the Midland and North and the West of England; widening and electrification between Barking and Upminster and the building of new stations at Heathway and Upney. This is part of a scheme for generally improving the services on the London and Southend Line; widening between Broadholme and Ambergate (Derbyshire); widening at Mirfield (Yorkshire), for improving facilities between industrial Lancashire and principal Yorkshire towns. Goods terminal accommodation and facilities are to be improved at certain important centres, such as Camden (London), Birmingham, Great Bridge and Stoke-on-Trent. Between Camden and Watford semi-automatic signalling is to be installed, which will permit of the L.M.S. suburban electric service out of London being intensified. Dock improvement and modernisation works are in progress at Ayr, Troon, Grangemouth, Fleetwood, Goole, Garston and Swansea. Two new stations will be in course of construction at Southend-on-Sea and Squires Gate, Blackpool. In addition to these schemes and in conjunction with the L. & N. E. Railway, the Manchester, South Junction and Altrincham line is being electrified and a new mineral railway (the Mid-Nottinghamshire Joint Railways) constructed in Nottinghamshire.

New Railway Coaches.—Two sleeping cars of entirely new design have been made for the London and North Eastern Railway. Separate bedrooms with full-size beds are provided for the first time on any railway. The sleeping cars were designed by Mr. H. H. Gresley, the chief mechanical engineer of the L.N.E.R. Each car has 10 rooms arranged in pairs, which can be converted into five double rooms by means of communicating doors if desired. The rooms are finished in stippled blue paint shaded from a deep blue at the bottom to white in the centre of the ceiling, the whole being varnished to a high gloss finish. The head and foot of the bed are of walnut; there are a spring mattress, with hair and wool overlay, blue blankets, and an embroidered bedspread. A pedestal with white porcelain washbowl and commode is fitted in a corner and provided with hot and cold water; and placed centrally on the partition near at hand is a frameless mirror, with a folding table below it. The room is lighted by means of a 30-watt single light in the ceiling, which can be dimmed for a night light, and there is a read-lamp over the bed head.

New Luffing Cranes for Middlesbrough Dock.—The London and North Eastern Railway announce that a comprehensive scheme for the improvement of the crane equipment at Middlesbrough Dock has been authorised and will be commenced before the end of September. Thirty-nine of the forty-two cranes at present in operation, viz., twenty-six 3-ton, four 5-ton and nine 10-ton with fixed jibs of 44 ft. 9 in. radius are to be replaced by new electrically driven two-gear cranes for working at half their maximum capacities. Seven additional 3-ton cranes of the same type will be provided. The provision of the improved cranes will reduce the time spent in setting and moving the appliances and greatly facilitate the loading of cargo, which owing to the increasing size of vessels has become a difficult matter with the fixed-jib cranes.

Air Transport Notes.

Paris to New York Flight. — The machine in which Costes and Bellonte made their record Paris to New York flight was a Brequet biplane (type 19) fitted with a 650 h.p. Hispano-Suiza engine and Dunlop 1,000 by 225 aeroplane tyres. The weight of the plane was 7,300 kgs. including 5,570 litres of petrol.

Go by Imperial Airways.—Imperial Airways announce that the fare on the services leaving Paris and London at 5 p.m. daily has been reduced from £5 15s. to £4 4s. A unique opportunity is thus offered for one-day aerial excursions to Paris at a return fare of £7 19s. 6d. every day, including Sundays. Also, in response to popular demand, it has been decided that both the two services mentioned will call at Le Touquet on any day by request. Following the standard practice of the Company, all aircraft on this route are triple-engined, and carry a steward and buffet. A Tea Flight over London in one of the luxurious Imperial Airways "Silver Wing" air liners has become the popular week-end pleasure. Afternoon tea is served in the 'plane. Tea Flights take place from Croydon Aerodrome every Friday, Saturday and Sunday afternoon until 28th September. The inclusive fare is £2 2s. per passenger. Bookings may be made in advance at any Travel Agency or with Imperial Airways, Limited, Airways House, Charles Street, London, S.W.1. Telephone: Regent 7861 (night and day). Telegrams: Impairlim, London.

Prince of Wales. Promotion.—The Air Ministry announces that His Majesty the King has been pleased to approve that Group Captain His Royal Highness Edward Albert Christian George Andrew Patrick David, Prince of Wales and Duke of Cornwall, K.G., K.T., K.P., G.C.S.I., G.C.M.G., G.C.I.E., G.C.V.O., G.B.E.. M.C., Personal A.D.C. to the King, be promoted to the rank of Air Marshal in the Royal Air Force.

Westland "Wessex" Aircraft for the Belgian Air Lines. —M. Cocquyt, Chief Pilot of the Sabena Air Lines of Belgium, took delivery recently at Yeovil of the fourth Westland Wessex three-engined, six-seater, cabin monoplane, sold by the Westland Aircraft Works to that Company. Before his departure M. Cocquyt expressed the great satisfaction of the directors and pilots of the Sabena Line with the three machines which they have now had in continuous use for a number of months, and congratulated the manufacturers on the high standard of service which they have received from them.

Finland Adopts Auto-Slots.—An agreement has been arrived at between the Finnish Government and Handley Page, Ltd., whereby the Finnish Government is enabled to use the slotted wing on its aircraft. Norway, Denmark and Sweden now use Handley Page slots on their aircraft. The Moths used for training by the Denmark air services are fitted with auto-slots, and in Norway all the Douglas torpedoplanes are slotted. Swedish aircraft are being slotted as they come into service, in accordance with the policy of the country.

R100.—In connection with the recent flights of the airship R100 it is of interest to learn that a Cooke, Troughton & Simms theodolite was the instrument chosen for the purpose of lining up the girders in the construction of this airship.

Anglo-American Air Alliance ? — The United States Government have submitted to the British Government the draft of a proposed reciprocal aerial agreement covering transatlantic flights and other aerial undertakings between Great Britain and her Dominions and the United States. A similar agreement already exists with Canada, under which the granting of pilots' licences by each nation is recognised by the other.

Aviation Ground Near Avignon.—A Paris message says that the establishment is being arranged of a large commercial and tourist aviation ground at about 10 kilometres from Avignon.

Turkish Tax Concession.—A Constantinople message says that with the exception of benzine, which comes under the petrol monopoly, all supplies and spare parts for aeroplanes sent from Holland to India via Turkey will be exempt from taxation.

Manchester Air Port.—Statistics have become available showing (a) the use of the Manchester air port for three months ending June, and (b) details of Imperial Airways Provincial Air Service up to 31st July. During April, May and June there were 174 arrivals (including 47 R.A.F. machines). In June there were 58 south bound passengers and 29 north bound passengers, and in July 115 and 44 respectively. The quantity of freight and excess luggage carried on Imperial planes during the month of July, to and from Manchester, was 918 lbs.

Larger and Swifter Airships Needed. — Sir Charles Burney, the designer of the R.100, addressing the Canadian Club at Ottawa last month, suggested that a committee of Canadian business men, in co-operation with the Canadian Government should meet to consider a proposal that Canada should co-operate with the British Government in the establishment of an airship line between Great Britain and Canada. "If, on investigation," he said, "you find you are interested, you might indicate the extent of the support you would be willing to give in order to enable me to submit a concrete proposal to the British Government." Sir Charles Burney said he was at present designing a larger dirigible capable of carrying a hundred passengers and ten tons of mail across the ocean at an average speed of 85 miles an hour and with a cruising radius of 6,000 miles. This would make possible a regular transatlantic service averaging two and a half days for the westward journey and one and a half days for the eastward. The only difficulties, he added, in realising such an ambition, would be financial or political. The builders would require mail contracts and loans to finance the building of such airships before embarking on extensive programmes. In view of the movement in Germany to establish an airship service between Germany and the U.S.A., the time was ripe for "a forward movement on a bold scale for the establishment of a British-Canadian service." "The world is changing," he said, "and the British Empire to maintain its place must develop a rapid form of transportation." He estimated the cost of establishing a fleet of airships for a bi-weekly service between the two countries at 30,000,000 dollars (£6,000,000). He calculated that the gross revenue to be derived from such a service would be approximately 20,000,000 dollars (£4,000,000) and the expenses about 15,000,000 dollars (£3,000,000). He suggested that the British and Canadian Governments should guarantee 75 per cent. of the initial cost in the same way as the United States had given a similar guarantee for its Government steamship lines on the Atlantic service, charging 3½ per cent. interest on the money invested, which constituted a first charge on the ships. If the two Governments guaranteed six tons of mail a week at a rate of 1,000 dollars (£200) a ton it would only be necessary to make a surcharge of from 8 to 10 cents. (4d. to 5d.) on each letter, and mail between the two countries would cross the ocean in two days instead of the eight days generally taken now.

Air Service for Afghanistan.—A Peshawar message says that the Junkers Company are negotiating with Nadir Shah with regard to the extension of the Persian air service to Afghanistan.

New Spanish Airport.—A Murcia message says that the Municipal Council has granted a credit of 150,000 pesetas for the construction of an airport at Murcia.

Towns to Erect Airway Signs.—The International Air Navigation Conference, which met recently at The Hague, decided to propose that every town of more than ten thousand inhabitants should erect a sign, according to a system to be determined later, by which pilots of aeroplanes could find out over what town they were flying.

Spanning the Prairies by Air. Success of Flying Service in Canada's Far North. — Not a single life nor a pound of mail lost in three years is the proud record of organised mail services in Canada, according to the report recently issued by the Civil Government Air Operations Branch of the Department of National Defence and quoted by Reuter's Ottawa Correspondent. The year 1929 witnessed great advances in aerial activity in all parts of the Dominion, the report states. Forest protection and survey work were continued on a larger scale than ever before. Flying in the far north became an essential part of the Dominion's transportation system. Air mail services were extended to span half the continent. In the East trunk lines have been operated daily from St. John to Quebec, Montreal, Toronto, Windsor and Detroit. In the West aeroplanes span the prairies every night. These developments have only been possible because of public interest and support. The most notable feature of the year, perhaps, was the increasing interest shown in aeroplane development by the municipalities in different parts of the country. Everywhere from the Pacific to the Atlantic municipalities are contributing generously to the provision of adequate aerodromes and their equipment, with hangars and night landing facilities where necessary.

Law Cases.

INTERESTING POINT IN IRISH FREE STATE LAW.

IN the District Court at Fermoy, County Cork, before District Justice G. Farrell, B.L., Mr. Peter J. Byrne, of Portarlington, was summoned by Sergeant J. Spillane, of the Civic Guards, Fermoy, for having on May 28th last used a motor car at Fermoy in respect of which a licence was not in force. For a like offence, Mr. A. Somerville, of Oxmantown Road, Dublin, was also summoned by Sergeant Spillane.

Mr. Rice, Solicitor, Fermoy, who appeared on behalf of Mr. Byrne, said there was an offence committed, but he would like to point out that the general public were not aware that they were committing an offence in taking a motor vehicle from Cork to Dublin without first having it registered, or that it should bear trade plates. In the case against his client a car was being brought from Cork to Dublin, where it would be duly registered in the usual way, and licensed, but the defendant was not aware that before he could remove it from Cork, he should have it first registered at Cork, or that it should bear trade plates. These cases were very important for persons taking cars from one place to another without having them first registered, as it was quite obvious that if any accident occurred the car could not be traced. He asked the District Justice, in the circumstances, not to impose a heavy fine.

Mr. Magnier, Solicitor, Fermoy, on behalf of Mr. Somerville, said that the same circumstances applied in the case against his client. He did not believe that it was generally known that a car should first be registered before it could be removed from one district to another. That, of course, was in respect of new cars.

District Justice Farrell said he hoped that the necessity for registration in such cases would become more generally known, and if so, it would avoid a lot of trouble and inconvenience for all parties concerned. In the present cases, he would impose a nominal penalty of one shilling on each defendant.

AN INTERESTING CASE.

A CASE of some importance to transport contractors was decided in the Shoreditch County Court by Deputy-Judge Linton Thorp. The plaintiffs were H. Perloff (a firm), of 36 Colombia Road, Shoreditch, E., cabinet manufacturers, and they sued R. I. Calcraft, of 23 Union Street, Hackney Road, to recover £26 13s. 9d. for alleged damage to furniture. The plaintiffs alleged that on March 20th, the defendants, a firm of transport contractors, contracted to take a lorry load of furniture to Birmingham and back, but that owing to negligent driving, there was a collision on the road outside Birmingham, a man was killed, and the furniture in the van so badly damaged that it cost the amount claimed to repair. There was a counterclaim for £8 11s. 6d. being £3 for the journey back, £1 11s. 6d. the man's time, and £4 the original contract for taking the furniture to Birmingham.

Lazarus Perloff, a brother of the plaintiff, said he went to Birmingham with a load of furniture, which consisted of two bedroom suites and 14 bureaux. He intended to hawk the furniture round Birmingham and to bring back the unsold. He disposed of two bedroom suites only, and then started on the return journey. They were just outside Birmingham at about 7 p.m., dark, going at a very fast pace, when he saw a man repairing a lamp at the back of a stationary van in front. He warned the driver, but he was too late and there was a violent collision, the man being killed instantaneously. As a result the furniture was thrown all over the van, legs were broken off and other serious damage done.

Mr. Goldstone, a cabinet maker's manager, said he estimated the cost of repairing the furniture was as claimed, but that was what it would cost the plaintiffs, but if he did it he would have to charge more to get his profit.

The defence was that if the furniture was damaged it was not part of the contract, as it was not agreed to bring any furniture back, nor to hawk any furniture round Birmingham.

Mr. Calcraft gave evidence, and said he had three small jobs for Birmingham, and agreed to take Perloff's as well. The plaintiffs man hawked the furniture round Birmingham unknown to him. He had twice offered to get the furniture repaired for £9, but the offers had been refused.

In cross-examination he said he did not agree to bring any of the furniture back under the £4 contract, it would not have paid him, and any transport contractor would tell them so. He never contracted to allow the furniture to be hawked.

Ferdinand Newman, the driver of the lorry, said what furniture was sold was at the places where he called with other furniture. Mr. Perloff wanted him to hawk the rest of the furniture round Birmingham, but he only went to one place and refused to go any further. He would have come back empty, if he had not the plaintiffs furniture.

In giving judgment, Deputy-Judge Linton Thorp said there was clearly the contract to take it, and he thought there must have been some understanding as to what was going to happen to it in Birmingham, that it was to be hawked round, and that there was some likelihood of some of it having to be brought back, as no arrangement had been made for another load to come back. Under the circumstances he must find for the plaintiffs, and he would enter judgment for £21 damages and costs, and the counterclaim would be dismissed.

IS A STEAM WAGON A MOTOR CAR?

THE old argument as to whether a steam wagon is a motor car "within the meaning of the Act" had another innings at the Ellesmere Port Police Court recently, when John William Sorrell, of Richmond Kelly Road, Liverpool, was summoned for driving a steam wagon which made an excessive noise.

Mr. H. B. M. Pidgeon, of Liverpool, who defended, raised the point that as defendant had been charged under the Motor Car Act, which only included vehicles up to four tons weight, the prosecution could not succeed. He contended that a steam wagon did not come within the meaning of a motor car. The Chairman: According to that statement a steam wagon can make as much row as it likes.

Supt. Ennion: My contention is that steam wagons do come within the meaning of the Act. It is as much a motor car as a motor cycle is for the purpose of these regulations. If it does not apply, then a steam wagon may make all the noise it possibly can with impunity. A fine of 10s. was imposed. Supt. Ennion said they did not take proceedings against the firm owning the wagon because the police were satisfied that they did not know of the existence of the bad tyre which caused the noise.

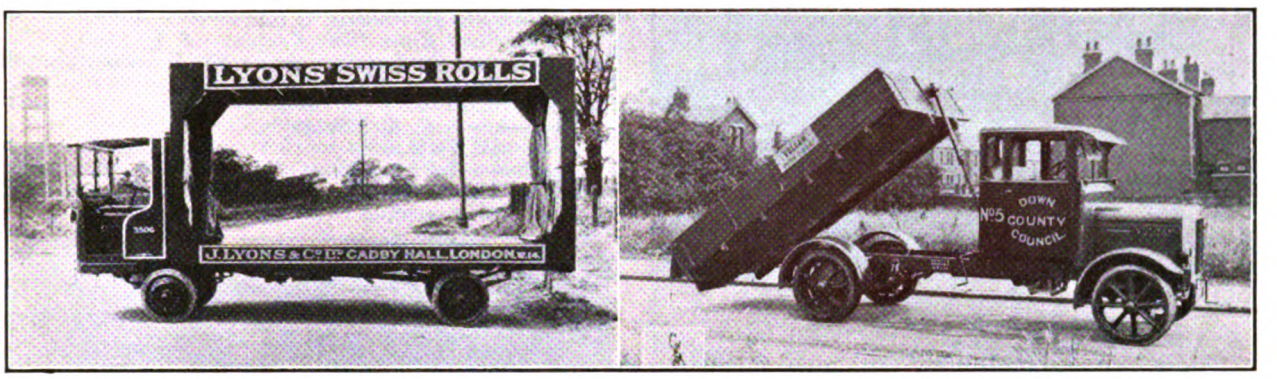
News from all Parts.

Institute of Transport. Presidential Address. — The Hon. Sir Arthur Stanley will deliver his Presidential Address at the Opening Meeting of the new Session of the Institute of Transport, to be held at the Institution of Electrical Engineers, London, at 5.30 p.m. on Monday, October 13th, 1930.

Interesting Vulcan Vehicles.—We illustrate a Vulcan 3-ton low-loader in the service of J. Lyons & Co., Ltd., the well-known caterers. Our other photograph is of a Vulcan 50-cwt. hand screw tipper, one of a fleet of vehicles recently supplied by the Vulcan Motor and Engineering Co. (1906), Ltd., Crossens, Southport, to the Down County Council.



LEFT: VULCAN 3-TON LOW-LOADER. RIGHT: VULCAN 50-CWT. HAND SCREW TIPPER.

Institute of Transport. Election to Council, 1930-31.—The following ten members of the Institute of Transport have been elected as Ordinary Members of Council as from October 1st, 1930:—

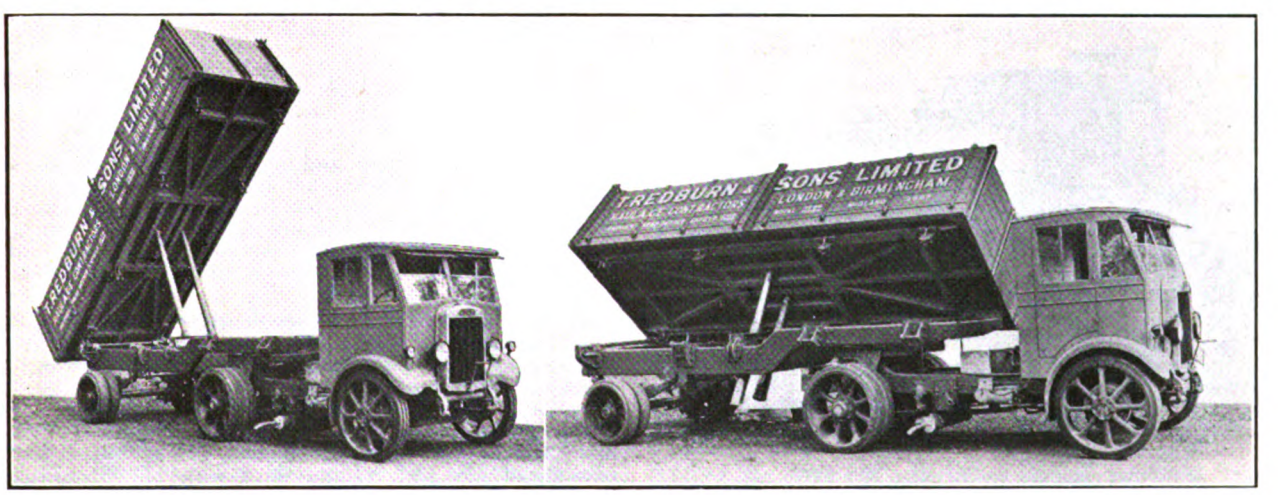
Members:—Bustard, Frank, O.B.E.; Castleman, Arthur Louttit; Gaunt, Walter Henry, O.B.E.; Mauldin, Herbert Henry; Mount, Alan Henry Lawrence, C.B.E.; Page, Frederick Handley, C.B.E.; Pickard, Henry, M.B.E.; Potter, Frank Rowe; Thomas, Theodore Eastaway. Associate Member:—Darbyshire, George Lionel.

A Large Three-Way Tipper. — Our illustrations show what is claimed to be the largest three-way tipping vehicle yet produced. The machine is a Carrimore Lynx, 100 h.p., six-cylinder engine and has been designed to carry and tip nett loads of 20 tons. We are informed by Carrimore Six-Wheelers, Ltd., Carrimore Works, High Road, Great North Road, North Finchley, London, N.12, that the tipping gear has been specially designed and produced for the purpose by Bromilow & Edwards, Ltd, of Foundry Street, Bolton.

Goodyear Tyre and Rubber Co. to Extend Wolverhampton Factory.—To cope with the increasing demand for Goodyear Tyres, an extension is to be built to the factory of the Goodyear Tyre and Rubber Co. situated at Wolverhampton. The extension will consist of a two-storey and basement building, measuring 80 ft. by 140 ft. adding 33,600 sq. feet to the factory, and will necessitate the employment of many British workmen.

City of Birmingham Commercial College. Transport Education.—Among the prospectuses recently issued by the City of Birmingham Commercial College is one giving particulars of the classes in transport subjects. These include classes on Railway Economics and Operation, Road Transport Economics and Operation, the Law Relating to Transport, and a new class on Industrial Traffic Management. The courses will cover the syllabuses set for the examinations of the Institute of Transport which takes place in April, 1931, and are also suitable for certain degree examinations of the University of London. Judging from the syllabuses outlined in the prospectus there should be much to interest students at the College this autumn and winter. Copies can be had free on application to the Principal at Suffolk Street, Birmingham.

Road Traffic Act.—A handy booklet summarising and explaining the new motoring laws has been issued by the Automobile Association, and is now available to every motorist on a postcard application to The Secretary, The Automobile Association, Fanum House, New Coventry Street, London, W.1, or to any of the A.A. branch offices.



THE CARRIMORE LYNX THREE-WAY TIPPER REFERRED TO IN TEXT.

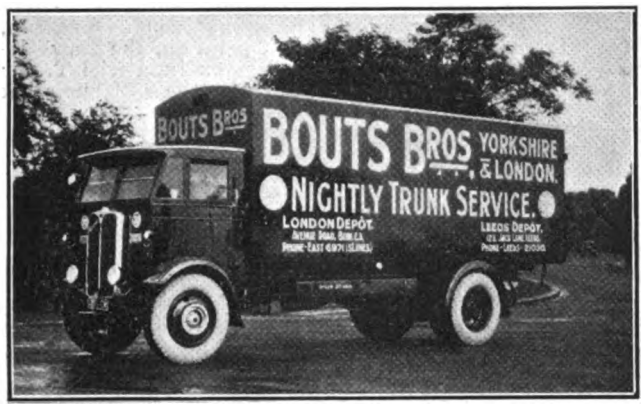
Institute of Transport. Metropolitan Graduate and Student Society.—The Inaugural Meeting of the Session, 1930-31, of the Institute of Transport Metropolitan Graduate and Student Society will be held at the Institution of Electrical Engineers, London, on October 7th next, when the Hon. Sir Arthur Stanley will address the members.

The Road Traffic Act and Road Motor Transport.—A useful and informative pamphlet dealing with the important provisions of the Act affecting owners and drivers of

Digitized by Google

commercial motor vehicles has been compiled by Mr. F. G. Bristow, the General Secretary of the Commercial Motor Users' Association, and may be obtained free by any interested party on application to the Association at 50, Pall Mall, London, S.W.1.

For Night Express Service.—The Associated Equipment Company's "Mammoth" 7-8 ton van for Messrs. Bouts Bros., of Leeds and London, which we illustrate, is the first delivery made by the new A.E.C. Northern Agents, Oswald Tillotson (1929), Ltd., who are also builders of the body. The chassis carries a body 21 ft. long, 7 ft. 3 ins. wide and 7 ft. in height, which is covered with Plymax panelling. There is a ventilator at the front,



A.E.C. "MAMMOTH" 7-8 TON VAN.

and electric light in the interior for night loading. The fully enclosed cab presents an interesting feature in its sloping windscreen and downswept door which makes for easy access. The vehicle is engaged on nightly express runs between Leeds and London.

R.A.C. "Get You Home" Service.—The latest figures relating to the R.A.C. "Get You Home" Service show that no fewer than 1,360 Members or Associate-Members received assistance under the scheme during the month of July, as compared with 1,176 during the similar period last year.

Morris-Commercial for Transporting Printers Ink. — The photograph which we reproduce has been sent us by

35-40 CWT. MORRIS COMMERCIAL FOR NEWS INK.

Stewart & Ardern, Ltd., the sole London distributors of Morris Cars, The Vale, Acton, London, W.3. It shows a unique body constructed for transporting printers ink mounted on a 35/40 cwt. Morris Commercial chassis.

Perrite Products.—Mr. H. Clayton-Wright, who is well-known in the motor trade and who has taken a prominent part in the building up of the business of Desmo, Ltd., the motor, motor-cycle and cycle accessory manufacturers, of Birmingham, has now acquired an interest in the business of Perrite, Limited, Weldbank Rubber Mills, Chorley, Lancs., rubber and ebonite manufacturers, motor components, etc. It is intended to develop an important Accessories Section of Perrite, Ltd. "If it's Rubber or Ebonite write to Perrite" is one of the slogans of Perrite, Ltd., of which Company Mr. H. Clayton-Wright is Managing Director.

Pirelli's New Tyre Depot.—It is announced that Messrs. Pirelli, Ltd., have opened a new Tyre Depot at 118, New Bridge Street, Newcastle-on-Tyne. Comprehensive stocks of tyres are available to enable the Company to cope with the growing sales in the immediate locality, and in surrounding areas.

Institute of Transport. Local Sections and Centres Abroad:—The following Sections and Centres Abroad of the Institute of Transport have elected as Chairmen for the ensuing Session the undernamed who will, *ipso facto*, become Members of Council:—

Manchester-Liverpool and District:—Robert W. Royle.
Birmingham and District:—O. C. Power.
Newcastle-on-Tyne and District:—R. Aughton.
Leeds and District:—A. Brown.
Bristol and District:—H. R. Griffiths, O.B.E.
Scottish:—A. H. Roberts, O.B.E.
Argentine and River Plate Centre:—M. F. Ryan.
Graduate and Student Societies:—The following gentlemen have been elected Chairmen for the ensuing year:—
Metropolitan:—A. F. E. Belcher.
Birmingham:—C. S. Dunbar.
Leeds:—W. Clarkson.

A Smart Morris-Commercial for Furniture Removals.—Mr. H. P. Elliott, railway and general carrier and re-

A SMART MORRIS COMMERCIAL ON REMOVAL WORK.

moval contractor, 10, St. Michael's Road, Aldershot, has taken into service recently the 2-ton Morris-Commercial which we illustrate. The bodywork is by Vick Bros., Ltd., of Aldershot.

Manchester-Liverpool and District Section of the Institute of Transport.—Another honour has been conferred on Mr. R. W. Royle, M.Inst.T., the Transport Manager of the Co-operative Wholesale Society, Manchester, by being elected to the Chairmanship of the Manchester-Liverpool and District Section of the Institute of Transport.

Motor & Cycle Trades Benevolent Fund. Silver Jubilee Celebrations.—The silver rose bowl, given by Mr. W. E. Bullock to the member of the Fund introducing the greatest number of subscribers in the year ended July 31st, 1930, has been won by Mr. W. C. Barker, of Ipswich, with a grand total of 382 new subscribers. Scotland comes second, Mr. J. Strachen, of Edinburgh, having introduced 226, and Ireland third with 138 introductions by Mr. J. Quinn, of Dublin. The Prize will be presented to Mr. Barker at the Silver Jubilee Banquet of the Fund to be held at the Connaught Rooms, London, on October 3rd, next.

Change of Title.—In our correspondence columns we print a letter from Mr. W. R. Shephard, the Managing Director of T. S. Motors, Limited (formerly Tilling-Stevens Motors, Ltd.), announcing that the name of Tilling-Stevens Motors, Limited, the well-known commercial motor vehicle manufacturers, of Victoria Works, Maidstone, has been changed to T.S. Motors, Limited. The letter explains the reasons for this change and emphasises the point that beyond the change of name the affairs of the Company will be conducted as heretofore.

Digitized by Google

British Economic Mission to the Far East.—The Department of Overseas Trade announces that the Economic Mission to the Far East, the formation of which was recently announced by Mr. G. M. Gillett, M.P., will leave this country on the 19th September. The terms of reference of the Mission are "to enquire into the present condition of British trade with China and Japan, and to report what action should be taken to develop and increase that trade." Its personnel is as follows:—Sir Ernest Thompson, J.P. (Chairman), Sir Thomas Allen, Mr. James Bell, J.P., Mr. William A. Crowther, J.P., Lieut.-Colonel Reginald Morcom, C.B.E., Mr. Louis Beale, G.B.E., Mr. T. St. Quintin Hill, O.B.E. (Secretary), Mr. F. A. Barnes (Assistant Secretary). The Mission is desirous of obtaining the views of those interested in Far Eastern trade as to the problems which the Mission should examine, and the Department of Overseas Trade (35 Old Queen Street, S.W.1) would, therefore, be glad to receive as early as possible any communications which those concerned feel disposed to make. All information received by the Department will be communicated to the Mission.

Portable Road Signs.—The Automobile Association has adopted light canvas signs, which, rolled up, can be carried easily by the Road Patrols. We understand that the new sign is a development of the A.A. "Loopway" sign, which constitutes a part of the ordinary kit of A.A. Patrols and which may be quickly fixed or hung on trees, etc., immediately patrols are aware of trouble on or near their beats.

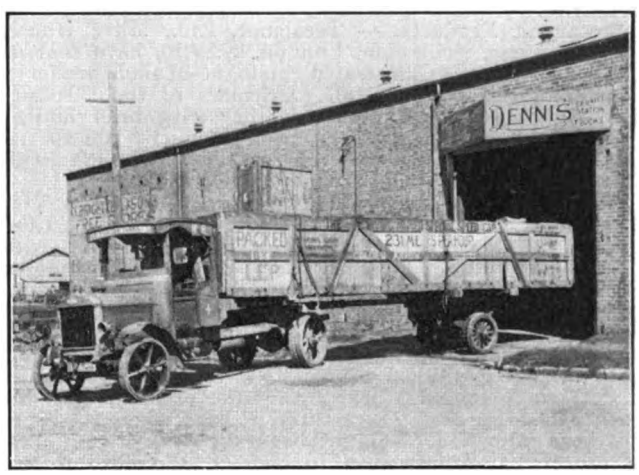
AN A.A. SCOUT ERECTING ONE OF THE NEW PORTABLE CANVAS SIGNS.

Road Traffic Act. Series of Addresses to be Given by Mr. F. G. Bristow. — Mr. F. G. Bristow, F.C.I.S., M.Inst.T., the General Secretary of the Commercial Motor Users' Association is between now and the end of the year giving a series of addresses on the provisions of the Road Traffic Act, 1930, before various technical and commercial organisations at Barnet, Bedford, Birmingham, Brighton, Bristol, Cambridge, Canterbury, Croydon, Exeter, Lincoln, Luton, Maidstone, Manchester, Margate, Newport, Oxford, Reading, Salisbury, Southampton and Tunbridge Wells. It is hoped in this way to bring home to owners and drivers of all classes of motor vehicles their responsibilities under this new Measure.

Novel One-Fold Map for Motorists.—The Automobile Association has produced a new "quarter-inch" series of maps covering the whole of Great Britain. This has been designed specially to meet modern conditions. It is printed in full colours with gradation for altitude, and the scale has been carefully chosen so that neither details nor handiness has been sacrificed. The primary object is to provide a reliable guide to the highways and by-ways of the country, which have been classified under:—(1) Recommended throughways; and (2) good motoring roads, both of which show the grade numbers of the Ministry of Transport; (3) other serviceable roads, while certain roads not in general use, private roads and bridle and footpaths are also indicated. Ferries are clearly shown, also a large number of mountains, lakes and other physical features. This road information has been based upon an actual survey made by the Automobile Association. The maps, which are printed and published by Messrs. John Bartholomew and Son, Ltd., are folded in the ever-ready style. They are issued in three types:—(1) Folded paper; (2) Mounted on cloth and folded; (3) mounted on cloth and dissected, and the complete set of 23 sheets is supplied in a strong case. Members of the A.A. can purchase copies at reduced prices at any A.A. office.

Map of the Road Traffic Areas in Great Britain.—When Part IV. of the Road Traffic Act, 1930, which deals with the regulation of public service vehicles, comes into force, in place of some hundreds of licensing authorities for public service vehicles, there will be substituted Traffic Commissioners responsible for the co-ordination of road transport in specified areas covering the whole country. To meet the special requirements of operators occasioned by this delimitation of the country into such Traffic Areas, the publishers of Garcke's "Motor Transport Year Book" have prepared a map of Great Britain showing the Areas, and the principal places in each area. The map (size 34 in. by 19 in.) has been specially drawn with a view to use in the re-grouping and re-arrangement of traffic route-centres and is printed on stout litho paper suitable for marking, Colouring, etc. Copies can be obtained (price, 2/- each) from "The Motor Transport Year Book," 13/16 Fisher Street, London, W.C.

Dennis Transport for Famous Cars.—What are probably the two most famous racing cars in the world, the "Golden Arrow," which holds the world's record, and the "Silver Bullet," have depended on a Dennis lorry for transport. The "Silver Bullet," it will be recalled, was conveyed from the Sunbeam works to Southampton earlier this year on a Dennis rigid 6-wheeled 12-tonner. The photograph which we reproduce has been sent over



THE CASED "GOLDEN ARROW" ON A DENNIS 2½-TON CHASSIS WITH 2-WHEELED TRAILER IN AUSTRALIA.

by Brightwell & Sons (Dennis Truck Sales, Ltd.), who are the Dennis agents in Sydney, Australia. It shows the cased "Golden Arrow" being carried by a Dennis 2½-ton chassis with a 2-wheeled trailer which conveyed it between the Sydney wharves and the Royal Agricultural Society's Show ground where it was exhibited.

The Roads Improvement Association.—The Chairman of the Roads Improvement Association (Mr. Rees Jeffreys) and General E. G. Wace, C.B., D.S.O., left on Sept. 6th by the "Empress of France" to attend the Canadian Good Roads Convention at Quebec on Sept. 16th-18th. Mr. Rees Jeffreys will address the Convention on "How the Constituent Parts of the British Commonwealth can best co-operate to develop their Road Systems." Mr. Rees Jeffreys will proceed from Canada to Washington to attend the Sixth International Road Congress on October 6th-11th, where he will be joined by Messrs. J. S. Killick, C.B.E., M.Inst.C.E., George Mitchell, Wallace E. Riche, W. E. Cone, Brig.-Gen. E. G. Wace, C.B., D.S.O., and Major R. A. B. Smith, M.C., M.I.Struct.E., A.M.Inst.C.E., who will, with the Chairman, represent the R.I.A. at this Congress. Mr. Rees Jeffreys has been appointed a delegate of the British Government at both gatherings.

F.W. & R.A. New Members. — The following firms have been elected to membership of the Furniture Warehousemen & Removers' Association:—Messrs. Spooner & Co., Ltd., Bedford Street, Plymouth, and H. Sabey & Son, Ltd., 23-31, Willesden Lane, Kilburn, London, N.W.6.

Canal Development. Grand Union Company's Scheme.—The directors of the Grand Union Canal Company report that the net revenue for the half-year ended June 30th last, after providing for Debenture interest, Preference dividend, and other charges, permits of an interim dividend at the rate of 1½ per cent. per annum. Traffic

Digitized by Google

has not increased to any extent in comparison with last year owing to the prevaling depression in trade. The Development (Public Utility) Advisory Committee has approved in principle the company's scheme of canal development between London and Birmingham, estimated to cost a total of £881,000, on £500,000 of which the committee has agreed to recommend a grant of interest over a period of 15 years as and when the necessary powers are obtained by the company. Immediate steps are being taken to arrange an agreement with the Oxford Canal Company with respect to its 5½-mile section on the through route in order that the necessary Bill may be laid before Parliament by the Grand Union Company forthwith, or any other appropriate procedure adopted. A special meeting of the proprietors will be called in due course to obtain their approval of the scheme.

The British Motor Industry. — The Society of Motor Manufacturers' and Traders' has decided to issue their Annual Summary, known as "The Motor Industry of Great Britain," in May of each year, from 1931, instead of in October as hitherto. Publication earlier in the year, it is believed, will prove of greater assistance to the industry by presenting to members tables brought as near to the end of the calendar year as possible. In order to bridge the transition period, the statistical and information department of the society has issued a booklet entitled "British Motor Industry: Summary, 1930," in which statistics are given of road transport in Great Britain, the British motor market and exports of other producing countries.

Tecalemit Products. — Tecalemit, Ltd., Mitre House, Scrubbs Lane, Willesden, London, N.W.10, have sent us a copy of the latest illustrated catalogue of their products. The catalogue includes full particulars of the "Tecalemit" lubricating equipment together with brief notices on the more important of the firm's products. Of special interest is that part of the catalogue dealing with Tecalemit bulb lubricating and service equipment.

Motor Policies. — We have received from Crusader Motor Policies, Ltd., head offices, 24-26 Holborn, London, E.C.1, a copy of their latest booklet dealing with "Crusader" Motor Policies. Complete rates are quoted for cover for business cars, chars-a-banc and buses, commercial vehicles, fire risk to garage, etc. It is pointed out that, if desired, the insured may avail himself of the special privilege under an ordinary comprehensive policy, without any additional premium, whereby the Company undertake to refund 5 per cent. of the premium paid for each vehicle insured, every three months where no claim has been intimated. This privilege, the booklet continues, is especially advantageous to owners who wish to encourage their drivers to keep a clean claims record, by showing a financial reward, as the bonus may be passed on to the driver responsible for each quarter free of claims. It should particularly appeal to char-a-banc and bus proprietors.

MERSEYSIDE.

Sir Henry Maybury Speaks.—In his report on Liverpool traffic problems to the Corporation, Sir Henry Maybury speaks highly of the trackless trolley vehicle. Instead of providing special overhead equipment, however, he imagines it will be the policy of the Corporation to augment the existing motor omnibus fleet, the vehicles in which he says, are of the most modern type, extremely comfortable and very satisfactory.

Centenary Celebration.—The principal transport event of the month in Liverpool, as well as in the county, is the centenary celebration of the opening of the Liverpool and Manchester Railway, at Liverpool, for a week commencing 13th September. Both Liverpool and Manchester besides the L.M.S. Railway Company have done their part in sponsoring the celebrations. Stephenson's railway between the two cities inaugurated a new age of travel, and was the direct ancestor of the present London, Midland and Scottish Railway. A railway exhibition of working models, miniature railways and historical material is being held in St. George's Hall, whilst in the Wavertree playground there is a display of ancient and modern rolling stock starting with a train of 1830, running round a circular track, and including an exhibition of the latest engines and rolling stock used here and in other countries. One of the most attractive parts of the celebrations is a transport pageant in which 3,500 men and women take part. Old locomotives like The Rocket are brought in, not to mention elephants, camels, dog teams and horses. There are glimpses of a covered wagon convoy, highwaymen holding up a coach, Spanish transport in Don Quixote's days—these and a dozen other incidents make the pageant exciting enough.

Difficult Load for one of M.R.S.'s Scammells. — The mammoth Scammell lorry of M.R.S., Ltd., performed a difficult task on 28th August in transporting a 56 ft. launch through a 15 ft. gateway from the Bootle works of Harland and Wolff, Ltd., to Gladstone Dock. The launch weighed twenty tons. The lorry which could only just get into the shed, was manoeuvred underneath the launch; the girders supporting it and resting on hydraulic jacks were lowered and the launch sank slowly into position on the lorry.

MANCHESTER.

Robinson's Cameo.—Realising that there is probably a large number of motor vehicle owners who are not aware of the obligations imposed upon them by the Road Traffic Act, Mr. H. Howard Robinson, A.M.Inst.T., has compiled a useful summary of the main provisions for circulation to members of the Manchester Transport (Owners') Association. The summary is a model of succinctness and lucidity and has proved distinctly helpful to the recipients. Many expressions of appreciation of this service have been received by Mr. Robinson, who informs us that he is willing to supply copies to unattached commercial motor users in the district, if they will make application to him at his office, 28, Queen Street, Manchester. Members of the Association are always kept well advised of legal and other changes affecting their interests.

New Co-ordination Plan.—To secure closer co-operation and co-ordination of the motor bus services in the Manchester area, a conference of local authorities interested in motor bus operation has been held recently in Manchester. It was decided to appoint a sub-committee to develop negotiations with the railway companies with the object of reaching an agreement with them similar to that existing between the Manchester Corporation and the North Western Road Car Co., Ltd., of Stockport. It is hoped, as the result of these negotiations, bus owners will conduct their businesses on uniform lines, in providing travel facilities for passengers in the areas they serve.

More Mileage for Buses.—Negotiations are taking place between the Altrincham Council and the Manchester Transport Committee with a view to the supersession of the tramways service by motor buses.

NORTH-EAST COAST.

Daily Planes to London?—Mr. Glenton Friars, head of Glenton Friars (Road Coaches), Ltd., of Newcastle and Blaydon-on-Tyne, is considering a scheme for 14-seater aeroplanes to run daily between London and Glasgow via Newcastle. He considers that there is no outstanding difficulty in inaugurating an air service, and says that he already has his London-Newcastle buses connected with the Dover-Calais seaplane service. "It is just possible," he added, "that we can organise a seaplane service, with planes leaving the Tyne and depositing their passengers on the Thames Embankment opposite the Houses of Parliament."

Newcastle Trams make £36,816 Profit.—The annual report of Newcastle Corporation's Transport and Electricity Committee shows that during the year ended March 31st last the tramways earned a net profit of £36,816, compared with only £2,328 in the preceding year. Omnibuses, on the other hand, lost £6,420. The gross profit was £159,150, but from this various deductions are made for interest, redemption, and other charges. The North East Coast Exhibition, last year, increased tram receipts by about £19,500; tram and bus advertisements brought in £7,694, and there has been a decrease of £2,300 in tram working expenses although 95,686,328 passengers were carried during the year. Since January, Corporation buses have earned progressively increasing profits week by week. Receipts on Newcastle trams average £8,647 and on the buses £3,351. In the tram receipts there is a decrease of £21,697, and in the bus receipts an increase of £17,413. In each of the past six years a sum of £14,000 has been contributed by the undertaking in relief of rates, but no such payment could be made in the year under review.

A Big Scheme.—Newcastle is one of the cities which it is intended to equip with a roof aerodrome according to the national scheme of a London syndicate. Under this ambitious plan, each structure will cost about £1,500,000, comprising shops on the ground floor; more shops, besides lifts and car parks, on the three floors above; wholesalers' quarters on the fourth floor; offices and residential flats on the fifth floor; and hangars and workshops on the top floor. The consulting engineer to the syndicate hopes to visit Newcastle to select a site shortly.

Wallsend Bus Contest.—Messrs. Wakefield's Motors, Ltd., of North Shields, appealed, at a Ministry of Transport inquiry, against the refusal of Wallsend Corporation

Digitized by Google

to grant them licences to run a service between High Farm and Station Road. Mr. H. A. Stagg admitted that the route did not pay at present, but they thought it would in the future.

Municipal Bus Garage.—Owing to the rapid development of Newcastle Corporation's omnibus undertaking the problem of housing the 100 and more buses is becoming acute. It is suggested to construct a central garage, with repair shops, etc., on made-up land at the Ouseburn tip, at a cost of approximately £50,000.

3,000 Miles Non-Stop Run.—A loaded 30 cwt. Chevrolet lorry engaged recently on a 7 days and 7 nights non-stop run over a 40 miles course around Tyneside. The lorry, one of the drop-side type, started from Messrs. C. H. Mason & Co., Ltd.'s showrooms in Newcastle and completed 3,288 miles within the time stipulated.

South Shields Transport.—The annual report of the South Shields Corporation Tramways and Motor undertaking for the year ended March 31st shows a gross profit of £18,560 after paying all operating expenses. A surplus of £2,389 is carried to the Reserve Fund.

HULL.

Proposed Humber Bridge.—The attitude of the local authorities in both East Yorkshire and North Lincolnshire towards the proposed Humber bridge is exceedingly disappointing to enthusiastic members of the Hull City Council. The bridge is to cost £1,750,000 and the Ministry of Transport has agreed to contribute 75 per cent. of that amount conditionally upon the local authorities concerned providing the balance amongst them. Hull has voted £200,000 and the small town of Barton-on-Humber £10,000. On the ground that its expenditure on roads reaches the maximum of its capacity to pay, the East Riding County Council refuses to come into the scheme. With two exceptions the smaller local authorities in the Yorkshire area have taken their cue from the County Council and decline to give anything. The chief authority on the Lincolnshire side, the Lindsey County Council, has offered £30,000, but amongst other conditions stipulates that road works, estimated to cost between £85,000 and £100,000 shall be part of the scheme. In these circumstances a second conference of representatives of the various authorities held at Hull recently was, not unnaturally, somewhat unsuccessful and disappointing. The Hull members know the people of both counties want the bridge very badly. They also know the countrymen hold the view that Hull is so keen on getting the bridge that in the last resort it will be prepared to find all the necessary money itself. That certainly is the attitude of some members of the City Council, and their plan is to seek authority to recoup the Corporation by imposing tolls. The Minister of Transport has intimated that he will allow tolls to be collected for a limited number of years in order to avoid heavy local rates. Meanwhile Mr. J. H. Fisher, the chairman of the Humber Conservancy Board, has sounded a note of warning as to the probable danger to navigation of the erection of a bridge and it is practically certain that that body, and the Aire and Calder Navigation Company, who have such large interests in the port of Goole, will be found in opposition when a Parliamentary bill is promoted.

SOUTH WALES.

Western Welsh Omnibus Company, Ltd.—The Western Welsh Omnibus Co., Ltd., sent one of their new Leyland Lion buses to the Penarth Carnival on August 20th. Daintily coloured in Lido blue and primrose yellow, with curtained windows, the bus looked well. It took second prize, and made a splendid advertisement, being driven by Mr. George Bennett, who, two years ago, drove one of the Company's buses through England and Scotland in a unique fortnight's tour. The first prize was taken by Messrs. Wm. Hancock, Ltd., the parent concern of the pioneer South Wales Motors, with a tableau of an old English brewery on a lorry.

Cardiff's Buses.—The Cardiff Corporation omnibus service is being improved in several directions. Mr. N. A. J. Cohen, of the Ministry of Transport, attended at the Cardiff City Hall on August 20th to hear the application of the Corporation to extend the Ely and Llandaff route to Rhiwvina, to complete the outer circle of the boundary of the Borough. Mr. Kenvyn Rees (Deputy Town Clerk) explained that this was the only deficiency of the Corporation scheme to get city and dock workers to their offices and shops. An appeal by the Barry Associated Motors also concerned the garden city suburb of Rhiwvina. They appealed against the refusal of a through licence to Barry Island by the Cardiff Watch Committee. Mr. Kenvyn Rees said the Corporation opposition would be withdrawn if the Barry Associated Motors would charge a minimum fare of 6d. single and 9d. return between Llandaff G.W.R. Station and Culverhouse Cross. The inspector said he would report to the Minister after an inspection of the routes.

NORTHERN IRELAND.

Bus Fares.—The Northern Ireland Road Transport Fares Tribunal has now granted the application of the London, Midland and Scottish Railway Co. for the alteration of the basis of fares charged on buses running between Belfast and Ballyclare. The basis provides for fares at one penny per mile for the single journey, fractions of a mile being disregarded, and the same figure plus 50 per cent. for the return journey. For weekly season tickets the proposed rates were based on six single fares determined in accordance with this schedule.

L.M.S. Belfast Bus Depot and Terminus.—The London, Midland and Scottish Railway Co. have acquired Smithfield Mill, an old building in the centre of Belfast, and are converting it into an up-to-date bus depot and terminus. The buses will in future operate from this station, and not from stands scattered here and there throughout the city.

Belfast's Proposed Air Port.—The proposal to establish an air port in Belfast has been revived, and the Ulster Government are in communication with National Flying Services, Ltd. Some months ago the Belfast Corporation included in a Parliamentary Bill a provision for the payment of a certain sum towards the rent of the land required for the aerodrome, but on a plebiscite being taken this proposal was defeated. At that time the Harbour Board wanted £600 per year for 60 acres, but National Flying Services would not give so much and the difference was to be met by local bodies. The Chamber of Trade have now agreed to contribute, as have the Chamber of Commerce and other business associations, and it seems likely that Belfast will have its air port after all, for both sea and land machines. The £600 per year required by the Harbour Board is not really rent, but is an annual charge to be levied because work required to be done to the site would cost the Board £6,000.

IRISH FREE STATE.

Value of Commercial Motor Vehicles Imported into the Irish Free State during the First Six Months of 1930.—Towards the end of August Irish Free State trade returns, dealing with the first six months of the present year, were issued, from which it appeared that the value of the commercial motor vehicles imported into the Free State for the period January-June, 1930, was £104,383, as compared with £107,916 for the first six months of 1929. Motor tractor parts to the value of £694,654 were imported during the first half of the present year, as against £247,931 during the January-June period of 1929. During the first six months of 1929, only 519 tractors, valued at £55,748, were exported from the Irish Free State, whilst during the first half of the present year up to 13,605 tractors, valued at £1,418,731, were exported from Cork. Touring motor cars to the value of £611,888 were imported during the first six months of 1930, as compared with £706,688 during the corresponding period of 1929.

Limerick Becoming a Centre for Free State Bus Traffic.—Limerick is becoming an important and progressive centre for the bus traffic in the Irish Free State. Just now, the Irish Omnibus Company has in course of construction an extensive garage for their vehicles. The building is being put up in concrete and corrugated iron, and takes in a considerable space of ground, on a suitable and convenient site situated near the goods depot of the Great Southern Railways Company on the Roxborough road, Limerick. When completed, the garage will house all the buses plying from that city as a central station, and it is the intention of the I.O.C. to have all repairs executed there, which will provide employment for several additional hands, and benefit the city accordingly.

Need for Adequate Control of Motor Traffic in the Irish Free State.—At the annual meeting of the General Council of Irish Free State County Councils, held in Dublin last month, the subject of the increasing bus competition and other forms of motor transport in the Free State came on for discussion, and a resolution, as follows, was adopted:—"That in consequence of the great increase in motor traffic and lack of any form of control over such traffic, it is the opinion of this Council that the travelling public and pedestrians are subjected to grave risk and danger on the roads, and therefore the opinion of this Council is that the Government should introduce without delay a measure of control which would embody strict driving tests for drivers, the introduction of third-party insurance, effective penalties for dangerous driving, and control over wasteful bus competition."

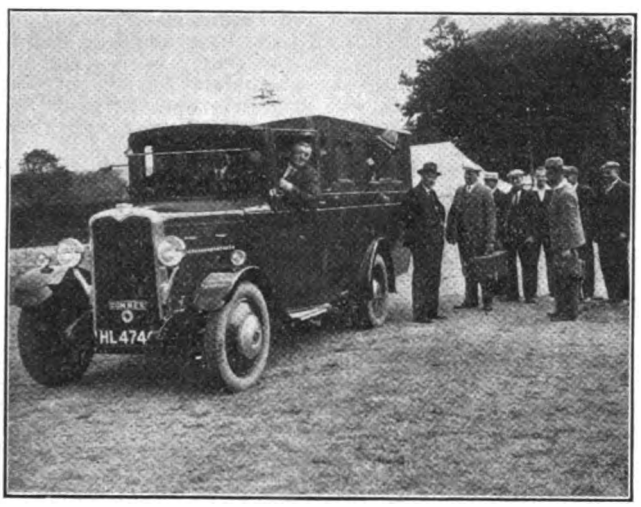
Motor Notes.

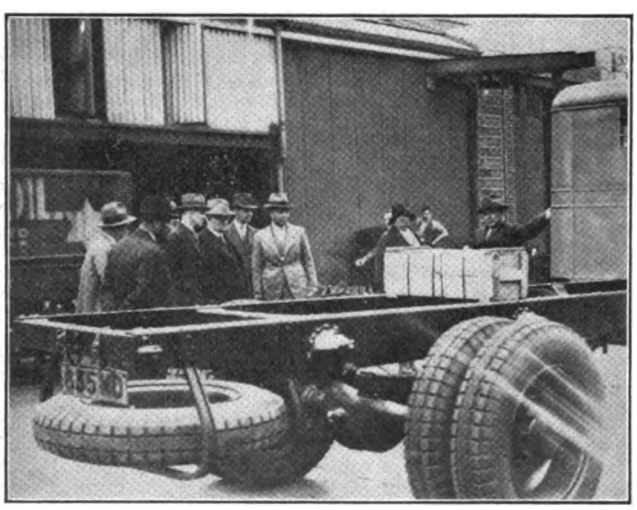
A Commer Police Van.—The police van illustrated has recently been delivered to the West Riding Constabulary by Commer Cars, Ltd., Luton. The chassis is the G2 type, while the bodywork was supplied by Charles Roberts & Co., Ltd., of Horbury Junction, Wakefield. Three compartments are provided, the first being for women,



A "COMMER" POLICE VAN FOR THE WEST RIDING CONSTABULARY.

the middle for men, while the end one is reserved for the policeman in charge. The vehicle can be converted, when necessary, into an open van by removing the partitions. Lieutenant Colonel F. Brook, Chief Constable of the West Riding, was responsible for the interior arrangements.

Roumanian Delegation at A.E.C. Works.—Recently members of the Roumanian Delegation, visiting this country for the Inter-Parliamentary Union Conferences, and in connection with trade development, paid an interesting afternoon's visit to the A.E.C. Works, Southall, where the Company's latest types of passenger and com-



ROUMANIAN TRADE DELEGATES INSPECTING THE "MERCURY" CHASSIS AT THE A.E.C. WORKS.

mercial chassis were displayed. Dr. Stefan Cicio Pop, President of the Roumanian House of Deputies, headed the group of visitors and great interest was evinced in all A.E.C. products and the up-to-date methods employed at the factory. Roumania aims to industrialise her country and she wishes to develop trade outside Roumania's own resources, particularly with Great Britain. Some of her urgent calls are for omnibuses, commercial vehicles, electric goods, tractors and machinery.

"Bull" Eddy-Current Brakes.—A booklet has recently been published by Bull Motors, Ltd., of Ipswich, an associated company of Agricultural & General Engineers, Ltd., describing the Bull Eddy-Current Brake for use on electric trolley buses, and other vehicles. The booklet points out that the brake is very simple to operate and calls for the minimum effort on the part of the driver. It is noiseless in operation, eliminates all "snatchiness," and its smooth action adds considerably to the comfort of passengers. Briefly stated, a short-circuited steel rotor is mounted on the motor shaft, and rotates within a specially designed field magnet frame. Braking effort is obtained simply by exciting the field which thereby induces currents in the rotor itself, these currents reacting upon the field magnetism to bring the motor to rest. The braking power is entirely dissipated within the rotor as heat, cooling air being drawn by a fan past fins on the rotor to keep the motor temperature within safe working limits. It is claimed that there is no frictional contact and no wear; maintenance charges are negligible and the current consumption for field excitation never exceeds 1 kilowatt. The brake is operated through a controller actuated by the foot-brake pedal, and is effective down to a speed of 3 m.p.h. After it has been operated fully a further depression of the pedal brings the friction brake into action for complete stopping or emergency. Tests carried out by the Mexborough and Swinton Traction Company showed that the saving effected in one year by running their fleet of 27 vehicles with the Bull Eddy-Current Brake was:—On tyres, £500; on brake expenses, £370.

FLEET OF ALBIONS OWNED BY MESSRS. PRICES (TAILORS) LTD., LEEDS.

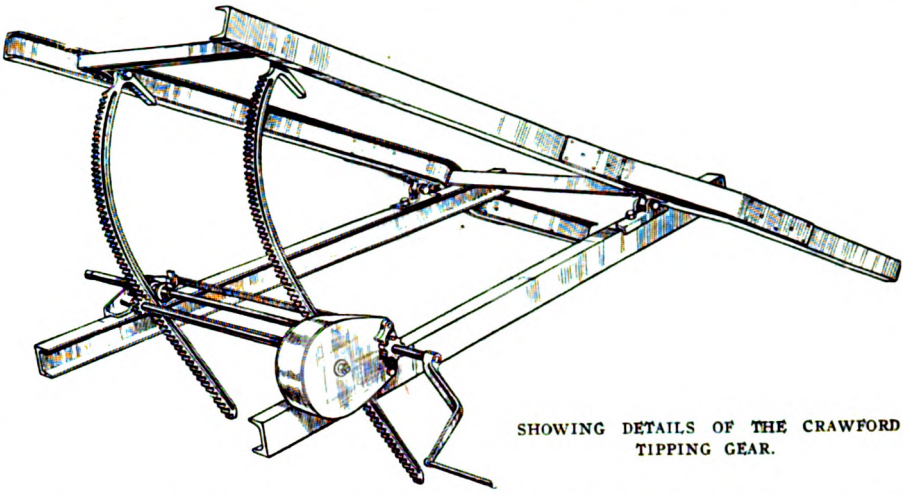
1930-31 Vulcan Programme.—The 1930-31 Programme just issued by the Vulcan Motor and Engineering Co. (1906), Ltd., Crossens, Southport, is of much interest. While making a cut in price the firm are still giving the same well-known quality and value, and the performance and specification has been improved where it has been thought necessary. The following is the range of models:—Goods Vehicles: 30/35 cwt. normal control, £295; 30/35 cwt. forward control, £350; 40/45 cwt. normal control, £355; 40/45 cwt. forward control, £385; 50/60 cwt. normal control, £495; 50/60 forward control, £535; 70 cwt. normal control, £575; 35/40 cwt. low loader, £365; 60 cwt. low loader, £465. Passenger Vehicles. "Duke" 20-seater, 4 or 6 cyl., £545; "Duchess" 26-seater, 4 or 6 cyl., £650; "Prince" 32-seater, 6 cyl., £1,050; "Emperor" (double decker) 50-seater, 6 cyl., £1,150. The above prices are for chassis only including pneumatic tyres. Ex. works.

Barford & Perkins New Catalogue.—Barford & Perkins, Ltd., Peterborough, have issued a new catalogue describing fully their series "B" motor rollers. The catalogue is profusely illustrated with photo illustrations. The "B" series of motor rollers are produced in two sizes, namely, the "BG" of 3 tons and the "BK" of 4 tons and they are of the three wheel design. The engine fitted is a four cylinder type 70 m.m. bore × 109.5 m.m. stroke developing 13.25 b.h.p. at a normal speed of 1,100 r.p.m. Cooling is thermo-syphon assisted by fan, pressure oiling, Zenith carburetter and Simms magneto. The two back rolling wheels are each 42 in. diameter by 15 in. wide. The front rolling wheel (in two parts) is 33 in. diameter by

Digitized by Google

36 in. total width. The rolling width is 4 ft. 6 in. and the overlap 4½ in. A two speed gear is fitted giving approximately 1¾ and 3½ m.p.h. forward and reverse. This catalogue presents in clear and simple form details of the latest road rolling methods and roller design, and copies can be obtained upon application to Messrs. Barford & Perkins, Ltd., Peterborough, or to the Publication Department, Agricultural and General Engineers, Ltd., Aldwych House, Aldwych, London, W.C.2.

Crawford Tipping Gears.—On page 573 of our August issue we published details of the Crawford Tipping Gear manufactured by the Crawford Tipping Gear Co., 128, Much Park Street, Coventry. Unfortunately, the block showing diagramatically the details of the gear was printed upside down and of course gives quite a wrong idea of the working of the gear. We now show the gear in the correct position. The principle on which the gear works is as follows: The gear complete is mounted and assembled as a unit, ready to be applied to any chassis and body. It consists of a subframe mounted on the chassis frame and the tipping frame upon which the body rests. The tipping frame is pivotted by a transverse hinge at the rear, and at the forward end is provided with two curved racks, which engage with toothed gearing on a transverse shaft mounted on the sub frame. This shaft is turned by reduction gearing in a gear box on the nearside subframe member, and a pawl is provided to ensure safety when raising or lowering. The curved racks are so shaped, hinged and disposed relatively to the driving pinions that when the tipping body is lowered, the racks are raised clear of the ground to an extent greater than the axle clearance of the vehicle. When the body is in the running position a minimum amount of space is wasted between the front end of the body and the rear of the cab and the racks are tucked well up under the chassis out of the way of any obstacles which might be on the road, the racks actually folding up above the lowest point of the back axle.

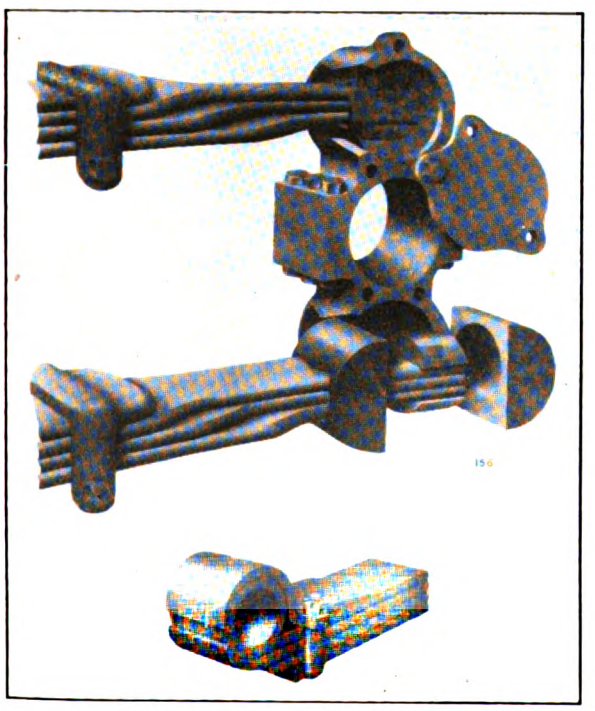


SHOWING DETAILS OF THE CRAWFORD TIPPING GEAR.

A.E.C. Indian Distributor's New Address.—The A.E.C. inform us that the address of their Indian Distributors, Messrs. Walford Transport, Ltd., has been changed from 6-7, Bentinck Street, Calcutta, to 71-73, Park Street, Calcutta.

Fox Patent Swivelling Coupling and Anchor Clips.

THIS device can be incorporated in either four-wheel or six-wheel vehicle designs. By its adoption, the designer can obtain complete elimination of twist in suspension. A special member is provided to take the forces of torque and tractive effort. The forces of bending and impact are given particular consideration in the design and the unit as a whole represents a self-contained bracket, which completely supersedes the old-fashioned dumb iron and shackle arrangement of mounting.



TOP: THE FOX PATENT SWIVELLING COUPLING FOR SIX-WHEELED VEHICLE. BOTTOM: THE FOX PATENT ANCHOR CLIP.

In the case of a six-wheel vehicle, the outer casing consists of a bracket axle box, which carried the members for locating the spring ends, and complete swivelling is obtained through a series of rotating and sliding cylinders which are each in turn internally mounted. Attachment between the spring and swivelling coupling is provided which separates torque and thrust from bending stress reactions. The torque or thrust member of the spring is recommended to be placed in the second or third plate position from the back, which arrangement gives longitudinal support above and below the torque or thrust member. At the end of this torque or thrust member is provided a boss or pin through which the torque and thrust is transmitted to the rotating and sliding cylinders.

With regard to the bending actions in the spring, the back plate, together with the second or third plate, as required, are made of equal length. This plurality of plates is mounted inside the rotating and sliding cylinders, which by reason of the arrangement separates the bending and the thrust stresses. The advantages of such an arrangement are obvious, and any number of plates can be included inside the swivelling coupling, covering for any value of torque and impact reaction stresses.

The arrangement is easy to mount, it is simple in design, and by reason of its construction, it is cheap to produce.

From this description it can be seen that the arrangement is equally suitable to four-wheel vehicle design, in which case the coupling mountings may be bolted either to the web or flange of the chassis. In those cases where web construction is adopted, a lower centre of gravity becomes possible.

The purpose of the patent anchor clip is to distribute the stresses of braking torque reactions through those portions of the spring which otherwise become idle under torque reaction conditions. The Fox anchor clip provides a means whereby under braking conditions the torque reaction is distributed through as many spring leaves as is considered desirable. It can be fitted to any existing type of spring, provided the dumb iron and shackle clearance will permit of the extra plate thickness, and in any circumstances can be adopted without serious alteration to dumb iron or shackle design. The arrangement of the anchor clip can, of course, also be used as a means of limiting rebound.

The coupling and clip are manufactured and supplied by Samuel Fox & Co., Ltd., the well-known steel manufacturers of Stockbridge Works, Nr. Sheffield.

County Court Judgments.

THE following returns from the Registry of County Courts' Judgments, Whitehall, have been received relating to judgments entered up in the respective County Courts of England and Wales. Publication does not imply inability to pay. Many judgments may have been settled between the parties or paid. Judgments settled otherwise than through the Court may appear unless "satisfaction" is entered up within twenty-one days from judgment or allocatur. Registered judgments are not necessarily for debts. They may be for damages or otherwise, they may relate to actions *bona fide* contested between the parties, or they may be against defendants, liable in a representative capacity, and not personally; but no distinction is made on the register. Judgments are not returned to registry if satisfied in Court books within twenty-one days.

David W. Smith, 6, Dunmow Road, Bishop Stortford, Herts., haulage contractor. £30/2/7. June 2nd.
Robert Burrows, 1, Ward Street, St. Helens, Lancs., master carter. £39/19/8. June 17th.
Robert Simms, 119, Yorkshire Street, Oldham, Lancs., char-a-banc proprietor. £44/12/0. June 19th.
E. J. Mylon, Merrimans, Hayes, Middlesex, haulage contractor. £109/3/8. June 12th.
H. W. Watling, Old Market Street Garage, Thetford, Norfolk, haulage contractor. £26/12/8. May 23rd.
H. Collins, 176, High Street, Colliers Wood, Surrey, haulage contractor. £25/16/7. June 16th.
Mr. H. Pern (trading as Stockwell Transport), Brixton, transport contractor. £32/19/7. June 3rd.
Edward John King, 1, Prospect Cottages, Allcannings, Devizes, Wilts., haulage contractor. £27/2/0. June 16th.
Chas. Naylor, 115, Recreation Terrace, Dinnington, Yorks., haulage contractor. £37/11/0. June 20th.
Harry Ward, 17, Meadow View Road, Sheffield, haulage contractor. £27/0/4. June 7th.
P. Wm. Newman, Hampden, Ledgers Road, Slough, Bucks., haulage contractor. £54/2/0. June 18th.
Standard Haulage Co., Derwent Street, Derby, Haulage contractors. £29/2/6. June 4th.
Saml. Trenchard, Spicelands, Uffculme, haulier. £37/17/3. June 16th.
E. G. Wilson, 25, Edinburgh Road, Ashford, Kent, haulage contractor. £25/4/0. June 26th.
Jno. A. Pinnington, 10, Fernhurst Avenue, Blackpool, Lancs., general carrier. £50/19/0. June 17th.
Jack Mears, Baston, Lincs., haulage contractor. £51/4/3. May 19th.
M. J. McKeon, 52, Lampton Road, Hornsey Rise, London, N., haulage contractor. £86/14/1. June 5th.
Wm. Payne, 117, Somerset Street, Abertillery, Mon., haulier. £22/6/4. June 17th.
T. Adams, Old Street, Ludlow, Salop, haulage contractor. £23/19/6. June 24th.
Wm. & Jno. Lewis, West-view, Minsterley, Salop, hauliers. £36/12/8. June 14th.
Barlow & Copeland, 44, Chapel-la Harriseahead, Staffs., haulage contractors. £21/6/4. June 21st.
A. & H. Transport Co., Wolverhampton Street, Dudley, Worcs., transport contractors. £42/13/6. June 17th.
Sydney Eastwood, 105, Weston Street, Sheffield, Yorks., haulage contractor. £26/17/3. June 20th.
Herbert Sutton, Minsthorpe Lane, South Elmsall, Yorks., haulage contractor. £24/0/8. June 25th.
W. J. Silvey, Hermitage, Nr. Newbury, Berks., carrier. £26/4/11. June 27th.
— Meakin, Hollis Lane, Chesterfield, Derbys., carting contractor. £31/2/5. July 1st.
E. Wm. Ward, 1c, Peterborough Villas, New King's Road, Fulham, London, S.W., haulage contractor. £42/3/6. June 26th.
Hy. Giles, 8, Lambridge, Bath, Som., haulage contractor. £35/2/3. June 26th.
A. Colam, 21, Grafton Street, Hull, haulage contractor. £31/9/10. July 3rd.
J. Jennings, 12, View Croft Road, Shipley, Yorks., carrier, £25/19/1. July 1st.
K. Chas. Prynn, The Bungalow, Winestead, Yorks., carrier. £31/11/4. June 28th.
W. P. Griffiths, 6, Bridge Street, Waunarllwydd, Swansea, haulage contractor. £141/12/11. June 6th.
T. P. Wilson, Blinderake, Cockermouth, Cumberland, haulage contractor. £59/8/6. June 27th.
C. Young & Sons, Alresford, Hants., haulage contractors. £37/5/3. July 4th.
Jas. R. Hunter & Mary Hunter (his wife), Stable-cot, Basin Lane, Wigan, haulage contractor. £25/12/0. June 26th.

The Gazette.

Dissolutions of Partnership.

JOHN WILFRED LUMLEY and ALAN DUNCAN JESSETT, trading as Jessett & Lumley, motor coach proprietors, Haywards Heath, Sussex. 10th July, 1930.

HARRY BOOTHMAN, JAMES THORNLEY and FRANK PICKUP, trading as The B.T.P. Transport Company, motor haulage contractors, 61, Chapelfield Road, Ardwick, Manchester. 15th July, 1930. All debts by James Thornley and Frank Pickup who will continue.

ELIZA EMMA BARRINGER, PHILLIP BARRINGER and JONATHAN BARRINGER, trading as Barringer & Sons, carters, etc., Godmanchester, Huntingdonshire. 15th August, 1930. All debts by Eliza Emma Barringer and Jonathan Barringer, who will continue.

MURIEL LUCY TOMPSON, WALTER HOWE JUBY and the late WALTER TOMPSON, trading as G. & E. R. Tompson, haulage contractors, etc., 12, College Street, Bury St. Edmund's Suffolk. 14th July, 1930.

THOMAS SHARP CLAYTON and JOHN RIDDICK, trading as Clayton & Riddick, motor haulage contractors, 28, Chapel Street, Liverpool, Lancs. 1st June, 1930.

The Bankruptcy Acts, 1914 and 1926 Bankruptcy Proceedings.

WILLIAM EDWARD PITCHFORTH (Senior) and WILLIAM EDWARD PITCHFORTH (Junior), 21, Park Avenue, Elland, Yorks, lately trading as W. E. Pitchforth, haulage contractors. Receiving order and order of adjudication, July 17th. Public examination, October 3rd, at Halifax.

ERNEST MONTAGUE ALBERT BUNDY, 34, Bridge Street, Reading, motor coach proprietor, etc. Receiving order July 22nd.

HENRY HOUGH, Brydges Farm, Cross-lane, Marple, Cheshire, carrier, etc. Order of adjudication, July 30th.

New Companies.

A. B. Haulage Company, Limited. (249,631).—Private company. Registered July 21st. Capital £500 in £1 shares. Objects: To carry on the business of haulage, transport and removal contractors, etc. Anna Burder is the first director. Registered office: 499 Hackney Road, E.2.

A. Hamson and Son, Ltd. (249,666).—Private company. Registered July 23rd. Capital £5,000 in £1 shares. Objects: To carry on the business of haulage contractors, hirers of railway wagons, coal, coke and wood merchants, builders, builders' merchants, sand and gravel merchants, etc. The directors are: Laura Hamson, L. E. Hamson, H. C. Law. The two first named shall be permanent so long as they each hold one share and the said H. C. Law shall be permanent so long as he is a trustee of the late Alfred Hamson.

Valliant Coaches, Ltd. (249,721).—Private company. Registered July 24th. Capital 500 in £1 shares. Objects: To carry on the business of proprietors of coaches, cabs, motor coaches, motor cabs, taxi and public service vehicles, etc. The directors are: G. R. Valli, W. D. Valli. Registered office: The Garage, Acton Lane, Acton Green, W.4.

Duke Haulage Company, Ltd. (249,732).—Private company. Registered July 25th. Capital £4,000 in £1 shares (3,000 5 per cent. preference and 1,000 ordinary). Objects: To carry on the business of haulage contractors, forwarding agents and warehousemen, manufacturers and proprietors of motor omnibuses, etc. The permanent directors are: J. Harding, J. Livingston. Secretary: J. Harding. Registered office: 15 Hardman Street, Liverpool.

Alfred Foley & Co. (1930), Ltd. (249,755).—Private company. Registered July 26th. Capital £500 in £1 shares. Objects: To carry on the business of shipping and forwarding agents, insurance agents, carriers, cartage contractors, etc. The first directors are to be appointed by the subscribers.

Irish Horse Box and Live Stock Transport Company, Ltd. (8,029).—Private company. Registered July 28th in Dublin. Capital £5,000 in £1 shares. Objects: To carry on in The Irish Free State and elsewhere the business of carriers by land, sea and air, of livestock, goods and passengers, store, warehouse and livery stable keepers and garage proprietors, etc. The directors are: D. Beatty, G. Martin.

James Hill (Manchester), Limited. (249,891).—Private company. Registered August 1st. Capital £3,000 in £1 shares. Objects: To acquire the business of a haulage contractor carried on by A. T. Eaves at New Allen Street, Oldham Road, Manchester, as "James Hill." The directors are: W. E. Hall, senior, W. E. Hall, junior, T. H. Dooly.

Jesse Smith, Ltd. (250,043).—Private company. Registered August 9th. Capital £1,000 in £1 shares. Objects: To carry on the business of wholesale and retail dealers in fruit, flowers and vegetables and all kind of farm and garden produce; farmers, market gardeners, nurserymen and florists, carmen and transport contractors, forwarding agents, etc. The first directors (to number not less than 2 nor more than 6) are to be appointed by the subscribers.

Request Services, Ltd. (250,048).—Private company. Registered August 9th. Capital £1,000 in £1 shares. Objects: To carry on the business of proprietors, hirers and letters on hire of motor omnibuses, coaches, chars-a-banc, lorries, vans, wagons, cars, cabs, aeroplanes, flying machines and other vehicles, organisers of vehicular excursions, trips, tours and flights, garage and aerodrome proprietors, carriers, haulage and transport contractors, forwarding agents, etc. The first directors (to number not less than 2 nor more than 6) are: F. Bamber (permanent director and chairman), R. Pilkington.

Anglo Scottish Transports, Ltd. (16,095). — Private company. Registered in Edinburgh on August 11th. Capital £2,500 in £1 shares. Objects: To carry on the business of road transporters, carters, common carriers, etc. The directors are: J. M. Hunter, R. L. Prentice, J. D. Woodside. Registered office: 534 Sauchiehall Street, Glasgow.

D. & O. Transport & Garages, Limited. (250,094).—Private company. Registered August 12th. Capital £500 in £1 shares. Objects: To adopt an agreement with T. Dye, and to carry on the business of haulage contractors, motor car, lorry, tractor, ship, barge, omnibus, carriage or private conveyance proprietors, motor and general engineers, etc. The permanent directors are: T. Dye (managing director), F. D. Osbiston, Mrs. Janet E. Osbiston. Registered office: 85 Hornsey Rise, N.19.

J. R. Sutcliffe (Liverpool), Ltd. (250,168).—Private company. Registered August 15th. Capital £100 in £1 shares. Objects: To carry on the business of haulage contractors, lightermen, warehousemen, freight forwarders, ship and insurance brokers, shipping agents, etc. The directors are: J. R. Sutcliffe, R. Capon. Registered office: Colonial Buildings, 40 Paradise Street, Liverpool.

Milton Jones, Ltd. (250,206). — Private company. Registered August 16th. Capital £1,000 in £1 shares. Objects: To acquire the business of a motor engineer and haulage contractor carried on by Frances A. Jones at Chapel Street, Halton, Yorks. The directors are: Mrs. Frances A. Jones, E. Jones, R. Jones. Secretary: E. Jones.

D. Mylon & Company, Ltd. (250,236).—Private company. Registered August 18th. Capital £100 in £1 shares. Objects: To carry on the business of sand and ballast merchants and contractors for and dealers in gravel, sand, shingle, ballast, breeze and other materials; omnibus proprietors, carriers of passengers and goods, etc. The directors are: D. Mylon (chairman and managing director), Mrs. M. S. Mylon.

G. & W. Baker, Ltd. (250,249).—Private company. Registered August 19th. Capital £500 in £1 shares. Objects: To carry on the business of coal and coke merchants, haulage contractors, coal and ironmasters, engineers, ironfounders, patent fuel manufacturers and contractors, etc. The directors are: G. Baker, W. Baker. Registered office: 79 Heath Street, Liverpool.

Personal Flying Service, Ltd. (250,317). — Private company. Registered August 22nd. Capital £100 in £1 shares. Objects: To carry on business as letters out on hire of flying machines, to transport passengers and goods, etc. The directors are: W. D. Gillies, W. N. Darnborough, I. N. C. Clarke. Registered office: 92 Piccadilly, W.1.

C. Albany & Sons, Ltd. (250,333).—Private company. Registered August 23rd. Capital £3,000 in £1 shares. Objects: To carry on the business of lightermen, barge owners, wharfingers and warehousemen, formerly carried on by Mary A. Albany and D. E. Albany at Ware and elsewhere as "C. Albany & Sons." The directors are: T. W. Jacobs, E. T. East, P. Albany.

Jones Bros. (Treharris), Ltd. (250,413).—Private company. Registered August 27th. Capital £500 in £1 shares. Objects: To acquire the business of motor omnibus and garage proprietors now carried on at Treharris, Merthyr Tydfil, as "Jones Bros." The permanent directors are: J. Jones (managing director and chairman), and Mrs. G. L. Jones.

Military Tractors, Ltd. (250,478).—Private company. Registered August 30th. Capital £600 in £1 shares. Objects: To carry on the business of haulage contractors, motor and mechanical engineers and garage proprietors, etc. The permanent directors are: T. S. Riley, E. T. James, A. I. C. Forster. Registered office: 32 Parliament Street, York.

National Freight Company (Great Britain), Ltd. (250,479).—Private company. Registered August 30th. Capital £100 in £1 shares. Objects: To carry on the business of shipbrokers, shipping and forwarding agents, wholesale warehousemen, removers, storers, packers and carriers of personal property of all kinds, etc. W. B. Woolley is the first director. Secretary (pro tem.); W. O. Allen. Registered office: Bilbao House, 36/8 New Broad Street, E.C.2.

H. I. Phillips & Co. (International Transport), Ltd. (250,578).—Private company. Registered September 5th. Capital £5,000 in 2,000 7 per cent. cumulative participating preference and 3,000 ordinary shares of £1 each. Objects: To acquire the business of international transport agents now carried on by H. J. Phillips, R. P. Sinclair and S. E. Tippin as "H. J. Phillips and Co.", and to carry on between Great Britain, Belgium, France, Europe, U.S.A., North and South America, Africa and Australia, the business of general carriers, railway or general transport, forwarding, shipping, freight, insurance, Custom house, storage, passenger, railway, steamship, port, harbour or general agents, etc. The permanent directors are: H. J. Phillips, R. P. Sinclair and S. E. Tippin.

Mortgages and Charges.

Marler Brothers, Ltd.—Particulars filed of £450 debentures authorised July 2nd, 1930, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

Digitized by Google

Associated Bus Companies, Ltd. — Debenture dated July 11th, 1930, to secure £4,000, charged on the company's property, present and future, including uncalled capital. Holder: G. Adams, Turn Off, Newchapel, Staffs.

Commercial Road Haulage, Ltd.—Issue on July 15th, 1930, of £300 debentures, part of a series already registered.

Ideal Haulage Service & Motor Works, Ltd. — Particulars filed of £700 debentures authorised July 17th, 1930, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

Simpsons Express Service, Ltd.—Particulars filed of £1,200 debentures authorised July 29th, 1930, charged on the company's undertaking and property, present and future, including uncalled capital, the amount of the present issue being £1,000.

Pride of the Peak, Ltd.—First debenture to secure £450 and second debenture to secure £450, both dated July 31st, 1930. The debentures constitute a specific charge on the company's freehold property and motor coaches, present and future, and a floating charge on all the other assets, present and future, including uncalled capital. Holders: J. Mitchell, "Whiteled," Louvain Road, Derby, and G. H. Halliday, Elm Tree Inn, Boroughs Walk, Derby.

Pride of the Peak, Ltd.—Particulars filed of £2,500 debentures authorised July 31st, 1930, the whole amount being now issued. The debentures constitute a specific charge on company's freehold properties and motor coaches, present and future, and a floating charge on all other assets, present and future, including uncalled capital.

James E. Whalley, Ltd.—Particulars filed of £4,900 debentures authorised July 31st, 1930, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

Don Motor Coach Company, Ltd. — Particulars filed August 1st by permission of the Court of £2,000 debentures authorised June 10th, 1930, charged on the companies undertaking and property, present and future, including uncalled capital, the amount of the present issue being £1,450.

Gush's Road Transport Services, Ltd.—Debenture dated August 8th, 1930, to secure £900, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: Mrs. E. V. Glass, The Croft, Irly Road, Heswall, Ches.

Bournemouth Coachways, Ltd. — Debenture dated August 8th, 1930, to secure £1,350, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: R. T. A. Cornwell, Ambleside, Brownsea View Avenue, Parkstone.

Premier Omnibus Company, Ltd.—Particulars filed of £10,000 debentures authorised August 15th, 1930, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

Beattie Coaches, Ltd.—Debenture dated September 1st, 1930, to secure £500, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: H. Howard, 23 Birkbeck Grove, Acton, W.

Receiverships (Appointment or Release).

Eniway Motor Tours, Ltd.—W. H. Arden, C.A., of 55 Brown Street, Manchester, ceased to act as Receiver on July 29th, 1930.

R. A. Dagnall (Haulage Contractor), Ltd. — A. W. Goodfellow, of 90 Cannon Street, E.C.4, was appointed Receiver on August 12th, 1930, under powers contained in debenture dated April 29th, 1930.

Liverpool Transport Company, Ltd.—J. H. Hilton, of 14 Cook Street, Liverpool, was appointed Receiver on August 12th, 1930, under powers contained in charge dated April 25th, 1930.

Narramore, Ltd.—A. C. W. Cheesley, of 44 Wulfstan Street, Shepherd's Bush, W.12, was appointed Receiver on August 13th, 1930, under powers contained in debentures dated December 18th, 1923, in place of W. Daw.

Covent Garden Haulage Company, Ltd.—A. May, of 201 Southampton Street, S.E.5, was appointed Receiver on August 29th, 1930, under powers contained in debenture dated January 29th, 1930.

New Crosville Depot.—The Crosville Bus Company has opened new premises in Sankey Street, Warrington. They are adapted for use for motor bus passengers as a cloakroom, inquiry bureau and waiting rooms.

Norway. Duty on Second-hand Motor Cars. — An Oslo message says that at the Annual General Meeting of the Norwegian Motor Dealers' Association it was decided to ask the Government to take measures to ensure that the many imported second-hand motor cars paid duty according to their real value, as the Association considered that at present the State undoubtedly lost much duty owing to the value of the cars being given too low.

Mexican Motor Factories. — Reuter's Trade Service learns from Mexico City that a concession has been granted to the Henry Ford Company (of Detroit, U.S.A.) for a large piece of land on the Calzada-de-Guadalupe for the purpose of constructing motor workshops. 80 per cent. of the employees must be of Mexican origin. It is reported that other American interests contemplate the establishment of factories near Mexico City, similar enterprises having been undertaken with promise of success in Argentina.

Buenos Aires Underground. £4,000,000 Project Nearing Completion.—The first 4½-mile long section of the new £4,000,000 underground railway in Buenos Aires is now approaching completion. The underground, which will be 5½ miles long in all, will run from the terminal station of the Buenos Aires Central Railway to the port at Callao, and will provide quick access to the congested business and shopping centres, the entire distance being covered in twenty minutes in comparison with fifty minutes under present conditions. Cars for the railway have been specially constructed under a contract awarded to a British firm, the Metropolitan-Cammell Carriage Wagon & Finance Co., and delivery of the entire 56 cars is expected to be completed by September. A special feature of the cars is the fitting of each with its own motor power, permitting rapid acceleration and easy adjustment of the length of trains to meet rush hour demands.

REUTERS TRADE SERVICE.—By special arrangement with Reuters Trade Service we are publishing news items from all parts of the world dealing with transport matters.

NOTICES

The World's Carriers is published monthly, on the 15th of each month. Annual Subscription, including **World's Carriers Year Book and Diary**, £1 1s., post free.

Advertisement tariff sent on request.

The Editor, while promising to give prompt consideration to any articles, notes, drawings, or photographs submitted, disclaims all liability in connection with contributions sent in voluntarily. If a properly addressed and stamped envelope is forwarded, every effort will be made to return rejected contributions.

Books, pamphlets, prospectuses, and newspapers (the latter having any special item conspicuously marked) should be addressed to the Editor.

All remittances should be made payable to "**The Carriers Publishing Company, Ltd.**," Bangor House, 68 & 69 Shoe Lane, London, E.C.4, and crossed "Midland Bank, Ltd."

Telegrams: KARRIWORL, LUD, LONDON. **Telephone:** CENTRAL 6068 (2 lines).

Our Information Bureau.

FOR THE INFORMATION OF OUR SUBSCRIBERS we have recorded the names of General Carriers, Furniture Removers, Motor Haulage Contractors, and Forwarding Agents in all parts of the world.

Any subscriber requiring the name and address of a carrier, motor transport contractor, furniture remover, or forwarding agent in any particular town can obtain the information by writing us and enclosing a stamped addressed envelope.

FREE INFORMATION COUPON.

Information and advice can be obtained relating to Road Transport matters and concerning Motor Vehicles, such as Buses, Lorries, Steam Wagons, Delivery Vans and Tractors.

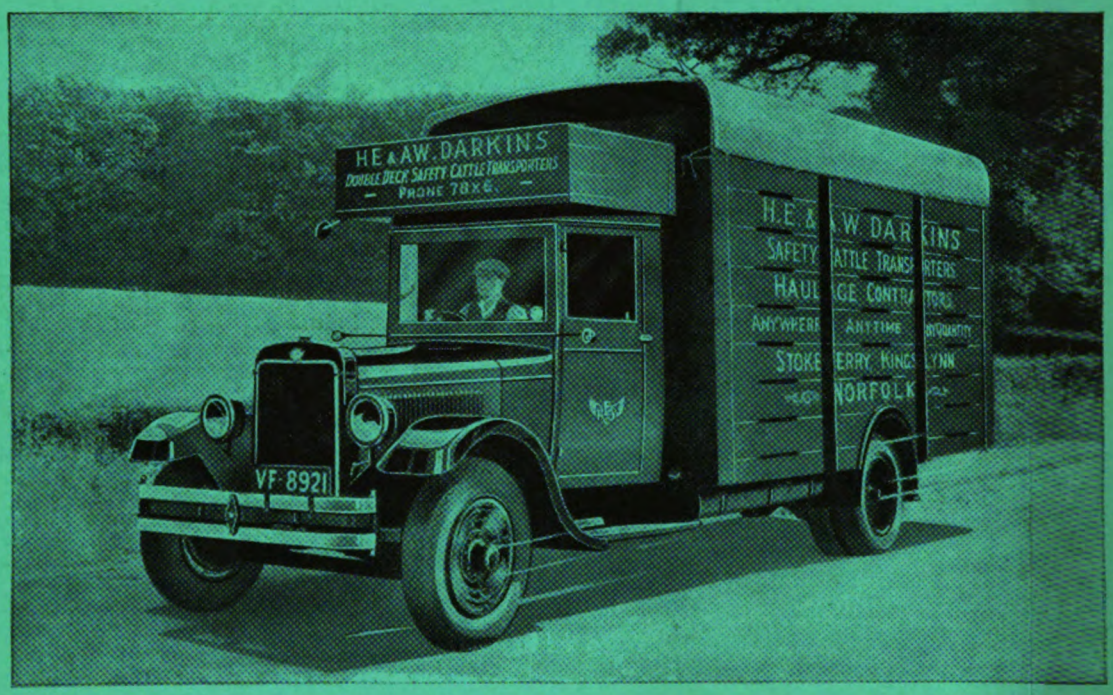
REO

SPEEDY LOW-LOADING CHASSIS



ESSENTIALLY "TOP-GEAR" vehicles, Reos have passenger-car performance. They are out ahead of the traffic stream while drivers of less handy trucks are fumbling with gears. Their swiftness has led to their adoption by leading sound news-film companies —who want speed *always.*

High averages are impossible without reliability. The Reo brand of reliability has satisfied thousands since 1904.

Low-loaders are to-morrow's trucks. Used increasingly and profitably for cattle and sheep transport, horse-boxes, furniture vans, oil and petrol tanks and milk floats, they facilitate the handling of all classes of goods. Their amazingly smooth riding qualities and the low centre of gravity makes them safe for the bulkiest or most fragile load.

A Reo low-loader, one of the fastest commercial chassis manufactured, is a sure way to economy, greater profits and owner satisfaction.

20 and 26-seater Passenger Chassis £485 and £645. Long Wheelbase Chassis £715
30-cwt., 2, 2½, and 3½-ton SPEED WAGON Chassis - - - £298 to £645

Maintains high average speeds with the greatest ease

The cab is far beyond anything previously offered in steam wagons for driving comfort and efficiency. It gives the driver an absolutely unrestricted view of the road.

The Pneumatic Tyred Foden Speed Six is a modern wagon in the true sense of the word. It provides a better, cheaper and quicker means of transportation. The ability to maintain high average speeds with ease is only one of its advanced features. Others are: 4 Wheel Brakes, surprising fuel economy—25/30 miles per cwt. of coal—high ground clearance, more speed and power, greater acceleration, coupled with an exceedingly smart appearance. This wagon is recognised by heavy load road haulage experts as a leader. Write to-day for full particulars and the new Foden booklet.

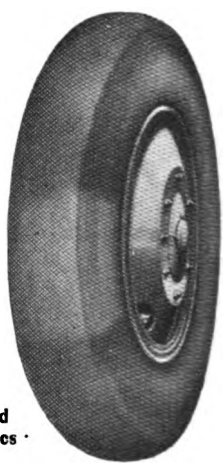
ENSURE *FAIR WEAR* *for* EACH TYRE



GIANT pneumatics need their pressures tested every time the vehicle leaves the garage. Most tyre troubles and many mechanical ones too, can be traced to incorrect inflation.

Tyre pressure cannot be guessed. Just as well try to take a patient's temperature without a thermometer. The proper instrument must be used for the purpose—the Schrader Service Tyre Gauge. It cannot make a mistake. It is easily read and reaches any valve. It ensures full mileage from your pneumatics · easier, safer driving; fewer repair bills.
Calibrated 10-160 lbs.

¶ *Stocks of this new Service Gauge are now available and can be obtained from your usual Supply House.*

Tests every type of pneumatic tyre.

ALL ROADS TO THE GARRETT ARE SMOOTH ROADS

Operating costs remain the same after five years continuous work.

2·3d. per TON MILE

Over five years ago we supplied to our customers, Messrs. Kaye & Co. Ltd., Southam Works, near Rugby, a fleet of three Garrett Wagons and Trailers for transporting their well-known cement.

On the 7th September, 1925, they wrote to us stating that the Wagons were in constant daily use and that the operating cost worked out at 2·3d. per ton mile.

To-day, after a lapse of five years, during which time their Wagons have been in continuous service, we are informed that the operating cost (loaded one way only) still averages for the three Wagons 2·5d. per ton mile.

THE OIL THAT NEVER LEAVES THE BEARINGS

When an engine stops the oil drains away from the bearings and—if the oil is a mineral oil, the oil film breaks up. It takes a few seconds on restarting before the oil film is reformed—and this is when almost all the wear takes place.

"Germ" oils are made on a **patented** process for increasing "oiliness" and when the engine stops the "Germ" oil film remains adsorbed on the metal surfaces and is there ready for duty **immediately** the engine re-starts.

Send for further particulars of "Germ" Oil—"The oil that never leaves the Bearings."

AUTOMATIC CHASSIS LUBRICATION

by the

TECALEMIT

system.

THE Tecalemit Automatic Chassis Lubrication System is operated by the movement of the vehicle to which it is fitted. It is no longer necessary to leave it to the driver to lubricate the chassis bearings when he thinks of it. Chassis lubrication can be made part and parcel of the running of the vehicle with the Tecalemit Automatic Pump, which distributes the correct quantity of lubricant to each bearing without further care during the life of the vehicle.

VULCAN

BIG PRICE DROP FOR 1930/31

AND IMPROVED SPECIFICATIONS!

The new Vulcan prices represent the utmost value for money. The extensive programme of production we have now embarked upon enables us to offer such attractive prices and improved specifications.

30/35 cwt. CHASSIS PRICE NOW £295

Normal Control. The most popular model of the Vulcan range. Completely equipped with pneumatic tyres all round and a pneumatic spare, this splendid heavy-duty vehicle now represents unrivalled value for money. With D.S. Lorry and Cab, £335

30/35 cwt. - £330

Forward Control. The same renowned quality as the Normal Control but giving larger body space. Pneumatic tyres standard.

40/45 cwt. - £355

Normal Control. A larger edition of the 30/35 cwt., giving a greater carrying capacity. Pneumatic tyres all round, twins rear.

40/45 cwt. - £385

Forward Control. Another generously equipped model giving larger body space for light but bulky loads. Pneumatic tyres, twins rear.

50/60 cwt. - £495

Normal Control. The reduced price will create an increased demand for this already popular model, with twin rear tyres.

50/60 cwt. - £535

Forward Control. Like the Normal Control, is equipped with pneumatic tyres. A strong chassis, built to carry a big load.

70 cwt. - - £575

Normal Control. Designed for years of hard work on heavy jobs. Of generous proportions and equipped with pneumatics, twins rear.

35/40 CWT. LOW LOADER £365

Already a strongly established model. The first Forward Control Low Loader on pneumatic tyres. For Municipal Service.

60 CWT. LOW LOADER. £465

Gives a very large loading space and low loading height. Useful either for Municipal or Private Service. Pneumatic tyres, twins rear.

ALL ABOVE ARE CHASSIS PRICES EX WORKS.
British Goodrich Tyres are standard on Vulcans.

PREVENTION OF CRUELTY TO TYRES

THAT might be stated as the aim of the Dunlop Rubber Company's "Road Transport Department." For its function is to assist users of Dunlop Giant Pneumatic tyres to obtain, by considerate treatment of their tyres, full value for the money they have spent.

No. 1. What it is

The Road Transport Department is an organisation provided by the Dunlop Rubber Co. Ltd., solely for the purpose of enabling commercial vehicle, omnibus and motor coach owners to obtain the service and value built into every Dunlop Giant pneumatic tyre. This service is practically unique, and is offered to Dunlop tyre users free of charge or obligation.

Further particulars of the Road Transport Service will appear in these pages from time to time. But if you are in a hurry to learn more about it, we would advise you to write for our booklet, The Dunlop Road Transport Service.

Write on your business notepaper to the nearest Dunlop Depot, or to the Road Transport Department, Fort Dunlop.

LIGHTING THE MODERN BUS

On modern buses a reliable storage battery is indispensable. Lights must be as bright when the engine is idle as when it is running, and the only way to ensure this is to carry a battery that is ready at any moment to flood the bus with glowing light.

Exide-Ironclad batteries with their special positive plates can take care of any modern lighting system with the ease and confidence derived from experience in supplying light and power to British and foreign ships and submarines.

POWER-*yes!* and more SPEED than haulage ever demands!

POWER is one of the outstanding features of the 2-ton Manchester . . . such a volume of power smoothly applied, that the lorry is unusually lively, even with full load. Such performance means time and money saved. Let this apply to your business. The powerful 4-cylinder engine has a massive 5-bearing crankshaft, great pressure lubrication and extra long steel connecting rods. These features all help to ensure greater power with strength and reliability. May we send you full details by return post?

Why Forward-Control?

BRITISH
BEAN
COMMERCIAL VEHICLES

Can you imagine a vehicle on which better use is made of its frame dimensions? Not a single cubic inch is wasted, because this Special Double Decker Cattle Truck was designed to earn not to spend, money.

This is only one of over 50 BEAN trucks available, from stock or at short notice. The best-equipped, the biggest, the most completely self-reliant works in the British Isles are at your service when you decide to see, for yourself, why BEAN owners gave us our slogan, BRITAIN'S FINEST TRUCK VALUE.

BEAN CARS LTD. : : **TIPTON STAFFS.**
(Associated with Hadfields, Ltd.)

Scottish Representative: Mr. F. M. Millikan, 68 Berelands Road, Prestwick, Ayrshire.

Sole Distributors for the Metropolitan Area:
Messrs. PASS and JOYCE, Ltd., 4a, Cambridge Street, Edgware Road, W.2.

COMMERCIAL MOTOR VEHICLE SHOW

THIS YEAR, COMMERCIAL MOTOR VEHICLES—
BUSES, CHAR-A-BANCS, VANS, LORRIES, ETC.,
ETC.—WILL BE EXHIBITED *ONLY* IN THE :—

SCOTTISH MOTOR SHOW

Kelvin Hall, GLASGOW

7th to 15th NOVEMBER

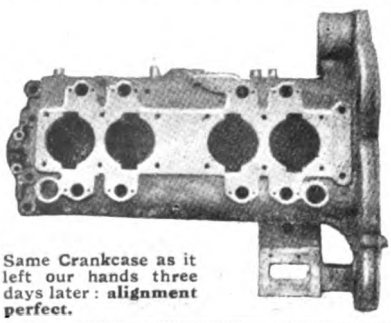
ARE YOU HAVING DIFFICULTY WITH ALUMINIUM WELDING!

REMEMBER, BAD ALIGNMENT IS A COSTLY ERROR.

A Broken Crankcase sent for Repair.

Whether you run Leyland, Dennis, Peerless, Maudslay, Albion, Packhard, Tilling, Berliet, A.E.C., Daimler, Guy, Thornycroft, Dorman, etc., you cannot take this risk. One of the final tests of a first class repair is the **alignment, and this we especially care for.**

All joint surfaces are machined, bearings bored, and in the case of cylinders, surface ground. **Time,** of course, is another important factor, and our deliveries are noted for their **speed.** Our works are laid out and specially equipped with the latest and most up-to-date machines operated by expert workmen, and with 18 years welding experience are able to give you a welding repair comparable only with the new article. In fact in numerous instances by casting and welding in special reinforcing webs, the repaired job is many times stronger.



Same Crankcase as it left our hands three days later : **alignment perfect.**

Jobs Collected and Delivered 40 miles Radius.

YEAR BOOK AND DIRECTORY

It will be a book of reference for all those interested in road engineering. It will deal mainly with current practice and will attempt to cover the entire range of road engineering, road administration, and problems connected therewith, including the chemistry of the road.

IT WILL CONTAIN AMONGST OTHER IMPORTANT FEATURES:—

1. A directory of chief engineers and their assistants of local authorities responsible for the roads of their districts.
2. A glossary of the trade names under which proprietary materials are marketed, together with the names and addresses of the proprietors.
3. A list of firms who specialise in the manufacture of road plant together with a list of the principal products of each firm, alphabetically arranged and classified.
4. Useful standard data and tables required for daily reference by road engineers.

Orders are now being taken for delivery immediately upon publication.

For further particulars apply to:

The CARRIERS PUBLISHING Co., Ltd.

Bangor House, 68/69, Shoe Lane, London, E.C.4.

SECOND-HAND PETROL ELECTRICS

A limited number of Tilling-Stevens 4-ton Petrol Electric Passenger and Goods chassis are still available, suitable for Tower Wagons, Circuses, Welding Equipment, Electrical Demonstration Vans, or any other purposes where electric power is required.

An illustration of a Petrol Electric converted as a Tower Wagon, and recently supplied to Sunderland Corporation.

All these chassis, which are offered at remarkably low prices, are in excellent condition, having been maintained under a "unit overhaul system" by leading Passenger Operating Companies.

The Petrol Electric system employs neither gears nor clutch and gives even starting and smooth running. Offered subject to being unsold.

Bump and Bounce!

The "M6" type of Karrier Six-wheeler, which carries loads up to five-tons and is eligible for the Government grant of £120, is a vehicle which can profitably be employed by many trades to whom the advantages of its particular type are of vital importance.

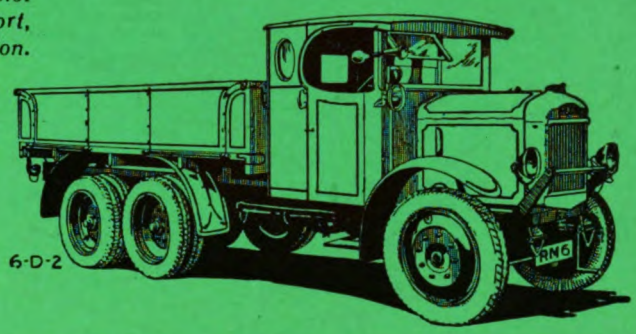
For instance, the question of smooth riding is of great moment to users of lorries whose goods suffer injury through the excessive bumping and bouncing of the ordinary four-wheeler on uneven road surfaces.

The Karrier Six-wheeler eliminates these disadvantages of road transport, and is therefore particularly suitable for the conveyance of Chemicals, Furniture, Glass, Pottery, Groceries, Confectionery, Fruit and Flowers.

There is hardly a trade or business which cannot advantageously make use of this modern mode of transport, full particulars of which will be supplied on application.

BUILT TO WAR OFFICE SPECIFICATION AND ELIGIBLE FOR SUBSIDY OF

£120



KARRIER MOTORS LTD., HUDDERSFIELD.
